After the fall of Asʿad in 1757, the power of the ʿAẓms had passed its peak, and the centre of political gravity in Syria shifted westwards to the coastlands, seen in the rise of Ẓāhir al-ʿUmar al-Zaydānī (Syrian pronunciation of the first name, Ḍāhir). Ḍāhir, a Bedouin *shaykh*, lord of the land of Ṣafad, extended his authority over Galilee, and settled at Acre, which he fortified and raised from its ruins. He resisted the Porte (1750-75) with assistance lent by the Egyptian Mamlūks ʿAlī Bey and Muḥammad Bey Abu ʾl-Dhahab and a Russian squadron cruising in Syrian waters. Besieged in Acre by the Turks, he died there in 1775. This marked the end of the autonomous state which he had created, but his benevolent rule had brought order and security and had favoured the revival of Acre, which now superseded Sidon as administrative centre of the *pashalik* or province of that name. It was here that Aḥmad al-Djazzār Pasha, a much more despotic and tyrannical figure than his predecessor, became governor after 1775, striving likewise to make it the centre of an autonomous power. He sought to diminish the authority of the revived ʿAẓms in Damascus, and intervened in Mount Lebanon to undermine the power there of Yūsuf Shihāb and his youthful successor Bashīr II [*q.v.*]. A new factor supervened, however, with the arrival of Bonaparte in Egypt in 1798, but al-Djazzār, with the aid of a British army under Sir Sidney Smith, withstood a French siege of Acre for three months (March-May 1799). The check proved fatal to French ambitions in the Near East. Al-Djazzār then retained power till his death in 1804 [see AL-DJAZZĀR PASHA, in Suppl.]. For the history of Syria during the 18th century, see P.M. Holt, *Egypt and the Fertile Crescent 1516-1922*, Ithaca 1966, 102-33.

The years after 1804 saw a rise in the power of Bashīr II Shihāb, who pursued the aim of making himself an autocratic prince, with a strongly centralised government, like Muḥammad ʿAlī Pasha in Egypt and the Ottoman Sultan Maḥmūd II [*q.vv.*] in Turkey. His policies, naturally involving higher taxation, were in 1820 to cause a revolt amongst the common people (the first *ʿāmmiyya*), compelling Bashīr to withdraw temporarily to the Ḥawrān. But in general, Bashīr's influence was felt widely in Syria. Even the great Turkish officials sought his intervention. Yūsuf, Pasha of Damascus (1807-10), implored his help against a threatened invasion of the Wahhābīs. Bashīr presided in Damascus at the installation of Sulaymān, Pasha of Acre and successor-designate of Yūsuf Pasha. In the middle of the general confusion, however, Muḥammad ʿAlī of Egypt was watching for an opportunity of adding Syria to his governorship of Egypt. ʿAbd Allāh Pasha, who succeeded Sulaymān at Acre (1818), undertook to give it him. He refused to allow the extradition of Egyptian *fellāḥīn* and the repayment of a million piastres. Summoned to contribute towards this sum by the Pasha of Acre, under whom was the Lebanon, the Christians of the Lebanon refused to pay. The rising of the Christians was a new feature in Syrian politics, but it was not to be the only one. Through contact with the Europeans, the Christians were becoming more assertive and enlightened, and they were learning their own strength. Taking as a pretext the refusals of ʿAbd Allāh Pasha, Muḥammad ʿAlī sent his son Ibrāhīm Pasha [*q.v.*] into Syria at the head of an army trained on European lines. Acre surrendered on 27 May 1832, after a siege of seven months. On 8 July at Ḥimṣ, Ibrāhīm routed the Turks. A little later he forced the pass of Baylān and entered Anatolia. A treaty (May 1833) assured Egypt temporary possession of Syria.

The new rule proved in many ways enlightened and tolerant. It admitted Christians to the communal councils; it favoured the abolition of measures humiliating to non-Muslims. It endeavoured to reform the police and the tribunals. The reclamation of waste and devastated land was encouraged, and agriculture encouraged; a considerable number of trees, especially olive and mulberry, were planted. On the other hand, it provoked discontent by introducing forced labour and conscription, even in the semi-independent regions of the Lebanon. Rebellions broke out among the Druze of the Lebanon and of the Ḥawrān, among the Nuṣayrīs and in the never properly-subjected hill region of Nābulus. Ibrāhīm exhausted himself in suppressing these risings. The Ottomans thought the moment had come for the reconquest of Syria. They were completely defeated (27 June 1839) at Nizib, north of Aleppo. European diplomacy then intervened at the instigation of Great Britain, which was disturbed by the ambitions of Muḥammad ʿAlī. British policy had at this time as its aims the maintenance of the Ottoman empire, the confinement of Muḥammad ʿAlī to Egypt and the extension of its influence in Syria. France had since the 16th century a historic role as protector of the Maronites and Uniate Churches of the Eastern Christians, hence Britain could only try to exert a parallel influence amongst the Druze, a policy which was never, however, very successful. A further element in the Levant was Imperial Russia which, by stretching the provisions of the Russo-Turkish Treaty of Küčük Kaynardjî (1774) [*q.v.*], claimed a protectorate over Greek Orthodox Christians in the Ottoman empire in general, which in Syria meant aid to the Orthodox communities of

the Antioch and Jerusalem Patriarchates.

The European powers banded together. An allied fleet shelled Beirut (September 1840). Acre surrendered in November, and Ibrāhīm Pasha agreed to evacuate Syria, successfully withdrawing his army of 60-80,000 men to Ghazza by January 1841. Ibrāhīm's collaborator Bashīr II Shihāb fell from power at this point, being deposed and sent into exile. A period of some twenty years' internal conflict opened in Lebanon, involving *inter alios* the great Maronite landowners and their increasingly restive peasantry, and a growing tension between the Druze and Maronites who had migrated from Kisrawān in central Lebanon to the Druze areas of southern Lebanon. In 1858-9 there took place the third *ʿāmmiyya*, a Maronite peasant revolt against the landlords in Kisrawān.

From the reign of Maḥmūd II [*q.v.*], the Porte had inaugurated a policy of administrative centralisation, and decreed the abolition of local autonomies and feudalities. After the departure of the Egyptians, it moved to Beirut, whose importance was steadily increasing, the administrative centres of the ancient *pashaliks* of Acre and Sidon, in order to prepare for the annexation of Lebanon. With the same object it declared the old line of princes of the Lebanon, the Shihāb Amīrs, deposed. The only result was to perpetuate anarchy there. The Christians who had fought against the Egyptians claimed to be treated on terms of equality to the Druze. In the southern Lebanon, several had acquired the confiscated lands of the Druze chiefs banished by Ibrāhīm Pasha. The latter, coming back from exile, demanded a return to the *status quo* and the restoration of their ancient privileges. In taking their side, Turkey paved the way for new conflicts and sanguinary fighting. The Syrian Muslims showed no less animosity to the Christians, whom Egyptian rule had partly enfranchised. They took no account of the intellectual and material progress made by the Christians, nor of the political equality promised by the rescripts of the sultans as part of the *Tanẓīmāt* [*q.v.*] reforms. The *khaṭṭ-i humāyūn* [*q.v.*] of Sultan ʿAbd al-Medjīd [*q.v.*] communicated to the Congress of Paris (1856), and tacitly placed under the guarantee of the Powers, scandalised Muslim opinion, but inspired confidence among the Christians. At Damascus and in the large towns, they took advantage of the occasion to enrich themselves commercially. A secret agitation began to stir up the Druze and Muslims, and waited for the events of 1860 to burst forth.

The Druze of the Lebanon, combining with their co-religionists of the Wādī 'l-Taym and of the Ḥawrān, spread fire and death through the villages of the Maronites, who were at that moment in turmoil in the aftermath of the peasant *ʿāmmiyya* of the previous year (see above). The anti-Christian movement reached Damascus, which the Muslims pillaged and then set fire to the prosperous Christian quarter, after massacring its inhabitants. In this city, in the Lebanon, and in Beirut, the Turkish authorities intervened only to disarm the Christians, and their sympathies were clearly with the Muslim and Druze perpetrators of the massacres. Amongst the Muslims, the only effective protector of the Christians in Damascus was the exiled former leader of resistance to the French in Algeria, the Amīr ʿAbd al-Ḳādir b. Muḥyī al-Dīn al-Ḥasanī [*q.v.*]. Inevitably, there was a reaction from the European powers. France landed troops at Beirut in September 1860, and the Porte sent its Foreign Minister, Fuʾād Pasha to Damascus with draconian powers to suppress disorder. Soon afterwards, an international commission began work in Beirut and then Istanbul; the aim of British and Ottoman diplomacy was now to prevent a permanent extension of Napoleon III's influence in Syria and Lebanon. The outcome was an Organic Regulation/Règlement organique in 1861, which abolished the dual ḳāʾimmaḳāmate of Christians in northern Lebanon and Druze in the south and established an administration for Lebanon under a Christian *mutaṣarrif* directly responsible to the sultan. The system gave Lebanon peace for over half-a-century; for the subsequent history of the region, see LUBNĀN. In Syria, Fuʾād Pasha shot or hanged a considerable number of guilty soldiers and civilians, and a collective fine of £ 200,000 was levied on Damascus and another £ 160,000 on the province at large. After 1864 Syria was divided into two *wilāyets*: Aleppo and Damascus. In 1888 Beirut, the chief port, the centre of the commercial life of Syria, was made a separate *wilāyet*.

Syria now gradually began to enter the modern age. The ports of Beirut and Jaffa were improved; the main ports and cities were in the 1860s linked by telegraph with Istanbul and Europe; a postal system was introduced; carriage roads were constructed between Alexandretta and Aleppo, Beirut and Damascus, and Jaffa and Jerusalem. The improvement in communications made possible increased centralisation of the Ottoman administration, with curbs on Bedouin brigandage and increased security. Such measures as these, plus the opening in 1869 of the Suez Canal, contributed to an increase of commercial confidence and activity, although trade was temporarily affected by the American Civil War and the Austro-Prussian and Franco-Prussian Wars. Eventually, too, railways appeared; with the exception of the north Syrian section of the Berlin-Baghdād railway and the Pilgrimage line from Damascus to Medina, financed by the Sultan ʿAbd al-Ḥamīd II and internal Ottoman contributions [see ḤIDJĀZ RAILWAY], these were largely constructed with French capital. Nevertheless, it was in the post-1860 period that emigration—mainly of Christians—above all from Lebanon, and from Syria, grew, a good proportion of it to the New World (for the Arabic literature of this diaspora, see MAHDJAR).

Lebanon and Syria also became the focuses of the Arabic literary revival known as the Nahḍa [*q.v.*]. Since the 17th century, the Christians of Syria had had presses for printing works in Arabic and, for the Eastern Churches, for printing religious and liturgical works in both Arabic and Syriac; a bilingual Psalter appeared in 1610 from the press at the monastery of St. Anthony at Ḳuzḥayya in Lebanon, and a Melkite press started up at Aleppo in 1706 [see MAṬBAʿA. B. 2]. In the 19th century organised Protestant Christian missionary work came to Syria, with American Presbyterians working from Beirut and Anglicans from Jerusalem. The Americans organised their converts into the Syrian Evangelical Church, with an Arabic press at Beirut in 1843, and their activity culminated in the foundation in 1866 of the Syrian Protestant College, after 1923 the American University of Beirut. The Jesuits, for their part, set up the Imprimerie Catholique at Beirut in 1853 and founded the Université de St.-Joseph in 1875. Both Universities were to make distinguished contributions to the revival of Arabic studies and to the training of an Arab intellectual élite throughout the Near East. Towards the end of the century, when Roman Catholic and Protestant missionary efforts amongst the Christians of Syria seemed to be reducing the Orthodox representation there, Russians interested in the Near East and, especially, in Jerusalem, founded in 1882 the Imperial Orthodox Palestine Society, which functioned until the Russian Revolution of 1917. Its

work included the running of village and urban elementary schools in Christian areas and some colleges; the *Mahdjar* writer Mikhā'īl Nu'ayma [*q.v.*] received his first education at the Russian school in his Lebanese home village of Biskinta, eventually going to study in Russia itself. See on this Russian religious and cultural interest in the Near East, D. Hopwood, *The Russian presence in Syria and Palestine 1843-1914. Church and politics in the Near East*, Oxford 1969.

Whereas the missions and schools in Syria and Lebanon aimed at making converts from the indigenous Eastern Christian Churches or at educating them, the Anglican Mission at Jerusalem aimed at converting the Jews of Palestine. The Jews of Syria did not, in fact, experience a national, cultural and educational revival as did the Greeks, Armenians and other indigenous Christian Churches of the Ottoman empire during the 19th century, and lost social and economic ground to these last. The emancipation of the Jews in Western and Central Europe did, however, lead to the appearance of protectors for the Oriental Jewish communities. Thus Sir Moses Montefiore visited Palestine several times, and intervened in 1840 to protect the Jews of Damascus after an accusation of ritual murder; and in 1860 the Alliance Israélite Universelle was formed with the aim of promoting Jewish education, primarily in the Islamic lands. Above all, in connection with the Jews, there begin in the last two decades of the century the rise of Zionism and Zionist immigration into Palestine; and even though there were still only about 85,000 Jews in Palestine by 1914, their presence was to make itself felt. See N.A. Stillman, *The Jews of Arab lands in modern times*, Philadelphia and New York 1991, 3 ff., 80-91, 231-5.

With the conceding of the first Ottoman constitution in 1876 [see DUSTŪR. ii], Syria acquired representation in the newly-established assembly in Istanbul. In this first *Medjlis-i 'Umūmī* it was represented by nine persons: three Muslim Arabs and one Armenian Christian from the province of Aleppo, two Muslim and two Christian Arabs from the province of Sūriyya (the former province of Damascus), and one Muslim Arab from Jerusalem, all of them from leading families of Syria. Midhat Pasha [*q.v.*] was governor of Syria for some twenty months in 1878-80, and it was at this time that the first faint glimmerings of incipient, proto-nationalist Syrian Arab discontent against Ottoman Turkish rule became discernible, with hopes of some sort of autonomy for the region. A number of anonymous, handwritten placards appeared in the main cities of Syria at the end of Midhat's governorship, asserting some basic Arab rights. Such sentiments can nevertheless only have been those of a tiny minority, but were significant for the beginnings of Arab nationalism there, slow though this was to develop [see ḲAWMIYYA. 1]. Not long afterwards, such views were temporarily submerged by Muslim Syrian enthusiasm for 'Abd al-Ḥamīd's promotion of Pan-Islamism [*q.v.*], a movement in which several Syrians were prominent, such as Shaykh Abu 'l-Hudā from Aleppo, who promoted the sultan's claim to the universal caliphate, and the sultan's second secretary, Aḥmad 'Izzat Pasha al-'Ābid, who became involved in the project of the Ḥidjāz Railway. On the other hand, the Syrians 'Abd al-Raḥmān al-Kawākibī [*q.v.*], from Aleppo, and Muḥammad Rashīd Riḍā [*q.v.*], from Tripoli, voiced from the safety of Cairo opposition to 'Abd al-Ḥamīd's religio-political claims. The Ḥamīdian censorship covered all literary output, including even the textbooks used in foreign mission schools, and caused a considerable emigration of writers to Egypt and elsewhere.

Agitation for the restoration of the 1876 constitution was of course primarily associated with the "Young Turks" and the Committee of Union and Progress [see ITTIḤĀD WE TERAḲḲĪ DJEM'IYYETI], but the Syrian Arabs hoped for equal rights in the empire with the Turks, some degree of administrative decentralisation which would give Syria a hand in its own affairs, and recognition of the Arabic language at the side of Turkish in education and administration. The Young Turk Revolution of 1908 brought about the deposition of 'Abd al-Ḥamīd. The reinstated constitution of 1876 and its parliament were greeted in Syria with enthusiasm as the dawn of a new era, and societies were formed there to promote the Arab course within the Ottoman empire, such as the Arab-Ottoman Brotherhood (*al-Ikhā'*).

This illusion was of short duration. The Young Turks, whom the Syrians had trusted, were not long in resuming once more the process of turkicising begun by 'Abd al-Ḥamīd. With more method and continuity, they declared war against all who were Arab by race or language. They insisted everywhere in Parliament and in the government offices on the employment of Turks only, and removed the Syrians from high offices and important military commands. This provocative policy brought together for the first time Muslims and Christians in Syria. It awakened amongst all the desire to come to an understanding in regard to a common policy, and to take joint action. Their demands were limited to reforms of a decentralising nature. They asked that, in the allotment of public offices, regard should be had to the progress which had been made by Syria, the most civilised province of the Empire, and that in the imposition and spending of taxes regard should be paid to the needs of their country. They thought the time had come to grant it a certain administrative autonomy. It was the obstinacy of the Young Turks in rejecting these moderate demands which opened the door to separatist ideas, and finally convinced the Syrian nationalists (the Muslims amongst whom for long had had a lingering sympathy for the Ottoman sultan, especially after the disasters to the Ottoman-Muslim cause of the loss of Tripolitania to the Italians in 1911 and the loss of almost all the Ottoman Balkan provinces after the Balkan Wars) that their aspirations were unlikely to be fulfilled within the Empire.

On 29 October 1914 Turkey entered the First World War on the side of the Central Powers. It began by suppressing the administrative autonomy of Lebanon, and imposing on it a Turkish governor. Djemāl Pasha took into his own hands the government of all Syria with discretionary powers. He at once proceeded to hang the principal patriots, whether Syrian Muslim or Christian. Hundreds of others went into exile. Soon afterwards, famine and disease decimated the population, principally of the Lebanon. Energetic but presumptuous, dreaming of the conquest of Egypt, Djemāl proceeded unsuccessfully to attack the Suez Canal (February 1915). He now gave more attention to Arab opposition in Syria, arresting and deporting to Anatolia many notables and publicly hanging eleven Muslim leaders in Beirut, until diplomatic pressure from Turkey's ally Germany brought a relenting in what might well have proved a counter-productive policy. Perhaps as a sop to Arab opinion, Djemāl in 1915 founded the Ṣalāḥiyya College in Jerusalem under the Pan-Islamic enthusiast Shaykh 'Abd al-'Azīz Shāwīsh. But a second Turkish attack in August 1916 on Egypt failed, and British forces advanced into Ottoman territory as far as Ghazza, but were temporarily checked there. The Ottoman

forces in Palestine were now placed under the command of the German general Von Falkenhayn, but British forces under Allenby broke through at Beersheba.

By November 1917 the British, French and Italian forces of the Allies had become masters of the southern portion of Palestine and on 11 December, they entered Jerusalem, which the Turks had evacuated. The latter defended themselves for a further nine months on a line extending to the north of Jaffa as far as the Jordan. The decisive action took place on 19 September 1918, on the plain of Sarona near Ṭūlkarm. The forces of Allenby broke the Turkish front. It was a rout. At the end of the month the British forces, without meeting with any resistance, arrived in the neighbourhood of Damascus. The advance was delayed for a few days, in order to allow the Amīr Fayṣal, the son of the Sharīf Ḥusayn of Mecca, time to hasten from the remote end of Transjordania and to make on 1 October his entry into Damascus at the head of a body of Bedouins. On 31 October, the Turks signed an armistice. A week later, the last of their soldiers had repassed the Taurus.

(b) From the end of the First World War to the end of the Mandate.

The Sharīf Ḥusayn's son Fayṣal [see fayṣal i] hoped to establish an Arab kingdom in Greater Syria based on Damascus, on the basis of the exchange of correspondence in October 1915 between Ḥusayn and Sir Henry McMahon, the British High Commissioner in Egypt, which had defined how far the British were prepared to go in conceding Arab independence. But this had in effect been superseded by the Sykes-Picot Agreement of 16 May 1916, dividing Greater Syria into British and French spheres of influence, with an internationalised Palestine. The publication of the Agreement by the triumphant Bolsheviks in 1917 had not surprisingly caused the Sharīf and other Arab leaders to doubt the sincerity of the British government's undertakings, and assurances had also to be given to Ḥusayn concerning the significance of the Balfour Declaration of November 1917.

With the end of the War, the whole of Greater Syria was occupied by Allied troops, with British troops throughout the area, a small French force on the Levant coast and the Arab army of the Sharīf (now King of the Ḥidjāz) Ḥusayn in the interior. There were already grounds for conflict between the Arabs and the French government, since the latter regarded the whole of the northern half of Greater Syria as lying within its sphere of influence, as provided for in the Sykes-Picot Agreement, and did not consider itself bound by any British promises to its ally Ḥusayn. It was also influenced by the attitude of the Lebanese Christians, who had no desire to become part of an Arab kingdom under a Muslim monarch from the ruling family in the Ḥidjāz. Fayṣal's position in Damascus was affected by the Anglo-French Agreement of September 1919, which provided for the withdrawal of British troops from Greater Syria excluding Palestine. The action of a congress of Syrian notables meeting at Damascus in March 1920 in offering the crown of Syria and Palestine to Fayṣal was repudiated by Britain and France in favour of a mandate [*q.v.*] of Britain over southern Greater Syria (i.e. Palestine) and of France over the northern part (i.e. Syria and Lebanon). French forces under General Gouraud marched on Damascus, defeated the Arabs at Maysalūn [*q.v.*] in the Anti-Lebanon and entered Damascus on 25 July 1920. Fayṣal left for exile and, eventually, a new throne in ʿIrāḳ. The San Remo Conference duly allotted the mandates of Syria and Lebanon to France, confirmed by the League of Nations in July 1922.

In the early years of the French mandate, the frontiers of Syria were gradually delimited: those with ʿIrāḳ, Palestine and Transjordania by two Anglo-French agreements, but the more contentious northern frontier with Turkey, with its mixed population of Arabs, Turks and Kurds, was not finally settled until 1930, and was to have a substantial modification in 1939 when the so-called Sanjak of Alexandretta [see iskandarūn] was ceded to Turkey (see further, below).

Under the *de facto* control of the French High Commissioner Gouraud, Syria was officially proclaimed to be a "federation of Syrian states": the State of Aleppo, with its dependent Sanjak of Alexandretta; the State of Damascus; the "Territory of the ʿAlawīs", sc. Nuṣayrīs [see nuṣayriyya], centred on Latakia [see al-lādhiḳiyya]; and a Druze state in the Djabal al-Durūz with its centre at Suwayda (1921-2). But the system never came to life, and from 1 January 1925 there was established a unitary state of Syria, which was, however, to exclude the ʿAlawī and Druze territories and Greater Lebanon. Meanwhile, a preliminary census was instituted as a basis for the voting groups of the first general elections (to be conducted by indirect voting) planned by the new High Commissioner General Weygand in 1923. Excluding Greater Lebanon, the census revealed the following picture. The nomads in the district of Aleppo and of Damascus were not included in it. The state of Aleppo,

including the independent Sanjak of Alexandretta had 604,000 inhabitants. The number was made up as follows: 502,000 Sunnīs, 30,000 ʿAlawīs, 52,000 Christians of diverse denominations, 7,000 Jews and 3,000 foreigners. The state of Damascus contained 595,000 inhabitants, of which 447,000 were Sunnīs, 8,000 Ismāʿīlīs, 5,000 ʿAlawīs, 4,000 Druze, 9,000 Mutawālīs, 67,000 Christians of different denominations, 6,000 Jews and 49,000 foreigners. In the state of the ʿAlawīs, there were 60,000 Sunnīs, 153,000 ʿAlawīs, 3,000 Ismāʿīlīs and 42,000 Christians of different denominations, in all 261,000 inhabitants. The state of the Djabal al-Durūz was remarkable for the homogeneity of its population. There were 43,000 Druze against 700 Sunnīs, and about 7,000 Greek, Catholic or Orthodox Christians.

It is not easy to draw up a balance-sheet of the achievements and failures of the French mandatory power. On the positive side, there was the establishment of law and order; improvements in communications and harbour facilities; order was achieved in the public finances, with the budget generally balanced and, after 1933, the burden of the share of the Ottoman Public Debt which had fallen upon the mandated territories was at last paid off so that no public debt remained; some tentative steps towards land reform were made through the introduction of a modern system of land registration and a land survey, although the pattern of actual land ownership changed little and there was a very clear continuity in the high level of political and economic power of the Syrian landowning élite from late Ottoman times to the post-Second World War years. A system of state schools was created from almost nothing; the University of Damascus expanded and the Arab Academy in Damascus acquired a solid reputation throughout the Arab world. An Antiquities Service did sterling work in preserving both the ancient and the Islamic sites and monuments of Syria. In agriculture, there were moves to improve crops and produce, with substantial increases in cotton production and the export of citrus fruits. Irrigation works were undertaken, such as the completion of the first phase in 1938 of the Lake of Homs barrage, although achievements here lagged behind those of ʿIrāḳ in the same period. The world depression of the 1930s reduced Syria's potential as an exporter; there was a slowing-down of Lebanese and Syrian emigration as overseas countries closed their doors to immigrants, and remittances home by existing emigrants decreased sharply.

On the debit side, in the early years of the Mandate at least, France ran Syria as a colonial possession, with commercial and financial policies which benefited the mandatory power. French companies, banks and individuals were favoured by the grant of industrial concessions and the provision of subsidies, and the League of Nations' mandatory system requirements of free trade and open competition for the provision of goods and services circumvented, annoying France's European and American trade competitors and frustrating the indigenous population which suffered from the lack of competition. Local Syrian industries were not given adequate protection by the High Commissioner, and French customs policy favoured the import of French goods and furthered the decline of local industry and handicrafts, causing, e.g. unemployment in the towns amongst handloom weavers and silk spinners.

The great failure of French rule—one which was probably inevitable, whatever the mandatory power could have done or not done—was to win the approval of the bulk of the Syrian and Lebanese people. The nationalists, backbone of the movement for independence, were naturally intransigent, resenting what they saw as the encouragement of separatism and what they believed to be French financial dominance through the Banque de Syrie et du Grand Liban. Thus it was widely believed that the French deliberately drained the country of gold which it had possessed in Ottoman times. In 1925-6 there were local risings in northern Syria (under Ibrāhīm Ḥanānū) and in the Djabal al-Durūz (under Sulṭān al-Aṭrash), the latter spreading to the Druze areas of southern Lebanon and the district of Damascus as far as Ḥimṣ. The mandatory power had to revise the constitutional arrangements for Syria, although martial law, censorship and the special tribunals were not abolished till 1928, when a general amnesty was issued. An indigenous Syrian government, more acceptable to public opinion, after 1928 under the moderate nationalist Shaykh Tādj al-Dīn al-Ḥasanī, was installed, with elections for a constituent assembly. The drafting of a constitution began, one on Western lines and with provision (as in Lebanon also) for the representation of minorities and a unicameral legislative assembly. Because of disagreements between the more moderate majority in the assembly and the more extremist nationalist bloc, *al-Kutla al-Waṭaniyya*, under Ḥanānū, a constitution for the State of Syria was finally refused by the High Commissioner Henri Ponsot.

It was also hoped to institute a Franco-Syrian Treaty, on the lines of the Anglo-Iraqi Treaty which had terminated the British mandate over ʿIrāḳ, but the negotiations for this were likewise bedevilled by party disputes in the assembly, until in November 1934 the High Commissioner Comte Damien Charles de Martel adjourned the Chamber of Deputies *sine die*, with provision for rule by decree. As may be inferred from the turbulent politics of the period, there was a proliferation of political parties in Syria in the 1930s; see for these, ḤIZB. i, at III, 522-3. Not until 1936, when there came to power in France a left-wing coalition, the Popular Front, slightly more favourably disposed to Syrian and Lebanese aspirations than the outgoing government, were Franco-Syrian and Franco-Lebanese Treaties achieved, defining what were to be the relations between France and the local Arab powers after the end of the mandate and, in the meantime, handing over certain administrative functions from the High Commissioner to the Syrian government. The National Bloc achieved an overwhelming majority in the 1936 elections. Soon afterwards, the ʿAlawī and Druze regions were annexed to the Syrian State. But difficulties grew as Turkish claims to thc Sanjak of Alexandretta were increasingly pressed; separatist movements grew (in the Djabal al-Durūz, 1937-9; in the ʿAlawī region, 1939; and amongst the Kurds of the Djazīra, sc. in northeastern Syria, in 1937). The accession to power in France in 1938 of a less sympathetic government, which now feared for the long-term safety of the minorities in Syria, above all, of the Christians there, led to the failure of the French Parliament to ratify the 1936 Treaty. Within Syria, confidence in the National Bloc had ebbed, and political instability and insecurity in the country at large made it difficult to find a government acceptable to a broad spectrum of Syrian interests. Hence in July 1939 the High Commissioner Gabriel Puaux suspended the constitution and appointed a council of directors to rule by decree under his own guidance; at the same time, the separate administrations of the Druze and ʿAlawī areas, abolished in 1936, were restored, and a separate

administration created for the restive Djazīra.

The outbreak of the Second World War on 3 September 1939 marks the beginning of the last period in which the French could hope to do more than hold their position in Syria. The fulfilment of any of their aims as the mandatory power had to be abandoned for a policy of survival as a weak outpost of a metropolitan power soon to be largely occupied by the German enemy. The surrender of France in June 1940 found the French Army of the Levant obeying the order from Vichy to cease hostilities. The adroit and circumspect Puaux was recalled from Syria because of his tepid attitude towards Vichy policy, and replaced by the respected but defeatist General Henri Dentz, whose tenure of the High Commissionship was to be uniformly unfortunate. Local Syrian nationalists could not but be affected by contemplation of the French débâcle; some of the more extreme elements, as in ʿIrāḳ, began openly to look for an Axis victory as German propagandists proclaimed in Syria ostensibly pan-Arab and anti-Zionist policies. Economic hardship, involving food shortages and black market, price rises and unemployment contributed to popular discontent, with a general strike in Damascus and Aleppo and similar disorders in Lebanon in February 1941. A leader of the nationalist movement now emerged in the person of Shukrī al-Ḳuwwatlī.

Meanwhile, the attitude of General Dentz, on orders from Vichy, was made clear to the British High Command in Cairo: that France would not regard the appearance of German forces or aeroplanes in Syria, en route as reinforcements for Rashīd ʿAlī al-Gaylānī's [*q.v.*] pro-Axis régime in Baghdād, as a hostile act, whereas any British intervention would be opposed by force. No message could have been clearer. Britain reluctantly—because its Middle Eastern military resources were already highly stretched in opposing the Axis forces in North Africa and the eastern Mediterranean—decided to intervene, once it was clear that the French administration in Syria would not promise, as similar administrations in other parts of France's colonial empire had in fact promised, to remain neutral and to maintain a defensive stance (which would have been in accordance with the terms of the Franco-German Armistice). The Free French movement under General Charles de Gaulle had to be accommodated in any military measures, and forces under General Legentilhomme took part in the invasion of Syria which began on 8 June 1941 and was strenuously opposed by General Dentz's troops. Offers of help from the Germans and Italians were distasteful to Dentz and were refused by the Vichy government. He surrendered on 14 July, most of his troops being repatriated to France.

General Georges Catroux, de Gaulle's Délégué-Général in Cairo, had promised in leaflets dropped by air into Syria on 8 June that the mandate would be terminated and that the peoples there would become free and independent. In fact, it was going to be difficult to say when France's mandate ended; General Catroux did not transfer power to the Syrians till early 1944, and the obligations of the mandate could still be invoked by the French in the protracted negotiations leading to the final withdrawal of French troops in 1945-6 (see below). In these years, there were also to be tensions between the more adaptable Catroux and the intransigent de Gaulle, whose mind was closed to the new political and psychological realities of the Arab world, though both were to remain bitterly critical of what they regarded as British perfidy in encouraging Syrian national aspirations in an area regarded as a purely French responsibility. Britain was regarded by de Gaulle as hopelessly Arabophile, and the French authorities in Syria fought a long-drawn out, but ultimately unsuccessful, battle to concede the minimum towards independence and to retain for France as many rights and privileges there as possible.

Meanwhile, within Syria, there was intense political activity among the parties, in which the Communists (though at this point professedly favourable to the nationalist cause and the war effort) were making their name heard in both Syria and Lebanon. The Druze and ʿAlawī territories were in February 1942 re-transferred to Syrian authority, this time for good. Elections were held in the summer of 1943, entailing the decisive return of the National Bloc to power, and the Assembly elected Shukrī al-Ḳuwwatlī as President of the Republic of Syria (17 August). From December 1943, the French authorities ceased to challenge any constitutional changes which the governments of Syria and Lebanon might make, and in January 1944 the Assembly members took the oath of allegiance to a constitution which ignored all mandatory ties. Even so, disputes between the two sides continued, especially over Catroux's refusal to cede control of the Syrian Legion, the *Troupes spéciales*, recruited largely from the minorities and from rural Sunnī Muslims, and over the continued existence of French regular army garrisons. The despatch of Senegalese troops by de Gaulle to Beirut in May 1945 was regarded as an attempt to reinforce the French military presence, provoking a general strike, and demonstrations and armed clashes as far as Deir al-Zor, and entailing the French shelling and bombing of Damascus with hundreds of casualties. There followed a threat of British military intervention, since Britain was still at war with Japan and the Levant lay across supply lines to the East. Only in the summer did France begin at last to withdraw troops, a process not completed until April 1946. Inevitably, there was now no hope in the foreseeable future of any Franco-Syrian Treaty favourable to France. The Syrian government had announced its adherence to the League of Arab States [see AL-DJĀMIʿA AL-ʿARABIYYA, in Suppl.], formed in March 1945, and nominally declared war on Germany and Japan. But as events were to show in the post-War years, political stability was to elude the new, faction-ridden state.

(c) Independent Syria.

Syria in its contemporary borders, comprising the central parts of the historic *Bilād al-Shām*, was established under the French Mandate [see MANDATES]. It gained formal independence in 1943 and full sovereignty in 1946, when the last French soldiers left the country. According to its constitution, independent Syria was a parliamentary democracy. *De facto*, power was concentrated in the hands of the landlord and merchant class, and, increasingly, of the military establishment. The ruling élite made Syria stumble into the first Arab-Israeli war, and it largely failed to solve the country's domestic political and social problems.

From 1949, the country experienced a series of military takeovers and attempted coups. In the mid-1950s, Syria became the focus of a regional conflict concerning the establishment of a Western-oriented military alliance, the Baghdād Pact. Syria's neutralist stance made it subject to strong Western pressures. While failing to push Syria into the Pact, these pressures destabilised the country and contributed to its hasty and ill-prepared unification with Egypt in 1958. When the leadership of the so-established United Arab Republic (UAR) embarked on an outspokenly socialist course in 1961, launching a wave of nationalisations that included some of the largest Syrian establishments, a group of conservative Syrian officers assumed power in Damascus and terminated this first unification experiment in contemporary Arab history. Syria re-emerged as a sovereign state, with the political élite of the 1950s back in power for another year and a half.

On 8 March 1963, the *ancient régime* was overthrown by a group of young military officers with strong Arab nationalist and, in a large part, socialist convictions. The faction connected to the Arab Socialist Baʿth Party (*ḥizb al-baʿth al-ʿarabī al-ishtirākī*) soon asserted its power, and the Baʿth party became the ruling party in a quasi-single-party system. The "revolution" of 1963, as it was henceforward called, was followed by an unstable period of army-and-party rule. The régime ventured to put the country on what was understood to be an Arab socialist development path, thereby trying to liquidate the economic basis of the old ruling élite which they had already removed from political power. Land reform, initially introduced under the UAR, was considerably speeded up. In 1964 and 1965, after a series of violent clashes between the régime and conservative oppositional forces, a large number of industrial and commercial establishments was nationalised. The radical social policies of the régime and a no less radical rhetoric confronting both the West and the conservative Arab states left it regionally and internationally largely isolated; only relations with the Soviet Union and the other then socialist countries were expanded.

At the same time, the political leadership was internally divided into different factions, each having their own basis in the army and the party. Internal frictions broke up along both political and sectarian lines. In February 1966, a radical wing of the party, led by officers of mainly middle class, rural and minority, particularly ʿAlawī origin, gained the upper hand by military force. Caught in internal struggles, the régime had to face the 1967 war unprepared; Israeli forces were able to occupy the Golan heights [see DJAWLĀN] without major resistance.

In November 1970, after further years of open conflict within the power élite about internal and foreign policy directions, General Ḥāfiẓ al-Asad (born 1930), an ʿAlawī Baʿthist who had been Commander of the Air Force since 1964 and Minister of Defence since 1966, assumed power in another coup. In 1971, he was elected President of the Republic in an uncontested popular referendum. By the time of writing, he has been re-elected three times, last in 1991 for another seven-year term of office.

Only after Asad's takeover or "corrective movement" (*al-ḥaraka al-taṣḥīḥiyya* as it had since been called) did stable political structures emerge, enabling Syria to develop into a veritable regional power. Thus a parliament (*madjlis al-shaʿb*) was established in 1971; and the Progressive National Front (PNF) (*al-djabha al-waṭaniyya al-takaddumiyya*), an institutionalised coalition of the Baʿth party with a group of tolerated, smaller parties, was set up in 1972. In 1973 a new constitution was promulgated, largely tailored to suit the personal rule of President Asad, who also occupies the positions of Supreme Commander of the Armed Forces, President of the PNF, and Secretary-General of the ruling party. The parliament, elected once every four years, has to share its legislative functions with the President. Aside from the PNF parties, only individual candidates are allowed to stand for election; the Baʿth party is guaranteed an absolute majority. Any constitutional amendement needs the approval of the president. The political system is authoritarian; no major policy decision, particularly in the fields of foreign policy and security, can be taken without the President's personal involvement and consent.

Under Asad's rule, the socialist orientation of the first Baʿthist régimes, though maintained as a tenet in the rhetoric of the ruling party, has been gradually abandoned. The state was still supposed to lead economic development, but conditions for the private sector have been considerably improved from the early 1970s onwards. Rapid economic growth rather than social reform has become the main objective of development policies. Both the state economic sector and the bureaucracy, as well as the armed forces, have grown at unprecedented speed. The new régime has also re-arranged the foreign policy orientation of the country. Good relations with the socialist bloc were maintained, but the régime sought to improve its relations with the West and with the conservative Arab states and strengthened its ties with Egypt. In October 1973, Egypt and Syria launched a coordinated military attack against Israel. Though not resulting in a military victory, the October War (*ḥarb Tishrīn*)—proving Arab military capabilities and their ability to coordinate military action with economic pressure, namely the imposition of an oil embargo against Israel's international allies—has generally been viewed as a political victory of the Arab States. Syria was able to regain parts of the occupied Golan heights in the course of the US-sponsored troop disengagement negotiations following the war.

The combination of internal stability, national success, and economic growth made Asad enjoy a high degree of popularity and legitimacy for several years. Only from the second half of the 1970s did the régime have to face veritable domestic threats. General disenchantment with the régime's regional policies, particularly its open military involvement, from 1976, in the Lebanese civil war [see LUBNĀN], the spread of corruption and nepotism, unrestrained behaviour of the security forces, the sectarian composition of the régime's core, and growing social inequalities, all contributed to an increase of tension. Oppositional forces were not able to organise themselves politically and were thus driven into violence. In the years 1979-82 Syria experienced a situation close to civil war. The anti-régime opposition was led by Islamist forces, particularly the Syrian branch of the Muslim Brotherhood (*al-Ikhwān al-Muslimūn* [*q.v.*]), who tried and partly succeeded in giving the conflict a sectarian (Sunnī majority against ʿAlawī minority) character. The opposition was only crushed after a brutal crescendo in Ḥamāt, where in February 1982 government troops put down a rebellion by military force, destroying large parts of the city. In the summer of the same year, the Syrian army and air force suffered a heavy blow at the hands of Israeli forces in Lebanon. Though not driven out of Lebanon, the Syrian forces were unable to prevent Israel's laying siege on the Lebanese capital Beirut. In late 1983, President Asad suddenly suffered severe

health problems, and the country seemed to face an internal military struggle for his succession.

During the later part of the 1980s, the main threat to the régime and its legitimacy came from a deep economic crisis that revealed the flaws of the country's étatist development orientation. A gradual process of economic policy change began, giving form to a more market-oriented economy and reducing the relative weight of the state sector. A major liberalisation of the political system, as some domestic quarters had expected in the course of economic liberalisation, did not occur. Minor changes included the enhancement of the role of parliament and a relaxation of political repression.

By the mid-1990s (at the time of writing), the economic situation has improved, both as a result of the reform process and of increased oil production (by 1993, Syria's oil production ranged around 550,000 b/d). President Asad's régime no longer faces any domestic opposition worth mentioning. There has been some uneasiness, both domestically and internationally, concerning the eventual succession process and the prospects of a post-Asad Syria, but the régime itself is stable. Internationally, Syria has managed to cope with the loss of its main ally and arms supplier, the Soviet Union. It has considerably improved its relations with the USA both by participating in the US-led coalition against ʿIrāḳ in 1991 and by joining the US-sponsored Middle East peace process. Syria has also asserted its regional position. Its hegemony over Lebanon has been internationally tacitly accepted, and Syria is generally perceived as the key Arab state to a peaceful settlement of the Arab-Israeli conflict. By entering into bilateral negotiations with Israel in 1991, Syria clearly stated its preparedness to peace, its main condition for a peace treaty being the full withdrawal of Israel from the occupied Golan heights.

3. The Arabic dialects of Syria.

The *Bilād al-Shām* does not constitute, from a linguistic point of view, a genuine unity. The history of the population of the region has been such that nomadic and sedentary dialects are adjacent there or are in contact there, as is demonstrated by reciprocal borrowings of lexical and grammatical elements. Thus in zones of close contact, sedentarisation, rural exodus and urbanisation have given rise at all times to a range of dialectal varieties, and it is not always easy to determine whether it is a case of "sedentarised" Bedouin dialects, or of "Bedouinised" sedentary dialects. Contacts with the major neighbouring dialectal groups (Egyptian, Arabian, Mesopotamian) are, at least on the external fringes of the domain, no less tight. Today, tourism and above all, the spectacular diffusion of radio and television, promote contacts of a different type, the effect of which is tangible. Finally, the region has experienced the presence of languages which, while they have not in general directly affected the majority of the population, have nevertheless, to decidedly differing degrees, exerted an influence, on vocabulary at least: Turkish, in particular in the Ottoman period; and European languages, in the era of the Crusades (for a long time also through the specific intermediary of the *lingua franca*, at least on the shores of the Mediterranean) and more recently (French and English) during and after the colonial or mandatory period. Among others, these elements explain the wide dialectal diversity of the region; but its history and the emergence of the linguistic crucibles constituted by nation-states, and the augmented role of certain major metropolises, also confer on many Shāmī dialects, sedentary ones in particular, common elements, an intercomprehensibility which varies from mediocre to excellent, and a specificity in general immediately perceptible to those who speak them, as it is to speakers of dialects belonging to other groups.

Since pre-Christian times, and then stimulated by the Muslim conquests, "Arab" populations, admittedly most often linguistically Aramaicised, had been installed in the Fertile Crescent. It was probably from the 7th century onward that this presence became more significant; soon, apparently rapid Arabisation was definitively to establish Arabic as a majority language. Aramaic was to survive, however, in small enclaves, and is still in use today in three villages of the Anti-Lebanon: Maʿlūlā, Bakhʿa and Djubb ʿAdīn (Western Neo-Aramaic). If the influence of this substratum has sometimes been exaggerated, it is nevertheless real (see e.g. W. Arnold and P. Behnstedt, *Arabisch-Aramäische Sprachbeziehungen im Qalamūn (Syrien)*, Wiesbaden 1993; and see, for present-day Neo-Aramaic in Syria, MAʿLŪLĀ).

The dominant position of Arabic should not obscure the existence of other languages, spoken by diverse communities, in some cases long-established in the region: Kurdish and Armenian in particular, Circassian and Turkish. For the populations concerned (in most cases, when they have preserved their own language, bilingual and even trilingual), the relation between this heteroglossia and the components, religious or ethnic, of their identity, is complex, and its configurations diverse and essentially variable. Finally, the presence of Israeli Hebrew has, over several decades, created an unprecedented situation for the Palestinians "of the interior", many of them being bilingual.

Conversely, Shāmī emigrés have transplanted their dialects, into North and South America in particular, where they have thriven to varying degrees [see AL-MAHDJAR]. A particular case is that, currently moribund, of Kormakiti in Cyprus, the last representative of the dialects imported by Maronite communities of Lebanon, in several waves, the most significant dating back to the end of the 12th century. In Turkey, while the majority of the Arabic dialects still spoken belong to the *ḳəltu* group of Anatolian dialects, some are to be associated with Syrian dialects (Adana, Antioch, Alexandretta).

Documentation concerning the dialects of the *Bilād al-Shām* in their ancient form is largely defective; it is possible to gain an impression of them through their traces, direct or indirect, in texts in "Middle Arabic" (see the studies of J. Blau, in particular, *A grammar of Christian Arabic, based mainly on South Palestinian texts from the first millennium*, Louvain 1966), also by means of documents of various kinds: correspondence, archives, etc., written in the same type of linguistic register, phrase-books, Turkish-Arabic for example, accounts of European travellers, manuals written by missionaries, etc. The ancient texts which have survived most often comprise a poetry of dialectal or dialectalising expression, as such composed in a dialec-

tal *koinè* and in a literary register involving conventions and archaisms. While it is thus difficult to compile a history dialect by dialect, it is nevertheless possible to identify the major trends of their overall evolution (see, for the sedentary dialects, I. Garbell, *Remarks on the historical phonology of an East Mediterranean Arabic dialect*, in *Word*, xiv/2-3 (1958), 303-37).

Possibly in part as a result of the attraction exerted by the Holy Land, the Shāmī dialects are without doubt those for which documentation is most abundant. However, for the speech of some relatively important cities (Latakia, Homs, Tyre, Baalbek, ʿAkkā, Nablus, etc.) and for the majority of the dialects of rural (and of mountainous) areas, it is practically nonexistent. Among the works which have appeared since the composition of the article of H. Fleisch [see ʿARABIYYA, iii, 2. *The Oriental dialects*], the following should be noted: for Syria, M. Cowell, *A reference grammar of Syrian Arabic based on the dialect of Damascus*, Washington D.C. 1964; H. Grotzfeld, *Syrisch-arabische Grammatik*, Wiesbaden 1965, A. Ambros, *Damascus Arabic*, Malibu, Calif. 1977; A. Sabuni, *Laut- und Formenlehre des arabischen Dialekts von Aleppo*, Frankfurt a.M. 1980; B. Lewin, *Arabische Texte im Dialekt von Hama*, Beirut 1966; idem, *Notes on Cabali. The Arabic dialect spoken by the Alawis of "Jebel Ansariyye"*, Göteborg 1969; for Lebanon, H. Fleisch, *Études d'arabe dialectal*, Beirut 1974; F. Abu-Haidar, *A study of the spoken Arabic of Baskinta*, Leiden 1979; M. Jiha, *Der arabische Dialekt von Bishmizzīn*, Beirut 1964; for Palestine and Jordan, H. Blanc, *The Arabic dialect of the Negev Bedouins*, in *Procs. of the Israel Academy of Sciences and Humanities*, iv/7, Jerusalem 1970; J. Rosenhouse, *The Bedouin Arabic dialects. General problems and a close analysis of North Israel Bedouin Dialects*, Wiesbaden 1984; H. Palva, *Lower Galilean Arabic*, Helsinki 1965 (= *Studia Orientalia*, xxxii); idem, *Balgāwi Arabic*, 1-3, in *Studia Orientalia*, xl/1-2 and xliii/l (1969, 1970-1974); *Studies in the Arabic dialect of the semi-nomadic əl-ʿAdjārma tribe (al-Balqāʾ District, Jordan)*, Göteborg 1976; *Narratives and poems from Ḥesbān. Arabic texts recorded among the semi-nomadic əl-ʿAdjārma tribe*, Göteborg 1978; see also below, *Bibl.*

The problems of classification of the dialects of the region are far from being resolved. For the speech of sedentary populations, the division proposed by G. Bergsträsser in his *Sprachatlas von Syrien und Palästina*, in *ZDPV*, xxxviii (1915), 169-222, amended and supplemented on a number of points by later works, remains largely valid: three parallel bands from north to south (North Syria; Lebanon, Anti-Lebanon; and Palestine, Transjordan, Ḥawrān), with zones of transition of course (such as that of Galilee between the south of Lebanon and the rest of Palestine). J. Cantineau (*Remarques sur les parlers de sédentaires Syro-Libano-Palestiniens*, in *BSL*, xl [1939], 80-8) also identifies three groups, but different, since he takes as the sole criterion the realisation of the correspondent of *ḳāf*, q, ʾ, or ḳ. He has also made the observation that, on the other hand, the dialects are distinguished thus:

	A	B
1st pers. sing.	bəktob	baktob
3rd pers. masc. sing.	byəktob	bəktob

Type A is encountered essentially in the central zone, type B elsewhere, to the north (Aleppo) but most of all in Palestine and in Jordan, in urban speech (Jerusalem) but also rural and even Bedouin speech (Negev), if only to the extent that they have borrowed the "sedentary" pre-verbal particle *b(i)*-. This discriminant has validated to some extent the revived division of Bergsträsser, and the following groupings are generally accepted (*Handbuch*, 28 [see *Bibl.*]): northern Syria, Lebanon/central Syria, Palestine/Jordan.

Finally, J. Cantineau has also proposed a distinction between "differential" and "non-differential" dialects; in the first group, *a* in an unaccented open syllable is better preserved than the correspondents of *i* and *u*: *byiflaḥu* ("they work") v. *byikətbu* ("they write") in the first case, but *byifəlḥu* like *byikətbu* in the second (thus in the majority of Lebanese dialects of the centre-north).

But no typological feature has, any more than those mentioned above, an absolute discriminant value (especially so since, for each one, dialects can almost always be found which present a mixed system). Thus the diphthongs *aw* and *ay* are preserved in numerous Lebanese dialects but also, to the north of the Lebanese border, in a swathe of Syrian territory extending almost as far as Aleppo, or furthermore in a region of Ḳalamūn (Anti-Lebanon); mixed systems are common: diphthongs preserved only in open syllables (for example, *lān* "colour" v. *lawnu* "his colour" in Tripoli, or *ʿanayyi* "my eyes" v. *ʿaynēn* "eyes" in z-Zayni, an ʿAlawī mountain village); or only in slow utterance (*lento* forms v. *allegro* forms: *bayt* v. *bat* (Ez-Zrēriyye, South Lebanon). *Imāla* of *ā* is widespread, its manifestations diverse and sometimes quite complex: the two principal types of conditioning—influence of the consonantic environment, and influence of a neighbouring *i* or *ī* in the word (sometimes present in the past and currently lost)—are not mutually exclusive; only certain morphological categories can be affected (*ṭēleb* "having asked", *ṭāleb* "a student"); the conditioning can also be lexical (leaving borrowings untouched), or prosodic, etc. The two realisations of *ā*, [ä], ([ē], [ī]) and [ạ̄], ([ō], [ū]), usually in complementary distribution, can apparently in some cases be phonologised (*ʾām* "he has risen", *ʾạ̄m* "he has removed"). The short *a* is also often subject to *imāla*, in particular in the "feminine" termination *-a(t)* of nouns (according to the phonetic nature of the last radical consonant in the absolute state, but often without conditioning of this type in the construct state) and of the 3rd pers. fem. sing of the verb in thc perfect tense. These two phenomena are very common, the first especially, even in dialects where *imāla* is otherwise unknown. Interdentals are present in all Bedouin dialects, but also in numerous sedentary, rural and mountain dialects (Palestine and Jordan, South Lebanon, Alawite Mountains). The phenomena of pause (known elsewhere, in particular in Yemen) are widespread. H. Fleisch has studied these in the case of Lebanese dialects, but they are found elsewhere, and their diffusion in ancient times was probably wider still. Their manifestations are diverse and their systems varied, since lengthening and shortening of vowels, diphthongisation (Zaḥle: *la ʿind ẓalamë ʿindu x* "someone who owed x" v. *iẓa ẓẓalamey* "the man came") or reductions of diphthongs, changes of timbre, can be combined; the last syllable is not always the only one modified; in numerous dialects, the alternation between these forms "of pause" and "of context" is essentially a product of the rapidity of utterance (Ez-Zrēriyye: *mēddīn sharshif w-ʿa-sh-sharshaf ṭabaliyye* "they (fem.) have spread out a cloth, on which a small table is placed") and such alternation can therefore be dictated by morphology or by syntax: masculine or feminine form, absolute or construct state, etc. (*ʿəddīm* "before" vs. *ʾəddām bənto* "before his daughter" (same dialect)). Short vocalic systems are of diverse types, depending on whether *a*, *i* and *u* are encountered in all positions (numerous Palestinian dialects, etc.) or /i/ and /u/ are partially or generally coalesced (ə); this partial

coalescence can affect /a/ and /i/ (Kfar ʿAbīda) and many mixed systems are attested. All of this has an effect on the radical vocalisation of verbs. For the perfect, one of the most widespread systems has two types: *katab, n(i)zil*, which can characterise semantico-syntactical categories which are more or less clearly demarcated; but sometimes observed is a tendency towards the generalisation of one of the two types, or towards interchangibility. Examples of a different system are *katab, sh̲arib* (El-Karak). In the imperfect, the three vocalisations have relative distribution and frequency varying according to dialects; in some, consonantic environment or vocalic harmony have a determinant role (*yafʿal, yifʿil, yufʿul*). In morphology, the distinction of plural in the 2nd and 3rd persons of the verbal conjugation and of personal pronouns, general in Bedouin speech, is not uncommon in sedentary speech, at least in northern and central zones.

The examples, taken here primarily in the domain of phonology, could easily be multiplied and extended to morphology and to syntax. They would all show that a single discriminant—were it considered typically Sh̲āmī—is always encountered at different points of the domain (even outside it). It is only by combining typological features (clusters of isoglosses) that it is possible, region by region, to determine relatively coherent, but never absolute classifications. It is thus that Fleisch proposed to classify, on a provisional basis, the Lebanese dialects into four groups (north, centre-north, centre-south, south), on the basis of some twelve features. For Palestine and Jordan, Palva has provided, on the basis of eleven features, the following classification (*A general classification for the Arabic Dialects spoken in Palestine and Transjordan*, in *Studia Orientalia*, lv [1984], 359-76): urban dialects (*biʾūl*); rural dialects: (a) Galilee (*biqūl*), (b) central Palestine (*biḳūl*), (c) South Palestine, (d) north and central Transjordan and (e) south Transjordan (*bigūl*); and Bedouin dialects: (a) Negev (*bigūl*), (b) Arabia Petraea, (c) Syro-Mesopotamian sheep-rearing tribes and (d) North Arabian (*yigūl*). The rural dialects (c), (d) and (e) are distinguished among other ways through the realisation of *ḳāf*, *k* alone (e), *k* and *ts̲h̲* in phonetically conditioned complementary distribution (d: *dīts̲h̲*, pl. *dyūk*, "cock"), generalised *ts̲h̲* (c). This point also differentiates the Bedouin dialects: *k* (a and b); *k/ts̲h̲* (c); (d) has an alternation *k/ts̲*, and in parallel an alternation *g/dz̲* for *ḳāf*.

As regards the Bedouin dialects alone, these being present throughout the region, the situation is also complicated. Schematically, it may be stated that they belong to three groups of dialects: those of the major camel-riding nomads of Arabia (groups A and B in Cantineau's classification, *Études sur quelques parlers de nomades arabes d'Orient*, in *AIEO*, ii [1936], 1-116, ii [1937], 3-121); those of the Syro-Mesopotamian sheep-rearing nomads (Cantineau, group C), related to the *gilit* dialects of the Mesopotamian group (see ʿIRĀḲ, iv (a) Arabic dialects (H. Blanc)); and those of a "North-West-Arabian" (sub-)group (Palva, in *Festgabe für H.R. Singer*, Frankfurt 1991, 151-66), at least some of which show characteristics in common with the Bedouin speech of Egypt and of the Mag̲h̲rib.

If these classifications are so problematical, this is most of all the result, as has been stated above, of the constant contacts between dialects, between Bedouin and sedentary speech (cf. the presence in the Negev e.g. of the pre-verb *b(i)-*, a supremely "sedentary" feature) as within the confines of each of these two groups.

To this phenomenon, which has such important implications, two others should be added, also of a socio-linguistic nature:

– "koinéisation". This appears, in particular, under the influence of the prestigious speech of regional or national metropolises, which explains e.g. the constant expansion of the following realisations: [ʾ] of *ḳāf* and [ž] (or [dj̲]) according to cases) of *dj̲īm*, that of *sh̲u* "what?", of *hallaḳ* (and variants) "now", etc.

– "classicisation". The influence of the modern literary language applies to vocabulary and, through more or less modified borrowing, to some syntactical structures. Lexical borrowing, by "grafting" new nominal schemes into the dialects, supplies, through the creation of "doublets", a supplementary means of enriching vocabulary, and could lead to a recasting of the system of nominal derivation. In dialects where interdental spirants have coalesced with the corresponding occlusives, these borrowings have determined the integration of a new phoneme (/ẓ/) as well as the creation of doublets of another type (*dahab* "gold", *zahāb* "going, departure"; *ḍahr* "back", *ẓāhir* "apparent"; *tōr* "bull", *sawra* "revolution", etc.).

It is nevertheless possible to give examples of regional features which can, to a certain extent, be considered as characteristic since they are present on a sufficiently large scale, even if some of them are found episodically in other dialectal groupings, or if their presence is not general in the region. It is also possible to regard as characteristic those features which are not encountered (in the current state of knowledge) in any other dialectal group. *Pronouns*. In the series of personal pronouns, to be noted are forms of the type *hənne(n)* (3rd pl.), *-kon* (2nd pl.) and *-hon* (3rd pl.), explanation of which by means of the Aramaic substratum is not to be ruled out; in that of demonstratives, mention should be made of *hayy* "this one" (fem.) (and sometimes "this one" (masc.) and/or "that (thing or fact)"), and it will be observed that demonstratives deprived of the **ha-* element are very sparsely represented; in that of the interrogatives, (*ʾis̲h̲)sh̲u* "what" already mentioned; a current form of the reflexive is *ḥāl-*. *Genitive particle*. *Tabaʿ* (variable or invariable) seems to be peculiar to the region, but is not alone there (*gīt, sh̲īt*, etc.). *Pre-verb*. The pre-verb (durative, progressive, of concomitance) *ʿam(māl)* has numerous variants (probably of different etymologies): *ʿan, man, ma*,... (*ʿam yəktob* "he is writing these days", "he is in the process of writing", etc.). *Active participle*. In certain dialects an embryonic form of conjugation is found in the three persons of the feminine singular (*kams̲h̲īto* "she holds it" [Ḥawrān]; *sh̲āyəftīha* "you (fem.) have seen her" [Damascus]; *ʾana mās̲h̲əṭṭīk* "I (fem.) have combed your hair" [Dfūn, Lebanon]). On the other hand, the form *faʿlān* is quite often used, not only for verbs of quality, where it is generally the only one possible, and can in certain cases alternate, either freely or in terms of semantic value, with *fāʿel* (*samʿān-o* "I have heard it"). *Negation*. Alongside the forms *ma, ma* ... *sh̲(i)*, also found, although less known elsewhere, are *ʾa* ... *sh̲i* and *ø* ... *sh̲i*. Among *conjunctions*, worth mentioning is *ta* (<**ḥattā*) and its variant *tann-* + personal pronoun suffix "so that", "in such a way that", "that". *Auxiliaries and pseudo-auxiliaries*. Typical is *ba/idd-* + personal pronoun suffix "to wish" (*widd-* in its Bedouin version), also used for the expression of a type of future. *Ḥisin* "to be capable, in a position to" is an equivalent of *ḳidir*, as is *fi-* + personal pronoun suffix: *ma fina nrūḥ* "we cannot go there". Alongside *lissa-*, known elsewhere, also found is *baʿd* + personal pronoun suffix, "still, always" and other values (Lebanon). *Adverbs*. *Hallaḳ* (and numerous variants) "now" is very widespread (it is also found, at the edge of the region, at certain points east of the

Nile Delta), and easily borrowed by Bedouin dialects (from which, conversely, *hassā'* and *hal-ḥīn* (same meaning) are borrowed). Also to be noted are *'ala bukra* and *bakkīr* "early".

Vocabulary. This evidently varies in particular, as is to be expected, with the words which are most used. Thus according to the dialect: *rama, ligaḥ, lakkaḥ, ṭaraḥ, ẓatt, ḳazwal, ḥashaṭ, lahash, shalaḥ, ḥadaf,* "cast, throw". Among the words relatively characteristic of the region, it is possible to distinguish those which derive from the Arabic lexical stock but have become specialised, have phonological or morphological peculiarities, or are even canonical creations: *sammān* "grocer", *miswadda/sōdāye* "bottle", *ḍa'īf* "sick", *frāṭa* "small change (money)", *fāt* "to enter", *mākin* "solid", *'idjr* "foot, leg", *təmm* "mouth", *dashshar* "to leave", *fardja* "to show", *maṣāri* "money" (<sing. *maṣriyye*, name of a coinage formerly in use in Egypt), etc., from those which derive, more or less directly, from the Aramaic (Syriac) substratum, or from borrowings from Turkish (and from Persian): *dafash* "to push", *danaḳ* "to die of cold", *zūm* "sauce, juice, soup", *shawb* "heat (of the weather)", *ṣūṣ* (chick), *fāsh* "to float", *lakkīs* "late [adj.]", *narbīsh* (and variants) "pipe", *'andjak* "hardly", *bərdāye* "curtain", *būẓa* "ice", *sharshaf* "cloth", *'ashshi* "cook", *ġāl* "lock", etc. The evolution of vocabulary often faithfully reflects social and political changes, for example: *kəzlok-* > *'waynāt-* > *naḍḍārāt* "spectacles".

Writing dialects; dialectal literature. There is no doubt that dialects have always been written down, as is confirmed by the dialectising or dialectal literary works which are available for study (in Arabic script or in the Syriac script known as *karshūnī* [*q.v.*] which has long been in use in the Maronite community in particular) and the orthographical norms (still observed today) which have controlled their putting into writing, even though variations are noticed, according to which is the dominant influence: the classical norm and etymology or a closer adherence, deliberate or not, to dialectal linguistic realities.

In parallel with its measured and to some extent ornamental utilisation in the codified genres of dialectising poetry such as the *muwashshaḥāt* (see, e.g. M. Raḥīm, *al-Muwashshaḥāt fī Bilād al-Shām min nash'atihā ḥattā nihāyat al-ḳarn al-thāniya 'ashara*, Beirut 1987), the dialectal language is, today as yesterday, the means of expression of an entire literature, "popular" *and* learned, and, more broadly, of an entire culture, the importance of which is partially disguised by the scant legitimacy accorded to it. Its manifestations are diverse: poetry of various types (*zadjal, mu'annā, mawwāl/mawāliyā* and its divisions: *al-sab'a funūn*, etc.), sometimes (*'atābā*) sung (S. Jargy, *La poésie populaire chantée au Proche-Orient arabe*, Paris-The Hague 1970). The poetry of Bedouin tradition has its own genres, and remains the repository and transmitter of the memory of its society (among recent works reference may be made, besides Palva, *Narratives and poems*, which has already been mentioned, to C. Bailey, *Bedouin poetry from Sinai and the Negev, mirror of a culture*, Oxford 1991). In sedentary circles, to take just one example, the Lebanese *zadjal* has a long and rich history (M.I. Wuhayba, *al-Zadjal—ta'rīkhuhu, adabuhu wa-a'lāmuhu ḳadīm*[an] *wa-ḥadīth*[an], Ḥarīṣa 1952; J. Abdel-Nour, *Étude sur la poésie dialectale au Liban*, Beirut 1957, [2]1966). Since the beginning of this century, freed from ancient forms and from certain traditional themes which are still practiced elsewhere—including on television—this poetry has taken on a new appearance. It is also a dialectal form of expression which is used for the composition and transmission of tales and proverbs, and today the majority of theatrical pieces and the dialogues of films and serials on radio and television. The art of the song, very much alive, carries beyond the Bilād al-Shām the dialects of the region, sometimes in the texts of its best poets. Palestinians are carrying this on with militant songs. Until not long ago, dramas of the shadow-theatre with its hero Karakōz (*Nuṣūṣ min khayāl al-ẓill*, ed. S. Ḳaṭāya, Damascus 1977; M. Kayyāl, *Mu'djam bābāt masraḥ al-ẓill*, Beirut 1995; see also KHAYĀL AL-ẒILL), and until more recently still the story-tellers (*ḥakawātīs*), transmitters of the marathon tales which are the *sīras* [*q.v.*] of legendary heroes (Sayf b. Dhī Yazan, 'Antar, Banū Hilāl, Baybars, etc.) perpetuated, before a generally exclusively male audience, the tradition of a living patrimony. The language of these legendary tales, some of which were partially in verse, could be dialectal or mixed. All these works were put into writing, at least in the form of *aides-mémoires* for the professionals of popular literature, also probably for the gratification of a public which had a particular liking for this kind of material. Today, the cassette and the video-cassette are the perfectly appropriate supports for this literature which is primarily oral and thus presupposes the presence of an audience. Dialectal poetry is published, however, in newspapers and magazines especially in Lebanon, sometimes in specialised journals. Since the 1960s, however, the press has only exceptionally accepted satirical columns in dialectal language, which were hitherto published in reasonable quantities. Literary prose as such in dialectal language has made little impact, in spite of a few isolated attempts in former times (*Ḳiṣṣit Finyānus* by Shukrī al-Khūrī, São Paolo 1902, repr. Beirut [1929, etc., and 1952, with transcription and French tr. by E. Lator]; and *Rasā'il Shmūne* by Ḥannā al-Khūrī al-Feghālī, published in book-form by the *al-Dabbūr* review) or more recently (Yūsuf al-Khāl and Mūrīs 'Awwād).

Finally, attention should be drawn to the isolated attempt on the part of the Lebanese poet (in classical and dialectal languages) Sa'īd 'Aḳl (b. Zaḥle, 1912) to devise a transcription (in Latin characters) of the dialect, in which he published, besides certain of his own *dīwāns*, translations of works of universal literature, including classical Arabic, and a newspaper (see H. Grotzfeld, in *Orientalia Suecana*, xxii [1973], 37-51).

Bibliography: Given in the article. See also *Handbuch* = W. Fischer and O. Jastrow (eds.), *Handbuch der arabischen Dialekte*, Wiesbaden 1980; M.H. Bakalla, *Arabic linguistics. An introduction and bibliography*, London 1983. Numerous articles in the major orientalist reviews and, since 1978, in the *Zeitschrift für Arabische Linguistik* (Wiesbaden). To the works mentioned dealing with one dialect in particular, the following may be added: for Ez-Zrēriyye, J. Aro, in *AO* (Copenhagen), xxxix (1978), 32-125, xl (1979), 27-71; for El-Karak, H. Palva, in *Studia ... H. Blanc dedicata*, ed. P. Wexler, Wiesbaden 1989, 225-51; for Gaza, E. Salonen (I. in *Studia Orientalia*, li/10 (1979) and II. in *Acta Acad. Sc. Fenn.*, B 213, Helsinki 1980); J. Rosenhouse and Y. Katz (eds.), *Texts in the dialects of Bedouins in Israel*, Univ. of Haifa 1980; P. Behnstedt, *Der arabische Dialekt von Soukhne* (Syrien), 3 vols. Wiesbaden 1994; a *Sprachatlas von Syrien* by this same author is forthcoming. For studies of syntax, besides the still useful *Syntaxe des parlers actuels du Liban* by Mgr. M. Feghali, Paris 1928, and the work of M. Cowell already mentioned (for Syrian Arabic), attention may be drawn to J. Blau, *Syntax des palästinensischen Bauerndialekts von Bir Zēt*, Walldorf-Hessen 1960, A. Bloch, *Die Hypotaxe im Damaszenisch-Arabischen*, Wiesbaden 1965, and M. Piamenta, *Studies in the*

syntax of Palestinian Arabic, Jerusalem 1966. The *Dictionnaire arabe-français. Dialectes de Syrie, Alep, Damas, Liban, Jérusalem* of A. Barthélemy, Paris 1935-69, is supplemented by the very useful *Dictionnaire des parlers arabes de Syrie, Liban et Palestine* compiled by C. Denizeau, Paris 1960. Bedouin type dialects are still awaiting their dictionaries. Dictionaries or catalogues of words and dialectal expressions are regularly published in the countries of the region, where there is often concern to show that this vocabulary is largely based on sound classical origins. Also published there are collections of proverbs, of anecdotes, *dīwāns* of dialectal poetry, encyclopaedias of popular traditions often rich in information and in dialectal texts: the *Mawsū'at Ḥalab al-muḳārana* of M. Kh. al-Asadī (Univ. of Aleppo 1981-8), the *Mawsū'at al-fulklūr al-Filasṭīnī* of N. Sirḥān ('Ammān 1977-81), the *Ma'lama li 'l-turāth al-urdunī* of R. Ibn Zā'id al-'Azīzī ('Ammān 1981-) are excellent examples. For dialectal literature, besides the older works by G. Dalman, *Palästinischer Diwân*, Leipzig 1901, and E. Littmann, *Neuarabische Volkspoesie*, Berlin 1902, reference may be made to J. Lecerf, *Littérature dialectale et renaissance arabe moderne*, in *BEO*, ii (1932) and iii (1933), 47-175 (with a *Répertoire alphabétique des poètes dialectaux de Syrie* [= Syria and Lebanon]); M. 'Awwād, *al-Anṭūlūdjiya al-lubnāniyyi 'l-shi'r* ..., Beirut 1982. A collection of *zadjaliyyāt* of Ibn al-Ḳilā'ī (9th/15th century) has been edited by B. al-Djumayyil, Beirut 1982. (J. LENTIN)

SHĀMA (A., pl. *shāmāt*) "naevus, skin blemish, mole".

This term seems originally to have denoted the coloured marks on a horse's body, above all, where they are disapproved of (*T'A*, viii, 362 ll. 12-13). It is applied to all marks of a colour different from the main body which they mark, and to all black marks on the body or on the ground (*ibid.*, ll. 304). But from what we know at present in our texts, there is no difference between *shāmāt* and *khīlān* (sing. *khāl*) (the two terms are attested in Akkadian: cf. *ḫālu*, Bezold, *Babylonisch-Assyrisches Glossar*, Heidelberg 1926, 120, and *sāmūti*, Labat, *Traité accadien de diagnostics et pronostics médicaux*, Leiden 1951, 200 l. 7). These two terms denote the natural marks on a man's skin, on the face and the rest of the body, and the accidental marks, abcesses (*buthūr*) or freckles caused by an illness and presaging death (see *R. fi 'l-kalām 'alā 'l-khīlān*, ms. Bursa, Hüseyin Çelebi 882, fols. 61a-62b; *Ḳaḍāyā Buḳrāṭ fi 'l-buthūr*, ms. Köprülü 1601, fols. 245b-248a, used by Ps.-Djāḥiẓ, *Bāb al-'irāfa wa 'l-zadjr wa 'l-firāsa 'alā madhhab al-Furs*, ed. K. Inostrancev, *Materials in Arabic sources for the history of culture in Sasanid Persia* [in Russian], in *ZVOIRAO*, xviii [1907], text 3-27, Russ. tr. and study 28-120, see 116 ff., in a section called *Min kalām Buḳrāṭ fi dalā'il al-khīlān wa 'l-shāmāt*).

Ibn al-Nadīm, *Fihrist*, 314), cites a *K. al-Khīlān* and *K. al-Shāmāt*, written by a Byzantine (*Rūmī*) author called Mīn.s (Mīna/os ?). The first title apparently corresponds in Greek to a work called Περὶ σπιλῶν, which is said to have treated the subject of beauty spots, and the second one, to a work called Περὶ ὧν which is said to have dealt with natural marks on the skin. We know nothing of this last, but the first is the title of one of the two chapters surviving of a treatise attributed to Melampos called Περὶ παλμῶν and Περὶ ἐλαιῶν (see the ed. J.G.Fr. Franz, in *Scriptores physiognomoniae veteres*, Altenburg 1780, 501-9). If one concedes—as seems very likely—that Mīn.s is a corruption of Melampos, one of the two titles mentioned in the *Fihrist* must correspond to Περὶ παλμῶν and be translatable as *K. al-Ikhtilādjā(t)* [see IKHTILĀDJ], the exact term for palmomancy.

In the Arabic sources, the information on the *'ilm al-shāmāt wa 'l-khīlān* which can be found in Fakhr al-Dīn al-Rāzī (see Y. Mourad, *La physiognomonie arabe et le Kitāb al-firāsa de Fakhr al-Dīn al-Rāzī*, diss. Paris 1939, 10) and in Ps.-Djāḥiẓ (*op. cit.*, 7) is Greek in origin. Two texts, however, show that the Arabs knew this method of divination, which comes within the sphere of *firāsa* [*q.v.*]. The first is part of the ensemble of miraculous signs announcing the Prophet Muḥammad's coming (on these signs, see T. Fahd, *La divination arabe*, Paris 1987, 81-90). In the course of his first trip to Syria, at the age of 12, the monk Baḥīrā [*q.v.*] is said to have recognised in him the signs of prophethood (see Ibn Sa'd, i/1, 99-100, and also 101, where it is said that, at the time of his second trip, aged 15, another monk named Nestor allegedly recognised in Muḥammad the same signs). These signs were physical ones (al-Ṭabarī, i, 1124) and concerned the eye, the face and above all, the "seal of prophethood" (*khātam al-nubuwwa*) like the impression of a cupper's scarifying instrument (*athar al-miḥdjam*), according to Ibn Hishām, *Sīra*, 116) or an "apple" (*tuffāḥa*, according to al-Ṭabarī, i, 1125). This legendary feature at least confirms the fact that the Arabs knew that the Byzantines practised drawing omens from skin marks.

The second seems to show that they practised it themselves. Mu'āwiya b. Abī Sufyān [*q.v.*] married a woman from the Banū Kalb, and he had her examined by his wife Maysūn, mother of Yazīd. Maysūn discovered a beauty spot below her navel, and she interpreted it as presaging the fact that the head of her husband would fall on to that place. Mu'āwiya divorced her; Ḥabīb b. Maslama married her, then divorced her; finally, al-Nu'mān b. Bashīr [*q.v.*], the later governor of Ḥimṣ for Marwān b. al-Ḥakam, married her. When al-Nu'mān was beheaded for having joined the anti-caliph Ibn al-Zubayr, his head was set down in his wife's lap (*Aghānī*, xiv, 124).

Bibliography (in addition to references in the text): See Fahd, *La divination arabe*, from which the material for this article has essentially been taken. The art of drawing omens from skin marks (*umṣatu*), black beauty spots or moles (*ḫālu*), red birthmarks (*pēndū*), warts, pimples, marks from jaundice, freckles, scars and even hairs which grew, was well known to the Assyrians and Babylonians (see F.R. Kraus, *Die physiognomischen Omina der Babylonier*, *MVAG* 40/2, Leipzig 1935). For the Byzantines, see *inter alia* the *Book of beauty spots* attributed to Leo the Wise, in J. Nicolaides, *Les livres de divination*, Paris 1889, 87-8. (T. FAHD)

SHAM'A (A.), candle.

As a literary topos, the candle is poetically described in many "ekphrastic" epigrams in Arabic, especially from the later 'Abbāsid and post-'Abbāsid periods; in pre- and early Arabic poetry the topos appears to be absent. Poems by al-Ma'mūnī, al-Sarī al-Raffā' and Kushādjim [*q.vv.*] are among the earliest (see J.C. Bürgel, *Die ekphrastischen Epigramme des Abū Ṭālib al-Ma'mūnī*, Göttingen 1965, 254; Alma Giese, *Waṣf bei Kušāǧim*, Berlin 1981, 156, 263-5). A few other examples are found in al-Sharīshī's *Sharḥ maḳāmāt al-Ḥarīrī* (repr. Beirut 1979, ii, 87-8); many later examples were collected by al-Nawādjī [*q.v.*] in the chapter on candles, lanterns, lamps etc. in his *Ḥalbat al-kumayt* (Cairo 1938, 204-12 on the *sham'a* only; some passages in prose are included). Often the epigrams take the form of a riddle (see P. Smoor, *The weeping wax candle*, in *ZDMG*, cxxxviii [1988],

292, 299-301). A recurrent topos is the comparison of the candle to a lover, or *vice versa*: both are pale, thin, burning, shedding tears, being consumed, patiently and silently suffering, "awake" at night; occasionally the candle is likened to a slender girl or a bride, which alludes to the role played by candles at weddings. Several poems on the candle were made by Abu 'l-Faḍl al-Mīkālī [see MĪKĀLĪS], see al-Ḥuṣrī, *Zahr al-ādāb*, repr. Beirut 1972, 747-8; he may have influenced his contemporary, the Persian poet Manūčihrī [*q.v.*], who elaborately used the candle topos as the introduction of a well-known panegyric poem (see J.W. Clinton, *The divan of Manūchihrī Dāmghānī: a critical study*, Minneapolis 1972, 31-43; Muḥammad Muḥammad Yūnus, *Adab al-sham'a bayna Manūčihrī al-Dāmghānī wa-Abi 'l-Faḍl al-Mīkālī*, in *Fuṣūl*, iii/3 [1983], 128-38).

Another topos involving the candle is that of the moth (Ar. *farāsha*, P. *parwāna*) seeking its light and immolating itself in its flame: here the lover is not the candle (which stands for the beloved) but the moth. The image, with a mystic interpretation in which the candle, the Beloved, stands for God/Truth/Reality, is found in Arabic already in al-Ḥallādj (*q.v.* see his *Kitāb al-Ṭawāsīn*, ed. Massignon, Paris 1913, 16-17, in rhyming prose, with "lamp", *miṣbāḥ*, instead of "candle"). Although this topos of *baḳā'* through *fanā'* [see BAḲĀ' WA-FANĀ'] persisted in Arabic (see Muḥammad Mansour Abahsain, *The supra-symbolic moth in Arabic religious poetry from the late Ottoman period*, in *JAL*, xxiv [1993], 21-7), it proved very popular especially in Persian and Turkish mystical verse (see e.g. Annemarie Schimmel, *As through a veil: mystical poetry in Islam*, New York 1982, index s.v. "moth & candle"; H. Ritter, *Das Meer der Seele*, Leiden 1955, index *s.v.* "Falter", "Kerze"). It was through Persian, it seems, that the topos reached Europe, as e.g. in Goethe's poem "Selige Sehnsucht" (*West-östlicher Divan*, ed. H.-J. Weitz, Frankfurt a.M. 1981, 21).

The candle appears in a few literary debates [see MUNĀẒARA] in *maḳāma* [*q.v.*] form; for anonymous texts on wine *vs.* candle, see W. Ahlwardt, *Verzeichnis der arab. Handschr.*, vii, 554 (nos. 8592-3), Aḥmad al-Hāshimī, *Djawāhir al-adab*, Cairo 1319, 183-6. 'Abd al-Bāḳī b. 'Abd al-Madjīd al-Makhzūmī al-Yamānī (d. 743/1342, see Brockelmann, S II, 220, 237) wrote a similar debate between "aristocratic" candelabrum or candlestick (*sham'adān*) and humble lamp (*ḳindīl*); text in al-Nuwayrī, *Nihāyat al-arab*, Cairo 1929-, i, 124-9, and in 'Izzat al-'Aṭṭār (ed.), *Munāẓarāt fi 'l-adab*, Cairo 1934, 30-6.

Bibliography: Given in the article. On Persian literature, see J.T.P. de Bruijn, *EIr*, art. "Candle: imagery in poetry", with further references.

(G.J.H. VAN GELDER)

SHAMĀKHA [see SHĪRWĀN].

SHAMAN. In Persian poetry.

In Persian poetry, *shaman* is used as a synonym of *but-parast* "idolator"; quite often it occurs together with the word *ṣanam* "idol" (synonym of *but*) in one of the conventional poetic word pairs, or, less frequently, it is associated with *ātash* "fire". In both cases, there is no specific reference to shamanistic practises; *shaman* denotes rather an unspecific type of non-Muslim religious person. *Shaman* and *ṣanam*, however, may occur as the two poles of a love relationship and then serve as an image of the lover and the beloved or the mystic and God. Instances of the usage of *shaman* can be traced back to the earliest years of New Persian poetry. Although not among the most frequently used poetic words, it does occur in many Persian poetic texts, such as the *Shāh-nāma*, the *dīwān*s of Anwarī [*q.v.*], Ḳaṭrān [*q.v.*], the *Mathnawī*, ed. Nicholson, book 1, 829; *ibid.*, 2407, and *Dīwān-i Shams* of Rūmī [see DJALĀL AL-DĪN], etc.

The following example is taken from Abū Salīk of Gurgān:

In this time there is no idol more beautiful than you, and for you there is no idolator more tenderly loving than your slave.

(G. Lazard. *Les premiers poètes persans*, Tehran-Paris 1964, French text, i, 61, Persian text, ii, 21).

Bibliography: Given in the article.

(M. GLÜNZ)

AL-**SHAMARDAL** b. Sharīk al-Yarbū'ī, Arab poet of the middle Umayyad period, important for the history of hunting poetry [see ṬARDIYYA].

His life can be dated only approximately, an elegy on 'Umar b. Yazīd al-Usayyidī (killed 109/727-8) being the sole exact reference known so far (poem no. 2, ed. Seidensticker = no. 3, ed. al-Ḳaysī). His poems show that he was acquainted with several persons who played a minor political role, among them two prefects of police in Baṣra. As reported in the *akhbār*, he also had a personal encounter with the famous poet al-Farazdaḳ (died no later than 112/730 in Baṣra [*q.v.*]). No *dīwān* of his poetry seems to have existed; 41 poems and fragments (about 430 lines) are preserved in various sources. The most important genres are *ḳaṣīdas*, *marāthī* and *ṭardiyyāt*. The *ḳaṣīdas*, five in number, vary in length from 21 to 66 lines. Besides several shorter *marāthī*, an elegy of 43 lines on his brother Wā'il has survived which was held in high esteem by some transmitters of his poetry. The handling of thematic and formulaic conventions in his hunting poems is reminiscent of similar episodes in the *fakhr* of pre-Islamic *ḳaṣīdas* (Imru' al-Ḳays, Zuhayr, al-A'shā), but the *radjaz* metre is a new feature, as is the fact that the poems devote themselves exclusively to the one topic of hunting. The missing link between the pre-Islamic hunting episodes and the *radjaz ṭardiyyāt* of al-Shamardal and others in later times must be sought in *radjaz* poems like those of Abu 'l-Nadjm al-'Idjlī (died before 125/743 [*q.v.*]) in which a conventional *nasīb* is followed by a hunting episode (cf. E. Wagner, *Grundzüge der klassischen arabischen Dichtung*, ii, Darmstadt 1988, 46-55).

SHAMDĪNĀN, a mountainous district (*ilče*) in the present province of Hakkâri in south-eastern Turkey (previously in the Ottoman *wilāyet* of Vān). The name of the district and the district centre (old name: Nāwshār) is presently Turkicised as Şemdinli. The district is bounded on the north and northwest by the district of Yüksekova of the same province (comprising the previous districts of Gewar and Oramār), on the south and east by the 'Irāḳī and Persian borders. Local tradition derives the name of Shamdīnān from that of a certain Shaykh Shams al-Dīn, the alleged ancestor of the Kurdish dynasty of the 'Abbāsī Begzāde, which exercised power in the district until the mid-19th century. Four major Kurdish tribes inhabit the district: the Khumārū (Humaro) in the north, Zarzā in the east, Herkī in the west, and Gerdī in the south. Other sections of the last three tribes are settled in isolated pockets in Persian and 'Irāḳī Kurdistān. Until the First World War, there

was also a significant minority of Nestorian Christians living scattered among the Kurds here. In the late 19th century, Cuinet's sources estimated the population of Shamdīnān at 13,270 Kurds, 2,000 Ottoman Turks, 3,000 Nestorian Christians and 200 Jews; another source, the 1897 *sālnāme* for Vān, gives the figures of 14,547 Muslims and 2,034 non-Muslims. According to the 1990 census, the present population is just over 30,000.

In the course of the 19th century, the ʿAbbāsī Begzāde family lost their paramount authority over the tribes to a family of religious leaders, who had settled in the village of Nehrī (present name: Bağlar) near the district centre. This family, known as the Sādatē Nehrī, claimed descent from ʿAbd al-Ḳādir al-Djīlānī [*q.v.*] through the latter's son, ʿAbd al-ʿAzīz, who lies buried in ʿAḳra, northeast of Mawṣil. The family was affiliated with the Ḳādiriyya *ṭarīḳa*, until the sayyids ʿAbd Allāh and Aḥmad took initiations in the Naḳshbandiyya from Mawlānā Khālid and became his *khalīfa* (ca. 1820). Like other Kurdish Naḳshbandī *shaykhs*, the Sādatē Nehrī increasingly acquired worldly power as well, extending their influence well beyond Shamdīnān to the Kurdish tribes further south and east. Sayyid Aḥmad's grandson, Shaykh ʿUbayd Allāh, in 1880 led a large tribal rebellion, temporarily occupying a vast stretch of Persian territory to the west of Lake Urmiya, and apparently intending to establish an independent Kurdish state. The Ottomans later arrested him and sent him into exile to Mecca. His son, Muḥammad Ṣiddīḳ, soon returned to Nehrī and took his father's place as the most influential man of central Kurdistān, successfully outwitting ambitious tribal chieftains as well as rival *shaykhs* (see Dickson; Nikitine and Soane). Another son, Sayyid ʿAbd al-Ḳādir, settled in Istanbul after the Young Turk revolution and became the president of the first Kurdish association there as well as the president of the Shūrā-yi Dewlet. In 1925, following Shaykh Saʿīd's rebellion, the Kemālist authorities hanged him and his son Muḥammad. Muḥammad Ṣiddīḳ's son, Sayyid Ṭāhā, was more actively involved in Kurdish nationalist and anti-Turkish agitation, at one time cooperating with Simko in Persia and later joining the British in ʿIrāḳ.

Relations between the local Muslims and Christians rapidly deteriorated during the First World War, especially following the *djihād* declaration. In 1916 Russian troops occupied Shamdīnān, overcoming Kurdish resistance coordinated by Sayyid Ṭāhā and his cousins ʿAbd Allāh and Muḥammad, sons of Sayyid ʿAbd al-Ḳādir. Local Nestorians, recruited and armed by the Russians as advance scouts, took part in the Russian offensive. After the October revolution and the withdrawal of Russian troops, the Nestorians were expelled and fled to Urmiya. Here the British enlisted their services against the final Ottoman eastward offensive and later brought them to northern ʿIrāḳ. Following the Armistice (1918), a contest between the British and the Kemālists for control of the region continued. Sayyid Ṭāhā was invited to represent the region in the Kemālists' First National Assembly (1920) but declined, and two years later allied himself with the British authorities in ʿIrāḳ, who made him governor of Rawāndiz [*q.v.*]. The tribes of Shamdīnān nevertheless remained opposed to the British infidels and deaf to Kurdish nationalist appeals. There was a brief rebellion in June 1925, in response to the execution of Sayyid ʿAbd al-Ḳādir; his son ʿAbd Allāh, aided by warriors of the Gerdī tribe, briefly occupied the district centre of Nāwshār and killed six Turkish officers. Then he too fled to British-controlled territory. At the final settlement of the border between ʿIrāḳ and Turkey in 1926, Shamdīnān came to Turkey, and the neighbouring districts of Bārzān and Brādōst, with which it had always had close relations, to ʿIrāḳ.

SHĀMĪ, NIẒĀM al-DĪN (or Niẓām-i Shāmī), Persian littérateur and chronicler of the late 8th/14th-early 9th/15th centuries.

His *nisba* (Shāmī < Shanbī) suggests that he was born in Shanb-i Ghāzānī, a suburb of Tabrīz. When on 20 Shawwāl 795/29 August 1393 Tīmūr-i Lang arrived before Baghdād, Shāmī tells us, he was the first of its inhabitants to come and submit to him (*Ẓafar-nāma*, i, 139). On his way to the Ḥidjāz not long before the conqueror's attack on Aleppo in 803/1400, Shāmī was detained by the authorities in Aleppo, who suspected him of spying on Tīmūr's behalf, and was thus an eye-witness of the siege (*ibid.*, i, 227, ii, 160). Brought before Tīmūr a second time following the city's capture, he appears to have remained in his entourage. In 804/1401-2 Tīmūr ordered him to compose a history of his conquests in a clear, unadorned style which would render it intelligible to all readers and not merely to a select few (*ibid.*, i, 10-11). The work was presented to Tīmūr around Shawwāl 806/April 1404. The title *Ẓafar-nāma* is not found in the original recension (Istanbul ms. Nuru Osmaniye 3267) utilised later in the compilations of Ḥāfiẓ-i Abrū [*q.v.*], but only in a second version dedicated to Tīmūr's grandson ʿUmar Bahādur (British Library ms. Add. 23980). Shāmī, who after Tīmūr's death in 807/1405 had probably entered ʿUmar's service, was dead, according to Ḥāfiẓ-i Abrū, by 814/1411-12 (*Dhayl*, 430). He enjoyed a high reputation among contemporaries for his literary skills: Sharaf al-Dīn ʿAlī Yazdī, in his own *Ẓafar-nāma* (ii, 571), calls him one of the most accomplished writers of his age.

SHĀMIL (1212-87/1796-1871), Dāghistānī leader of the Muslim resistance to the Russian conquest of the Caucasus from 1250/1834 to 1276/1859.

Shāmil's biography and his ghazawāt

Born in the village (*awul*) of Gimrāh (Gimrî) to a family of an Avār freedman, Shāmil was named ʿAlī at birth. A sickly child, who was often ill, his original name, according to a local belief, was changed to Shāmūīl (i.e. Samuel) to "repel" sickness. This was the name Shāmil used in letters and official documents. Contemporary sources, however, styled him Shāmil,

or Shamīl—the name under which he became known in Russia and the West. Already in his youth he overcame his ailments and grew into an exceptionally strong, tall (over six feet) and athletic young man, famed for his fencing skills, bravery, and horsemanship. In addition, he had an acute interest in, and talent for, religious learning. By the age of 20 he had successfully completed an elementary course of Arabic grammar and rhetoric under the guidance of renowned Dāghistānī *ʿulamāʾ*. He then proceeded to study Ḳurʾānic interpretation, *ḥadīth*, *fiḳh*, and *kalām* with his friend and distant relative Ghāzī Muḥammad (Kazi Magoma), who also introduced him to the Ṣūfī teachings of the Naḳshbandiyya-Khālidiyya *ṭarīḳa*, which were propagated in Dāghistān by Muḥammad al-Yarāghī and Sayyid Djamāl al-Dīn al-Ghāzī Ghumuḳī. Unlike the otherwordly-oriented and quietist Djamāl al-Dīn, Ghāzī Muḥammad and his younger friend were anxious to enforce *sharʿī* norms actively among the mountaineers committed to their tribal customs (*ʿādāt*). Presenting themselves as religious reformers, they attacked such widespread vices as drunkenness, the use of tobacco, "indecent" intermingling of the sexes, merry pastimes with music and dancing, etc. With the Russian forces inexorably closing in on Dāghistān, Ghāzī Muḥammad, against the express wish of his *shaykh* Djamāl al-Dīn, added to this programme the call for *djihād* [*q.v.*] against the infidel Russians. When in late 1829 several Avār communities proclaimed him the first *imām* of Dāghistān, Shāmil became his trusted lieutenant. In 1832, after three years of fierce fighting, Ghāzī Muḥammad and his closest followers, known as *murīdūn* (Russ. *myuridī*), were surrounded and slaughtered in their stronghold at Gimrāh—an episode in which Shāmil was one of only two survivors. Under the second *imām*, Ḥamza(t) Bek, Shāmil continued to wage a pitiless struggle against the local nobility and their Russian backers. Following Ḥamza's assassination in 1834 by the vengeful Avār notables, Shāmil was unanimously recognised as the third *imām* of Dāghistān by Avār *ʿulamāʾ* and dignitaries at ʿAshilṭa. In 1834-6, despite the stiff resistance of the local ruling families and the continuing Russian intervention, he managed to establish firm control over most areas of Dāghistān. His inordinate military talents were recognised by the Russian commanders, who failed to subdue the territories under his sway and on several occasions had to sue for peace. As a result, his reputation as the successful leader of *djihād* spread far and wide, making him "enemy number one" of the Russian military administration of the Caucasus. Apprehensive of Shāmil's growing influence on the warlike tribes of nearby Čečnya, the Russians launched a massive military expedition against his headquarters at Akhulgoḥ. After a series of bloody engagements en route, the Russian expedition finally besieged Shāmil and his men in their mountain fortress. When he refused to surrender after several weeks of fierce fighting, the irate Russians ruthlessly cut his garrison to pieces. Miraculously, Shāmil again made an almost incredible escape down the lofty cliffs under the enemy's very nose. Of the two wives with him during the siege, one was killed alongside his best men. Contrary to the Russians' expectations, the *imām*'s spirit was far from broken. Moreover, he found new powerful allies among the Čečens who were disgusted at the continued Russian encroachment on their independence. In a matter of months, Shāmil recovered and even expanded his power, whereupon he and his lieutenants delivered several shattering blows to the Russian forces in Čečnya and Avāristān in 1840-2. Exasperated by these reversals, Tsar Nicholas I ordered an all-out campaign to crush Shāmil's resistance in 1844. Organised and led by Prince Vorontsov, a 10,000-strong expedition against Shāmil's stronghold at Darghiyya was an almost total disaster. The *imām* had learned well the lessons of Akhulgoḥ and changed his strategy accordingly. With his prestige at its peak, Shāmil endeavoured to extend his rule to Ghabarṭa (Kabarda) and to unify all the mountain tribes of the Caucasus against the Russians. His ambitious plans, however, were frustrated by the brilliant strategy of General Freytag, the ineptitude of his lieutenant Nūr ʿAlī, and the resultant failure of the Ghabarṭians to join his army. More importantly, this campaign demonstrated the vast disparity between Shāmil's resources and those of the Russian Empire—a disparity that would eventually lead to his undoing. About the same time, the Russians realised the futility of the "one-blow" strategy they had previously pursued, and resorted to a more methodical, if less offensive strategy, known as "the system of the axe." It consisted in steadily encircling Shāmil with a network of defensive lines and military posts aimed at cutting him off from Čečnya, his major source of food supplies and manpower. From 1846 to 1849, the Russians erected fortifications in, and cut roads through, the impenetrable forests of Greater Čečnya. Simultaneously, they "pacified" the population of the fertile Čečen plains, chasing those who refused to submit into the barren mountains. In the meantime, another Russian expeditionary force attempted to eradicate Shāmil's strongholds in central Dāghistān, a goal for which they paid an enormous price in money, ammunition, and human lives. Their successes, however, proved short-lived. Once the Russian troops had withdrawn, the *imām* quickly rebuilt his fortifications and invaded southern Dāghistān, whose free communities had asked for his assistance against the oppressive Russian rule. In a dramatic reversal of roles, Shāmil invested several Russian fortresses, and was poised to achieve complete success if it had not been for the heroic stand of the small Russian garrison of Akhtī (Akhtī), which allowed the Russians to regroup and to repel Shāmil's levies. On the Čečen front, Shāmil established a line of defence and deployed against the Russian troops his cherished regular infantry units built on the model of the Ottoman *niẓām-i djedīd* [*q.v.*]. The latter were soundly defeated on 11 March 1851 by Colonel Baryatinskiy, forcing Shāmil to revert to guerilla tactics and thereby to relinquish any hope of defeating the Russian army in a pitched battle. Turning his attention to Dāghistān, Shāmil sent his best military commander and lifelong rival Ḥādjdjī Murād to Russian-controlled Ḳayṭāḳ and Ṭabasarān in an attempt to rouse their "pacified" populations. This campaign yielded little result, but instead further aggravated the long-standing distrust between the *imām* and his chief lieutenant. Sentenced to death on Shāmil's instance, Ḥādjdjī Murād defected to the Russians but was soon killed in an attempt to escape back to the mountains, relieving the *imām* of the onerous necessity to execute one of his commanders. In 1851-3, the hostilities, in which Shāmil took part personally, were centred on Čečnya with results generally favourable for the Russians. Throughout 1853, faced with the prospect of war with the Ottomans, the Russians were unable to capitalise on their earlier successes and diverted their attention and main forces to the Ottoman front, giving Shāmil a much-needed respite, which he spent in his fortified headquarters at Vedān (Vedeno). Rumours about an impending Russo-Turkish conflict infused the *imām*

and his followers with determination to continue their struggle under the leadership of, and with help from, the Ottoman sultan. Shāmil sent him several messages assuring him of the mountaineers' support and even promising to effect a junction with the Ottoman troops at Tiflis. Although somewhat offended by the tone of the sultan's replies, who treated the *imām* as his vassal, Shāmil remained committed to the person whom he considered the supreme ruler of all Muslims. Before and during the war, he kept the Russians on their tiptoes by raiding the territories under their control. On 15 July 1854, the *imām*'s forces led by his son Ghāzī Muḥammad swept in on the Alazān valley and Tsinandali, carrying off a rich booty and many prisoners, among whom were the grand-daughters of the last Kart'lo-Kakhet'i Tsar, George XII, the princesses Tchavtchvadze and Orbeliani. This raid, in which Shāmil took no direct part, brought him great notoriety not only in Russia but in the West as well. On the positive side, he was able to exchange the princesses for his elder son Djamāl al-Dīn, surrendered to the Russians as a hostage during the desperate defence of Akhulgoḥ in 1839. In addition, he received a hefty ransom of 40,000 silver roubles. On the other hand, this episode proved to be extremely damaging to his reputation in Europe, where his treatment of the royal captives was perceived by many as an act of "a fanatic and a barbarian with whom it will be difficult for us, and even for the Porte, to entertain any credible or satisfactory relations." Offended by the insulting reprimands he received from the Ottomans and their European allies in the aftermath of this affair, Shāmil relinquished any hope of obtaining their support in his struggle against the Russians. The result of the Crimean War, though by no means favourable to Russia, came as a shock to Shāmil and his following, for they could now expect no Ottoman help and were left face-to-face with their formidable foe. The Russian command, on the other hand, could now focus its undivided attention on the Caucasus. In the spring of 1857, the Russians led by the newly-appointed viceroy of the Caucasus, Prince Baryatinskiy and several talented generals, started methodically to mop up Shāmil's strongholds in Čečnya. As a result, Shāmil's power-base was drastically reduced, and the few Čečen warriors still loyal to him had to seek refuge in the mountains. The majority of the war-weary Čečens and many Dāghistānī communities abandoned him and submitted to Russian rule. Amidst the general despondency which overcame even his most committed followers, his pleas for help to the Ottomans, the British and the French were left without reply. With the rapid collapse of the mountaineers' resistance, the *imām* had no option but to retreat constantly in the face of a relentless Russian advance, abandoning one by one his fortified positions at New Darghiyya and Vedān. He made his last stand on top of Mt. Ghunīb surrounded by his family and 400 loyal *murīdūn*. In the face of inevitable destruction, he surrendered unconditionally to the Russians on 6 September (25 August Old Style) 1859.

In contrast to the earlier leaders of the anti-Russian *djihād* in the Caucasus, e.g., Shaykh Manṣūr Ushurma and Ghāzī Muḥammad, Shāmil received an unusually lenient treatment by the jubilant Tsar Alexander II and his subjects. With his "misdeeds" against the Russians all but forgotten, he was paraded through Moscow, St. Petersburg and many lesser Russian cities, repeatedly honoured by the Tsar, photographed, painted by artists, introduced to "high society", and praised in numerous books and articles. A "cultural hero" of sorts, he was everywhere greeted by admiring crowds and an enthusiastic nobility. For many Russians, still reeling from the Crimean debacle, Shāmil became an emblem for military and colonial victory which reaffirmed Russia's status as an enlightened, powerful and successful nation. Shāmil, genuinely touched by the attention and hospitality ac-corded to him by his former foes, seems to have accepted his role and even volunteered to swear allegiance to the Tsar. He constantly marvelled at, and praised the technological and cultural achievements of Russian civilisation and wrote letters to his former supporters, urging them to stop their resistance and to recognise Russian sovereignty. Upon completing his triumphant tour of Russia, he was assigned to residence in Kaluga—a town about 120 miles south-west of Moscow. He lived there in a luxurious mansion with his two wives, three surviving sons, four daughters and their families. In 1866, he was permitted to move to Kiev and in 1869 his request to make a pilgrimage to Mecca was finally granted. En route, he visited the Ottoman sultan ʿAbd al-ʿAzīz and the Egyptian *khidīw* Ismāʿīl, both of whom gave him a cordial reception and showered him with gifts and money. He died and was buried in Medina in Dhu 'l-Ḥidjdja 1287/March 1871. Of his three surviving sons (Djamāl al-Dīn died three years after he had returned to his father from Russian captivity), the eldest, Ghāzī Muḥammad, entered the Ottoman service and fought against the Russians in the Russo-Ottoman war of 1877-8. He died in Mecca in 1903. Shāmil's other son, Muḥammad Shāfiʿī, became a major-general in the Russian army and resided in Moscow and later in Kazan. His grandson by his youngest son Muḥammad Kāmil, named Saʿīd Shāmil, took an active part in the struggle for independence of Dāghistān from Soviet Russia in the 1920s.

Shāmil's state, army and administration

The military-theocratic state in which Shāmil was the supreme temporal and religious authority was geared to one overriding goal: uniting the mountaineers in their struggle against the "infidel" Russians and their local cohorts. Based on the institutions and precedents established by the first two *imāms* of Avāristān, Ghāzī Muḥammad and Ḥamza, the mountaineers' state grew much more complex and efficient under Shāmil's able leadership. The dual title *imām* and *amīr al-muʾminīn*, which featured in his letters and decrees, accurately reflected his functions as the principal interpreter and enforcer of the *sharīʿa* on the one hand, and as the political and military leader on the other. In addition, Shāmil was his own legislator. His instructions and ordinances on matters not explicitly covered by the *sharīʿa* formed the so-called *niẓām*, an administrative and military code similar to, and possibly modelled on, the Ottoman *ḳānūn* [*q.v.*]. Finally, Shāmil was also the chief justiciar and administrator of his state. In executing all these political, religious, legislative, administrative and judicial functions, Shāmil was assisted by a privy council, a *dīwān*, established around 1842. Stacked with his closest followers and confidants, the *dīwān* was convened for emergency consultations, but also relieved him of routine decision-making on matters of minor significance. Executive and judicial power in the areas under Shāmil's control rested with his deputies (*nāʾibs*), whose numbers grew from four in 1840 to about thirty in 1856. The *nāʾibs* were nominated personally by Shāmil and were responsible for law and order, tax collection, and enforcement of verdicts passed by local *ḳuḍāt*. During military campaigns, they served as field commanders and were responsible to Shāmil for fielding the required number of warriors and for general readiness for war.

The *nā'ib*'s status varied according to the military importance of the area under his jurisdiction. In the late 1840s, Shāmil introduced the post of *mudīr*, i.e. the senior *nā'ib*, who, apart from running his own domain, supervised and coordinated the activities of lesser *nā'ibs* in neighbouring regions. Normally, the *nā'ib* led up to 500 warriors into battle. Both the *mudīrs* and the ordinary *nā'ibs* were closely watched by the *imām*'s "secret agents" (*muḥtasibs*), who were answerable directly to Shāmil and reported to him on the activities, especially misdeeds, of his lieutenants. The *nā'ib*ships were divided into smaller units administered by the *nā'ib*'s subordinates, the *dibīrs*, or *ma'zūms* (Russ. *mazun*). These officials, in turn, had under their command village elders, elected by their respective communities. To enforce the *imām*'s orders, each *nā'ib* relied on a standing force of 20 to 50 (or occasionally up to 100) loyal guards called *nā'ib murīds* as opposed to *ṭarīḳa murīds*, who were considered "men of God" and normally did not participate in fighting. On the level of the *ma'zūm*, the *nā'ib murīds* were paralleled by the mounted "retainers" (*murtaziḳa*), supported by their communities.

While the executive and administrative powers were vested in the *nā'ibs*, they were not allowed to interpret the *sharī'a* or dispense *shar'ī* justice. For this they had *muftīs* and *ḳuḍāt* attached to them. In addition, these religious officials, whom the sources generally describe as *'ulamā'*, were responsible for maintaining the mosques, leading the prayers, delivering the Friday sermons, and for implementing the *shar'ī* precepts in their *nā'ib*ships. They also provided religious instruction, usually at the mosques, to the young. Being at least partially independent of their *nā'ibs*, the *'ulamā'* provided a much-needed check on the broad discretionary power given to their temporal counterparts.

The core of Shāmil's army consisted of the *nā'ib murīds*, the career fighters who had sworn an oath of personal allegiance to the *imām* and his cause and regarded themselves as his personal disciples. Fearless and loyal, the *murīdūn* were, in a sense, "warrior monks" who were always ready for martyrdom "in the path of God" and provided example and leadership for the less organised and often lukewarm local levies. According to different calculations, they numbered 400 to 500 men, of which 120 served as Shāmil's personal bodyguards, while the others were assigned to his *nā'ibs* or sent on special missions. The *murīdūn* were supported directly from the treasury of the *imām* or his deputies. This small élite corps was supplemented by the regular cavalrymen called *murtaziḳa*. Under Shāmil's orders, every ten households in the territory under his control had to furnish one fully-equipped horseman, whose personal needs as well as those of his wife and children were provided for by the other nine families. The *murīdūn* and the *murtaziḳa* constituted the backbone of Shāmil's army. The peasant irregulars who joined them during large-scale campaigns were poorly trained, far less reliable and therefore served primarily as auxiliaries. Finally, in imitation of the Ottoman *niẓām-i djedīd* [*q.v.*], Shāmil attempted to create a modern infantry corps, which, however, proved ineffectual and inferior to its Russian counterpart. In an attempt to achieve logistical independence, Shāmil established three gunpowder factories, which produced not only powder but mines, gunshells, and bombs. Shāmil's army also manufactured its own cannon, albeit of a rather low quality, to supplement the Russian artillery captured on the battlefield. Shāmil's regular troops donned special uniforms and were awarded special marks of distinction for courage. Cowards and deserters, on the other hand, were obliged to wear "marks of disgrace" until they "erased" them by military feats or loyal service.

To sustain this complex administrative and military machinery, Shāmil collected from his subjects a *zakāt* of approximately 5% to 7% in money and kind. In anticipation of a military campaign, an extraordinary tax in kind could be imposed on specific communities to meet the needs of the army on the march. Another source of state income was one-fifth of war booty, sometimes quite substantial, which under the *sharī'a* was set aside for the ruler. All fines, popularly known as *bayt al-māl*, along with escheatable or forfeited property went to Shāmil's treasury. The same holds true for the income derived from *awḳāf*. The lion's share of the income was spent on the military, on the upkeep of *'ulamā'* and mosques as well as on the support of Muslim emigrants who had fled from territories under Russian control (*muhādjirūn*) and settled in Shāmil's *shar'ī* state.

Shāmil and "Myuridism"

The issue of whether or not Shāmil's *ghazawāt* were related to, or motivated by, his Ṣūfī background has not yet found a satisfactory solution. As mentioned, Shāmil, like the other *imāms* of Dāghistān Ghāzī Muḥammad and Ḥamza(t) Bek, sought to establish a theocratic state that would unite the anarchic Caucasian mountaineers against the common enemy, the Russian Empire. Apart from being military leaders and religious reformers, all three *imāms* were also affiliated with the Khālidī branch of the Naḳshbandiyya [*q.v.*]. Their initiatic line stretched back to the Kurdish Shaykh Ḍiyā' al-Dīn Khālid al-Shahrazūrī (d. 1243/1827), who, in turn, belonged to the influential Mudjaddidī subdivision of the Naḳshbandiyya *ṭarīḳa*, founded by the Indian Shaykh Aḥmad Sirhindī (d. 1034/1624 [*q.v.*]). One of Khālid's disciples, Shaykh Ismā'īl al-Kūrdumīrī, propagated his teaching in the Khānate of Shīrwān [*q.v.*] in the late 1810s. His local deputy Shaykh Khāṣṣ Muḥammad al-Shīrwānī introduced the Khālidī *ṭarīḳa* into Dāghistān, where it found an enthusiastic following. Around 1823, his *khalīfa* [*q.v.*, section III] Muḥammad al-Yarāghī (Mulla Magomet) called on Dāghistānī Muslims to observe the *sunna* and the *sharī'a* strictly, to avoid *bid'a* (i.e. the *'ādāt*), to fight against the enemies of Islam, and, if defeated, to emigrate to Islamic lands. All these precepts were in full accord with the central tenets of the Khālidiyya, although it is not clear whether or not Muḥammad al-Yarāghī actually called his audience to *djihād* against the Russians. Plainly, his chief concern was to extirpate the "un-Islamic" customs and beliefs of the mountaineers and to replace them with the *sharī'a*. Paradoxically, it was not the militant Muḥammad al-Yarāghī, but his reclusive disciple, Sayyid Djamāl al-Dīn, who initiated Ghāzī Muḥammad and young Shāmil into the Naḳshbandiyya-Khālidiyya (Ḥamza Bek was a disciple of Ghāzī Muḥammad). Shāmil's emphasis on meticulous adherence to the *sharī'a*, his open hostility toward "the cursed Christians and the despicable Persians [i.e. the Shī'a of Iran]," his political activism and unswerving loyalty to the Ottoman sultan, seem to be in line with the Khālidī teaching as expounded by its founder and his Turkish followers. Yet, as Sayyid Djamāl al-Dīn's opposition to *ghazawāt* and insistence on inward self-perfection well shows, Shāmil's interpretation of the Khālidī tenets was not the only possible one. In the early stages of his career, Shāmil acted primarily as a religious reformer, first under Ghāzī Muḥammad, then in his own right, intent on making the *sharī'a* the only legal and moral code. His reformist activities inevitably set him on a collision course with the conservative Avār

nobility and, eventually, with the Russians, who, not unlike the contemporary French colonial administrators of Algeria, gave precedence to customary law over the *sharīʿa*, deeming it to be more "manageable." Hence the Russians were suspicious of the Dāghistānī *ʿulamāʾ* and were unwilling to accommodate them, relying instead on the corrupt and discredited nobility. The inflexibility of the Russian colonial officials was further aggravated by the Russian political and economic expansion in the Caucasus, which disrupted the traditional life-style and economy of the region, bringing about dislocation, and concomitant resentment, among the mountaineers. Under these circumstances, the *sharʿī*-oriented, sober tenets of the Naḳshbandiyya-Khālidiyya, combined with the viable institutional structure of *ṭarīḳa* Ṣūfism, provided a compelling solution to the mountaineers' problems. Although formally he was neither head of a *ṭarīḳa* nor even the supreme Ṣūfī master of Dāghistān (both titles were better applicable to Sayyid Djamāl al-Dīn, whose ascendancy in Ṣūfī matters the *imām* humbly acknowledged), Shāmil commanded the practically unconditional loyalty of his followers, the most devoted of whom viewed him as their personal *murshid* [*q.v.*]. In a sense, Shāmil's whole state was an extended *ṭarīḳa*, complete with such trappings of a Ṣūfī community as the collective *dhikr* [*q.v.*] chanted by his *murīdūn* on the move and in battle, the periodical *khalwas* [*q.v.*] practiced by the *imām* and his disciples, the miracles (*karāmāt* [*q.v.*]) ascribed to him by the followers, the supererogatory prayers (up to 20 times a day, according to some testimonies) he assigned to the *murīdūn*, the constant spiritual link (*rābiṭa* [*q.v.*]) which Shāmil maintained with his closest disciples, and, finally, his communications with the spirit of the Prophet to solicit the latter's advice. All this, however, is true only of Shāmil's retinue in Darghiyya and Vedān. Outside this immediate circle of followers, and for the overwhelming majority of his subjects, Shāmil was a venerated, and often fearsome, sovereign and military leader who ruled with an iron fist over a host of diverse and recalcitrant tribal communities, traditionally opposed to any state control. It is in his ability to weld the mountaineers together for a common goal, rather than in his activities as a Ṣūfī master (for which he had little time anyway) that one should look for his major achievement. Therefore, the Russian and Western historians who described Shāmil's movement as "*myuridism*" were to some extent justified in setting it apart from ordinary Ṣūfism. In many respects, his *ghazawāt* bear striking resemblance to the other contemporary Ṣūfī-based movements, notably the Ḳādiriyya [*q.v.*] of Algeria and Sudan and the Sanūsiyya [*q.v.*] of Cyrenaica. For each of these movements, Ṣūfism provided a handy organisational vehicle, rather than their true motivation, which should be sought elsewhere.

Shāmil's legacy

Already in his lifetime, Shāmil became a great media event, which generated a vast corpus of scholarly discourse and Romantic literature. From 1854 to 1859, 38 full-size books (not to mention innumerable articles, poems and news accounts) dealing with Shāmil were published in the West alone. In Russia, the volume of writings on Shāmil and his movement was, of course, much greater. In line with the fashion of the day, this literature depicted Shāmil as a "noble savage" and a typical hero of European Romanticism. As time went on, the public interest in him began to subside, giving way to a more balanced academic evaluation of his personality and of the Caucasian wars as a whole. During the Soviet period, Shāmil once again became an object of intense study and of heated debate over the nature of his movement. In accordance with the Marxian concept of class struggle, the Soviet historians of the 1920s and 1930s portrayed him as a hero of revolutionary struggle, a fearless fighter against the colonisation of the Caucasus by Tsarist Russia. In the 1950s, however, the Communist Party of the Soviet Union launched a campaign against so-called "bourgeois-nationalism", as a result of which Shāmil's role underwent a radical revision. In a remarkable *volte-face*, Soviet historians condemned him as the leader of a "reactionary and nationalistic movement in the service of English capitalism and the Turkish sultan." They argued that by fighting against the Russians, Shāmil became a hindrance to progress, in so far as the incorporation of the "backward" and "feudal" Caucasus into a technologically-advanced Russian Empire was an "objective historical necessity" and the only way to develop its culture and economy. The debate over Shāmil's role reached its peak in 1956-7, whereupon it was forcibly suppressed by the official condemnation of the *imām* as a thoroughgoing reactionary and a religious fanatic. The official viewpoint, however, was not to everyone's liking, and a covert campaign to rehabilitate Shāmil, spearheaded by some Dāghistānī scholars, continued for several decades. With the advent of *perestroika* and *glasnost* in 1986, Shāmil's contribution to the history of the Caucasus was again drastically revised. Today, Shāmil is totally rehabilitated and is celebrated by most of the Dāghistānīs and the Čečens as their greatest national hero. Symbols and slogans associated with the *imām*'s resistance to the Russian domination took on a new life during the Russo-Čečen conflict of 1994-5, when they were appropriated and re-defined by the supporters of President Džohar (Djawhar) Dudaev.

Bibliography: For Shāmil's own view of himself and his movement, see A. Runovskiy, *Zapiski o Shamile*, St. Petersburg 1860, repr. Moscow 1989. His biography, written in Arabic by his son-in-law, was published as *Khronika Mukhammeda Takhira al-Karakhi o dagestanskikh voynakh v period Shamila*, ed. A.M. Barabanov under the general editorship of I.Yu. Kračkovskiy, Moscow and Leningrad 1946 (a Russian translation of this work with the same title was published in Moscow and Leningrad in 1941); cf. Kračkovskiy, *Izbrannie sočineniya*, vi, Moscow and Leningrad 1960, 551-622. Many of Shāmil's letters and rescripts were edited by A. Runovskiy in *Voenniy Sbornik* (St. Petersburg), ii (1862), 327-86, and in *Russkiy Vestnik* (St. Petersburg), xii (1862), 642-85. The most comprehensive collection of historical documents related to Shāmil and his movement is *Dviženie gortsev severo-vostočnogo Kavkaza v 20-50kh gg. XIX veka: Sbornik dokumentov*, Makhačkala 1959; cf. also the editions of Shāmil's letters and his *niẓām* by R. Sharafutdinova in *Pis'mennie pamyatniki Vostoka* (Moscow), iii (1970), iv (1971); v (1972), viii (1975).

A helpful list of studies on Shāmil is M. Gammer, *Shamil and the Murid movement, 1830-1859. An attempt at a comprehensive bibliography*, in *Central Asian Survey* (London), x/1-2 (1991), 189-247; see also idem, *Shamil in Soviet historiography*, in *MEJ*, xxviii/4 (Oct. 1992), 729-77, and *Narodno-osvoboditel'noe dviženie gortsev Dagestana i Čečni v 20-50kh godakh xix v. Vsesoyuznaya naučnaya Konferentsiya*, Makhačkala 1989. For Shāmil's literary image in 19th-century Russia and the West, see T.M. Barret, *The remaking of the Lion of Dagestan*, in *The Russian Review* (Ohio), liii/3 (July 1994), 353-6.

For Shāmil's predecessors at the head of the anti-Russian struggle in the Caucasus, see. A. Bennigsen,

Un mouvement populaire au Caucase au XVIII^e siècle, in *Cahiers du Monde Russe et Soviétique* (Paris), v/2 (April-June 1964), 159-205; M. Gammer, *The beginnings of the Naqshbandiyya in Dāghestān and the Russian conquest of the Caucasus*, in *WI*, xxxiv (1994), 204-17.

Of the general histories of S̲h̲āmil's movement, J. Baddeley's *The Russian conquest of the Caucasus*, London 1908, and F. Bodenstedt's *Die Völker des Kaukasus und ihre Freiheitskämpfe gegen die Russen*, Frankfurt 1848, remain standard works in the field, at least as far as the military operations are concerned. A typical Soviet view of S̲h̲āmil's *g̲h̲azawāt*, based on 19th-century Russian sources, is given in N.A. Smirnov, *Myuridizm na Kavkaze*, Moscow 1961, cf. A. Yandarov, *Sufizm i ideologiya natsional'no-osvoboditel'nogo dviženiya*, Alma-Ata 1975. An illuminating, if somewhat idealised account of S̲h̲āmil and his movement, which was extensively used in the present article, is M. Gammer, *Muslim resistance to the Tsar. Shamil and the conquest of Chechnia and Daghestan*, London 1994. See also ČEČENS, AL-ḲABḲ, and DĀG̲H̲ISTĀN. (A. KNYSH)

SHAMMĀʿ (A.), candlemaker (synonymous with *s̲h̲amʿī*). The usage of the latter term as a *nisba* is illustrated by al-Samʿānī citing names of some candlemakers who were also counted among transmitters of Traditions during the 4th/10th and 5th/11th centuries. The early *ḥisba* manuals did not include a chapter on the candlemakers, who were only briefly cited by Ibn al-Ukhuwwa (d. 729/1329 [*q.v.*]). He noted the dishonest practice of the *s̲h̲ammāʿūn*, who mixed beeswax with vegetable oil and other substances, thereby lowering the quality of their product.

While discussing the *s̲h̲ammāʿ*, some Arab writers bring forth two names among the *Ṣaḥāba*, namely, ʿUthmān (b. ʿAffān) and Tamīm al-Dārī, the former in connection with candlemakers and the latter as the pioneer who brought a lamp (*ḳandīl*) from Syria and lighted it in the Prophet's mosque in Medina during the life of Muḥammad. This is cited as the origin of the practice of lighting lamps and candles in mosques since early Islamic history. Legends aside, the Umayyad caliph al-Walīd II (125-6/741-2) was credited with using candle illumination at the Umayyad court of Damascus. The common people of the ʿAbbāsid period used oil lamps (*ḳindīl*), while the rich and powerful could afford expensive candles. Al-Maʾmūn (d. 218/833) spent a lot of money on candle illumination during his marriage with Būrān bt. al-Ḥasan b. Sahl, and al-Mutawakkil (d. 247/861) spent a fabulous sum of 1.2 million *dirhams* for candles in royal palaces *per annum*. During the ʿAbbāsid and Fāṭimid periods, candles were made mainly from beeswax, which was sometimes imported from long distances, e.g. from Tunis to Egypt.

There were guilds of candlemakers in the Ṣafawid capital city of Iṣfahān in the 10th/16th and 11th/17th centuries. The members of the guild of candlemakers (*s̲h̲ammāʿī* in Persian), were classified as workers of low position in society, comparable to the lowly status of barbers, bath-keepers, fortune-tellers, bricklayers, corpse-washers, porters, muleteers and so forth. Nevertheless, a modern *s̲h̲ammāʿ* of North Africa attained upward social mobility by writing a history of the Ḥafṣīd dynasty (cf. S̲h̲ayk̲h̲ Abu 'l-ʿAbbās al-S̲h̲ammāʿ, *al-Adillat al-bayyina al-nūrāniyya ʿalā mafāk̲h̲ir al-dawla al-Ḥafṣiyya*, Tunis 1327/1909). The candlemakers' work was in high demand in early modern Syria, where it was customary to light candles in marriage ceremonies by all strata of people: a candle used to cost 2 liras in early 20th-century Syria.

AL-SHAMMĀKH B. ḌIRĀR, true name Maʿḳil b. Ḍirār, of the T̲h̲aʿlaba b. Saʿd of the Banū D̲h̲ubyān (G̲h̲aṭafān), a *muk̲h̲aḍram* poet and, according to some sources, a Companion after his conversion in 9/630 (Ibn ʿAbd al-Barr, *Istīʿāb*, i, 324; *Ag̲h̲ānī*, viii, 98; *Iṣāba*, iii, 210). This information is to be treated with caution: according to Ibn Sayyid al-Nās [*q.v.*], the author of a work on the poets of the Prophet, it was his brother al-Muzarrid who met him and composed a poem in his honour (*Minaḥ al-midaḥ*, Damascus 1407/1987, 310-11). Al-S̲h̲ammāk̲h̲ must have been too young at this time.

Reliable information concerning him is extremely sparse; details relating to him have been inextricably mingled with those relating to his older brother al-Muzarrid b. Ḍirār. He was allegedly ugly, one-eyed (al-Ṣafadī, *al-S̲h̲uʿūr bi 'l-ʿūr*, 206; al-Bag̲h̲dādī, *K̲h̲izāna*, ed. Hārūn, iv, 257), ruddy and of small stature. Certain traditions have associated his unprepossessing appearance with his misogynistic tendencies (al-Balād̲h̲urī, *Ansāb al-as̲h̲rāf*, ms. fols. 1090b-1091a), the traces of which, clearly visible, survive in his poetry (*Dīwān*, 104-8, 219-23, 287-95).

After the death of the Prophet, he took part in the battle of al-Ḳādisiyya (al-Ṭabarī, i, 2232, 2292), in the conquest of Armenia (*ibid.*, i, 2667) and in that of Ād̲h̲arbayd̲j̲ān (al-Balād̲h̲urī, *Futūḥ*, 329, idem, *Ansāb*, fol. 1090b). It is today generally accepted that he was martyred in Mūḳān *ca.* 30/650 (al-Hādī, 157). However, al-Balād̲h̲urī (*Ansāb*, fol. 1090b) insists that he was not involved in that episode (*wa-lam yaḥḍur Mūḳāna*); he mentions a lament which he is said to have composed for the occasion. It is therefore appropriate to place his death at a later date.

Al-S̲h̲ammāk̲h̲ belonged to a family of poets. His brothers al-Muzarrid and D̲j̲azʾ practised the art of the *naẓm*; under the name of the former a *dīwān* has survived in a recension by Ibn al-Sikkīt (publ. Bag̲h̲dād 1962); as regards D̲j̲azʾ, al-D̲j̲umaḥī attributes to him a dirge composed after the assassination of ʿUmar b. al-K̲h̲aṭṭāb (*Ṭabaḳāt*, 133; Abū Tammām, *Ḥamāsa*, i, 453-4). Similarly, the two sons of al-Muzarrid, Ḥasan and Kut̲h̲ayyir (al-Hādī, 89), and the son of D̲j̲azʾ, D̲j̲abbār, were poets; the latter composed a lament on the death of al-S̲h̲ammāk̲h̲. Our poet owes his cognomen "the Proud", to the superb quality of his poems (Sāmī Makkī al-ʿĀnī, *Muʿd̲j̲am alḳāb al-s̲h̲uʿarāʾ*, Bag̲h̲dād 1971, 127). Examination of his verses confirms this beyond doubt; first of all, the most eminent transmitters discussed them in their *mad̲j̲lis*; among those who collected his written poems were Ibn Ḥabīb in the 2nd/8th century (Yāḳūt, *Udabāʾ*, xviii, 116-17) and al-Sukkarī a century later (Yāḳūt, viii, 98; Ibn al-Nadīm, *al-Fihrist*, Cairo n.d., 230). For his part, al-D̲j̲umaḥī places him in the third category of the *fuḥūl* alongside al-Nābig̲h̲a al-D̲j̲aʿdī and Abū D̲h̲uʾayb (*Ṭabaḳāt*, 123). In more specifically literary terms, numerous critics have expressed admiration for his treatment of poetic themes (Ibn Ḳutayba, *S̲h̲iʿrāʾ*;

al-Djawālīkī, *Sharḥ adab al-kātib*, 328, 372).

From a thematic point of view, the poetry of al-Shammākh is unconcerned with the tribal aspect; similarly, total silence surrounds his participation in the great conquests of nascent Islam. The poetry of circumstance, the principal concern of pre-Islamic poetry, does not seem to have tempted him unduly. He takes pleasure, on the contrary, in more genuinely artistic composition, in the description of animals, which he pursues to a degree that has seldom been equalled. In the sections relating to camels, whilst comparing his camel to a wild ass, he develops an episode combining description with narration; the wild ass, after a joyous period in which he indulges in amorous frolics, is killed as a result of thirst. He leads his entire herd to the water, where a well-armed hunter waits, accompanied by hunting dogs. Within this context, the poet innovates. According to him, the animal sees himself as endowed with sentiments such as jealousy, the preoccupation of the male responsible for a whole herd and terror in the face of imminent death; the hunter, the dogs and the natural order are presented here in prominent relief (*Dīwān*, i, ii, vi, vii, viii, x, xi, xii, xvi, xviii, *mulḥak*, iv, xxiii, xxiv, xxxiv). In this connection, the *zā'iyya* (*Dīwān*, 173-202) merits special mention; in this poem of 56 verses, the poet relates the episode of the bow. In a broad expanse of 20 verses, he evokes at length the process of its fabrication and the birth of an emotional correspondence between the craftsman and his work; the Bedouin is attached to his creation and refuses to be parted from it. Tempted by a buyer, he sells his bow, but deep regrets beset him. Such human resonances are rarely attested in the poetry of the period. Ancient critics aware of it (Ibn Ḳutayba, *Shuʿarā'*, 178; al-Shimshāṭī, *al-Anwār wa-maḥāsin al-ashʿār*, Baghdād 1987, 30). Modern scholars speak of it as a masterpiece (Bräu, *Die Bogen-Qasidah von aš-Šammāḫ*, in *WKZM*, xxxi (1926), 174-95; Maḥmūd Shākir, *Ḳaws al-Shammākh* or *al-Ḳaws al-ʿadhrā'*, in *al-Kitāb*, xi [1952], 151-78; al-Hādī, 195-201; Yaḥyā al-Djubūrī, *al-Furūsiyya fi 'l-shiʿr al-djāhilī*, Baghdād 1384, 169, 184-5).

A second aspect of his poetic talent deserves to be stressed. Al-Shammākh seems to have been an excellent composer of *radjaz*; his *Dīwān* contains 9 *urdjūza*s (section on *arādjīz al-dīwān*, 353-422), in some of which he is indebted to Khiyar b. Djaz', Djundub and al-Djulayḥ. The poet submits this poetic form to a new treatment, which recalls that reserved for the *ḳaṣīda*, with an opening *nasīb* based on the memory and the episode of the savage bull (Ullmann, 27).

However, the poetic language of al-Shammākh is discouraging: his language, suffused with archaisms and rare terms was and remains difficult of access (al-Djāḥiẓ, *Bayān*, ed. Hārūn, iii, 251). As early as the 2nd/8th century, al-Djumaḥī was stressing the stiffness of his style (*kazāza*) and his extremely vigorous language (*shadīd mutūn al-shiʿr*), implying that it was complex. It is for this reason that his poetry is considerably more difficult than that of Labīd (*Ṭabaḳāt*, 132; Ibn Sayyid al-Nās, *op. cit.*, 234-5), which is itself extremely complicated. Modern research has been concerned with giving him the status that he deserves; his rehabilitation, instigated by Blachère, seems today to be progressing successfully, and Thomas Bauer considers him one of the best representatives of classical poetry (Bauer, 259, esp. 273).

Bibliography: *Dīwān*, ed. al-Hādī, Cairo 1977; Sībawayhi, *Kitāb*, Cairo 1403/1983, index; Djāḥiẓ, *Bayān*, Cairo 1968, i, 281, ii, 251, 277, iii, 68, 73, 80, 93, iv, 34; Ibn Ḳutayba, *Maʿānī*, index; Balādhurī, *Ansāb al-ashrāf*, ms. Ḍirār al-Dhubyānī ḥayātuhu wa-shiʿruhu*, Cairo 1968 (excellent study in spite of some tedious passages).

(A. Arazi)

SHAMMĀKHA, Shammākhī, Shammākhiyya, the mediaeval Islamic names for a town in the former region of Shīrwān in eastern Caucasia, from *ca.* the 4th/10th century capital of the local Yazīdī dynasty of Shīrwān Shāhs, by whom it was temporarily re-named Yazīdiyya. For its pre-modern role and then for its post-1917 one, first within the Azerbaijan Republic of the former Soviet Union and now in the independent Republic of Azerbaijan, under its present name of Shemakha, see SHĪRWĀN and SHĪRWĀN SHĀHS. (Ed.)

AL-**SHAMMĀKHĪ** AL-**ĪFRANĪ**, the name of two Ibāḍī [see IBĀḌIYYA] scholars and jurisconsults from the Djabal Nafūsa [*q.v.*] in Tripolitania.

1. Abū 'l-ʿAbbās Aḥmad b. Abī ʿUthmān Saʿīd b. ʿAbd al-Wāḥid, especially famed as a biographer, died in Djumādā 928/April-May 1522 in one of the villages of the oasis of the Ifren of the Djabal Nafūsa, in Tripolitania. Among his pupils was Abū Yaḥyā Zakariyyā' b. Ibrāhīm al-Hawwārī.

He was the author of the following works: 1. A commentary on the *ʿAḳīda*, a short treatise on theology by Abū Ḥafṣ ʿUmar b. Djamīʿ al-Nafūsī; 2. A commentary on his synopsis of the *K. al-ʿAdl wa 'l-inṣāf* on the sources of law by Abū Yaʿḳūb Yūsuf b. Ibrāhīm al-Sadrātī; 3. *K. al-Siyar*, a biographical collection, spiced with anecdotes and a few historical events, of the principal Ibāḍī personages. A few extracts translated into French have been published by E. Masqueray in his *Chronique d'Abou Zakaria*, Algiers 1879, 325 ff.; the Arabic text was lithographed at Cairo in 1301/1884.

Bibliography: A.C. de Motylinski, *Bibliographie du Mzab*, in *Bull. de Correspond. afric.* (1885), i. ii, 47-70; idem, *Le Djebel Nefousa*, Paris 1899, 90, n. 1; Shammākhī, *K. al-Siyar*, 562; Abū Isḥāḳ Ibrāhīm al-Yūsuf Aṭfiyash al-Djazā'irī, *al-Diʿāya ilā sabīl al-mu'minīn*, Cairo 1342/1923, 28, n. 1; T. Lewicki, *Une chronique Ibāḍite "Kitāb as-Siyar" d'Abū 'l-ʿAbbās Aḥmad aš-Šammāḫī, avec quelques remarques sur l'origine et l'histoire de la famille des Šammāḫīs*, in *REI*, viii (1934),

59-78; Brockelmann; II², 312, S II, 339; Ziriklī, *Aʿlām*², i, 126.

2. Abū Sākin ʿĀmir b. ʿAlī b. ʿĀmir b. Isfāw, d. at an advanced age in 792/1390 in one of the villages of the Ifren in the Djabal Nafūsa.

After studying with Abū Mūsā ʿĪsā b. ʿĪsā al-Shammākhī, he attached himself to Abū ʿAzīz b. Ibrāhīm b. Abī Yaḥyā. On the conclusion of his studies he settled at Metiwen, where he devoted himself to teaching for thirteen years. He then settled in the oasis of Ifren in 756/1355. His pupils were his son Abū ʿImrān Mūsā, his grandson Sulaymān, Abu ʾl-Ḳāsim b. Ibrāhīm al-Barrādī, Abū Yaʿḳūb Yūsuf b. Miṣbāḥ, etc.

He composed the following works: 1. a *Dīwān*, which remained unfinished, in four great volumes but which has become the fundamental lawbook of the people of the Djabal Nafūsa; 2. *al-ʿAḳīda*, a theological treatise dedicated to Nūḥ b. Ḥāzim; 3. *al-Ḳaṣīda fī ʾl-azmina*.

Bibliography: Shammākhī, *K. al-Siyar*, 559; Motylinski, *Bibliographie du Mzab*, i-ii, 45; Brockelmann, S II, 349. (Moh. Ben Cheneb)

SHAMMAR, a nomadic tribal confederation currently found in Saudi Arabia, Syria and ʿIrāḳ. Their oral tradition states that they are Yemenis of Ḳaḥṭānī origin. Their myth of descent links their ancestry to Shimmar Ibn al-ʿAmluḳ, a Yemeni king of ancient times. The date of their migration northward is not clear. Neither historical sources nor their oral tradition provides accurate documentation concerning their migration to Djabal Shammar, previously known as Djabalā Ṭayyiʾ. Their oral narratives claim that they established themselves in Djabal Shammar in the 16th century after pushing away a local leader by the name of Bahidj.

While the majority of the tribe remained in Djabal Shammar, some sections migrated to the area between the Tigris and Euphrates in the 18th century in search of pasture and under pressure from local tribes such as the ʿAnaza and the Suʿūdī dynasty. These sections are referred to as northern Shammar or Shammar of Mesopotamia. They consist of a number of tribal lineages the most known of which are the Djarba, Toḳah and Zakarit. In Mesopotamia, the Shammar combined pastoral nomadism with agriculture. Some became Shīʿī under the influence of the Shīʿī communities of the region, especially in ʿIrāḳ. The tribe developed a history distinct from their brothers in the south.

Those who remained in Djabal Shammar are known as southern Shammar. This group attracted the attention of a number of 19th-century European travellers among whom are Wallin, Doughty, Blunt, and Guarmani. In the 20th century, the accounts of Musil and Montagne are prominent. One of the reasons behind their preoccupation with the Shammar stemmed from the fact that this nomadic tribe was at the height of its power, as it succeeded in establishing a centralised authority over most of central Arabia.

Estimates of their number vary in the 19th and early 20th centuries. The *Handbook of Arabia* gives a figure of 4,000 tents and a total of 150,000-200,000 individuals. This excludes those who were settled in the oases of Djabal Shammar, Ḥāʾil, Muḳaḳ, Sabʿan, Mustadjida, Ghazala and Rawḍa, estimated by Montagne at 20,000 individuals.

The southern Shammar are divided into four tribal sections; ʿAbda, Sindjāra, Aslam and Tūmān. In the 19th century, the ʿAbda assumed leadership of the whole tribe. Unlike other nomadic tribes in the area, the Shammar combined their nomadism with control over an oasis settlement, Ḥāʾil [*q.v.*]. From there, their chiefs, the Āl Rashīd [*q.v.*], expanded into al-Ḳasīm and southern Nadjd. Musil claimed that Rashīdī expansion reached the borders of Aleppo, Damascus, Baṣra, ʿUmān and ʿAsīr by the end of the last century. However, their power base remained strongest in Djabal Shammar and the Great Nafūd, the core of their tribal *dīra*.

The Shammar dynasty developed a complex political organisation. The Rashīdī *amīrs*, resident in Ḥāʾil, co-existed with the Shammar *shaykhs* who were drawn from the chiefly families of the tribal sections. The latter participated in the *amīrs*' raids in return for a share of the booty. They attended the *madjlis* in Ḥāʾil where they regularly received gifts and subsidies from the Rashīdī *amīrs*. These subsidies, together with a network of marriages with the oasis *amīrs* ensured interdependence and loyalty at least until the beginning of the 20th century.

The Shammar dynasty rested on a multi-resource economy. The Shammar pastoral economy was supplemented by control over trade and pilgrimage caravans. Their tribal territory included important trade routes which linked Mesopotamia and the Gulf ports to the holy cities of the Ḥidjāz. Wahhābī fanaticism in the 18th and 19th centuries led to the diversion of trade routes in favour of Ḥāʾil, which was then outside their control. Trading and pilgrim caravans were usually accompanied by a caravan leader and a group of armed men who were responsible for its security, and this leader was appointed by the Ḥāʾil *amīr* who expected him to levy a toll from the caravan after keeping a sum for himself. In return for this toll, the Ḥāʾil *amīrs* guaranteed the safety of merchants and pilgrims, especially Shīʿīs from Persia and ʿIrāḳ, regarded as heretics by the Wahhābī Suʿūdī dynasty in southern Nadjd. Taxes levied from these sources ensured a surplus in the hands of the *amīrs*, and Ḥāʾil developed into an important transit station where traders, craftsmen and agriculturalists coexisted and flourished.

Its prosperity was maintained as a result of an extended period of peace and security. The *amīrs* were able to raise a "police force", drawn from among their slaves and the sedentary population, mainly the Banū Tamīm of Ḥāʾil, in charge of keeping order in the oasis. Also an army consisting of a mixture of tribal people, mercenaries, sedentary groups and, above all, slaves was often sent to distant areas to pacify any rebellious Bedouin and enforce Rashīdī hegemony in other oases and towns.

Towards the end of the 19th century, Rashīdī expansion led to the collapse of Suʿūdī domination in al-Riyāḍ, and for a brief period the Rashīdīs under the banner of Muḥammad Ibn Rashīd became the undisputed rulers of central Arabia. The Ottoman empire recognised them there and maintained good relations with them through the *wālī* of Baṣra. They supplied the *amīrs* with irregular subsidies and weapons to cement a fragile alliance which cost the Shammar nothing but a vague recognition of nominal Ottoman suzerainty, manifested in the mentioning of the sultan's name during the Friday prayers in Ḥāʾil. This alliance eventually led to the collapse of their dynasty with the defeat of the Ottoman empire in the First World War.

Rashīdī supremacy in Arabia began to be eroded with the return of Ibn Suʿūd from his exile in Kuwayt in 1902 to recapture his ancestral capital from the Rashīdīs. Having secured the support of Britain during the First World War, he drove them out of Ḥāʾil in

1921, thus putting an end to their leadership and role in Arabian politics. The Ras͟hīdī ruling group was taken hostage to his capital, al-Riyāḍ, where some members of the family are still resident. Ibn Suʿūd confiscated their belongings and prohibited them from returning to their land, and through a series of marriages with Ras͟hīdī and S͟hammarī women, incorporated them into his wide network of affinities.

After a series of fierce battles, some S͟hammar sections refused to become subjects of Ibn Suʿūd, but fled to Mesopotamia to join their tribal brothers in the north at a time when Britain was establishing a protectorate in ʿIrāḳ. The latter, being on good terms with Ibn Suʿūd, guaranteed that the S͟hammar remained there without being able to launch a counter-attack on him. However, the majority of the S͟hammar were pacified and reluctantly accepted the loss of their supremacy in Arabia, with some of them adopting Wahhābism and accepting settlement among the *hid͟jar* [*q.v.*] of the *Ik͟hwān*.

With the establishment of the Suʿūdī state, the S͟hammar lost their tribal autonomy and, above all, their exclusive rights to pasture and water in their traditional tribal *dīra*. In 1925, Ibn Suʿūd abolished tribal territories, which became the property of the state. Later, in 1968, the Land Redistribution Act allocated special areas to particular tribes and s͟hayk͟hly lineages within each tribe. These measures widened economic differentiation within groups and altered the nature of available resources. Forced sedentarisation was imposed on the S͟hammar, with the aim of confining them to special areas where they could be closely controlled and, above all, their independence and *ʿaṣabiyya* eroded. The history of enmity between the S͟hammar and the Suʿūdīs precludes the former from taking advantage of the new economic opportunities created by the state, such as employment in the National Guard, a para-military organisation consisting mainly of tribal peoples, and endowed with the function of protecting the Suʿūdī royal family.

(M. Al-Rasheed)

S͟HAMS (A.), the sun (f.).

1. In Pre-Islamic Arab lore.

This was a divinity worshipped in the Semitic world, especially in Assyria-Babylonia (cf. its attributes in K. Tallqvist, *Akkadische Götterepitheta*, Helsinki 1938, 453 ff.) and in South Arabia, where the plurals *s͟hums* (for *s͟humūs*) given by Yāḳūt (ed. Beirut, iii, 362) for this *ṣanam* or idol, *ʾs͟hms* and the dual *s͟hmsy* (G. Ryckmans, *Les noms propres sudsémitiques*, Louvain 1934-5, i, 33; A. Jamme, *Le panthéon sud-arabe préislamique d'après les sources épigraphiques*, in *Muséon*, lx [1947], 101 ff.) denote the titulary divinities of a certain individual or ethnic group or clan or territory. For Yāḳūt, it was "an idol of the Banū Tamīm; it had a sanctuary and was worshipped by all the sections of the Banū Udd (sc. the grandfather of Tamīm), sc. Ḍabba, Taym, ʿAdī, T͟hawr and ʿUkl. Its custodians (*sādins* [*q.v.*]) were the Banū Aws b. Muk͟hās͟hin ... It was destroyed by Hind b. Abī Hāla and Sufyān b. Usayyid ...".

But this idol is not mentioned in Ibn al-Kalbī's *Book of Idols*, although the *TʿA*, citing the *Ḳāmūs*, states the contrary, saying "It was an ancient idol mentioned by Ibn al-Kalbī". It is very likely that this deity did not belong in the pantheon of Central Arabia and that mention of it, rare in the sources, is just a contamination from its cult by the South Arabs. This seems especially likely in that the theophoric name ʿAbd S͟hams, only known in a section of Ḳurays͟h (*TʿA*, iv, 172 ll. 32-3), is found in the Tamīm in the syncopated form ʿAbs͟hams (*ibid.*, 173 l. 1), which is attested in Sabaean (Ryckmans, *op. cit.*, i, 241). The same applies to the theophoric name ʿAbd al-S͟hāriḳ, known amongst the D͟juhayna, which Arab authors render by ʿAbd al-S͟hams, giving to al-S͟hāriḳ, recognised as the name of an idol, the sense of *ḳarn al-s͟hams* "the rising sun" (al-Tibrīzī, in *Ḥamāsa*, 218; Ibn Durayd, cited in *TʿA*, vi, 392 ll. 26 ff.).

Moreover, the Ḳurʾān attributes the cult of the Sun to Sabaʾ (XXVII, 24), whilst it attributes the cult of Venus, the Moon and the Sun to Mesopotamia, the homeland of Abraham (VI, 74, cf. XXXVII, 86). The exhortation, only found occasionally (XLVII, 37), not to worship the Sun and Moon, two signs created by God, is certainly an allusion to these two instances. "For nowhere in Ḳurʾānic polemics is there any emphasis on the stellar cult" (Fahd, *Le panthéon de l'Arabie Centrale à la veille de l'hégire*, Paris 1968, 151).

Theophoric names including the element S͟hams are numerous amongst the Greek inscriptions of the Ḥawrān (see D. Sourdel, *Les cultes du Ḥaurān à l'époque romaine*, Paris 1952, 53 ff.), showing that the Arabs who had migrated northwards had come under the Hellenistic cult of Helios, which Strabo makes the main deity of the Nabataeans (see his *Geographica*, ed. C. Müller, 784; Wellhausen, *Reste*[2], 60-1; Sourdel, *op. cit.*, 53 n. 1).

For the interpretation of the term al-Ilāha "the goddess" (applied in certain sources to the Sun), mentioned in an elegy pronounced by Āmina bt. ʿUtayba *ca.* A.D. 621 on her father fallen in battle at the Yawm K͟haww, between the Banū Asad and the Yarbūʿ (*TʿA*, ix, 375), cf. Fahd, *op. cit.*, 152-3.

Bibliography: This article is essentially based on Fahd, *Le panthéon*, 150-3.

(T. Fahd)

2. In astronomy.

In the Aristotelian view accepted by most Muslim astronomers, the sun was a ball-shaped solid body (according to early doctrines made of fire), which moved around the earth in the solar sphere. This sphere was made of crystalline or ether and occupied a central position between the spheres of Venus and Mars [see falak].

In the geocentric representation of the heavens, which the Muslim astronomers adopted from Ptolemy [see baṭlamiyūs], the earth is assumed to be fixed in the centre of the universe. The sun moves on the ecliptic in the direction of the zodiacal signs, i.e. from west to east, and its longitude is measured from the vernal point [see minṭaḳat al-burūd͟j]. The period of return of the sun to the vernal point is the tropical year; the period of return to a fixed star, the sidereal year. The precession of the equinoxes is the difference between the tropical and the sidereal solar motion.

In order to predict the solar position on the ecliptic, most Muslim astronomers used the Ptolemaic eccentre model or the equivalent simple epicycle model. These models were adopted by Ptolemy from his predecessor Hipparchus (Rhodes, 2nd century B.C.) and were based on the observed differences in length between the seasons.

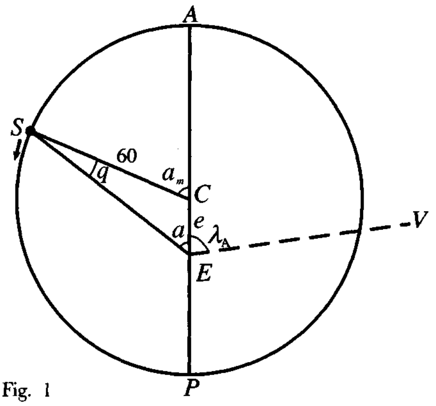

Fig. 1

In the eccentre model (see Fig. 1) the sun S moves at a constant speed on the circle ASP, whose radius is taken equal to 60. The centre C of this circle is removed from the earth E by a distance e, the solar eccentricity (*mā bayn al-markazayn*). The sun reaches its largest distance from the earth at the apogee A (*awdj*), its smallest distance at the perigee P (*ḥaḍīḍ*). The vernal point is indicated by V; the longitude of the apogee, angle VEA, by λ_A.

Since the sun moves uniformly on the eccentric circle, the mean solar anomaly a_m (*khāṣṣat al-shams*), angle ACS, increases linearly as a function of time. In order to determine the non-linear true solar anomaly a, the angle AES between the apogee and the sun as seen from the earth, a correction q, called the solar equation (*taʿdīl al-shams*), must be subtracted from or added to the mean solar anomaly. This correction, equal to angle ESC in Fig. 1, can be calculated as a function of the true anomaly by applying the sine rule to the triangle ESC. In this way we obtain

$$q(a) = \arcsin\left(\frac{e}{60} \sin a\right).$$

In order to determine the solar equation as a function of the mean solar anomaly a_m, we can extend triangle ESC to a right-angled triangle ESX, in which $\angle SXE = 90°$ and hence $EX = e \cdot \sin a_m$ and $CX = e \cdot \cos a_m$. From this we find

$$q(a_m) = \arcsin\left(\frac{e \cdot \sin a_m}{\sqrt{(e \cdot \sin a_m)^2 + (60 + e \cdot \cos a_m)^2}}\right)$$

or the equivalent

$$q(a_m) = \arctan\left(\frac{e \cdot \sin a_m}{60 + e \cdot \cos a_m}\right).$$

Using these modern formulae we have $a = a_m - q$ for every value of the mean or true solar anomaly. The true solar longitude λ (*mawḍiʿ al-shams*), angle VES, can be obtained by adding the longitude of the apogee to the true anomaly: $\lambda = a + \lambda_A$. Instead of the mean solar anomaly, ancient and mediaeval astronomers usually based their calculations on another linear function of time, namely the mean solar longitude λ_m (*wasaṭ al-shams*), defined by $\lambda_m = a_m + \lambda_A$. Using the formulae for the solar equation given above (with a replaced by $\lambda - \lambda_A$ and a_m by $\lambda_m - \lambda_A$), we have $\lambda = \lambda_m - q$ for all values of λ and λ_m.

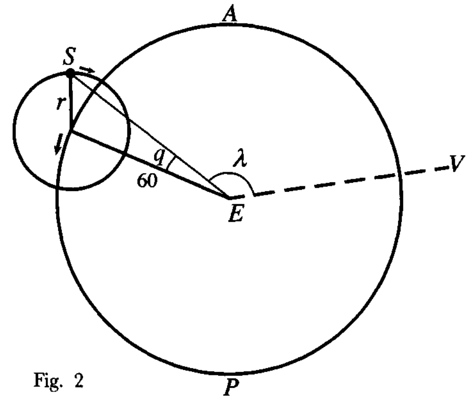

Fig. 2

In the simple epicycle model (see Fig. 2) the sun S moves clockwise on a small circle, called the epicycle (*falak al-tadwīr*), whose radius r is equal to the eccentricity e of the eccentre model. The centre of the epicycle rotates in the direction of the zodiacal signs on a circle around the earth with radius 60, the deferent (*al-falak al-ḥāmil*). If the angular velocities of the sun and the epicycle centre are equal to the angular velocity of the sun in the eccentre model, the two models are equivalent. In that case the sun reaches its largest distance from the earth whenever the epicycle centre passes through A, its smallest distance whenever the epicycle centre passes through P. (For more information about the Ptolemaic solar model, see O. Pedersen, *A survey of the Almagest*, Odense 1974, ch. 5.)

In early Islamic astronomical sources we find non-Ptolemaic planetary equations based on Persian and Indian methods (for the transmission of Persian and Indian astronomy to the Islamic world, see ʿILM AL-HAYʾA). For instance, al-Khwārazmī [*q.v.*] calculated the solar equation according to the so-called "method of declinations":

$$q(\lambda_m) = q_{max} \cdot \frac{\delta(\lambda_m)}{\varepsilon},$$

where q_{max} denotes the maximum solar equation ($q_{max} = \arcsin(e/60)$), δ the solar declination [see MAYL], and ε the obliquity of the ecliptic [see MINṬAḲAT AL-BURŪDJ]. A treatise by al-Bīrūnī [*q.v.*] describing the method of declinations and many other methods of calculating the solar equation was discussed in E.S. Kennedy and A. Muruwwa, *Bīrūnī on the solar equation*, in *JNES*, xvii (1958), 112-21*.

The Muslim astronomers significantly improved upon the solar parameter values used by both Hipparchus and Ptolemy. The values of the length of the solar year, the solar eccentricity, and the position and motion of the solar apogee were repeatedly updated on the basis of fresh observations [see MARṢAD]. The length of the solar year was generally determined from solar observations at equinoxes or solstices made over periods of many centuries. For this purpose, Muslim astronomers combined the data of Ptolemy

and Hipparchus with their own results. As early as the 3rd/9th century Muslim astronomers improved the method of determining the eccentricity and the longitude of the apogee from the lengths of the seasons by measuring the periods between the midpoints of the seasons (*fuṣūl*).

The motion of the solar apogee, approximately 1° per 70 years in the direction of the zodiacal signs, had not been recognised by Ptolemy. Many Muslim astronomers made it equal to the precession of the equinoxes. The 5th/11th-century Andalusian astronomer al-Zarḳālī [*q.v.*] was the first to discover that the two motions are different; he estimated the sidereal motion of the solar apogee to be 1° per 279 Julian years in the direction of the signs (12″54‴ per year; the modern value is 11″46‴) (see G.J. Toomer, *The solar theory of az-Zarqāl*, in *Centaurus*, xiv [1969], 306-36).

Extensive accounts of solar observations can be found, in particular, in al-Bīrūnī's work (see *al-Ḳānūn al-Masʿūdī*, Ḥaydarābād 1954-6, ii, 636 ff., and J. Ali, *The determination of the coordinates of cities*, Beirut 1967). Parameter values used by Hipparchus/Ptolemy and the authors of various important Islamic astronomical handbooks [see ZĪDJ] are presented in Table 1.

In order to perform practical computations of the solar longitude in a convenient way, practically all *zīdj*s contained the following tables:

- A table for the mean solar motion (*djadwal wasaṭ al-shams*), which gave the mean motion in various periods depending on the calendar used [see TAʾRĪKH]: groups of years (*al-sinūn al-madjmūʿa*), single years (*al-sinūn al-mabsūṭa*), months, days, and hours. By adding the mean motion to the given mean solar longitude at a certain fixed point in time, the epoch, the mean longitude λ_m at any time could be calculated.
- A similar table for the determination of the longitude of the solar apogee λ_A. This table was usually headed *ḥarakat al-awdj*, or also *ḥarakat al-kawākib al-thābita* (cf. above). The mean anomaly a_m was found by subtracting λ_A from λ_m.
- A table for the solar equation (*taʿdīl al-shams*) as a function of the mean anomaly. Since no negative numbers were used, the values in the solar equation table had to be subtracted from the mean solar longitude in order to obtain the true solar longitude if the anomaly was smaller than 180°; otherwise, they had to be added.

In various Islamic astronomical handbooks the calculation of the solar position using the tables listed above was replaced by tables giving the true solar longitude directly as a function of the date [see TAḲWĪM]. Some of these ephemerides could be used only during one particular year, others included yearly corrections which made them suitable for long-term use. Examples can be found in the almanac of al-Zarḳālī (see J.M. Millás Vallicrosa, *Estudios sobre Azarquiel*, Madrid/Granada 1943-50, 158-65); in a treatise on astronomical instruments by al-Marrākushī [*q.v.*]; (see J.J. Sédillot, *Traité des instruments astronomiques des arabes*, Paris 1834 (reprint Frankfurt 1984), 134-7); and in an 8th/14th-century Damascene corpus of tables for time-keeping by al-Khalīlī (Paris Bibliothèque Nationale ms. arabe 2558, fols. 8ᵛ-9ʳ).

Only incidental attempts were made by Muslim astronomers to improve or modify the Ptolemaic solar model. Some of these attempts aimed at an explanation of the striking variation in the solar parameters during the centuries, others at a better correspondence with cosmological principles. In the model of al-Zarḳālī the centre of the eccentric solar orbit moved slowly on a small circle around the average eccentre. As a result the eccentricity varied between 1;51 and Ptolemy's 2;29,30 (expressed sexagesimally; see ʿILM AL-ḤISĀB). Al-Zarḳālī ignored the variation of the longitude of the solar apogee also induced by his modification (see Toomer's article referred to above and J. Samsó and E. Millás, *Ibn al-Bannāʾ, Ibn Isḥāq and Ibn al-Zarqālluh's solar theory*, in Samsó, *Islamic astronomy in medieval Spain*, Aldershot 1994).

In the 6th/12th century various Andalusian

Name	Place	Year	Maximum equation	Longitude of the apogee	Daily motion of the apogee	length of the solar year

Table 1: Value of the maximum solar equation (in degrees), the longitude of the solar apogee (in degrees), the daily motion of the apogee (in sexagesimal thirds), and the length of the tropical year (in days), as used by Ptolemy and Muslim astronomers in their tables for the solar motion. All values are given in sexagesimal notation.

* Different from the precession of the equinoxes.
≠ Sidereal.
[1] Close to 1° in 66 Byzantine years.
[2] Equal to 1° in 70¼ Persian years.
[3] Al-Zarḳālī's maximum equation fluctuates between 1° 46' and 2° 23' with a period of 3343 Julian years.
[4] Equal to 1° in 279 Julian years.
[5] Equal to 1° in 70 Persian years.
[6] Close to 1° in 60 Persian years.

astronomers tried to make the Ptolemaic planetary models conform more closely to the Aristotelian physical principles. In the solar model of al-Biṭrūdjī [*q.v.*], the pole of the solar orbit moved on a small circle around the pole of the equator. Its motion was uniform with respect to a point slightly removed from that pole, thus accounting for the different lengths of the seasons in a way similar to the Ptolemaic eccentre model (see B.R. Goldstein, *Al-Biṭrūjī: On the principles of astronomy*, New Haven 1971).

In his popular *Tadhkira fī ʿilm al-hayʾa*, the 7th/13th-century Persian astronomer Naṣīr al-Dīn al-Ṭūsī [*q.v.*] attempted to give a physically more realistic representation of the Ptolemaic planetary models and to find solutions for the purported "difficulties" (*ishkālāt*) with these models: non-uniform motion and incomplete rotation. Thus he made his models mathematically equivalent to those of Ptolemy, but used solid spheres bounded by two parallel spherical surfaces instead of circles (see F.J. Ragep, *Naṣīr al-Dīn al-Ṭūsī's memoir on astronomy*, New York 1993, esp. i, 46-53, 144-9).

The 8th/14th-century Damascene astronomer Ibn al-Shāṭir [*q.v.*] made some of the most elaborate modifications to Ptolemy's models. He made the sun rotate on an epicycle, whose centre rotated on a larger epicycle moving uniformly around the earth (see V. Roberts, *The solar and lunar theory of Ibn ash-Shāṭir. A pre-Copernican Copernical model*, in *Isis*, xlviii [1957], 428-32).

The sun played a crucial role in many types of observations and astronomical calculations. In particular, the time of the day and the divisions of the (solar) year were defined on the basis of the solar motion. Although the Islamic religious calendar is a lunar one, solar calendars were used intensively for agricultural and administrative purposes [see TAʾRĪKH]. In folk astronomy, simple arithmetical schemes for the length of the shadow cast by a man were used to determine the approximate time of the day and the prayer times (see D.A. King, *A survey of medieval Islamic shadow schemes for simple time-reckoning*, in *Oriens*, xxxii [1990], 191-249); sunrise and sunset at the equinoxes and solstices were used to establish the direction of Mecca [see MAKKA. 4. and MAṬLAʿ]. In mathematical astronomy, extensive tables of spherical astronomical functions were used to determine the time of the day from the solar altitude and to design sophisticated sundials [see MĪḲĀT. 2. and MIZWALA].

The equation of time (*taʿdīl al-ayyām bi-layālīhā* or *taʿdīl al-zamān*), a correction required to convert the time found from observations of the sun into mean time, was explained and tabulated in most Islamic astronomical handbooks (see ZAMĀN and E.S. Kennedy, *Two medieval approaches to the equation of time*, in *Centaurus*, xxxi [1988], 1-8). Likewise, we find extensive tables for the prediction for solar and lunar eclipses [see KUSŪF]. In connection with such predictions, Muslim astronomers used Ptolemy's method to find the angular diameter of the sun and the solar distance from the earth from observations of eclipses. Like Ptolemy, they found a solar distance around 1,000 earth radii, more than ten times too small (see N.M. Swerdlow, *Al-Battānī's determination of the solar distance*, in *Centaurus*, xvii [1973], 97-105). Finally, the solar position on the ecliptic was required to predict the first visibility of the lunar crescent after new moon [see RUʾYAT AL-HILĀL].

In astrology [see NUDJŪM (AḤKĀM AL-)], the sun had a large influence on the well-being of humans, animals, political affairs, etc. The characteristics attached to the sun were listed by al-Bīrūnī (see R.R. Wright, *The book of instruction in the elements of the art of astrology*, London 1934, 240-54). The sun was assumed to change the characteristics of the moon and the planets if these were within certain small distances from the sun (*ibid.*, 296-302). The astrological lots [see SAHM] were calculated using the solar position on the ecliptic (*ibid.*, 279-95). Certain astrological periods were defined in terms of the solar year (see D. Pingree, *The Thousands of Abū Maʿshar*, London 1968, 59-64).

3. In art.

In the first centuries of Islam, the sun was mainly depicted in symbolic forms such as the sun wheel, spiral whorl, swastika, rosette and five- or six-point star. The tentative interpretation of these motifs as

solar symbols is based on their traditional meaning in the ancient Near East. At this early stage, the most important were the stylised floral devices called *shamsa* in Ḳur'ān illumination, which marked the head of a sūra and the fifth or tenth *āya*. These decorative forms developed from "tree of life" motifs, which in antiquity were closely associated with sun gods and which reached Islam in Sāsānid and Coptic textiles.

Beginning in the 12th century A.D., however, the interest of Turkish dynasties in astrological prognostication introduced astral iconography into architecture, metalwork, ceramics and book illustrations. The sun was depicted as a disk surrounded by rays, often with a human face in the centre, or as an enthroned and haloed ruler. Surrounded by an inner circle of the six planets and an outer circle of the twelve zodiac signs, the sun represents the centre of heavenly motion. Alternatively, as one of the revolving planets, it appears mounted on the back of Leo, the sign of its house, or occasionally on Aries, the sign of its exaltation. From 6th/12th-century stone reliefs of a bridge in Djazīrat Ibn ʿUmar, the sun-lion combination persisted in innumerable examples of minor arts and paintings up to the Shīr-Dūr (1020/1611) *madrasa* in Samarḳand and to the flag of Pahlavi Iran.

As a royal symbol, the sun appears adjoining the sultan's name in 7th/13th Saldjūḳid coins from Anatolia. It is depicted alone, with a lion, or between two lions. In the same spirit, royal shields of many periods were fashioned with a sun or some solar symbol in the centre, occasionally with the zodiacal signs around, as in a shield of the Mughal sultan Akbar. The sun formed a part of a halo in portraits of the Mughals and was depicted in the centre of their royal canopies. On the yearly pilgrimage to Mecca, other dynasties sent palanquins (*maḥmal* [*q.v.*]) decorated with solar designs that symbolised their political status. A similar princely iconography underlies the composition of many metal vessels, on which an enthroned ruler replaces the sun in its cosmic setting. In other examples, mainly Mamlūk, only the ruler's name remains, with the long letters forming a rayed disk. In architecture, the artistic evolution resulted in the unusual dome of the congregational mosque of Malatya. In the interior of this dome, a whorl of bricks creates, in the summit, a hexagram made up of the name Muḥammad. This solar symbol denotes a divine context rather than a princely one, the Muslim version of a cosmic dome, which in Christian monuments would have the Pantocrator in the summit.

In religious painting, especially during the 10th/16th century, the sun is sometimes shown reflected in a mirror or in a pool of water, symbolising the reflection of the Divine Light in the heart of the perfect Man—a prophet or a mystic lover. In other paintings, mostly profane, the sun in the upper corner serves mainly as an involved witness to dramatic events. In most instances, however, the image of the sun is confined to cosmological or astrological texts. In its astrological role it figures also in daily objects of talismanic or prophylactic nature, such as amulets, divination bowls, magical shirts and all sorts of jewelry.

(RACHEL MILSTEIN)

SHAMS AL-DAWLA, ABŪ ṬĀHIR b. Fakhr al-Dawla Ḥasan, Būyid prince and ruler in Hamadhān [*q.v.*] 387-412/997-1021. After the death of Fakhr al-Dawla [*q.v.*], the *amīrs* proclaimed as his successor in Rayy his four-year-old son Madjd al-Dawla [*q.v.*] under the guardianship of his mother Sayyida and gave the governorship of Hamadhān and Kirmānshāhān to Shams al-Dawla, who was also a minor. When Madjd al-Dawla grew up, he sought to overthrow his mother and with this object made an arrangement with the vizier al-Khaṭīr Abū ʿAlī b. ʿAlī b. al-Ḳāsim in 397/1006-7. But when they sought assistance from the Kurdish chief Badr b. Ḥasanawayh, the latter set out for Rayy with Shams al-Dawla and took Madjd al-Dawla prisoner. The government was then given to Shams al-Dawla, and a coin of his, minted at Rayy in 397/1006-7, is extant (G.C. Miles, *The numismatic history of Rayy*, New York 1938, 180). But as he was not so pliant as Madjd al-Dawla, the latter was released from his prison after a year and again proclaimed ruler, while Shams al-Dawla returned to Hamadhān. After Badr had been murdered by the soldiers in 405/1014-15, Shams al-Dawla seized a portion of his territory and when the grandson of the dead man, Ṭāhir b. Hilāl b. Badr, wished to dispute the possession of it, he was defeated and thrown into prison. His father Hilāl b. Badr had already been imprisoned by Sulṭān al-Dawla [*q.v.*]; but the latter released him and sent him with an army to regain the lands occupied by Shams al-Dawla. In Dhu 'l-Ḳaʿda 405/April-May 1015, he came upon the enemy but the battle resulted in Hilāl's defeat and death. After this victory, Shams al-Dawla seized the town of Rayy; Madjd al-Dawla and his mother took to flight, but when Shams al-Dawla wished to pursue them, his troops mutinied and forced him to return to Hamadhān, whereupon Madjd al-Dawla and his mother returned to Rayy. In 411/1020-1, the Turkish troops rose in Hamadhān; Shams al-Dawla appealed to Abū Djaʿfar b. Kākawayh, governor of Iṣfahān, and with his help succeeded in driving the mutinous element out of the town. In 412/1021-2, Shams al-Dawla died and was succeeded by his son Samā' al-Dawla, but within two years (414/1023-4), Hamadhān fell into the hands of the Kākūyids [*q.v.*].

One of Shams al-Dawla's claims to fame is his connection with the great physician and philosopher Ibn Sīnā [*q.v.*], who treated the Amīr medically at Hamadhān in *ca.* 406/1015-16 and then became his vizier until Shams al-Dawla's death, when he transferred to the service of the Kākūyid ʿAlā' al-Dawla in Iṣfahān.

(K.V. ZETTERSTÉEN*)

SHAMS AL-DĪN [see AL-DIMASHḲĪ; DJUWAYNĪ; ILDEÑIZ; AL-ṢAYDĀWĪ; SHAMS-I TABRĪZ(Ī)].

SHAMS AL-DĪN MUḤAMMAD, the first post-Alamūt Nizārī Ismāʿīlī *imām*. Born in the late 640s/1240s, he was the sole surviving son of Rukn al-Dīn Khurshāh [*q.v.*], the last lord of Alamūt. The youthful Shams al-Dīn was taken into hiding during the final months of the Nizārī state, shortly before

the surrender of Alamūt to the Mongols in Dhu 'l-Ḳaʿda 654/December 1256. He succeeded to the Nizārī imāmate on the death of his father in the late spring of 655/1257.

Shams al-Dīn reportedly lived his life clandestinely in Ādharbāydjān as an embroiderer, whence his nickname of Zardūz. Certain allusions in the still unpublished versified *Safar-nāma* of Nizārī Ḳuhistānī [*q.v.*], a contemporary Nizārī poet from Bīrdjand, indicate that he evidently saw Shams al-Dīn, named by him as Shams-i Dīn Shāh Nīmrūz ʿAlī and Shāh Shams, in Ādharbāydjān, possibly in Tabrīz, in 679/1280 (see his *Dīwān*, ed. M. Muṣaffā, Tehran 1371 Sh./1992, 105, 109; Ch.G. Baiburdi, *Zhizn' i tvorčestvo Nizārī Persidskogo poeta*, Moscow 1966, 158, 162). In legendary accounts, and in some oral traditions of the Ismāʿīlīs, Shams al-Dīn has been identified with Shams-i Tabrīzī, the spiritual guide of Mawlānā Djalāl al-Dīn Rūmī [*q.vv.*].

Shams al-Dīn Muḥammad's long imāmate coincided with a difficult and obscure period in the post-Alamūt history of the Nizārī community. It was during his imāmate that the Persian Nizārīs, especially in Rūdbār, reorganised themselves to some extent and temporarily reoccupied the fortress of Alamūt, while the Syrian Nizārīs became subjugated by the Mamlūks. Shams al-Dīn Muḥammad died around 710/1310-11. His succession was disputed by his sons, leading to the Muḥammad Shāhī-Ḳāsim Shāhī schism in the Nizārī Ismāʿīlī imāmate and community.

(F. DAFTARY)

SHAMS AL-DĪN AL-SAMAṬRĀNĪ, religious scholar of the court of Atjèh [*q.v.*] in northern Sumatra, now in Indonesia, b. before 1575, d. 12 Radjab 1039/25 February 1630. The *nisba* al-Samaṭrānī indicates that Shams al-Dīn was associated with Samaṭrā < Samudra, a region in north Sumatra. Little is known of his early life, but from the first decade of the 17th century on, he played a prominent role at the court of Sultan Iskandar Muda (Makuta ʿAlam 1607-36), most powerful of the Achehnese sultans, with the title *Shaykh al-Islām*, serving as leading authority in religious matters, as Ṣūfī *murshid* to the sulṭān, whom he inducted into the Naḳshbandiyya *ṭarīḳa*, as his vicegerent on a number of occasions, and as his negotiator with foreign emissaries such as the Englishman Sir James Lancaster in 1602.

On the death of Iskandar Muda in 1636 and the accession of Iskandar II in 1637, al-Rānīrī [*q.v.*], an Indo-Arab religious scholar, gained court patronage. Possibly motivated by his espousal of Sirhindī's (d. 1624 [*q.v.*]) concept of *waḥdat al-shuhūd*, as opposed to Shams al-Dīn's *waḥdat al-wudjūd*, he had the latter's writings burnt, a number of his followers executed, and wrote polemics condemning what he alleged to be the implications of his teaching.

Shams al-Dīn was an outstanding scholar. He was the first Djāwī known to have left significant works written in Arabic alongside a number of prose writings in Malay, among them *Mirʾāt al-muʾminīn*, a treatise on dogmatics—not all of which, thanks to al-Rānīrī, are extant. Of his Arabic works, the most important is *Djawhar al-ḥaḳāʾiḳ* edited by van Nieuwenhuijze, whose dissertation (see *Bibl.*) is the basic work for any further study of this author, and includes a representative selection of his work alongside a penetrating analysis of their intellectual structure. The work is in the Ibn ʿArabī tradition. It breathes a spirit of intense religious devotion and presents a wide range of Ṣūfī learning, including what may be the earliest citation of the poetry of Ibn al-Fāriḍ (lines 355-6 from *al-Tāʾiyya al-kubrā*, see van Nieuwenhuijze ed. 265) in Southeast Asian writing. Its structure is based on *al-Tuḥfa al-mursala ilā rūḥ al-nabī* (ed. Johns, see *Bibl.*), an Arabic work by the North Indian author Muḥammad b. Faḍl Allāh al-Burhānpūrī (d. 1590 [*q.v.*]), which summates the complex theosophy of Ibn ʿArabī in a convenient "portfolio" of seven grades of being. Shams al-Dīn played a major role in popularising this "portfolio" in Sumatra, Java and in the Indonesian region generally, one which replaced the more complex theosophical system used by the earlier Achehnese mystic Ḥamza Fanṣūrī [*q.v.*], whose work shows an affiliation to an ʿIrāḳī-Persian transmission of the Ibn ʿArabī tradition as mediated by al-Djīlī.

In the literature, he is frequently referred to as an exponent of a so-called heterodox tradition of pantheistic mysticism, many scholars taking at face-value the partisan denunciation of him and his followers by al-Rānīrī, who accused him of teaching the doctrine of *waḥdat al-wudjūd* in an absolute sense, without taking into account the concept of the grades of being as understood by adherents of the *waḥdat al-shuhūd* doctrine. In view of a deeper understanding of Ibn ʿArabī's ideas both in themselves and in the wider context of Islamic thought, terms such as "heterodox" and "pantheistic" no longer have a place in an historical assessment of his learning, teachings and spirituality.

(A.H. JOHNS)

SHAMS AL-DĪN-I SIRĀDJ ʿAFĪF, historian of the Dihlī Sultanate in mediaeval Muslim India whose exact dates of birth and death are unknown but who may have been born around 751/1350-1; he certainly flourished during the later 8th/14th century.

He stemmed from a family with long traditions of service to the ruling dynasty of sultans. His father and uncle held the office of oversight of the royal *kār-khānas* or stores and workshops during the reign of Fīrūz Shāh Tughluḳ (752-90/1351-88 [*q.v.*]), and in his youth, Shams al-Dīn accompanied the sultan on hunting trips. His fame arises from his history, the *Taʾrīkh-i Fīrūz Shāhī*, composed at a time when there was quite a florescence of historical writing within the Sultanate, seen in Ḍiyāʾ al-Dīn Baranī's [*q.v.*] history

of the same name, which covers the first six years of the sultan's reign, whilst Mawlānā ʿAbd al-ʿAzīz of Dihlī is reported to have composed a further history with the same name. There is also the anonymous, florid and eulogistic *Sīrat-i Fīrūz Shāhī*, written in 772/1370-1 (see Storey, i, 509), which reads like an official history. The sultan himself had his achievements inscribed on stone and affixed to the walls of the Friday Mosque of his new capital Fīrūzābād.

Shams al-Dīn ʿAfīf undertook the task of writing separate volumes on the Tughluḳids from Ghiyāth al-Dīn Tughluḳ Shāh to Muḥammad b. Fīrūz Shāh, recounting their virtues or *manāḳib* [*q.v.*]. Only that volume on Fīrūz Shāh is extant, perhaps originally entitled *Manāḳib-i Fīrūz Shāhī*, and must have been written, from an internal reference, after Tīmūr's invasion of the Sultanate in 801/1398, perhaps when the historian had returned to Dihlī after Nāṣir al-Dīn Maḥmūd Shāh, Fīrūz Shāh's last descendant, had re-occupied the capital at the beginning of the 15th century A.D. It has five sections (*ḳism*), each divided into eighteen chapters (*muḳaddima*) of unequal length. The last three chapters of the fifth *ḳism* seem to have been lost, since they do not appear in any extant ms.

Writing as he apparently did when the capital Dihlī had been devastated and the Tughluḳid Sultanate was dissolving, Shams al-Dīn ʿAfīf expresses in his book a clear nostalgia for the glories of the Sultanate. He praises Fīrūz Shāh as the special recipient of divine grace in terms which echo the style of the eulogy of Ṣūfī saints in the *tadhkira* literature. He also provides much useful information on social and economic life of the time. The foundation of new cities, like Fīrūzābād, and the construction of canals, water reservoirs and the encouragement of agriculture are recorded. From his own background, he was especially interested in taxation and financial topics and their interlocking with agricultural policy, and he did not fail to mention abuses which had crept into administration and army affairs. His aim seems, in fact, to have been to portray the sultan as a saintly ruler, conformable to the demands of the literary genre of Ṣūfī hagiography, and his reign as a golden age.

Bibliography: The surviving part of ʿAfīf's history was edited in the Bibl. Indica series, Calcutta 1888-91; tr. of extracts in Elliott and Dowson, *History of India*, iii, 269-373. See also Riazul Islam, *The age of Firuz Shah*, in *Medieval India Quarterly*, Aligarh, i/1 (1950), 25-41, on Mawlānā ʿAbd al-ʿAzīz's work; P. Hardy, *Historians of medieval India, studies in Indo-Muslim historical writing*, London 1960, 40-55; Storey, i, 509-12. (I.H. Siddiqui)

SHAMS AL-MAʿĀLĪ [see ĶĀBŪS B. WUSHMAGĪR B. ZIYĀR].

SHAMS-I FAKHRĪ [see FAKHRĪ].

SHAMS-I ĶAYS, the familiar form of the name of Shams al-Dīn Muḥammad b. Ḳays Rāzī, author of the oldest Persian work on poetics, *al-Muʿdjam fī maʿāyīr ashʿār al-ʿadjam*, which covers the full range of traditional literary scholarship. Facts about his life are only to be found in his own statements, mostly in the introduction to his sole surviving work (*Muʿdjam*, 2-24). His native town was Rayy, where he must have been born around the beginning of the last quarter of the 12th century. For many years he lived in Transoxania, Khwārazm and Khurāsān. He relates an incident situated in Bukhārā and dated 601/1204-5 (*Muʿdjam*, 456). In 614/1217-18 he was living at Marw, where he wrote the first draft of his textbook in Arabic. When in the same year the Khwārazm Shāh ʿAlāʾ al-Dīn Muḥammad (596-617/1200-20) marched to the west against the caliph al-Nāṣir [*q.v.*], he joined the sultan's retinue. In 617/1220, during a battle with the Mongols near the fortress of Farzīn (between Iṣfahān and Hamadān), he lost all his books, but was able to retrieve some parts of the manuscript of his textbook from the local peasants. About 623/1226, he took refuge in Shīrāz with Saʿd b. Zangī, the Salghurid Atabeg of Fārs (599-628/1202-31), who admitted him to his court as a companion (*muḳarrab*). He retained this position under Saʿd's successor Abū Bakr (628-58/1231-60).

In these secure surroundings, he was able to resume the writing of his work on poetics, which had been frustrated by his constant travels and the turbulent events of the Mongol invasion. The version which he now produced was an extensive Arabic work on Arabic and Persian poetry together. However, the literati (*ẓurafāʾ*) and poets of Shīrāz did not approve of his approach because they considered a critical discussion of Persian poetry in Arabic not very useful. Giving in to this, Shams-i Ḳays then dealt with the two poetical traditions separately, each in its own language. Of these two books, only the Persian one has survived.

The *Muʿdjam* (sometimes erroneously vocalised *Muʿadjdjam*) consists of two parts and a *khātima*. The first part contains the oldest treatment of Persian metrics still extant. The ten fundamental patterns current in Persian poetry are arranged in four circles in accordance with the system of *ʿarūḍ* [*q.v.*] as it had been established by al-Khalīl (89 ff.; cf. Elwell-Sutton, 77-9). Remarkable, moreover, is the discussion of the metre of the *rubāʿī* [*q.v.*], which Shams-i Ḳays regarded as a Persian invention, tentatively attributed to Rūdakī [*q.v.*]; it is treated as a derivative of the *hazadj* pattern. The more miscellaneous contents of the second part include, first, the theory of rhyme (*ʿilm-i ḳāfiyat*), which entails a discussion of Persian grammar as far as it is concerned with the definition of rhyming letters (204 ff., *ḥurūf-i ḳāfiyat*); attention is also given to the use of *radīf* and *wādjib*, respectively the repetition of a word after or before the rhyming letter in each line, which are special features of Persian poetry (258-61). This is followed by a chapter on the embellishment of poetry (328 ff., *maḥāsin-i shiʿr*), a list of rhetorical figures in the tradition of the textbooks of *badīʿ* [*q.v.*]. In this section, the influence of Rashīd al-Dīn [*q.v.*] Waṭwāṭ is evident, but a number of Shams's figures do not appear earlier in Persian textbooks; some can be traced back to Ḳudāma b. Djaʿfar [*q.v.*] (cf. S.A. Bonebakker, *The Kitāb Naqd al-šiʿr*, Leiden 1956, Introd. 59). The treatment of poetical genres (*adjnās-i shiʿr*), which concludes this part, pays only scant attention to specifically Persian features. The *khātima* is devoted to the practice of poetry (*shāʿirī*) and plagiarism (*sariḳāt-i shiʿr*). The prescription for the composition of a poem at the beginning of this appendix is a translation from Ibn Ṭabāṭabā's *ʿIyār al-shiʿr* (ed. Cairo 1956, 4 ff.).

Shams-i Ḳays saw his work in the first place as a tool for literary criticism providing measures (*maʿāyīr*) for the distinction between good and bad poetry (3, *bar naḳd-i nīk va bad-i kalām-i manẓūm*) to prose writers and poets alike. In his view, poetical technique was a creation of the Arabs, and Persian poets were merely following their example (69). Nevertheless, the *Muʿdjam* stands out as the most important contribution to Persian literary theory, both on account of its wide scope and the quality of its discussion of detail. Among the poets dealt with, by far the most often cited is Anwarī [*q.v.*], who flourished in the first half of the 6th/12th century. Although the book never achieved the popularity of Rashīd al-Dīn Waṭwāṭ's textbook,

its influence can be found with a number of later writers on literary theory, and a few abridgements were made (see the Introd. by Mudarris-i Raḍawī, pp. xviii-xx).

Bibliography: The first critical edition of the *Muʿdjam* was published by Mīrzā Muḥammad Ḳazwīnī, London 1909 (*GMS*, x), with an English introd. by E.G. Browne; revised ed. Muḥammad Mudarris-i Raḍawī, Tehran 1314 *sh*./1935-6, ²Tehran 1338 *sh*./1959 (referred to in this article). See further the introd. to the editions; Storey, *Persian literature*, iii/1, 179; L.P. SHAMS-I TABRĪZ(Ī), the name given to a rather enigmatic dervish who deeply influenced and transformed Djalāl al-Dīn Rūmī [*q.v.*], and whose real name was, according to Djāmī, *Nafaḥāt al-uns*, ed. Nassau Lees, 535, Shams al-Dīn Muḥammad b. ʿAlī b. Malik-dād-i Tabrīzī.

His prose writings, *Maḳālāt*, as well as the notes by Rūmī's elder son Sulṭān Walad [*q.v.*], reveal him as a man of overwhelming spiritual power. He must have been in his forties or fifties when he reached Konya on 26 Djumādā II 642/23 October 1244, but next to nothing about his spiritual pedigree is known. He writes that he was a disciple of Abū Bakr Sallabāf, a basket maker, which may point to a relation with the *futuwwa* [*q.v.*] (thus Gölpınarlı). A Kubrawī *silsila* is sometimes mentioned, and the frequent, very positive use of the term *ḳalandar* in Rūmī's poetry might indicate that Shams was close to the *ḳalandars*. In his search for someone to understand him, Shams wandered through the world, always staying in caravansarays, not in religious establishments. In ʿIrāḳ he met Awḥad al-Dīn-i Kirmānī, whose claim to see the reflection of the moon in a lake when looking at unbearded youths, incited him to the well-known remark, "If you haven't got a boil on your neck, why don't you look at the sky?" For some time, Shams stayed in Syria, where he met Ibn ʿArabī [*q.v.*], whom he did not like, as he "did not follow the *Sharīʿa*" although he found "something useful" in him. But his later comparison of Ibn ʿArabī with Rūmī reveals his feeling; Ibn ʿArabī was, for him, a "pebble, Djalāl al-Dīn, a pearl". For some time, Shams was a teacher in Erzerum; but nowhere could he find someone who could bear his company, for his sharp tongue did not spare anyone, and he was quick in punishing students (although he never accepted a *murīd*). Finally, he was guided by dreams to Konya, where he met Rūmī, who "understood him". Djalāl al-Dīn left his teaching to spend weeks in solitude with Shams (who did not, however, believe in the necessity of the forty days' seclusion). Sensing the increasing enmity of the people of Konya, Shams left secretly on 21 Shawwāl 643/15 February 1246, and in longing for him Rūmī turned poet, touched like a flute by the friend's breath. Shams was finally found in Damascus, and brought back by Sulṭān Walad, who describes the reunion of his father with Shams, when "nobody knew who was the lover and who the beloved" (1 Muḥarram 645/8 May 1247). For some months he stayed in Rūmī's house, married to a girl from the household, who died a few days before he disappeared (5 Shaʿbān 645/5 December 1247). Most likely he was murdered with the connivance of Rūmī's younger son; his body was thrown into a nearby well besides which the *maḳām-i Shams* was later built. Rūmī probably sensed what had happened, yet did not believe in the death of the "eternally radiant Sun" and went to Syria to search for him until he realised that Shams lived in him; and he signed his poetry with his name. His later friends, Ṣalāḥ al-Dīn Zarkūb and Ḥusām al-Dīn Čelebi were nothing but "reflections" of "the Sun". His *naʿt-i sharīf* shows the close connection between Shams and the Prophet, from whom he claimed to have received "the cloak of companionship". His love for the Prophet to the exclusion of all learned books, and his aversion from philosophy, is echoed in Rūmī's poetry.

Shams claimed to have reached the highest possible rank, that of the third degree of the beloved ones, *maʿshūḳ*, or "the *ḳuṭb* of the beloved ones", and Rūmī's descriptions of Shams are sometimes close to his "deification".

Claims have been made that Shams was an Ismāʿīlī, all the more as a mausoleum of Shams-i Tabrīzī is found in Multān. This (Indian) Shams was a contemporary of the Suhrawardī master Bahāʾ al-Dīn Zakariyyā (d. 1267), and the miracles ascribed to him are as outspoken and as scaring displays of tremendous power as those of Mawlānā Rūmī's Shams; however, it is likely that the Multānī Shams may be identical with an Ismāʿīlī *pīr* (cf. shams al-dīn muḥammad).

But whoever Shams-i Tabrīz may have been (and that he was a real person is proven by his enormous derwish hat in the museum in Konya), the world owes to his inspiration the collection of the most fiery mystical love lyrics, the *Dīwān-i Shams-i Tabrīz* by Rūmī, and without his influence Rūmī's *Mathnawī* would not have been composed either, for he was the inspiring power behind every word that Rūmī wrote.

SHAMSA, a jewel used by the ʿAbbāsid and Fāṭimid [*q.vv.*] caliphs as one of the insignia of kingship. According to the description of the Fāṭimid *shamsa*, given by Ibn Zūlāḳ (quoted by al-Maḳrīzī, *Ittiʿāẓ al-ḥunafāʾ*, i, 140-2), it was not a sunshade, as has been guessed (de Goeje, in al-Ṭabarī, *Glossarium*, p. cccxvi), but a kind of suspended crown, made out of gold or silver, studded with pearls and precious stones, and hoisted up by the aid of a chain. The *shamsa*, therefore, is not to be confounded with the *miẓalla* [*q.v.*] or sunshade which belonged also to the royal insignia. The model of the *shamsa* was probably the crown suspended above the head of the Sāsānid king (al-Ṭabarī, i, 946). It served for the ʿAbbāsid caliphs as a symbol of legitimate rule (al-Ṭabarī, iii, 1553-4) and represented the authority of the absent caliph during the Pilgrimage to Mecca, where it was suspended in front of the Kaʿba during the *ḥadjdj*

ceremonies. The ʿAbbāsid *shamsa* was endowed by the caliph al-Mutawakkil (232-47/847-61) and studded with precious stones by al-Muʿtaḍid (279-89/892-902); in 311/924 it was taken by force by the Carmathian leader Abū Ṭāhir al-Djannābī (al-Azraḳī, *Akhbār Makka*, ed. Wüstenfeld, 156; ʿArīb al-Ḳurṭubī, 16-17, 119). The Egyptian one was made by order of the regent Kāfūr for the young Ikhshīdid prince Unūdjūr (334-49/946-61). After the Fāṭimid conquest it was replaced by a greater one on the order of the general Djawhar for the caliph al-Muʿizz; this new *shamsa* was for the first time hoisted above the great hall (*īwān*) of the palace of Cairo at the day of ʿArafa in Dhu ʾl-Ḥidjdja, 362/973 (al-Maḳrīzī, *loc. cit.*). Djawhar's *shamsa* was carried away during the plunder of the Fāṭimid treasure houses in 461/1068, together with a yet unfinished new one. On this occasion we learn that Djawhar's *shamsa* was made out of 30,000 *mithḳāls* (132.42 kg) of gold, 20,000 dirhams (61.6 kg) of silver and 3,600 precious stones (al-Maḳrīzī, *op. cit.*, ii, 294).

(H. Halm)

SHAMSIYYA, a mystical brotherhood derived from the Khalwatiyya [*q.v.*], which came into existence and developed in the Ottoman Empire from the end of the 10th/16th century.

Its founding saint, Abu ʾl-Thanāʾ Shams al-Dīn Aḥmad b. Abi ʾl-Barakāt Muḥammad b. ʿĀrif Ḥasan al-Zīlī al-Sīwāsī—more commonly known as Ḳara Aḥmad Shams al-Dīn Sīwāsī—was born in the small town of Zile, in eastern Anatolia, in 926/1520, and was initiated by two Khalwatī *shaykhs* practising in this region: the *shaykh* Muṣliḥ al-Dīn of Djumʿa Pazarī, and then the *shaykh* ʿAbd al-Madjīd Shirwānī (d. 972/1565) of Tokat. At the request of Ḥasan Pasha, *wālī* of Sivas, he undertook the supervision of a *zāwiya*, constructed at the latter's instigation in the precincts of a mosque in the town of Sivas. He taught there until the end of his life, which took place in 1006/1597, and he was buried in the vicinity of his *zāwiya*.

Three elements were influential in the inception of the mystical way on which Ḳara Aḥmad Shams al-Dīn left his distinguishing mark: the significant literary corpus of this individual; the number and the widespread diffusion of his *khalīfas*; and his participation in the campaign of Eger in Hungary. A number of works are in fact attributed to him, in verse and in prose, in Turkish and in Arabic, of which the most important are entitled: *Kitāb al-Ḥiyāḍ min ṣawb al-ghamām al-fayyāḍ, Mewlid, Menāḳib-i čahār yār-i guzīn, Manāzil al-ʿārifīn, Gulshan-ābād, Zubdat al-asrār fī sharḥ mukhtaṣar al-Manār, Süleymān-nāme, ʿIbret-nāme*, etc. (a number of these were published in Turkey from the end of the 19th century; cf. A. Gölpınarlı, *IA*, art. *Şemsiye*). Under the *makhlaṣ* of Shamsī, he also left many poems and songs of a mystical inspiration. As for his *khalīfas*, there were some thirty of them, who spread his teachings in eastern and central Anatolia—especially in the towns of Zile, Sivas, Merzifon, Turhal, Samsun, Divriği, Kırşehir, Ankara and Kayseri—but also in Cyprus, in Istanbul and in Cairo. As to his participation in the campaign of Eger in 1596 (in the company of several of his disciples), this marked the establishment of contact between the nucleus of the nascent brotherhood and the Ottoman authorities. In fact, the sultan Meḥemmed III invited Shams al-Dīn to take up residence in the capital, as a reward for his support in the victorious campaign; but the *shaykh* declined the invitation on account of his advanced age. The Ottoman sovereign extended the same offer, some years later, to his nephew and successor ʿAbd al-Madjīd Sīwāsī (d. 1049/1639-40), and the latter accepted it.

The centre of the network of the Shamsiyya was then shifted to Istanbul, where the brotherhood tended partially to supplant other branches of the Khalwatiyya. It was this grouping which henceforward enjoyed the goodwill of the sultan and of senior functionaries of the Empire, and occupied, throughout the first half of the 11th/17th century, the centre of the religious stage. In fact, Khalwatī-Shamsī *shaykhs* were in numerous cases appointed to serve as preachers (*wāʿiẓ*), particularly in the most prestigious mosques. ʿAbd al-Madjīd Sīwāsī and his disciples were the leading protagonists in the struggle against the heterodoxy of the Ḥamzawī *shaykhs*, whom they denounced publicly. They also acted as spokesmen for the Ṣūfīs in the bitter conflict between the latter and the *Ḳāḍīzādelī*, representatives of the conservative and fundamentalist tendency led by Meḥmed Ḳāḍīzāde (d. 1635).

This preponderance of the successors of Ḳara Aḥmad Shams al-Dīn in the Ottoman capital—particularly in the scholarly circles from which the majority of them emerged—favoured the expansion of the network of the Shamsiyya. This was consolidated in Anatolia (on the eastern side, the cradle of the brotherhood, but also on the western side—Alaşehir, Manisa, Mytilene and Chios—as well as in central Anatolia (especially at Konya and Safranbolu), and in the Middle East (Damascus, Cyprus, Jerusalem, Cairo and Mecca). But it also extended into the provinces of Thrace and Macedonia (especially in the eastern region—in particular, in Gelibolu, Gülmücine/Komotine, Havsa, Edirne, Yambol, Filibe/Plovdiv, Lofça/Loveč, Varna, Silistre/Silistra, Dobriç/Tolbuhin and Kefe—as well as in Buda and the Hungarian frontier zones) and as far as the Crimea. In Istanbul itself, the establishments directed by *shaykhs* of the Shamsiyya flourished, in particular during the period of the nephew and successor of ʿAbd al-Madjīd Sīwāsī, ʿAbd al-Aḥad Nūrī Sīwāsī (d. 1061/1651), who contributed so energetically to the progress of this branch of the Khalwatiyya that it became known by the name of Shamsiyya-Sīwāsiyya or simply Sīwāsiyya. At that time, the diffusion of the brotherhood generally proceeded according to the following pattern: arrival in Istanbul of a young student intent on pursuing his studies in the major metropolitan *madrasas*, affiliation to the *ṭarīḳa*, and return to his native land with the object of propagating the latter. Despite its rapid expansion, the network remained relatively centralised, its heart being the *tekke* of Shaykh Yawsī—renamed Sīwāsī Tekkesi—situated close to the Selīmiyye mosque in Istanbul, and administered by the descendants of the *shaykh* ʿAbd al-Madjīd.

From the beginning of the 18th century, the brotherhood went into decline, to disappear almost totally in the 19th century, often, it seems, to the advantage of other branches of the Khalwatiyya, such as the Sunbuliyya and the Shaʿbāniyya [*q.vv.*]. In Istanbul, during the final decades of the Ottoman Empire, there were still representatives of the Shamsiyya administering a *tekke* in the Taşkassap quarter. According to Dhākir Shükrī, the *tekke* of Zibin-i sherīf had as its *shaykh* a certain Meḥmed Ḳāsim al-Dāghistānī al-Khalwatī al-Shemsī (d. 1328/1910), who was succeeded by his son, Yūsuf Ḍiyāʾ al-Dīn. But S. Vicdanî makes it clear that, although these *shaykhs* possessed a *silsila* linking them to ʿAbd al-Aḥad Nūrī Sīwāsī, the *tekke* in question functioned as an establishment of the Naḳshbandiyya. Today, this branch of the Khalwatiyya seems to have disappeared.

As regards the doctrine and the practices of the Shamsiyya-Sīwāsiyya, they were shared by the majority of the Khalwatīs; the practice of spiritual retreat (*khalwa* [*q.v.*]) and the initiation of the seven names (*al-asmā' al-sab'a*) being two central elements. The Shamsī-Sīwāsī *dhikr* was a *dhikr dewrān*, with a rotating movement in a circle formed by the dervishes. 'Abd al-Aḥad Nūrī is the author of a treatise defending this practice, entitled *Risāle fī djewāzi dewrāni 'l-ṣūfiyye*. As for the adoption of the doctrine of the oneness of being (*waḥdat al-wudjūd*), cf. O. Türer, *Türk mutasavvıf ve şairi Muhammed Nazmi*, which also provides further details regarding the teaching of one *shaykh* of the brotherhood. The characteristic *tādj* of the Shamsī-Sīwāsī *shaykhs*—comprising forty separate pieces, as with the majority of the Khalwatīs—was made of yellow fabric, half of it embroidered with Kufic script, surmounted by a red button and encircled by a green turban.

SHAMSŪN, the Biblical Samson of Judges, xii-xvi (12th century B.C. according to Biblical chronology), unmentioned in the Ḳur'ān. Al-Ṭabarī, i, 793-5, locates him historically in the Christian era, just before St. George (Djurdjīs); al-Tha'labī, *'Arā'is al-madjālis*, Cairo n.d., 392-3, situates him just after St. George and understands him to have been a Christian. The chronology is probably the result of the use of Christian sources for the story. The story of Samson was very popular in Christian circles, with Samson proclaimed an exemplar of victorious faith in Hebr. xi, 32, and, later, an allegorical figure of Christ. Samson's status as a Nazirite (in Aramaic, *nadhīrā* or *n^edhīrā* [see NADHĪR] may also have suggested a Christian connection to some Muslims because of the similarity of the name of Samson's vow (see Num. vi, 2-8) and the name Nazareth (*al-Nāṣira*), the home town of Jesus, and *Naṣārā* [*q.v.*], the Ḳur'ānic term for Christians (the linking of the names was also a tendency in Christian allegorical interpretation of the story).

The individuality of Samson (contrary to the general Biblical picture of judges who lead the community into battle) becomes the focus of the Muslim development of the prophetic model in Samson. According to al-Ṭabarī's information, Samson was born into a community of unbelievers but dedicated his life to God, ever fighting the idolators. He was aided by God, specifically by being given water during battles (see Judges xv, 19). His opponents realised that they would only overcome him through his wife whom they then bribed. She tested his strength twice and subsequently nagged him until he finally revealed that he could only be subdued by his uncut hair. She bound him with his hair while he was sleeping and, when he awoke, his enemies came, mutilated his body and took him away, powerless, to be paraded in front of the local minaret. There, Samson pulled the supports down, killing all the people (including his wife, according to al-Tha'labī, but perhaps not himself).

The purified presentation of Samson is in keeping with the Christian understanding rather than the Biblical story: Samson was a great fighter and man of faith who was betrayed by his wife. There is no lust, no prostitution, and no self-destruction within the story.

Bibliography: Given in the article.

(A. Rippin)

SHAMWĪL (also Ashamwīl/Ashmawīl, Sham'ūn, Sam'ūn), the Samuel of Biblical history (I Sam. i-xxviii), perhaps referred to in Ḳur'ān, II, 246-7, in connection with the appointment of Saul [see ṬĀLŪT] as king over Israel (although some exegetes see the reference to be to Joshua (Yūsha'), the "prophet after Moses"). The form of the name Shamwīl is closer than Sham'ūn to the Hebrew Sh^emu'el; Sham'ūn may be the result of some confusion between the names Simeon (Hebrew Shim'on; see Gen. xxix, 33, etc.) and Samuel, but that is unclear and confused further by attempts to incorporate etymologies of the names into the narratives. Al-Ṭabarī, i, 547-54, interchanges the spelling of the name throughout his account. Abū Rifā'a al-Fārisī, *Bad' al-khalḳ wa-ḳiṣaṣ al-anbiyā'*, in R.G. Khoury (ed.), *Les légendes prophétiques dans l'Islam*, Wiesbaden 1978, 80-4, however, recounts separate stories of Sham'ūn and Ashamwīl (with the story of 'Aylūḳ—probably Eli, who is called 'Alī, 'Aylī and 'Aylā in al-Ṭabarī—being placed in between the two; cf. I Sam. i); H. Schwarzbaum, *Biblical and extra-biblical legends in Islamic folk-literature*, Beiträge zur Sprach- und Kulturgeschichte des Orients, Bd. 30, Walldorf-Hessen 1982, 64, suggests that Sham'ūn here should be understood as Shamsūn [*q.v.*], i.e. Samson, but the story is barely recognisable as speaking of him. Al-Kisā'ī, *Ḳiṣaṣ al-anbiyā'*, ed. Eisenberg, Leiden 1923, 250-1, and al-Tha'labī, *'Arā'is al-madjālis*, Cairo n.d., 232-9, use the name Shamwīl consistently.

The stories of Samuel transmitted in the Islamic context concentrate on his birth and his selection of Saul; other elements of his nomination and career as a prophet are elaborated so as to fit within the common pattern of Muslim prophet stories, especially in his struggles with the unbelievers. Samuel is remembered today at his tomb at al-Nabī Samwīl near Jerusalem, where there has been a mosque since the 18th century.

Brinner (tr.), *The history of al-Ṭabarī*. iii. *The children of Israel*, Albany, N.Y. 1991, 129-35, esp. the notes.

(A. Rippin)

SHANDĪ, a town in the Republic of the Sudan, on the east bank of the Nile, about 160 km/100 miles north-east of Kharṭūm. Population, in 1956, 11,500; in 1980, 24,000; and in 1995 probably more than 30,000. The origins and early history of Shandī are unknown. It is situated in the central area of the ancient Kingdom of Meroë. Modern Shandī has been one of the main towns of the Dja'aliyyūn [*q.v.*], who since at least the 16th century until 1821 maintained a small kingdom in the area. However, the town of Shandī does not appear in the historical sources before the 18th century, and then as the seat of the king (*makk*) and as an important trading centre.

Major caravan routes have crossed the area of Shandī since ancient times, and trade was an important factor in its foundation. Between 1770 and 1820 the town witnessed a remarkable growth which was only broken by the Egyptian invasion in 1820-1, under the command of Ismāʿīl Pasha [*q.v.*], the son of Muḥammad ʿAlī Pasha [*q.v.*]. Its population was then estimated at about 5-7,000 people living in 8-900 houses. A revolt against the invaders following the murder in Shandī of Ismāʿīl Pasha in the autumn of 1822, caused the town to be destroyed and a large part of its population to be dispersed. Subsequently, the Egyptians moved the district administration across the Nile to the sister-town of al-Matamma [*q.v.*], and Shandī did not recover its former prosperity before the present century. In the spring of 1884 the people of Shandī joined the Mahdist revolt against the Egyptians [see AL-MAHDIYYA]. By that time, the population numbered about 2,000, a figure which was reduced to about 500 at the turn of the century.

During the Anglo-Egyptian Condominium (1899-1956) and thereafter, Shandī grew into a prosperous town. Its location in a rich agricultural area, its position on the north-south railway, and its relative proximity to Kharṭūm, are all factors which have stimulated the town's growth. Agricultural expansion in the area based on pump irrigation started early in this century, and local produce like grain, vegetables and fruits is exported through Shandī. Local trades consist of carpentry, tailoring, basketry, and cotton weaving. Today, it is also an administrative and educational centre, and the seat of a military garrison.

AL-**SHANFARĀ** "he who has large lips", is the nickname, perhaps even the name (al-Zamakhsharī, introd., 8; Sharīf, 15), of one of the most famous pre-Islamic *ṣuʿlūk* poets. A great deal of confusion surrounds the man and his work; for this reason it is appropriate to handle the information concerning him with the greatest caution.

1. Life.

Details relating to the life of al-Shanfarā are sparse, contradictory and marked by an anecdotal quality much more pronounced than is the case with all the other pre-Islamic poets. His name is reportedly Thābit (ʿAmr) b. Mālik, of al-Iwās b. al-Ḥadjr (al-Ghawth) b. al-Aws, a clan of the al-Ḥārith b. Rabīʿa, a sub-tribe of the al-Hinw (Azd) (Ibn Ḥabīb, *Asmāʾ al-mughtālīn*, in *Nawādir al-makhṭūṭāt*, ii, 231). This genealogy is problematical, since it renders implausible the biography of the poet as it is currently accepted.

(1) According to a tradition related by al-Muʾarridj al-Sadūsī and retained by Abū ʿAmr al-Shaybānī, al-Shanfarā was allegedly captured at a very early age by the Banū Shabāba b. Fahm b. ʿAmr of the Ḳays b. ʿAylān; he remained in a state of semi-captivity until his liberation following an exchange of prisoners between the Shabāba and the Salāmān b. Mufridj b. Mālik b. Zahrān, a tribe of which the eponym was said to be Naṣr b. al-Azd. He was adopted by a member of the latter tribe; according to some sources, he quarrelled with the daughter of the master of the house; according to another version, he fell in love with the girl, al-Ḳuʿsūs (*Dīwān*, 53), who rejected him as unworthy of her on account of his humble ancestry (*al-Mufaḍḍaliyyāt*, ed. Lyall, 195-6; *Ḥamāsa*, Bonn 1828, 244). Offended, al-Shanfarā abandoned his adoptive clan, returned to the Banū Shabāba, his erstwhile captors, and swore to avenge himself on the Salāmān by killing a hundred of them. This account is invalidated by a number of implausibilities: (a) the efforts of the Salāmān in seeking to liberate a man whose blood-links with them were distant and weak, if not non-existent; (b) the genealogical reservations of the young Salāmāniyya woman: al-Hinw b. al-Azd (eponymous ancestor of al-Shanfarā) was in no way inferior in terms of eminence to his brother Naṣr b. al-Azd (eponymous ancestor of the Salāmān); (c) resentment as justification for the return of a captive to his former jailers. However, it is precisely this tradition which was subsequently taken up by the other sources as well as by modern research (F. Gabrieli, *Taʾabbaṭa Sharran, Shanfarā, Khalaf al-Aḥmar*, in *Atti della Accademia Nazionale dei Lincei*, cccxliii (1946), 1, 41-2; Sharīf, 16; Yūsuf Khalīf, 332; Ṣafadī and Ḥāwī, *Mawsūʿat al-shiʿr al-ʿArabī*, i, al-*Shiʿr al-djāhilī*, Beirut 1974, 61; Brockelmann, S I, 52-3; *GAS*, ii, 133-4; Ḥifnī, 112).

(2) A genealogical text of Ibn Ḥazm (d. 456/1064) permits the presentation of a biography of the poet which corresponds more closely to reality; it is stated there: "To the Mālik b. Zahrān belong the Banū Salāmān b. Mufridj b. Mālik b. Zahrān, a tribe (*baṭn*) to which the outlaw al-Shanfarā belonged; he attacked his own kinsmen incessantly, because a fellow-tribesman of theirs had murdered his father and they refused to apply in his case the law of retaliation; he allied himself with the Banū [Shabāba b.] Fahm b. ʿAmr b. Ḳays b. ʿAylān b. Muḍar who were his maternal uncles" (Ibn Ḥazm, *Djamharat ansāb al-ʿArab*, Cairo 1971, 386).

This text, with its wealth of information, is supported by traditions which circulated in the 2nd/8th century (*al-Mufaḍḍaliyyāt*, 196, § 1; *Aghānī*, xxi, 137-8), and throws new light on them, in particular on another tradition of al-Shaybānīw in this version, the mother of al-Shanfarā returns to her own people, accompanied by her two young sons, after the assassination of her husband and the refusal of the tribe to avenge the blood which has been shed; the younger of the two sons dies soon afterwards. The poet grows up among his maternal uncles, the Shabāba b. Fahm. On coming of age, he exacts vengeance by killing Salāmānīs, including the murderer of his father, Ḥarām b. Djābir al-Salāmānī, although he is in a state of *iḥrām* at Minā (*Aghānī*, xxi, Leiden 1888, 137).

He then becomes a *ṣuʿlūk*, on amicable terms with his maternal uncle, Taʾabbaṭa Sharran and with ʿAmr b. Barrāḳ (Ḥifnī, 112). In dangerous circumstances, he shows great courage; his prowess as a runner is proverbial (Ibn Saʿīd al-Andalusī, *Nashwat al-ṭarab fī taʾrīkh djāhiliyyat al-ʿArab*, ʿAmmān 1962, i, 434; al-Rāghib af-Iṣfahānī, *Madjmaʿ al-balāgha*, ʿAmmān 1406/

1986, 630; al-Baghdādī, *Khizāna*, iii, 344); on account of his dark skin, he is included in the group of the *aghribat al-ʿArab* (ʿAbduh Badawī, *al-Shuʿarāʾ al-sūd wa-khaṣāʾiṣuhum fi ʾl-shiʿr al-ʿarabī*, Cairo 1973, 23-7, denies any negroid element in the poet's ancestry). It is related that he met his death in an ambush set by the Banū Ghāmid in the mountainous region to the south of Mecca, a zone controlled at this time by the Azd (Ibn Ḥabīb, 231-2).

2. His poetry.

The *Dīwān*, such as it has survived, presents enormous problems: the 191 verses which it comprises do not constitute in any way a classic recension; the Cairo manuscript (Dār al-Kutub, 6676, *adab*) is a photocopy of the work in Molla Husrev Paşa 149, used in 1936 by al-Maymanī to establish his edition of the *Dīwān*; it includes three long pieces, the *Lāmiyya*, the *Tāʾiyya* (*al-Mufaḍḍaliyyāt*, xx, 194-207) and the *Fāʾiyya*, better known by the name *al-Markaba* (*Dīwān*, 32-5), three bravura fragments which derive from a clearly pursued artistic project. They possess, in this respect, a richness of expression, a thematic variety, and a profundity which is totally absent from all the rest, in other words, the brief fragments belonging to the poetry of circumstance (17 fragments comprising 73 verses), collected by the modern editor from various secondary sources.

(a) The *Lāmiyyat al-ʿArab*

This poem, the most accomplished specimen of the poetry of the *ṣaʿālīk*, has aroused great interest from the first decades of the 3rd/9th century to the present day, as is shown by the numerous *sharḥ*s which have been devoted to it. However, the philologists of the Baṣra school expressed serious doubts as to its authenticity: if Yāḳūt is to be believed, Abū ʿUbayda (d. 210/825) declared that the poem had been erroneously attributed to al-Shanfarā (*Muʿdjam al-udabāʾ*, Beirut 1993, 1255). The entirely identical view of Ibn Durayd, relayed by al-Ḳālī, has been mentioned by all those who have studied the poet.

Is it appropriate to see in this attitude a supplementary echo of the rivalry between the schools of Baṣra and of Kūfa? It should not be forgotten that the poetry of al-Shanfarā was collected by Kūfī *rāwiya*s (Blachère, *loc. cit.*). Opinions are divided among modern scholars. In 1864 Nöldeke expressed serious doubts as to its authenticity, noting that the ancient transmitters were unaware of its existence; furthermore, the philologists of the 3rd/9th century make no mention of it whatsoever (*Beiträge zur Kenntnis der Poesie der alter Araber*, Hanover 1864, 201). Krenkow (*al-Shanfarā*, in *EI*[1]), F. Gabrieli (*Sull' autenticità della Lāmiyyat al-ʿArab*, in *RSO*, xv [1935], 361), and Blachère (*HLA*, ii, 410) essentially reproduce Nöldeke's arguments, adding others relating especially to poetic style and language. Only G. Jacob, *Schanfarà-Studien*, i, *passim*; and idem, *Aus Schanfaràs Dīwān*, Berlin 1914, introd., and Brockelmann were convinced of its authenticity, basing their conclusions on the results of internal analysis, such as the use of Yemeni terms, the mention of cows, which do not figure at all in archaic poetry, and symbolic description. S. Stetkevych, 125-6, reckons that the poem is marked by a series of signs and symbols which render incontrovertible its attribution to al-Shanfarā: the relations of the poet with his own people, the Azd, constitute an antidote to the normal affiliation of a tribesman to his tribe. In other words, this ode constitutes the typical process of regret for the past, an essential characteristic of the poetry of al-Shanfarā.

The publication of a section of the *K. al-Manthūr wa ʾl-manẓūm* in 1977 has cast a new light on this problem. This work makes it possible to ratify, historically and on the basis of an ancient source, the arguments of the partisans of the authenticity of the *Lāmiyya*. The author of the work, Ibn Abī Ṭāhir Ṭayfūr (d. 280/893), is a chronicler and an anthologist of exemplary integrity. Under the heading of "unique and incomparable *ḳaṣīdas* (*al-ḳaṣāʾid al-mufradāt allatī lā mathīl lahā*)", he quotes in full the *Lāmiyya* of al-Shanfarā (*al-Manthūr wa ʾl-manẓūm*, Beirut 1977, 69; the *Lāmiyya* in its entirety, 69-79) which was recited to him by Abu ʾl-Minhāl ʿUyayna b. ʿAbd al-Raḥmān al-Muhallabī, a transmitter considered reliable (*Fihrist*, 157; Yāḳūt, *Udabāʾ*, 250-1) and a contemporary of Khalaf al-Aḥmar, the presumed author of the poem in the view of those who deny paternity to the Azdī poet. It may thus be affirmed that in the 2nd/8th century, in the lifetime of Khalaf, the transmitters were well acquainted with the *ḳaṣīda* and attributed it to al-Shanfarā.

This ode, which has the rhythm of a beating drum, turns its back on the poetic conventions of the *Djāhiliyya*. It reflects a purely individual register and constitutes, thereby, a negation of tribal values (vv. 1-5). The self stresses its primacy in each verse by means of incessant use of pronouns and verbs in the first person singular (more than 30 instances in the first 50 verses); in parallel, an absolute rejection of the tribe is attested here, accompanied by an affirmation of its superiority over the clan as such. In fact, mutual relations are conceived in a multi-dimensional approach. The disowned tribe (v. 1) reacts; the disruptive element must be removed; the latter, feeling under threat of elimination, engages in conflict which ends in the triumph of the individual. He reigns over the desert dominating the maleficent creatures of the night, defeating the wolf (vv. 27-35) and the sand grouse which he overtakes in the race for water (vv. 36-41). But this is a short-lived triumph; the poet has a very clear vision of this, and knows that in the end *Umm Ḳasṭal* (death) will claim him; and he asks not to be buried at all. Finally, what is observed is a total disintegration of the individual and a re-unification of the tribe. In the context of form, al-Shanfarā also departs from convention; he addresses his themes directly, leaving aside the *nasīb* and the camel-driving section.

(b) The *Tāʾiyya*

The *Tāʾiyya* begins with a *ghazal*, a genuine love poem which has aroused the admiration of scholars (see *Bibl.*, Stetkevych, 136). This love takes on a double aspect: the feminine personality, the departure which is equivalent to a rejection of this love by al-Shanfarā and leads to its loss. These two overlapping aspects are presented simultaneously; they are identified with one another by means of persistent recourse to the third person singular (*istaḳallati, tawallati, aẓallati, wallati*; for the overlapping, see vv. 10-12); the love of which the poet speaks is certainly complete. For the second aspect, it is the female companion who is praised for her moral qualities and not the female lover, as is the more frequent case. However, it is destructive vengeance which triumphs. Total pessimism is the overwhelming sense; in fact, no possibility of reconciliation is envisaged here.

(c) The *Fāʾiyya*

The *Fāʾiyya* describes a night of vigil spent by a warrior preparing himself for a razzia. As a precaution, he has established himself on a *marḳaba* (hill-top). Scrutinising the darkness, with ears wide open, he examines his bow and his arrows and proceeds, in the same vein, to give a quite detailed description of his weapons; clearly revealed are intent interest, pride

and sympathy on the part of the warrior towards his companions. It is appropriate to note, in this connection, that al-Shanfarā exploits a tendency of the poetry of the *ṣuʿlūks* in describing weapons in lavish detail, thus setting himself apart from the poetry of war; in the latter, substantive adjectives are used to denote weapons (Ibn Sallām, *K. al-Silāḥ*, Beirut 1408/1988, where this tendency is clearly visible); according to a regular pattern, and with little variation, the poet confines himself to mentioning arms, rather than describing them. The only descriptions worthy of the name in pre-Islamic poetry are found among the *ṣuʿlūks*; al-Shanfarā stands apart on account of his description of contemporary weapons for shooting.

Bibliography: al-Shanfarā, *Dīwān*, in *Dīwān al-ṣaʿālīk*, Beirut 1413/1992, 11-54 (currently the least unsatisfactory edition); Masʿūdī, *Murūdj*, iii, 310 = § 1190; Zamakhsharī, *Aʿdjab al-ʿadjab fī sharḥ Lāmiyyat al-ʿArab*, Damascus 1408/1987; ʿUkbarī, *Sharḥ Lāmiyyat al-ʿArab*, Beirut 1403/1983; Yāḳūt, *Udabāʾ*, Beirut 1993, 330, 1255, 2409, 2601; poetic tr. of the *Lāmiyya* in M. Sells, *Desert tracings*, Middletown, Conn. 1989, 21-31; Ibn al-Shadjarī, *Mukhtārāt al-shuʿarāʾ al-ʿArab*, Cairo 1399/1979, 92-125; Baghdādī, *Khizāna*, Cairo 1406/1986, index; F. Gabrieli, *Storia della litteratura araba*, Rome 1951, 60-2; Blachère, *HLA*, index; Sezgin, *GAS*, ii, 133-7, ix, 267; Suzanne Pinckney Stetkevych, *The mute immortals speak. Pre-Islamic poetry and the poetics of ritual*, Ithaca and London 1993, § 4, 119-57 (an excellent study based on the theory of the "abortive passage" of the ethnologist Van Gennep and offering a new reading of the *Tāʾiyya*); Nāṣir al-Dīn al-Asad, *Maṣādir al-shiʿr al-djāhilī*, Cairo 1956, 173, 452-61; Yūsuf Khalīf, *al-Shuʿarāʾ al-ṣaʿālīk*, Cairo 1959, index, see especially 328-36 (very interesting biography); Nūrī Ḥammūdī al-Ḳaysī, *al-Furūsiyya fī 'l-shiʿr al-djāhilī*, Baghdād 1384/1964, 139, 169, 179, 185; Muḥammad Badīʿ Sharīf, *Lāmiyyat al-ʿArab aw nashīd al-ṣaḥrāʾ*, Beirut 1964; ʿAbd al-Ḥalīm Ḥifnī, *Shiʿr al-ṣaʿālīk, manhadjuhu wa-khaṣāʾiṣuhu*, Cairo 1987, 51, 69, 112, 161, 162-72, 179-81, 185, 187-92, 203. SHĀNĪ-ZĀDE Meḥmed ʿAṭāʾ Allāh Efendi (1769? or 1771?-1826), Ottoman physician, historian and polymath. Son of the *ḳāḍī* Shānī-zāde Ṣādiḳ Meḥmed Efendi, he pursued a religious career together with a medical education. In 1793-4 Shānī-zāde attained the rank of *müderris*, in 1814-15 that of *ḳāḍī* of Eyüp, and in October 1821 that of Mollā of Mecca and inspector of *ewḳāf*. Shānī-zāde suffered from the jealousy of the *ḥekīm-bashī* Behdjet Efendi [see bahdjat muṣṭafā efendi] and never himself became chief physician. Meanwhile, after the *waḳʿa-nüwīs* ʿĀṣim [*q.v.*] died, Shānī-zāde was appointed official historiographer (November-December 1819). As a leader in the Beshiktash Scientific Society, Shānī-zāde was suspected of Bektāshī connections and, when the Janissaries were suppressed, banished to Tire (Aydin). He died two months later in September 1826, and is buried in Tire.

The encyclopaedic Shānī-zāde was knowledgeable in medicine, mathematics, physics, astronomy, military science and painting. He composed poetry, and was a watchmaker. He was at home in Arabic, Persian, French and, probably, Italian and Latin. His experiments with cows proved that effective smallpox vaccine could be produced, and he advised Maḥmūd II to institute a vaccination campaign in Istanbul. He contributed much to modern Turkish medical terminology, especially to anatomical terms. His five-part series on anatomy, physiology, pathology, surgery, and pharmacology, written in plain Turkish, included translations from western works. The anatomy, *Mirʾātu 'l-ebdān fī teshrīḥ-i aʿḍāʾ-i 'l-insān*, the first medical work printed in Turkish (Istanbul 1820), contained Turkey's first accurate anatomical illustrations, often modelled after those in Diderot's *Encyclopédie*. Shānī-zāde's *Taʾrīkh*, running from Maḥmūd II's accession to 1820-1, exhibited cautious westernising leanings, mentioning such topics as parliaments, insurance and quarantine.

(R.H. Davison)

SHANSI (Shan-hsi, Shan-xi), a province of north Central China watered by the Huang ho (Yellow River) and its tributaries. Of the total population of Shansi which numbers 32,882,403, Muslims (*Hui-min, Hui-tsu*) number about 130,000 (in 1990). Densely-populated places of Shansi Muslims are: Hsi-an (pop. 53,753), Hsien-yang, Ta-li (Tʿung-chou), Wei-nan, Pao-chi, An-kʿang (Hsing-an), Nan-cheng (Han-chung) and other villages along the Wei River. The Muslim population of Shansi before 1862 is estimated at about 1,500,000-2,000,000, but about 1,000,000 of them were reportedly slaughtered by Han Chinese during the Muslim Rebellion of 1862-78; others fled to neighbouring Kansu [*q.v.*] province for safety.

As to the origin of Shansi Muslims, there were some Muslims in Shansi under the Tʿang dynasty (8th-9th centuries), while many Arab and Persian Muslims emigrated from West Asia to Shansi under the Mongol Yüan dynasty in the 13th-14th centuries. In 1280 Naṣr al-Dīn, son of a Muslim general and governor of Yünnan province, Shams al-Dīn Sayyid-i Adjall ʿUmar (1211-79), came to Shansi as local minister, and Muslims there increased. In the late 13th century, Prince Ananda, Yüan viceroy of Shansi and Tangut, was stationed at Kinjānfū (Hsi-an) with an army of 150,000. He was a believer in Islam from early childhood, and it is reported that a great number of the troops were converted to Islam (Rashīd al-Dīn). Under the Ming dynasty which overthrew the Yüan, Shansi Muslims were naturalised as Chinese Muslims (*Hui-min*). In April 1862, when a group of Taiping rebels invaded southern Shansi from Sichuan, the Chʿing authorities who tried to attack them happened to mishandle local Muslims, between whom and the local Chinese in Shansi there had long been antagonism. At first, Muslims at Hua-chou broke out against local Chinese inhabitants, and Muslim rebellion spread over various places along the Wei River, extending to Kansu province. The Chʿing authorities managed to suppress those Muslim rebels, and even massacred a great mass of Shansi Muslims. Consequently, they were dispersed and their population considerably decreased up to the early 20th century.

Shansi Muslims mostly belong to the Ḥanafī rite like other Chinese Muslims. Originally, they had about 300 mosques in Shansi but they have now 118 mosques, large and small, the most prestigious and

archaic one being *Hsi Ta-ssŭ* (West Large Mosque) at Hsi-an. Shansi Muslims have been and are engaged in retail trade, restaurant and inn-keeping, cattle-breeding, fur-trading, farming and transport. Hsi-an has been historically a centre of Chinese Muslim culture and learning in Shansi since Ming times. Shansi Muslims now co-exist with Han Chinese under the minority peoples' policy of Communist China, as is the case with other provinces.

SHANT MĀNKASH, the modern Simancas, a village of the Spanish province of Valladolid, some 10 km/6 miles from that town, on the Douro, known above all for its castle, in which the state archives of Castile, mainly for the 16th and 17th centuries, are preserved.

The site, situated on a bluff commanding a ford over the Douro, was occupied in Roman and Visigothic times, and "repopulated" by Alfonso III, King of León, together with other towns along the line of that River (Zamora, Toro and Dueñas), probably in the last years of the 9th century, when the Christians were able to profit from the feeble state into which the amirate of Cordova had been plunged. After the accession of ʿAbd al-Raḥmān III and the "restoration" of the Umayyad caliphate, the state of al-Andalus sought to regain the lost territory to the north of the Meseta.

In 327/939 the caliph personally led an expedition, the *ghazwat al-ḳudra*, especially aimed at the town of Sammūra/Zamora. But on 11-12 Shawwāl/8-9 August he suffered a check before Simancas, followed by another defeat, in the course of his withdrawal, that of al-Khandaḳ/Alhándega. This defeat was apparently to be explained by the treachery of certain officers in the caliphal army, marked by the crucifixion of 300 of them after the return to Cordova. There has been much discussion on how *al-khandaḳ* ("the trench", or a place thus named) should be understood and on the place in question, and consequently whether there were two successive battles (Simancas and Alhándega) or just one (Simancas, finishing in the trench). Dozy's theory, on the slender basis of the opinion of Spanish authors of the 16th century (cf. his *Recherches*[3], i, 161), placed al-Khandaḳ to the west of Simancas, near Salamanca, towards the river Alhándega, an affluent of the Tormés, but this was opposed by M. Gómez Moreno, who placed it in the opposite direction, at Albendiego, in the modern province of Guadalajara, on the Roman road from Osma to Sigüenza, and by Lévi-Provençal who, after having followed Dozy in his *EI*[1] art. *Simancas*, in 1950 thought, relying on the texts of Ibn al-Khaṭīb and al-Ḥimyarī which he had published, that the reference was to the trench into which Ramiro II's troops hurled down troops of ʿAbd al-Raḥmān al-Nāṣir at the end of the battle of Simancas.

But doubts seem to have been raised since the publication of vol. v of Ibn Ḥayyān's *Muḳtabis*, reproducing the narrative of ʿĪsā al-Rāzī, which agrees on this point with the most ancient Christian source, the *Anales Castellanos Primeros*, and since P. Chalmeta's article *Simancas y Alhándega*, in *Hispania*, xxxvi/133 (1976), 359-444. There could well have been two distinct battles, separated by some fifteen days, with the second one to be situated towards the east, in the confused, mountainous zone separating the upper valley of the Douro from that of the Henares, even if a completely satisfying solution of its exact localisation has not yet been found. There is a similar divergence regarding the seriousness, and the long-term significance, of the caliphal defeat. Chalmeta reduces the event's significance, *pace* the Spanish historical tradition. It is nevertheless true that ʿAbd al-Raḥmān III led personally no more expeditions into Christian territory after this one, in which he was almost captured, and that the military reforms of al-Manṣūr, with long-term effects in the period of the fall of the caliphate, responded, at least in part, to the lack of confidence which could be accorded to the officers of the *djund*, as appeared on the Simancas battlefield.

The abortive attempt of ʿAbd al-Raḥmān III towards the Meseta del Norte was taken up later, with greater tenacity, by Ibn Abī ʿĀmir al-Manṣūr. In particular, in his eighteenth campaign (373/983), he captured and destroyed Simancas. But if the *ḥādjib* envisaged a policy of reconquest, and not merely one of devastation, in these regions, and had the intention to hold at least the line of the Douro, with a garrison and a governor at Sammūra/Zamora, this policy collapsed with the crisis of the caliphate of Cordova in 399/1009.

(J.-P. Molénat)

SHANT YĀḲUB, the Arabic form of the place name St. James of Compostella, Span. Santiago de Compostela, at the present time in the province

of La Coruña, in Galicia.

The "discovery" in the first half of the 9th century of the grave of the Apostle St. James the Greater, who had allegedly come to evangelise the Iberian Peninsula, and whose remains were said to have been brought, after his death in Jerusalem, to Galicia, was the origin of the town's development and of the pilgrimage thither, its church being described by Ibn ʿI̲dh̲ārī as the equivalent, for the Christians, of the Kaʿba for the Muslims.

In 387/997 Ibn Abī ʿĀmir al-Manṣūr led against the shrine his 48th campaign, the most famous one, for which Ibn ʿI̲dh̲ārī has transmitted a fairly detailed account, probably stemming from an official bulletin announcing the victory. The expedition left Cordova, passed through Coria and then through the north of modern Portugal, reaching its destination after crossing difficult mountainous regions. It was supported by a fleet which had left the great arsenal of Ḳaṣr Abī Dānis (Alcacer do Sal), and by the rallying to it of some at least of the military and civil chiefs, the counts, of the lands through which it passed. Having arrived at Santiago on 2 S̲h̲aʿbān/10 August, it found the town abandoned by its inhabitants; the army then destroyed it completely in the course of the following week, including the shrine, but not the tomb itself, respected on al-Manṣūr's express orders. Part of the army pushed on northwards to the outskirts of La Coruña, but the mass of troops beat a retreat and returned to Cordova, after having once more devastated the lands of the king of León but not those of the counts allied to the Muslims. According to the Christian sources, the Muslim army is said to have suffered from dysentery on its retreat.

The character of this expedition, more a demonstration of force to impress and humiliate the Christian enemy, but also to show them the possibility of a rally of forces, than a real operation for conquest, is further illustrated by the episode of the gates and bells of the shrine, brought to Cordova on the backs of captured Christians, to be placed in the roof or to serve as lamps in the Great Mosque there, an episode recounted by other sources, Muslim as well as Christian (Ibn K̲h̲aldūn, al-Maḳḳarī, Jiménez de Rada and Lucas of Tuy).

It nevertheless seems that the ʿĀmirid sacking only momentarily slowed up the growth of Santiago de Compostela; Bermudo II, king of León (d. 999) immediately began rebuilding it. The building of the Romanesque basilica began in 1075.

(J.-P. Molénat)

S̲H̲ANTABARIYYA, a place name of mediaeval al-Andalus (the two component elements *s̲h̲anta* and *bariyya* may be written separately or as one), the Arabic transcription of Spanish Santaver, ancient Sontebria (Centobriga).

It denoted both the province and its chef-lieu. The *kūra* (*balad, bilād, ʿamal*, see Ibn Ḥayyān, *Muḳtabis*, ed. Makkī, Beirut 1973, 330, ed. Chalmeta *et alii*, Madrid 1979, v, 136, 245) "province" of S̲h̲antabariyya lay on high ground not far from the confluence of the Guadiela and the Tagus to the south-east of Guadalajara (Wādī 'l-Ḥid̲j̲āra) (Lévi-Provençal, *Hist. Esp. mus.*, i, 112 n. 3). It was a fertile region famed for its pasture and arable land, and its valleys grew hazel nuts and walnuts (Yāḳūt, *Buldān*, ed. Beirut, iii, 366; Lévi-Provençal, *La "Description de l'Espagne d'Aḥmad al-Rāzī"*, in *And.*, xviii [1953], 80). The difficulty of access of much of its mountainous areas, and the disinclination of its inhabitants (largely Berber) to submit to the central authority in Cordova, made S̲h̲antabariyya the focus of more than one revolt. The most serious was that launched by the celebrated Fāṭimid *dāʿī* or missionary, the Berber S̲h̲aḳyā b. ʿAbd al-Wāḥid, at the head of his fellow-countrymen in 151/768. Several expeditions, some led by ʿAbd al-Raḥmān I in person, were needed before it was finally and definitively suppressed in 160/776-7.

The important strategic position of S̲h̲antabariyya led the most powerful of the Berber families of al-Andalus, the Banū Mūsā b. D̲h̲i 'l-Nūn (Dozy, *Hist. des Mus. d'Espagne*, Leiden 1932, i, 86; d̲h̲u 'l-nūnids), to make it their inacessible and easily defensible residence (*iḳtaʿadūhā dār^a manʿat^{in}*). Al-Fatḥ and Muṭarrif, Mūsā's two sons, brought together their forces, rebelled against the authority of Cordova and became masters of S̲h̲antabariyya. They built there fortresses and fortifications, and founded new villages, and under their rule, the population grew and the region enjoyed prosperity and security (Ibn Ḥayyān, ed. Antuña, Paris 1937, iii, 17). In particular, al-Fatḥ constructed the town of Uklīs̲h̲ (Uclès) at the end of the 9th century, which became the chef-lieu of the region (al-Ḥimyarī, *Rawḍ*, ed. ʿAbbās, Beirut 1984, 61). It was not until 312/924 that it abandoned all tendency towards independence. In that year, ʿAbd al-Raḥmān III, on his return from his victorious expedition to Pamplona, (the *g̲h̲azwat Banbalūna*) against the Christians, passed through the district of S̲h̲antabariyya, where he

received the submission of two of the Berber Dhu 'l-Nūnids, Yaḥyā b. Mūsā and his nephew Yaḥyā b. al-Fatḥ b. Mūsā.

At the present time, there still exists a fortress some 60 km/35 miles to the east of Guadlaja and *ca.* 70 km/40 miles to the north-west of Cuenca, called Castro de Santaver (Ibn Ḥayyān, ed. Makkī, 341 n. 560). However, we have no information which might allow us to acknowledge or to deny any link between this citadel and our Shantabariyya.

AL-SHANTAMARĪ, ABU 'L-ḤADJDJĀDJ YŪSUF b. Sulaymān al-Andalusī al-Naḥwī, Spanish Muslim grammarian and philologist, known as al-Aʿlam al-Shantamarī (the first epithet from his hare-lip; it became a family name, and his eldest son, *ḳāḍī* at Shantamariyya, became known as Ibn al-Aʿlam), born at Shantamariyyat al-Gharb [*q.v.*] (modern Faro, on the southern coast of Portugal) in 410/1019, died at Seville in 476/1083. In 433/1041 he moved from his home town to Cordova, where he studied, and became, in his turn, a famed master in the fields of grammar, lexicography and classical Arabic poetry, fields which enjoyed a great florescence in the Andalus of his time. In the years before his death, he became blind.

He was a prolific author (see Ibn Khayr, *Fahrasa*, 315, 388-9, 422, 432, and ʿIyāḍ, *Ghunya*, 178, 229), and part of his output has survived till today. Amongst his grammatical works were his *Djuzʾ fīhi al-farḳ bayn al-mushib wa 'l-mushab wa 'l-masʾala al-zanbūriyya* (given in al-Makkarī, *Nafḥ*, iv, 77-9); *Djuzʾ fīhi maʿrifat ḥurūf al-muʿdjam; K. al-Masʾala al-rashīd; al-Mukhtār fi 'l-naḥw; K. al-Nukat fī Kitāb Sībawayh* (ed. Z.ʿA. Sulṭān, Kuwayt 1987); and *Sharḥ al-Djumal li 'l-Zadjdjādjī* (*GAS*, ix, 90 no. 10). His most famous work is probably the *Sharḥ dawāwīn al-shuʿarāʾ al-sitta al-djāhiliyyīn* (authors of the *Muʿallaḳāt* except al-Ḥārith b. Ḥilliza) (*GAS*, ii, 109, 112, 122, ix, 265-6; the most recent editions are those of M. ʿAbd al-Munʿim Khafādja, 1954, and of Beirut 1992; and there are separate editions of each of the six commentaries). Al-Shantamarī wrote other commentaries on the works of Abū Tammām (*Sharḥ K. al-Ḥamāsa li-Abī Tammām*, ed. ʿAlī Mufaḍḍal Ḥammūdān, Beirut-Damascus 1992; and *Sharḥ shiʿr Ḥabīb* = Abū Tammām), as well on verses gathered together in grammatical works (*Sharḥ abyāt al-Djumal li 'l-Zadjdjādjī, GAS*, ix, 90 no. 11; and *K. ʿUyūn al-dhahab fī sharḥ Kitāb Sībawayh, GAS*, ix, 60 no. 43, ed. with Sībawayh's *Kitāb*, Cairo 1316-17/1889-90). He also compiled a *Fahrasa* and an opusculum called *Maʿrifat al-anwāʾ* (résumé in *Djuzʾ fīhi mukhtaṣar al-anwāʾ*). For his transmissions of grammar and poetry, see Ibn Khayr, 305, 321, 324-5, 328-30, 333, 338, 340, 346-7, 389, 392, 398, 402-3.

(MARIBEL FIERRO and MANUELA MARÍN)

SHANTAMARIYYAT AL-GHARB, a town of mediaeval al-Andalus, the modern Faro, capital of the Algarve province [see GHARB AL-ANDALUS] of southern Portugal.

It passed under Arab control in Shawwāl 94/June 713 after the capture of Seville. Both the town and the region took on the name of Roman antiquity, Ossónoba, in the form Ukhshūnuba or better, Ukshūnuba. Then from the 4th/10th century there appears the name Shantamariyya or Shanta Mārīlat al-Gharb, and, in the next century, Sh. Hārūn, the name of one of the masters of the town at that time. These two qualificatives enable the town to be distinguished from the town Shantamariyyat al-Razīn or Sh. al-Sharḳ [*q.v.*], sc. Albarrácin. It was the Christians who, in 1233, corrupted Hārūn into Faaron or Faaram, soon afterwards yielding Faro.

The Arabic sources are hazy about the town and its district until the 4th/10th century, describing it then as relatively prosperous (E. Lévi-Provençal, *La description de l'Espagne d'Aḥmad al-Rāzī*, in *al-And.*, viii [1953], 91; Ibn Ḥawḳal, ed. Kramers, 115). But these same sources show that towards the end of the 3rd/9th century and the opening of the next one, a dynasty of *muwallad* origin, the Banū Bakr b. Zadlafa, restored the town, which became the capital of a sort of small, autonomous state during the amirate of ʿAbd Allāh and the beginning of that of ʿAbd al-Raḥmān III (Ibn ʿIdhārī, *Bayān*, ed. Dozy, re-ed. G.S. Colin and Lévi-Provençal, Leiden 1948-51, ii, 137) until 317/929. Shantamariyya lost its position as the first town of the Algarve to Silves [see SHILB] in the course of the 4th/10th century, though it remained the seat of a *ḳāḍī* (J.D. Domingues, *Ossónoba na epoca árabe*, in *Anais do Municipio de Faro*, Faro 1972, 37-8). It again became the capital of a petty state in the period of the *Mulūk al-Ṭawāʾif* [*q.v.*] under the rule of Saʿīd b. Hārūn (417-33/1026-42) and then of his son Muḥammad until 443/1052, when Shantamariyya, like all the region, passed under the rule of the ʿAbbādids [*q.v.*] of Seville. It is mentioned under ensuing dynasties, such as the Almoravids and the next period of Taifas—for a brief while under the authority of the Ṣūfī Ibn Ḳasī of Silves—and then the Almohades. It was one of the last towns of the Algarve to fall, in 647/1249, to Alfonso III of Portugal.

The town remained one of the centres of the Yaḥṣubī Arabs who came there at the time of the conquest, but several bloody defeats at the hands of ʿAbd al-Raḥmān I and the latter's killing of the chief of the Abu 'l-Ṣabbāḥ al-Yamanī clan in 163/779-80 weakened this group, which fell back on Niebla and Silves. The seizure of power, in the 880s, by the Banū Bakr b. Zadlafa marked the ascendancy, as a local power, of the *muwalladūn*, who "transformed the town into a fortress" (*ḥiṣn*) (Ibn ʿIdhārī, *loc. cit.*). This reconstruction was part of a general movement of expansion and prosperity in the Algarve during ʿAbd Allāh's amirate inspired by local forces (Ibn Ḥayyān, *Muḳtabis*, ed. 1979, 96). The seizure of power by other *muwalladūn* during the 5th/11th century was based on the growing popularity of the pilgrimage to the Virgin Mary mentioned by al-Ḳazwīnī (*Āthār*, ed. Wüstenfeld, 394) and al-Ḥimyarī (ed. and tr. Lévi-Provençal, *La Péninsule ibérique au Moyen Age d'après le "Kitāb Rawḍ al-Miʿṭār"*, Leiden 1938, text 115, tr. 140), which was to last till the Christian reconquest (Alfonso X, *Cantigas de Santa Maria*, ed. W. Mettmann, Coimbra 1959, no. 183) and in which both Christians and Muslims, probably *muwalladūn*, took part. Arabic authors like al-Idrīsī evoke the florescence of the Muslim community, shown by at least a congregational mosque, a mosque of the quarter and a sort of assembly

(*dj̲amāʿa*). For intellectual life, we know of the names of some well-known poets and writers from there, such as Ibn Ṣāliḥ al-S̲h̲antamarī in the 7th/13th century, some famous *ḳāḍīs* there and the importance of the town and its district for Ṣūfism. The town also flourished economically through its position as a port, with al-Ḥimyarī (*loc. cit.*) mentioning that the port was frequented by ships and had a dockyard for naval construction (*dār al-ṣināʿa*). Maritime activity increased in the 6th/12th century through the efforts of the Banū Hārūn, who, like other Taifas of the coastlands, had fleets and dockyards supplied by the plantations of pines on the islands and in the hinterland of the town. Its site along a lagoon favoured fishing, an activity stimulated by the pilgrimage, and the cultivation of figs and grapes and production of oil had a commercial orientation towards al-Andalus, the Mag̲h̲rib and Egypt.

The town itself faced both landwards and seawards, being "built on the shores of the ocean, with its walls bathed by the waves of the high tide" (al-Idrīsī, *Opus geographicum*, Naples-Rome 1975, text 543, tr. Dozy and de Goeje, *Description de l'Afrique et de l'Espagne*, repr. Leiden 1968, 217). The mediaeval walls, largely rebuilt by the Christians in the 13th century, have retained, to the north-west of the town, traces of a gate topped by a Norman arch, leading one to think that the internal area of about 9.5 ha corresponds to the Islamic *madīna* (B. Pavon Maldonado, *Ciudades y fortalezas lusomusulmanas. Cronicas de viajes por el sur de Portugal*, in *Cuadernos de Arte y Arqueologia*, v [Madrid 1993], 71-9). The sites of the cathedral, built two years after the reconquest of the town, and the fortress, protecting access to the seashore, correspond respectively to the sites of the Great Mosque and the Muslim *ḳaṣaba*.

In 1252 the town was placed under the protection of Alfonso X of Castile, protector of the Muslim ruler Ibn Maḥfūẓ. Once it returned to Portuguese hands in 1266, endowed with charters, it speedily resumed its maritime role.

S̲H̲ANTAMARIYYAT al-S̲H̲ARḲ, a name often confused in the sources with S̲h̲antabariyya, which corresponds to the depopulated modern place name Santaver in Cuenca province. S̲h̲. al-S̲h̲arḳ (thus to distinguish it from S̲h̲. al-G̲h̲arb) corresponds to modern Albarracín, a small town 45 km/28 miles from Teruel, in the province of the same name in Aragon. The town derives its present name from the Hawwāra Berber family of the Banū Razīn [*q.v.*], who were established at an unknown date in the Sahla, the fertile district around Albarracín. The supposed ancestor Razīn al-Burnusī is said to have come with the conqueror Ṭāriḳ b. Ziyād, and was then given land at Cordova. His alleged descendants (since Ibn Ḥazm seems to deny the connection) governed the Sahla with more or less loyalty to the Umayyads. After a revolt of the Sahla in 346/957-8 headed by Marwān b. Hud̲h̲ayl b. Razīn, the family submitted to ʿAbd al-Raḥmān III. In 361/972 Yaḥyā b. Hud̲h̲ayl and his sons, and Marwān's four sons, obtained from al-Ḥakam II a grant, in favour of the latter, of the *ʿamal* of their father, and three years later, the nine sons of Yaḥyā likewise obtained a grant of their father's heritage.

During the crisis of the caliphate, in 403/1012-13 a member of the family, Abū Muḥammad Hud̲h̲ayl b. ʿAbd al-Malik, called Ibn al-Aṣlaʿ, proclaimed his independence as *ḥādj̲ib*, with the titles ʿIzz al-Dawla and D̲h̲u 'l-Madj̲dayn. Sulaymān al-Mustaʿīn, the "caliph of the Berbers", confirmed him in his lands, but also reproached him, probably for not being able to intervene in his favour. From the next year onwards, Hud̲h̲ayl built, or rebuilt, his little capital, S̲h̲antamariyya, whose name, hitherto unknown, since only Sahla is found, suggests the presence, otherwise imperfectly known, of a Mozarab community. Hud̲h̲ayl maintained himself, staying apart from the wars of the Taifas, and fending off al-Mund̲h̲ir of Saragossa, who coveted his territories. The sources praise his good qualities and the prosperity he brought to his principality.

When in 436/1044-5 he died after a reign of over 30 years, his son ʿAbd al-Malik, called in his father's life time Ḥusām al-Dawla and then subsequently Dj̲abr al-Dawla, al-Ḥādj̲ib D̲h̲u 'l-Riyāsatayn, succeeded him, with an even longer reign of 58 solar years. The sources regard him harshly, but the times were certainly now less propitious. He may possibly early have suffered attacks from Castile, though the notice of Ibn al-Kardabūs that Ferdinand (1037-65) is said to have taken S̲h̲antamariyya, *balad Ibn Razīn*, is unconfirmed elsewhere. After the capture of Toledo by Alfonso VI (478/1085), he had to accept with a good grace the insults of the Christian king, who sent him a monkey in exchange for his presents. His vacillating policy reveals the feebleness of his miniature principality.

After Zallāḳa (479/1086), he ceased paying tribute to Castile-León, but three years later had to accord it to the Cid. In 1092 he annexed Murviedo (Sagonta), and concluded a treaty of friendly neutrality with the Cid. When the latter besieged Valencia, ʿAbd al-Malik tried to ally, early in 1093, with the king of Aragon in order to help him occupy the town. But the Cid, warned by the Aragonese, invaded ʿAbd al-Malik's lands, and forced him to help in the siege of Valencia, which fell in June 1094. He then allied with the Almoravids who came to besiege Valencia (487/autumn 1094), and took part in the battle of Cuarte, from which he fled. When ʿAbd al-Malik died in 496/1103, his son Ḥusām al-Dawla Yaḥyā succeeded him. But with Valencia now in the hands of the Almoravids, the governor Abū ʿAbd Allāh Ibn Fāṭima deposed Yaḥyā and annexed his state (497/1104).

Ca. 1170 Albarracín passed into Christian control, either, according to the traditional account, handed over by Ibn Mardanīs̲h̲ [*q.v.*] Lobo or Lope to the lord of Navarre, Pedro Ruiz de Azagra, or, according to J.M. Lacarra, by a Navarrese conquest. In 1172 the bishopric of Albarracín was set up, but—reflecting the lack of knowledge of the old ecclesiastical divisions and the probable disappearance by now of the Mozarabs of the district—the bishop was first given the title of the ancient bishopric of Arcavica (*Arcavicense*), before this was corrected to that of Segobriga (*Segobricense*). Henceforth, the region formed a petty independent state, under Christian lords, the Azagras

and then the Laras, until Pedro III of Aragon's conquest of 1284, though Albarracín was not definitely incorporated under the Aragonese crown till 1370. During this period, the presence of Mudéjars is as hypothetical as that of Mozarabs in the preceding one. It would appear, rather, that the region's Muslim population had been evacuated for strategic reasons, to the proximity of Valencia, under Muslim control until 1238, and that the Mudéjar presence attested at the end of the mediaeval period results, as at Teruel, from the establishment there of Muslims from other Christian zones and former captives, settled for economic reasons.

SHANTARĪN, Santarém, a town in Portugal and chef-lieu of a district, held by the Muslims until the mid-6th/12th century. It is situated on a plateau with escarpments 100 m/340 feet high, on the shore of the right bank of the Tagus, a little distance before it empties into the Atlantic. It is in the midst of a fertile district, sprinkled with *lezirias* (< Ar. *al-djazīra*) fertilised by the alluvium of the river. It was already well-known to the Arabic geographers under its name, of Latin origin, of al-Balāṭa (> Port. Valada, Alvalade), and had always held a strategic role in the communications between the north and south of the country.

Its main Arabic name stems from the name in Low Latin, connected with a saint, **Santaren* (Costa, *Santa Iria*), which superseded the Roman name Scallabis, being the site of an important *conventus* of the Iberian province of Lusitania. In Islamic times, it kept its status as the capital of a district (*kūra*), whose fate was linked, in different ways, with those of Coimbra (Ḳulumriya [*q.v.*]) to the north and Lisbon (al-Ushbūna [*q.v.*]) to the south.

The town must have been conquered by the Arabs at some time in 95-6/714-15, at the same time as all the far west of the Iberian peninsula. According to the lost chronicle of Ibn Muzayn (Silvès and Seville, 5th/11th century), preserved in a Moroccan source of the 11th/17th century (Dozy, *Recherches*³, i, 73-4 and p. IV of Appx.), Santarém is said to have benefited, together with Coimbra, from a treaty of capitulation which guaranteed a considerable autonomy, probably analogous to the well-known concession to the Visigothic duke Theodomir/Tudmīr for the territories which he controlled at the other side of the peninsula, Murcia/Mursiya. This treaty was a determining factor from the viewpoint of population patterns, given that there were not, to the north of the Tagus, in the territory now within Portugal, Arab colonists established like those in the southern districts of Beja/Bādja [*q.v.*] and Ocsonoba/Ukshūnuba [*q.v.*]. Consequently, Islamisation was on a much reduced scale, and the Arabisation of the indigenous people, who became Mozarabs [*q.v.*], was the result of economic and administrative factors and the influence of the vigorous civilisation of al-Andalus rather than from the presence of Muslim colonists from outside.

At the same time, the politico-military history of all the territory between the Tagus and the Douro was characterised by a constant confrontation between the Muslims in the south and the Christians in the north, and even by alternations of power, whilst the local population remained passive onlookers. The sources mention no participation by this region in the many movements for autonomy and challenge to the central government in Cordova which punctuated the history of the regions to the south of the great river. The definitive conquest of Shantarīn by the Christians in Shawwāl 541/March 1147 was to be decisive for their advance southwards and the stabilisation of the frontier along the line of the Tagus. The last major siege of the town, led by the Almohad caliph Abū Yaʿḳūb Yūsuf [*q.v.*] in 580/1184, cost him his life (Dozy, *op. cit.*, ii, 443-80; Huici, *Almohades*).

Despite the feeble Arab and Muslim presence there, Shantarīn produced several littérateurs during the literary and intellectual *belle époque* of the Afṭasids [*q.v.*] of Badajoz and in the wake, probably, of the politico-judicial authority exercised by the celebrated *ḳāḍī* and *adīb* Abū ʿUmar Ibn ʿAbd al-Barr [*q.v.*]. Thus poets included the younger son of the latter, Abū ʿAbd Allāh Muḥammad, Abū ʿUmar Yūsuf b. Kawthar and Ibn Sāra (d. 517/1124). Above all, there was Ibn Bassām al-Shantarīnī (d. 542/1147 [*q.v.*]), the jewel in the crown of the town's literary men. Since the appearance of the article on him in this *Encyclopaedia*, one may mention four large-scale works on him and on his *Dhakhīra*, not counting the excellent complete edition of Iḥsān ʿAbbās, 8 vols., Beirut 1979: Ḥ.Y.Ḥ. Kharyūsh, *Ibn Bassām* ..., ʿAmmān 1984; two doctoral theses, by ʿA.A.M. Djamāl al-Dīn, Madrid Univ. 1977 (cf. *Awrāk*, ii [Madrid 1979]), and Kh.L. Bākir,

Glasgow 1993 (cf. *JAL*, xii [1994]); plus a master's dissertation by E. Kapyrina-Koroleva, Moscow 1994. Whilst the first two works concentrate mainly on the abundant historical sources of the *Dhakhīra*, the remaining two deal directly with the intrinsic literary value of the famous anthology.

During the period of Christian domination, the Muslim *Mudéjares* [*q.v.*] were by no means concentrated exclusively within the *mourarias* of Santarém, and they devoted themselves to the general economic activities of the *mouros* of the Kingdom of Portugal.

Combining the Arabic geographical texts and the mediaeval Christian sources, the configuration of the town in Islamic times can be approximately reconstituted. There was a strongly defended fortress (*ḥiṣn, ḳalʿa*), with ramparts and towers, perched on an inaccessible rocky spur. The *madīna* was there, as also the congregational mosque (very likely built by al-Ḥakam I, 180-206/796-822), later turned into the church dedicated to the Virgin Mary in the heart of the Christian Alcáçova (< *al-ḳaṣaba*). At the foot of the mountain, on the banks of the river, there was a suburb attested at least since the middle of the 4th/10th century; this is the modern Ribeira quarter, formerly also called *Sesserigo* and the location of one of the two Muslim quarters. Certain traces could possibly reveal the existence of another urban nucleus *extra muros*, in the eastern part, around the Marvila quarter, which was the heart of the Christian town and to the north-west of which was located the second and more lasting *mouraria*. The modest suburb called Alfange (< *al-ḥanash* "serpent"), which grew up, like the Ribeira suburb, on the banks of the river but on the other side of the projecting elevation, to the south, does not necessarily date from the Islamic period. As elsewhere in al-Andalus, this place-name could refer to a simple gate giving on to the ravine and the tortuous pathway leading up to it (*Bāb al-ḥanash*). Moreover, the *Ermida da N.S. do Monte*, from its strategic position, its dominating role and its ancientness, could well represent the later evolution of a little *rābiṭa* or *zāwiya*.

SHĀPŪR (P.), the NP form of MP Shāhpūr "king's son", usually Arabised as Shābūr, Sābūr, Syriac Shābhōr, Greek Σαπώρης or Σαβουρ (see Justi, *Iranisches Namenbuch*, 284 ff.), the name of various monarchs of the Sāsānid dynasty in pre-Islamic Persia. For the detailed history of their reigns, see SĀSĀNIDS. Here, only such aspects as impinged on the Arabs will be noted.

Shāpūr I, son of Ardashīr Pāpakān (*r.* 239 or 241 to 270 or 273) is known in Arabic sources as Shāpūr al-Djunūd "Sh. of the armies" (e.g. in al-Ṭabarī, i, 824, tr. Nöldeke, *Gesch. der Perser und Araber*, 28). In the Arabic sources, he is particularly connected with the capture from the Romans and the sack of the Arab city-state of northern ʿIrāḳ, Hatra (Ar. al-Ḥaḍr), which had been under Parthian cultural and political influence. Around this event was woven a romantic story (found in the *Khudāy-i nāma* transmitted by Ibn al-Muḳaffaʿ [*q.v.*] and in an Arabic tradition by Ibn al-Kalbī) that the city was betrayed to the Persians by the local ruler's daughter, who had become enamoured of Shāpūr (for details, see AL-ḤAḌR, and C.E. Bosworth, ch. *Iran and the Arabs*, in *Camb. hist. Iran*, iii/1, 595-6). This Shāpūr is also credited by the Arabic geographers and historians with the foundation of various cities and towns of Persia, with compound names which included his own, such as Djundīshāpūr [see GONDĒSHĀPŪR] (these are listed in *EI*[1] art. SHĀPŪR, at IV, 314a).

Shāpūr II, son of Hormizd II (*r.* 309-79), was one of the greatest of the Sāsānid emperors, and had considerable contacts with the Arabs in his endeavours to protect the fringes of his Mesopotamian provinces from desert Arab marauders. According to Arabic authorities (including Ibn Ḳutayba, al-Ṭabarī, al-Masʿūdī, al-Thaʿālibī, etc.), he led a punitive expedition into eastern Arabia against such tribes as the ʿAbd al-Ḳays and the Iyād, although the story that he penetrated as far as Medina must be fictitious. Arab captives had their shoulders pierced or dislocated, whence Shāpūr's nickname in the Arabic sources of Dhu 'l-Aktāf "the man of the shoulder-blades". He is likewise described as constructing a line of defensive forts, walls and trenches (the *khandaḳ Sābūr*) in ʿIrāḳ, along the desert borders, and as garrisoning them, in the fashion of the Romans and their *limitanei*, with Arabs against the other Arabs within the desert (cf. also the role there of buffer-states like that of the Lakhmids of Ḥīra [*q.vv.*]). Again, the building of various cities and towns, where Roman captives were settled, is attributed to him (see *EI*[1] art. SHĀPŪR, at IV, 314b-316a).

Shāpūr III, son of Shāpūr II (*r.* 383-8), figures little in the Arabic sources, and what details are ascribed to him are probably due to confusion with the preceding Shāpūrs.

Bibliography: In addition to references given in the article and in SĀSĀNIDS, see R.N. Frye, ch. *The political history of Iran under the Sasanians*, in *Camb. hist. Iran*, iii/1, 116-80.

(C.E. Bosworth)

SHĀPŪR, the name of a river of Fārs in southern Persia and also of the mediaeval Islamic town of Fārs which was the chef-lieu of the district of Shāpūr Khūra.

1. The river.

This is also called the Bishāwur (in Thévenot, *Suite du Voyage de Levant*, Paris 1674, 295: Bouschavir; 296: Boschavir), and river of Tawwadj. It must be identical with the antique Granis, mentioned by Arrian, *Indica*, 39; Pliny, *Nat. hist.*, vi, 99. The lower course, the proper river of Tawwadj, is formed by the junction of two streams, the Shāpūr and the Dalakī Rūd, rising both in the southwestern border mountains of the

Persian plateau, which extend along the Persian Gulf. The upper course is called by the Arab geographers Nahr Ratīn: this name is, very likely, found in Pliny, *Nat. hist.*, vi, 111, where *Dratinus* (with var. *Ratinus*) must, however, mean the river down to its mouth. This statement must be due to another source than Iuba, on whose authority the Granis was mentioned in vi, 99. In his *Nuzhat al-ḳulūb*, Mustawfī al-Ḳazwīnī seems to indicate that the Ratīn, whose source is, according to him as well as to al-Iṣṭakhrī, in the Upper Humāyidjān (al-Iṣṭakhrī: Khumāyidjān) district, is a tributary of the Shāpūr Rūd (tr. Le Strange, 217: "It is a great stream, and it flows into the Shāpūr river, its length, till it joins the Shāpūr river being 10 leagues". By this way of putting things, he can only mean that the river of Tawwadj originates from two different streams, one of which is the Ratīn. This, then, must be the older name for either the Shāpūr or the Dalakī Rūd. Al-Iṣṭakhrī (120) represents these facts in the same manner; there it is said that the Ratīn flows through the district of al-Zīriyān (with var.) before joining the Shāpūr.

The other rivers of the system are the Djirra (or Djarshīḳ), which joins the Shāpūr on the left, below Khisht, and the Ikhshīn. The name of the latter ("blue") may have originated from the colouring property of its waters, mentioned by the mediaeval geographers. Djarshīḳ is the older name of the Djirra river, although in the *Nuzha* Djarshīḳ and Djirra are erroneously described as two different streams. The account which the latter work gives of the Djirra is for the most part copied from Ibn al-Balkhī's *Fārs-nāma*. This states (ed. Le Strange, 151) that the Nahr Djirra, rising in the Māṣaram district, waters the lands of Musdjān and Djirra, and part of Ghundidjān, after which it joins the Shāpūr. In addition, al-Iṣṭakhrī mentions the bridge of Sabūk, under which the river Djarshīḳ flows before entering the *rustāḳ* of Khurra (Ibn al-Balkhī's Djirra); after Khurra, the stream passes into Dādhīn, where it unites with the Ikhshīn. The *Nuzha* makes the Djirra join the Shāpūr and the Djarshīḳ the Ikhshīn; as its author erroneously splits up the one river Djarshīḳ-Djirra into two, his account is here worthless.

The Ikhshīn, according to al-Iṣṭakhrī and Mustawfī, rises in thc Dādhīn hills, and unites with the Shāpūr at al-Djunḳān. The *Nuzha* calls it a great stream; at present, it is identified with a little water course to the south-west of the lake of Kāzarūn. There appears, then, to be a difference as to the question, whether the Djarshīḳ and the Ikhshīn first join each other, and then unite with the river of Tawwadj, or flow into that stream each apart.

Concerning the Shāpūr itself, the *Fārs-nāma* (152) says that it rises in the mountain region (*kuhistān*) of the Bishāpūr district, which it waters, as also Khisht and Dīh Mālik. It flows in the sea (Persian Gulf) between Djanābī and Māndistān. This account is repeated in the *Nuzha*. In *Fārs-nāma*, 142, the Bishāpūr district is said to have its water from "a great river, called Rūd-i Bishāpūr". Owing to rice-plantations being there, its water is unwholesome (*wakhīm u nāguwār*). A short description of the river in modern times is given in J. Morier's *Second Journey through Persia ... between the years 1810 and 1816*, London 1818, 49: "a river which ... having pierced into the plain of the Dashtistan, at length falls into the sea at Robilla. It takes its source near the site of Shapour, and when it begins to flow is fresh. But when it reaches the mountains it passes through a salt soil, and then its waters ... become brackish. A lesser stream of the same river branches off before it reaches the salt soil, and flows pure to the sea".

The mouth of the river is a short distance to the north of Bushīr, near the frontier of the district of Arradjān. Opposite to it lies the island of Khārik, on the shipping route from Baṣra to India. The name Māndistān in the Persian geographers is connected by Tomaschek (*Topographische Erläuterung der Küstenfahrt Nearchs*, in *SB Ak. Wien*, cxxi, 65) with the *Deximontani* in Pliny, *Nat. hist.*, vi, 99. According to Pliny, the river (Granis) is navigable for small vessels. Nowadays, the principal mouth presents difficulties to navigation because of its shallows; two minor mouths can be navigated up to some distance. On the present conditions, the delta, and the bitumen wells on the left bank of the river, south of Dalakī, see Tomaschek, *op. cit.*

In Antiquity, there was on the Granis a royal residence, Taoke, 200 stadia from the sea. This must be the same as the mediaeval Tawwadj (or Tawwaz), from which place the Shāpūr is named river of Tawwadj. In early Islamic times it was an important trade city, which also had a considerable textile industry; the stuffs named *tawwaziyya* were well-known (see R.B. Sergeant, *Islamic textiles*, Beirut 1972, 52-3). This town belonged to the district of Ardashīr Khurra (Ibn al-Balkhī, *Fārs-nāma*, 114). During the 6th/12th century, the place had already declined; in Mustawfī's time (8th/14th century) it was totally ruined. Its site can not exactly be determined; nowadays the coast district of the Shāpūr river is called Tawwadj. Le Strange thought that the site of the town could be identified with the present Dih Kuhna, "the chief town of the (modern) Shabānkāra sub-district of the Dashtistān district".

On another Shāpūr or Shāwūr, a tributary of the Dizfūl Rūd, see KĀRŪN, at IV, 675a.

2. The town.

This was the ancient capital of the district Shāpūr Khurra of Fārs. According to al-Muḳaddasī, it was also called Shahrastān; its older name is Bishāpūr (from Pahlawī *Wēh-Shāhpuhr*). A naive etymology is found in the *Nuzha*, whose author, Mustawfī, says, that the word Bīshāpūr is a contraction of *binā-i Shāpūr* "building of Shāpūr". Ibn al-Balkhī, on the other hand, states that the first syllable of the original Bīshāpūr (with a long *ī*) may disappear by way of *takhfīf*.

Shāpūr Khurra, the area watered by the system of the Shāpūr-Ratīn, the smallest of the five provinces of Fārs, contained besides the town of Shāpūr some other important localities, e.g. Kāzarūn [*q.v.*], which was regarded as its chief town after Shāpūr had fallen into ruins, in addition to Nawbandadjān and Djirra.

The old town of Shāpūr was situated on the Shāpūr Rūd, at the road from Shīrāz to the sea, to the north of Kāzarūn. Mustawfī gives its situation as long. 86° 15', lat. 20°. Its climate belonged to the *garmsīr* or hot region, but its atmosphere was considered not to be healthy because the territory of the city was shut in by the mountains from the northern side. The environs were fruitful; they produced, besides many kinds of fruits and flowers also silk, the mulberry tree being frequent in that region. Honey and wax also came from its territory. The town was founded by the Sāsānid emperor Shāpūr I. It was one of the three cities where he settled his captives of war. It has been supposed, with much reason, that the emperor made use of the skill of these Roman captives in the construction of his buildings and also in the execution of his famous reliefs that have been found in the ruins. These reliefs relate to the campaigns of Shāpūr against the Romans. Three later rulers, Bahrām

II, Narseh and Khusraw II also added each a relief of themselves.

These works of art, already described in detail by Morier, have also been noticed by the mediaeval Islamic geographers; at least, they mention a great statue, standing in a cavern, which European travellers were able to identify.

Local authorities constructed a mythical history of the city from before the times of its Sāsānid founder. It was, according to these traditions, originally built by Tahmūrath, at a time when there existed in Fārs no other town besides Iṣṭakhr. Later on, it was laid waste by Alexander, to be only renovated by Shāpūr I. The name of Tahmūrath's foundation had been *D.y.n D.lā* (Ibn al-Balkhī, *Fārs-nāma*, 63, 142).

The Muslims subdued Shāpūr Khurra in 16/637, after the conquest of Tawwadj and the battle of Rīshahr. Bishāpūr is mentioned on the occasion of the disturbances which ensued at the beginning of the caliphate of ʿUthmān b. ʿAffān; the insurrection in Fārs (25/645-6) against the Arabs seems to have been directed for some time from Bishāpūr by a brother of Shahrak, the governor of Fārs, who had fallen in the battle of Rīshahr. After the submission of the rebels, the inhabitants of Bishāpūr once more broke the treaty; hence it was reduced by Abu 'l-Mūsā al-Ashʿarī and ʿUthmān b. Abi 'l-ʿĀṣ.

In the time of the al-Muḳaddasī (end of the 4th/10th century), the town of Shahrastān or Shāpūr was already decaying, its outskirts being ruined; the environs, however, were well cultivated. He noted the four city gates and the ditch, also the *masdjid al-djāmiʿ* outside the city. Perhaps this may be the *masdjid-i djāmiʿ* mentioned by Ibn al-Balkhī, whose words seem to imply that it still existed when he wrote (beginning of the 6th/12th century). At the end of the Būyid rule, the Shabānkāra chieftain Abū Saʿd b. Muḥammad b. Mamā destroyed Shāpūr, but, as Ibn al-Balkhī remarks, in his time the (Saldjūḳ) government tried to restore the damage. These endeavours may have had an effect as regards the district as a whole, but the city of Shāpūr never rose from its ruins. When Morier visited the site (1809), he found only a poor village, Darīs, in the neighbourhood of the remains. The opinion of this traveller, that the town may have existed till the 16th century of the Christian era because its name occurs in a table of latitudes and longitudes in the *Āʾīn-i Akbarī*, carries no weight, for such a table may have been composed from older sources.

On the other foundations of Shāpūr I, which were called after his name, see the article SHĀPŪR, in addition to which it may be remarked that the town of Shāpūr Khʷāst, according to the *Fārs-nāma* (63), was situated in Khūzistān, near al-Ashtar.

(V.F. Büchner)

SHĀR, a title of rulers in Central Asia and what is now Afghānistān during the early Islamic period and, presumably, in pre-Islamic times also. The form *shār* must be an attempt to render in Arabic orthography the MP and NP form *shēr/shīr* (< OP *khshathriya* "ruler", and not from *shēr* "lion"; see Marquart, *Ērānšahr*, 79).

The title appears in early Islamic texts on the geography and history of the eastern Iranian fringes. Thus the *Ḥudūd al-ʿālam*, tr. Minorsky 105, comm. 327-8, gives Shār as the title of the ruler of the district of Gharčistān in northern Afghānistān [see GHARDJISTĀN], and al-Iṣṭakhrī, 271, and Ibn Ḥawḳal, ed. Kramers, 443-4, had already spoken of the district as Ghardj al-Shār "the mountainous region of the Shār"; these rulers were vassals of first the Sāmānids and then of the Ghaznawids (see M. Nāẓim, *The life and times of Sulṭān Maḥmud of Ghazna*, Cambridge 1931, 60-2).

The title was also borne by the local rulers of Bāmiyān in eastern Afghānistān, with the *Ḥudūd al-ʿālam*, tr. 109, comm. 341, giving it in the form Shīr [see BĀMIYĀN].

Finally, the rulers of the branch of the petty dynasty of Abū Dāwūdids or Banīdjūrids [*q.v.* in Suppl.] which ruled in Khuttal, to the north of the upper Oxus [see KHUTTALĀN], bore the title Shīr-i Khuttalān, according to Ibn Khurradādhbih, 40, cf. Marquart, *Ērānšahr*, 301.

SHAʿR (A.) "hair, pelt".

1. General.

The Arab poets, pre-Islamic as well as post-Islamic, often describe the hair of the women with whom they have fallen in love (al-ʿAskarī, *Dīwān al-maʿānī*, ii, 229; al-Raffāʾ, *al-Muḥibb wa 'l-maḥbūb*, i, 16-58; al-Nuwayrī, *Nihāya, fann* 2, *ḳism* 1, *bāb* 2; J. Sadan, *Maiden's hair and starry skies*, in *IOS*, xi [1991], 57-88). The context in which these descriptions are found shows a fairly clear situation: the hair of the heads of beautiful women is observed by lovers away from the house, in the open air, on the public road, etc. Sometimes the belles let their hair run down to their feet, sometimes they hide their identity and that of their lover by unbraiding and letting flow their hair around their own bodies and those of their lovers. This comes from their fear of being seen with their lovers by passers-by and calumniators. This poetic reality, which reflects a residue of ancient motifs rather than scenes of everyday life, is given real shape by iconography, above all, that of the Fāṭimid period (a woman with long hair flowing down to, or almost to the ground, in four clearly-distinguished tresses; D.S. Rice, *A drawing of the Fāṭimid period*, in *BSOAS*, xxi [1958], 31-9). Moreover, this iconography shows diverse manners of coiffure, like curls of hair in the form of hooks (either the letter *fāʾ* or *wāw*, *grosso modo*, or other letters, or "scorpions", in the language of the poet Abū Nuwās; see J. Bencheikh, *Poésies bacchiques*, in *BEO*, xviii [1963-4], 60-1) over the temples, a style which began at the court of al-Amīn (d. 198/813; see al-Masʿūdī, ed. Pellat, § 3451: *aṣdāgh*). In most of these cases, it is a question of slave girls in interiors.

Nevertheless, one of the duties of a woman faithful to the Islamic law is to cover her hair and the nape of her neck whenever she goes outside [see ḤIDJĀB]. This question has become one of the symbols of the struggles of contemporary Islamic fundamentalist circles for the piety and purity of the family. This symbol is strongly opposed by those circles who do not consider these teachings about female shame as an integral and rigorous part of the authentic religious tradition. Now, the restrictions imposed by Islam, such

as the prohibition for women of adding wigs or hairpieces to their natural covering of hair, are very clear, and can only develop into a fascinating clash between the ancient religious traditions and Western tastes and concepts of beauty care (see Wensinck, *Concordance*, s.v. *w-ṣ-l*; M.ʿA.-ʿA. ʿAmr, *al-Libās wa 'l-zīna fi 'l-sharīʿa al-islāmiyya*, Beirut 1985, 403-7; ʿU.ʿA.M. al-Ṭayyibī, *Ḥukm al-Islām fi 'l-kuwāfir* [= coiffeur] *wa-ḥallāḳ al-nisā'*, Cairo 1992; a *fatwā* by al-Ḳarḍāwī against the use of wigs in his collected *Fatāwā*, Cairo 1990, 426-8).

In mediaeval times, the jurists permitted dyeing (*khiḍāb*) of men's hair. The licitness of this usage has become almost unanimous; now, in order to distance the biography of the Prophet Muḥammad from all controversy of this type, one group of jurists stresses the traditions which suggest that virtually all the Prophet's hair remained black up to his death. These traditions attach great importance, not only to the hair of this great personality who serves as a model for all Muslims (the number of his locks, *ḍafā'ir, ghadā'ir*, generally given as four, the length of his hair, which fell as far as his ears and his shoulders, the methods of combing, laying out, putting oil on the hair, etc.), but also to the hair on his chest, as far as the beginning of the stomach or *masraba* (al-Tirmidhī, *Awṣāf al-nabī*, Beirut 1989, 37-47; Abu 'l-Shaykh, *Akhlāḳ al-nabī*, Cairo 1993, 184; Ibn al-Djawzī, *al-Wafā'*, Beirut 1988, 398-402; al-Baghawī, *al-Anwār*, Beirut 1989, i, 148-52; see also Muḥammad b. ʿAbd Allāh b. ʿAbd al-ʿAzīz, *Khalḳ al-nabī wa-khulḳuhu*, ms. Leiden Or. 437).

The Muslims limited the size of their moustaches (*iḥfā'*, *djazz*; even a partial tonsure), but they allowed their beards to grow (*iʿfā'*), except for certain ephebes who, by depilation (*natf*) of their cheeks, "prolonged" their youth for a few weeks (M. al-Hamīd, *Ḥukm al-liḥya fi 'l-Islām*, Cairo, Dār al-Djihād n.d.; ʿA. ʿAbd al-Ḥamīd, *Ḥukm al-dīn fi 'l-liḥya wa 'l-tadkhīn*, Cairo 1984; F. al-Hindāwī (ed.), *Wudjūb iʿfā' al-liḥya*, Cairo 1987; ʿUmar al-Ashkar, *Thalāth shaʿā'ir: al-ʿaḳīḳa, al-aḍḥiya, al-liḥya*, ʿAmmān 1991; a *fatwā* by ʿA.-Ḥ. Kishk forbidding the trimming of beards in his collected *Fatāwā*, vi, Cairo 1988, 103-4). However, it is allowable to pluck the hair under the armpits (*natf al-ibṭ*), and the hair on the more intimate parts of the body may be removed by using a razor (*istiḥdād* or *ḥalḳ*) or by applying *nūra*, a depilatory paste (see *Concordance*, s.v. *ḥ-d-d, ḥ-l-ḳ, n-t-f*; al-Djāḥiẓ, *Rasā'il*, ed. Hārūn, i, 388-9; Usāma b. Munḳidh, *al-Iʿtibār*, ed. Hitti, 136-7; al-Suyūṭī, *al-Akhbār al-ma'thūra fi 'l-iṭṭilāʾ bi 'l-nūra* (= epistle on the usage of depilatories), in his *al-Ḥāwī fi 'l-fatāwī*, Cairo 1959, i, 524-31; al-Ḳāsimī, *Ḳāmūs al-ṣināʿāt al-shāmiyya*, i, 37, 103-5, 107-8, ii, 435-6; Lane, *Manners and customs*, end of ch. XVI, since care of the hair and depilation often took place in public baths, and cf. al-ʿAskarī, *op. cit.*, 152-64, describing grey hair and the dyeing of hair; al-Nuwayrī, *loc. cit.* See also the treatises on public baths: al-Munāwī, *al-Nuzha al-zahiyya*, Cairo 1987, 18, 35-8, 78; al-Kawkabānī, *Ḥadā'iḳ al-nammām fi 'l-kalām ʿalā mā yataʿallaḳ bi 'l-ḥammām*, Beirut 1986, 48-53, 144-50).

The term *shaʿr* also has the sense of "skin, pelt" (human and animal). The wool of sheep is called *ṣūf* [*q.v.*], whilst the hair of camels and dromedaries is usually called *shaʿr* and occasionally *wabar*; the nomads are called *ahl al-wabar*. This hair or wool can be woven, whence the term *buyūt al-shaʿr* for the nomads' tents. Animal pelts are also used to stuff mattresses and valued cushions (Sadan, *Le mobilier*, Leiden 1976, 102).

(J. SADAN)

2. Legal aspects regarding human hair.

The dressing of hair is, like many other items of hygiene and ornament, addressed in the works of *sharīʿa*. The discussion of its rules has no fixed location in these works, which may indicate that the topic came only lately to be a concern of the jurists. Discussions of hair and its treatment, in addition to the part it plays in *ʿaḳīḳa, ḥadjdj* [*q.vv.*], and gender distinctions (through requirements to cover the hair), can be found in sections on *wuḍū'* [*q.v.*], and *albisa/libāsāt* [see LIBĀS] *mustaḥsanāt* or *makrūhāt*.

In these works, there is a lingering sense of hair as a sacral substance, an occasion of vulnerability (see Leach, *Magical hair*, Morgenstern, *Rites of birth*). The *locus classicus* for the rules of hair care is the *ḥadīth* specifying the five, or ten, *fiṭra* practices, here understood to mean practices common to all the prophets, or practices that are part of the general *sunna*, or of religion (*dīn*) (see al-Nawawī, *Sharḥ*, iii, 147). These five or ten are practices of elementary hygiene, from cleansing the knuckles and clipping the nails, to circumcision [see KHITĀN]. Men and women are enjoined to pluck, shave, or depilate their pubic regions and armpits. Men are to cut (*ḳaṣṣ*) the moustache and let the beard grow (*iʿfā'*), and to cut, not shave, their hair. Women may cut their hair. Grey hairs may be dyed.

Characteristically, the *sharʿī* rules are meticulous, and are also occasions of discussion and controversy. How best to accomplish these aims is discussed in some detail. The pubis (*al-ʿāna*) is best shaved with a razor (a practice called *istiḥdād*), as is a portion of the buttocks (*ḥalḳat al-dubur*). The armpits (*ibṭ*) are best plucked (*natf*), but if that is too painful one may shave, or depilate them (with lime, *nūra*). The beard is to be left full, contrary to the custom of the Persians. It may be dyed, but not black, which would be deceptive. One may dye it black in war, so as to deceive the enemy (Juynboll, *Dying the hair and beard*). It is reprehensible for men to pluck or shave the beard when it first appears, so as to maintain a comely youthful appearance. Women may clip facial hairs, or depilate them, but not pluck them. Preferred dyes for the beard and hair, especially when grey, are yellow or red. Adding to hair by weaving into it other hair (*waṣl*), of whatever kind, is not permitted. Hair for men should be worn between the earlobes and shoulders; it should be dressed and parted. The nape (*al-ḳafā*) of the neck should not be shaved, unless for cupping (*ḥidjāma*). Hair of the head should be cut, depending on its length, though some sources suggest every 40 days (al-Nawawī, *Sharḥ*, iii, 148-9); other hair should be cut when it becomes excessive and disgusting (*Mughnī*, i, 72). Hair removed from the head should be buried (*ibid.*).

(A.K. Reinhart)

3. In Arabic and Persian poetry.

The ancient Arab poets were interested in two aspects of human hair, namely, women's black splendour of thick, soft and fragrant hair (*farʿ*) falling over the shoulders in light waves (*dhuʾāba*), plaited or worn up and serving as a symbol of beauty, and men's greying and whitening hair (*shayb*), pointing to old age and death and stimulating contemplative meditations.

Due to later urbanism, the ideal of beauty also deals with other hair styles, such as the seductive love locks (*ṣudgh*), the fore locks (*ṭurra*), the shoulder locks (*limma*) and—mainly under Persian influence—the young man's down.

Originally, comparison between hair styles was rather underdeveloped, probably because most of the terms were of metonymical or metaphorical origin. The Bedouin poets occasionally compared women's exuberant hair (*waḥf*) with bunches of dates (Imruʾ al-Ḳays b. Ḥudjr, *Muʿallaḳa*, 32/35) and al-Aʿshā's description of his beloved as "a garden whose grapes (= hair) dangle down upon me" was seen as a very uncommon verse (according to Bashshār b. Burd, see al-ʿAskarī, *Maʿānī*, i, 244, 6). A more elaborate terminology for hair came into being in the ʿAbbāsid period, again, in particular, for the love locks, which are compared sometimes with links of a chain and with annalids (*zurfīn*), sometimes with curved objects such as a scorpion or a polo-stick or the letters *nūn* and *lām* (al-ʿAskarī, *op. cit.*, i, 245, 247; Ibn al-Muʿtazz, *Dīwān*, ed. Khayyāṭ, 91, 1).

But the incentive for a poetical description of the hair is usually found in a complementary or contrastive reality. In the case of greying hair, there is the visible distinction between black and white, which refers to the internal one between youth and old age. Antithetic metaphors are day and night, darkness and light and, linguistically speaking, there is the alliteration of *shabāb* (youth) and *shayb* (see al-Farazdaḳ [*q.v.*], *Dīwān*, ed. Beirut 1983, 148 v. 32, and Kushādjim, in *Nihāya*, ii, 23, 15-16). Abū Tammām speaks of the dazzlingly white exterior and the raven-black interior (*ibid.*, 25, 17), and for Rūdakī, dyeing the hair black is not feigning youth but applying colour of mourning about the loss of youth (Saʿīd Nafīsī, *Aḥwāl u ashʿār-i ... Rūdakī*, Tehran 1319/1940, vv. 396-7).

In the field of the beauty of the youth of both sexes, contrasts and mental pyrotechnics are stimulated by the opposition between dark hair and white skin. Al-Aʿshā still compares the black hair which falls over the naked body of his beloved with his *khamīṣa* (black garment with edging) lying on glittering gold, but to a poet of the 4th/10th century the down of a beautiful youth appears "as the black of misfortune, which creeps over the white of happiness" (al-Thaʿālibī, *Yatīma*, ed. ʿAbd al-Ḥamīd, Cairo 1956, i, 420, 3).

And so the field of fantasy is reached. For Ibn al-Muʿtazz, the polo-stick of the lock drives the ball of the birth-mark (*Dīwān*, ed. Lewin, iii, 55, 5), and the scorpion of the lock stops short when he comes too close to the fire of the cheek (*Dīwān*, ed. Khayyāṭ, Beirut 1332/1914, 88, 4); for al-Waʾwāʾ, the "lightning of the teeth", and for Ibn Ḥamdīs the "light of the forehead", become the leader when they go astray in the night of the hair (*Yatīma*, i, 291, 3, and *Dīwān Ibn Ḥamdīs*, ed. ʿAbbās, Beirut 1960, 72, 4 from below).

In Persian poetry, hair is completely integrated in the general symmetry of comparison between human and botanical forms of beauty. Lock/down and violet/hyacinth are opposed here, like in Arabic poetry, cheek = rose or eye = narcissus. It may be that this is a heritage of the lyrics of the minstrels (cf. M. Boyce, *The Parthian* gosan *and Iranian minstrel tradition*, in *JRAS* [1957], 36). In any case, a play is made later with the corresponding ambivalence of the indications of flowers, like for instance Kamāl al-Dīn Ismāʿīl (d. 635/1237) in the first part of the verse (*Dīwān*, ed. Baḥr al-ʿulūmī, 343, v. 5810):

In the rose-garden (the face), the violets grabbed
the hem of the jasmine (the fair skin):
Your field of down countered with a most sweet
chin (= "over-trumping").

Already in the most ancient material, the love locks (*zulf*) and the down (*ʿidhār*, also *khaṭṭ*) dominate the field of the Persian descriptions of hair. Later, they are supplemented by the combination "the arrows of the eyelashes on the bow of the eyebrows" (Anwarī, *Dīwān*, ed. Raḍawī, Tehran 1959, i, 34, 3). Sometimes the length of the love lock is emphasised, sometimes its untidyness and its tousled nature. It drags on in interminable windings, curves and knots, *ʿayn* in *ʿayn*, as Maʿrūfī says in a comparison with letters (Lazard, *Les premiers poètes persans*, Paris-Tehran 1964, ii, 134, v. 18). It remains the "chain" of Arabic poetry, but becomes also a "trap", a "snare" and a "lasso" (*dām*, *kamand*) and, from the time of Rūdakī (d. 329/1040-1), connected with the image that the hearts of the amorous have to languish in its bonds (Nafīsī, *Aḥwāl*, 1038, v. 469).

The swarthiness of the hair remains, incidentally, an inexhaustible source for the invention of images in Persian poetry. Reference is made to all that is literally or figuratively black: musk, a Hindu, Ahriman, infidelity, etc. Even in the theosophical visions of ʿAyn al-Ḳuḍāt Hamadhānī [*q.v.*], the "black light" of Iblīs appears as a forelock on the luminous head of God (*Tamhīdāt*, ed. ʿUsayran, Tehran 1341/1970, 118, ll. 8-9; cf. van Ess, *Theologie und Gesellschaft*, i, Berlin 1991, 345-6).

Bibliography (in addition to references in the article): Specific chapters devoted to the theme of poetical treatment of hair are found in *Tashbīhāt* works, like that of Kattānī, ed. ʿAbbās, Beirut 1966, 124-31; in collections of motifs, such as that by Abū Hilāl al-ʿAskarī, *Dīwān al-maʿānī*, Cairo 1352/1933-4, i, 244-50; and in encyclopaedic *adab* works such as Nuwayrī's *Nihāyat al-arab*, Cairo 1923 ff., ii, 16-31. Individual verses on the theme of hair can be met on almost all places where erotic poetry is written, collected or quoted.

(B. Reinert)

SHARĀB [see mashrūbāt].

SHARAF (a.), a verbal noun from the root *sh-r-f* indicating elevation, nobility, pre-eminence in the physical and the moral senses. Hence the *sharīf* [*q.v.*] is a person who is placed above those who surround him on account of his prestigious and noble origin. In pre-Islamic Arabia and in early Islam, *sharaf* and *madjd* both denote "illustriousness on account of birth", while *ḥasab*, "individual quality, merit" (as opposed to *nasab*) and *karam* denote "illustriousness acquired by oneself" (*LA*, s.vv. and see ḥasab wa-nasab).

According to the historians of Islam, those among the Arabs who could claim this innate glory, this

nobility of birth, were the descendants of Ḳuraysh̲ in the *D̲j̲āhiliyya* and in Islam, comprising Hās̲h̲im, Umayya, Nawfal, ʿAbd al-Dār, Asad, Taym, Makhzūm, ʿAdī, D̲j̲umaḥ and Sahm, in all, ten families (*rahṭ*), the offspring of ten wombs (*baṭn*) (cf. Ibn ʿAbd Rabbih, *al-ʿIḳd al-farīd*, ed. Ṣādir, Beirut, fasc. xii, 8).

But this list was to be much reduced in the course of the first century of Islam, nobility of birth being concentrated in the family of the Prophet. The Prophet himself was reckoned to embody all the nobility of the Arabs, since it was said of him that he was the best of creatures, being the offspring of the best part (of the world), the best tribe, the best family and the best genealogy (*op. cit.*, fasc. xvii, 9 ff.).

But the Arabs had had other definitions of glory before Islam. In fact, *s̲h̲araf* and *mad̲j̲d* belonged to the kings of Kinda [*q.v.*], who attempted to unify the nomadic Arab tribes under a single banner, *ca.* A.D. 480. This was an ephemeral glory, since this experiment collapsed in 529, following the victory of al-Mund̲h̲ir III b. Māʾ al-Samāʾ, king of al-Ḥīra, over al-Ḥārit̲h̲ V b. ʿAmr, the last great king of Kinda, who had succeeded in extending his power over al-Ḥīra between 524 and 528, as a result of a misunderstanding between the Sāsānid emperor Kawād̲h̲ I (488-531) and al-Mund̲h̲ir III (512-54). The support of the successor to Kawād̲h̲ I, K̲h̲usraw I Anūs̲h̲irwān (531-79) [*q.v.*], enabled the king of al-Ḥīra to regain his kingdom, to expel al-Ḥārit̲h̲, to have forty-eight members of his family executed by his loyal retainers, and to have the man himself assassinated by his allies the Banū Kalb. Such was the end of the glory of the Kinda, lamented by a grandson of al-Ḥārit̲h̲, Imruʾ al-Ḳays, one of the greatest poets of pre-Islamic Arabia.

This glory was retrieved by the Lak̲h̲mids and the G̲h̲assānids, both originating from Yemen (while the Kinda came from Ḥaḍramawt). But they, too, left no recognised lineage and no acknowledged nobility. All of this was based on a rivalry, the memories of which are not yet extinct, between Ḳaysīs (Arabs of the North) and Yamanīs (Arabs of the South).

There remains prophetic nobility (*s̲h̲araf bayt al-nabī*). It is immortalised by the *s̲h̲arīfs* of Mecca (whose heir is the King of Jordan) and the S̲h̲orfā [see S̲H̲URAFĀʾ] of Morocco (Idrīsids, Saʿdids, etc.). The Umayyads tried in vain to revive the glories of Ḳuraysh̲. Only poetry has retained its memory.

Bibliography: The most important sources for the subject are: Abū ʿAbd Allāh Muṣʿab al-Zubayrī, *K. Nasab Ḳuraysh̲*, ed. E. Lévi-Provençal, Cairo 1953; Balād̲h̲urī, *Ansāb al-as̲h̲rāf*, an immense historical and genealogical encyclopaedia (the Cairo ms. comprises 12 vols.), of which the following vols. have been published:

i. ed. Muḥammad Ḥamīdullāh Ḥaydarābādī, Cairo 1938; iii. ed. ʿAbd al-ʿAzīz al-Dūrī, Wiesbaden 1978 (*Bibliotheca Islamica*, 28c); iv/1. ed. Iḥsān ʿAbbās, Wiesbaden 1979 (*Bibliotheca Islamica*, 28d); iv/1-2. ed. M. Schlössinger, Jerusalem 1938 and 1971; v. ed. S.D.F. Goitein, Jerusalem 1936; xi. ed. W. Ahlwardt, Greifswald 1883.

The third important source is Ibn Ḥazm, *D̲j̲amharat ansāb al-ʿArab*, ed. Lévi-Provençal, Cairo 1948.

For a sociological analysis of the notion of honour (*ʿirḍ*) among the pre-Islamic Arabs, see Edouard (in the thesis) or Bis̲h̲r (in the article) Farès, *L'honneur chez les Arabes. Etude de sociologie*, Paris 1932, and his art. ʿIRḌ above. (T. FAHD)

AL-**S̲H̲ARAF** (Yemen) [see Suppl.].

S̲H̲ARAF AL-DAWLA, Abu 'l-Fawāris S̲h̲īrd̲h̲īl, Būyid ruler (350-79/961-89), the eldest son of ʿAḍud al-Dawla [*q.v.*].

His mother was, like his paternal grandmother, a Turkish slave woman. In 357/967-8, at the age of six or seven, he was given Kirmān as an appanage by his father, then ruling in Fārs. He accompanied his father on his campaign to conquer Bag̲h̲dād in 366/977, but was sent back to Kirmān to remove him from the court not long before ʿAḍud al-Dawla's death in 372/983. Since the latter had failed to make final arrangements for the succession, a power struggle ensued for the supreme position among the Būyid princes. In Bag̲h̲dād, S̲h̲araf al-Dawla's younger brother Ṣamṣām al-Dawla [*q.v.*] was recognised by the caliph al-Ṭāʾiʿ. S̲h̲araf al-Dawla responded by seizing the Būyid power base of Fārs. He killed ʿAḍud al-Dawla's vizier there and relied on the backing of commanders who had been imprisoned by his father. He recognised, however, the overlordship of his uncle Muʾayyid al-Dawla ruling in Rayy. The latter died in 373/984 and was succeeded by his brother Fak̲h̲r al-Dawla [*q.v.*], who backed Ṣamṣām al-Dawla's claim to supremacy among ʿAḍud al-Dawla's sons, while himself assuming the title *S̲h̲āhāns̲h̲āh*.

S̲h̲araf al-Dawla refused to acknowledge his overlordship, and took the offensive against Ṣamṣām al-Dawla. He seized al-Ahwāz and Baṣra, where two further brothers of his had been ruling. Ṣamṣām al-Dawla was forced to sue for peace, and formally agreed to obey S̲h̲araf al-Dawla as his overlord. The caliph confirmed the agreement by conferring the titles S̲h̲araf al-Dawla wa-Tād̲j̲ al-Milla on the elder brother. The latter had, however, decided to proceed with the conquest of ʿIrāḳ, ignoring the agreement. Ṣamṣām al-Dawla surrendered to him in Wāsiṭ and was soon sent to prison in Fārs. S̲h̲araf al-Dawla entered Bag̲h̲dād in 376/987 and was greeted by the caliph. He now aspired to supremacy over his uncle Fak̲h̲r al-Dawla, and assumed the title *S̲h̲āhāns̲h̲āh*. However, an army which he sent against the Kurd Badr b. Ḥasanūya in western D̲j̲ibāl to punish him for his support of Fak̲h̲r al-Dawla was defeated. Before the conflict for supremacy was settled, S̲h̲araf al-Dawla died of dropsy in 379/989 aged 28. He was buried at Kūfa next to his father.

S̲h̲araf al-Dawla was a patron of astronomical research and built an observatory in the garden of his palace in Bag̲h̲dād, where Abū Sahl al-Kūhī and other renowned astronomers carried out observations of planetary movements. ʿAbd al-Raḥmān al-Ṣūfī dedicated to him a treatise on making astrolabes.

S̲H̲ARAF AL-DĪN [see S̲H̲UFURWA].

S̲H̲ARAF AL-DĪN, ʿABD AL-ḤUSAYN B. AL-SAYYID YŪSUF, AL-MŪSAWĪ AL-ʿĀMILĪ, famous Imāmī S̲h̲īʿī *mud̲j̲tahid* [*q.v.*], one of the promoters of what has been called the "S̲h̲īʿī awakening" in modern Lebanon [see MUTAWĀLĪ]. According to his autobiography, he was born in 1290/1873 at al-Kāẓimayn [*q.v.*], where his father had emigrated to, for the purpose of studying, from S̲h̲(u)ḥūr, a village near Tyre in the D̲j̲abal ʿĀmil [see ʿĀMILA].

Having received his primary education, mainly in

southern Lebanon, ʿAbd al-Ḥusayn came back to ʿIrāḳ in 1892, and he pursued his studies in Nadjaf until May 1904, when he returned to his home village. About three years later he settled in Tyre to become the spiritual leader of the local Imāmī Shīʿī community. Apart from a period of exile after World War I (see below) and a number of journeys abroad, he lived in Tyre until his death on 30 December, 1957, being then buried in Nadjaf.

Supported, *inter alia*, by Lebanese Shīʿī communities in West Africa, Sharaf al-Dīn was over the years able to establish a number of religious, educational and social institutions in Tyre, such as a *Ḥusayniyya*, a Friday mosque, schools (including one for girls), a charitable society and an orphanage. Moreover, new mosques were erected or old ones rebuilt on his initiative in a number of adjacent villages. As far as his political activities are concerned, he has been praised by many authors for his stand against the French Mandate over Lebanon [see LUBNĀN], and notably for a speech he delivered at a meeting of political and religious leaders at Wādī ʾl-Ḥudjayr in April 1920, but he has also been criticised by a few others who have interpreted his attitude at that time and in the following years somewhat differently. However, as a result of his agitation against the mandatory power, he was forced to leave southern Lebanon. First he went to Damascus, after the battle of Maysalūn [*q.v.*] to Egypt, and finally to Palestine, from where he was allowed to return to Tyre in June 1921 (for a book written wholly in defence of Sharaf al-Dīn's political role, see Muḥammad al-Kūrānī, *al-Djudhūr al-taʾrīkhiyya li ʾl-muḳāwama al-islāmiyya fī Djabal ʿĀmil*, Beirut 1993).

During the last years of his life, Sharaf al-Dīn himself seems to have paved the way for his relative Sayyid Mūsā al-Ṣadr [*q.v.* in Suppl.] to become his successor as leader of the Shīʿī community in Tyre and its vicinity.

As a religious scholar, Sayyid ʿAbd al-Ḥusayn was known for his erudition in both Shīʿī and Sunnī *Ḥadīth*, for his apologetical fervour as well as for his conservative standpoint on a number of issues raised by Shīʿī modernists, such as the corpse traffic to the *ʿAtabāt* [*q.v.* in Suppl.] and its paraphernalia (see Y. Nakash, *The Shiʿis of Iraq*, Princeton 1994, 184-201, esp. 193-7) and certain features of the *taʿziya* processions (see W. Ende, *The flagellations of Muḥarram*, in *Isl.*, lv [1978], 19-36, esp. 31-2).

As far as his works are concerned, a history of his own family as well as of the Āl Ṣadr, who are closely linked to the Āl Sharaf al-Dīn by intermarriage, was published only posthumously by one of his sons, Sayyid ʿAbd Allāh, with extensive additions, i.e. *Bughyat al-rāghibīn fī silsilat Āl Sharaf al-Dīn*, Beirut 1991 (with ʿAbd al-Ḥusayn's autobiography in ii, 63-254).

Of special fame in Shīʿī circles is his book *al-Murādjaʿāt*, a work on doctrinal questions purporting to contain his correspondence with an Egyptian Sunnī scholar, Salīm al-Bishrī (d. 1917), who was Shaykh al-Azhar when Sharaf al-Dīn came to Cairo in 1911. The first edition was published only in 1936 in Sidon, while the 10th appeared in 1972 in Beirut; since then there have been several reprints (as well as translations into other languages). Many Shīʿīs consider this work (i.e. Sharaf al-Dīn's answers to al-Bishrī's questions) as one of the most convincing expositions of the Twelver Shīʿī doctrine of the *imāma* [*q.v.*] that has ever been written (for a discussion of its rather uncertain genesis, see Brunner, *Annäherung*).

The last of his books published in his lifetime is *al-Naṣṣ wa ʾl-idjtihād*, [1]Nadjaf 1956, [10]Beirut 1988, a work on early Islam and the role of the Companions of the Prophet in the development of the *Sharīʿa*.

For lists of Sharaf al-Dīn's many works, see e.g. Ḳubaysī, 53-69; Ṣadr, 28-32; Āl Yasīn, 20-3; ʿAbbās ʿAlī, 113-14, 146-8; Faḍl Allāh, 55-70; all these authors also mention unpublished writings of his lost when soldiers plundered his houses in Shḥūr and Tyre during the disturbances of 1920. See further K. ʿAwwād, *Muʿdjam al-muʾallifīn*, ii, Baghdād 1969, 228-9; Y.A. Dāghir, *Maṣādir al-dirāsa al-adabiyya*, iii/1, Beirut 1972, 626-9.

Bibliography: In addition to the titles given in the text, see Murtaḍā Āl Yāsīn, *Ḥayāt al-muʾallif*, dated 1946, in the introduction to *al-Murādjaʿāt* (see above), e.g. [10]Beirut 1972, 9-29; Aghā Buzurg al-Ṭihrānī, *Ṭabaḳāt aʿlām al-shīʿa*, i/3 (*Nuḳabāʾ al-bashar*), Nadjaf 1962, 1080-8; Muḥammad Ṣādiḳ al-Ṣadr, *Ḳabas min ḥayāt al-sayyid al-muʾallif*, in the introd. to *al-Naṣṣ wa ʾl-idjtihād* (see above), [3]Nadjaf 1964, 7-44 (as well as in later editions); ʿAbbās ʿAlī, *al-Imām Sharaf al-Dīn, ḥuzmat ḍawʾ ʿalā ṭarīḳ al-fikr al-imāmī*, Nadjaf 1968; Aḥmad Ḳubaysī, *Ḥayāt al-imām Sharaf al-Dīn fī suṭūr*, ed. [1987-8]; Muṣṭafā Ḳulī-zāda, *Sharaf al-Dīn-i ʿĀmilī*, Tehran 1993; *al-Imām al-Sayyid ʿAbd al-Ḥusayn Sharaf al-Dīn muṣliḥ^an, mufakkir^an wa-adīb^an*, Beirut 1993 (= procs. of a commemorative conference organised by the Iranian Cultural Council, Beirut); R. Brunner, *Annäherung und Distanz ...*, diss. Univ. of Freiburg-im-Breisgau (forthcoming). (W. ENDE)

SHARAF AL-DĪN ʿALĪ YAZDĪ, Persian historian and poet of the Tīmūrid period, born at Yazd, died in 858/1454.

He was a favourite of the Tīmūrid ruler Shāh Rukh [*q.v.*] and of his son Mīrzā Abu ʾl-Fatḥ Ibrāhīm Sulṭān, governor of Fārs, and in 832/1429 became tutor to the captured young Čingizid Yūnus Khān, to whom he dedicated many poems. He was then in the service of the Tīmūrid prince Mīrzā Sulṭān Muḥammad in ʿIrāḳ ʿAdjamī or western Persia, and narrowly escaped death when that prince rebelled in 850/1447. After Shāh Rukh's death he retired to Yazd and settled in the nearby village of Taft, where he died, being buried in the Sharafiyya *madrasa* which he had founded.

Yazdī had a high reputation as a littérateur and poet. In addition to his poetry, written under the *takhalluṣ* of Sharaf, he wrote a commentary on the *Burda* ode of al-Būṣīrī [*q.v.* in Suppl.], a work on magic squares and a work on riddles (*muʿammā*); he compiled an anthology of Arabic and Persian poetry; and he left behind a collection of *inshāʾ*. His main fame, however, stems from his *Ẓafar-nāma*, a florid and euphuistic, hence much admired at the time (with the result that a large number of mss. survive), history in Persian of Tīmūr and his grandson Khalīl Sulṭān. This was compiled from other histories of the great conqueror and from eyewitness accounts, and completed in 828/1425; further planned sections on Shāh Rukh and Ibrāhīm Sulṭān were never completed.

Bibliography: Dawlat Shāh, *Tadhkirat al-shuʿarāʾ*, ed. Browne, 378-81; C. Rieu, *Cat. of Persian manuscripts in the British Museum*, 173-5; Browne, *LHP*, iii, 362-5; Storey, i, 284-8, 1274; Storey-Bregel, ii, 797-807; Rypka *et alii*, *History of Persian literature*, 434, 444. The most recent eds. of the *Ẓafar-nāma* include that of M. ʿAbbāsī, Tehran 1336/1957, and facs. ed. A. Uranbaev, Tashkent 1972.

(C.E. BOSWORTH)

SHARAF AL-DĪN, ḤASAN RĀMĪ [see RĀMĪ TABRĪZĪ].

AL-SHAʿRĀNĪ, ʿAbd al-Wahhāb b. Aḥmad (897-973/1492-1565), Egyptian Ṣūfī, scholar, historian of Ṣūfism, and a prolific writer about many religious subjects during a period otherwise poor in distinguished figures of learning and piety in the Arab lands.

Sources. The main sources for al-Shaʿrānī's life are his own writings, which must, of course, be used with caution. This is especially true of *Laṭāʾif al-minan*, his lengthy account of the graces bestowed upon him by God, a work that beside recounting miraculous events, also includes many autobiographical elements. Paradoxically, al-Shaʿrānī's voluminous literary output obscures our view of him, because most of his biographers, such as his disciple ʿAbd al-Raʾūf al-Munāwī [*q.v.*], drew heavily on his works, adding little new information. An important biography, *al-Manāḳib al-kubrā*, was written in 1109/1697 by Muḥammad Muḥyī ʾl-Dīn al-Malīdjī, an affiliate of the al-Shaʿrānī order (Cairo 1350/1932).

Origins and life. According to al-Shaʿrānī, his ancestor five generations back was Mūsā Abū ʿImrān, son of the sultan of Tlemcen in North Africa. Mūsā was a follower of Shaykh Abū Madyan Shuʿayb (d. 594/1197), the founder of the Shādhilī Ṣūfī tradition, who sent him to Egypt. Finally, the family settled in the village of Sāḳiyat Abū Shaʿra in the Minūfiyya province, hence the *nisba*. Al-Shaʿrānī came to Cairo at the age of twelve and settled in the Bāb al-Shaʿriyya quarter and was raised in a Ṣūfī milieu. He became a student of Cairo's best-known *ʿulamāʾ* of all the *madhāhib*, not only his own Shāfiʿī one, and a follower of distinguished orthodox Ṣūfīs. Yet his spiritual director was an illiterate palm-leaf plaiter (hence, his *laḳab*), named ʿAlī al-Khawwāṣ al-Burullusī (d. 939/1532-3). Al-Shaʿrānī became a successful and wealthy man and a popular writer thanks to his attractive personality, erudition and readable style. Inevitably, his popularity made him many enemies and rivals, the most prominent of whom was Muḥammad b. Aḥmad b. Karīm al-Dīn (d. 985/1578), the leader of the (then) unorthodox Khalwatī *ṭarīḳa*, but he claimed to have had personal contacts with members of the ruling class, from the pashas, the Ottoman governors of Egypt, down. He died on 12 Djumādā I 973/5 December 1565, and was buried in the *zāwiya*, which had been built for him. His son ʿAbd al-Raḥīm (d. 1011/1608) succeeded as the head of the *zāwiya* and the *ṭarīḳa*, although he did not have his father's personality and ability. Yet the *ṭarīḳa* survived into the 19th century. Ewliya Čelebi mentions al-Shaʿrānī's *mawlid* in the second half of the 11th/17th century. The *ṭarīḳa* is mentioned by al-Djabartī and by E.W. Lane, but not by ʿAlī Bāshā Mubārak, whose *al-Khiṭaṭ al-tawfīḳiyya al-djadīda* is a major source for Egyptian Ṣūfism in the late 19th century, nor by 20th-century sources and authorities on the subject.

His Ṣūfism. Al-Shaʿrānī represents the orthodox, middle-of-the-road, only moderately ascetic, and non-political brand of Egyptian Ṣūfism. He was influenced by Shādhilī ethics and literature, but did not identify with that *ṭarīḳa*, since he considered it too aristocratic. Socially, he was associated with the Aḥmadiyya or Badawiyya, the *ṭarīḳa* of Sīdī Aḥmad al-Badawī (d. 675/1276) [*q.v.*], whom he venerated, but he fiercely attacked the antinomian and vulgar Aḥmadīs and other similar orders for their "excesses", their disregard of the *Sharīʿa* and lack of respect for the *ʿulamāʾ*. Likewise, al-Shaʿrānī criticises the Khalwatiyya [*q.v.*], popular at that time among the Turkish soldiers, attacking its principle of *khalwa*, solitary retreat of the adherents, as causing hallucinations and not true religious experience. He never states his own *ṭarīḳa* affiliation, and identifies generally with the *ṭarīḳ al-ḳawm*, i.e. the orthodox way of al-Djunayd. His initiation into 26 *ṭarīḳas* seems to have been merely ceremonial or for the sake of obtaining *baraka*.

As a historian of Ṣūfism (he compiled collections of *ṭabaḳāt* containing lives and sayings of Ṣūfīs) and an apologist for it, al-Shaʿrānī insists that genuine Ṣūfīs have never contravened the *Sharīʿa* in word or deed, and if it seems otherwise, it is only because of a misunderstanding, misinterpretation, ignorance of the Ṣūfī terminology, or interpolation by enemies. In this way, al-Shaʿrānī chose to defend the orthodoxy of the great mystic Muḥyī ʾl-Dīn Ibn al-ʿArabī [*q.v.*], whose ideas he epitomises in his *al-Yawāḳīt wa ʾl-djawāhir*, rendering the mystic's complicated theories in a simplified way.

His *fiḳh*. In his *al-Mīzān al-Kubrā*, al-Shaʿrānī expounds a theory based on Ṣūfī assumptions that aims at the unification of the four *madhāhib*, or at least their equality and the need to narrow the gaps between them. He believed that there were no real differences between the founders of the *madhāhib*, in contradistinction to the opinions held by their narrow-minded imitators (*muḳallidūn*). The founders were *awliyāʾ* and thus had access to the Source of the Law (*ʿayn al-Sharīʿa*) whence they derived the precepts of religion. According to him, there is only one *Sharīʿa*, and it has two standards—strict (*ʿazīma*) for those who are resolute in their religion, and lenient (*rukhṣa*) for those who are weak. Generally, al-Shaʿrānī criticised the *fuḳahāʾ* for troubling the common people with the finer points of jurisprudence, of little relevance to the essentials of Islam.

His social ideas. His weaknesses and inconsistencies notwithstanding, al-Shaʿrānī had a feeling for the essentials in religion. He also had a genuine empathy for the weak and underprivileged elements of society, such as fellaheen, labourers, and women. He paid particular attention to the relations of Ṣūfīs with members of the ruling class and wrote a treatise advising *ʿulamāʾ* and *faḳīrs* how to get along with *amīrs*. His criticism of the rulers' injustice in general and the Ottoman rulers of Egypt in particular, is typically circumspect, but he hints at the date 923/1517, the year of the Ottoman conquest, as a turning point for the worse, and elsewhere makes a hostile remark about the *ḳānūn*, the Ottoman administrative law.

SHARARĀT (A.), a camel-herding group of northwestern Arabia.

In Burckhardt's time, the Shararāt were known for their camel herds, which they exchanged in the Ḥawrān and at Gaza for wheat. They regarded Maʿān, Djawf and Madāʾin Ṣāliḥ as their former properties; Doughty suggested that they came from the Banī Hilāl and Peake that they came from the Kalb. Unable to protect their property, they paid protection money to the Rwala and the Banī Ṣakhr, at the same time themselves taking *khuwwa* [*q.v.*] from Djawf and, at an earlier date, from the Ḥuwayṭāt and the Banī ʿAṭiyya. The Rwala and Ṣakhr did not intermarry

with them because the Sharārāt paid for protection. The Sharārāt were subject, in Doughty's time, to the *amīr* of the Āl Rashīd [*q.v.*] in Ḥāyil, like most tribes. Both Doughty and Musil emphasised the excellence of Sharārāt-bred camels.

The increasing drawing of northern Arabia into tribal and then state politics probably accounts for the politically-weak Sharārāt's initial impoverishment, accelerated by the declining market for camels, which had virtually disappeared by the 1940s. Many Sharārāt are now in the National Guard, army and police of Saudi Arabia or involved in local government, whilst their camel herds supply an urban market for their milk and flesh.

al-SHĀRĀT, from the Latin *serra* through the Spanish *sierra*, is the term applied by certain geographers of Muslim Spain to the mountains which stretch from east to west in the centre of the Iberian Peninsula. The best definition is given by Ibn Faḍl Allāh al-ʿUmarī. According to this author, the mountain range called al-Shārāt stretches from the country behind Madīnat Sālim (Medinaceli) to Coimbra. This term therefore describes the mountains now known under the names of Sierra de Guadarrama (Ar. Wādī 'l-Ramla?), Sierra de Gredos and Sierra de Gata in Spain and Serra de Estrella in Portugal. In the time of al-Idrīsī, however, it was applied only to the Sierra de Guadarrama, to the north of Madrid. The geographer Abu 'l-Fidā', quoting Ibn Saʿīd, described the mountain system of the centre of al-Andalus under the name of Djabal al-Shāra. According to him, it divided the peninsula into two well marked divisions, the north and the south.

Al-Idrīsī, in his description of al-Andalus, gives the name of al-Shārāt to one of the twenty-six "climes" of this country, the twenty-second in his classification; this region, which embraced all the Sierra de Guadarrama, included the towns of Talavera de la Reina, Toledo, Madrid, al-Fahmīn, Guadalajara, Uclès and Huete.

al-SHARDJA [see al-shāriḳa].

SHARḤ (a.), pl. *shurūḥ*, denotes in Arabic a commentary on a text of greater or lesser length, but this term by itself does not cover the entire semantic domain of "commentary". Lexically, it refers to notions of opening, expansion, explanation and finally of commentary.

Sixty-seven *sharḥ*s appear in the *Fihrist*: language (29, of which two have a title; two *Sharḥ abyāt Sībawayh*; a *Sharḥ abyāt al-Īḍāḥ*; two *Sharḥ shawāhid Sībawayh*; *Sharḥ Maḳṣūrat Ibn Durayd* by Abū Saʿīd al-Sīrāfī, commentary on a didactic poem; two *sharḥ al-maʿānī*), philosophy and sciences (16), concerning the Djābirian corpus (4), Ḥanafī *fiḳh* (5), Shāfiʿī (4), Mālikī (3), Ẓāhirī (1), theology (2), *ḥadīth* (2) and miscellaneous (2).

Also found there are ninety-six *tafsīrs*: Ḳur'ān (40), philosophy and sciences, whether these are translated works—they are the majority—or commentaries written directly in Arabic (25; the instances where the expression *fassarahu* is used have not been counted; the same applies to *sharaḥahu*), poetry (8), Old Testament (7), Gospels (1), language (4), language and theology (1), *fiḳh* (1), *ḥadīth* (1) and miscellaneous (8).

In the course of time, the number of commentaries becomes impressive, to the point where this emerges as one of the characteristics of Arabic literary production. Many of them are veritable museums, as if their authors feared the loss of whole sections of the patrimony.

I. Grammar and philology.

Among the works which were the object of commentaries at a very early stage, particular distinction belongs to the *Kitāb* of Sībawayh (d. 180/796 *et alt. an.*; 19 titles in Sezgin, ix; 32 names of commentators or glossators in Ḥādjdjī Khalīfa, ii, 1427-8). It is difficult to conclude whether the terminology to denote these works is contemporary; it varies between *taʿlīḳāt*, *tafsīr*, *tafāsīr*, *nukat*, *sharḥ* (or *ikhrādj*) *nukat* and *sharḥ* (Sezgin, ix, 58-63). Besides al-Akhfash al-Awsaṭ [*q.v.*], the disciple of Sībawayh, the following works are listed here: Abū ʿUmar al-Djarmī (d. 225/839), *Tafsīr gharīb Sībawayh*; al-Māzinī (d. 248/862), *K. Tafsīr K. Sībawayh*; Abu Yaʿlā b. Zurʿa (d. 257/871), *Nukat ʿalā K. Sībawayh*; al-Mubarrad (d. 285/898), *Tafsīr mā aghfala istiḳṣā' al-ḥudjdja fīhi*. Of the various commentaries and glosses on the *Kitāb* which have been edited, worth mentioning are: the *Sharḥ* of Abū Saʿīd al-Sīrāfī (d. 368/979; *MIDEO*, xviii, no. 9, xix, no. 18), that and of al-Rummānī (*MIDEO*, xxi, no. 20), *Taʿlīḳa al-Taʿālīḳ ʿalā K. Sībawayh* by Abū ʿAlī al-Fārisī [*q.v.*] (*MIDEO*, xxi, no. 19).

Sharḥ does not invariably denote a commentary on a work; it also refers to explanations given regarding a subject within a book, especially regarding verses (*abyāt*) or probative quotations (*shawāhid*). The monumental *Khizānat al-adab* of ʿAbd al-Ḳādir al-Baghdādī [*q.v.*] constitutes the crowning achievement of this type of literature.

Later treatises on grammar or grammatical didactic poems were also the object of commentary, sometimes to an even greater extent. These include *al-Mufaṣṣal* of al-Zamakhsharī (d. 538/1144, 24 according to Brockelmann, I², 347, S I, 509-10; 18 in Ḥādjdjī Khalīfa, ii, 1774-5), *al-Durra al-alfiyya* of Ibn Muʿṭī (d. 628/1261, *MIDEO*, xxi, no. 24); *al-Kāfiya* of Ibn Ḥādjib (51 entries in Brockelmann, I², 367-70, S I, 531-5; *MIDEO*, xix no. 9: *Sharḥ* of Ibn Djamāʿa: cf. Makram, 61-2); *al-Shāfiya* (23 principal entries in Brockelmann, I², 370-1, S I, 535-7; cf. Makram, 66) of Ibn Ḥādjib (d. 646/1249); and especially *al-Khulāṣa al-Alfiyya* (45 entries in Brockelmann, I², 359-62, S I, 522-6; *MIDEO*, x, no. 2, for the commentary of Ibn ʿAḳīl; *MIDEO*, xix, no. 8: ten; cf. Makram, 176) of Ibn Mālik (d. 672/1274). Some of these commentaries were in their turn the object of commentaries or glosses, among others *Awḍaḥ al-masālik* of Ibn Hishām (d. 762/1361; 11 entries in Brockelmann, S I, 523). Numerous unedited commentaries pose a problem on account of the similarity between the titles of the works to which they refer; this applies in the case of those on the *K. al-Djumal* of al-Zadjdjādjī and that of ʿAbd al-Ḳāhir al-Djurdjānī (*MIDEO*, xxi, no. 22). There is less ambiguity with regard to that of Ibn al-

Sarrādj (d. 316/928), with commentary by one of his disciples, al-Rummānī (Sezgin, ix, 84).

In lexicography, the *K. al-ʿAyn* of al-Khalīl b. Aḥmad [*q.v.*] has been less the object of commentaries than of *addenda et emendanda* (Sezgin, viii, 54-6). The same applies to the *Gharīb al-muṣannaf* of Abū ʿUbayd (d. 224/838), except that it was also the object of commentary *strictu sensu*, in particular by Ibn Sīduh (d. 458/1066) and by Abu 'l-ʿAbbās al-Mursī (d. *ca.* 460/1068; twelve diverse entries in Sezgin, viii, 83-4; *MIDEO*, xx, no. 6). His *K. al-Amthāl* received the same treatment (six in Sezgin, viii, 84-5). The same applied to *al-Djamhara fi 'l-lugha* of Ibn Durayd (d. 321/933) (six entries for summaries, additions, etc.; Sezgin, viii, 103). But no work of this period has received as much attention on the part of lexicographers as the *K. al-Faṣīḥ* of the Kūfan Thaʿlab (d. 291/904) (42 entries, including 20 commentaries, in Sezgin, viii, 142-4; *MIDEO*, xix, no. 5). Major lexicographical works or dictionaries have seldom been subjected to commentary. However, the emendations, alterations, additions, elucidations, additions, glosses, corrections and even "summaries" (*tahdhīb, mukhtaṣar, takmila, bayān wa-taḳrīb, ḥawāshī, taṣḥīḥ*) of which they have been the object belong more or less to the domain of "commentary". Furthermore, the more recent of them are in a relationship of "commentaries" to "texts" with regard to the earlier (see Kraemer; Sezgin, viii; introd. by ʿA.S.A. Farādj to *TʿA*, ed. Kuwait; *EI*, art ḲĀMŪS).

II. Poetry, *adab* and stylistics.

It is hardly surprising that Ibn al-Nadīm does not name a single *sharḥ* of collections of poetry, seeing that he mentions only twenty-eight *dīwāns*. Al-Āmidī (d. 371/981) refers to 59 (R. Jacobi, in *GaP*, ii, 11). Moreover, collections of poetry were at first called *shiʿr* or even *khabar* (Sezgin, ii, 36-46). It should, however, be recognised that "commentaries" on poetry are not absent from the *Fihrist*, although this is only through the intermediary of the *sharḥs abyāt/shawāhid* or the *sharḥs maʿānī al-Bāhilī* of Lughda/Lughdha al-Iṣfahānī, contemporary of Ibn Ḳutayba, and of Bundār b. ʿAbd al-Ḥamīd b. Lurra (first half of 3rd/9th century). On the other hand, Ibn al-Nadīm mentions three *tafsīrs* of poetry by Ibn Durustawayh (d. 347/958; Sezgin, viii, 106-8): of *al-Mufaḍḍaliyyāt* (incomplete), of *al-Sabʿ* [*al-Muʿallaḳāt*] and of the *Ḳaṣīda* of Shubayl b. ʿAzra. He also adds here the *Tafsīr al-sabʿ al-djahiliyyāt wa-gharībihā*, of al-ʿUmarī, judge of Takrīt, and the *Tafsīr al-Ḥamāsa* of Abū Tammām [*q.v.*] by al-Dīmartī (flor. *ca.* 364/975, Sezgin, ii, 68).

Among the commentators on the *Muʿallaḳāt* (29 entries in Sezgin, ii, 50-3; cf. Blachère, *HLA*, i, 143-8), worth mentioning are: Abū Saʿīd al-Ḍarīr (d. 282/895), Ibn Kaysān (d. 299/911), Abū Bakr Ibn al-Anbārī (d. 328/940; in fact a revision of his father's commentary), Ibn al-Naḥḥās [*q.v.*], al-Zawzānī (d. 486/1093), Abū Bakr al-Baṭalyawsī (d. 494/1100) and Abū Zakariyyāʾ al-Tibrīzī (d. 502/1109). The *Ḥamāsa* of Abū Tammām was no less the object of commentaries (36 entries in Sezgin, ii, 69-72). The greatest success in these terms belongs, however, to the *Bānat Suʿād* of Kaʿb b. Zuhayr [*q.v.*] (48 in Sezgin, ii, 231-34).

Some authors distinguished themselves in the elucidation of various collections of poetry. These include Abū Saʿīd al-Sukkarī (d. 275/888); Ibn al-Anbārī, disciple of Thaʿlab: commentaries on *al-Mufaḍḍaliyyāt* (Sezgin, ii, 54; Blachère, *HLA*, i, 148-50); Abū Bakr al-Ṣūlī (d. 335/946): commentaries on the *Ḥamāsa* of Abū Tammām (Sezgin, ii, 68); al-Maʿarrī [*q.v.*], commentator especially on al-Mutannabī (*MIDEO*, xx, no. 66); Abū ʿAlī al-Ḳālī (d. 356/967); Ibn Khālawayh (d. 370/980); Ibn Djinnī (d. 392/1002); al-Marzūḳī (d. 421/1030); Abu 'l-Ḥasan al-Wāḥidī (d. 468/1075); al-Aʿlam al-Shantamarī (d. 476/1083): commentaries on the seven *Muʿallaḳāt*; al-Tibrīzī: commentaries on the *Ḥamāsa* (Sezgin, ii, 71, no. 24), on the *Lāmiyyat al-ʿArab* of Shanfarā (Sezgin, ii, 135); Mawhūb al-Djawālīḳī (d. 540/1145); Ibn Hishām al-Anṣārī (d. 761/1360).

Among works of *adab*, the *Adab al-kātib* of Ibn Ḳutayba has drawn the attention of commentators (eleven in G. Lecomte, *Ibn Qutayba*, 104-5).

An interesting case in the domain of stylistics is that of the *Miftāḥ al-ʿulūm* of al-Sakkākī (626/1229; Ḥādjdjī Khalīfa, ii, 1762-8) which was the object of a comprehensive commentary (*explicit* 742/1341) by Ḥusām al-Dīn al-Khʷārazmī. But it was especially the third part of this work, on stylistics, which was commented on and glossed, then summarised (see A. Arazi and H. Ben Shammai, art. MUKHTAṢAR, at Vol. VII, 537a), the summaries in their turn being commented on and glossed. The ideas of the author were evidently modified by the commentators and glossators (Brockelmann, I², 352-6, S I, 515-19; A. Maṭlūb, *al-Ḳazwīnī wa-shurūḥ al-Talkhīṣ*, Baghdād 1967; R. Sellheim, i, 299-317; W. Heinrichs, in *GaP*, ii, 184).

III. Religious sciences.

It is probable that the first "commentaries" or explanations in this area were applied to the *gharīb* [*q.v.*] of the Ḳurʾān and of *ḥadīth* in the form of oral explanations, of pamphlets, then of books. These were therefore not "commentaries" on a work, but explanations of a term, of a verse, or of a tradition. In fact, they most often bear the title of *Gharīb/Tafsīr al-ḥadīth* or *al-Ḳurʾān*, or even *Sharḥ gharīb al-ḥadīth* (Abū ʿUbayda, d. 207/822, whose *Madjāz al-Ḳurʾān* is also called *al-Madjāz fī gharīb al-Ḳurʾān*). For commentaries on the Ḳurʾān, the accepted term is *tafsīr* [*q.v.*]. However, the Muʿtazilī Abū Muslim al-Iṣfahānī (d. 322/934) is the author of a commentary sometimes called *Sharḥ taʾwīl al-Ḳurʾān wa-tafsīr maʿānīhi* (E. Kohlberg, *A medieval Muslim scholar at work*, Leiden 1992, 330). For the explanation of isolated passages of the Ḳurʾān, *sharḥ* is sometimes applied to a few pages (*djuzʾ*), in the form: *Sharḥ ḳawlihi taʿālā* (four in the list of works of Makkī b. Abī Ṭālib, in Ḳifṭī, *Inbāh*, iii, 317-8) or *Sharḥ āyat*..., or even *Sharḥ/Tafsīr sūrat*..., *Sharḥ al-Basmala*, *Sharḥ kalimatay al-shahāda*. *Al-Kashshāf* by al-Zamakhsharī (d. 538/1144), unusually for a commentary on the Ḳurʾān, was frequently the object of commentaries and glosses (Brockelmann, I², 345-6, S I, 507-9). The "commentaries on the divine names" also contain interpretations of the terms according to various theological orientations. They may bear various titles: *Sharḥ al-asmāʾ al-ḥusnā* (31 in Ḥādjdjī Khalīfa, ii, 1031-5), but also *Tafsīr*, *Kitāb*, etc. (D. Gimaret, *Les noms divins en Islam*, Paris 1988, 16-29).

In the context of *ḥadīth*, *sharḥ* is used for the commentary on a single tradition. Some traditions have been subjected to extensive commentary, in particular *Sharḥ ḥadīth Umm Ẓarʿ*: al-Ṭabarī (Gilliot, *Elt* [see *Bibl.*], 67), al-Ḳāḍī ʿIyāḍ (*ibid.*, no. 8); *Sharḥ gharīb ḥadīth Umm Ẓarʿ* by Ibn al-Anbārī (Sezgin, viii, 154) and Ibn al-Khallāl (flor. *ca.* 1000/1591). The major collections of prophetic traditions, in particular the "six books", have been the object of an impressive number of commentaries, the majority of which are supplied with titles: 27 for *al-Muwaṭṭaʾ*, all recensions combined (sometimes also *Tafsīr al-Muwaṭṭaʾ*, M. Muranyi, *Ein altes Fragment medinensischer Jurisprudenz aus Qairawan*, Wiesbaden 1985, 12); 56 for al-Bukhārī, 27 for Muslim (Sezgin, i, 115 ff.), etc. In the genre of the "Forty

Prophetic Traditions", the collection of al-Nawawī (d. 676/1277), *al-Arbaʿūn al-nawawiyya*, has been the object of some forty commentaries, including one by the author himself (L. Pouzet, *Une Herméneutique de la tradition islamique ...*, Beirut 1982, 55-7). In the terminology of *ḥadīth*, pride of place probably belongs to the *Muḳaddima* of Ibn al-Ṣalāḥ [*q.v.*], which was commented on, glossed and summarised (Brockelmann, I², 441-2, S I, 610-12; *MIDEO*, xix, no. 43; xxi, no. 121).

The energy of the commentators in Muslim law is no less impressive (Spies, 238-69; Sezgin, i, 409-524). In Ḥanafī law (Spies, 238-47; Sezgin, i, 409-57), at least fifteen commentaries are known to have been made on one of the oldest Ḥanafī compilations of *furūʿ*, *al-Djāmiʿ al-kabīr* of al-Shaybānī (d. 189/805), including those by al-Ṭaḥāwī (d. 321/933) and al-Djaṣṣāṣ [*q.v.*], who also wrote the earliest commentary on *al-Mukhtaṣar* of al-Ṭaḥāwī. The judicial epitome of this school, *al-Mabsūṭ fī 'l-furūʿ* by al-Sarakhsī (d. 490/1097 [*q.v.*]), is a commentary on *al-Kāfī* of Muḥammad al-Marwazī (d. 334/945). The *Bidāyat al-mubtadī'*, a compendium by al-Farghānī al-Marghīnānī (d. 593/1197), was also the object of numerous commentaries; the same applied to the *Manār al-anwār*, a manual of Abu 'l-Barakāt al-Nasafī (d. 710/1310). As for the *Mukhtaṣar* of al-Ḳudūrī (d. 428/1037 [*q.v.*]), which is called *al-Kitāb* by the Ḥanafīs, Ḥādjdjī Khalīfa, ii, 1631-2, lists twelve commentaries on it. The same author also wrote a commentary on the *Mukhtaṣar* of al-Karkhī (d. 340/951; Ḥadjdjī Khalīfa, ii, 1634-5; Brockelmann, S I, 295).

In Mālikī law (Spies, 254-60; Sezgin, i, 457-84; Muranyi, in *GaP*, ii, particularly for the commentaries on the *Mudawwana*), as elsewhere, some of the older manuals were displaced by more recent ones. Such was the case of the *Mukhtaṣars*, *al-kabīr* and *al-ṣaghīr*, of Ibn ʿAbd al-Ḥakam (d. 214/829); both were subjected to commentary by al-Abharī (d. 375/985); the second by Abū Bakr Muḥammad b. al-Djahm (d. 282/895) (*Fihrist*, 200, 201). They were superseded, to some extent, by *al-Risāla* of Ibn Abī Zayd al-Ḳayrawānī (d. 386/996, 15 entries in Sezgin) and by *al-Mukhtaṣar* of Khalīl b. Isḥāḳ (d. 767/1365; Brockelmann, II², 102-3, S II, 96-9), on which one of the most recent commentaries is that of al-Dardīr (d. 1201/1786; *MIDEO*, xxi, no. 174). The didactic poem of Ibn ʿĀṣim (d. 829/1426), was also the object of frequent commentary.

In Shāfiʿī law (Spies, 284-54, Sezgin, i, 484-502), the *Mukhtaṣar* of al-Muzanī (d. 264/877) also attracted the interest of commentators (six in Sezgin, i, 493); but the compendium of Abū Shudjāʿ (d. 593/116; Brockelmann, S I, 676-7) was no less the object of explanations and glosses; the same applied to the *Minhādj al-ṭālibīn* of al-Nawawī [*q.v.*].

In Ḥanbalī law, the basic compendium is *al-Mukhtaṣar* of al-Khiraḳī (d. 334/945). It was commented on by Abū Yaʿlā Ibn al-Farrā' (d. 458/1065), but especially by Muwaffaḳ al-Dīn Ibn Ḳudāma (d. 620/1233 [*q.v.*]) under the title *al-Mughnī*. The latter's *al-Muḳniʿ* was the object of commentary by ʿAbd al-Raḥmān b. Muḥammad b. Ḳudāma (d. 682/1283; *MIDEO*, xxi, no. 180).

Commentators did not always belong to the same school of law; thus the *ʿUmda* of the Ḥanbalī ʿAbd al-Ghanī al-Maḳdisī (d. 600/1203) was the object of commentary by the Shāfiʿī Ibn Daḳīḳ al-ʿĪd (d. 625/1128 [*q.v.* in Suppl.]) in *Sharḥ ʿUmdat al-aḥkām*, which was glossed by the Zaydī al-ʿĀmir al-Ṣanʿānī (d. 1099/1688) in *al-ʿUdda* (*MIDEO*, xxi, no. 184).

The major compilations of Shīʿī traditions and law were also subjected to commentary, especially "the four books" (Spies, 263-5; Sezgin, i, 540-2, 545-9).

Dialectical and scholastic theology was no less prolific, generating numerous catechisms, creeds, professions of faith and treatises on theology (*uṣūl al-dīn, kalām*). The various treatises and "testaments" of Abū Ḥanīfa were commented on abundantly from the 5th/11th century onward (Sezgin, i, 412-8). *Al-ʿAḳā'id* of Abū Ḥafṣ al-Nasafī (d. 537/1142) was certainly one of the most commented on and glossed texts in Islam (*MIDEO*, xix, no. 48); one of its best known commentaries is that by al-Taftazānī (d. 791/1388). At the present day, the manual of Ashʿarī theology *al-Mawāḳif fī ʿilm al-kalām* of al-Īdjī [*q.v.*] is studied with the commentary of al-Sharīf al-Djurdjānī and the glosses of the Indian ʿAbd al-Ḥakīm al-Siyālkūtī (d. 1067/1657) and of Ḥasan Čelebi al-Fanārī (d. 886/1641) (W. Madelung, in *GaP*, ii, 333). As in law, there were occasions when theologians of different trends commented on one another. Thus the *Muḥaṣṣal al-afkār* of the Ashʿarī Fakhr al-Dīn al-Rāzī was the object of commentary by a Shīʿī of Muʿtazilī persuasion, Nāṣir al-Dīn al-Ṭūsī. The latter's *Tadjrīd al-ʿaḳā'id*, with its long introduction dealing with logic and ontology, was commented on by the Shāfiʿī-Ashʿarī Maḥmūd al-Iṣfahānī (d. 749/1349) under the title *Tasdīd al-ḳawāʿid* ("*al-Sharḥ al-ḳadīm*"), then by the Sunnī astronomer and philosopher al-Ḳūshdjī (d. 879/1474 [see ʿALĪ AL-ḲŪSHDJĪ] ("*al-Sharḥ al-djadīd*"). These two commentators were in their turn the object of commentaries and glosses by Shīʿī and Sunnī authors (Brockelmann, I², 670-2, S I, 925-7; W. Madelung, in *GaP*, ii, 333).

In mysticism, numerous texts were the objects of commentary, beginning with the *K. al-Taʿarruf* of al-Kalābādhī (d. 380/990 [*q.v.*]), in particular by ʿAlī al-Ḳūnawī (d. 712/1326; Sezgin, i, 669), the *Risāla* of al-Ḳushayri (d. 465/1072) by Zakariyyā' al-Anṣārī (d. 926/1520; Brockelmann, I², 556, S I, 771-2). The same applied to *Manāzil al-sā'irīn* of al-Anṣārī al-Harawī [*q.v.*]; cf. the introduction to the edition and translation of S. Laugier de Beaurecueil, *Les étapes des itinérants vers Dieu*, Cairo 1962, 15-21; idem, in *MIDEO*, xi (1972), 80-91. Numerous writings of Shihāb al-Dīn al-Suhrawardī (d. 587/1191; Brockelmann, I², 565-6) also received the attentions of commentators. Many works of Ibn ʿArabī [*q.v.*] were commented on, but pride of place belongs to *Fuṣūṣ al-ḥikam*; see O. Yahia, *Histoire et classification de l'œuvre d'Ibn ʿArabī*, Damascus 1964, 241-57.

Certain religious texts, such as the *Burda*, a panegyric of the Prophet by al-Būṣīrī (d. 694/1294 [*q.v.* in Suppl.), were the object of particular attention: 74 commentaries in Brockelmann, I², 308-13, S I, 467-70; *MIDEO*, xxi, nos. 45, 96.

Many commentaries are veritable encyclopaedias, the text under discussion often serving as a pretext for recording entire documents or quotations from works of which many have since been lost; such is the case with the commentary on the *Nahdj al-balāgha* [*q.v.*] by Ibn Abi 'l-Ḥadīd [*q.v.*] or that on the *Iḥyā' ʿulūm al-dīn* by al-Zabīdī [*q.v.*].

IV. Philosophy.

It is in this region that research is most advanced in relation to the terminology of the "commentary". Reference should be made to the art. MUKHTAṢAR, section on philosophy, to be complemented by Endress and Gutas.

The translators of the ancient sources were the first Arab exegetes. In fact, transference into Arabic required an interpretation. This is why they included in their works paraphrases, definitions and glosses

which derived in part from the scholia of their base texts or from the commentaries which were at their disposal. Numerous terms need to be taken into consideration, especially in the domain of logic, even if it is not always easy to tell them apart.

Tafsīr is a generic term which signifies literally "to bring to light, reveal" something which is hidden, and consequently "to interpret, elucidate, explain", and sometimes even to interpret in the sense of translating. This generic sense appears under the rubric of *De interpretatione*, in *Fihrist*, 249, where the authors of writings called "synopses" or "epitomes" (*summaria*, *d̲j̲awāmiʿ*), "abridgments" (*muk̲h̲taṣars*, *talk̲h̲īṣāt*) or "commentaries" (*s̲h̲arḥs*), are defined as exegetes (*al-mufassirūn*).

S̲h̲arḥ is "the commentary on a text which is not an interpretative abridgment, but which may nevertheless be of variable length" (Gutas, 35). This can be a developed commentary, *ad litteram* (*ʿalā 'l-lafẓ*), or an interpretation according to the sense (*ʿalā 'l-maʿnā*) in the form of a paraphrase (e.g. *Talk̲h̲īṣ Safsaṭa, Exposition or Paraphrase of the Sophistici elenchi* by Ibn Rus̲h̲d). It can also have the appearance of notes on the text (e.g. *S̲h̲arḥ K. Bārīminiyās ʿalā d̲j̲ihat al-taʿlīk* of al-Fārābī); for a full analysis, see Endress, in *GaP*, ii, 461-73, iii, 19-20; Gutas, 31-43.

V. Other elements of the semantic field of "commentary".

It is appropriate to include other terms here e.g. *taḥrīr* (revision of a text, or even "edition"), a term which refers to the elements of a text or a commentary which have been chosen for comment, clarification or correction, such as the *Taḥrīr* of al-D̲j̲uwaynī on the lost commentary by al-Bāḳillānī on the *K. al-Lumaʿ* of al-As̲h̲ʿarī (Madelung, in *GaP*, ii, 332); or furthermore the commentaries on scientific *compendia* of the ancients such as those of Euclid, of Menelaos, etc., revised by Nāṣir al-Dīn al-Ṭūsī (Endress, in *GaP*, ii, 463). It is also necessary to take into account works which bear the title *taḳrīr*, a term which refers to remarks on a text.

Other types of work belong to a greater or lesser extent to the genre of "commentary" or contain interpretative elements; for this reason it would be necessary, in a monograph on the subject which is yet to be written, to consider the following genres also: in certain cases, the *addenda* and *corrigenda*, complements and supplements, especially in philology: *Istidrāk* (two in the *Fihrist*, bearing on the *K. al-ʿAyn*), *al-istidrāk limā ag̲h̲falahu, mā ag̲h̲falahu, fāʾit, ziyādāt, istik̲h̲rād̲j̲, ik̲h̲rad̲j̲ nukat, takmila, g̲h̲alaṭ* and *taṣḥīḥ*, sometimes even "refutations": *radd, naḳḍ* and *intiṣār*. Numerous works which bear the title *tahd̲h̲īb* belong to the category of "commentary", thus for example *The emendation of traditions* (*Tahd̲h̲īb al-āt̲h̲ār* of al-Ṭabarī) (see *EIt*, 58-60; arts. ḤĀS̲H̲IYA, MATN, etc.; cf. A.F.L. Beeston, in *CHAL*. i. *Arabic literature to the end of the Umayyad Period*, Cambridge 1983, 24).

(CL. GILLIOT)

S̲H̲ĀRIʿ (A., pl. *s̲h̲awāriʿ*), "clearly-defined way, main road, highway"; "situated on a main road, at the side of the road (e.g. a house)".

Compared with other terms having similar urban denotations, such as *darb* and *zuḳāḳ*, the uses of *s̲h̲āriʿ* as a common noun are not the most numerous in the pre-modern texts. Thus there is no chapter in al-Maḳrīzī's *K̲h̲iṭaṭ* devoted to this term; the treatise devoted to it at the end of the 9th/15th century, the *K. al-Fawāʾid al nafīsa al-bāhira fī bayān ḥukm s̲h̲awāriʿ al-Ḳāhira* (ms. Istanbul, Süleymaniye 1176) is an exception.

S̲h̲āriʿ is often used as an adjective and as an active participle, "giving on to a street" (of a house, see *LʿA*), "opening out on to"; or, preceded by a particle, it forms (like *ṭarīḳ*) a phrase meaning "at the opening out of...", "on the road of..." (see S. Denoix, *Décrire Le Caire. Fusṭāṭ-Miṣr d'après Ibn Duqmāq et Maqrīzī*, Cairo 1993, 143). But it also becomes a genuine toponym. In the geographer Ibn Rusta [*q.v.*], the *s̲h̲āriʿ* divides Ṣanʿāʾ into two halves (see R.B. Serjeant and R. Lewcock, *Ṣanʿāʾ, an Arabian Islamic city*, London 1983, 146). "It is the Street called Straight, the main street of Damascus" in Ibn ʿAsākir (N. Elisséeff, *La description de Damas d'Ibn ʿAsākir*, Damascus 1959, 85 n. 10) (but in Ottoman times, the three main traffic arteries were called *ṭarīḳ sulṭānī*). *Al-s̲h̲āriʿ al-aʿẓam* denoted the main axis, the central avenue, of ʿAbbāsid Sāmarrāʾ or the *ḳaṣaba* of the Cairo of al-Maḳrīzī.

In the course of their long history, the names for traffic routes did not necessarily express differences in width, length, form or function. Nor, with the exception of *s̲h̲āriʿ*, did they indicate the open and freely-circulated nature or, on the contrary, the closed nature of what they designated. To define the status of a way, legal language resorted to a single criterion, *nāfid̲h̲* or *sālik* "through way" and *g̲h̲ayr nāfid̲h̲/sālik* "closed way, cul-de-sac". A *s̲h̲āriʿ* was *nāfid̲h̲*, "it denotes a road properly open at both ends ... a public road where everyone has the right to circulate" (R. Brunschvig, *Etudes d'Islamologie*, Paris 1976, ii, 11), and a road along which clear passage must be maintained.

At the time when cities and towns were being transformed and the vocabulary of urban patterning evolved, *s̲h̲āriʿ* became a key element in the new terminology, as is seen in the *K̲h̲iṭaṭ al-tawfīḳiyya al-d̲j̲adīda* of ʿAlī Mubārak Pas̲h̲a. *S̲h̲āriʿ* was henceforth used for any road of some importance, corresponding to a "street" or to Fr. *boulevard* or *avenue*, as in Cairo, in the quarters built up since the end of the 19th century. Or it could be used only for the main arterial roads, whilst for the secondary ones, other terms, which were part of the local tradition, would be used. This was still the case in Cairo, where, in the historic centre, *s̲h̲āriʿ* co-exists with *sikka, ḥāra, darb, ʿaṭfa* and *zuḳāḳ*, in accordance with a terminology laid down by the city administration at the end of the last century. Similarly in Tunis, where the term co-exists with *nahd̲j̲* and *zanḳa*, which are by no means exclusive to the *madīna*.

SHARĪʿA (a.), derived from the root *sharaʿa*, having a primary range of meaning in relation to religion and religious law; also Sharʿ, frequently synonymous. The word *sharīʿa* is common to the Arabic-speaking peoples of the Middle East and designates a prophetic religion in its totality, generating such phrases as *sharīʿat Mūsā*, *sharīʿat al-Masīḥ* (the law/religion of Moses or the Messiah), *sharīʿat al-Madjūs* (the Zoroastrian religion) or *sharīʿatu-nā* (meaning our religion and referring to any of the monotheist faiths). Within Muslim discourse, *sharīʿa* designates the rules and regulations governing the lives of Muslims, derived in principal from the Ḳurʾān and *ḥadīth*. In this sense, the word is closely associated with *fiḳh* [*q.v.*], which signifies academic discussion of divine law. The root *sharaʿa* has a wide range of secular usage explored and analysed in the Arabic lexicographical tradition (see 5. below).

1. *Sharīʿa* in Ḳurʾān and *ḥadīth*
2. *Sharīʿa* in Jewish and Christian literature
3. *Sharīʿa* in Muslim literature
4. *Sharīʿa* and *fiḳh*
5. *Sharīʿa* in the lexicographical tradition

1. *Sharīʿa* in Ḳurʾān and *ḥadīth*.

1.1. *Sharīʿa* occurs once in the Ḳurʾān, at XLV, 18 ("We have set you on a *sharīʿa* of command, so follow it"), where it designates a way or path, divinely appointed. The cognate *shirʿa* is also used once, at V, 48, in parallel to *minhādj*, meaning way or path ("To each we have appointed a *shirʿa* and a *minhādj*"). The verb *sharaʿa* occurs twice, once with God as subject (*sharaʿa la-kum min al-dīn* ..., "He has laid down for you as religion that which he appointed also for Noah", XLII, 13); and once in relation to rebels (*sharaʿū lahum min al-dīn* ..., "Or do they have companions who have laid down for them as religion that which God did not permit?" VII, 163).

1.2. In the corpus of *ḥadīth* surveyed by Wensinck *et al.*, *sharīʿa* occurs once in the singular, in a *ḥadīth* in the *Musnad* of Ibn Ḥanbal: "the community shall remain on the *sharīʿa* (path/way) as long as there does not occur in it three things ..." The plural form occurs not more than a dozen times, mostly in locutions like *sharāʾiʿ al-islām*, *sharāʾiʿ al-īmān*, once in a string of terms indicating rules: *inna li-'l-īmān farāʾiḍ wa-sharāʾiʿ wa-ḥudūd wa-sunan*. The word *sharʿ* does not occur with the connotation of religion or law, and the verbal form *sharaʿa* occurs only once with these connotations, in a set of variations of the same *ḥadīth*: "God has laid down for his (var. your) Prophet the rules of guidance" (*sharaʿa li-nabi-hi sunan al-hudā*). The noun *sharʿ*, the verb *sharaʿa* and derivatives occur frequently with secular meanings, corresponding to those discussed in 5. below.

This paucity of usage and connotation make it unlikely that these sources constitute the beginning of the development of this term in Islam or in the other monotheist faiths.

2. *Sharīʿa* in Jewish and Christian literature.

2.1. The Jewish tradition. The translation of the Old Testament into Arabic attributed to Saʿīd b. Yūsuf al-Fayyūmī, known as Saʿadya Gaon (d. A.D. 933 [*q.v.*]), demonstrates that *sharīʿa* had become a central component of the religious vocabulary of the Arabic-speaking Jewish community. The most commonly used term for translating Hebrew *torah* is Arabic *sharīʿa* or its plural. When the Hebrew word clearly designates a single rule, or set of rules, the favoured terms are *sharīʿa* and *sharāyiʿ*. The same is true when the Hebrew term designates the law as a totality, the law delivered to Moses. There are many instances, especially in Deuteronomy, where the Hebrew word is retained in an Arabic form, *al-tawrāh*. The use of *sharīʿa* to designate a single rule is most obvious in a group of verses in Leviticus, e.g. Lev. vi, 8, "This is the law of the burnt offering" (*hādhihi sharīʿat*...); cf. vi, 14; vi, 25; vii, 1; vii, 7 etc. The plural form is found at Exod. xviii, 20, "And thou shalt teach them ordinances and laws" (*al-rusūm wa 'l-sharāyiʿ*); cf. xviii, 16. The more general sense, where the word *torah* means the whole of the law, is exemplified at Exod. xiii, 9, "And it shall be a sign unto thee [Moses] ... that the Lord's law may be in thy mouth" (*li-takūn sharīʿat Allāh fī fī-ka*). The plural form is found at Exod. xvi, 4, "That I may prove them whether they will walk in my law or not" (*fī sharāyiʿī am lā*); cf. Exod. xxiv, 12. A majority of references to *torah* in Deuteronomy elicit the Arabic form *al-tawrāt*, perhaps because the referent is understood to be the Pentateuch; but cf. Deut. iv, 44, "And this is the law which Moses set before the children of Israel" (*wa-hādhihi al-sharīʿa allatī* ...).

Sharīʿa is thus the most common word expressing rule and system of rules in Saʿadya's Arabic version of the Hebrew Bible. It is occasionally used to translate Hebrew *misvah*, e.g. Deut. vi, 25; xvii, 20. It functions frequently as one of a cluster of words designating God's commands, often together with *waṣāyā*, *rusūm*, *aḥkām*, etc., e.g. Deut. xxvi, 5; xxvi, 17. This translation, even if managed and completed by Saʿadya, should be understood as a reflection of a pre-existing Arabic targum tradition (Blau).

A similar reliance on the nouns *sharīʿa* and *sharʿ*, and the verb *sharaʿa*, for reference to God's law-making activities, is found in Saʿadya's theological (polemical) work, *K. al-Amānāt wa 'l-iʿtiḳādāt*. This book, though it reflects Saʿadaya's participation in the Rabbanite-Karaite [see karaites] struggle, may be accepted as a reflection of the general religious vocabulary used in polemical contexts by those who shared the monotheist traditions of the Middle East. *Sharīʿa* and its plural designate individual laws (141, 175) and also systems of law revealed by God through prophets (113). Rational laws are distinguished from revealed laws (*al-sharāyiʿ al-ʿaḳliyya wa 'l-samʿiyya*, 115-8). *Sharʿ* is used synonymously with *sharīʿa*; and the verb, *sharaʿa* with God as subject, meaning to lay down a law (128-9). A context which generates multiple reference to the law (religious system promulgated by a prophet) is abrogation (*naskh*), the question whether the law of a later can abrogate that of an earlier prophet (131). Arabic *tawrāt* is used to designate the Pentateuch: *sharʿ al-tawrah*, *sharayiʿ al-tawrah* (139).

2.2. The Christian tradition. A similar use of this vocabulary can be found in Christian writers, discussion of abrogation being particularly likely to generate systematic reference to *sharīʿa*. A characteristic example, from the 4th/10th century, may be found in a polemical tract directed against the Jews, by the Jacobite ʿĪsā b. Isḥāḳ Ibn Zurʿa [*q.v.*]. *Sharīʿa* refers to a system of laws brought by a prophet and subject (perhaps) to abrogation by later prophets. The word *sunna* (pl. *sunan*) [*q.v.*] covers the same semantic field. Both terms are extended to carry distinctions

between natural, rational and revealed laws. The Christian religion, the Law of the Messiah, is referred to as *sunnat al-Masīḥ* (34) and *sharīʿat al-Masīḥ* (35).

The question of when this cluster of Arabic terms emerged as part of the self-expression of Jews and Christians is unclear. But, whatever model is adopted for the emergence and early development of Islam, it is necessary to acknowledge the co-existence or prior existence of Arabic-speaking Jewish and Christian communities. The development of an Arabic vocabulary for the expression of concepts and ideas integral to the prophetic religions of the Middle East is perhaps best understood as the common achievement of several communities engaged in polemical encounter throughout the 7th to the 9th centuries A.D. The most radical and stimulating account of this encounter is that of J. Wansbrough (1977, 1978).

3. *Sharīʿa* in Muslim literature.

Sharīʿa and its cognates appear, in Islamic religious literature, reflecting the same range and type of reference as in Jewish and Christian literature. *Sharīʿa* (pl. *sharāʾiʿ*) designates a rule of law, or a system of laws, or the totality of the message of a particular prophet. In so far as it designates a system of laws it is synonymous with the word *sharʿ*, which is probably the more common word in juristic literature for divine law. The verb *sharaʿa* may appear with God as subject (following Ḳurʾānic usage). More frequently, the process of demonstrating the law is a prophetic activity, and the word *shāriʿ* (law-giver) refers characteristically to Muḥammad in his function as model and exemplar of the law. In a rare extension of meaning, the word *shāriʿ* is transfered to the jurists, thereby highlighting the creative aspect of their interpretative activity (al-Shāṭibī, iv, 245). These patterns of usage may be found in all the major genres of religious literature.

3.1. *Kalām.* Theological literature is likely to generate reference to *sharīʿa* wherever the message bearing activity of a prophet becomes the focus of discussion. Al-Bāḳillānī (d. 403/1013 [*q.v.*]), in a discussion of prophets as bearers of the divine message (*risāla*), raised the question whether they confirm or abrogate the *sharīʿa* of an earlier prophet, *sharīʿat ghayri-hi min al-rusul.* He uses the adjective *sharʿī* to indicate revealed laws (*al-ʿibādāt al-sharʿiyya*) perhaps distinguished them from rational laws (*al-ḳaḍāyā al-ʿaḳliyya*) (38-40). The category of moral rules accessible to the intellect was denied by Sunnīs, but the concept was forced upon them by their Muʿtazilī opponents. Al-Ghazālī (d. 505/1111 [*q.v.*]), in his *K. al-Arbaʿīn,* describes Muḥammad as sent with a message (*risāla*) such that he abrogated with his law earlier laws, *nasakha bi-sharʿi-hi al-sharāʾiʿ.* Here *sharāʾiʿ* functions perhaps as a plural for *sharʿ* (20). In the Muʿtazilī tradition, the words *sharʿ*, *sharīʿa*, etc., kept their general sense, meaning the totality of a prophetic religion, but were also used systematically to distinguish rational from revealed laws. The Shīʿī (Muʿtazilī) scholar al-ʿAllāma al-Ḥillī (d. 726/1325 [*q.v.*]) accounts it a benefit of prophecy that the prophet brings rules which are not accessible to the intellect; he refers to these as *sharāʾiʿ* or *ʿibādāt wa-sharāʾiʿ.* He thinks there is no period of time exempt from a prophetic law (*sharʿu nabī*) (271-3, 278). Heresiographical literature continues to use the word *sharīʿa* and its derivatives to refer to Islam and to other religions, including *sharīʿat al-Madjūs* for Zoroastrianism (W. Cantwell Smith).

3.2. *Tafsīr.* Works of Ḳurʾānic commentary draw on the conceptual structures of *kalām* while developing some arguments specific to Ḳurʾānic usage. The word *shirʿa* is usually declared to be synonymous with *sharīʿa.* Comparison of Ḳurʾān, V, 48 ("To each [community] we have appointed a *shirʿa*") and XLII, 13 ("He has laid down—*sharaʿa*—for you as religion—*dīn*—that which he had laid down also for Noah") prompted a systematic distinction between *sharīʿa,* meaning law, and different for different prophets, and *dīn,* implying recognition of the one God, and the same for all prophets. From al-Ṭabarī, citing Ḳatāda, *ad* V, 48: the Torah, the Gospels and the Ḳurʾān have each their own *sharīʿa*... but *dīn* is one, meaning *tawḥīd* and *ikhlāṣ li-llāh,* and brought by all prophets.

3.3. Juristic literature. In so far as juristic literature gives an account of or a statement of rules, it need not generate self-referring locutions. When it does so, there was a considerable number of technical terms meaning rule: *sunna/sunan, ḥukm/aḥkām, farīḍa/farāʾiḍ, ḥadd/ḥudūd, sharīʿa/sharāʾiʿ.* The latter does not dominate in the earliest texts. Even later, general reference to the law is more likely to elicit the word *sharʿ* than *sharīʿa.* Systematic distinction between ordinary linguistic usage and technical juristic usage depends on the contrast *lughat^{an}:shar^{ʿan}*. Hermeneutical literature (works of *uṣūl al-fiḳh*) generated an increasing quantity of reference to the law, the law-giver etc., but the earliest work of this kind, the *Risāla* of al-Shāfiʿī, makes little use of the word *sharīʿa* or *sharʿ*. Later works generated numerous references. A characteristic context relates to the question whether Muslims and/or Muḥammad were subject to the laws of earlier prophets. Al-Ghazālī, in his *Mustaṣfā,* phrased the question in relation to *sharʿu-nā* and *sharʿu man ḳabla-nā,* our law and the law of those before us. He asked whether Muḥammad was bound by the law (*sharʿ*) of earlier prophets, and whether he abrogated the *sharīʿa* (*sic*) of Moses and Jesus. The rapid transition from *sharʿ* to *sharīʿa* suggests no distinction between these terms in this context. Espousing one of the views current in juristic circles, al-Ghazālī affirmed that the *Sharīʿa* of our Prophet (*sharīʿat rasūli-nā*) abrogated previous systems; for, if Muḥammad had been bound by any other *sharʿ*, he would not deserve the title of law-giver (*shāriʿ*).

Most of the problems attendant on the word *sharīʿa* were perspicuous to the tradition and capable of being explained. The Ḥanafī jurist Ibn ʿĀbidīn (Muḥammad Amīn b. ʿUmar, d. 1252/1836) explained it as having the meaning of a passive participle of the verb *sharaʿa,* meaning that which is laid down, or decreed. When the Prophet is identified as the law-giver, the *shāriʿ*, this is metaphoric usage (*madjāz^{an}*); in truth (*ḥaḳīḳat^{an}*), it is God who is *shāriʿ*. *Sharīʿa* means the same as *milla* and *dīn* (i.e. the totality of religious beliefs), but it may be applied absolutely to the rules (*aḥkām*) governing human actions. Both *sharīʿa* and *dīn* may be ascribed (in a genitive construction) to God, the Prophet and the community: God's law, the Prophet's and the community's law. (Ibn ʿĀbidīn, i, 11)

4. *Sharīʿa* and *fiḳh.*

The academic discipline whereby scholars described and explored the *Sharīʿa* is called *fiḳh.* The word designates a human activity, and cannot be ascribed to God or (usually) the Prophet. It frequently occurs in a genitive construction with the name of a scholar: the *fiḳh* of Mālik, the *fiḳh* of Ibn ʿĀbidīn. The *Sharīʿa,* contained in God's revelation (Ḳurʾān and *ḥadīth*), is explained and elaborated by the interpretative activity of scholars, masters of *fiḳh,* the *fuḳahāʾ*. Since this is in practice the only access to the law, the two words are sometimes used synonymously, though *sharīʿa* retains the connotation of divine, and *fiḳh* that of

human. Since the late 19th century, the linguistic calque *al-ḳānūn al-islāmī* (Islamic law, borrowed from European usage) has become a part of Muslim discourse and carries with it connotations of legal system, as in modern states [see ḲĀNŪN]. Western studies of *fiḳh* are still dominated by the work of Joseph Schacht, who produced the articles *fiḳh* and *sharīʿa* for *EI*[1], the former lightly edited for *EI*[2].

4.1. The origins of Islamic law. The earliest large-scale and systematic expressions of the law are found in a bundle of texts attributed to scholars of the late 2nd/8th and early 3rd/9th centuries, notably Mālik b. Anas (d. 179/795), al-Shāfiʿī (d. 204/820), al-Shaybānī (d. 189/805) and Abū Yūsuf (d. 182/798 [*q.vv.*]). The last two are pupils of Abū Ḥanīfa (d. 150/767 [*q.v.*]), who, together with Mālik, al-Shāfiʿī and, later, Aḥmad b. Ḥanbal (d. 241/855 [*q.v.*]) gave his name to a broad tradition or school (*madhhab*) of juristic thinking. These four schools dominated the Sunnī community. The Imāmī Shīʿa developed an independent tradition of their own (finding literary form only in the 4th/10th century). And there were a number of minor traditions, e.g. those of the Zaydīs and Khāridjīs (both alleged to be early) and the Ẓāhirīs (or Literalists), followers of Dāwūd al-Ẓāhirī (d. 269/882 [*q.v.*]). The emergence of the dominant traditions is presented inside Islam as the result of a process, described in historical terms, but perhaps a narrative expression of a theological conviction. The Prophet, by virtue of his ideal practice or *sunna*, was exemplar and model for his followers, whose duty it was to conform to his *sunna*. To this end, his words and deeds were preserved by his Companions in the form of discrete narratives or *ḥadīth* which were passed on from generation to generation, giving rise to discussion, debate and finally to formal juristic thinking, or *fiḳh*. The eponymous founders of the schools, by virtue of their piety and commitment to Ḳurʾān and *ḥadīth*, together with their learning and capacity for systematic thought, derived from this inheritance structures of rules which were adopted by subsequent generations, and preserved and developed in an ongoing tradition of commitment and loyalty. The actual and historically successful juristic traditions in Islam were thus traced back to the Prophet through the decisive intervention of great jurists.

As an account of history, this sequence of events was challenged already by Ignaz Goldziher (*Muh. Stud.*, 1888-90). Building on his work, Schacht offered, in his *Origins*, a coherent account of early Muslim jurisprudence. He proposed that the earliest works were reflections of a "living tradition" which had grown up locally in diverse cities (Kūfa, Baṣra, Damascus, Mecca, Medina). The systematic structures that emerged reflected local (and Imperial, Umayyad) practice, and the ongoing thought of local scholars. They were not dependent on Prophetic *ḥadīth*, perhaps not even on the legal aspects of the Ḳurʾān. Increasing polemical encounter, in the early ʿAbbāsid period, led to a search for justification of the law and this took the form of appeal to Prophetic practice expressed in the form of *ḥadīth*. The first scholar to argue systematically that law was necessarily related to Prophetic *ḥadīth* was al-Shāfiʿī, who emerges, for Schacht, as the master architect of Islamic law. Eventually all the schools succumbed to al-Shāfiʿī's argumentation and developed a common hermeneutical approach to the law, presenting it as derived, by a systematic act of interpretation, from Ḳurʾān and *ḥadīth*. According to Schacht, the demand for Prophetic *ḥadīth*, even before al-Shāfiʿī, and certainly after him, ensured that they were produced (created) in numbers appropriate to the need. Schacht derived his theory primarily from the study of al-Shāfiʿī's *Umm* and *Risāla*, works which not only exemplify (in marked contrast to other early works) the principle of Prophetic authority for the law but systematically criticise the early local schools for their failure to adhere to this principle.

All subsequent scholarship in this field has responded to Schacht, whether to refute, to qualify, or to confirm and extend his findings. Several Muslim scholars (e.g. M.M. Azmi) have denied them. Both Muslim and secular scholars have searched for qualifications and refinements whereby to discover the antiquity and/or authenticity of at least some Prophetic *ḥadīth* (G.H.A. Juynboll, D.S. Powers). J. Wansbrough has developed Schacht's methodology, arguing that the Ḳurʾān too must be recognised as the end product of two centuries of community experience (1977). N. Calder argues that the major early works of Islamic law are not authored, but organic, texts, reflecting generations of thinking about the law, expressed through successive redactions of school material (1993). F. Rahman initiated a Muslim theological response to Schacht's ideas (1965).

4.2. The literature of the law. There are a number of genres of juristic literature, of which the two most important are *furūʿ al-fiḳh* (a literature of rules) and *uṣūl al-fiḳh* (a literature that identifies the sources of law and the methodology for deriving rules from revelation). It is possible to identify a number of minor genres, but many of these can be classified as monographic developments of topics that are proper to *furūʿ* (e.g. special studies of the rules relating to government, or judicial practice) or *uṣūl* (special studies of analogy or consensus, etc.). Collections of *fatāwā* (sing. *fatwā* [*q.v.*]) and studies on the authority of *muftīs* (section 4.3, below) may be recognised as independent genres, the first having some affiliation to works of *furūʿ*, the second to works of *uṣūl*.

Furūʿ. The genre of *furūʿ* is continuous from the 3rd/9th to the 13th/19th century. All the major works of the genre have the same basic structure. They offer a network of rules roughly grouped into topics. The major topics of the law are, first, purity, prayer, alms, fasting and pilgrimage. These, together, sometimes, with *djihād*, are the major *ʿibādāt* (acts of worship). Their importance is signalled by their being positioned at the beginning of a work of *furūʿ*. More loosely ordered are the remaining topics of the law, the *muʿāmalāt* (interpersonal acts). These include family law (marriage, divorce, inheritance, testamentary bequest, slavery, etc.), mercantile law (contracts of sale, debt, hire, loan, gift, partnership, etc.), laws relating to agency, land ownership, compensation for injury, killing and the usurpation of goods, penalties (restricted to the divinely specified penalties for adultery, false accusation of adultery, theft, wine-drinking and highway robbery), judicial procedure and other topics. Though various attemps were made to devise more analytical approaches to the topics of the law, a sequential approach based on loose groupings, and subject to considerable variation, prevailed. Since the topics of the law cover all the major categories of a pious, and a social, life, and since, further, the tendency of the jurists was to hold on to the concrete and to elaborate precise and distinct "cases" for analysis, a work of *furūʿ*, formally at least, constituted a literary depiction of social reality in normative form. As works of literature, books of this kind were subject to the usual tendencies of literary formalism, sufficiently indicated in the notions of linguistic,

structural and conceptual virtuosity, of imaginative exploration, of realism transformed into artifice, etc. At the same time, in so far as they were intended to control and guide social life, they display also qualities of practical concern and hard-headed realism. The interplay of literary and imaginative qualities with practical and mundane ends was not predictable and varied immensely both within a work and across works and schools. The four major schools of law, and the Shīʿī tradition, show a broadly similar approach to the genre and a broadly similar exploration of its possibilities.

To the casuistic and exploratory aspects of a work of *furūʿ* were added patterns of justificatory argument. These had two major forms. First, the interpretative relationship between school tradition (*madhhab*) and revelation (Ḳurʾān and Sunna) was re-expressed from generation to generation, constituting a major part of the ongoing task of jurists. At the same time, loyalty and commitment to tradition were expressed through demonstration that later articulations of the law were derived from and were justifiable in terms of earlier articulations within the school. Works of *furūʿ* had thus a dual hermeneutical aspect: an interpretative relationship to the school tradition and a further interpretative relationship to Ḳurʾān and Sunna. It is the former which dominates. Jurists did not act as independent interpreters of revelation, they submitted to the authority of the school and the eponymous founder. They were committed, by a prior act of loyalty (usually determined by birth or geography), to a discursive, hermeneutical, engagement with their past. The creative aspect of their work was termed *idjtihād*, the duty of submission *taḳlīd* [*q.vv*]. The original act of *idjtihād* characteristic of the eponymous founders was absolute and independent, that of succeeding jurists qualified and limited.

The various components of a work of *furūʿ* can then be summarised with reference to topics and concepts, rules and "cases", and justificatory argument related to Ḳurʾān and Sunna, and to school tradition, the whole capable of being drawn towards an exploratory and hypothetical pole or towards a pragmatic and practical pole. The literary tradition as a whole suggests possibilities of expansion and exuberance which point (perhaps not accidentally) towards an infinite concern with detail. This tendency naturally engendered the opposite need, namely that of synthesis, control and concision. The play of expansion and concision is reflected in two literary types within the genre, *mukhtaṣars* and *mabsūṭs*. A *mukhtaṣar* or epitome is a concise exposition of the law, often expressed in a self-consciously elegant and syntactically compressed language. One of the most famous, and aesthetically and intellectually challenging, works of this kind is the *Mukhtaṣar* of al-Khalīl b. Isḥāḳ (d. 776/1374). A *mabsūṭ* by contrast tends to multiply detail and argument, with only loose structural control. The relationship between *mukhtaṣar* and *mabsūṭ* is repeated in that between *matn* and *sharḥ* (text and commentary), it being a mark of the continuity of a tradition that what was summarised was the tradition to date, and what was expanded was an earlier and briefer expression of the tradition. The processes of summary and commentary, of paraphrase and citation, of preservation and re-use of prior articulations were all symbolic of loyalty and of a mode of hermeneutical development which camouflaged the reality of change. Change, in this context, means not only the accommodation of rules to social reality but also the management of a literary structure to serve the needs (educational, literary, aesthetic, theological, and strictly legal) of a developing community.

Uṣūl. Works of *uṣūl*, like works of *furūʿ*, have a stability of form and content which, marking them as a continuous genre, lasted till the 13th/19th century (and in some areas beyond). These works emerged, in numbers, in the early 5th/11th century, the most sophisticated of the early works emerging only towards the end of that century. Particularly significant was the synthesising and ordering work of a group of Shāfiʿī scholars living under the Saldjūḳs, notably Ibrāhīm b. ʿAlī al-Shīrāzī, the Imām al-Ḥaramayn al-Djuwaynī, and al-Ghazālī. The *Mustasfa* of al-Ghazālī was a well-organised work which, capturing and ordering all the topics of the discipline, in a masterpiece of structure and expository detail, decisively influenced the subsequent development of the genre. The *Risāla* of al-Shāfiʿī constitutes an apparently isolated early work which has most of the characteristics and covers many of the topics of a work of *uṣūl*, but it has been judged by contemporary scholars to be either a late school work (Calder, 1993), or a work of limited achievement whose implications took time to discover (Hallaq, 1993).

Works of *uṣūl* usually contain four broad areas of discussion: the categories of the law; the sources of the law; the hermeneutical rules that permit extrapolation of norms from sources; and an elaboration of the theory of *idjtihād*. The categories comprise at least the familiar five *aḥkām* (sing. *ḥukm*), viz. mandatory, preferred, permitted, disliked and forbidden, and the distinctions between valid, defective and null (*ṣaḥīḥ*, *fāsid*, *bāṭil*). The sources always include Ḳurʾān, *ḥadīth* and consensus (*idjmāʿ* [*q.v.*]), and might include intellect (limited for the Sunnīs to a presumption of continuity, *istiṣḥāb al-ḥāl*), the law of earlier prophets, the opinions of the Companions, juristic preference (*istiḥsān* [*q.v.*]), and public welfare (*maṣlaḥa* [*q.v.*]). The hermeneutical principles relate first to language and rhetoric (usually presented in a set of antithetical pairs: ambiguous and clarifying, the evident and the inferred, commands and prohibitions, general and particular, etc.) and secondly to the operation of analogy (*ḳiyās* [*q.v.*]). All of these items were contained in an open-ended and exploratory pattern of discourse.

The body of hermeneutical principles leads to conflicting possibilities (*taʿāruḍ*) and to the exercise of preference (*tardjīḥ*), the methodology of which is explained under the heading *idjtihād*. *Idjtihād* literally means effort. Technically, it means the exertion of the utmost possible effort by a trained jurist, taking into account all the relevant texts and principles of interpretation, to discover, for a particular human situation, a rule of law. Underlying this definition there is an important epistemological message. It concedes that most of the details of the law are not known for certain but are a matter of skilled and pious deduction, leading, however, only to opinion. Final certainty on the details of the law is not accessible, but the duty of searching for and justifying opinion by argument is absolute. Committed in this respect to argument and debate, the jurists (in this context *mudjtahids*, those who undertake *idjtihād*) also acknowledged a need for final decisions in particular cases. This was provided by asserting that the result of an act of *idjtihād* was binding both on the *mudjtahid* and, where relevant, on those who were not trained in the law. The latter (the *ʿāmmīs*) were required to submit to the *mudjtahids*, becoming thereby *muḳallids* (lit. followers or imitators). In so far as a *mudjtahid* responded directly to a particular question, he was acting as a *muftī* and his decision was

a *fatwā*. This network of topics was a part of the hermeneutical thinking of the Sunnī and Shīʿī traditions, and it was capable of varied and sometimes highly individual development.

4.3. *Sharīʿa* and practice. The literature and intellectual structures which were the highest expression of *sharīʿa* had their most important social realisation in the Islamic educational system. With the emergence of *madrasas* [*q.v.*] in the 5th/11th century, *fikh* was recognised as the chief end of education, and retained this position until the decline of the traditional system in the 19th and 20th centuries. Common to all Islamic lands, and taught almost exclusively in Arabic, the curriculum provided cultural homogeneity and fostered the emergence of a pan-Islamic cultural élite. The discipline of *fikh* became a powerful and flexible intellectual tool, adapted to various social needs, aesthetic, imaginative and theological as well as strictly legal. The training in this discipline was usually found practical in respect of the needs of the mercantile classes and the governing bureaucracies, as well as the religious hierarchy.

The topics and concepts of the law were closely allied to life experience or could be made so by systematic exploratory thought. But a work of *furūʿ* was never a set of rules governing practice in the way that regulations and statutes do. In a given city, at one time, different jurists produced different works, reflecting different concerns; intended to influence certainly, but also to provoke thought and to delight. The actual realisation of the law depended always on personal and local factors: the customs of a family or a quarter, the traditions of a city or a region, the specific rules and practices of a judge, a governor, or a sultan. The pluralist and exploratory aspects of the law had a varied and unpredictable relationship to the necessarily single and pragmatic actuality. This relationship itself became a part of the subject matter of *furūʿ*. The interplay of legal theory and reality has become increasingly an object of scholarly study, exemplified in Heyd (1973) and Johansen (1988).

Some areas of the law were systematically transformed into administrative structures. Central amongst these was the office of judge (*ḳāḍī* [*q.v.*]). His competence covered many aspects of family law (marriage, divorce, inheritance etc.), the administration of charitable endowments (*waḳf*) and the property of orphans, and the adjudication of civil disputes. His appointment and terms of office were controlled by political authority. His efficiency was often thought to be limited by the stringency of *sharʿī* rules and this led to the emergence of parallel judicial structures (called *maẓālim* [*q.v.*] in early ʿAbbāsid times) which had a more pragmatic attitude to the law and were closely related to government. In Ottoman times the integration of the *ḳāḍī* into the structures of government was nearly complete. (Tyan, 1960)

Mediating between the law as theory (object of study and subject of literary endeavour) and law in practice was the *muftī*. The *muftī* was a jurist, preferably highly qualified, who made himself available to give specific answers to specific questions of the law. In many areas and periods, and notably under the Ottomans, the higher ranks of *muftī*s were controlled and salaried by the government (Heyd, 1969). The responsa of *muftī*s were called *fatāwā*, and, in the case of intellectually outstanding, or politically important *muftī*s, might be preserved either as individual items or in collections. These have been recognised as important to our understanding of the law in practice (Masud *et al.*, 1995). Theoretical accounts of the authority and ranks of *muftī*s stimulated some of the most instructive general theories of Islamic law.

4.4. Modern developments. From the mid-19th century, three major factors affected the history of the *Sharīʿa*, all of them, at least in part, a result of Western influence. First, there was the gradual emergence of secular educational systems, aimed initially at the needs of the military, then of the administrative and mercantile classes. This development reduced the numbers of students in the traditional system, deprived them of a career structure, undermined their social alliances, and marginalised the subject matter of the curriculum. In the Shīʿī world, where the jurists had greater access to independent finance, the major centres of juristic education survived better, but even there, there was a decline in provincial centres and some loss of status. Secondly, with the emergence of modern, independent nation states, there was a rapid development of law-codes, constitutions, and statute law. In some respects, these are continuous with the procedures of government by decree that characterised older systems. But the enactment of the *Madjalla* [see MEDJELLE] (a partial codification of Ḥanafī law for practical ends), in 1876, by the Ottoman authorities, initiated a long history of (selective) codification of traditional law that continued through the 20th century. The reformist ideas of theoreticians (like Muḥammad ʿAbduh, d. 1905 [*q.v.*], in Egypt) brought increased flexibility based on a renewal of *idjtihād*, an abandonment (or curtailment) of school loyalties, and a patchwork approach to the juristic tradition as a whole (*talfīḳ* [*q.v.*]). Jurists and the religious-minded found it possible to accommodate themselves to the idea of constitutions. A majority even of the Shīʿī jurists supported the Persian Constitution in 1906. Throughout the 20th century all modern Muslim states have acquired legal systems, suited to modern nation states, in an astonishing act of creative system building, in which the *Sharīʿa* has always been one influence (Western legal systems being another, often a dominant, influence). The actual role of the *Sharīʿa*, meaning the tradition of *fikh*, has varied both in terms of its symbolic foregrounding and in terms of its real input (always greatest in the area of family law) (Anderson, Coulson).

A third area of development relates to political opposition. The ideology of political opposition in the Muslim world has been influenced by Western thought (by French revolutionary, or socialist and communist ideologies, etc.), but is nearly always accompanied by appeal to the *Sharīʿa* as an ideal of social justice. In these contexts, the word is characteristically deprived of detail, of complexity, and of association with the intellectual tradition of *fikh*. It functions instead as a constitutive element in a demand for loyalty, unity, and commitment; it represents an ideal (unreal) governmental system. With this pattern of connotation, it permeates the ideological statements of the Muslim Brothers and of more recent fundamentalist groups. It is sometimes closely associated with the name of the scholar-hero Ibn Taymiyya [*q.v.*] (exploited for his arguments in favour of a renewed *idjtihād*, based on a return to the earliest generations—the *salaf* [see AL-SALAF WA ʾL-KHALAF; SALAFIYYA]): or with selected items of the law which take on the disproportionate ideological burden (e.g. the *ḥadd* penalties for fornication).

Neither the practical aspects of the history of the *Sharīʿa* in the 20th century, nor its ideological aspects, take up or draw on the complex of cultural, philosophical and theological messages that are embedded in the tradition. In so far as these messages can be

recovered and translated into idioms appropriate to the 21st century, it seems likely to be the task of modern universities in the Muslim world, these being now the dominant institutions that preserve the cultural inheritance of traditional Islam.

5. *Sharīʿa* in the lexicographical tradition. The lexicographical tradition recognises two major (and a number of minor) areas of use which are without religious connotation. In a corpus of poetry and of *ḥadīth* evoking a pastoral and Bedouin environment, the verb *sharaʿa* and its derivatives relate to watering animals at a permanent water-hole. The verb implies lapping at, or drinking, water, and has animals as its subject (*sharaʿat al-dawābb*). *Sharīʿa* designates the area round a water-hole, or the point of entry to it, the place at which the animals drink, a place and not a road—*mawḍiʿ*, *mawrid*. *Sharaʿa*, *sharraʿa*, possibly *ashraʿa*, all mean to drive (or lead) animals to water. Adjectival usage indicates animals en route to or lapping at water (*dawābb shurūʿ*). *Sharīʿa* also signifies the seashore, again with special reference to animals which come there. Various aspects of this semantic cluster are claimed to constitute the origin of religious use. The second major semantic field relates to the notions of stretched, extended, and lengthy. A *shirʿa* is a fine string, as stretched on a bow, or a lute. *Ashraʿu 'l-unfi* is long-nosed. A *sharaʿa* (pl. *ashruʿ*) means a projecting, covered area (syn. *sakīfa*). The *shirāʿ* of a ship is its sail, stretched above it to catch the wind. This word is applied also to the neck of a camel; hence also *shurāʿiyya*, a long-necked camel (*Lisān al-ʿArab*, s.v. *sharaʿa*; see also Lane, *Lexicon*). This field of use is cognate with Biblical and Talmudic Hebrew *saraʿ* meaning to stretch/be stretched and is likely to be the origin of *shāriʿ* and *sharīʿa* meaning way, path, road, highway. It is from here that the specialist religious use emerged.

In South-East Asia.

Islam is found primarily in the modern states of Indonesia and Malaysia [*q.vv.*], with a presence also in Burma, Thailand and the Southern Philippines. The language of Islam is primarily Malay and Indonesian and cognate languages. Islam dates from the late 14th century and from that time the *Sharīʿa* has been expressed in a number of different forms. In general, we can distinguish three such forms.

(I) *The pre-modern texts.*

These are in Malay, Javanese and Arabic, and extant mss. date mostly from the 18th and 19th centuries.

The texts in Malay most usually, consist of elements of *fiḳh* as well as localised provisions (*adat*) [see ʿĀDA]. Commonly, these two elements are distinct and separate parts, and may easily be distinguished. However, it is not uncommon in some texts (e.g. Malacca laws, the Undang-undang Minangkabau) for explanations to be given as to different functions for each source of law. One (*adat*), expresses the practice of mankind, the other, *fiḳh*, the will of God. Differences are always reconcilable in the texts. The Java-Muslim texts, on the other hand, are written in an Indian-adapted form (*ubaya*, *pepakem*, *jayasong*) in which the Islamic element is confined to references to promulgation by a Muslim ruler and to *Hukum*, the law of God. There is little or no substantive *fiḳh*. One has Javanese laws administered under the aegis of a Muslim sovereign. Whether this was always the case in Java is uncertain because of the Dutch practice (18th-19th centuries) of revising or improving ("verbeterd") existing mss. for administrative use.

The major Arabic texts of the *Sharīʿa* circulated widely in South-East Asia. The standard works of al-Shāfiʿī, al-Anṣārī, al-Nawawī and al-Haythamī were either imported from the Middle East or were available in locally produced reprints. They were, and still are, the standard works for use by *kathi* and *imam* and in the *pesantren* [*q.v.*]. It was common practice for interlinear translation and/or glosses to be added. There was a considerable industry in the translation of these verses, especially into Malay. In the 18th and 19th centuries, elements of each of these pre-modern laws appeared in European (Dutch and British) rationalisations of Muslim law(s). The practice was to take selected portions of the *Sharīʿa* and incorporate them into administrative manuals for colonial use. There are many examples (see below).

To sum up: there is a vast mss. source which shows the adaptation and incorporation of the *Sharīʿa* into South-East Asian laws. The forms vary widely and, so far as context is concerned, the *Sharīʿa* is reproduced in part, re-defined and re-stated and (in some cases) exactly translated. However, by the mid-19th century, one can say that there was a definite trend toward the more classically-exact Arabic language prescription. This was a consequence of greater access to the Middle East centres of learning, brought about ironically enough by the colonial powers themselves,

but it was a trend interrupted by the imposition of colonial rule.

(II) Sharīʿa *in the colonial period* (*18th-20th centuries*).

In the pre-European Muslim lands, Islam was central to kingship, rule, sovereignty and morality. With European dominance from the 18th century onwards, Islam lost this function. Its status was reduced to that of a private religion and its political function was reduced to but a pale shadow, if that, of its former position. The *Sharīʿa*, likewise, was similarly limited in its scope and narrowly limited in its implementation.

(a) The Netherlands East Indies.

Islam was always an ideology of resistance to Dutch rule in the Indies and this intensified in the 19th century when V.O.C. rule was replaced by direct Netherlands State Government (1800). From this time, the N.E.I. Government adopted a consistent long-term policy toward the *Sharīʿa* in its legal administration.

N.E.I. legal policy was to introduce separate legal régimes for the various population groups. Thus for Europeans or persons assimilated to that status, the law was the law of the Netherlands. For the native population(s) it was *adat* (custom). There were about nineteen named *adat* law areas ("adatrechtskring"). The *Sharīʿa*, as such, had no place in this system. Islam was a religion only and not one which necessarily had legal consequences. This policy of separate law régimes became ever more complex throughout the 19th-20th centuries and ultimately proved unworkable. For example, special provisions had to be made for Native Christians, provisions had to be made for assimilation, i.e. change from one group to another, there were serious difficulties in inter-racial family law as well as in commercial law, and a complex intra-racial law of conflicts of laws had to be developed.

For the *Sharīʿa*, it was realised by 1882 that Islam could not be excluded from the legal régime, whatever its status in politics might be. In that year a "Priests' Court" (*Priesterraad*) was instituted for Java and later extended. Its competence was severely limited, mainly to family law but excluding inheritance, and its decisions had to be approved by the secular courts. Substantial revisions were made in 1937 which extended jurisdiction and also extended this competence of the courts (now the "Penghulu Courts") to Borneo. At the same time, the 1937 law withdrew jurisdiction in specified forms of property which were also in dispute in the civil (*Landraad*) courts. In short, the *Sharīʿa* was subject to very restrictive laws and its pre-colonial trend toward a more exact implementation was halted. On the other hand, it received a new form; now it was expressed in regulations and in bureaucratic practice. These are characteristics which persist into the post-colonial period (below). It is the politics of laws, rather than the *Sharīʿa* itself which determines the status of *fiḳh*.

(b) The British Territories.

These comprised the following:

(1) British Burma (1826-1947). The Islamic presence in Burma was an accident of imperial expansion. Muslims were immigrants, and the history of *Sharīʿa* is the history of *Sharīʿa* in Bengal. The only exception is some precedent on persons of mixed race ("Zerbadi"), one of whom was Muslim (see references).

(2) Second, the Straits Settlements and Malay States (1786-1957). It was British policy to recognise and give effect to the "manners, religions and customs" of the subject peoples. In effect, this meant the legal recognition of religious laws in the areas of family law and land ownership. To this extent, the *Sharīʿa* had recognition in purely family and religious (e.g. mosque administration, *waḳf*) matters. However, there are some special features which should be noted. First, references were taken from the pre-modern texts, but only in relation to land, and not to religion as such. Second, the *Sharīʿa* administered in the courts was taken from local experts not from the standard text books. It was only in the 1930s that standard texts from British India were commonly consulted. Third, *Sharīʿa* was never permitted to influence inheritance where land was involved; this was always a matter governed by *adat*.

From the late 1880s, the *Sharīʿa* gradually came to be organised in legislation and in the creation of a *Sharīʿa* court system, together with the necessary bureaucracy. Various "Muslims' Ordinances" or legislation with a similar name were promulgated. The purpose of the legislation was to regulate marriage (by registration), define the duties of the *ḳāḍī*, and regulate property matters as between husband and wife. The legislation was many times amended. The point is that *Sharīʿa*, while recognised in a limited way, was a "local" law or a "personal" law for a defined group. The *Sharīʿa* was dependent on recognition by the colonial authority. It had no existence outside of its colonial dependence, and it was never the law of the country.

(3) British Borneo comprised *Sarawak* (1841-1963) and British North Borneo (1888-1963). In both cases, the *Sharīʿa* was only one of a number of "native laws". There was no attempt to apply it; instead, there was a mélange of custom (*adat*) with some rather eclectic, mostly inaccurate, selections of *fiḳh*. This composite was not imposed by the British authority. Instead, by taking evidence from the local Muslim populations it grew and took on a life of its own. The most striking example is the Undang-undang Mahkamah Melayu Sarawak "Laws of the Sarawak Malay Court" (1915).

(c) French Indo-China and the American Philippines.

These can be dealt with rather shortly. In the Indo-China territories, the minority Cham [see ČAM] of western Vietnam and eastern Cambodia were Muslim. There were historical links to Java. The only reliable information dates from 1941 (see *Bibl.*) and shows a sort of "Customary Islam". For the Philippines [*q.v.*], the main Muslim population is in the southern islands. Here, the *Sharīʿa* was only one element in an *adat*-Islam complex of prescriptions. While in respect of the Cham the French did manage a classification, that of *asiatique assimilé*, in terms of private international law, the Americans attempted nothing of the sort. Islam was considered only in political terms; the *Sharīʿa*/*adat* was ignored.

(III) Sharīʿa *since the Second World War*.

The end of the war saw the effective end of the colonial presence in South-East Asia. For Islam, this had two important consequences. First, Islam could now have an open and legitimate political presence in what became Indonesia and Malaysia. The result was that the *Sharīʿa* immediately attained a status of something more than a personal law. Indeed, even in the transition periods, new provisions were already being made.

(a) Indonesia.

The Republic Indonesia has had a complex history since 1945, and the history of Islam has been similarly complex. The colonial courts system (now renamed Pengadilan Agama) has been retained and extended to all of Indonesia. In addition, a Department of Religious Affairs has been established for the whole

Republic. The jurisdiction of the courts has been extended somewhat, though not to the extent asked for by Islamic activists. However, the latter have been successful in preserving the position of *Sharīʿa* in the contemporary reforming legislation, such as family law. There is no Muslim or Islamic Code of law as such in Indonesia. Various drafts have been proposed and are still under discussion.

(b) Singapore and Malaysia.

The 1950s saw a considerable activity in the regulation of *Sharīʿa*. Singapore and all the states of Malaysia now have enactments (The Administration of Islamic [or Muslim] Law) in force. Generally speaking, the legislation provides mechanisms for (i) the determination of *Sharīʿa* entrusted to a Council (Majlis) of scholars; (ii) a system of Muslim courts; and (iii) statements of substantive principles of law, including family law, trusts and offences against religion. In Malaysia, though not in Singapore, constitutional amendments in 1988 have re-enforced the *Sharīʿa*. Since the 1980s also, the various states in Malaysia have considerably extended the scope of *Sharīʿa*.

(c) The Philippines.

After many years of neglect under the Spanish, American, and Republic of the Philippines' governments, the *Sharīʿa* received formal recognition in 1977 with the proclamation of the "Code of Muslim Personal Laws of the Philippines". It is in five books and covers persons and family relations, succession, disputes, legal opinions penal provisions and transition provisions. In short, the Code recognises the separateness of Islamic principle and provides for its administration in the Philippines for the first time. Data are lacking on its success or otherwise at the moment.

(d) General.

The *Sharīʿa* has been much re-defined in South-East Asia. We can trace adaptations to local form and culture as in the pre-modern texts, and its colonial redefinitions into European form. These have been continued into the post-War years. More recently, however, there has been a consistent trend toward reintroducing the rules of *Sharīʿa* in a more classically accurate formulation. If this progression is even partly implemented, it will result, for the first time, in the application of a "classical" *Sharīʿa* to South-East Asia. The legal history of Islam in the area will thus have come full circle; from its introduction in the Arabic, through its re-definition in Malay, and now back again to the Arabic sources. However, the *Sharīʿa* is dependent on the authority of the State, which is secular. Its existence is unlikely to escape from this constitutionally imposed status.

SHARĪʿATĪ, ʿALĪ, influential Iranian intellectual (1933-77).

He was born at Mazīnān (Khurāsān), as the son of Muḥammad Taḳī Sharīʿatī, a preacher. His secondary education he received in Mashhad and in 1951 he qualified as teacher. His first publications and translations, as well as his involvement in politics, date from this period. In 1956 he enrolled as a student at the Faculty of Letters in Mashhad. Receiving his bachelor's degree in 1959, he was rewarded with a scholarship. A year later he went to Paris where he studied religious history and sociology, but his thesis, under G. Lazard, was in the field of Persian philology. In his Parisian period he actively supported the Algerian and other liberation movements. His principal sources of inspiration were Louis Massignon, with whom he studied the figure of the Prophet's daughter Fāṭima, and Frantz Fanon, whose book *The wretched of the earth* he translated and with whom he corresponded. Upon his return to Iran, in 1964, he was arrested for importing banned books and jailed for several months. After his release he taught, first in a village and then in a high school in Mashhad, and he was employed at the university of Mashhad to teach sociology and history of religion. In 1970 he was dismissed and two years later he went to Tehran, where he soon became the key figure of the Ḥusayniyya-yi Irshād, a centre for the study of Islam, established in 1965. At the end of 1973 the centre, renowned particularly for the well-attended public lectures it organised, was shut down by the government and Sharīʿatī went into hiding, but after some time he gave himself up in order to secure the release of his father, who was held hostage. After 18 months of solitary confinement, he was allowed, in March 1975, to return to Mazīnān where he was kept under constant police surveillance. In the spring of 1977 he managed to go to London, but shortly after his arrival there, he died of a heart attack on June 19.

His ideas centred around the reconstruction of true Islam, which he equated with the original Shīʿī Islam, i.e. the Islam of ʿAlī and his family and their partisans, as opposed to the highly institutionalised and clerical (post-)Ṣafawid Shīʿism. In this original Islam, *tawḥīd* is central not only in its theological, but also in its social and political implications, since it favours a classless society and a revolutionary ethos. Therefore, Abū Dharr [*q.v.*], a "God-worshipping socialist", and Fāṭima [*q.v.*] are presented as role-models for modern Muslim men and women. Sharīʿatī's sometimes revolutionary approach to Islam made him popular with many young Iranians, university students in particular, as well as with some more reform-minded members of the Shīʿī clergy. In the eyes of the traditional segments of this clergy, however, he lacked the necessary qualifications to be an authoritative spokesman on Islamic affairs. Sharīʿatī is often considered to be one of the most important ideologues of the process culminating in the Islamic Revolution in Iran. However, there is no real congruence between his ideas and the theoretical foundations, let alone the policy, of the ensuing Islamic Rcpublic of Iran. Nevertheless, it is not to be denied, that his ideas have played and still play an important part in the discussions on the role and significance of Islam, both in Iran and, through the translation of several of his writings, in many other countries of the Islamic world.

Bibliography: In the absence of a comprehensive and thorough study on Sharīʿatī, information on his life and ideas are to be found in S. Akhavi, *Religion and politics in contemporary Iran. Clergy-state relations in the Pahlavi period*, Albany 1980, 143-50; H. Dabashi, *Theology of discontent. S̲H̲ARĪʿATMADĀRĪ, Āyatullāh Sayyid Muḥammad Kāẓim, a high-ranking and influential Iranian cleric (d. 1986).

He was born in 1905 in Tabrīz where he started his theological studies. In 1924 he continued his studies in Ḳum, and in 1935 he went to Nad̲j̲af. His return to Tabrīz was the starting-point of a career as a teacher, first in his native city and subsequently in Ḳum, where he had moved toward the end of the forties, at the invitation of Āyatullāh Burūd̲j̲irdī [*q.v.* in Suppl.]. Here he became one of the most respected leaders of the S̲h̲īʿī community and in his capacity as *Mard̲j̲aʿ-i Taḳlīd* [*q.v.*] he drew his support mainly from the Ād̲h̲arī-speaking part of the population. In the 1960s he started an institute for Islamic education and propaganda, called Dār al-Tablīg̲h̲. From the educational point of view, the programme offered by the institute to boys and later on also, albeit separately, to girls, stood midway between the curriculum of a modern school and the traditional *madrasa* system. The propaganda activities of the institute included the publication of books and journals. Three of the journals were in Persian, *Maktab-i Islām* ("School of Islam"), *Nasl-i Naw* ("New Generation") and *Payām-i S̲h̲ādī* ("Glad Tidings") for adults, for adolescents and children respectively, and one in Arabic, *al-Hādī*. The Dār al-Tablīg̲h̲ also provided for the training of preachers, and finally it served as an oracle for many S̲h̲īʿīs outside Iran, who consulted the institute on religious questions. The only book which S̲h̲arīʿatmadārī appears to have published, was his version of the thesis that traditionally confirms a cleric's position as *mud̲j̲tahid*, *Tawḍīḥ al-masāʾil*.

His ideas, which he mainly expressed in interviews, can overall be characterised as the ideas of highly traditional S̲h̲īʿī cleric. And so, during the Islamic Revolution, he strongly supported the view that the clergy must not be directly involved in politics. He was one of those who favoured the model incorporated in the Iranian Constitution of 1906-7, that accorded to the clergy, or, to be precise, to a committee of five *mud̲j̲tahids*, the right to monitor the legislatory process and to veto any legation that they judged was incompatible with Islamic laws and regulations. His name and ideas were claimed by the predominantly Ād̲h̲arbāyd̲j̲ānī Muslim Republican People's Party, although he himself carefully avoided direct association with the party, as he equally carefully avoided accepting any official posts. In the discussions concerning the constitution of the Islamic Republic, S̲h̲arīʿatmadārī protested against the fact that the draft constitution had not been submitted to a constituent assembly. A compromise was reached, to the effect that an Assembly of Experts, consisting of 73 elected members, was given the power to amend the draft. But when the new draft was presented and about to be submitted to a referendum, S̲h̲arīʿatmadārī expressed his disagreement with the leading principle of the intended constitution, viz. the *wilāyat al-faḳīh*, that was to give the clergy a direct and even ultimate say in politics. He even threatened that he would abstain from voting. Thereupon his house was attacked and there was even an attempt on his life (on 5 December 1979), which provoked a general strike and demonstration in his home town Tabrīz. But K̲h̲umaynī and those who shared his view proved too strong for S̲h̲arīʿatmadārī and his partisans. In a referendum the overwhelming majority of the Iranian people voted in favour of the draft that beared almost exclusively the stamp of K̲h̲umaynī's ideas. The Muslim Republican People's Party was forced to dissolve itself, and two years later, S̲h̲arīʿatmadārī himself was silenced rather drastically. In April 1982, after his son-in-law, accused of being an accomplice of Ṣādiḳ Ḳuṭbzāda (who had been shortly before executed), had been sentenced to prison, an orchestrated effort was made to discredit S̲h̲arīʿatmadārī. Forged documents circulated that denounced him as a traitor. Members of Parliament and clerics accused him of having made common cause with the enemy of the Islamic Republic. His Dār al-Tablīg̲h̲ was shut down and he was placed under house arrest. His opponents even managed, through the influential Society of Teachers of Seminaries in Ḳum, to have him demoted and stripped of his title as *Mard̲j̲aʿ-i Taḳlīd* or source of emulation. Virtually no protests were heard against this, and four years later, in April 1986, he died.

S̲H̲ARĪF (a.; loanword in p. and t.) (pl., *as̲h̲rāf*, *s̲h̲urafāʾ* [in the Mag̲h̲rib, *s̲h̲urfāʾ*, *q.v.*], *s̲h̲araf* [seldom]) "noble", "exalted", "eminent" [in religious or worldly esteem], derives from the root *s̲h̲-r-f*, which expresses the idea of exaltedness and prominence. Its pre-Islamic as well as its most basic use in Islamic cultures is to denote a free man who can claim a distinguished rank because of his descent from illustrious ancestors (*LA*, xi, 70-1); that is, a person possessed of nobility (*s̲h̲araf*, or, less frequently, *s̲h̲urfa*; both also used in p.; in t., *s̲h̲eref*, *s̲h̲erāfet*), whether conferred by inherited or personally acquired glory and honourable conduct or, preferably, both. Possession of *s̲h̲araf* is expressed often by the phrase "*d̲h̲u 'l-ḥasab wa 'l-nasab*", "possessing great honour [lit. 'estimation'] and unblemished ancestry" [see ḥasab wa-nasab; nasab]. Early in Islamic times, kinship or even "companionship" [see ṣaḥāba] with the Prophet became a new and special form of *s̲h̲araf*. To be a *s̲h̲arīf* meant having a claim to: (i) most commonly, some type of Hās̲h̲imid descent—from the family or clan of the Prophet, the Banū Hās̲h̲im (after the Prophet's great-grandfather, Hās̲h̲im b. ʿAbd Manāf [*q.v.*]); or, (ii) more specifically, ʿAlid—normally Ḥasanid or Ḥusaynid—descent (from Muḥammad's cousin and son-in-law ʿAlī and his daughter Fāṭima, through either of their two sons, al-Ḥasan and al-Ḥusayn, or one of their daughters, or one of ʿAlī's children by other wives); or, (iii) still more narrowly, Ḥasanid descent only—the term *sayyid* "lord", being used to denote Ḥusaynid descent. The last two usages reflect the fact that al-Ḥasan and al-Ḥusayn were widely regarded as the noblest of the noble by birth (see al-T̲h̲aʿālibī, *Laṭāʾif al-maʿārif*, ed. P. de Jong, Leiden 1867, 51 ff., tr. C.E. Bosworth, *The Book of curious and entertaining information*, Edinburgh 1968, 79).

(1) Generic (pre-Islamic and Islamic) meanings of the term.

Traditionally in the Arab, and also in the wider Islamic world, as in most cultures, it has been assumed that the meritorious qualities of forebears are transmitted to their descendants. Thus it is typically the possession of illustrious ancestors, or estimable "house" (*bayt*, pl. *buyūtāt*; Ibn Khaldūn, *Mukaddima*, i, 243; cf. Ibn Durayd, *Ishtikāk*, ed. Wüstenfeld, Göttingen 1854, 174; see also AHL AL-BUYŪTĀT), which is requisite for a *sharaf* (or *ḥasab*) *ḍakhm*, a "substantial/great nobility" (I. Goldziher, *Muh. St.*, i, 41-2; H. Lammens, *Le berceau de l'Islam*, Rome 1914, 289-90). Although in Islam there did develop the doctrine of the equality of all Muslims—based on Ḳur'ān, XLIX, 13, *inna akramakum 'ind Allāh atkākum*, "Truly the noblest among you in God's eyes is he who is most Godfearing" (cf. Goldziher, *op cit.*, i, 50-3, 69-76), it never quite displaced the old Arab reverence for a distinguished genealogy. An oft-reported *ḥadīth* of the Prophet underscores that "the most noble (*akram*) people are the most pious (*atkāhum*), but adds that "the best (*khiyār*) of them in the *Djāhiliyya* [*q.v.*] are the best in Islām, if they have understanding [in religious matters] (*idhā fakihū*)" (Muslim, *Ṣaḥīḥ*. ed. 'Abd al-Bāḳī, Beirut 1955-6, 43 [*Faḍā'il*], trad. 168; 44 [*Faḍā'il al-ṣaḥāba*], trad. 199; al-Bukhārī, *Ṣaḥīḥ*, ed. Al-Nawāwī, Ibrāhīm and Khafādjī, Cairo 1378/1958, 60 [*Anbiyā'*]. 8.5,14, 19.1; 61 [*Manākib*]. 1.5,6).

Among the Arabs before and after the advent of Islam, the *ashrāf* were either persons from noble tribes or specifically the heads of prominent families—those who over time had gained recognised status vis-à-vis others and were entrusted with administering the affairs of the tribe or alliance of tribes or towns: e.g. *min ashrāf al-kawm*, Ibn Hishām, *Sīra*, ed. al-Saḳḳā', al-Abyārī and Shalabī, Cairo 1355, repr. Beirut 1391/1971, i, 386,17 = ed. Wüstenfeld, 237; the *ashrāf* of Muḥammad's *kawm* [i.e. Ḳuraysh], al-Ṭabarī, i, 1191,1; the *ashrāf* of al-Ḥīra, *ibid.*, i, 2017; the *ashrāf al-kabā'il*, *ibid.*, ii, 541,17; the *ashrāf* in Kūfa, *ibid.*, ii, 631 ff. *passim*; the *ashrāf* of Khurasān, *ibid.*, iii, 714,1; the *ashrāf al-a'ādjim*, al-Ya'kūbī, ii, 176,8. The *ashrāf* regarded themselves as the aristocrats (*ahl al-faḍl*) in contrast to the rude and untutored masses (*arādhil*, *sufahā'*, *akhissā'*) and lesser tribes or families (al-Ṭabarī, ii, 631,7; cf. the boast of a Tamīmī leader about his tribe's noble persons, *kirām*, in Ibn Hishām, *op. cit.*, iv, 308 = ed. Wüstenfeld, 935). In Islamic times as before, *sharīf* also meant a person strong in noble pedigree, character, and importance, in contrast to one who is "weak" (*ḍa'īf*, also *waḍī'*), especially in his or her *nasab* (al-Bukhārī, *op. cit.*, 1 [*Bad' al-waḥy*], 6; 86 [*Ḥudūd*], 11,12; Muslim, *op. cit.*, 33 [*Imāra*], trad. 16). *Sharīf* and *ḍa'īf* could also refer specifically to those able to bear arms and those "unarmed", respectively—the right to bear arms being an important social distinction in Islamic as in many other societies (B. Lewis, *The political language of Islam*, Chicago 1988, 67-8).

A *sharīf* as a person of importance, in contrast to one of lower status, has been an enduring social distinction in most of the Islamic world. It occurs frequently in this sense in the older Islamic sources of the 3rd-5th/9th-10th centuries, as in the title of the genealogical work of al-Balādhurī, *Ansāb al-ashrāf*, and in chapter headings such as *Af'āl min af'āl al-sāda wa 'l-ashrāf*, in Ibn Ḳutayba, *'Uyūn al-akhbār*, Cairo 1343/1924-5, i, 332; *Marāthī 'l-ashrāf*, *Ashrāf kuttāb al-nabī*, *Nawka 'l-ashrāf*, *Man ḥudda min al-ashrāf*, in Ibn 'Abd Rabbihi, *al-'Iḳd al-farīd*, Būlāḳ 1293/1876, ii, 29, 207, and iii, 311, 406, respectively; and *Ṣinā'āt al-ashrāf*, in al-Tha'ālibī, *op. cit.*, 77, tr. 102. In such examples, the meaning is not always precise: the use of al-ashrāf to indicate something like *al-khāṣṣa* (the élite, notables), or a subgroup within this category (as opposed to *al-'āmma*, the common folk, masses), seems to have continued under Islam, even while simultaneously *al-ashrāf* in the stricter genealogical sense (whether designating persons ennobled by prophetic or by other socially exalted blood lines) has been used for persons of noble lineage whatever their social, economic, or political status (see AL-KHĀṢṢA WA 'L-'ĀMMA and, on the complexity of mediaeval Muslim societal attitudes about rank and status generally, R. Mottahedeh, *Loyalty and leadership in an early Islamic society*, Princeton 1980, esp. 97-174).

The possible meanings of *sharīf/ashrāf* have varied both geographically and chronologically. In the Arabian peninsula, alongside prophetic lineage, other standards of *sharaf* not directly linked to Islam have remained remarkably strong: Arab tribal groups have prided themselves on purity of descent from the ancient patriarchs of the southern and northern Arabs, Ḳaḥṭān and 'Adnān, respectively [*q.v.*], and many clans or families still claim to be *ashrāf* because of their pure and illustrious Arab lineage [see AL-'ARAB, DJAZĪRAT, vi. Ethnography, esp. at I, 546a]. By contrast, in South Asia, *ashrāf* has had a very different meaning. Here it has been used to designate a major social-status group within the overall Muslim community, namely all Muslims of foreign ancestry (as opposed to higher and lower indigenous Indian Muslim lineages, the *aṭrāf*, or *adjlāf*, and the *ardhāl*, respectively). Thus the *ashrāf* comprise *sayyids* (descendants of 'Alī and Fāṭima) and *shaykhs* (descendants of Ḳuraysh or of Muḥammad's Companions), as well as *mughals* and *pathāns* (two ethnic descent groups of "foreign" origin): see I. Ahmad (ed.), *Caste and social stratification among the Muslims*, Delhi 1973, 21-2 (P. Aggarwal, ch. *The Meos of Rajasthan and Haryana*), 92-5 (Z. Bhatty, ch. *Status and power in a Muslim-dominated village of Uttar Pradesh*), 113-19 (Bhattacharya, ch. *Concept and ideology of caste among the Muslims of rural West Bengal*), 159-70 (I. Ahmad, ch. *Endogamy and status mobility among the Siddique Sheikhs of Allahabad*); L. Dumont, *Homo hierarchicus*, Eng. tr. Sainsbury, Chicago 1970, 206-8; J. Sharīf, *Islām in India or the Qānūn-i-Islām*, tr. Herklots, rev. ed. Crooke, London 1921, 9-13 (see also HIND, ii. Ethnography, at III, 411a; and on the use of these categories also in Nepal, M. Gaborieau, *Muslim minorities in Nepal*, in R. Israeli, *The Crescent in the East*, London 1982, esp. 85-90). Similarly, in many other regions today, e.g. Turkey and Persia, *sharīf* is used primarily to designate social or economic "nobility" status without reference to Prophetic descent, which is signalled by the specific use of *sayyid* (see below), not *sharīf*. One should note also the presence in Islamic societies alongside (as well as among) the blooded *ashrāf* and/or *sāda* (pl. of *sayyid* [*q.v.*]) of what has been effectively a "noblesse de la robe", to use Tyan's phrase (*Histoire de l'organisation judiciaire en pays d'Islam* [Paris 1938], ²Leiden 1960, 552, n. 1), namely the religious scholars (*'ulamā'*).

(2) The Islamic meanings of the term.

The broadest specifically Islamic meaning of *sharīf* has been "descendant of the Prophet". Early on, the ability to show kinship with the Prophet was an important claim to *sharaf* (cf. al-Bayhaḳī [*fl. ca.* 300/912], *al-Maḥāsin wa 'l-masāwī*, ed. F. Schwally, Giessen 1902, 95 ff.), and under the influence of Shī'ī views and the increasing veneration of the Prophet generally,

membership in the "house of Muḥammad" became a mark of special distinction in Islamic societies. There was, however, considerable variation in how such membership was defined.

The expression *ahl al-bayt* [*q.v.*], "People of the House", is from Ḳur'ān, XXXIII, 33b, "God will remove the stains from you, O people of the House, and purify you completely". Although this verse may well have referred to Muslims as people of the Ka'ba (cf. R. Paret, in *Orientalistische Studien Enno Littmann überreicht*, Leiden 1935, 127-30), it was interpreted frequently among Sunnīs, but especially among the Shī'īs (as early as al-Kumayt [*q.v.*], who died in 126/743, 38,11 ff.; cf. 92,9 ff., and R. Strothmann, *Das Staatsrecht der Zaiditen*, Strasbourg 1912, 19-20), as referring to Muḥammad, his daughter Fāṭima, his son-in-law and cousin 'Alī, and his grandsons al-Ḥasan and al-Ḥusayn. The key proof text for this is the well known "mantle ḥadīth" (*ḥadīth al-kisā'*/'*abā'*, from which these five are also known, above all among Shī'īs, as the "People of the Cloak", *ahl al-kisā'* [*q.v.*; and cf. MUBĀHALA, at VII, 276b], or *ahl al-'abā'*). This ḥadīth recounts how Muḥammad one day brought the other four under his cloak (*kisā'*, '*abā'*[*a*], *mirṭ*, or *thawb*) and called them *ahl al-bayt*, or simply "my family", *ahlī* (Muslim, *op. cit.*, 44 [*Faḍā'il al-ṣaḥāba*], trad. 61 [cf. trad. 32]; al-Tirmidhī, *Sunan*, ed. Shākir, 'Abd al-Bāḳī, and 'Iwaḍ, Cairo 1319-46/1937-65, 48 [*Tafsīr*], 34.7 and 50 [*Manāḳib*], 32.2, 61.5; Ṭabarī, *Tafsīr*, Cairo 1968, xxii, 6-8 [10 versions]; al-Ṣabbān, 105-6; cf. M. Ayoub, *Redemptive suffering in Islām*, The Hague 1978, 37 n. 49).

More in keeping with the Ḳur'ānic context of XXXIII, 33b (despite the absence of the feminine plural pronoun, *-kunna*, in v. 33: see al-Nabhānī, 15-16, 21-2, 30-1) is the interpretation given the *ahl al-bayt* of XXXIII, 33, in a *ḥadīth* from Ibn 'Abbās, Muḳātil, and/or 'Ikrima, namely that it refers to the Prophet's wives, the "women" of his household addressed explicitly in XXXIII, 28-34. Other versions cite Umm Salama as being included specifically by the Prophet, along with the *ahl al-kisā'*, in the *ahl al-bayt* (al-Tirmidhī, 48 [*Tafsīr*], 34,7; Ibn Ḥanbal, *Musnad*, Cairo 1313/1895-6, vi, 292, 296; al-Ṭabarī, *Tafsīr*, xxii, 8; al-Maḳrīzī, 26-33; cf. al-Ṣabbān, 106-7).

The survey by al-Nabhānī (10-34) of the various reports and exegetical opinions on who is included in *ahl al-bayt* reinforces the evidence that the scope of the term varied with time and circumstances. The *ḥadīth* that glosses it simply as "the family of the Prophet", '*itrat al-nabī* (Ibn Ḥanbal, iii, 14, 17; al-Tirmidhī, 50 [*Manāḳib*], 32.1; further references in A.J. Wensinck, *Concordance de la tradition musulmane*, 120a, s.v. "'itra"; cf. Lane, 1946b) left the door open to further interpretation. It appears that, while descent in the direct bloodline of the *ahl al-kisā'*, i.e. from 'Alī and Fāṭima through their two sons [see 'ALIDS], came later to distinguish above all the Shī'ī Imāms [*q.v.*] and their descendants as *ahl al-bayt*, or to define (among Sunnīs or Shī'īs) the true *ashrāf*, initially for Muslims descent from 'Alī specifically as Muḥammad's male cousin or from other agnates of the Prophet was a more important link to the "house" of Muḥammad than direct descent from him via the line of Fāṭima and 'Alī. In general, the use of *ahl al-bayt* has been more rather than less inclusive in the wider tradition (some reports even portray the Prophet as including the Companion Salmān al-Fārisī [*q.v.*] among the *ahl al-bayt*: Ibn 'Arabī, *Futūḥāt*, ed. Yaḥyā, Cairo 1394/1974, 230-3; al-Maḳrīzī, 43; al-Nabhānī, 23-6). Two common Sunnī views that developed were: (i) the harmonising opinion according to which *ahl al-bayt* include the five key members of Muḥammad's family plus his wives (and hence their descendants), and (ii) the position that the term encompasses both the Ṭālibids and 'Abbāsids, historically the most important families of the Banū Hāshim. This latter view was one that the 'Abbāsid caliphs espoused to bolster their own legitimacy and prestige. Shī'īs also have stressed Ṭālibid as well as 'Alid descent (see AHL AL-BAYT; on the genealogy of the Ṭālibids, see Ibn 'Inaba, '*Umdat al-ṭālib*; cf. Nadjm al-Dīn 'Alī al-'Umarī, Ibn al-Ṣūfī (d. *ca.* 466/1074), *al-Madjdī fī ansāb al-ṭālibīn*, ed. Mahdawī Dāmghānī, Ḳum 1409/1988-9).

The identification of the two main Hāshimī lineages with the *ahl al-bayt* was based chiefly upon one version of the so-called *ḥadīth al-thaḳalayn* (in which *thaḳalānī* refers to the two sources of guidance that Muḥammad says he is leaving behind for the Muslims: Scripture, sc. *al-Kitāb*, and the *ahl al-bayt*). In this version, the *ahl al-bayt* are identified as those to whom, as members of the Prophet's family, the sharing in *ṣadaḳa* [*q.v.*] is forbidden; specifically mentioned are the Āl 'Alī, the Āl 'Aḳīl, the Āl Dja'far (i.e. descendants of Abū Ṭālib's sons), and the Al al-Abbās (Muslim, *op. cit.*, 44 [*Faḍā'il al-ṣaḥāba*], trad. 32 [cf. trad. 33]; al-Tirmidhī, 50 [*Manāḳib*], 32.3 Ibn Ḥanbal, ii, 409-10, iv, 367; al-Nabhānī, 35-54, 68-74; al-Maḳrīzī, 30-1, 33; Ibn Ḥadjar al-Haytamī, *Ṣawā'iḳ*, 147; Lammens, *Fāṭima*, Rome 1912, 95-100 [for references to still other groups counted as *ahl al-bayt*, see esp. 99, n. 4]; C. van Arendonk, *De Opkomst van het Zaidietische Imamaat in Yemen*, Leiden 1919, 65 ff.; see also ĀL; on *taḥrīm al-ṣadaḳa*, cf., e.g. al-Ṣabbān, 108, 110, 117, 121).

The tendency to equate the main Hāshimī lineages with the *ashrāf* of the *ahl al-bayt* appeared as early as the 2nd/8th century. The special status of the Banū Hāshim was trumpeted already by al-Kumayt, *op. cit.*; just as he lauds effusively the noble blood of the Prophet (14,5-15,12), he praises the Banū Hāshim as "the highest of creatures" (2,9) and "the peaks of splendid nobility (*ḥasab*)" (5,8), who are granted "a pre-eminence among all humankind" (58,8), and he celebrates them as *ashrāf* and *sāda* (10,4, 56,2). The editors of the Prophet's *Sīra* especially bolstered the prestige of the Banū Hāshim by putting forward the idea that God, after a gradual process of elimination of others, deliberately chose the Hāshimids as the family to produce the Prophet. A tradition which occurs in several versions has the Apostle of God say: "God chose Ismā'īl from the sons of Ibrāhīm, and from the sons of Ismā'īl the Banū Kināna, and from the Banū Kināna the Ḳuraysh, and from the Ḳuraysh the Banū Hāshim" (Ibn Sa'd, i, 2,2; cf. Ibn Hishām, iv, 205 = ed. Wüstenfeld, 933; al-Nabhānī, 76-7, 172; cf. *ibid.*, 78-9; al-Ṣabbān, 120; cf. al-Ḥusaynī, *Faḍā'il*, 57-148). One version concludes with the Prophet's words, "consequently I am the best of you as regards family and the best of you as regards genealogy" (Ibn 'Abd Rabbihi, *op. cit.*, ii, 247. Cf. also al-Khafādjī (d. 1069/1659), *Nasīm al-riyāḍ fī sharḥ shifā' al-Ḳāḍī 'Iyāḍ*, Cairo 1325-7/1907-9, i, 429 ff., ch. on the *sharaf* of the Prophet).

According to al-Suyūṭī, *R. al-Sulāla al-zaynabiyya*, fols. 4a-b (cited in al-Ṣabbān, 121; al-Nabhānī, 82), *al-sharīf* designated in the earlier period (*al-ṣadr al-awwal*) anyone who belonged to the *ahl al-bayt*, whether Ḥasanī or Ḥusaynī, 'Alawī (a descendant of any of 'Alī's sons, esp. Ḥasan, Ḥusayn, or Muḥammad b. al-Ḥanafiyya), Djafarī or 'Aḳīlī (a descendant of one of 'Alī's brothers), or 'Abbāsī (a descendant of the Prophet's uncle al-'Abbās). He also points out that in the *Tar'rīkh* of al-Dhahabī [*q.v.*], who died in 748/

1348, we often meet with titles like *al-sharīf al-ʿabbāsī, al-sharīf al-ʿaḳīlī, al-sharīf al-djaʿfarī, al-sharīf al-zaynabī* (which, however, proves very little for the older period).

There are indications that in ʿAbbāsid times, no later than the mid-4th/10th century and probably earlier, *al-sharīf*, which is said to have been also a *laḳab* of ʿAlī b. Abī Ṭālib (Muḥibb al-Dīn al-Ṭabarī, iii, 137,6), was reserved especially for the descendants of al-ʿAbbās and Abū Ṭālib. Al-Saffāḥ's (*r.* 132-6/750-4) naming of the first official ʿAbbāsid administrative capital *al-Hāshimiyya* likely reflected to some degree (even if it also referred to the dynasty's roots in the so-called Hāshimiyya [*q.v.*] movement) the ʿAbbāsids' desire to identify, in contrast to the Umayyad "usurpers" before them, with the Hāshimī legitimacy of the *ahl al-bayt* (J. Lassner, *The shaping of ʿAbbasid rule*, Princeton 1980, 151-2). We know that the Ḥusaynid Abū Aḥmad al-Ḥusayn b. Mūsā (d. *ca.* 400/1009-10) and his two famous sons, al-Sharīf al-Raḍī (d. 406/1016) and al-Sharīf al-Murtaḍā (d. 436/1044), all served terms as *naḳīb* (see below) of the Ṭālibid *ashrāf* in Baghdād (cf. H. Halm, *Die Schia*, Darmstadt 1988, 64-5; AL-MURTAḌĀ; AL-RAḌĪ; Brockelmann, S I, 131, 704-6). Muslim historians first used the term *sharīf* for such descendants in the 4th/10th century, as the ʿAbbāsid empire was dissolving, with ʿAlids rebelling everywhere and attaining power in Ṭabaristān and Arabia (Snouck Hurgronje, *Mekka*, i, 56-7), but not all references to the *ashrāf* are clear: al-Ṭabarī (d. 311/923), writing of an event in 178/794-5 (iii, 635,6), mentions *al-ashrāf* as one group of (Arab? ʿAlid?) notables alongside the Banū Hāshim.

With time, the title *sharīf* came commonly to be restricted to the ʿAlids alone. Al-Suyūṭī (*ibid.*) observes that the Fāṭimids (who had strong reasons to reject ʿAbbāsid claims to legitimacy) restricted the title *al-sharīf* to the descendants of al-Ḥasan and al-Ḥusayn and that this had remained the custom in Egypt down to his own time (end of 9th/15th century). He cites, however, the *Kitāb al-Alḳāb* of Ibn Ḥadjar al-ʿAsḳalānī to note that *al-sharīf* was used in Baghdād as a *laḳab* of every ʿAbbāsī and in Egypt of every ʿAlawī. We may assume that at least in the Fāṭimid sphere, the term in the strict sense was applied only to a Ḥasanī or Ḥusaynī, for, as al-Suyūṭī notes in another connection (fol. 6a-b; in al-Ṣabbān, 207-8; cf. Ibn Ḥadjar al-Haytamī, *Fatāwā*, 144), a *waḳf* [*q.v.*] or a testamentary deposition in favour of the *ashrāf* is only awarded to the descendants of al-Ḥasan and al-Ḥusayn, for such depositions are decided by local usage (*ʿurf*), and according to the usage in Egypt, dating from Fāṭimid times, *ashrāf* applied only to Ḥasanids and Ḥusaynids (that this usage persisted even in Mamlūk and Ottoman times indicates how firmly established it had become under the Fāṭimids: M. Winter, 17, n. 2). In conclusion, al-Suyūṭī observes that according to the linguistic usage of Egypt, noble blood (*sharaf*) was divided into different classes, namely a grade that included the whole of the *ahl al-bayt*, another that contained only the *Dhurriyya*, i.e. the descendants of ʿAlī, which included the Zaynabīs, the descendants of Zaynab bt. ʿAlī or any other of ʿAlī's daughters, and finally a still smaller class, the *sharaf al-nisba*, which only admitted the descendants of al-Ḥasan and al-Ḥusayn.

(3) *Sayyid* and *Sharīf*.

The case of *sayyid* or "lord" [*q.v.*] was similar to that of *sharīf*. *Sayyid* means the master in contrast to the slave (e.g. al-Bukhārī, *op. cit.*, 93 [*aḥkām*], 1.2, etc.), and the husband vis-à-vis the wife (e.g. Ḳurʾān, XII, 25). *Sayyid* was also the usual name for the head of a tribe or clan (cf. Ḳurʾān, XXXIII, 67; Ibn Hishām, ii, 83,10-1 = ed. Wüstenfeld, 295,17) whose authority was based mainly on personal qualities like discretion (*ḥilm* [*q.v.*]), liberality, and command of language (cf. Ibn Ḳutayba, *op. cit.*, i, 223 ff.; G. Jacob, *Altarabisches Beduinenleben*, ²Berlin 1897, 223; Lammens, *Berceau*, 206-10). The Ḳurʾān, III, 39, praises the prophet Yaḥyā or John (the Baptist) as a *sayyid*. Certain physical qualities are also said to mark a person as a *sayyid* (Ibn Ḳutayba, *loc. cit.*; Mez, *Renaissance*, 144). Contemporary Arabic usage has reduced the term to a synonym for "mister" (and *sayyida* to "madam") in much of the Arab world and thus reduced or effaced its association with special socio-religious status.

The term may have come into use particularly as a title for ʿAlids or Ṭālibids at about the same time as *sharīf*. This development was probably aided by traditions that describe al-Ḥasan and al-Ḥusayn and their parents as *sayyid(a)*. The Prophet is reported to have said of al-Ḥasan, "this my [grand]son is a *sayyid*, and perhaps God will bring about reconciliation between the two parties of Muslims through him" (al-Bukhārī, 92 [*Fitan*], 20,1; 62 [*Faḍāʾil al-ṣaḥāba*], 22,1). Al-Ḥusayn appears in the Ḥadīth as *sayyid shabāb ahl al-Djanna*, "Lord of the young men of the people of Paradise" (al-Nabhānī, 130-1; al-Ṣabbān, 185), just as he and his brother are celebrated as *sayyidā shabāb ahl al-Djanna* "the two lords of the young men [etc.]" (al-Tirmidhī, 50 [*Manāḳib*], 31.1, 14; al-Nasāʾī, 117, 118, 123, 124; al-Ṣabbān, 115; al-Nabhānī, 143; A. Amīn *Duḥā 'l-Islām*, iii, Cairo 1362/1943, 287), while their mother Fāṭima is lauded by the Prophet as "mistress of the women of this community/my community" or "mistress of the women of the worlds" (*sayyidat nisāʾ hādhihi 'l-umma/ummatī, sayyidat nisāʾ al-ʿālamīn*) (Ibn Saʿd, viii, 17,17; al-Nasāʾī, 116-20, *passim*), and as "mistress of the women of the people of Paradise (*ahl al-djanna*)" (al-Bukhārī, *op. cit.*, 61 [*Manāḳib*] 24.44; 62 [*Faḍāʾil aṣḥāb al-nabī*], 29; al-Tirmidhī, 50 [*Manāḳib*], 30.15; Ibn Ḥadjar al-Haytamī, *Fatāwā*, 142,18; al-Nasāʾī, 117; Amīn, *op. cit.*, 286). The Prophet is said to have called ʿAlī *sayyid al-ʿArab* and *sayyid al-muslimīn* (Muḥibb al-Dīn al-Ṭabarī, iii, 176,9,20, 177, 2-3) and to have once said to him, "You are a *sayyid* in this world and a *sayyid* in the next" (*ibid.*, 177,7). In a verse in al-Bayhaḳī (*Maḥāsin*, 96,10), ʿAlī is described as *sayyid al-nās*, but as a rule such expressions are only applied to the Prophet (*sayyid wuld Ādam*, Ibn Saʿd, i, 1,18, 3,15, and Muḥibb al-Dīn al-Ṭabarī, iii, 176,9; *sayyid al-bashar*, Ibn ʿAbd Rabbihi, *op. cit.*, ii, 246,17).

In the beginning, the term *sayyid* may have been first applied to those who possessed some authority in their own sphere. In the genealogical work of the Ḥasanid Ibn ʿInaba, *ʿUmdat al-ṭālib*, individual ʿAlids are often described as *sayyid(a)* (e.g. 81,6,9,12, 87,8, 88,12, 91,8, 92,5, 94,20, 163,16,19, 169,5,15). Al-Dhahabī, *Taʾrīkh al-Islām*, ms. Leiden 1721, fol. 65a, gives this title to the Twelver Imām ʿAlī b. Muḥammad. We also find the combination *al-sayyid al-sharīf* or vice-versa (al-Nuwayrī, *Nihāyat al-arab*, Cairo 1342/1923-4, ii, 277,12; al-Khazradjī, *al-ʿUḳūd al-luʾluʾiyya*, i, Leiden and London 1913, 314,11). The word *sayyid* also came to be applied to Ṣūfī masters, saints and notable theologians, e.g. *al-sāda al-ṣūfiyya, al-sādāt al-awliyāʾ* (al-Shardjī, *Ṭabaḳāt al-khawāṣṣ ahl al-ṣidḳ wa 'l-ikhlāṣ*, Cairo 1321/1903, 2,9, 3,1, 195,3; cf. M. Winter, 18); *al-sāda al-aʿlām* (Ibn Ḥadjar al-Haytamī, *Fatāwā*, 141,34). Found widely in Arabic as the term used by a slave to address his/her master, the term *sayyidī* or *sīdī* (frequently in al-Shaʿrānī) became very popular in a still more general applica-

tion to persons regarded as holy, especially mystical masters of particular *ṭarīḳas* or *zāwiyas* [*q.v.*] or Ṣūfīs in general. This can be seen in the many Muslim shrines dedicated to saintly persons addressed as *sīdī*, e.g. the tomb of "Sīdī Maḥyi 'l-Dīn" (Muḥyi 'l-Dīn Ibn al-Arabī) in Damascus, the *Ḥaram* of "Sidnā 'Alī b. 'Alīl" (a descendant of 'Umar b. al-Khaṭṭāb) in Israel/Palestine (L. Mayer and J. Pinkerfeld, *Some principal Muslim religious buildings in Israel*, Jerusalem 1950, 36-9), or the shrine of "Sīdī Muḥammad Sharḳī" (also a descendant of 'Umar and key figure of the Sharḳāwī order) in Būdjad, Morocco (D. Eickelman, *Moroccan Islam*, Austin 1976, 183-210).

It is also the case that such Ṣūfīs or other saintly figures have often also claimed Prophetic descent, so that the title "sayyid" is doubly earned. This is above all the case in Morocco, on which, see SHURFĀ'; cf. E. Gellner, *Saints of the Atlas*, Chicago 1969, 70-80. Sayyid Aḥmad b. 'Īsā al-Muhādjir, the Ḥusaynid forefather of the prestigious Ḥaḍramī *sāda* and the greatest saint of the Ḥaḍramawt, is venerated by pilgrims performing *ziyāra* [*q.v.*] to his tomb in Ḳaydūn (D. van der Meulen, *Aden to the Hadhramaut*, London 1947, 185-6; see also ḤAḌRAMAWT, in Suppl.). Sayyid Sālār Mas'ūd Ghāzī, whose tomb shrine is in Bahrā'ič, in eastern Uttar Pradesh, India, is said to trace his Ṭālibid pedigree to 'Alī through 'Alī's son by Khawla of the Banū Ḥanīfa, Muḥammad b. al-Ḥanafiyya [*q.v.*] (T. Mahmood, in C. Troll (ed.), *Muslim shrines in India*, Delhi 1989, 24-30).

Sayyid is the standard term used (instead of, or in preference to, *sharīf*) for all direct descendants of Muḥammad in many Muslim societies; in these contexts, *sharīf* has typically retained its older, more general sense of simply a person of patrician social status (e.g. Persia, Turkey). *Sayyid*, and even *emīr* (A. *amīr*), or *mīr* [*q.v.*], were and are used in Persia, Turkey, Central Asia, and India as names for a descendant of the Prophet (J. Chardin, *Voyages*, ed. Langlès, Paris 1811, v, 290; H. Gibb and H. Bowen, *Islamic society and the West*, i/2, London 1957, 93, n. 1; M. d'Ohsson, *Tableau général de l'empire othoman*, Paris 1786-1820, i, 211, cf. 111; J. Hammer-Purgstall, *Des osmanischen Reichs Staatsverfassung und Staatsverwaltung*, Vienna 1815, ii, 398-401; Sharīf, *op. cit.*, 9-10, 26-8). In Ḥaḍramawt, the usual title for a Prophetic descendant, whether Ḥasanid or Ḥusaynid, is *sayyid* (Snouck Hurgronje, *Verspr. Geschr.*, iii, 163; van der Meulen, 70, 185-6). According to Amīn al Rayḥānī (*Mulūk al-'Arab*, Beirut 1924, i, 92, n. 1), the same was true in the Yaman in the early part of the present century, although, to judge from al-Khazradjī (e.g. i, 314,11, 315,3, 317,10,13, 318,7,11), who died in 812/1409, *sharīf* was in his day the usual name used there. Ibn Ṭūlūn al-Dimashḳī (d. 953/1546) reports that among the chiefs of the young men's *zu'ar* [*q.v.*] of Damascus, *ḳuraysh* was used alongside *sayyid* and *sharīf* as a name signalling Prophetic descent (cited in I. Lapidus, *Muslim cities in the later middle ages*, Cambridge, Mass. 1967, 155). In the Malay archipelago at the end of the last century, along with the title *sayyid* usual for Prophetic descendants we find also traditional in Acheh the honorific *ḥabīb* (beloved), which was used similarly in Arabia (Snouck Hurgronje, *The Achehnese*, Eng. tr. O'Sullivan, Leiden 1906, i, 155).

In other instances, Muslims have distinguished *sharīf* and *sayyid* as referring specifically to Ḥasanī and Ḥusaynī descent, respectively. In the Ḥidjāz, it was for centuries the custom to call *sharīf* only those Ḥasanids whose ancestors had lived in Mecca and to designate as *sayyid* only the Ḥusaynids (cf. Gibb and Bowen, *loc. cit.*). From the beginning of their rule in the late 4th/10th century to its end in 1924, the Ḥasanid *amīrs* of Mecca (who began as Zaydīs, but by the mid-8th/14th century had become Sunnī adherents of the Shāfi'ī school) used the title *sharīf*, as did also, however, the ruling Ḥusaynids of Medina (see the Meccan *amīr* list in al-Batanūnī, *al-Riḥla al-ḥidjāziyya*, Cairo 1329/1911, 82-6). At the turn of the last century, the title *sharīf* was reserved for Ḥasanids alone, but the Meccans addressed the Ḥasanid Amīr of Mecca, or so-called "Grand Sharīf" (a European usage), as *sayyidunā*, and he likewise gave his Ḥasanid kin the title *sayyid* (Admiralty War Staff, Intelligence Div., *A handbook of Arabia*, i, London 1916, 109; Snouck Hurgronje, *Mekka*, i, 57 n. 1; idem, *Verspr. Geschr.*, iii, 163, v, 31, 40; cf. al-Nabhānī, 82-3).

(4) The *Naḳīb al-Ashrāf* and *Niḳābat al-Ashrāf*.

In the 'Abbāsid period, the *ashrāf*, both 'Abbāsids and Ṭālibids, were usually under the authority of a *naḳīb al-ashrāf* or "marshal of the nobility" (also *naḳīb al-sādāt*, or *ra'īs al-sādāt*) chosen by them. The history of this office remains largely uninvestigated (with the notable exception of M. Winter's study of the Egyptian case; see also the monograph by al-Ḥusaynī, *al-Ithāf*, which is a compendium of *nuḳabā'* in various cities; on both, see *Bibl.* below). That the *niḳāba* already existed under the Umayyads, as von Kremer (*Culturgeschichte des Orients unter den Chalifen*, Vienna 1875, i, 449, n. 1) supposed (supported by Tyan, *op. cit.*, 552, n. 4), based upon Ibn Khaldūn, *'Ibar*, Būlāḳ 1284/1867-8, iii, 134, is very doubtful, as the passage at issue is probably corrupt (cf. al-Ṭabarī, ii, 16, *ult.*-17,1). The two branches of the Banū Hāshim were from the first probably under a marshal, as was the case about 301/913-14 ('Arīb al-Ḳurṭubī, *Ṣilat ta'rīkh al-Ṭabarī*, ed. de Goeje, Leiden 1897, 47,10); yet we find mention in al-Ṭabarī, iii, 1516,5, of an administrator of the affairs of the Ṭālibids (*yatawallā amr al-Ṭālibiyyīn*), in the year 250/864, during al-Mutawakkil's reign, one 'Umar b. Faradj (al-Rukhkhadjī), who was apparently not a Hāshimī. The 'Alid 'Alī b. Muḥammad b. Ja'far al-Ḥimmānī (d. 260/873-4) was *naḳīb* in Kūfa (al-Mas'ūdī, *Murūdj*, vii, 338 = § 3029). By this date there were apparently marshals of the local nobles who answered to a single grand marshal (*naḳīb* or *sayyid al-nuḳabā'*): in the late 3rd/9th century, Abu 'l-Ḥasan 'Alī b. Dja'far Ibn al-Riḍā was *sayyid al-nuḳabā'* in Baghdād (al-Marwazī, *al-Fakhrī fī ansāb al-Ṭālibiyyīn*, ed. Radjā'ī, Kum 1408/1988-9, 9; Fakhr al-Dīn al-Rāzī, *al-Shadjara al-mubāraka*, Ḳum 1409/1989, 79-80), and in Nīshāpūr in the same era, the *sayyid* al-Adjall al-Zabbāra was an influential *naḳīb* of the 'Alids and *ra'īs* of the town, as was his son also after him in the reign of the Sāmānid *amīr* Abu 'l-Ḥasan Naṣr b. Aḥmad (301-31/914-43) (Ibn Funduḳ, *Ta'rīkh-i Bayhaḳ*, Tehran 1317/1938, tr. in C.E. Bosworth, *The Ghaznavids*, Edinburgh 1963, 196). In Fāṭimid Egypt, there was a *naḳīb al-ṭālibiyyīn* or *al-'alawiyyīn*, who (as under the 'Abbāsids) belonged to the political-military rather than the religious or administrative leadership; in Mamlūk Egypt this figure was known as *naḳīb al-ashrāf* and, not being of the ruling Turkish military élite, was considered a religious functionary, or *'ālim* (Winter, 31; cf. Tyan, 550-4).

In general theory, it was the duty of the *naḳīb*, who had to possess a good knowledge of genealogical matters, to keep a register of nobility, to enter births and deaths in it and to examine the validity of alleged 'Alid genealogies (on which see al-Ḳurṭubī, 49-50, 167). He had to keep a watch on the behaviour of the *ashrāf*, to restrain them from excesses, and

to remind them to do their duty and avoid anything that might injure their prestige. He had also to urge their claims, especially those on the treasury, to endeavour to prevent the women of noble blood from making mésalliances, and to see that the *wakf* trusts on the *ashrāf* were properly administered. He had to participate in, and to be responsible for participation of the *ashrāf* in special religious ceremonies. The chief *nakīb* had also other special duties, including specific and sometimes important judicial powers, which varied from era to era and region to region. See al-Māwardī, 164-71; Tyan, 550-8; von Kremer, i, 448-49; L. Massignon, *Cadis et naqibs bagdadiens*, in *WZKM*, li (1948). 106-15; Winter, 32-3; H. Bodman, *Political factions in Aleppo, 1760-1826*, Chapel Hill 1963, 79-102; Mez, *op. cit.*, 145; al-Damurdāshī, *Kitāb al-Durra al-muṣāna*, tr. D. Crecelius and ʿA. Bakr as *al-Damurdashi's chronicle of Egypt, 1688-1755*, 43, n. 108; H. Halm, *op. cit.*, 60-1, 64-5; A. Laroui, *Les origines sociales et culturelles du nationalisme marocain*, Paris 1977, 93-4; and NAKĪB (esp. the *Bibl.*).

If the case of Egypt (Winter, 34-9) is indicative, the social and even the religious importance of the *nikāba* institution has waned in most areas, especially in the past two centuries, and most sharply in the present one; this goes along with the fact that today the *ashrāf* rarely represent the distinctive and cohesive, often élite social class that they did several centuries ago in most Islamic societies. Nor do they today typically enjoy the special tax status or other special favours they once did.

(5) Marks of *Sharīf* status.

Traditionally, the most common public mark of a *sharīf* has been the green turban that became usual for male *sharīfs* and *sayyids* to wear, especially in Egypt and Persia. Its origin may lie in a 773/1371-2 edict of the Mamlūk sultan al-Ashrāf Shaʿbān b. Ḥasan (764-78/1363-77) that the male *ashrāf* should wear a green badge (*shutfa*) fastened to their turbans to distinguish them from other people and as an honour for their rank (ʿAlī Dadah, *Muḥāḍarat al-awāʾil wa-musāmarat al-awākhir*, Būlāḳ 1300/1883, 85; al-Kattānī, 95, 97; Ibn Iyās, *Badāʾiʿ al-zuhūr*, Cairo 1311/1893-4, i, 227; Ibn Taghrībirdī, *al-Nudjūm al-ẓāhira*, Cairo n.d., xi, 56-7; Dozy, *Dict. des noms des vêtements chez les arabes*, Amsterdam 1845, 308; Mez, 59; H. Algar, art. *ʿAmāma*, in *EIr*, i, 920a). According to the Ḥasanid Muḥammad al-Kattānī (d. 1345/1927), in his treatise on the turban (97-8), this Mamlūk edict, which is commemorated by the poets of the time, recalls that of the caliph al-Maʾmūn in Ramaḍān 201/817, which replaced the black colour of the ʿAbbāsid house with green at the time when he designated the Ḥusaynid ʿAlī b. Mūsā al-Riḍā as his successor (cf. al-Ṭabarī, iii, 1012-13). Al-Kattānī opines that the descendants of ʿAlī and Fāṭima henceforth retained green as their colour, but confined themselves in practice to wearing a piece of green material on the turban. This, he thinks, fell in time into disuse until Sultan Shaʿbān revived it by his edict. According to the *Durar al-aṣdāf*, which al-Kattānī quotes (98), the wearing of an entirely green turban dates from an edict of the late 16th-century Ottoman Pasha governing Egypt, al-Sayyid Muḥammad al-Sharīf (cf. Muḥammad al-Isḥāḳī, *Akhbār al-uwal fī-man taṣarrafa fī Miṣr min arbāb al-duwal*, Cairo 1311/1893-4, 164) in 1004/1596; when he had the *kiswa* [*q.v.*] for the Kaʿba exhibited, he ordered the *ashrāf* to come before him, each wearing a green turban.

Al-Suyūṭī observes that the wearing of this badge is a permissible innovation (*bidʿa mubāḥa*) that no one, whether a *sharīf* or not, can be prevented from following, if he or she wishes to do so, and one that cannot be forced upon anyone who wishes to omit it, since it cannot be deduced legally. However, Ibn Ḥadjar al-ʿAskalānī tells of a *sharīf*, Fakhr al-Dīn, who lost his post of *nakīb* because he was said to take bribes and to have let non-*sharīfs* wear green badges (*Inbāʾ al-ghumr*, i, Ḥaydarābād 1387/1967, 39). At most, it can be said that the badge was introduced as a distinction for the *ashrāf*; it is therefore equally permissible to limit it to the Ḥasanids or Ḥusaynids or to allow it also to the Zaynabiyya and the still wider circles of the remaining ʿAlids or even Ṭālibids. An endeavour is made to connect this custom with Ḳurʾān XXXIII, 59, in which some scholars see a suggestion that learned men should be distinguished by their dress, e.g. by long sleeves or the winding of the *ṭaylasān*, so that they may be readily recognised and honoured for the sake of learning (al-Suyūṭī, fols. 5a-6a; in al-Ṣabbān, 206-7, abbreviated in Ibn Ḥadjar al-Haytamī, *Fatāwā*, 144,23-4, and al-Nabhānī, 84-5; cf. al-Kattānī, 98-9). With regard to the aforementioned Ḳurʾānic verse, according to al-Ṣabbān it should be taken to imply that wearing the green badge or turban is recommended for the *ashrāf* and blameworthy for others than they, because the latter by wearing it would be claiming a genealogy that is not theirs, which is not permitted (206). On this account, according to al-Kattānī, even the Mālikī authorities considered the wearing of a green turban as forbidden to a non-*sharīf*. With regard to a tradition transmitted by Ibn Ḥanbal, according to which, on the Day of Resurrection the Prophet will be clothed by his Lord in a green turban, Shāfiʿī teachers are said to incline to the view that this headgear is desirable for the *ashrāf* (al-Kattānī, 98-9; cf. 95). Other authorities note that green is the colour of the garments of the dwellers in Paradise (idem, 96; cf. Ḳurʾān, XVIII, 30, LXXVI, 21), and that it was the Prophet's favourite colour (idem, 95-6, with references to Ḥadīth).

The green turban has been frequently adopted, but never became the general headgear of the *ashrāf* throughout the Islamic world. Although in Egypt still in the 19th century it was a mark of a *sayyid*/*sharīf*, many entitled to wear it, especially the more learned, often chose to wear instead the white turban of a *shaykh* or *ʿālim* (E.W. Lane, *Manners and customs of the modern Egyptians* [1836], New York 1973, 31, 132; Winter, 22); in Arabia several decades later (as today), *sayyids* rarely wore other than white turbans (Snouck Hurgronje, *Verspr. Geschr.*, iv/i, 63). The green colour was preferred in Morocco at the turn of this century (Westermarck, ii, 21) and, according to J. Chardin (*loc. cit.*) and also in late-18th-century Persia, although in this last country, according to Algar, in *op. cit.*, i, 921a, the black turban (as opposed to white) has long been the standard sign of a *sayyid.* However, Iranian contemporaries report consistently that black is worn instead of green rarely by *sayyids*; normally, black turbans are used only by the most venerable scholars or most elderly *sayyids*; most *sayyids* wear green. In India *sayyids* traditionally have worn green; they were therefore occasionally called *sabzpūsh* "green-robed" (Sharīf, 303). According to al-Nabhānī (d. 1932), 85-6, the green turban was not in his time a mark of noble blood in Istanbul. It was worn there not only by learned men and students but also by artisans and street merchants, especially in winter, as it did not show dirt so quickly. On this account, many *ashrāf* there were even said to avoid the colour green.

(6) Other marks and special treatment of the *Ashrāf*.

Those of the Prophet's blood are also distinguished in other ways according to common Sunnī views. For example, the sharing in the *ṣadaḳa* [*q.v.*; and see ZAKĀT; cf. al-Ḥusaynī, *Faḍā'il*, 208-21] is forbidden them. The Prophet is recorded to have said of the *ṣadaḳa*, "It is the filth of men (cf. Ḳur'ān, IX, 104) and permitted neither to Muḥammad nor to the family (*āl*) of Muḥammad". The legal authorities differ on the question as to whether this rule applies not only to the Banū Hāshim but also to the Banū 'l-Muṭṭalib and the clients of these families, and whether also free-will offerings (*ṣadaḳat al-nafl/al-taṭawwu'*) are included under it (al-Nabhānī, 67 ff.; cf. Ibn Ḥadjar al-Haytamī, *Ṣawā'iḳ*, 142-3). Over against this ban, special *waḳfs* were established and state allowances or pensions typically set aside for the *ashrāf*, and until the 19th or even 20th century they were largely exempted from regular taxation (see e.g. Tyan, 556; Winter, 26-7, 33, 35, 38; Laroui, 96; E. Burke, *The Moroccan Ulama, 1860-1912*, in N. Keddie (ed.), *Scholars, saints, and Sufis*, Berkeley 1972, 98, 124).

The sons of Fāṭima have the privilege of being called "sons of the Prophet of God" and thus having their lineage traced directly to the Prophet. Such a one is therefore frequently addressed as *Ibn Rasūl Allāh*. Justification of this is found in sayings of the Prophet, such as, "All the sons of one mother trace themselves back to an agnate, except the sons of Fāṭima, for I am their nearest relative and their agnate (*waliyyuhum wa-'aṣabatuhum*)" (Ibn Ḥadjar al-Haytamī, *Fatāwā*, 144,1,10-11; al-Nabhānī, 97).

Because of the belief that the *ahl al-bayt* are the noblest in descent, the female members of the family have no one equal in birth (*kuf'*) to them [see KAFĀ'A]. According to al-Suyūṭī (fols. 3a-b; cf. al-Ṣabbān, 201; see also Ibn Ḥadjar al-Haytamī, *Fatāwā*, 144,12-3), it is a very old opinion that the son of the marriage of a *sharīfa* (fem. of *sharīf*) with a non-*sharīf* is not a *sharīf*. However, as al-Ṣabbān, 209, points out, there are many authorities who consider him a *sharīf*. In practice marriage of a *sayyid*'s daughter with a man not her equal is extremely rare (Snouck Hurgronje, *Achehnese*, i, 158; idem, *Verspr. Geschr.*, iv/i, 297 ff.; "Mrs. Meer Hassan Alī", *Observations on the Mussulmauns of India*, London 1832, 8-9; cf. Jacob, 222-3). While a *sharīf* may legally marry a non-*sharīfa* and have their offspring counted as *ashrāf*, marriage of a *sharīfa* to a non-*sharīf* has historically been taboo in most Muslim societies, e.g. among the Arabs (see C. Doughty, *Travels in Arabia deserta* [1888], London 1926, ii, 522-3). As late as 1932, a governor of Baghdād was murdered by a man of the Sa'dūn for trying to marry the daughter of the 'Irāḳī Prime Minister, who was of Sharīfian lineage, see H.R.P. Dickson, *The Arab of the desert* [1949], rev. ed. Wilson and Freeth, London 1983, 22, 99). This prohibition was also traditional in South Asia (J. Oman, *Brahmans, theists and muslims of India*, [2]Delhi 1973, 62); and in Indonesia (Snouck Hurgronje, *Achehnese*, 158; cf. the sharply-worded refutation of a Singapore jurist's *fatwā* against such marriages by Rashīd Riḍā, see *Fatāwā 'l-Imām Muḥammad Rashīd Riḍā*, ed. Khoury, i, Beirut 1970, 385-94, cf. 340-1). One may only enter into matrimony with a *sharīfa* if he knows he is in a position to afford her all that is due her, will obey her pleasure and consider himself her slave. Al-Sha'rānī (according to al-Nabhānī, 185-9) does not consider it seemly to marry the widow or divorced wife of a *sharīf*.

A weak prophetic *ḥadīth* has Muḥammad say: "The stars are a security (*amān*) for those who dwell in the heavens and my *ahl al-bayt* are a security for those who dwell on earth [or: 'for my community']" (al-Ṣabbān, 129-30, al-Nabhānī, 54; cf. 58-9). According to the commentators, by *ahl al-bayt* are here meant the children of Fāṭima. Their existence on the earth is a security for its inhabitants in general and for the community of the Prophet in particular against punishment or "temptations/acts of sedition" (*fitan*). It is not the pious among them that are specially meant here; this distinction is solely based on their descent from the Prophet (*al-'unṣur al-nabawī*), apart from any qualities, meritorious or otherwise, which they happen to possess as individuals. An allusion to this opinion is held to exist in Ḳur'ān, VIII, 33 (al-Nabhānī, 59-60; cf. Ibn Ḥadjar al-Haytamī, *Ṣawā'iḳ*, 150-1, *Fatāwā*, 142,20-2). The *baraka* [*q.v.*] of a descendant of the Prophet is widely recognised, especially in the Maghrib (see e.g. V. Crapanzano, *The Ḥamadsha*, Berkeley 1981, 108).

One tradition of the Prophet has been taken as referring particularly to the *ahl al-bayt*: "Every bond of relationship and consanguinity (*sabab wa-nasab*) will be severed on the Day of Resurrection except mine" (al-Ṣabbān, 125-6; al-Nabhānī, 45, 80-1, cf. 54, 61-2, 94). They are therefore the only ones whose relationship can help them at the final Reckoning (al-Nabhānī, 60, 79-82; cf. al-Shubrāwī, 7,20-3). According to traditional wisdom, none of the *ahl al-bayt* will suffer the punishment of Hell (al-Maḳrīzī, 50-2; al-Nabhānī, 44-5, 90), and 'Alī, al-Ḥasan and al-Ḥusayn, with their families, will be the first to enter Paradise along with the Prophet (*ibid.*, 96-7).

The "sons of the Prophet of God" may be certain of divine forgiveness, and any wrong inflicted by them must be accepted like a dispensation of God, if possible with gratitude. Ibn al-'Arabī, who connects the verse of purification (see above) and its reference to the *ahl al-bayt* with Ḳur'ān, XLVIII, 2, in which the Prophet is promised pardon for his sin, observes, *inter alia*: "It behoves every Muslim who has faith in God and in what He has revealed to recognise the truth of the word of God, 'God will remove the stain from you, O people of the House, and purify you completely', so that he may be convinced with respect to everything the *ahl al-bayt* have done for which God has given them pardon. It is therefore not fitting for a Muslim to criticise them, neither for what is not in keeping with the honour of those of whom God has testified that he has purified them and removed the stain from them, nor for pious works or good deeds they have performed, but always to remember God's watchful care for them" (*al-Futūḥāt al-makkiyya*, Cairo 1329/1911, ch. 29, i, 196,17-8,25, esp. 196,31 ff., cf. 197,14 ff.; cited also in al-Maḳrīzī, 44; cf. al-Nabhānī, 23-4, 155-6). In a similar vein, Ibn Ḥadjar al-Haytamī notes that a *sharīf* who has received *ḥadd* [*q.v.*] punishment for fornication, taking intoxicants or theft may be compared with an *amīr* or *sulṭān* whose feet have become soiled but are wiped clean by one of his servants. He is also likened to a refractory son who is not, however, deprived of his inheritance (*Fatāwā*, 142,26-9; al-Nabhānī, 92).

The duty of love for the *ahl al-bayt* is based on Ḳur'ān, XLII, 23, "Say, 'I ask of you [all] no reward except love for the kinsfolk (*ḳurbā*)'," where *ḳurbā* is taken as kin of the Prophet (al-Ṣabbān, 104-5; al-Nabhānī, 154 ff.; Ibn Biṭrīḳ al-Ḥillī, *Khaṣā'iṣ*, 51 ff.; idem, *'Umda*, 23 ff.; al-Maḳrīzī, 78; al-Shubrāwī, 4,30-5,8; Ibn Ḥadjar al-Haytamī, *Ṣawā'iḳ*, 167-9). It is

further pointed out that the conclusion of the *tashahhud* contains a prayer for the Āl Muḥammad (*ibid.*, 145-6; al-Nabhānī, 155). A saying attributed to al-Shāfiʿī [*q.v.*] is as follows: "O members of the house of the Prophet, love for you is a duty to God that He has revealed in the Ḳurʾān. It is a great honour for you that anyone who does not say the *taṣliya* over you has not performed the *ṣalāt* [*q.v.*]" (*ibid.*, 184). There are further a large number of traditions that urge this affection, represent it as a proof of faith or a defence against Hellfire, promise in return for it the *shafāʿa* of the Prophet on the Day of Resurrection and a reward in the next world, and forbid signs of hatred towards the *ahl al-bayt*, even describing such animosity as infidelity (al-Shubrāwī, 3,7-8 ff.; al-Nabhānī. 171 ff.: Ibn Ḥadjar al-Haytamī, *Ṣawāʿiḳ*, 153-4; al-Ḥusaynī, *Faḍāʾil*, 230-40).

According to al-Shubrāwī, an 18th-century Rector of al-Azhar, reverence and respect ought therefore always to be shown to the *ashrāf*, especially to the pious and learned among them; this is a natural result of reverence for the Prophet. One should be humble in their presence; the man who injures them should be an object of hatred. Unjust treatment from them should be patiently borne, their evil returned with good; and they should be assisted when necessary. One should refrain from mentioning their faults; on the other hand, their virtues should be lauded abroad. One should try to come nearer to God and His Prophet through the prayers of the devout among them (*Itḥāf*, 7,17 ff.). Such attitudes did not, to be sure, keep all *ashrāf* from evil deeds, or from punishment for those deeds. In the year 842/1438-9, Shāhrukh b. Tīmūr, for example, had a *sayyid* who had publicly cursed Abū Bakr and ʿUmar scourged and removed from Mashhad to Harāt (ʿAbd al-Razzāḳ Samarḳandī, *Maṭlaʿ al-saʿdayn*, ed. M. Shafiʿ, Lahore 1360-8/1941-9, ii/2, 711).

According to al-Shaʿrānī, one should treat a *sharīf* with the same distinction as a governor or *ḳāḍī al-ʿaskar*, one should not take a seat if a *sharīf* is without one. Special reverence should be paid to the *sharīfa*; one dare hardly look at her. Anyone who really loves the children of the Prophet will present them with anything they wish to buy. Whoever has a daughter or sister to give in marriage with a rich dowry should not refuse her hand to a *sharīf*, even if he has no more than the bridal gift for her and can only live from hand to mouth. If one meets a *sharīf* or *sharīfa* on the street and he or she asks for a gift, one should give him or her what one can (al-Nabhānī, 185-9). Ibn Baṭṭūṭa (d. 779/1377) presents a good example from East Africa of such an attitude toward the Prophet's progeny in his remarks on the sultan of Kilwa, Abū Muẓaffar Ḥasan: his *kunya* was Abū Mawāhib ("father of gifts") because of his largesse to any *sharīf* who approached him, even one from abroad (*Riḥla*, ii, 193-4, Eng. tr. Hamdun and King, *Ibn Battuta in Black Africa*, London 1975, 19-20).

One should not refuse marks of respect even to a *sharīf* who is a sinner (*fāsiḳ*) in the eyes of the law, because one knows his sin will be forgiven him. This high esteem is his due on account of his pure origin (*al-ʿunṣur al-ṭāhir*) and *fisḳ* does not affect his genealogy (*ibid.*, 91). As Doughty reported on the Ḥidjāz of the 1880s, "these persons of the seed of Mohammad 'are not to be spoken against', and have a privilege, in the public opinion, above the common lot of mankind" (ii, 487, cf. 533). If it is doubtful whether a man is a *sharīf*, but there is nothing to object to in his genealogy from the legal point of view, he should be treated with the proper respect. Even if his pedigree is not legally established, one should not assume he is lying without being absolutely certain on the point (Ibn Ḥadjar al-Haytamī, *Fatāwā*, 142,33 ff.; al-Nabhānī, 92-3). There are a number of anecdotes in which an individual who has been neglectful of respect to, or who has irritated, a *sharīf* has been corrected in a dream by the Prophet or by Fāṭima (al-Maḳrīzī, 81-6; al-Nabhānī, 91).

The *sayyid* who distinguishes himself by a pious life readily becomes revered as a saint. His blessing is expected to bring good fortune, while his wrath brings misfortune. By vows and gifts, it is hoped to secure his auspicious intercession (*shafāʿa* [*q.v.*]), and his tomb (*ḳubba, ḳabr, mashhad* [*q.vv.*]) becomes a place of pilgrimage [see ZIYĀRA]. On the much-visited tombs of *sayyids* and *sayyidas* in Cairo, for example, cf. al-Shablandjī's work cited below, and J.W. McPherson, *The Moulids of Egypt*, Cairo 1941, 31-3. In the Yemen, as in Ḥaḍramawt, the *sayyid*, who is distinguished there from the armed *sharīf* carrying a staff and rosary, acts as intermediary between two disputing parties. He also drives away the locusts and his prayer puts an end to infertility, while his curse makes it continue. Many *sayyids* are also visited for their healing powers, and reverence for them is frequently expressed in gifts of land (H. Jacoby, *Parfumes of Araby*, London 1915, 45, 173). On the visitation of *sayyids*' shrines in South Asia, see Troll, *Muslim shrines in India*, esp. 24-43 (on the shrine of Sayyid Sālār Masʿūd Ghāzī). For a fuller description of the *sharīfs* and *sayyids* and the reverence paid them in the Ḥidjāz, see Snouck Hurgronje, *Mekka*, i, 32 ff., 7 ff.; for Acheh and the Indonesian Archipelago on the 19th century, see idem, *Achehnese*, i, 153-64; for Khūrāsān, see Bosworth, 194, n. 77 (citing al-Muḳaddasī); for Morocco, Westermarck, i, 169-71.

(7) Social and political roles of the *Ashrāf*. *Sayyids* and *sharīfs* have been and are represented in large numbers throughout the entire Islamic world. Historically, several dynasties of Prophetic lineage have ruled in various regions for longer or shorter periods, e.g. in Egypt and North Africa [see FĀṬIMIDS]; in Persia in general [see ṢAFAWIDS]; in Ṭabaristān (Māzandarān), Daylam, and Gīlān (see e.g. MARʿASHIS; AL-ZAYDIYYA; B. Manz, *The rise and rule of Tamerlane*, Cambridge 1989, 92-5; W. Madelung, art. *Alids*, in *EIr*, i, 881-6, H.R. di Borgomale, *Les dynasties locales du Gīlān et du Daylam*, in *JA*, ccxxxvii [1949], 301-50); in western Arabia (see Snouck Hurgronje, *Mekka*, i; Admiralty War Staff, *Handbook of Arabia*, 107-11; cf. the articles HĀSHIMIDS at III, 262b; MAKKA, at VI, 148a ff.); in the Yemen [*q.v.*; see also AL-ZAYDIYYA]; in modern Jordan [see HĀSHIMIDS at III, 263 ff.]; and in Morocco [see SHURFĀʾ; IDRĪSIDS; ḤASANĪ; SAʿDIDS; ʿALAWĪS; TĀFĪLĀLT; AL-MAGHRIB at V, 1191-2]. The Maghribī case is especially striking, for religio-political claims have been tied strongly to Sharīfian blood lineage, and such lineage has been commonly a key qualification for temporal leadership (see M. Kably, *Musāham fī taʾrīkh al-tamhīd li-ẓuhūr dawlat al-saʿdiyyīn*, in *Madjallat Kulliyyat al-Ādāb* ... (*Djāmiʿat Muḥammad al-Khāmis*), xliii [1978], 7-59; M. Combs-Schilling, *Sacred performances*, New York 1989; M. García-Arenal, *Mahdī, murābiṭ, sharīf: l'avènement de la dynastie saʿdienne*, in *SI*, lxxi [1990], 84 ff.).

Families of *ashrāf* have also exercised local influence even without holding overt political power, as evidenced especially in mediaeval sources by frequent, recurring references to *sāda* or *ashrāf* as one class of the local social, political, or intellectual élite (*aʿyān*

[*q.v.*]) gathered on a given occasion alongside *ʿulamāʾ*, *shuyūkh*, *kuḍāt*, *fukahāʾ*, *akābir*, *wudjūh al-balad*, etc. (see e.g. al-Damurdāshī, 66-7, 91, 224, 326, 331, 342, 380; Ibn Baṭṭūṭa, ii, 188-90, tr. Gibb, ii, 377-8; J. Aubin, *Matériaux pour la biographie de Shah Niʿmatullah Wali Kermani*, Paris-Tehran 1956, 174; R. Mottahedeh, *Consultation and the political process*, in C. Mallat (ed.), *Islam and public law*, London 1993, 20 (citing Miskawayh), 23 (citing Bayhaḳī). Thus in many places the *ashrāf* were an influential local or regional élite—"a blood aristocracy without peer" (R.W. Bulliet, *The patricians of Nishapur*, Cambridge, Mass. 1972, 234)—with considerable political as well as social, power: e.g. Nīshāpūr (see *ibid.*, 234-45; Bosworth, 195, 197-9, 263-4), Harāt (cf. ʿAbd Allāh Wāʿiẓ, *Maḳsad al-iḳbāl-i sulṭāniyya*, ed. M. Harawī, Tehran 1351/1932-3, 18, 73, 87), Bam (cf. Aubin, *Deux sayyids de Bam au XV^e siècle*, in *Akad. d. Wiss. u. d. Lit., Geistes- u. Sozialwiss. Kl.* [Wiesbaden 1956], no. 2, 86-473), Egypt (see Winter, 22-30; al-Damurdāshī, 66), and Morocco (see SHURFĀʾ; Kably, *Société, pouvoir et religion au Maroc à la fin du "moyen-âge"*, Paris 1986, 291-302 and *passim*; Laroui, 92-7). However, for all their prestige historically, the great majority of *ashrāf*, given their constantly increasing numbers, have probably lived and still live in poor circumstances (see e.g. Snouck Hurgronje, *ibid.*, i, 71; Burke, 98).

The genuineness of an ʿAlid pedigree has historically often been open to question, despite efforts at regulation and authentication such as the institution of the *niḳāba* discussed above. See, e.g. SHURFĀʾ, and Westermarck, i, 37, on the difficulty of distinguishing between genuine and assumed Sharīfian descent in Morocco; M. Zilfi, *The politics of piety*, Minneapolis 1988, 95, for an example of 17th-century fraud in some two thousand false claims to *sayyid* tax exemptions uncovered by Ottoman officials in a single town (citing Naʿīmā, Taʾrīkh, Istanbul 1280/1863-4, vi, 402-5, and Kātib Čelebi, *Fedhleke*, Istanbul 1286/1870, ii, 142-7); Z. Bhatty, 94, concerning false claims of Uttar Pradesh *shaykhs* to be *sayyids*; A. Roy, *Islamic syncretistic tradition in Bengal*, Princeton 1983, 61-9, esp. 61 n. 10 (with bibl.), on Bengali Muslims' striving for *ashrāf* status; Faṣīḥ Khʷāfī, *Mudjmal-i faṣīḥī*, ed. Farrukh, Mashhad 1339/1960-1, 157-8, on the evil deeds of one so-called "Sayyid Kalā Kush" (Ḥasan Khʷārazmī Gūsh Burīda) in Zāwa whose false claim to Prophetic descent and title was uncovered in an investigation in 807/1404-5, under Shāhrukh; and Snouck Hurgronje, *Achehnese*, i, 155, on successful but false claims to Prophetic ancestry in Acheh in the late 19th century.

The general trend in the past century seems to have been towards some diminution of *sharīfī* prestige and power in most parts of the Islamic world (see e.g. Winter, 28-30), yet the *ashrāf* still almost everywhere enjoy special social, and often popular religious status. Their prestige remains presumably greatest in Shīʿī communities and in the Maghrib. The genealogical tradition has survived in its greatest purity in western Arabia and Ḥaḍramawt. The family of ʿAlawīs in Ḥaḍramawt, which has produced many notable jurists, theologians, and mystics, regard only the West Arabian *sharīfs* as their equals in birth [see ḤAḌRAMAWT, in Suppl.]. On the *sayyids* of Ḥaḍramawt, who are also strongly represented in the Malay Archipelago, and to whom belong the founders of the sultanates of Siak and Pontianak, see Snouck Hurgronje, *Verspr. Geschr.*, iii, 162 ff., and *Achehnese*, i, 153 ff.; cf. W. Ende, *Schiitische Tendenzen bei sunnitischen Sayyids aus Hadramaut: Muhammad b. ʿAqīl al-ʿAlawī* (1863-1931), in *Isl.*, 1 (1973), 82-97. On the history of the Sharīfian dynasties of Mecca and the Ḥidjāz and on the *sharīfs* of Morocco, see the refs. given above and also the sketch in al-Batanūnī, 73-81. Somewhat dated information on the families of *ashrāf* in Arabia is given in the Admiralty War Staff's *Handbook of Arabia*, see index.

Winter, *The ashrāf and niqābat al-ashrāf in Egypt in Ottoman and modern times*, in *Asian and African Studies*, xix (1985), 17-41.

(C. VAN ARENDONK-[W.A. GRAHAM])

SHARĪF, the pen-name of several Persian poets of various periods, among them the author of the *Saʿādat-nāma*, a collection of moral precepts in some 300 verses, wrongly ascribed, in mss. and in the printed editions, to the famous 5th/11th-century Ismāʿīlī poet Nāṣir-i Khusraw [*q.v.*]. This poem was first published by E. Fagnan, together with a (rather inadequate) French translation, from a Paris manuscript in *ZDMG*, xxxiv (1880), 643-74, reprinted (from Fagnan, with some emendations) in the appendix to the edition of Nāṣir's *Safar-nāma* published in Berlin, Kaviani Press 1341/1922-3, and then (from the Berlin edition, but collated with a manuscript in the editor's possession) in N. Taḳawī's edition of Nāṣir's *dīwān*, Tehran 1307 *Sh*./1928, 545-61. There is also an annotated English translation by G.M. Wickens in *IQ*, ii (1955), 117-32, 206-21. In Taḳawī's manuscript the text ends with a verse in which the author tells his readers to heed "the words of Sharīf", evidently his poetic signature; there is no mention in this recension of the name Nāṣir. In some other copies "Sharīf" is replaced by "Nāṣir-i Khusraw", while the manuscript

published by Fagnan retains the verse mentioning "Sharīf" (three lines from the end) but adds a final verse giving the author's name as "Nāṣir b. Khusraw". It is quite obvious that (except in the version represented by Taḳawī's ms.) the text has been tampered with. The poem is clearly not by Nāṣir-i Khusraw, whose pen-name was "Ḥudjdjat", not "Sharīf", and whose style is quite unlike that of the *Saʿādat-nāma*; moreover, the latter poem contains no trace of Ismāʿīlī doctrines. Nothing else is known of our Sharīf, except that he must have lived before the middle of the 9th/15th century, the date of the earliest manuscripts, though he could very well have been a good deal earlier.

The modern Persian scholar M.T. Bahār (in his *Sabk-shināsī*, iii, Tehran 1321 *Sh.*/1942, 188) identified the author of the *Saʿādat-nāma* as one Nāṣir al-Dīn b. Khusraw Iṣfahānī, who supposedly died in 735/1334-5, but in fact this person is totally fictitious. Bahār merely misconstrued the entry on the *Saʿādat-nāma* in the *Kashf al-ẓunūn* of Ḥādjdjī Khalīfa, who, following Dawlatshāh (61-4), wrongly makes Nāṣir-i Khusraw a native of Iṣfahān (see ed. Flügel, iii, 598, ed. Yaltkaya/Bilge, ii, 990; the date "735" is evidently a misprint in the oriental edition used by Bahār).

A striking feature of the poem is the vehemence with which the author denounces the "great ones" and his insistence that, after the prophets and saints, the best of mankind are the peasants, and then the artisans.

Bibliography: Given in the article.

(F.C. DE BLOIS)

AL-**SHARĪF ABŪ MUḤAMMAD IDRĪS** B. ʿALĪ, called ʿImād al-Dīn, a Ḥasanī *sharīf* of Yemen. Belonging also to the Zaydī Ḥamzas, he is usually given the *nisba* al-Ḥamzī. He was a Ṣanʿānī, was born in 673/1274 and died in 714/1314. Idrīs had a strict Zaydī background and his early days were spent under the eye of his father, Djamāl al-Dīn ʿAlī, who played a prominent military part on the side of the Zaydīs in the Zaydī-Rasūlid struggles of the late 7th/13th century. By the time his father died in 699/1299, he had made his peace with the Rasūlids and Idrīs was left in charge of the Ḥamzī *ashrāf* in the Yemen. From 700/1300 onwards relations between Idrīs and the Rasūlid sultan al-Muʾayyad Dāwūd became progressively closer. The Rasūlid granted him as fiefs (*iḳṭāʿāt*) al-Kaḥma and Mawzaʿ in Tihāma and the administrative and military experience which he gained during more than fifteen years of service with the Rasūlids was considerable.

Idrīs was also renowned for his learning, particularly in the fields of *fiḳh*, poetry and history, and there is mention of numerous books composed by him. But it was in the latter discipline that he was in particular famous. Alone extant among other historical works is his *Kanz al-akhbār fī maʿrifat al-siyar wa ʾl-akhbār*, the Yemenite part of which has recently appeared in print (Kuwait 1992), edited by ʿAbd al-Muḥsin al-Madʿadj. The work begins as an abridgement (*ikhtiṣār*) of Ibn al-Athīr's [*q.v.*] *Kāmil*, tracing the history of Islam from the time of the Prophet. Additional material is provided, however, on the history of ʿIrāḳ, Egypt and Syria. Of great value is the final section of the third part and the whole of the fourth and final part of the work which concern the history of Yemen down to the year 714/1314, i.e. the date of the author's death.

The Yemenite section also begins with the period of the Prophet. The chief town, Ṣanʿāʾ [*q.v.*], is given fairly detailed treatment, its foundation and early development, its most important early buildings like the Great Mosque and the castle of Ghumdān [*q.v.*]. On the early history, the *Kanz* is an extremely useful source for the governors of the Yemen during the period of the Prophet, the Orthodox caliphs, the Umayyads and ʿAbbāsids down to the year 204/819, when the author turns his attention to the earliest dynasty in Islamic times in the Yemen, the Ziyādids [*q.v.*] and thereafter to the various dynasties which ruled over different parts of the Yemen in early Islam. As we might expect, he does not neglect the history of the Zaydī imāms and chronicles too the appearance in the Yemen of the Ismāʿīlī *daʿwa* in the late 3rd/9th-early 4th/10th century. The work is also of value as an important source of the Rasūlids in the Yemen, and from fol. 191a of the British Library ms. Or. 4581 (ed. Madʿadj, 111), the author speaks as an eyewitness of the events which played out around him. The *Kanz* was itself the subject of a further abridgement, *Nuzhat al-abṣār fī ikhtiṣār Kanz al-akhyār*, composed by the Rasūlid sultan al-Afḍal ʿAbbās (d. 787/1385).

Bibliography: The Kuwait 1992 ed. by al-Madʿadj, entitled *Taʾrīkh al-Yaman*, is a timely and competent piece of work, edited from the B.L. ms. only, with an excellent editorial introd. (7-22); Ayman Fuʾād Sayyid, *Maṣādir taʾrīkh al-Yaman fī al-ʿaṣr al-Islāmī*, Cairo 1974, 138-9, lists two other mss., one in Lucknow and another in a private library in Ṣanʿāʾ; Ḥusayn ʿAbd Allāh al-ʿAmrī, *Maṣādir al-turāth al-Yamanī fī al-Matḥaf al-Biriṭānī*, Damascus 1980, 54-5, gives a comprehensive list of Yemeni primary sources for the author and his work, among which are ʿAlī b. al-Ḥasan al-Khazradjī, *The Pearl-strings; a history of the Resúliyy dynasty of Yemen*, ed. and tr. J.W. Redhouse, esp. i, Leiden-London 1906, 315-17, 318, 324-6 etc.; Muḥammad b. ʿAlī al-Shawkānī, *al-Badr al-ṭāliʿ bi-maḥāsin man baʿd al-karn al-sābiʿ*, ii, Beirut n.d., appendix, 52-3.

(G.R. SMITH)

AL-**SHARĪF** AL-ʿ**AḲĪLĪ**, ABU ʾL-ḤASAN ʿALĪ B. AL-ḤUSAYN b. Ḥaydara b. Muḥammad b. ʿAbd Allāh b. Muḥammad, from the genealogical line of ʿAḳīl b. Abī Ṭālib [*q.v.*]. Since ʿAḳīl was a half-brother of ʿAlī (the Prophet's nephew), al-ʿAḳīlī was seen to belong to the Sharīfian nobility, and therefore was entitled to a regular income. As a poet of independent means, al-ʿAḳīlī lived *ca.* 350-450/960-1060 in the old town of al-Fusṭāṭ, next to the then newly-founded city of al-Ḳāhira (Cairo).

Apart from a short poem in praise of a chancellor who was in the service of the Fāṭimid al-Ḥākim bi-amr Allāh, and a few poems dedicated to al-Ḥusayn and Djaʿfar, respectively son and grandson of Djawhar, the general who had conquered Egypt on behalf of his Fāṭimid masters, he did not write poems in praise of state officials. Usually, al-ʿAḳīlī composed his poems in order to describe his personal pleasures, together with his intimate friends who used to frequent his literary salon. Thus the poet's quiet lifestyle might have been the reason why details concerning his life came to be neglected by later generations. His poetry, however, was highly valued by Ibn Saʿīd al-Maghribī, who in his *Mughrib* (see *Bibl.*) gave extensive quotations.

The poet's *Dīwān* itself, edited on the basis of several manuscripts, shows al-ʿAḳīlī's versatility in various genres: we find *khamriyyāt*, wherein the poet shows himself an admirer of Abū Nuwās's style; his *ghazals* chiefly consist of small poetical pieces, often with a highly rhetorical play on words. In his invective poetry, *hidjāʾ*, he attacks—sometimes with obscene vulgarity—a whole range of individuals, such as fellow poets, a

grammarian and a singer whose performance he did not appreciate, and corrupt officials. Another of his genres consists of *rawḍiyyāt*, i.e. descriptions of gardens, flowers, ponds and fountains. Interesting are his poems describing inanimate objects, such as a painted screen or a curtain. The poet also composed some brief ascetic poems, resembling the *zuhdiyyāt*, a few of which he regularly placed at the end of every one of the alphabetical sections within his *Dīwān* (i.e. sections of the rhyme letters *alif*, *bā'*, *tā'*, ... etc.).

His long poem on "Rejection of wine in the evening and praise of wine in the morning" (*Muzdawidja fī dhamm al-ghabūḳ wa-madḥ al-ṣabūḥ*, in *Dīwān*, 301-7) was intended both as an imitation and contradiction [see NAḲĀ'IḌ] of an earlier poem by Ibn al-Muʿtazz, on "Rejection of wine in the morning" (*Urdjūza fī dhamm al-ṣabūḥ*). In general, al-ʿAḳīlī proved himself a late supporter of the new style which Ibn al-Muʿtazz [*q.v.*] had begun to advocate some one hundred years before.

Bibliography: *Dīwān al-Sharīf al-ʿAḳīlī*, ed. Zakī al-Maḥāsinī, n.d. but not before 1953; Ibn Saʿīd, *al-Mughrib fī ḥulā 'l-Maghrib, Kitāb al-ightibāṭ fī ḥulā madīnat al-Fusṭāṭ* (= section on al-Fusṭāṭ), ed. Zakī Muḥammad Ḥasan, Shawḳī Ḍayf and Sayyida Kāshif, Cairo 1953, 205-49; Brockelmann, S I, 465 no. 10; Muḥammad ʿAbd al-Ghanī Ḥasan, *Miṣr al-shāʿira fi 'l-ʿaṣr al-Fāṭimī*, Cairo 1983.

(P. SMOOR)

SHARĪF ĀMULĪ, a Mughal noble of the 10th/16th century. Persian by birth, he spent some time at Balkh in the *khānaḳāh* of the Ṣūfī Muḥammad Zāhid, but allegedly because of his heretic views was driven away from there and forced to go to the Deccan. But there, too, his heresies drew upon him the unfavourable attention of the local rulers, leading to his flight to Mālwa, then in Akbar's empire (984/1576-7). He was acclaimed as a great scholar by the Persian notables, and was granted audience by Akbar, whom he introduced to the doctrines of the Nuḳṭawī sect founded by Maḥmūd Pasīkhānī [see NUḲṬAWIYYA]. Henceforth, he became one of Akbar's advisors in religious and legal matters. Official appointments followed: *amīn* and *ṣadr* of Kābul (993/1585), *amīn* and *ṣadr* of Bihār and Bengal (1000/1591-2); and governor of Adjmēr with the *pargana* of Mohan near Lucknow in *djāgīr* (1007/1598-9). In 1004/1595 he had the rank of 900 *dhāt*. His status remained high under Djahāngīr, who, while recording impressions of nobles immediately after his accession (114/1605-6), praises him highly in his memoirs, and says he raised his *manṣab* from 2000 to 2500 *dhāt*. The date of his death is not recorded.

Sharīf Āmulī seems to have been possessed of exceptional learning and eloquence, and is said to have written a book called *Tarashshuḥ-i ẓuhūr*, though neither this nor any other work from his pen has survived. He earned the bitter enmity of theologians like ʿAbd al-Ḳādir Badā'ūnī [*q.v.*], the famous historian, who mentions his arrival in India in order to insert a diatribe against him and his heretical views. The author of the *Ṭabaḳāt-i Akbarī*, however, acclaimed him as "a monotheist (*muwaḥḥid*) of the time, having a true expertise in mysticism".

Bibliography: Niẓām al-Dīn Aḥmad, *Ṭabaḳāt-i Akbarī*, ed. B. De, Calcutta 1931, ii, 451; Badā'ūnī, *Muntakhab al-tawārīkh*, ed. ʿAlī Muḥammad and Nassau Lees, Bibl. Ind. Calcutta 1864-9, ii, 245-8; Djahāngīr, *Tūzuk*, ed. Sayyid Aḥmad Khān, Ghāzīpur and ʿAlīgaṛh 1864, 222; Shāh Nawāz Khān, *Ma'āthir al-umarā'*, ed. Mawlwī ʿAbd Raḥīm, iii, 285-90; Abu 'l-Faḍl, *Ā'īn-i Akbarī*, tr. Blochmann, revised D.C. Phillott, Calcutta 1927, i, 502-4.

(M. ATHAR ALI)

AL-**SHARĪF** AL-**DJURDJĀNĪ** [see AL-DJURDJĀNĪ].

AL-**SHARĪF** AL-**GHARNĀṬĪ**, Muḥammad b. Aḥmad ... b. al-Ḥasan b. ʿAlī b. Abī Ṭālib al-Sabtī, Abū ʿAbd Allāh and Abu 'l-Ḳāsim (697-760/1297-1359), philologist, grammarian and poet of Muslim Spain.

He was born at Sabta (Ceuta) and deeply educated in Arabic language and the law. At an unknown date he went to Granada and worked in the *dīwān al-inshā'* of the Naṣrid Muḥammad IV (725-37/1325-37), and became friendly with the eminent poet Ibn al-Djayyāb [*q.v.*]. He then embarked on a legal career and in 737/1336 became *ḳāḍī* of Malaga and then six years later followed Ibn Burṭāl as *ḳāḍī 'l-djamāʿa* of Granada. He lost his post in 747/1346 because of corruption charges (of which Ibn al-Khaṭīb considered him innocent), and took up teaching and study until he returned to his previous job two years later at the command of Yūsuf I. He died in Granada aged 63 after a long illness which inspired the physician Muḥammad al-Shaḳūrī to write his *Tuḥfat al-mutawaṣṣil wa-rāḥat al-muta'ammil*.

The sources stress his wide knowledge of language and literature. His poetic *dīwān*, dedicated to his pupil Ibn al-Khaṭīb, is lost, but fragments have been preserved by the latter and by al-Nubāhī and al-Maḳḳarī. He also made a résumé of the *dīwān* of his friend and successor as *ḳāḍī 'l-djamāʿa*, Abu 'l-Barakāt al-Balafīḳī called *al-Lu'lu' wa 'l-mardjān*, and a *Sharḥ al-Ḳaṣīda al-khazradjiyya* (see Brokelmann, I², 380, and art. AL-KHAZRADJĪ). In the field of Arabic grammar, he wrote a *sharḥ* and a *taḳyīd* on the *Tashīl al-fawā'id* of Ibn Mālik. He further made a *taḳyīd* on Ibn al-Abbār's [*q.v.*] *Durar al-simṭ fī khabar al-Sibṭ*, and was the author of a legal work, *Ḥaṣr mathārāt al-ḳuḍāt bi 'l-adilla* (Brockelmann, S II, 346). But al-Sharīf's most famous work was his *Rafʿ al-ḥudjub al-mastūra ʿan maḥāsin al-Maḳṣūra li 'l-Ḳarṭādjannī*, considered as a model of the genre, analysing each verse of the poem, with a grammatical commentary, al-Ḳarṭādjannī's sources, poetic citations on the same subject, analysis of the rhetorical figures used, and historical and biographical details. The work is extant in several mss., and was published, together with the *Maḳṣūra*, at Cairo 1344/1925.

The names of two of al-Sharīf's sons are known, Aḥmad and Muḥammad. The first followed the career of his father as a *kātib* and a *ḳāḍī*, whilst the second devoted himself to Ṣūfism and frequented numerous *zawāyā* in the region of Granada before becoming likewise *ḳāḍī 'l-djamāʿa* in the Naṣrid capital.

Bibliography: Ibn al-Khaṭīb, *Iḥāṭa*, ii, 181-7; Nubāhī, *Marḳaba*, 171-7; Ibn Farḥūn, *Dībādj*, ii, 267; Suyūṭī, *Bughya*, i, 39 no. 64; Ibn Ḥadjar, *al-Durar al-kāmina*, iii, 443 no. 3452; Ibn al-Ḳāḍī, *Djadhwat al-iḳtibās*, i, 306 no. 314; Brockelmann, II², 318, S II 346; Ziriklī, v, 327; Kaḥḥāla, viii, 252, 317. There is a very detailed biography of al-Sharīf in I. Calero Secall, *Una familia ceutí en la Granada de los siglos XIV y XV: los Banū l-Šarīf al-Ḥasanī*, in *Al-Qantara*, vii (1986), 85-105. AL-SHARĪF AL-IDRĪSĪ [see AL-IDRĪSĪ].

AL-SHARĪF AL-MURTAḌĀ [see AL-MURTAḌĀ].

SHARĪF PASHA, Muḥammad (1823-87), Egyptian statesman in the reigns of the Khedives Ismāʿīl and Tawfīḳ. He was of Turkish origin and was born in Cairo, where his father was then acting as *ḳāḍī 'l-ḳuḍāt* sent by the sultan. When some ten years later the family was again temporarily in Cairo, Muḥammad ʿAlī [*q.v.*] had the boy sent to the military school recently founded by him. Henceforth, his whole career was to be spent in the Egyptian service. Sharīf was a member of the "Egyptian mission" sent to Paris for higher education which included the future Khedives Saʿīd Pasha and Ismāʿīl Pasha and the statesman ʿAlī Mubārak Pasha. He then took a military course at St. Cyr (1843-5), and served for some time in the French army until the mission was recalled by ʿAbbās I in 1849. For the next four years he acted as secretary to Prince Ḥalīm, then took up military duties again in 1853 and attained the rank of general under Saʿīd Pasha. During this period, he was much associated with the commander-in-chief of the Egyptian army, Sulaymān Pasha (de Sèves [see SULAYMĀN PASHA, AL-FRANSAWĪ]), whose daughter he married.

In 1857 Sharīf Pasha began his political career as Minister of Foreign Affairs and he acted as deputy for the Khedive Ismāʿīl [see ISMĀʿĪL PASHA] when the latter went to Istanbul in 1865. He later filled in succession all the high offices of state. It was he who in 1866 drew up the plans for the new *Madjlis al-nuwwāb* [see MADJLIS. xvi].

After the inauguration of constitutional government in Egypt in 1878, three cabinets were formed by Sharīf Pasha. When in February 1879 Nūbār Pasha's [*q.v.*] cabinet (which included two Europeans) had been overthrown by the nationalist parliament, a constitutionalist movement was begun under Muḥammad Sharīf Pasha, the leader of which in Parliament was ʿAbd al-Salām al-Muwayliḥī. This party drew up a plan of financial reforms, which was laid before the Khedive, who in April 1879 entrusted Sharīf Pasha with the formation of a cabinet composed of purely Egyptian elements. This new cabinet instituted a Conseil d'État and had a new organic law passed by the Chamber (promulgated on 14 June 1879). After the accession of the Khedive Tawfīḳ Pasha [*q.v.*], Sharīf Pasha's cabinet was remodelled, but the new government was not so nationalist in complexion as the preceding. In August of the same year, the new Khedive refused to approve the constitution drawn up by the Prime Minister, hence on 18 August Sharīf Pasha resigned and was succeeded by Muḥammad Riyāḍ Pasha. Sharīf Pasha then took part in the formation of the "National Society" or "Party" at Ḥulwān, which published a manifesto against Riyāḍ Pasha on 4 November.

During the two years or so of mounting tension between the Khedive and the rising influence in the state of the nationalist elements of the army led by Aḥmad ʿUrābī Bey [*q.v.*], Muḥammad Sharīf Pasha endeavoured to put forward the idea of constitutional reform in order to forestall an attempted putsch by ʿUrābist elements. He became Prime Minister in September 1881, but had to resign in January 1882 in favour of Maḥmūd Sāmī Pasha al-Bārūdī [*q.v.*]. Yet in the late summer of that year, when the Khedive had been restored to power in Cairo by British force of arms and the ʿUrābī revolt crushed, Muḥammad Sharīf Pasha again became Prime Minister (August 1882). He held office during the beginning of the British occupation, but in the end came in conflict with the British government and its Consul-General in Egypt, Sir Evelyn Baring (the later Lord Cromer), when the government required the evacuation of Egyptian forces from the Sūdān in face of the rising power there of the Mahdī [see MAHDIYYA], and resigned in January 1884. He then retired from political life, suffered ill health and died at Graz, being buried at Cairo in April 1887.

By birth, Muḥammad Sharīf Pasha stemmed from the Turco-Egyptian ruling class, so that his attitudes were bound to be more Khedivalist than nationalist, but he managed to establish a reputation for sincerity with the nationalists, who recognised his genuine desire to make Egypt a constitutional state under Muḥammad ʿAlī's house.

(J.H. KRAMERS-[C.E. BOSWORTH])

AL-SHARĪF AL-RAḌĪ, ABU 'L-ḤASAN MUḤAMMAD b. Abī Aḥmad al-Ḥusayn b. Mūsā, was born in Baghdād in 359/970, of an illustrious and highly sophisticated ʿAlīd family, and died in 406/1016. His lineage dated back to al-Ḥusayn b. ʿAlī, through Mūsā al-Kāẓim [*q.v.*], the seventh Shīʿī Imām, whence his *nisbas* al-Mūsawī al-ʿAlawī.

His father Abū Aḥmad al-Ṭāhir (not Abū Ṭāhir, as Krenkow writes in *EI*[1], vol. IV, 329), Dhu 'l-Manāḳib ("the pure man of noble qualities") as the Būyid *amīrs* dubbed him, was born in 304/916-17. He was a distinguished man who was extremely influential, both in the caliphal court and among the populace, on account of his noble ancestry and his cultural eminence. In 354/965 he was appointed *naḳīb* or marshal of the ʿAlīds, and given responsibility for the *maẓālim* and for the Pilgrimage. His career was interrupted in 369/979-80, in which year he was imprisoned by the Būyid ʿAḍud al-Dawla [*q.v.*], with his brother ʿAbd Allāh and numerous other dignitaries, in a fortress in Shīrāz. He had been accused—on the basis of falsified documents—of revealing state secrets and of abuse of trust (Ibn al-Djawzī, *Muntaẓam*, vii, 98). The real charge against him seems to have been the mounting prestige which he enjoyed, prestige which exceeded, if Ibn Taghrībirdī is to be believed (*Nudjūm*, iv, 223), that of the caliph himself. If to this is added the enormous wealth possessed by Abū Aḥmad and coveted by the Būyids, the true reasons behind his detention are easily deduced. It was not until 376/986 that he was freed, following the death of ʿAḍud al-Dawla and the accession of his son Sharaf al-Dawla [*q.v.*]. Rehabilitated, he was reinstated in his official functions and all his property was restored to him.

In the political domain, Abū Aḥmad played an important role. He was entrusted with numerous missions of mediation, all of which he accomplished successfully, through his wisdom and his diplomatic skills. Such was the case, for example, when serious conflict erupted between Sunnīs and Shīʿīs at al-Karkh in 380/990. The consequences could have been very grave had it not been for the intervention of the *naḳīb*, who succeeded in soothing passions and putting

an end to this confrontation (see H.F. Amedroz, *Three years of Buwaihid rule in Baghdad*, in *JRAS* [1901], 619 ff.). Towards the end of his life, Abū Aḥmad suffered poor health and lost his sight. In 400/1009-10 he died, at the age of 97 years (*Dīwān*, ii, 293).

The mother of al-Raḍī, Fāṭima bt. al-Ḥusayn (d. 385/996), was also of ʿAlīd descent, more precisely from al-Ḥasan b. ʿAlī. Her grandfather al-Nāṣir li 'l-Ḥakk, poet and man of letters, was the ruler of Daylam. Al-Raḍī apparently had two sisters, Khadīdja and Zaynab, as well as two brothers, al-Aṭhar, mentioned by the poet al-Maʿarrī (d. 449/1057) in his ode to Abū Aḥmad (*Sikt al-zand*, Beirut 1957, 35), and al-Sharīf al-Murtaḍā (355-493/967-1044 [*q.v.*]), renowned as a writer, poet, theologian, polemicist and leading defender of Imāmism. While the two brothers al-Raḍī and al-Murtaḍā are often mentioned conjointly, their contemporaries seem to have preferred the former, in particular for his poetic gifts and for his personal qualities (cf. Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj*, 39-40).

As regards al-Raḍī's own immediate family, little is known. He apparently had a son, Aḥmad ʿAdnān, known like his grandfather by the cognomen of al-Ṭāhir Dhu 'l-Manāḳib. He followed the example of his ancestors in occupying the post of *naḳīb*. Furthermore, after his death, a second son was born, Abū Aḥmad al-Mūsawī (Ibn ʿInaba, *ʿUmda*, 211).

Intellectual formation.

Al-Raḍī had an education worthy of his rank. While he was still at an early age, and during the absence of his imprisoned father, his mother entrusted him, with his brother al-Murtaḍā, to the eminent Imāmī scholar al-Shaykh al-Mufīd (d. 413/1022 [*q.v.*]), who taught them Shīʿī theology (*op. cit.*, 41). Al-Raḍī continued his studies under the tutelage of other scholars who were among the most distinguished of the time, such as the grammarian Abū ʿAlī al-Fārisī (d. 377/987), the writer Abū ʿAbd Allāh al-Marzubānī (d. 384/994), the Mālikī Abū Isḥāḳ al-Ṭabarī al-Muḳri' (d. 393/995), the Muʿtazilī al-Ḳāḍī ʿAbd al-Djabbār (d. 415/1024) and the philologist and grammarian Ibn Djinnī (d. 399/1002), among others. Al-Raḍī was very much attached to the last-named, in particular. It was, in fact, Ibn al-Djinnī who encouraged him to pursue his career as a poet. In token of admiration and friendship, the master contributed, at a very early stage, a commentary to his renowned *rā'iyya*, an elegy dedicated to the Ḥamdānid Abū Ṭāhir b. Nāṣir al-Dawla (d. 382/992) (*Dīwān*, i, 490-4), and later, to three other poems (cf. *Ḥaḳā'iḳ*, v, 87).

Thus our poet obtained a rich, diverse and profound cultural training. His exemplary friendship and loyalty towards the Sabian Abū Isḥāḳ Ibrāhīm (d. 384/994), who was his senior by more than forty years, testifies eloquently to his tolerant spirit and his freedom of thought.

Considered precocious, he composed his first poem at the age of ten years. However, he did not study the Ḳur'ān until after the age of thirty (al-Thaʿālibī, *Yatīma*, iii, 131).

The portrait provided by his biographers, corroborated furthermore by his poems, is that of a man of honesty, sensitivity, sincerity and finesse, a staunch and loyal friend. He was also immensely proud and conscious of his dignity; he accepted no gift from anyone. On the contrary, he was generous and well-disposed towards scholarship and scholars. He had founded a school, the *Dār al-ʿilm* ("house of knowledge"), where the students were lodged and provided for (Ibn ʿInaba, *op. cit.*, 209).

A committed Imāmī, but without excess or fanaticism, al-Raḍī was open to all tendencies. He showed some sympathy for Shāfiʿism and for Muʿtazilism (cf. Ibn ʿAbbās, *al-Sharīf*, 46-7). He made his own convictions clear in declaring (*Ḥaḳā'iḳ*, v, 17) that he had been drawn, in early life, towards Murdji'ism, but that he had later opted for the dogma of the *waʿd* and *waʿīd* (promises and threats in the life beyond), one of the five fundamental principles dear to the Muʿtazilīs (cf. *Dīwān*, ii, 270).

Political activity.

His biographers, led by Ibn Abi 'l-Ḥadīd (*op. cit.*, i, 34), state that, from an early age, he harboured political ambitions and even aspired to the highest authority in the state, the caliphate itself; some of his verses express this unequivocally (*Dīwān*, i, 358, 536, ii, 167, 408-12). It seems that his friend Abū Isḥāḳ al-Ṣābī encouraged him and built up his hopes (*Dīwān*, ii, 89-90; cf. Ibn Abi 'l-Ḥadīd, *op. cit.*, 26). This idea, which he cherished throughout his youth, came to nothing, and many of his poems convey a sense of disappointment, of deep dejection and of acute pessimism. He was finally obliged to come to terms with reality and to be content with the honours lavished on him by the Būyids, Bahā' al-Dawla [*q.v.* in Suppl.] in particular. In fact, in 380/990, at 24 years old, he was entrusted with his father's responsibilities (the *niḳāba* of the ʿAlīds, the *maẓālim* and the Pilgrimage), when the latter's state of health prevented him from performing these duties himself. Sometimes, it was the two brothers together who assumed the responsibility. He was probably not officially appointed *naḳīb* until 403/1013. Furthermore, Bahā' al-Dawla persisted in showering him with honorific titles: *al-Sharīf al-Djalīl* ("the venerable noble one") (388/998), *al-Raḍī* ("the well-pleasing") (398/1007), *al-Sharīf al-Adjall* ("the most venerable noble one") (401/1011), *Dhu 'l-Ḥasabayn* ("of the two nobilities") and *Dhu 'l-Manḳabatayn* ("of two virtues"). To this writer's knowledge, in the entire history of Islam no one has ever surpassed al-Raḍī in terms of official honours and distinctions.

Poetic activity.

A writer and scholar versed in various disciplines (Ḳur'ān, *Ḥadīth*, language and literature), he was most appreciated in his role as a poet. His contemporary al-Thaʿālibī (*op. cit.*) asserts that he was considered, in terms of quality as well as quantity, the best poet of the Ṭālibīs, indeed of Ḳuraysh in general. Whatever the case, one thing is certain: al-Raḍī was passionate about his poetry. He was proud and jealous where it was concerned. He never permitted himself to utilise it for material ends, nor to obtain presents and benefits, as was the practice of innumerable poets of his time. He sought only honour and prestige as rewards for his poetry. His panegyric poems were devoted mostly to his relatives and friends; the others were addressed to certain public figures, those whom he genuinely trusted. Among the latter, worthy of mention is the caliph al-Ṭā'iʿ (d. 393/1003 [*q.v.*]), to whom he dedicated numerous laudatory poems revealing sincere affection and respect for the man. One of his most moving poems is that in which he recounts the deposition of the caliph in 381/991 by Bahā' al-Dawla (*Dīwān*, ii, 444-8). He continued to dedicate poems to him until the former caliph's death twelve years later in 393/1003 (*Dīwān*, 197-201). But his relations with al-Ḳādir (d. 422/1031 [*q.v.*]), successor to al-Ṭā'iʿ, were not so favourable. Indeed, he wrote some eulogies addressed to him, but without much conviction. On the contrary, he composed a number of audacious, impertinent and provocative poems which sometimes roused the ire of the caliph, such as that

in which he compares himself to the latter, declaring in his presence (*Dīwān*, ii, 42):

"Alas, *Amīr* of the Believers! We are equal, at the summit of glory ...
Only the caliphate, of which you hold the reins, separates us."

Bahā' al-Dawla was one of the few *amīrs* to enjoy eulogies on the part of this poet, in the guise of appreciation for all the privileges which he had accorded him (*Dīwān*, i, 13-18, 53-64, 277-8, 413-18 and *passim*). But the poems in which al-Raḍī displays innovation and skill of the highest order are those devoted to praise of his father. There are some forty of these, and no other Arab poet has ever produced anything comparable. He treated his father, whose personality fascinated him, as though he were a caliph. On the occasion of every festival, he presented him with a poem. Furthermore, it was the arrest of his father, in 369/979, which gave the first impetus to his poetic genius. He composed one of his very first poems, of unprecedented power (78 verses), full of grief, melancholy and wisdom, when he was barely ten years old (*Dīwān*, i, 305-10). Other poems were addressed to friends or to men of letters, such as al-Ṣābī, the Ṣāḥib Ibn ʿAbbād, Ibn Djinnī, etc. He lauded their merits and especially—something virtually unique in Arabic literature—their art of the pen and their eloquence (*Dīwān*, i, 280-4, 285-9, ii, 199-68 and *passim*.

Besides panegyric, his *Dīwān* covers all poetic genres: descriptive, satirical, amorous and elegiac. But this poet excelled particularly in the last two (*ghazal* and *rithā'*). His *Ḥidjāziyyāt*, some forty poems in which he sang of love and celebrated the beauty of the fine ladies who were performing the Pilgrimage, made him one of the most renowned Arab poets of all time. Neither his official function as organiser of processions of pilgrims, nor the holy places of Islam, nor his social and religious position, hindered him from expressing tender feelings of love. Admittedly, he was careful not to go too far in this respect and he confined himself to declaring his admiration of feminine beauty in delicate, elegant, restrained and measured terms, in a Bedouin style which recalls Djamīl Buthayna (d. 82/701), ʿUmar b. Abī Rabīʿa (d. 93/712) or Kuthayyir ʿAzza (d. 105/723), far from the libertine exhibitionism of an Abū Nuwās (d. 197/812) or of an Ibn Sukkara (d. 385/995). It is quite simply a case of innocent, platonic (*ʿudhrī*) love, as he says himself (*Dīwān*, i, 175):

"I have loved but, as God knows,
I have only needed to see, to enjoy it ..."

His elegiac poetry is a model of sincerity and sensibility, full of wisdom, of meditation on man, life and death. Among his most moving elegies, notable are those dedicated to al-Ḥusayn b. ʿAlī, to his mother, to his father, to his friend al-Ṣābī and to his master Ibn Djinnī (*Dīwān*, i, 26-30, 44-8, 187-90, 381-6, ii, 63-7, 75-6, 290-6 and *passim*). His last poem of the genre was the elegy addressed to his friend, the writer and poet Aḥmad al-Battī, at the time of his death in Shaʿbān 405/1015 (*Dīwān*, i, 170-1). In this poem, al-Raḍī seems to have a sense of his own impending demise, as he declares (*op. cit.*, 170):

"After you have hurt the one whom you love,
Misfortunes will never spare you!"

In fact, a few months later, his own death supervened. He expired on Sunday, 6 Muḥarram 406/26 June 1016, at 47 years old. He was buried first in his home town, al-Karkh, in the precincts of the mosque of the Anbāriyyīn, in the absence of his brother al-Murtaḍā, who was, it is said, too distressed to attend the ceremony. It was the *wazīr* Fakhr al-Mulk who conducted the funeral prayers. According to Ibn ʿInaba (*op. cit.*, 210-11), the remains of al-Raḍī were said to have been later transferred to Karbalā', to the mausoleum of al-Ḥusayn, near the tomb of his father. Numerous poets paid their respects to him, in particular, his brother al-Murtaḍā, Abu 'l-Ḳāsim al-Maghribī (d. 418/1027) and his disciple Mihyār al-Daylamī (d. 428/1037).

Works.

Despite his relatively early death, and in spite of his weighty official responsibilities, al-Raḍī had the time to compose numerous works, reflecting his extensive and varied culture. His contemporary al-Nadjāshī (*Ridjāl*, 283) has listed some fifty of them. Particularly worthy of mention are the following: (1) His *Dīwān*, of 10,000 verses, the poems in which are often dated (374-405/985-1015), was assembled by several compilers, his son Aḥmad and Abū Ḥakīm al-Khabrī (d. 476/1083) among others (ed. Bombay and Baghdād 1889, Beirut 1890, 1893, and more recently ed. Dār Ṣādir, n.d.). (2) *Khaṣā'iṣ al-Imām ʿAlī* ("Special characteristics of the Imām ʿAlī") (ed. Nadjaf 1949 and Mashhad 1986): written in 383/994, this work was in fact the draft of a more ambitious project. The author intended at the outset to deal with the characteristic virtues of the twelve Shīʿī Imāms (*Khaṣā'iṣ al-A'imma*). He began with ʿAlī: his biography, his qualities and some extracts from his speeches and his wise aphorisms; this gave him the idea of devoting a second work exclusively to the sayings of ʿAlī, with the object of illustrating his oratorical gifts. With the study of the other Imāms still unfinished, he turned immediately to this new enterprise which culminated in the celebrated *Nahdj al-balāgha* (cf. *Nahdj*, 1-3). (3) *Nahdj al-balāgha* ("The way of eloquence") [*q.v.*] (ed. Beirut 1885, Cairo 1905, 1910, 1925 and ed. M.M. ʿAbd al-Ḥamīd, n.d. and Beirut 1983): this is the anthology of the speeches, homilies and letters traditionally attributed to ʿAlī, which al-Raḍī compiled in 400/1010 (see on this subject M. Djebli, *Encore à propos de l'authenticité du Nahdj al-Balāgha*, in *SI*, lxxii [1992], 36-52). (4) *Ḥaḳā'iḳ al-ta'wīl fī mutashābih al-tanzīl* ("Interpretation of Ḳur'ānic images"), sometimes mentioned under the title of *Maʿānī al-Ḳur'ān al-kabīr* ("Obscure meanings in the Ḳur'ān"): this was a monumental work, considered one of the most important exegeses of the Ḳur'ān. Unfortunately, only the 5th volume has survived (ed. Nadjaf 1936). (5) *Talkhīṣ al-bayān fī madjāzāt al-Ḳur'ān* ("Summary of metaphors in the Ḳur'ān") (ed. Cairo 1964, Baghdād 1955): begun on Thursday, 20 Shaʿbān 401/1011 and completed on Sunday, 13 Shawwāl of the same year, this book is probably a summary of the preceding work (cf. *Talkhīṣ*, 288). (6) *al-Madjāzāt al-nabawiyya* ("Metaphors in the *Ḥadīth*") (ed. Baghdād 1911, Cairo 1971). As a talented writer and an admirer of literature, the author wanted to seek out eloquence, rhetoric and metaphor in the three principal sources of the Arabic language, these being the Ḳur'ān, the *Ḥadīth* and the sayings of ʿAlī. It was in this spirit that he composed these last four works. (7) *Rasā'il al-Ṣābī wa 'l-Sharīf al-Raḍī* ("Correspondence with al-Ṣābī"). If al-Ṣafadī is to be believed (*Wāfī*, ii, 374), this correspondence, in prose and in poetry, constituted three volumes. But unfortunately, only an infinitesimal part of it has survived, in a ms. belonging to the Tunisian scholar Ḥ.Ḥ. ʿAbd al-Wahhāb (ed. Kuwait 1961).

Other works, apparently no longer in existence, deserve mention, in particular: (1) *Sīrat wālidih Abī*

Aḥmad (biography of his father), composed in his youth, in 379/990. (2) *al-Ḥasan min shiʿr al-Ḥusayn* ("The fine [poetry] of his friend al-Ḥusayn [b. al-Ḥadjdjādj]). (3) *al-Mukhtār min shiʿr Abī Tammām* ("Anthology of the poems of Abū Tammām"). (4) *Mukhtār shiʿr Abī Isḥāḳ* ("Anthology of the poems of al-Ṣābī"). (5) *Akhbār ḳuḍāt Baghdād* ("Biographies of Baghdādī ḳāḍīs"). (6) *Taʿlīḳ fī 'l-Īḍāḥ* ("Glosses on the *Īḍāḥ*", sc. on the grammatical work of Abū ʿAlī al-Fārisī), etc ...

Bibliography: 1. Works of al-Raḍī. These are already cited in the text.

(MOKTAR DJEBLI)

AL-SHARĪF AL-TALĪḲ, the name by which the Andalusī poet, active in Cordova, Abū ʿAbd al-Malik Marwān b. ʿAbd al-Raḥmān b. Marwān b. ʿAbd al-Raḥmān al-Nāṣir (b. 347/958, d. by 395/1005), is known. A great-grandson of the caliph ʿAbd al-Raḥmān III, he was imprisoned in Madīnat al-Zahrāʾ [*q.v.*] when he was 16 for killing his father out of jealousy over a girl. Among his fellow prisoners were several literary figures, including Abū ʿAbd Allāh b. Masʿūd al-Badjdjānī, who wrote at first love poetry and later *hidjāʾ* on the handsome youth. Among these men, at-Ṭalīḳ developed his skill at poetry, most of which was written in prison. Al-Manṣūr ordered his release in or before 379/989-90, either because of a dream-vision of the Prophet or thanks to the intervention of al-Manṣūr's pet ostrich; the supposedly supernatural cause of his release is said to have given rise to his cognomen, which in one source is said to be Ṭalīḳ al-naʿāma, "released by the ostrich".

Although he is reported to have been a prolific poet, little of his work is extant, and that only in fragmentary quotations. His friend, Ibn Ḥazm calls him the greatest Andalusian poet of his time and compares his rank among the poets of the Andalusian Umayyads to that of Ibn al-Muʿtazz among the ʿAbbāsids because of the "gracefulness of his poetry and the beauty of his similes." Particularly appreciated was his *ḳāfʾiyya* beginning:

ghuṣun[un] yahtazzu fī diʿṣi naḳā
yadjtanī minhu fuʾādī ḥuraḳā

("A bough, quivering on a sandy hillock/from which my heart harvests burning!"); but only 41 verses, probably not the entire poem, are extant. The extant fragments deal mostly with wine and flowers.

(R.P. SCHEINDLIN)

AL-SHARĪF AL-TILIMSĀNĪ, the name given to a dynasty of scholars of Tlemcen.

1. MUḤAMMAD B. AḤMAD, Abū Ṭālib

(a) Life

This scholar (*ʿālim*) of Tlemcen, who was born in 710/1310 and died in 771/1369 or 1370, is the renowned ancestor (*mashhūr*) of a family which has produced several generations of jurisconsults (*fuḳahāʾ*), and more specifically of "philosopher-jurisconsults" (Abū Bakr Ibn Shuʿayb) or philosophers of law, also known as "theoreticians of law" (W.B. Hallaq), particularly distinguished among whom are his two sons. He was nicknamed al-ʿAlawī, being the native of a village situated a day's journey from Tlemcen and called al-ʿAlawiyyīn.

He studied under masters of repute, including Abū Zayd (d. 743/1342) and Abū Mūsā (d. 749/1348), with whom he studied science of law (*fiḳh*), sources of law (*uṣūl al-fiḳh*) and dogmatic theology (*ʿilm al-kalām*). He also studied under the teacher of ʿAbd al-Raḥmān and Yaḥyā Ibn Khaldūn, Abū ʿAbd Allāh al-Ābilī (d. 757/1356), a citizen of Tlemcen of Andalusian origin (from Avila), later a resident of Fās, where he became the disciple of the mathematician Ibn al-Bannāʾ (d. 721/1321). Among his other distinguished teachers were the savant and mystic ʿAbd Allāh b. Ibrāhīm al-Madjāsī, nicknamed "the Weeper" (*al-Bakkāʾ*, *Bustān*, 121, tr. 132), the *ḳāḍī* Muḥammad al-Tamīmī (who was appointed governor of Bidjāya, where he died in 756/1355), Abū Mūsā ʿImrān al-Mashaddālī (a native of the region of Bidjāya, d. 745/

1344-5), the *ḳāḍī*s Ibn ʿAbd al-Nūr (Abū ʿAbd Allāh Muḥammad, d. 748/1337-8), Ibn al-Ḥasan (Abu ʾl-ʿAbbās Aḥmad, d. 767/1366), and the astronomer and mathematician Abū ʿAbd Allāh Muḥammad Ibn al-Nad̲j̲d̲j̲ār (d. 749/1348-9).

In 740/1339 he set out for Tunis, where he attended courses given by the *ḳāḍī* Muḥammad Ibn ʿAbd al-Salām (675-749-1277-1348), the commentator on Ibn al-Ḥad̲j̲ib (d. 646/1249), studying in particular the chapter concerning Ṣūfism (*faṣl al-taṣawwuf*) in the *Kitāb al-S̲h̲ifāʾ* of Ibn Sīnā, and the shorter and middle-sized commentaries on Aristotle by Ibn Rus̲h̲d, which correspond to the *Organon* and which illustrate the methods of the Greek thinker (the work always begins with the analysis and detailed criticism of the ideas of his predecessors) and his style of discourse.

Al-S̲h̲arīf also engaged in the study of mathematics, of astronomy and of the science of the division of inheritances (*al-farāʾiḍ*). He escaped the "Black Death" of 749/1348, which originated in the Orient and spread throughout the West, decimating the intellectual élite of North Africa. On his return to Tlemcen, and until the capture of this town in 753/1352 by the Marīnid sultan Abū ʿInān, he gave courses which were well attended, among others by students from neighbouring countries.

Abū ʿInān appointed him as a member of his academic council (*al-mad̲j̲lis al-ʿilmī*) and introduced him to his court in Fās. There he gave instruction to the royal family, to the children of the nobility and to eminent individuals of the court (*awlād al-s̲h̲urafāʾ wa ʾl-ʿuẓamāʾ*, *Bustān*, 117). Some of his pupils were to become renowned, such as the notary and astronomer (*muwaḳḳit*) attached to the mosque of al-Ḳarawiyyīn Abū Zayd ʿAbd al-Raḥmān al-Madyūnī (al-Ḳādirī, b. 777/1375-6) and the traditionist scholar Abū Zakariyyāʾ Yaḥyā al-Sarrād̲j̲ (d. 805/1402-3). On the death in 759-1358 of Abū ʿInān and with the consent of the Marīnid *wazīr* ʿUmar b. ʿAbd Allāh, al-S̲h̲arīf al-Tilimsānī accepted an invitation from the sultan of Tlemcen, Abū Ḥammū II (723-91/1323-89) who appointed him an advisor, being impressed by his superb intellectual qualities (*and̲j̲abuhum ʿaḳl^an^*, *Bustān*, 170, tr. 190), his expertise in the theology and law of the Mālikī *mad̲h̲hab* and his pre-eminence in the science of divergences (*al-k̲h̲ilāfiyyāt* or comparative law, which analyses the different schools of Muslim law).

Abū Ḥammū II asked for the hand of the scholar's daughter in marriage, then appointed him director of the Yaʿḳūbiyya *madrasa*, specially founded for the scholar and richly endowed with *ḥubus*. Subsequently, it seems that his descendents had the use of a site where the *ḳāḍī* ʿAbd al-Wāḥid al-Wans̲h̲arīsī, assassinated during a period of instability in Fās, was buried in 957/1550 (al-Maḳḳarī, *Nafḥ al-ṭīb*, v, 280). The precincts of the mosque and the *madrasa* became a royal cemetery; in later times, only the mosque and the *ḳubba* remained, taking the name of the saint Sidi Brāhīm al-Maṣmūdī (d. 804/1401), also buried in the same cemetery.

The life of al-S̲h̲arīf is informative on the climate of religious rivalry between the Mag̲h̲ribī powers, in particular the Marīnid and Zayyānid or ʿAbd al-Wādid dynasties. Anxious for legitimacy, both sought to rely on the prestige of the descendants of the Prophet's family, the *S̲h̲urafāʾ* [*q.v.*]. In fact, the ʿAbd al-Wādids claimed, as is asserted by Ibn K̲h̲aldūn (*Muḳaddima*), descent from al-Ḳāsim b. Idrīs and had themselves called, in the Berber dialect of the Zanāta, Ayt al-Ḳāsim. Furthermore, the arrival of the scholar at the invitation of the sultan of Tlemcen was indicative not only of a strategy of alliance destined to enhance the intellectual and cultural prestige of the capital of the central Mag̲h̲rib, but also of a S̲h̲arīfian power-policy, of which one of the most visible aspects was the festival surrounding the celebration of the *Mawlid*.

Al-S̲h̲arīf al-Tilimsānī appears to be a key-individual, an intermediary between the political and the religious, between power and the people, who did not hesitate to defend the *faḳīh*, the marabout or the destitute. Of pleasing physical appearance, he dressed with elegance. He was generous and enjoyed giving advice to people. He was kind-hearted and tolerant towards others, and used his ablutions as a diversion when his irritation was aroused. The prestige which he enjoyed among the dignitaries of the kingdom was supplemented by his popularity and his reputation as a man of piety, capable of producing miracles (*karāmāt*). If he wrote little, this was because when he was not engaged in diplomatic missions (764/1362, 765/1363, 767/1366), most of his efforts were devoted to teaching.

The courses given by al-S̲h̲arīf were characterised by his methodical analyses and the clarity of his language which rendered him a proficient orator. His daily routine began with interpretation of the Ḳurʾān, in which he showed himself an incomparable exegete over a period of twenty-five years. He captivated his audience with his favourite reading, the *Mudawwana al-kubrā* of Saḥnūn (d. 240/854 [*q.v.*]). His commentary on the *D̲j̲umal* of al-K̲h̲ūnad̲j̲ī (author of the *Kitāb al-ʿUmda*, d. 649/1249) was also a component of his courses. He was an accomplished philologist, skilled in the knowledge of the proper use of words, their etymology and their grammatical forms—useful arts in the study of the abundant judicial literature of the different Mālikī schools (Ḳayrawān, Cordova, Bag̲h̲dād, Cairo, etc.), especially in regard to the Ḳurʾān: its grammatical analysis (*naḥw*), its readings (*ḳirāʾāt*) and its variants (*ik̲h̲tilāf*). Furthermore, the art of poetry, ancient history of the Arabs ("Days of the Arabs", *ayyām al-ʿArab*, and "Days of God," *ayyām Allāh*) and Ṣūfism were subjects in which he excelled. In addition to his mastery of the rational and traditional sciences (*al-maʿḳūl wa ʾl-manḳūl*), and sound judgment (*salāmat al-ʿaḳl*), he was also endowed with profound mystical knowledge which he sought to share with his pupils, initiating them especially into the rejection of material goods.

What emerges from his personality is the image of a sincere Muslim whom affluence did not deflect from the defence of the spiritual, moral and humanist values contributing to the cohesion and dynamism of the city. Among his pupils, many acquired renown: in the first place his own sons, ʿAbd Allāh and ʿAbd al-Raḥmān, the *imām* al-S̲h̲āṭibī, Ibn Zamrak, ʿAbd al-Raḥmān Ibn K̲h̲aldūn, Ibn al-Sakkāk (Abū Yaḥyā Muḥammad, d. 816/1413), the *faḳīh* Muḥammad b. ʿAlī al-Madyūnī, the saint and preacher Ibrāhīm al-Maṣmūdī (d. 804 or 805/1401 or 1402), and the jurist Abū ʿAbd Allāh b. ʿArafa al-Warg̲h̲amī (716-803/1316-1400).

Al-S̲h̲arīf al-Tilimsānī is a representative of that class of Mag̲h̲ribī scholars who were employed by the successors to the Almohads in the training of royal functionaries responsible for the sultan's secretariat and for military, religious or judicial administration, in the context of the official teaching of the *madrasas*. Furthermore, the need for such functionaries was augmented by the prosperity of Tlemcen and the development of the diplomatic and commercial relations of the kingdom.

His work is situated in the movement whereby insti-

tutions were re-adapted to Mālikism after the Almohad period. For Ibn Marzūḳ al-Khaṭīb, he revealed a high degree of expertise in the interpretation of the Mālikī doctrine (*Bustān*, 166, tr. 185). According to Ibn Maryam, "he was the last of the great masters of *idjtihād*" seen by this period (*kāna ākhir al-a'imma al-mudjtahidīn al-rāsikhīn, Bustān*, 167, tr. 185). He was responsible for the revival of orthodoxy (*ibid.*, 169, tr. 185), he resuscitated religious law and dispelled heresy (*ibid.*, 167, tr. 185).

In reaction to the Almohad doctrine, illustrated in particular by the *Mahdī* Ibn Tūmart, the scholar equally versed in the sources (*uṣūl*) of law, permitting the deduction of laws from their principles, and in the applications (*furū'*) of law, exerted his critical sense while applying himself to the original texts. Two methods were combined: *idjtihād*, personal interpretation as a means of rectifying or completing passages in the Mālikī treatises, and *taḳlīd*, using the model of the opinions of Mālikī scholars expressed in the treatises on *furū'*, the mystical sense (*bāṭin*) taking on an ever-increasing importance in the interpretation of sources.

With al-Sharīf al-Tilimsānī, the development of the judicial sciences is characterised by an attempt at reconciling these *furū'* with the *uṣūl*, as well as by the more profound study of theology, these various elements forming part of the education dispensed especially in *madrasas*. As with the Ḥafṣid dynasty, the function of *muftī*, initially private and independent, tends to be given official status, becoming an institution designed to bolster the authority of the Banū 'Abd al-Wād. Thus in connection with the school of Bidjāya, and under influences deriving from al-Andalus, from Tunis and from Fās, a judicial practice (*'amal*) is constituted, belonging specifically to Tlemcen and its region, which has left its mark in collections of particular cases (*nawāzil*), where the position of the Divine Law is expressed by an authorised religious scholar (*muftī*), in answer to a question put to him by the jurist (*faḳīh, mustaftī*).

The *fatwā* related by Ibn Maryam (*Bustān*, 178-84) is not so much an example of a judicial decision, an opinion on a point of law delivered by an expert, as a concise survey of the principal issues debated in the 8th/14th century at Tlemcen in the field of *uṣūl al-fiḳh*. More specifically, this *fatwā* reflects the pedagogical concern of al-Sharīf, revealing his characteristic method of addressing the problem from different angles (*bi-wudjūh al-naẓar, ibid.*, 178). It gives an insight into his way of contemplating the rules of interpretation of the sources of law from which are derived the legal statutes (*aḥkām*) which should govern the judicial problems (*nawāzil*) which are presented.

The doctrine of al-Sharīf is characterised here by:

– Insistence on the authority of the Prophet as representative of the Supreme Legislator, God;

– His concern to reconcile rules which appear to be contradictory, e.g. by linking the particular to the general case;

– The resolution of conflicts through the rule of abrogation (*naskh*), which can concern an explicit text (*naṣṣ*) or a judicial decision or rule (*ḥukm*);

– A technique close to that of such Ash'arīs as al-Ash'arī himself, al-Djuwaynī, al-Ghazālī and al-Rāzī and to that of mediaeval Christian scholarship (the technique of division and of classification, reference to religious authority, the hypotheses envisaged being most often expressed in the form of the syllogism, the use of copious evidence in argumentation, refutation of the opponent through his own arguments or through *argumentum ad hominem, al-ilzām*). Directly, the accent is placed on the delimitation of the question, the demarcation of the controversial points, and then the reduction of divergencies by the elimination of faulty interpretations giving approbation (*taṣdīḳ*) to the erroneous, then turning in the direction of probable certainty, of equitable solutions;

– A rigorous exegesis aided by an analytic logic bordering on an apodeictic logic which does not impute to the texts more than they show, proceeding through the observation of singular principles which resemble one another to the deduction and detachment of the universal rule (e.g. the Aristotelian concept revised by Ibn Sīnā). Simple allegation (*ḳawl*) needs to be confirmed (*yuḥaḳḳiḳu, ibid.*, 183). His procedure for validation between the valid and the non-valid is close to that of the philosopher (e.g. Ibn Rushd), between the true and the false: simple notions (*ma'ānī mufrada*) are all conceivable, it is their composition (*tarkīb*), which gives the concept (*taṣawwur*) which permits affirmation and negation (*al-īdjāb wa'l-salb*), and especially, truth and falsehood (*al-ṣidḳ wa'l-kadhib*);

– A cautious use of analogy (*al-ḳiyās*). This is a means of avoiding, on the one hand, assimilation by analogy which brings about an interpretation far removed from the basic case (*aṣl*), by stressing the resemblance to the assimilated case (*far'*); and on the other, personal opinion (*ra'y*), especially in the absence of a clear expression of legal rules in the texts (*'ibārāt al-naṣṣ*). The arguments used are non-analogical, arguments *a fortiori* (*faḥwa 'l-khiṭāb*, where the themes are to be found more decisively present in the assimilated case than in the basic case), starting with the implicit meaning of the typical text (*a maiore ad minus* or *a minore ad maius, mafhūm al-khiṭāb* or *dalālat al-naṣṣ*, and *reductio ad absurdum, ḳiyās al-'aks*);

– Utilisation of logic, in the general structure, as in the different developments of the reasoning, which adds richness to the text and clarity as well, giving it persuasive force and avoiding ambiguity. However, its presence is diffuse and takes the form in the course of the text, after the manner of Ibn Ḥazm, of stylistic features apparently not designed or intended (for example, the non-categorical syllogism, or, according to Arabic classification, of, e.g. al-Fārābī, disjunctive conditional syllogism);

The predominance of *idjtihād*, here in the sense of judicial effort (Abū Bakr b. Shu'ayb) where faith and knowledge are partners, and which is tied to the notion of action, will, knowledge, truth, while servile imitation (*taḳlīd*) is the symbol of immobilism, of passivity, or ignorance and of falsehood (*al-ghalaṭ*). But the definition of *idjtihād* is fairly broad as applied by al-Sharīf, who acknowledges absolute *idjtihād* in the case of the independent interpreter, who decides without reference to any doctrine, whereas for al-Ghazālī, for example, the independence of this judgment is only valid within the parameters of the school to which the jurisconsult belongs.

It is the concern for just equilibrium (*i'tidāl*), and the feeling that the certainty obtained is only a probable certainty, which leads the jurist, a devout Muslim, subject to the omnipotence of the Legislator (God), to an attitude of moderation (*hay'at al-tawassuṭ*) and of wisdom (*al-ḥikma*). Thus the judge becomes the arbiter, or finds his role in arbitration (since *ḳaḍā* is to settle a dispute, to arbitrate), as is shown by Aristotle's definition of equity (*aequitas*): "Equity seems to be justice which goes beyond the written law" (*Rhetoric*, i, 1374a).

(b) Works

A book on donations (*al-mu'āṭāt* or *al-mu'āwaḍāt*, exchanges); *Sharḥ Djumal al-Khūnadjī—Mukhtaṣar fi 'l-uṣūl*

(or *K. al-Miftāḥ fī uṣūl al-fiḳh* or *Miftāḥ al-wuṣūl fī binā' al-furū' 'alā 'l-uṣūl*), dedicated to the Marīnid sultan Abū 'Inān (749-59/1347-58); a work on predestination and the immutable decrees of God (*Fī 'l-ḳaḍā' wa 'l-ḳadar*); poems (*ḳaṣā'id*) composed at the time of the *Mawlid*; *fatwās* conveyed in the works of al-Maghīlī al-Māzūnī (d. 883/1478) and of al-Wansharīsī, with those of his sons 'Abd Allāh and 'Abd al-Raḥmān, as well as in *al-Bustān*.

2. 'ABD ALLĀH B. MUḤAMMAD, sometimes called Ibn al-Imām, b. 748/1347-8, the elder son of the preceding, who was allegedly informed in a dream that his son would become a scholar. Arriving with his father in Fās, at an early age, he embarked on a multifarious programme of studies which included the Ḳur'ān, as well as the treatise on grammar and logic *al-Djumal* by al-Zadjdjādjī and the *Alfiyya* by Ibn Mālik, under the tutorship of Abū 'Abd Allāh Muḥammad b. Zayd, among numerous other classical works. He read the *Mudawwana* of Saḥnūn with Abū 'Imrān Mūsā al-'Abdūsī. With Abu l-'Abbās Aḥmad al-Kabbāb (d. 777/1375) he studied *al-Talḳīn* by 'Abd al-Wahhāb (d. 422/1030), the *Risāla* of Ibn Abī Zayd al-Ḳayrawānī and the *Kāfiya* of Ibn al-Ḥādjib. With Abu 'l-'Abbās Aḥmad Ibn al-Shammā', he read Ibn al-Ḥādjib (*al-Mukhtaṣar fī 'l-furū'* or *al-Mukhtaṣar al-far'ī*). With the *ḳāḍī* Abu 'l-'Abbās Aḥmad b. al-Ḥasan, whose courses had been attended by his father, he perfected his knowledge of jurisprudence through reading the *Muwaṭṭa'*, *al-Tahdhīb* by the jurist of Ḳayrawān Abū Sa'īd al-Barādhi'ī, and further works by Ibn al-Ḥādjib.

Then, with his father, he studied philosophy in *Maḳāṣid al-falāsifa* by al-Ghazālī, and dogmatic theology in the latter's *al-Iḳtiṣād fī 'l-i'tiḳād*, and in *al-Muḥaṣṣal* by al-Rāzī, the sciences in Ibn Sīnā (*al-Nadjāt*), then, for the principles of law, al-Ghazālī (*Shifā' al-ghalīl*) and Ibn al-Ḥādjib; in rhetoric, the *Talkhīṣ* and *Īḍāḥ* of al-Ḳazwīnī; in dialectic (*djadal*), *al-Muḳtaraḥ* by al-Barawā'ī (517-67/1124-72); in geometry, Euclid; in logic, *al-Djumal* by al-Khūnadjī, previously studied in depth by his father who had written a commentary on it, and for Ṣūfism, al-Ghazālī again. He also studied the *Risāla* of Ibn Abī Zayd al-Ḳayrawānī and was soon perceived to be superior to his father in scholarship. He then taught at the Great Mosque of Tlemcen, giving instruction especially in the Ḳur'ān, in 'Abd al-Haḳḳ (*al-Aḥkām al-ṣughrā*) and in Ibn al-Ḥādjib (*al-Mukhtaṣar al-far'ī*), in the presence of numerous students, the majority of them from Fās. He received a salary from the Mārīnid sultan Abū Fāris 'Abd al-'Azīz (767-74/1365-72) until the restoration of the Banū 'Abd al-Wād. On the death of his father, he was appointed his successor as teacher at the Ya'ḳūbiyya *madrasa* by sultan Abū Ḥammū II. One of his more notable pupils was Ibn Marzūḳ al-Ḥalīd (766-842/1364-1438). When Abū 'Abd Allāh fell ill in 784/1382, his place in the classroom was taken by his brother 'Abd al-Raḥmān. Abū 'Abd Allāh lived for some time in Gharnāṭa, where he was one of the tutors of the great *ḳāḍī* Ibn 'Āṣim, author of the *Tuḥfa*. He perished in a shipwreck between Mālaḳa and Tilimsān in 792/1390.

3. ABŪ YAḤYĀ 'ABD AL-RAḤMĀN B. MUḤAMMAD, born in 757/1356, brother of the preceding. His name,

as regards the *ism* and the *kunya*, appears to be a combination of that of ʿAbd al-Raḥmān Ibn Khaldūn and that of Abū Yaḥyā b. al-Sakkāk (*ḳāḍī* of Fās, d. 816/1413), both present on the night of his birth, in his father's house. After apprenticeship with the Ḳurʾān, he studied in particular, with his father, the fundamentals of law and the *Muwaṭṭaʾ*, then with his brother ʿAbd Allāh, nine years his senior, whose diligent disciple he became. He also undertook study of Ibn al-Ḥādjib, of the *Djumal* of al-Khūnadjī and of the *Īḍāḥ* of al-Fārisī, as a pupil of Abū ʿUthmān Saʿīd al-ʿUkbānī (*ḳāḍī* of Bidjāya, then of Tilimsān, 720-811/1320-1408). Like his brother, he had Muḥammad b. Ḥayātī al-Gharnāṭī for a tutor in the study of the *Djumal* of al-Zadjdjādjī and the *Mukarrib* of Ibn ʿUṣfūr. With the Andalusian Abu ʾl-Ḳāsim b. Riḍwān, he studied the *Ṣaḥīḥ* of Muslim and the *Shifāʾ* of ʿIyāḍ. During his brother's illness, in 784/1382, he taught in his place, before leaving to give a series of lectures in Fās. Renowned for his skill at exegesis and the analysis of the apparent and hidden (*al-ẓāhir wa ʾl-bāṭin*) meaning of texts, he educated numerous students including the writer and poet Abū ʿAbd Allāh Muḥammad b. Yūsuf al-Thaghrī, secretary of Abū Ḥammū II, as well as Abu ʾl-ʿAbbās Aḥmad Ibn Zāghū (782-845/1380-1441), himself an eminent jurist and teacher of the *ḳāḍī* of Māzūnā, al-Maghīlī (d. 883/1478) and of Abu ʾl-Ḥasan ʿAlī al-Ḳalaṣādī (d. 891-1486), an Andalusian and a resident of Tlemcen who was himself the teacher, in arithmetic and the law of succession of the theologian Muḥammad al-Sanūsī (838 or 839-894/1435-1490). He died in 826/1423.

His works comprise a book on the forgiveness of sins (*Taʾlīf ʿalā ʾl-maghfira*); *Sharḥ al-asrār al-ʿaḳliyya* (of al-Muḳtaraḥ, d. 612/1215-16); and *Sharḥ al-Irshād* (of al-Djuwaynī);

4. Abu ʾl-ʿAbbās Aḥmad b. Abī Yaḥyā b. Muḥammad, sometimes called Abū Djaʿfar, senior *ḳāḍī* (*ḳāḍī ʾl-djamāʿa*) of Granada, grandson of Muḥammad al-Sharīf al-Tilimisānī. With his brother Abu ʾl-Faradj, he attended courses given by Marzūḳ al-Ḥafīd at al-ʿUbbād (Sidi Bou-Medein). He died at Tlemcen in 895/1490. He seems to correspond to the *faḳīh*, the *imām* Abu ʾl-ʿAbbās Aḥmad b. Sayyidī Yaḥyā al-Sharīf in the *Miʿyār* of al-Wansharīsī.

Bibliography (complementary to preceding sources): ʿAbd al-Bāsiṭ b. Khalīl, *al-Rawḍ al-bāsim fī ḥawādith al-ʿumr wa ʾl-tarādjim*, Paris 1936, 107; Aḥmad Bābā, 80; Ben Cheneb, *Etude sur les personnages mentionnés dans l'idjâza du cheikh ʿAbd el Qâdir al-Fâsy*, 112; Ḥafnāwī, ii, 96, 297; Ibn al-Ḳāḍī, Rabat, i, 124, Cairo, i, 124; Ibn Maryam, *al-Bustān*, 44, tr. 5. Abu ʾl-Faradj b. Abī Yaḥyā b. Muḥammad, brother of Abu ʾl-ʿAbbās essentially followed courses given by Ibn Marzūḳ al-Ḥafīd at al-ʿUbbād. The details of this education with its different gradations, were typical of Mālikī instruction. On the occasion of the presentation of the *idjāza*, he was dressed by his master in the robe of the Ṣūfīs (*albasahu khirḳat al-taṣawwuf*) in which Ibn Marzūḳ had himself been clad by his father and his maternal uncle. He died in Tlemcen in 868/1463.

Bibliography (complementary to preceding sources): Aḥmad Bābā, 294, 297; Ibn al-Ḳāḍī, Rabat, ii, 1300, Cairo, iii, 1320; Ibn Maryam, *al-Bustān*, 204-6, 209-10, tr. Provenzali, 234-6, 240.

The al-Sharīf al-Tilimsānī family in the cultural life of their time.

The abundant biographical material concerning the al-Sharīf al-Tilimsānī family gives a clear impression of the dynamism of intellectual life and of the institutions which formed its environment, in particular the elaborate system of education in Algeria in the 8th/14th century. The instructive evidence conveyed in the biographical notices show a social promotion of scholars, who are above all jurists, which was owed to their personal merit (*ḥasab*) rather than to their genealogy (*nasab*). The traditional sciences play a significant role in the initial training of a jurist in this period, the sources being the Ḳurʾān and the Sunna. Judicial logic flourished, as did the theological logic manifested in dogmatic theology (*kalām*), and there seems to have been, in this context, a scholastic tradition at Tlemcen, which is seen, in the following century, in al-Sanūsī, with an original synthesis between theology, logic and Ṣūfism, as well as the jurist, logician and historian al-Ṭanasī (d. 899/1494). As in Christian Europe, the work of Ibn Sīnā is one of the central pillars of education, with the huge encyclopaedia constituted by the *K. al-Shifāʾ* (known and annotated in Latin under the title of *Sufficientia*) as a universal work of reference for the age.

This system of education was developed not only at the instigation and under the control of royal power but also in response to a prodigious appetite for knowledge and to the enthusiasm aroused by new ideas and by the growing social prestige of masters. The attraction of the allowances paid to the students admitted to courses (*al-murattab, Bustān*, 170) and the social utility of studies, success in which brought privileges (*intifāʿ*), honours and the guarantee of public careers in the administration or even in the diplomatic service, or confidential occupations (such as that of notary)—all these factors contributed to an increase in the numbers of students (*ṭalaba*), which created problems of accommodation and catering. The hierarchical ranking of disciplines led to the consolidation of the lucrative scholarship of the time, that of law. However, grammar did not fall into disfavour, as it did in Europe, and the epistolary art (*dictamen* or *ars dictaminis*, corresponding to the art of inditing, *inshāʾ*, which is one of the *ʿulūm al-adab*) in association with the practice of rhetoric, enjoyed a revival on account of the development of commercial and diplomatic relations in the Mediterranean region, which necessitated the composition of more numerous and more complex official documents.

SHĀRIḤ ÜL-MENĀR-ZĀDE, Aḥmed (?-1067/?-1657), Ottoman historian.

The son of the Ottoman *ʿālim* ʿAbd ül-Ḥalīm (d. 1051/1641-2), he was born probably in Amasya and himself followed an *ʿulemā* career, rising to be a middle-ranking *müderris* in Istanbul. His father being the author of an Ottoman commentary on an Arabic work on jurisprudence, *Manār al-anwār*, the son became generally known by the *laḳab* Shāriḥ ül-Menār-zāde. He died in Istanbul in Shaʿbān 1067/May-June 1657 (H.J. Kissling (ed.), *ʿUşāḳī-zāde's Lebensbeschreibungen berühmter Gelehrter und Gottesmänner des Osmanischen Reiches im 17. Jahrhundert* (*Ẓeyl-i Šaqāʾiq*), Wiesbaden 1965, 221-2; Meḥmed Sheykhī Ef., *Weḳāʾ iʿ al-fuḍalāʾ*, ms. Süleymaniye, Beşir Ağa 479, fol. 197a; Babinger, *GOW*, 190-1; L.V. Thomas, *A study of Naima*, New York 1972, 136-8).

Shāriḥ ül-Menār-zāde compiled a world history from the creation to the year 1065/1655 which remained in draft form at his death (Kissling, *op. cit.*). This draft was subsequently presented to the Grand Vizier ʿAmūdja-zāde Ḥusayn [Köprülü] Pasha [*q.v.*], who commissioned Naʿīmā [*q.v.*] to write a new Ottoman history based upon it. The earliest references by Naʿīmā to Shāriḥ ül-Menār-zāde's original are to 1018/1609 in the reign of Aḥmed I and the latest to Meḥmed Köprülü Pasha [*q.v.*] in 1065/1655 (Muṣṭafā Naʿīmā, *Taʾrīkh*, Istanbul 1281/1864, i, 10; Thomas, *op. cit.*, 138). It is thought that for the intervening period Shāriḥ ül-Menār-zāde's work was incorporated almost entirely into Naʿīmā's history and that the latter's text is therefore heavily dependent upon it (*Taʾrīkh*, i, 10-11, and *passim*; Thomas, 138-9). Shāriḥ ül-Menār-zāde's history was never published separately; the manuscript is presumed lost.

Shāriḥ ül-Menār-zāde's own sources appear to have been (i) for the late 16th-early 17th centuries, a written history now thought lost but possibly closely related to the chronicle of Ḥasan Bey-zāde [*q.v.*]; (ii) the history by his contemporary Ḳara Čelebi-zāde [*q.v.*]; (iii) his own notes and information from oral informants. According to ʿUshāḳī-zāde, Shāriḥ ül-Menār-zāde was an avid participator in social and official gatherings and was thus well-informed; Naʿīmā regarded him as a shrewd and reliable observer of events (Kissling, *ʿUşâḳî-zâde*, 221-2; Naʿīmā, *Taʾrīkh*, i, 10).

Bibliography: Given in the text.

(CHRISTINE WOODHEAD)

SHARIKA, SHIRKA (A.), nouns with a basic meaning of "partnership, association" (see Lane, *Lexicon*, s.v.) hence from the same root as the theological term *shirk* [*q.v.*] "associating other gods with God", hence polytheism, and *sharīk*, pl. *shurakāʾ* "partner associated in divinity", both frequent in the Ḳurʾān.

As a term of Islamic law, it takes different forms according to the contents and conditions. According to al-Azharī, it signifies the mixing (*khalṭ*) of two or more assets (*māl*) together with the permission of each partner that the other can trade with it. *Sharika* is principally divided into partnership by property (*milk*), and by contract (*ʿaḳd*). The former originates when two "persons" become owners of one property without a contract. This can occur by choice, when they "accept" the subject through someone's gift. Alternatively, it may be brought about without choice; this is the case in inheritance [see MĪRĀTH]. In both cases, it is not lawful for either partner to perform any act with the other partner's share without his permission.

A partnership contract is controlled by the principle of proposal and consent (*īdjāb wa-ḳabūl*). The classification of companies seems to be incompatible between the various schools of *fiḳh*, the incompatibility probably arising from the varying recognition of authentic sources, as well as from the question of what constitutes a valid partnership. The Ḥanafī school, which permits all kinds of partnerships, appears to have the most consistent and logical classification. One can observe that they divided it from a "liability" point of view into:

(1) Partnership in traffic (*sharikat ʿinān*); this is contracted when each party contributes capital. Each partner would accordingly become an agent of the other but not his bail. Equality in capital, responsibility or profit need not result.

(2) The *mufāwaḍa* [*q.v.*] or equal partnership, is contracted between two persons of equivalent property, privilege and religious persuasion.

From a "subject" point of view, partnership for the Ḥanafīs can be divided into:

(1) Partnership in crafts or trades (*sharikat ṣanāʾiʿ*). This is contracted between two craftsmen in a similar trade, such as cobblers or tailors; they agree to work together and share the profit produced. The condition that Mālik makes for *sharikat al-ṣanāʾiʿ* to be valid is that the partners should be in the same or related trades. The Ḥanbalīs permit this kind of partnership, while the Shāfiʿīs and Imāmī Shīʿīs totally reject it on the grounds that it can only take place in regard to capital and not in regard to work.

(2) Partnership of capital *sharikat amwāl*). This is contracted when two partners put their capital in one project and agree on certain conditions for administration, profit and loss.

(3) Partnership of personal credit (*sharikat wudjūh*). This is contracted when two well-known persons (*wudjahāʾ*) ask others to sell to them goods without payment on the basis of their reputation, and then sell the goods for cash. This use of personal credit is rejected by scholars, including al-Shāfiʿī and Mālik, on the basis that it involves work and money that are not actually present, and that it also involves uncertainty and risk (*gharar*) in the traded subject.

The Ḥanbalīs do not seem to identify "liability" as an element of classification when they place both *mufāwaḍa* and *ʿinān* on equal footing with other divisions based on the subject element.

The *muḍāraba* [*q.v.*], also called by the Ḥidjāzīs *ḳirāḍ* [*q.v.*], is another early Islamic form of *sharika* which has been focused upon by modern Muslim writers in Islamic banking. The main difference between the two forms lies in the instruments that each utilises. *Sharika* uses similar "assets", whereas in *muḍāraba* the owner of various "forms" of assets can be partners, in return for a share of the profits, in accordance with their agreement. The risk for the capitalist is his capital, while for the manager, it is his time and effort.

Sharika, together with profit-sharing, *muḍāraba*, are seen by scholars of Islamic banking as the main legal structures for Interest-Free Banking. The idea of IFB has gradually evolved over the last forty years into a fairly comprehensive, though controversial, model of banking. Partnership arrangements (*mushāraka*), according to John Presley, represent a total of 7%-10% of the total financing package of IFB.

AL-**SHĀRIKA**, a shaykhdom of the Gulf, named after its capital city, since 1971 one of the seven United Arab Emirates, third in importance and wealth after Abū Ẓabī and Dubayy [*q.vv.*]. The capital is located 14 km/8 miles north of the latter city, on the western side of the Musandam Peninsula in the lower Persian Gulf. Commonly rendered in English as Sharjah, reflecting the dialectical pronunciation al-Shārdja, the town is mentioned as early as the 15th century. The 1985 census counted 268,723 inhabitants, 75% of whom lived in the capital. With a total surface of 2,590 km^2, it has the most fragmented territory of any of the seven emirates. The main body stretches inland from the capital on the coast; in addition, there is an area around Khawr Fakkān, and the immediate surroundings of the town of Kalbā—both on the Bāṭina coast along the Gulf of Oman—and three further small enclaves around the Kalbā area. The precise borders are the result of boundary-drawing exercises by British officials in the 1960s, based on surveys of local loyalties to the various rulers. The Emirate also claims the island of Abū Mūsā in the Persian Gulf—jointly administered with Persia since 1971, but forcibly occupied by the latter in 1992.

Since 1972, the Emirate has been ruled by Shaykh Sulṭān b. Muḥammad al-Ḳāsimī, who was agreed upon by the UAE's Federal Supreme Council as the successor to his brother Khālid. The latter was slain in an attempted coup by his predecessor Ṣaḳr b. Sulṭān, who had himself been deposed in 1965 under British pressure for sympathising with Egyptian and Arab nationalist influence. British control over al-Shārika, which was officially ended in 1971, dated back to the 19th century, as part of Britain's determination to control the Gulf region as a whole [see BAḤR FĀRIS], in the course of which the sea power of the Ḳāsimī (pl. Ḳawāsim [*q.v.*]) ruling family of al-Shārika and Ra's al-Khayma [*q.v.*] was sharply reduced by military means, and which was formalised under a number of agreements culminating in the "Exclusive Agreement" of 1892. Until the early 20th century, the Emirate officially included all the territory north of a line between al-Shārika town and Kalbā, except for the coastal shaykhdoms of ʿAdjmān and Umm al-Ḳaywayn, and the north-easternmost part of the Musandam peninsula. Effective control always fluctuated along with the strength of central power and shifting alliances, however, and rule was decentralised at best. Ra's al-Khayma, after several periods of virtual independence under rival members of the family, was recognised by Britain as an independent shaykhdom in 1921. Kalbā, recognised by Britain as independent in 1936 (in connection with the establishment of an emergency airstrip) was reincorporated into al-Shārika in 1952. The same year, however, al-Fudjayra was recognised as an independent shaykhdom, under the *shaykh* of the Sharkiyyīn tribe who had always made up the majority of this area's population. Al-Shārika, once pre-eminent among the Trucial States on the basis of its sea-going power and trade, lost this status to the Banī Yās [*q.v.*] of Abū Ẓabī and Dubayy, as British naval control increased the importance of the latter's land-based power. A revival came with the establishment of the main British airfield in the Gulf (on the route to India) in al-Shārika in 1932. Yet the commercial growth of Dubayy, as al-Shārika's creek began to silt up, had reversed the situation again by the 1950s. A major dispute with Dubayy was solved in 1985, but a number of others (e.g. with al-Fudjayra) remained outstanding in 1995.

Since independence and integration into the UAE, al-Shārika has remained a sovereign emirate, although some powers (including, since 1976, defence) have been transferred to the federal level. The Amīr rules by decree, but informal consultation plays an important role. The Emirate distinguishes itself from the others by its relatively greater achievement in education (the first modern school in any of the emirates was established here in 1953, and the Amīr himself holds a doctorate from Exeter University), by a relatively outspoken press, and by the fact that alcohol was banned in 1985. Development has taken off on the basis of oil revenues, initially mainly through aid from al-Kuwayt and Abū Ẓabī, but since 1974 also from al-Shārika's own small oil and gas exports. Crude oil output since 1988 has totalled some 40,000 b/d. Some light industry has developed, and agriculture and fishing retain a diminishing part of the labour force, yet their contribution to GDP has been small by comparison to hydrocarbons, construction and services. The development boom since the 1970s has also resulted in large-scale labour immigration, as in the other emirates. The foreign population exceeds the number of nationals, although its proportion is probably somewhat lower than the 80-90% which has been estimated for the UAE as a whole since the 1980s.

SHARĪSH, the Spanish Arabic place name corresponding to the modern Jerez de la Frontera, in the north of the province of Cadiz. The original Islamic core of the town appeared on the site of the ancient Hasta Regia, 2 km/1.2 miles from modern Jerez. In the middle of the 6th/12th century, the population was apparently moved to a new site, where the town became firmly fixed. The anonymous author of the *Dhikr bilād al-Andalus* (8th-9th/14th-15th centuries) merely states that Sharīsh "was built in Islamic times".

Documentary evidence shows that Sharīsh at an early date fell within the *kūra* or province of Shadūna [*q.v.*], whose chef-lieu it was, according to some Islamic historian (e.g. al-Rāzī and Ibn Ghālib), but it does not seem to have played any notable role in the period of the Umayyad caliphate, and we do not even have a list of governors. In the time of the Taifas, it came under the authority of the Banū Djizrūn, Berbers who rebelled in Kalsāna during the time of *fitna* and who also controlled Arcos and al-Djazīra, the latter probably corresponding to Cadiz, according

to M.J. Viguera. They held power from 402/1011 to 461/1069, when the ʿAbbādid al-Muʿtaḍid [*q.v.*] of Seville attacked them, toppled them from power and absorbed their territory into his own Taifa. This situation seems to have lasted until the arrival of the Almoravids in al-Andalus. Later, Sharīsh was one of the towns which rose against this North African dynasty; it was there that Abu 'l-Ḳamar Ibn ʿAzzūn, who controlled this region as well as Ronda, proclaimed his independence. With other local rebels, he was one of the original members of the "second wave" of Taifas. Ibn ʿAzzūn remained in charge of the administration of this region until the establishment of the Almohads in al-Andalus, to whom he remained faithful. It was under these last rulers that the defences of the town were strengthened and that its walls were built, described by al-Idrīsī; they contained an area of *ca.* 50 ha and sheltered some 16,000 inhabitants.

Towards 1176, the lands of Sharīsh and Arcos were attacked by Ferdinand II, and reached by Ibn Hūd [see HŪDIDS] in the course of his expansionist plans; it was in fact at Jerez that he was defeated by the Castilians in 1230. The Islamic history of the town gradually recedes after the Castilian conquest of Seville in 1248, and it was in vassalage to Ferdinand III. After the Mudéjar revolt of 1264, the population of Jerez, Arcos, Medina Sidonia, Vejer, Sanlúcar, etc. was subdued by Alfonso X. From this time onwards, this region formed the political frontier with the Nasrid kingdom of Granada [see NAṢRIDS].

Concerning the natural resources of Sharīsh, al-Rāzī (4th/10th century) states that the region was rich in all the products of land and sea, and al-Idrīsī mentions the vines and olive and fig trees of its fertile agriculture, placing the town at two days' good journey along the road from Seville. The author of the *Dhikr* describes its pastures and vales, indicating that it was also good for stock-rearing. A famous son of the town was the famed commentator on the *Maḳāmāt* of al-Ḥarīrī, Abu 'l-ʿAbbās Aḥmad b. ʿAbd al-Muʾmin al-Sharīshī (d. 619/1222 [*q.v.*]).

Finally, one should note, to avoid possible confusion, that Sharīsha appears in the Arabic sources as a place-name corresponding to Jerez de los Caballeros, in the modern Spanish province of Badajoz.

(F. ROLDÁN CASTRO)

AL-**SHARĪSHĪ**, ABU 'L-ʿABBĀS KAMĀL AL-DĪN AḤMAD b. ʿAbd al-Muʾmin al-Ḳaysī, grammarian, philologist and littérateur of Muslim Spain (557-619/1181-1222), born at Sharīsh [*q.v.*] (modern Jerez de la Frontera) in the province of Cadiz and died in his natal town.

He functioned mainly as a teacher of Arabic language, but like many of his compatriots, went to the East, probably to make the Pilgrimage to Mecca and probably search of knowledge (*fī ṭalab al-ʿilm*). The biographies of him cite a piece of verse which he composed when resident in Egypt in which he expresses his regrets at ever having left Syria and his admiration for the land's beauty (*Nafḥ al-ṭīb*, ii, 116, 392).

Al-Sharīshī wrote a commentary on the *Īḍāḥ* of al-Fārisī and another on the *Djumal* of al-Zadjdjādjī, as well as treatises on metrics, an anthology of Arabic poetry and a résumé of the *Nawādir* of Abū ʿAlī al-Ḳālī [*q.v.*]. But he is above all known as author of a commentary on the *Maḳāmāt* of al-Ḥarīrī [*q.v.*], which soon became known in Spain and, from the opening of the 6th/12th century, formed part of the programme of studies for Andalusian scholars (see al-Ruʿaynī, *Barnāmadj*, Damascus 1962, 32-3, 44, 51, 60, 79). Al-Sharīshī produced three commentaries on the *Maḳāmāt*: a large one, literary; a middle-sized one, philological; and a small one, a résumé. The first was printed at Būlāḳ 1284/1867, 1300/1883, and at Cairo 1306/1889. The second exists in ms. at Leiden, no. 415. Amongst some twenty commentaries produced, al-Sharīshī's is undoubtedly the most complete and the most famous; thus the *Maḳāmāt* found their most productive commentator in Spain. In his *Sharh*'s preface, i, 8-9, al-Sharīshī states, in highly respectful terms, that his work is dedicated to the Almohad rulers Abū ʿAbd Allāh al-Nāṣir (595-60/1198-1213) and his son and heir presumptive Abū Yaʿḳūb al-Mustanṣir (610-20/1213-23).

The biographer Ibn al-Abbār, i, 136-7 no. 281, mentions having met the author in *ca.* 616/1219 at Valencia, at the house of his master Abu 'l-Ḥasan b. Ḥarīḳ, to whom al-Sharīshī then submitted his commentary on al-Ḥarīrī. Al-Ruʿaynī likewise states that he met al-Sharīshī in 615/1218, followed his courses and obtained his authorisation (*idjāza* [*q.v.*]) to transmit the whole of his works (see *Barnāmadj*, 90-1).

In his *Shadharāt*, v, 392, Ibn al-ʿImād confuses Aḥmad with Muḥammad al-Sharīshī (d. 685/12860) and erroneously attributes to this latter person a commentary on al-Ḥarīrī which is the work of the former. Al-Maḳḳarī, *Nafḥ*, ii, 131-2, in fact draws attention to this confusion.

(A. BEN ABDESSELEM)

SHĀRIYA, one of the renowned female singers at the ʿAbbāsid court, was born *ca.* 200/815 in Baṣra as a *muwallada* of an Arab father and a non-Arab mother. She died after 256/870, probably in Sāmarrā.

While still a young girl, she was acquired by Ibrāhīm b. al-Mahdī [*q.v.*], who refined her musical education and made her a competent transmitter of his own compositions. After the death of her master in 224/839, she first served al-Muʿtaṣim, and she reached the zenith of her career under the caliph and musician al-Wāthiḳ. Under al-Mutawakkil, an open competition broke out between Shāriya as a representative of the "romantic" school of Ibrāhīm b. al-Mahdī, and the famous ʿArīb, who stood for the "classical" style of Isḥāḳ al-Mawṣilī [*q.v.*] and his school. Their violent rivalry split the public of Sāmarrā into two camps. Shāriya was still active under al-Muʿtazz, who wrote her biography and assembled her song texts in a book entitled *Akhbār Shāriya*. It was handed down by Ḳurayṣ al-Mughannī (d. 324/936) to Abu 'l-Faradj al-Iṣfahānī, who used it in his *Kitāb al-Aghānī al-kabīr*. Al-Muʿtamid was the last caliph to admire her talents, including her skill at cooking. In her songs she showed a predilec-

tion for the "light" (*khafīf*) form of the metre called *ramal* [*q.v.*].

SHARḲ AL-ANDALUS, an expression which denotes, in the mediaeval Arabic texts and also in contemporary historical usage, the eastern region, adjacent to the Mediterranean, of Muslim Spain. In both cases, the term has a geographical and not an administrative application, and it is difficult to demonstrate *a priori* which regions of the peninsula are being referred to.

The centre of the Sharḳ al-Andalus is the region of Valencia (Balansiya [*q.v.*]), but the expression probably has a wider sense than the modern one of *Levante*. The unfavourable attitude of the Valencians to this last term, which they consider "Castilocentric" and pejorative, seems to have favoured, in contemporary historiography, the use of Sharḳ al-Andalus, which spills over into, in ancient times as now, in a somewhat vague fashion, the surrounding regions.

These last are as follows. To the west, the mountain zones stretching between the region of Valencia and Toledo. They correspond, in their western part (modern province of Cuenca) to the *kūra* or region called that of Shantabariyya [*q.v.*] (Santaver), but the neighbouring regions of Balansiya (Teruel, Albarracin, called Shantamariyat al-Sharḳ [*q.v.*]), and above all Alpuente (al-Būnt) are incontestably part of the Sharḳ. In the north, the zone ventred on the Ebro valley is generally called *al-Thaghr al-aʿlā* "Upper march", but the eastern part (the region of Tortosa) is also called *al-Thaghr al-sharḳī*, and is easily included in the Sharḳ al-Andalus. In the south, the modern region of Murcia traditionally has the name of Tudmīr. This last includes a good part of the province of Alicante, with the town of the same name, Elche and Orihuela, as far as the mountains of the Alcoy massif which separate the *kūras* of Tudmīr and Balansiya. The journal of the Arabists of Alicante, devoted in the first place to the history of eastern al-Andalus, has however been given the name *Sharq al-Andalus*. Finally, the Balearics (al-Djazā'ir al-Sharḳiyya) are more or less part of the Sharḳ, considered in a large sense.

It is, rather, recent historiographical considerations—polemics concerning the history of this region—than historical consistency over a geographical-historical entity, which can justify an article *Sharḳ al-Andalus* in this Encyclopaedia. For, from a historical perspective, it is not very easy to establish the specific nature of the Sharḳ. In the age of the Umayyads of Cordova, the eastern part of al-Andalus, urbanised to only a small degree, is little mentioned in the sources, and it would seem to be, rather, this negative and "backwards" character which ought to be brought out. The break with Antiquity in regard to urban life is very striking. The town of Valencia had very little importance between the 6th and 10th centuries. It was, from a regional point of view, on a level with Játiva (Shāṭiba [*q.v.*]), which is no longer today a considerable centre. The Balearics were only attached politically to Cordova in the first half of the 10th century, and *Madīnat Mayūrḳa* only assumed a certain importance at the end of this period. Tortosa was a frontier town which only slowly came to life. Murcia, founded for military and administrative reasons in 216/831, only became an important centre in the 11th-13th centuries.

This impression of torpor only changes perceptibly with the crisis of the Umayyad caliphate (399-422/1009-31), and very likely marks an evolution already in train: the progressive commercial reawakening of the western Mediterranean in the course of the 10th century probably favoured the development of urban centres along the coasts. Taifas of Ṣaḳāliba [*q.v.*], sc. military and administrative elements of servile origin, grew up at Tortosa, Valencia and Denia (as also further south at Almeria, which had enjoyed a considerable development in the 4th/10th century) between 400-3/1010-12. It is likely that these elements in the region were reinforced after the beginning of the crisis of the caliphate by the expulsion from Cordova of further Ṣaḳāliba of high rank by the caliph Muḥammad II al-Mahdī, who had been embroiled with them. The most active and long-lasting of these Taifas was that of Mudjāhid [*q.v.*] of Denia [see DĀNIYA], who reigned there from 403/1012-13 till his death in 436/1044-5. He seized control of the Balearics, and tried—without success—to conquer Sardinia. His son ʿAlī reigned for a further thirty years after him. The other Ṣaḳlabī Taifas were less durable, except for the one which took shape in the Balearics after the end of the independent power of Denia, absorbed by the more powerful Taifa kingdom of Saragossa in 468/1075-6. Two successive Ṣaḳlabī *amīrs* retained power in the "eastern islands" until the devastating attack on the islands by a naval expedition of Pisans and Catalans in 507/1114.

At the end of the 11th century, the greater part of the Sharḳ fell under the control of the Cid [see AL-SĪD], who seized power at Valencia in 1087. The Almoravid conquest of the region was put back by a decade or so compared with the rest of al-Andalus, and only took place after the death (in 1099) of the Castilian chief, sc. in 495/1102. During the crisis of the years 540-2/1145-7, which ended Almoravid power in al-Andalus, the eastern region had, like the rest of the country, a disturbed history, with the formation of local, autonomous powers at Valencia and Murcia, both by now amongst the most important economic, political and intellectual centres of Muslim Spain. Whilst Almohad authority was being progressively extended over the rest of al-Andalus, this region became organised into an independent amirate under a military chief formerly of the Almoravid forces, but originally from the north of the region of Valencia, Muḥammad b. Saʿd b. Mardanīsh [see IBN MARDANĪSH]. From his capital of Murcia he exercised power over all the Mediterranean side of al-Andalus (apart from Tortosa, conquered by the Christians in 1148). Despite Almohad military pressure, this independent principality, the only Muslim power to have controlled the whole of the Sharḳ (except for the islands), maintained itself all through Ibn Mardanīsh's reign (542-67/1147-72). Strongly anti-Almohad, he recognised in principle the ʿAbbāsid caliphate in Baghdād, and welcomed the *fuḳahā'* who had fled from the Almohads,

in part probably for ideological reasons. But immediately after his death, his sons submitted to the Almohads. During the same period, and until 1102, the Balearics, ruled by a power carrying on the Almoravid tradition, that of the Banū Ghāniya [*q.v.*], also escaped Almohad domination.

After the fall of Almohad power in the peninsula in 625/1228, distinct powers arose in Murcia and Valencia, whilst an Almohad governor remained in Majorca. Certain texts, mainly a collection of politico-literary letters called the *K. Zawāhir al-fikar*, studied by E. Molina López (*Murcia y el Levante español en el siglo XIII (1224-1266) a través de la correspondencia oficial, personal y diplomática*, résumé of his Univ. of Granada doctoral thesis, Granada 1978), nevertheless testify to a movement of élites and ideas in the eastern region as a whole during this troubled period which preceded the occupation of the capital cities of the Sharḳ by the Aragonese (Majorca in 1229, Valencia in 1238) and by the Castilians (Murcia in 1243). From the standpoint of intellectual and religious life, there seems to have been a fairly different atmosphere at Valencia, more traditional and marked by the dominance of the study of *ḥadīth*, whereas at Murcia mystical currents were very strong (Ibn ʿArabī and Ibn Sabʿīn were natives of the city).

The historiography of the Sharḳ has been favoured, in relation to other regions of al-Andalus, by certain factors. One should probably note here the relative abundance of Arabic sources and contemporary documents on the Reconquest on the one hand, and on the other, some peculiarities in the history of eastern Muslim Spain (it was the Cid's main theatre of action; it seems especially marked by certain traditions going back to the Islamic period, such as in irrigation; and it continued to have an important Mudéjar community after the Reconquest). The main outlines of regional history began to be traced quite early. For the Balearics, by Alvaro Campaner y Fuertes (*Bosquejo histórico de la dominación islamita en las Islas Baleares*, Palma 1888), and for Murcia by Mariano Gaspar Remiro (*Historia de Murcia musulmana*, Saragossa 1905). In the first quarter of the 20th century, Valencia was the subject of several works by the Arabist Julian Ribera y Tarragó (collected together in his *Disertaciones y opúsculos*, Madrid 1928, but it was quite a long time later that another Valencian Arabist, Ambrosio Huici Miranda, wrote a satisfactory general history of the region (*Historia musulmana de Valencia y su región*, Valencia 1970). This latter work is in part a "rounded" rejoinder to the "Castilocentric" nature of the great work by Ramón Menéndez Pidal (*La España del Cid*, Madrid 1929) and its exaltation of the personage of the Cid.

The somewhat polemical character which this historiography of the Sharḳ al-Andalus assumed in regard to Valencia was accentuated in the 1980s. The idea put forward by Pierre Guichard of an early "Berberisation" of the eastern region (*Le peuplement de la région de Valence aux deux premiers siècles de la domination musulmane*, in *Mélanges de la Casa de Valâzquez*, v [1969]), aroused increasingly clear opposition from several Arabists, principally Mikel de Epalza (*Los beréberes y la arabización del País Valenciano*, in *Miscellanea Sanchis Guarner*, Valencia 1984), María Jesús Rubiera (*Toponimia arabigo-valentna: falsos atroprónimos beréberes*, in *ibid.*), Carmen Barceló (*Galgos o podencos? Sobre la supuesta berberización del país valenciano en los siglos VIII y IX*, in *Al-Qantara*, xi [1990]).

The works of Miquel Barceló and his disciples at the Autonomous University of Barcelona—which have tried to emphasise, above all from the abundant place-name evidence with its clan and tribal aspects (see also Guichard, in his *Al-Andalus. Estructura antropóligica de una sociedad islámica en Occidente*, Barcelona 1976), the segmentary aspect of Muslim society in the eastern regions of the peninsula on the eve of the Reconquest—have given rise of refutations of the same kind (Epalza, *Precisiones sobre instituciones musulmans de las Baleares*, in *Les illes orientals d'al-Andalus, V Jornades d'estudis historics locals*, Palma, Majorca 1987). From the archaeological point of view, the "non-feudal" characteristics of Muslim rural fortifications in eastern Spain adduced as evidence by A. Bazzana, P. Cressier and Guichard (*Châteaux ruraux d'al-Andalus. Histoire et archéologie des ḥuṣūn du Sud-est de l'Espagne*, Madrid 1988) have also stimulated polemics. Up to a certain point, these debates, which touch on the nature of society in Muslim Spain, may be considered as marking fresh stages and a prolongation of (whilst fairly well removing them from the centre stage) the controversies between Américo Castro and C. Sánchez Albornoz on the impact of the Arab conquest and the "orientalisation" of the peninsula in mediaeval times.

SHARḲĀWA or SHERḲĀWA, the common ethnic designation of a Marabout group in central Morocco, belonging to the Shādhilī-Djazūlī brotherhood through the intermediary of the mystic Abū Fāris ʿAbd al-ʿAzīz al-Tabbāʿ [*q.v.*]. The singular is *Sharḳāwī*, synonym of *sharḳī* (*shargī*, pl. *shrāga*), a geographical ethnic name (cf. on the other hand *Tādilī*, ethnic from Tādlā confined to the *shurafāʾ* of this name, while the geographical ethnic is *Tādlāwī*). The principal *zāwiya* of the Sharḳāwa is in the town

of Abu 'l-Dja'd (modern form, Boujad), in the Tādlā, between the Middle Atlas and the Atlantic coast. It attained importance at the end of the 11th/17th century and henceforth became one of the most frequented sanctuaries in Morocco.

Among the more notable of this Marabout family may be mentioned: 1. the founder of the *zāwiya* of Abu 'l-Dja'd, Maḥammad b. Abi 'l-Ḳāsim al-Sharḳī al-Sumayrī al-Za'rī al-Djabīrī, d. 1. Muḥarram 1010/2 July 1601; a monograph was devoted to him by one of his descendants, Abū Muḥammad 'Abd al-Khālik b. Muḥammad al-'Arūsī al-Tādilī al-Sharkāwī, entitled *al-Muraḳḳī fī dhikr ba'd manāḳib al-ḳuṭb sayyidī M. al-Sharḳī*; 2. the latter's son, Muḥammad al-Mu'ṭā, d. Rabī' II 1092/April-May 1681; 3. his son Muḥammad al-Ṣāliḥ, who was the patron of the historian al-Ifrānī [*q.v.*] (or al-Wafrānī): a monograph entitled *al-Rawḍ al-yāni' al-fā'iḥ fī manāḳib al-shaykh Abī 'Abd Allāh Muḥammad al-Ṣāliḥ*, was devoted to him by a scholar of Fās who was *ḳāḍī* of Meknes (Miknāsat al-Zaytūn) in the reign of the 'Alawid sultan Mawlāy Ismā'īl, sc. by Abū 'Alī al-Ḥasan b. Raḥḥāl al-Ma'dānī al-Tādilī, d. 1140/1728; 4. the son of the preceding, Muḥammad al-Mu'ṭā, who restored the *zāwiya* and wrote a collection of prayers in no fewer than 40 volumes entitled *Dhakhīrat al-ghānī wa 'l-muḥtādj fī ṣāḥib al-liwā wa 'l-tādj* (there is one volume in the Bibliothèque Générale of Rabat, no. 100, cf. E. Lévi-Provençal, *Les manuscrits arabes de Rabat*, i, 36); he died in Muḥarram 1180/June 1766. A monograph was devoted to him by his secretary Muḥammad b. 'Abd al-Karīm al-'Abdūnī, d. 1189/1775-6, entitled *Yatīmat al-'uḳūd al-wusṭā fī manāḳib al-shaykh al-Mu'ṭā*.

Bibliography: Muḥammad al-Mahdī al-Fāsī, *Mumti' al-asmā'*, lith. Fās 1313, 21; Ifrānī, *Ṣafwat man intashar*, lith. Fās 25; Ḳādirī, *Nashr al-mathānī*, lith. al-**SHARḲĀWĪ**, 'Abd al-Raḥmān, modern Egyptian poet, story-teller and dramatist, was born in Shibīn al-Kūm, Lower Egypt, on 10 November 1920. He practised law from 1943 to 1945, and was subsequently employed in the Ministry of Education until 1956, but was also active in journalism from 1945, rising to the directorship of the Rūz al-Yūsuf Foundation 1971-7. He was Secretary-General of the Supreme Council for Arts, Literature and Social Sciences 1977-9. He died on 10 November 1987.

Two slim volumes record his extant poetry, which is mostly from the 1940s. It is decidedly romantic on personal themes, ironic and vehement on political ones. His anti-establishment stance in this and in early short stories and sketches brought him into conflict with the censors, and he had a taste of imprisonment in 1946 and 1947. His *al-Arḍ* "The Earth" first published in 1954, portraying villagers rising in revolt against grasping landowners and corrupt authorities, was the first of four novels of the same temper, the social realism aimed at being reduced to a conflict between virtue and villainy. Between 1962 and 1981, he wrote nine plays in verse on resistance to foreign oppressors in modern Algeria and Palestine, and on heroes of the past from al-Ḥusayn b. 'Alī to 'Urābī, all represented as champions of social justice. After a book on the Prophet revealingly entitled *Muḥammad Rasūl al-Ḥurriyya* "Muḥammad the Apostle of Freedom" (1962) and another on aspects of Islamic thought (1972), he produced between 1980 and 1987 five books retelling in prose the stories of early Muslim leaders, stressing their humanism and their resistance to social and political pressures that might have compromised their probity.

SHARḲĪ (*sharkī*), (a., t.) literally "oriental, eastern", with the non-technical meanings in Turkish of (a) song; (b) almost any type of song belonging to Turkish art music, especially as opposed to the folk-song, designates as a technical term: (1) in music a certain form of classical Turkish song; (2) in literature a genre of Turkish strophic poem composed on literary lines with the aim or ultimate result of being set to music.

The genre of lyric called *sharḳī* is composed in accordance with the rules of the Arabo-Persian metrical system (*'arūḍ* [*q.v.*]), in contradistinction to the popular lyric as represented by the folk-song, which is composed according to the original Turkic method of versification (*parmaḳ ḥisābi*, wherein the verses are based not on quantity as in *'arūḍ* but on the number and stress of the syllables). Common to both types of lyric is the strophic composition.

These formal characteristics place the *sharḳī* in the group of *musammaṭ* [*q.v.*], the strophic forms of *dīwān* poetry. The majority of the *sharḳī*s have stanzas of four lines. When the *sharḳī* made its appearance in the 17th century, the *murabba'*, a *musammaṭ* with four-line stanzas, had already been in existence for centuries and it was the *murabba'* that was often set to music prior to the emergence of the *sharḳī*. The rhyme schemes of the *sharḳī* and the *murabba'* are not only almost identical but the rhyme schemes considered to be typical for the *sharḳī* were used in the *murabba'* not only after the *sharḳī* acquired a place in literature, but also, albeit very rarely, before. As to the *sharḳī*, it always made use of the typical *murabba'* rhyme schemes, too.

The sole difference between the typical *murabba'* and the typical *sharḳī* rhyme schemes lies in the first stanza; in the *murabba'* it is *aaaa* (followed by *bbba*, *ccca*, etc.) or *aaaA* (followed by *bbbA*, *cccA*, etc.; the capital letter stands for a refrain), in the *sharḳī* it is *abab* (followed by *cccb*, *dddb*, etc.) or *aAaA* (followed by *bbbA*, *cccA*, etc.) or *aBaB* (followed by *cccB*, *dddB*, etc.). Other variations in rhyme schemes are negligible in number.

Yet the *sharḳī* is not formally restricted to the fourline stanza, as there are—although much fewer in number and of later provenance—*sharḳī*s with stanzas of five or six lines. These generally have the rhyme schemes of the *mukhammes-i mütekerrir* and the *müseddes-i mütekerrir* (*aaaaA*, *bbbbA*, *ccccA* etc.; *aaaAA*, *bbbAA*, *cccAA*, etc.; *aaaaaA*, *bbbbbA*, *cccccA*, etc.; *aaaaAA*, *bbbbAA*, *ccccAA*, etc.; respectively). As in all *dīwān* poetry, the rules of rhyming are strictly observed in the *sharḳī*, in contradistinction to the folk-song where they are not observed as strictly.

The third line of each stanza of the *sharkî* is called *miyān* or *miyān-khāne* ("the middle" and "mid-house" respectively) and is generally the most effective line of the stanza. If repeated as a refrain, the ultimate line or the ultimate and penultimate lines of each stanza are called *nakarāt* "refrain", literally "peckings". (Both of these terms are also used for the description of *sharkîs* set to music.)

The *sharkîs* are generally rather short, comprising 3-5 stanzas (whereas the other types of *musammaṭ* are often longer). The poet states his *makhlaṣ* (pen-name) in the last stanza (as is the case with the other types of *musammaṭ*), though there are exceptions to this rule.

No restrictions with regard to the metres of *ʿarūḍ* used in composing *sharkîs* are known; the preferred metres are *remel* and *hezedj*.

The *sharkî* is generally about the various aspects of love (and to a lesser degree, about the pleasures of life); the tone is light. The *murabbaʿ* shows much more variety with respect to subject matter The language of the *sharkî* is not too intricate, which makes it convenient to be sung. It is simpler than that of the *ghazel*, and generally, but not always, even simpler than that of the *murabbaʿ*, yet still elevated and free trom dialectal forms. Here, too, it differs from the folk-song, which is quite free from restrictions as regards subject matter, imagery, and phraseology.

These characteristics oblige us to consider the *sharkî* not as a truly independent structure of versification but as a genre of lyric that is undeniably closely related to the *murabbaʿ*. The emergence of the *sharkî* can be dated—based on the appearance of examples both bearing the title *sharkî* and having the rhyme schemes in the first stanza that are considered typical of the *sharkî*—towards the end of the 11th/17th century. The first known examples are 11 *sharkîs* by Nāʾilī-yi Ḳadīm (d. 1077/1666-7), followed by 9 *sharkîs* by Yaḥyā Naẓīm (d. 1139/1727), who himself set his *sharkîs* to music. It is Nedīm (d. 1143/1730 [*q.v.*]) who is regarded as the greatest master of the *sharkî* and who had a lasting influence. The 27 *sharkîs* in his *dīwān* have all been set to music and are considered to be among the outstanding examples of Turkish classical music. After Nedīm, the popularity of the *sharkî* increased, even the Mewlewī *sheykh* and master of allegorical poetry Sheykh Ghālib (d. 1213/1799) wrote 11 *sharkîs*, and we find a considerable number of *sharkîs* by various poets in the 19th century. One of these, Sheref Khanîm (d. 1861), wrote as many as 41. However, the greatest number of *sharkîs* was composed by Enderūnlu Wāṣif (d. 1240/1824-5); 211 poems are to be found in the *sharkiyyāt* section of his *dīwān* entitled *Gülshen-i efkār*.

Yaḥyā Kemāl (d. 1958) was the last great master of this type of lyric, though *sharkî* recitals continue to enjoy considerable popularity in our time.

AL-SHARḲĪ B. AL-ḲUṬĀMĪ (d. *ca.* 150/767, according to Sezgin, *GAS*, viii, 115; *ca.* 155/772, according to al-Ziriklī, *Aʿlām*[3], ix, 139), transmitter of ancient Arabic poetry and *akhbār*, quoted also for lexicographical, genealogical, geographical, and historical data. There is some fluctuation in the sources between al-Sharḳī and Sharḳī as well as between al-Ḳuṭāmī and Ḳuṭāmī; in addition, there is some discussion whether Ḳaṭāmī is the correct reading. The form given here has the best authority. Both names are *laḳabs*, his real name being al-Walīd b. al-Ḥuṣayn, with the *kunya* Abu 'l-Muthannā. In his tribal affiliation he was a Kalbī, and he hailed from Kūfa (*Taʾrīkh Baghdād*, ix, 278).

Like his student Ibn al-Kalbī [*q.v.*], he is best characterised as an antiquarian of the Arab past. Due to his wide knowledge in the Arab "humanities", he was called to Baghdād by al-Manṣūr and entrusted with the instruction of the future caliph al-Mahdī [*q.vv.*] (*ibid.* and Ibn al-Anbārī, *Nuzha*, 22, cf. also al-Masʿūdī, *Murūdj*, vi, 251-6 = §§ 2458-63).

Being an *akhbārī*, he is frowned upon by the strict traditionists (e.g. Ibn Ḥadjar, *Lisān*, iii, 142-3); but this is due to the fact that, with early scholars, the two branches of knowledge have not yet been rigorously separated; in other words, he should not have been regarded as a *muḥaddith*, at all (see the pertinent remarks on al-Sharḳī and similar figures in S. Leder, *Korpus*, 309-10). He is credited by Ibn Ḥadjar with only ten *ḥadīths* anyway, most of them *manāḳīr*.

No titles of books by al-Sharḳī are given in the sources. Ibn al-Nadīm credits him with a *ḳaṣīda* on *gharīb* "rare words" (*Fihrist*, 90 and 170 [the latter a list of such *ḳaṣāʾid*]). Most of the extant *akhbār* and other text units are found in al-Djāḥiẓ, *al-Bayān wa 'l-tabyīn* and *al-Ḥayawān*, al-Ṭabarī, *Taʾrīkh*, and al-Masʿūdī, *Murūdj*, see the respective indices. A field in which his authority is often invoked is the aetiologies of proverbs (Sellheim, *Sprichwörter*, 30-1, 99, 117, 136, 140, 149). In a number of cases his stories, always well told, deviate from other explanations of the same proverb.

This leads us to another aspect of his personality: he is also characterised as a story-teller (*ṣāḥib samar*, in *Taʾrīkh Baghdād*, ix, 279, and cf. al-Djāḥiẓ, *al-Ḥayawān*, v, 302-3, where one of al-Sharḳī's stories is characterised as "women's talk" [*min aḥādīth al-nisāʾ*]). Fittingly, Ibn al-Nadīm lists him among the compilers of love-stories (*Fihrist*, 306). Some of his transmissions are, therefore, likely to be creative "transmissions". This phenomenon, typical of early *akhbārīs*, has been analysed and evaluated by Leder (*Korpus*, 308-14) with regard to al-Haytham b. ʿAdī (d. 207/822 [*q.v.*], one of the scholars who transmitted from al-Sharḳī). It is not meaningful to call al-Sharḳī an impostor (Blachère, *HLA*, i, 126).

Although he is said to have been a transmitter of poetry, he is not mentioned in connection with any specific *dīwāns*, as his absence from the relevant discussions in Sezgin, *GAS*, ii, Blachère, *HLA*, and Nāṣir al-Dīn al-Asad, *Maṣādir al-shiʿr al-djāhilī*[2], Cairo 1962, shows. This might mean that his poetry transmission occurred only within the framework of his *akhbār*.

SHARḲĪS, an Indian dynasty established in the closing years of the 8th/14th century with Djawnpur, [*q.v.*] as its capital. It had a life span of about one hundred years (796-901/1394-1495) during which six rulers—Malik Sarwar Khʷādja Djahān (796-802/1394-99), Malik Mubārak Shāh Ḳaranfal (802-4/1399-1401), Shams al-Dīn Ibrāhīm Shāh (804-44/1401-40), Maḥmūd Shāh (844-62/1440-67), Muḥammad Shāh (862-3/1457-8) and Ḥusayn Shāh (863-901/1458-95)—exercised authority.

The founder of the Sharḳī kingdom, Malik Sarwar [*q.v.*], was a eunuch in the service of Fīrūz Shāh Tughluḳ [*q.v.*]. He was custodian of the royal jewellery and *shaḥna-yi shahr* (City Superintendent). Sultan Muḥammad Shāh entrusted the eastern districts to him and conferred the title of *Malik al-Shark* (Lord of the East) on him. Disturbed conditions helped him in extending his territory. He brought all the rich districts of Uttar Pradesh under his control, and his authority stretched to Tirhut in north Bihār and touched the boundary of Nepal. In the west, Ḳannawdj, Bhodjpur and Udjdjayn were under him. Rulers of Djadjnagar and Bengal were his feudatories. Malik Sarwar died suddenly in Rabīʿ I 801/November 1399 after a brief reign of five years and six months, but he had firmly planted his dynasty. His administrative talent and political realism were extraordinary. His patronage of scholars made Djawnpur a veritable centre of culture and learning.

Malik Mubārak Shāh Ḳaranfal, who succeeded Malik Sarwar, was his adopted son. According to Yaḥyā Sirhindī, he was a nephew of Khiḍr Khān, the founder of the Sayyid dynasty [*q.v.*], but some scholars have attributed negroid origin to him. Soon after his accession, he had to face an invasion of Mallū Iḳbāl [*q.v.*], but he successfully pushed him back. Sometime later both Sultān Maḥmūd Shāh Tughluḳ and Mallū Iḳbāl marched against Djawnpur. Mubārak set out to face the invaders but died suddenly on the way.

Mubārak's younger brother, Ibrāhīm, who succeeded him, had also to face a joint attack of Mallū Iḳbāl and Sultan Maḥmūd Shāh. Maḥmūd occupied the city of Ḳannawdj [*q.v.*]. Ibrāhīm's efforts to retrieve the fort having failed, he made peace with Maḥmūd. The Hindu ruler of Tirhut was a tributary of the Sharḳīs. In 1402 Malik Arslan attacked and killed its Rādjā, Ganeśvara. Ibrāhīm installed his son Kirti Singh on the throne. Later, when Kirti's son Shiv Singh turned hostile, Ibrāhīm annexed Tirhut. In Djumādā I 809/October 1406, Ibrāhīm marched against Ḳannawdj and conquered it, which immensely enhanced his prestige. Next year, in Djumādā I 810/October 1407, Ibrāhīm marched against Dihlī, but when he reached the banks of the Djumnā he heard that Sultan Muẓaffar of Gudjarāt was moving towards Djawnpur. He hastily turned back. In Muḥarram 817/April 1414, he attacked Kalpī [*q.v.*]. After a feigned retreat he reappeared and captured Mahoba and Ruth. Iradj was then conquered. Ibrāhīm next attacked the fort of Shaykhpur with naptha-hurling engines and catapults. The garrison became nervous and appealed for mercy. Ḳādir Khān was allowed to rule over Kalpī on accepting the suzerainty of Djawnpur, but he later gave up this allegiance and conquered Iradj.

In 817/1414 Ibrāhīm was invited by Shaykh Nūr Ḳuṭb-i ʿĀlam, a distinguished Čishtī saint of Bengal [see ČISHTIYYA] to march against Rādja Ganesh [*q.v.*] of Dinādjpur, who had established himself in Bengal and was oppressing the Muslims (*Maktūbāt-i Nūr Ḳuṭb-i ʿĀlam*, ms. author's personal collection). Ibrāhīm set out with a strong army. Ganesh approached Shaykh Nūr Ḳuṭb-i ʿĀlam with the request to intercede. The saint agreed to his request, provided that his younger son accepted Islam and that Ganesh promised not to harass the Muslims. Ganesh's son Djuda later ascended the throne as Djalāl al-Dīn.

In 840/1437 Ibrāhīm marched against the Sayyid Muḥammad Shāh of Dihlī. The latter sued for peace and arranged a matrimonial alliance, giving his daughter, Bībī Rādjī, in marriage to Ibrāhīm's son Maḥmūd. Ibrāhīm Sharḳī ruled for forty years until his son ascended the throne in 844/1440, with the title of Maḥmūd Shāh. He organised an attack on Bengal (ʿAbd al-Razzāḳ, *Maṭlaʿ al-saʿdayn*, ii, 782-3), but when the Tīmūrid Shāh Rukh [*q.v.*] of Harāt sent a message urging him to refrain from this attack, he gave up the idea.

In 847/1443 Maḥmūd Sharḳī marched against Naṣīr Khān of Kalpī. The latter abandoned Maḥmūdābād and fled to Čandērī and sought the help of the Khaldjī ruler of Mālwa, who marched (3 Shaʿbān 848/8 January 1444) towards Maḥmūdābād at the head of a huge army. Several indecisive encounters took place between the two armies, but eventually peace was concluded and the Khadjī ruler returned to Mālwa.

Maḥmūd Shāh was deeply interested in the political affairs of Dihlī, as the Sayyid sultan ʿAlāʾ al-Dīn ʿĀlam Shāh of Dihlī was his wife's brother. Harassed by his nobles, ʿAlāʾ al-Dīn invited Bahlūl Lōdī [see LŌDĪS] from Sirhind. But when Bahlūl himself assumed royal authority, Maḥmūd Sharḳī's wife prevailed upon her husband to attack Dihlī and dislodge Bahlūl. In 856/1452 he accordingly marched against Dihlī. But after a fierce battle at Narela, some 17 miles from Dihlī, Maḥmūd had to retreat. In 858/1454, however, he did capture Dawa, the capital of Udjdjayn.

In 859/1455 a non-intervention treaty was reached between the Lōdī and the Sharḳī sultans, but hardly a year had passed before hostilities started again. Maḥmūd's sudden death in 862/1458 was a serious setback to Sharḳī power. Bībī Rādjī raised his eldest son to the throne under the title of Sultan Muḥammad. Muḥammad endeavoured to patch up differences with Dihlī, but without any lasting effect, and he fell fighting at Dalmaw. His successor Sultan Ḥusayn entered into a four-year truce with Bahlūl. He strengthened his hold over Tirhut, Orissa and Gwāliyār, and in 872/1468 planned an attack on Dihlī. The battle fought at Čandwar being indecisive, Ḥusayn Shāh sought the support of Bayna and Mewāt. In 873/1469 he again marched against Dihlī, but was forced to take to flight, leaving behind even his *ḥarem*. In 875/1471 for the third time he led an army against Dihlī consisting of one lakh of horsemen and a thousand elephants. Through the mediation of Khān-i Djahān Lōdī [*q.v.*], peace was arranged and Ḥusayn returned to Ētāwa. Ignoring his pledged word, he led his armies against Dihlī several more times. In the fifth campaign he was initially successful, but Bahlūl's army made a surprise attack which turned his victory into complete rout. Driven to extremes, Ḥusayn turned round and gave battle to Bahlūl at Rādjhohar, sixteen miles from Farrukhābād. Ultimately, peace was concluded and both sides agreed to keep to their old boundaries. But in 885/1480 he marched against Dihlī

a sixth time. In 888/1483-84 Bahlūl captured Djawnpur, but out of generosity to a fallen enemy, allowed Ḥusayn to retain a small tract in Čunar which had once constituted his family *djāgīr* [*q.v.*]. In 897/1492. Ḥusayn fought against Sikandar Lōdī, at Kathgaṙh, but was defeated and had to flee to Bihār. In 1494 the forces of Sikandar and Ḥusayn fought a fierce battle at Benares, in which Ḥusayn was completely defeated. He fled to Colgong, a dependency of Lakhnawtī [*q.v.*] in Bengal. The ruler of Lakhnawtī received him cordially and assigned the *pargana* of Colgong to him and permitted him to issue his own currency. Sikandar Lōdī stayed in Djawnpur for six months and destroyed all the Sharḳī buildings. Sultan Ḥusayn died in 911/1505, and with him the last vestiges of the Sharḳī dynasty disappeared. Though he did not succeed in achieving his objectives, his tenacity of purpose and mobilisation of resources were remarkable. He never took any defeat as final but carried on his struggle against the Lōdīs till the last moment. Popular support and regional loyalties helped him in his prolonged struggle. He was also a cultured prince, interested in the fine arts, poetry and music.

Under the Sharḳīs, Djawnpur became a renowned centre of culture and a rendezvous of scholars. Tīmūr's invasion drove many *ʿulamāʾ* and divines to seek shelter in Djawnpur, which came to be looked upon as a *dār al-amān* (Abode of Security). Among the distinguished scholars of Djawnpur were included Shihāb al-Dīn Dawlatābādī [*q.v.*], Mawlāna Ilāh Dād, Khʷādja Abu 'l-Fatḥ and others. The Čishti saints of Djawnpur, Mānikpur, Kičawča, Kalpī, Kintur and Iradj played an important role in the cultural life of the region. The Ḳalandariyya, the Madāriyya and the Shaṭṭāriyya *silsilas* also flourished there, and Mahdawī *dāʾiras* [see MAHDAWĪS] came to be established there.

The architectural achievements of the Sharḳīs were characterised by a synthesis of Muslim, Djayn and Hindu traditions. Malik Sarwar repaired and redesigned the old palace of Vidjaya Čandra and named it *Badīʿ Manzil* (the Wonderful House). He enlarged the city of Djawnpur and named it *Dār al-Surūr* (the Abode of Bliss). New bazaars were added, old forts were repaired, and bridges, gardens, wells and tanks were laid out by the Sharḳī rulers. Bībī Rādjī also took a keen interest in building activity.

Construction of mosques on a large scale as a symbol of Sharḳī hegemony and political prestige, was a distinct feature of Sharḳī policy. When Sikandar Lōdī thought of destroying these mosques, his real intention must have been to destroy all signs of Sharḳī prestige. The *ʿulamāʾ* prevented him from going that far. Percy Brown has rightly observed, "Had not ... Sikandar Lodi shown his implacable enmity towards the last of the Sharqi kings ... by ruthlessly destroying or mutilating the monuments of that dynasty, its buildings would have provided a provincial manifestation of Indo-Islamic architecture ..." (*op. cit.* in *Bibl.*, 42). The most outstanding mosque was the Atala mosque which was built on the site of the temple of Atala Devi, and concerning it Brown remarks, "in the design of its façade the Jaunpur architects have combined artistic skill with remarkable originality" (*ibid.*, 43).

AL-SHARḲIYYA, a traditional name for the eastern area of the Sultanate of Oman [see ʿUMĀN], now the official Eastern Region of the Sultanate, which lies in the inland region of Eastern Hadjar, northwest of Djaʿlān and north of the Wahība Sands (see Wilkinson, *Water*, 14, Fig. 5). The main towns of the region are Ibrā, the largest, and Samad, al-Muḍaybī, Sināw and al-Ḳābil. The whole area is a sandy plain interspersed with wadis.

Today, the official, extended region of al-Sharḳiyya is made up of thirteen provinces (*wilāyāt*), including Ibrā, Bid(d)iyya, al-Ḳābil and al-Muḍaybī and also Djaʿlān Banī Bū Ḥasan, Djaʿlān Banī Bū ʿAlī and the port and centre of ship-building, Ṣūr, plus even the island of al-Maṣīra [*q.v.*].

Ibrā is reckoned to have 23 villages and a population of 30,000. It contains the regional government offices and has a thriving commercial life. Al-Ḳābil has 16 villages and a total population of about 30,000. It is famed for its religious learning and horsemanship. Apart from its ship-building, Ṣūr, with its approximately 70,000 inhabitants, is famed for its woodcarving and the manufacture of doors, as well as daggers, jewellery and woven fabrics. The whole region, as in all regions of northern ʿUmān, is scattered with large and impressive strongholds and fortresses.

Bibliography: For the traditional area of al-Sharḳiyya, see J.C. Wilkinson, *Water and tribal settlement in south-east Arabia*, Oxford 1977, 14, Fig. 5. The map also shows the extended region with the additional areas mentioned above. See also idem, *The Imamate tradition of Oman*, Cambridge etc. 1987, especially 262 ff. (G.R. SMITH)

AL-SHARḲIYYA, the name of a *kūra* and of a province (formerly, *ʿamal*, now *mudīriyya*) in Egypt.

1. The *kūra* of al-Sharḳiyya which replaced the Byzantine pagarchy of Aphroditopolis, was one of the few districts which received an Arabic name; the latter is explained by its situation on the eastern bank of the Nile.

It is difficult to estimate the extent of its territory, which lay immediately south of the capital of the country, al-Fusṭāṭ. The first capital of the *kūra*, situated on the right bank of the river, was Anṣinā (Antinöe), but the small number (17) of villages in the *kūra* of al-Sharḳiyya allows us to suppose that the next

kūra, Dallāṣ (Nilopolis) or at least al-Ḳays (Kynopolis) lay on both sides of the Nile. The capital of the *kūra* was very probably Aṭfīḥ, since one of the censuses quoted by al-Maḳrīzī gives it in addition the name of Aṭfīḥiyya.

In the Fāṭimid division into provinces, there was a province of al-Aṭfīḥiyya, larger than the old *kūra* (50 villages at the time of Ibn al-Dji̱ʿān).

In the time of the governors of the caliphs, the *kūra* of al-Sharḳiyya enjoyed at times a certain prosperity. On account of an epidemic of plague, ʿAbd al-Azīz b. Marwān transferred the government offices to Ḥulwān; a little later and for the same reason another governor transferred them to Askur (or Sukur) towards the south. To the north of the *kūra* lie the quarries of Ṭurā.

Bibliography: See the art. ATFĪḤ; Kindī, ed. Guest, index, 643; J. Maspéro and G. Wiet, *Matériaux pour servir à la géogr. de l'Égypte*, in *MIFAO*, xxxvi, 22, 112, 173, 175, 177, 180-2, 184, 185; Maḳrīzī, *Khiṭaṭ*, ed. *MIFAO*, iv, 18, v, ch. xi, § 2.

2. The Eastern province of the Delta of Egypt, situated to the east of the province of al-Daḳahliyya and bordered towards its south-west point by that of Ḳalyūbiyya.

The present area of the *mudīriyya* of al-Sharḳiyya corresponds roughly to the following pagarchies of the Byzantine epoch, divisions retained by the Arabs under the name of *kūra*; Bubaste (Basṭa), Arabia (Ṭarābiya) and Pharbaithos (Farbayṭ). The Delta was at this time divided into three large divisions, not administrative in character, which are mentioned by the historians: the Ḥawf al-Gharbī situated to the west of the Rosetta arm, whilst the Baṭn al-Rīf applied to the territory lying between this arm and that of Damietta. All the land which extended to the east of the latter district was called the Ḥawf al-Sharḳī and it is probably this name which gave rise to that of al-Sharḳiyya. The Ḥawf al-Sharḳī included 11 or 12 *kūras* and 529 villages.

At the time of the division into provinces under the Fāṭimids the Ḥawf al-Sharḳī included those of al-Sharḳiyya, of al-Murtāḥiyya, of al-Daḳahliyya and of al-Abwāniyya. Thus delimited, the province of al-Sharḳiyya, which extended farther than at the present time in the direction of Cairo, still included 452 towns and villages (the three other provinces together accounted for 165). It brought annually to the treasury 694,121 dīnārs. The southern part of al-Sharḳiyya was separated from it in 715/1315 at the time of the survey of al-Malik al-Nāṣir Muḥammad, and received the name of al-Ḳalyūbiyya. From this time, the province of Sharḳiyya must have shown little variation. Thus reduced it contained, according to Ibn al-Djīʿān, 380 towns and villages and the taxes were valued at 1,411,875 dīnārs. The capital was Bilbays in the Middle Ages, and it was also in this town that the Turkish *Kāshif* resided. It was only during the 19th century that Zaḳāzīk supplanted Bilbays.

Through the province of al-Sharḳiyya passed Trajan's canal (*Traianius potamos*) which connected the Nile with the Red Sea via Lake Timsāḥ and the Bitter Lakes. In order to supply the Holy Cities of the Ḥidjāz with Egyptian cereals, the canal was renovated in 23/643-4 by ʿAmr b. al-ʿĀṣ during the reign of the caliph ʿUmar; whence its name of Canal of the Commander of the Faithful (*khalīdj amīr al-muʾminīn*). Having been silted up, the canal was reopened by the Fāṭimid caliph al-Ḥākim (*al-khalīdj al-ḥākimī*). In al-Maḳrīzī's time it had almost disappeared (*Khiṭaṭ*, i, 302 f.).

In Mamlūk times, many of the villages of the Sharḳiyya province were granted as *iḳṭāʿ*s to Bedouin chiefs; the settlement of Bedouins is reflected up to this day by the local dialects (cf. *Tübinger Atlas des Vorderen Orients, TAVO*, maps A, viii, 12, B, vii, 13, and B, viii, 13). The modern province (*mudīriyya*) of al-Sharḳiyya (capital, Zaḳāzīk) covers 4,702 km^2; the number of inhabitants was in 1897, 749,130; in 1960, 1,820,000; and in 1966, 2,125,000.

AL-**SHARRĀṬ** ("the manufacturer of string from palm-fibre", *sharīṭ*), ABŪ ʿABD ALLĀH MUḤAMMAD B. MUḤAMMAD B. ʿAYSHŪN, son of a *mudjāhid*, slain in battle which the Spaniards at al-Maʿmūra (al-Mahdiyya = San Miguel de Ultramar) was born at Fās in 1035/1625-6 and died there in 1109/1697 after having adopted Ṣūfism. He is credited with the authorship of a hagiographical collection, but this has sometimes been disputed by his compatriots; this is *al-Rawḍ al-ʿāṭir al-anfās bi-akhbār al-ṣāliḥīn min ahl Fās*. According to al-Kattānī, it was really the work of Muḥammad al-ʿArabī al-Ḳādirī. In it among the biographies is a synopsis of the *manāḳib* of 99 saints of Fās dating for the most part from the 10th-11th/16th-17th centuries. They are all included again in the *Salwat al-anfās*. There is a manuscript of this work dated 1203/1788 in the Bibliothèque Générale of Rabat, no. 389.

Bibliography: Ḳādirī, *Nashr al-mathānī*, lith. Fās 1310, ii, 161; Kattānī, *Salwat al-anfās*, lith. Fās 1316, i, 8 and ii, 347; R. Basset, *Recherches bibliographiques*, 32, no. 86; E. Lévi-Provençal, *Les historiens des Chorfa*, Paris 1922, 280-3. (E. LÉVI-PROVENÇAL)

SHARSHAL, conventional French form Cherchell, a town of Algeria, the chef-lieu of an arrondissement in the department of al-Aṣnām (formerly Orléansville). It is situated on the edge of the Miliana massif, 95 km/60 miles to the west of Algiers, in long. 2° 29' E., lat. 36° 37' N. The estimated population in 1994 was 22,000 (in 1930, *ca*. 5,500, including 1,500 Europeans). The town is built on a plateau a kilometre broad lying between the sea on the north and wooded hills, the outer buttresses of the massif of the Banū Manāṣir, in the south. The calcareous rocks of the plateau provide excellent building materials, the fertility of the soil and humidity of the climate are conducive to the growth of all kinds of produce. The surrounding country is covered with gardens and vineyards. The harbour, sheltered from the west winds by a little island and from the east winds by Cape Tizirine is small but safe.

History. The advantages of the site of Sharshal were remarked in very early times. The Phoenicians had a trading station here called Iol, which later passed to the Carthaginians. After the Second Punic War, Iol became the capital of the kings of Mauretania. Placed on the throne of Mauretania in 25 B.C. by Augustus, King Juba II gave the town the name of Caesarea and adorned it with monuments and works of art. When, after the death of Ptolemy, successor of Juba, Mauretania had been annexed to the empire the town was raised to the rank of a Roman colony (Colonia Claudia Caesarea) and was the capital

of the province of Mauretania. It was considerably extended and in the second century A.D. had perhaps 40,000 inhabitants (Leveau and Pellet, 1984). Its walls were about 5 miles round. Having previously lost its importance by the partition of the two Mauretanias in the time of Diocletian, it was burned during the rebellion of Firmus (371) and at the beginning of the next century was sacked by the Vandals.

The Byzantines reoccupied it in 585 but never restored to it its past prosperity; at a date which is not accurately known, but probably in the early years of the 8th century A.D., Caesarea fell into the hands of the Arabs. The harbour still existed in the time of Ibn Ḥawḳal (*Description de l'Afrique*, tr. de Slane, in *JA* [1842], 184). In the time of al-Bakrī (*Masālik*, tr. de Slane, Algiers 1913, 165) it was in ruins. According to this author there was nothing left at Sharshal but an "anchorage commanded by an enormous town of ancient buildings and still inhabited". Al-Bakrī, however, mentions the existence of several *ribāṭs* where a large crowd of people assembled every year. Al-Idrīsī describes Sharshal as a town of small extent but well populated (tr. Dozy and de Goeje, 103). The surrounding country was occupied by Bedouin families who devoted themselves to cattle-rearing, to growing vines and figs, and they harvested more wheat and barley than they could consume. These circumstances explain the raid made on the town by the Normans of Sicily in 1144. According to Leo Africanus, *Description de l'Afrique*, Bk. iv, ed. Schefer, iii, 52, the town was continuously inhabited during the five centuries that followed the Arab conquest.

During this period, Sharshal was held in turn by the various dynasties which disputed the possession of central Maghrib. After the disruption of the Almohad empire, it fell to the ʿAbd al-Wādids of Tlemcen, was taken from them by the Marīnids in 700/1300, became a part of the ephemeral kingdom founded about 750/1350 by the Awlād Mandīl and ultimately recognised the authority of the Zayyānids in the reign of Abū Thābit. In the 9th/15th century, fugitive Moors from Spain settled here in large numbers and built 2,000 houses (according to Leo Africanus, *loc. cit.*). The newcomers devoted themselves to agriculture and industry, especially to silk growing, and commerce, but also to piracy. In the first years of the 10th/16th century a Turkish corsair named Ḳara Ḥasan settled at Sharshal but was put to death by Arūdj [*q.v.*], who made himself master of the town and placed a garrison in it. Temporarily liberated from the authority of the Turks as a result of the defeat of Khayr al-Dīn [*q.v.*] by the Kabyles, the people of Sharshal had again to recognise the Turkish government and this time, definitively, in 934/1528. An attempt made by the Spanish to seize the town and make it a base of operations against Algiers failed in 1531.

During the Turkish period, Sharshal simply stagnated. The population never exceeded 2,500-3,000 inhabitants, occupying a limited part of the old town. The depredations wrought by the corsairs who sallied out from it led to its bombardment by Duquesnes in 1682. Turkish authority was represented by a *ḳāʾid*, aided in the administration of local affairs by a council of six notables and supported by a garrison established some distance south on the Wādī al-Hashim. The mainstay of Turkish power, however, was the Marabout family of the Ghubrīnī, whose ancestors had come from Morocco at the end of the 10th/16th century and who had acquired considerable influence throughout this region. At the beginning of the 19th century, the Turks quarrelled with them. Al-Ḥādjdj b. ʿAwda al-Ghubrīnī was put to death by order of the Dey, and his relatives had to take refuge in al-Dahra.

The disappearance of Turkish government in 1830 enabled the Ghubrīnīs to return to Sharshal and become masters of the province. But they found their influence assailed by that of another Marabout family, that of the Brākna who lived among the Banū Manāṣir. Finally, ʿAbd al-Ḳādir who had established a *khalīfa* at Milyāna, forced the people of Sharshal to submit to him. He tried to use the harbour for an attempt to revive piracy. An attack by a Sharshal corsair on a French warship decided the Governor-General Valée to occupy the town in 1840 and to establish there a colony of a hundred European families. The new settlement prospered rapidly, and by 1850 had over a thousand inhabitants. They began the development of the countryside around and this has been steadily continued.

Sharshal has lived through difficult times, but not without handing on to posterity authentic traditions and typically urban values. The eclipses of its prosperity have always been aggravated by the distance and the eccentric positions of the successive capitals of the central Maghrib, from Tāhart to Tlemcen, putting up with the ephemeral ʿĀshir [*q.v.*] or the inaccessible Ḳalʿat Banī Ḥammād [*q.v.*], and even Bidjāya or Bougie. The present capital, Algiers, has not favoured upheavals.

The long-lastingness of the town's traditions, and also the stability of its population, are well-underlined by the role of the Ghubrīnīs and Brākna, out of whom have arisen the present-day élite, such as the two Bélarbi physician brothers, one of whom was in the service of the Bey of Tunis at the end of the 19th century (Sari, 1988, 225). From 1943 to 1945, Sharshal was the seat of the École Spéciale Militaire Française of St. Cyr.

The present wave of urbanisation has given rise to an unprecedented population increase, reaching 22,000 in 1993 as against 2,287 in 1954.

SHARṬ (pls. *shurūṭ*, *sharāʾiṭ*), literally, "condition".

1. In Islamic law. Here, it has the sense of "condition, term, stipulation". The term has two major connotations. Generally, it denotes that which does not partake in the quiddity of a thing but upon which the existence of that thing hinges. Ritual cleansing (*ṭahāra*), for instance, is not a constitutive part of prayer (*ṣalāt*) but it is a condition for its validity. In legal theory (*uṣūl al-fiḳh*), *sharṭ* signifies a condition in verifying the *ratio legis*, the *ʿilla*. *Sharṭ* requires the ruling (*ḥukm*) to be non-existent when this condition does not obtain, and it does not necessitate the presence of the ruling when this condition is present; for if there is a relationship of entailment between the condition and the ruling, then the condition is deemed to be its *ratio legis*, which it is not. Since ritual cleansing is a prerequisite (= condition) for the validity of prayer, prayer would be invalid when cleans-

ing does not obtain. Conversely, ritual cleansing may be valid when prayer may not.

The same distinction between the constitutive elements of a thing and that upon which the thing and its validity depend is likewise maintained in the area of substantive law (*furūʿ*). Here, *sharṭ* denotes the general prerequisites for the validity of a legal act, as opposed to its essential elements (*arkān*, sing. *rukn*). Witnessing, for instance, is a condition for concluding matrimonial contracts, but it is not a constitutive part of it, as is offer and acceptance (*īdjāb* and *ḳabūl*).

In contracts, the term has another specialised meaning, namely, term, condition or reservation. The insertion of these in agreements may be necessary for the agreement to be valid, as we have seen. If they contradict the established law, they render the agreement void. A contractual term that nullifies an agreement is any term that runs counter to the otherwise established conditions of the agreement and that intends to benefit one of the parties to the agreement to the exception of the other(s). A well-known option in contracts is *khiyār al-sharṭ*, which is the agreement of the contracting parties to bestow on one or both of them the right to rescind the contract within a certain period of time. The majority opinion allows for three days, whereas the minority one allows four.

In its plural form, the term is normatively used to denote legal formularies. *Shurūṭ* thus refers to a wide variety of prescribed model documents used in legal transactions including sales, securities, agency, partnership, loans, bankruptcy, preemption, rent, agricultural leases, *waḳf*, bequests, inheritance, custody, oaths, aquittances, interdiction, dowry, marriage, divorce, religious conversion, homicide and penal injuries. A specialised genre eventually developed for the purpose of providing jurists with legally-watertight formulae. The authors and compilers of these formularies became known as the *shurūṭiyyūn* (mainly in the Ḥanafī and Shāfiʿī schools), *al-muwaththiḳūn* (in the Mālikī school), and *kuttāb*. The Ḥanafī scholars seem to have played a special role in the creation of *shurūṭ* literature in the early period. Later on, the Shāfiʿī and Mālikī contribution to the further development of the genre was no less significant. The Ḥanbalī legists, on the other hand, do not appear to have devoted much energy to this literature.

Although the Ḳurʾān and the Sunna enjoin the writing down of transactions, the Muslim jurists generally did not consider written documents to be necessary for the validity of a transaction. In fact, the written instrument needs only to be duly attested by witnesses in order for it to be valid. Conversely, without a written document, an oral contract attested by witnesses is deemed both sufficient and valid. Nonetheless, in practical terms, the writing down of transactions was highly recommended, for it constituted a safeguard against distortion, misrepresentation and forgetfulness, all of which were causes for litigation.

In the light of the controversy about the correspondence, or lack of it, between doctrine and practice in Islamic law, modern scholarship draws a distinction between model formularies and those which were used in practice. The former appear in the *shurūṭ* manuals, compiled in a more or less formal fashion by the jurists, often with commentaries and annotation. The latter are found in archives and documentary collections. While these contain details of social and economic significance, including specific information about the objects being sold, rented, bequeathed or otherwise, as well as about the individuals who were parties to them, model documents appear as abstracted formulas, dissociated from any specific context and having little more than strictly legal significance. Their seemingly idealistic nature may lead one to think that a gap separated them from the realities of judicial practice. However, ample evidence suggests that the relationship between model documents and documents used in judicial practice was dialectical: the former were ultimately drawn from the latter, no doubt with some alterations and improvements, including the omission of real names and objects involved in the transaction. The purpose behind the changes made in the actual documents was not only to make them legally watertight but also to provide the notary and the public with ready-made formularies to serve in legal transactions. Thus documents in judicial practice were appropriated from model documents, and these in turn were drawn from the world of practice.

(WAEL B. HALLAQ)

2. In philosophy. Here, it has the sense of the logical term "hypothesis, condition". In Arabic logic, the term is firmly bound up with propositional thought, and, with *sharīṭa*, constitutes an equivalent to the Aristotelian Greek ὑπόθεσις. Of course, the unique Ḳurʾānic usage of the root has no connotations of formal Greek logic, referring rather to "signs" or "tokens" (*ashrāṭuhā*) of the Last Day (*al-Sāʿa*) (XLVII, 18) in a single verse. Furthermore, Lane (s.v. *sharaṭa*) shows very clearly that one of the earliest secular senses of the Arabic root lay in commerce rather than philosophy or logic. However, by the time of al-Fārābī [*q.v.*], the Arabic term *sharṭ* and its cognates had developed considerably in logical sophistication. The interest which had developed in conditional syllogisms constituted a legacy from Stoic thought. Rescher has stressed the considerable attention paid by the Baghdād School to the syllogism in its commentaries on Aristotle's logical works; noteworthy here were the treatises of Abū Bishr Mattā and al-Fārābī himself. The latter's preferred term for "syllogism" was *ḳiyās*, which came to be the standard rendering of the Aristotelian *syllogismos*. Al-Fārābī made a distinction between the "attributive" or "predicative" syllogism (*ḳiyās ḥamlī*), and the "conditional" or "hypothetical" syllogism (*ḳiyās sharṭī*). The latter was further divided into "conjunctive" and "disjunctive" (*al-ḳiyās al-sharṭī al-muttaṣil* and *al-ḳiyās al-sharṭī al-munfaṣil*). Ibn Sīnā followed al-Fārābī's terminology in distinguishing between *ḥamlī*

and *sharṭī* propositions, and also identified two basic kinds of conditional proposition as "conjunctive" (*muttaṣila*) and "disjunctive" (*munfaṣila*). It is clear that the conditional syllogism was of considerable interest to mediaeval Muslim logicians in the Islamic West as well; as R. Arnaldez reminds us (*EI*[2] art. *Manṭiḳ*), the Ẓāhirī Ibn Ḥazm devoted some space to this topic, although the Arabic terminology which he employed to divide up conditional propositions, as adumbrated by Arnaldez, differed somewhat from that of al-Fārābī and Ibn Sīnā outlined above.

3. In Arabic grammar. Here, *sharṭ* denotes the protasis of a conditional sentence. The apodosis is variously referred to as *djawāb* "response", *djazā'* or *mudjāzāt* "requital". Both *djazā'* and *mudjāzāt* may denote the conditional structure as such, for which the merismus *sharṭ wa-djawāb* is also commonly used, while *djawāb* is applied to several other kinds of clause, though never to the whole conditional sentence.

The rules state that the protasis of real (possible) conditions is introduced by the particle *in*, with *law* reserved for unreal (impossible) conditions and *idhā* only being conditional to the extent that it indicates the time of occurrence of the apodosis (cf. Sībawayhi, *Kitāb*, Būlāḳ, ii, 311/Derenbourg, ii, 338: *idhā* denotes "future time with a conditional sense"). Hence *sa-azūruka idhā 'ḥmarra al-busru* "I shall visit you when the grapes redden" is correct but not **in iḥmarra 'l-busru* "if the grapes redden". On the other hand *in ṭala'at il-shamsu* "if the sun rises" is permitted because the exact time of sunrise may not be known if obscured by cloud. In practice, the three particles are often confused, and likewise the accompanying verb forms, which ought to be the same in each clause, either both perfect, *māḍī* + *māḍī* or both imperfect, *muḍāri'* + *muḍāri'* (apocopated *madjzūm* with *in* and independent *marfū'* with *law*). The canonical patterns and their many variations are reviewed by Peled, *Conditional structures*, where the contrast with the simplified prescriptions of pedagogical grammars becomes dramatically visible.

Other elements unanimously accepted as having conditional force are the nouns *mā*, *mahmā* "whatever", *man*, *ayyu(-mā)* "whoever", and the particles *aynamā* "wherever", *matā mā* "whenever" (always spelt as two words), *idhmā* "whenever", *immā* (< *in mā*) and *ḥaythumā* "however". The conditional functions of *kayfa(-mā)* "however" and *kullamā* "every time" are disputed. On the other hand *ammā*, whose second clause is always introduced by *fa-*, is often interpreted as a true conditional particle, hence paraphrased by Sībawayhi (*Kitāb*, i, 418/i, 469) as *mahmā yakun min shay'in*.

Among the theoretical issues which attracted the attention of the Arab grammarians are the following.

The operator (*'āmil*) on the two clauses is discussed in the same terms as the equational sentence, i.e. either the conditional particle itself operates on both clauses or only on the first and the whole protasis then operates on the apodosis. Other, dissenting views are advanced, however.

Pseudo-conditionals were extensively analysed, both those in which the protasis is not a true condition, e.g. *itīnī ukrimka* "come to me [and if you do] I will treat you generously", and those in which the apodosis is not the immediate consequence of the condition, e.g. *in atāka zaydun fa-akrimhu* "if Z. comes to you [then] treat him generously", with an obligatory *fa-* before the apodosis.

The structural relationship between conditionals and interrogatives was recognised (cf. *djawāb* for apodosis), which led to a disagreement about the conditional status of *kayfa*.

Whether *law* intrinsically denotes impossibility (*imtinā'*) is much debated in later grammar, though Sībawayhi defines *law* simply as "indicating something which would have happened when [or because] something else happened" (*ḥarf li-mā kāna sa-yaḳa'u li-wuḳū'i ghayrihi*, *Kitāb*, ii, 306/ii, 334). The theological implication of being impossible even to God was not overlooked, cf. I. Goldziher, in *ZDMG*, lvii (1903), 401, *apud* Reckendorf, *Arabische Syntax*, 494 n. 1.

Inversion of protasis and apodosis is generally disallowed. Such constructions as *anā ẓālimun in fa'altu* "I would be wrong if I did this" are explained as elliptical, viz. [*in fa'altu fa*]-*anā ẓālimun in fa'altu* "[if I did this] I would be wrong if I did this".

Serial conditions have legal implications, e.g. *in akalti in sharibti anti ṭāliḳun* "if you eat, if you drink you are divorced" only effects a divorce if the woman first drinks and then eats, though a converse interpretation is also maintained.

In conclusion it should be noted that the situation in contemporary written Arabic is rather fluid; both *law* and *idhā* appear to be encroaching on the functions of *in*, which is becoming correspondingly less frequent in occurrence.

Bibliography: The topic can conveniently be explored in Zamakhsharī, *K. al-Mufaṣṣal*, ed. C. Broch, Christianiae 1879, §§ 32, 204, 207, 419-27, 585-94 (same paragraphs in Howell and Ibn Ya'īsh). For Sībawayhi, see A.S. Hārūn (ed.), *Kitāb Sībawayhi*, Cairo 1968-77, v (Index). The important discussion of the various particles by Ibn Hishām is easily located in his *Mughnī 'l-labīb*, Cairo n.d., and cf. A.J. Gully, *Grammar and semantics in medieval Arabic. A study of Ibn Hisham's Mughni 'l-Labib*, London 1995, 42-3, 157-8, 179-83, 229-30; Yishai Peled, *Conditional structures in Classical Arabic*, Wiesbaden 1992, 166-70, has a bibl. of secondary sources, to which may be added Kinga Dévenyi, *The treatment of Arabic conditional sentences by the medieval Arabic grammarians (stability and change in the history of Arabic grammar)*, in *The Arabist* (= Budapest Studies in Arabic), i (1988), 11-42; C.H.M. [Kees] Versteegh, *Two conceptions of irreality in Arabic grammar: Ibn Hišām and Ibn al-Ḥāğib on the particle* law, in *BEO*, xliii (1991), 77-92.

SHĀSH [see tashkent].

SHASHMAḲOM ("six modes", the Tadzhik form of a compound of the standard Persian numeral *shash* and the Arabic term *maḳām* [*q.v.*]), a term designating the modal and formal concept of art music played in the urban centres of Uzbekistan. It developed in Bukhārā from elements of the local *maḳām* tradition and the *nawba* [*q.v.*] "suite" of Tīmūrid and Shaybānid court music. The earliest known song text collections are said to date back to the middle of the 18th century. Up to the beginning of the 20th century, the *shashmaḳom* flourished in the Emirate of Bukhārā and the Khanate of Khīwa. It consequently had to suffer from Socialist cultural policy. Modern

tendencies develop since the middle of the 20th century. Local differences exist between the ("Uzbek-Tadzhik") Bukhārā and the ("Uzbek") Khwārazm versions. The terminology of modes, metres and genres as well as the bulk of the song texts are Persian-Tadzhik; Uzbek song texts are a rather recent novelty.

The six *maḳom* cycles are called *buzruk, rost, navo, dugokh, segokh* and *iroḳ*. They bear the names of four of the former twelve main modes (*rāst, ʿirāḳ, buzurg, nawā*), and of two former "derived" (*shuʿba*) modes (*dogāh, segāh*). In contrast to the earlier "*nawba* of the masters" that consisted of four or five vocal pieces composed by individual musicians, the actual *maḳom* is characterised by separate cycles of basically five instrumental parts and a varying number of vocal pieces that are transmitted anonymously as a part of a canonical repertoire. The performance of a complete *maḳom* lasts about two hours.

A large part of the Khwārazmian version was written down at the end of the 19th century in tabulatures developed for the *ṭanbūr* [*q.v.*] and the *dutār*. For editions of both versions in staff notation, see A. Jung, *Quellen*.

(E. Neubauer)

SHAṬĀ, a place in Egypt celebrated in the Middle Ages, situated a few miles from Damietta, on the Western shore of the Lake of Tinnīs, now called Lake Manzala.

This town existed before the Arab period, since it is mentioned as the see of a bishop (Σάτα). There is no reason for giving credence to the romantic story of the pseudo-al-Wāḳidī, which gives as the founder of this town a certain Shaṭā b. al-Hāmūk (var. al-Hāmirak), a relative of the famous Muḳawḳis [*q.v.*]. This Shaṭā is presented to us as a deserter from the garrison of Damietta who helped to secure the possession of Burullus, Damīra and Ashmūn Ṭanāḥ for the Muslim army and who was killed at the capture of Tinnīs, on 15 Shaʿbān 21/19 July 642. Every year at this date, it is the custom to celebrate the anniversary of his death, and to this origin the writers attribute the pilgrimage which still took place at Shaṭā in the time of Ibn Baṭṭūṭa.

To guard against the maritime attacks of the Greeks, the Arabs stationed regiments of troops on certain parts on the coast, and Shaṭā was amongst the number. This port became in the Middle Ages a very active industrial centre, in this region sharing with Damietta, Dabīḳ and Tinnīs, the manufacture of valuable textiles. Each of these towns probably manufactured a special article since the materials which they exported bore a name indicative of their place of origin. Travellers and geographers never tire of praising the goods of Shaṭā called *shaṭawī*. Very probably there was at this place, in addition to the private industry, a government workshop, a *Dār al-Ṭirāz*, analogous to those of Alexandria and Tinnīs. The historian of Mecca, al-Fākihī, has preserved the text of an inscription embroidered on a cover intended for the Kaʿba. It was the caliph Hārūn al-Rashīd who ordered it to be made in the year 191/807 at the *ṭirāz* of Shaṭā.

We do not know the part which Shaṭā played in the two occupations of Damietta by the Franks. Certain writers have tried to place at the spot the site of the encampment of Jean de Brienne, but this view has been disputed. Between the two Crusades, Tinnīs had been razed to the ground by order of al-Malik al-Kāmil in the year 624/1227, and as military reasons had probably induced this destruction, Shaṭā perhaps suffered the same fate.

But while the ruins of the former have survived under the name of Tell Tinnīs, a small town now bears the name of Shaykh Shaṭā. In its centre there is the mosque in which the relics of the hero of the Arab conquest, who became the Shaykh Shaṭā, are venerated.

(G. Wiet-[H. Halm])

SHAṬḤ or *shaṭhiyya* (A., pl. *shaṭaḥāt* or *shaṭhiyyāt*), a technical term in Sūfism meaning "ecstatic expression", commonly used for mystical sayings that are frequently outrageous in character.

The root *sh-ṭ-ḥ* has the literal meaning of movement, shaking, or agitation, and carries the sense of overflowing or outpouring caused by agitation; thus *mishṭāḥ* is a place where flour is sifted by shaking. In the first available discussion of the term, Abū Naṣr al-Sarrādj (d. 378/988) defines *shaṭḥ* as "a strange-seeming expression describing an ecstasy that overflows because of its power" (*Kitāb al-Lumaʿ*, ed. R.A. Nicholson, London 1914, 375).

There is no evidence to support the suggestion of Massignon that early ecstatic sayings circulated in the guise of divine sayings reported by the Prophet Muḥammad, or *ḥadīth ḳudsī* [*q.v.*]; the latter have as good a documentation as any early *ḥadīth* collection and are not separately attributed to Ṣūfīs (W. Graham, *Divine word and prophetic word in early Islam*, The Hague 1977, 70). Nonetheless, the early stratum of *ḥadīth ḳudsī* contains similar materials, such as the important *ḥadīth al-nawāfil* (Graham, 173), which anticipates *shaṭḥ* by proposing the possibility of a union with God through love that leads to divinely-inspired speech and action. By the 4th/10th century, authors such as al-Sarrādj had applied the term above all to utterances such as Abū Yazīd al-Bisṭāmī's "Glory be to me, how great is my majesty" (*subḥānī mā aʿẓama shānī* [for *shaʾnī*]), and al-Ḥusayn b. Manṣūr al-Ḥallādj's "I am the (divine) truth" (*anā al-ḥaḳḳ*); for a general survey, see C. Ernst, *Words of ecstasy in Sufism*, Albany 1985).

Among Ṣūfī authors, the chief responses to *shaṭhiyyāt* (sometimes held simultaneously by the same individual) were (1) to explain them away, either as misquotations, or as the results of immaturity, madness, or intoxication (*sukr*); (2) to regard them as authentic expressions of spiritual states, which should nonetheless be concealed from the unworthy; and (3) to view them as expressions of the profoundest experience of divine realities. Many Ṣūfī authors briefly address the question of *shaṭḥ*, showing a strong ambivalence about apparently blasphemous claims to divinity, mixed with admiration for the spiritual status of their authors, whose words are often quoted anonymously; al-Ghazālī notably belongs to this category. Among those who took these sayings seriously was Djunayd [*q.v.*], who

composed a commentary (*tafsīr*) on the sayings of Abū Yazīd, partially transmitted by al-Sarrādj with his own additions (*Luma'*, 375-408). This may be compared with the collection of Abū Yazīd's sayings transmitted by al-Sahlakī (d. 476/1083) under the title *Kitāb al-Nūr min kalimāt Abī Ṭayfūr* (ed. 'Abd al-Raḥmān Badawī, *Shaṭaḥāt al-Ṣūfiyya*, Cairo 1949, tr. Abdelwahab Meddeb, *Les Dits de Bistami: Shatahât*, Paris 1989).

The most extensive exposition of *shaṭḥ* was provided by Rūzbihān al-Baḳlī ([*q.v.*]; see now also Ernst, *Rūzbihān Baqlī: mysticism experience and the rhetoric of sainthood in Persian Sufism*, London 1995). His Arabic *Manṭiḳ al-asrār* (ed. P. Ballanfat and Ernst, forthcoming), translated into Persian by the author in 570/1174 as *Sharḥ-i shaṭḥiyyāt* (ed. H. Corbin, Tehran 1966), presents nearly 200 commented examples from 45 different authors (with emphasis on Abū Yazīd, al-Wāsiṭī, al-Ḥuṣrī, al-Shiblī, and al-Ḥallādj, including all of the latter's *Kitāb al-Ṭawāsīn*). Rūzbihān's distinctly apologetic commentary typifies the most positive Ṣūfī attitude toward *shaṭḥiyyāt*. Many of the sayings take the form of "I am" sayings, identifying with God or the divine attributes. The principal Ṣūfī interpretation of this variety of sayings rested on the concept of mystical annihilation of the individual ego (*fanā'*), followed by the subsistence of God in its place (*baḳā'*); this made it possible for God to speak through the individual. Other sayings question the ultimate significance of Islamic rituals and the afterlife. Rhetorically, the audacious style of *shaṭḥ* partook of the form of the pre-Islamic Arab boasting contest (*mufākhara* [*q.v.*]); among early Ṣūfīs, many recorded conversations and sayings show the tendency to exceed the claims of others and discredit them by hyperbole.

Because of the lack of any clear legal definition of blasphemy in Islamic law, *shaṭḥiyyāt* were treated inconsistently by legal authorities; some regarded them as beyond the jurisdiction of the *sharī'a*, especially when subjected to interpretation, while others (e.g. Ibn al-Djawzī [*q.v.*]) viewed them as tantamount to the heresies of incarnation, libertinism, and unification (*ḥulūl, ibāḥa, ittiḥād*) and fully deserving of punishment in terms of apostasy. In practice, the reduction of apostasy to the category of *zandaḳa* [*q.v.*], the Zoroastrian concept of heresy as political crime, meant that *shaṭḥiyyāt* were only prosecuted when political authorities found it desirable to do so. The prosecution of Ṣūfīs such as Nūrī, the executions of al-Ḥallādj and 'Ayn al-Ḳuḍāt Hamadānī [*q.v.*], or the posthumous trial of the poet Ibn al-Fāriḍ [*q.v.*], are explicable in terms of their political context (*Words of ecstasy*, 97-116; Th.E. Homerin, *From Arab poet to Muslim saint: Ibn al-Fāriḍ, his verse, and his shrine*, Columbia, S.C. 1994, 63).

Non-Ṣūfī intellectuals regarded *shaṭḥiyyāt* with sceptical interest; Ibn Khaldūn regarded them as unintentional products of unconscious ecstasy, which are pardonable except (as in the case of al-Ḥallādj) when they are spoken deliberately (*Muḳaddima*, ed. 'Abd al-Wāḥid Wāfī, Cairo 1379/1960, 1079-80). The philosopher Ibn Ṭufayl [*q.v.*] found the sayings of Abū Yazīd and al-Ḥallādj to lack intellectual rigour (*Ḥayy ibn Yaḳẓān*, ed. L. Gautier, Beirut 1936, 4), while his Jewish commentator Moses of Narbonne reinterpreted them to harmonise with Hebrew scripture (G. Vajda, *Comment le philosophe Juif Moïse de Narbonne, commentateur d'Ibn Ṭufayl, comprenait-il les paroles extatiques (šaṭaḥāt) des Soufis?*, in *Actas del primer congreso de estudios arabes e islamicos, Cordoba, 1962*, Madrid 1964, 129-35).

Among later Ṣūfīs, Ibn 'Arabī [*q.v.*] continued the ambivalent attitude toward *shaṭḥiyyāt*, regarding them as a sign of lack of mental control together with an egotistical claim (*al-Futūḥāt al-Makkiyya*, Beirut ed., ii, 387.8-388.26, tr. W. Chittick, in *Les Illuminations de la Mecque*, ed. M. Chodkiewicz, Paris 1988, 265-74). He only admitted as legitimate sources of doctrine those sayings (like his own) that are spoken by divine command, without any boasting, although his classification of particular *shaṭḥiyyāt* is remarkably elastic, depending on the context of his argument (Ernst, *The man without attributes: Ibn 'Arabī's interpretation of Abū Yazīd al-Bisṭāmī*, in *Journal of the Muhyiddin Ibn 'Arabi Society*, xiii [1993], 1-18). The most elaborate response to Rūzbihān's collection of *shaṭḥiyyāt* was supplied by Dārā Shukōh [*q.v.*] in 1062/1650 in his *Ḥasanāt al-'ārifīn* (ed. M. Rahīn, Tehran 1973), an abridgement of the *Sharḥ-i shaṭḥiyyāt* with additional excerpts from later Indian Ṣūfīs. The term *shaṭḥ* has been applied to later mystical sayings of Ṣūfīs in Java (Badawī, 148-58), India, Turkey, Egypt, and North Africa until the present day, with the same mixture of responses as in earlier times, while the sayings of Abū Yazīd and al-Ḥallādj still retain the power to shock their readers.

(C. ERNST)

SHĀṬIBA, the modern Xàtiva or Játiva, a town of the Sharḳ al-Andalus [*q.v.*], to the south of Valencia. The ancient Roman town (Saetabis) was situated on the Via Augusta; the Arab town saw a shift to the slope of the mountain, which was crowned by a powerful fortress. The surrounding region, irrigated by several rivers, was devoted to agriculture. Shāṭiba is described by the Arab geographers as a commercial centre which had trading links with North Africa and with Ghāna; its location in the network of communications of the Sharḳ al-Andalus no doubt favoured this mercantile activity, and also the development of a specialised industry, that of paper. The superior quality of its defences and its strategic position strongly influenced the history of Shāṭiba, a place of refuge and also the bridgehead for attacks on Valencia and other towns of the Sharḳ. It appears that in the early stages the town was included in the district of Tudmīr, but, at least from the 4th/10th century onward, it belonged to the *kūra* of Valencia. In the first half of this century, Shāṭiba sometimes had a governor appointed exclusively for the town, which was also under the general jurisdiction of the authorities in Valencia.

Information regarding Shāṭiba in the period of the Arab conquest and under the Umayyads is very sparse in the historical chronicles. To the local population there should be added, as elsewhere, Arab or Berber elements such as the Banū Mufawwiz (Ma'āfirids) or the Banū 'Amīra (Nafzids). However, the date of these arrivals is unknown, as is the significance of this influx in relation to the indigenous population. Later, in the

5th/11th century, the Banū Milḥān, Nafzids originally from Huelva, moved to Shāṭiba. The Banū Mufawwiz, according to Ibn Ḥazm, settled close to the town, in the hamlet of Yānuba (Énova). At least a part of this clan became urbanised, producing an important sequence of functionaries and scholars which is documented until the very end of the Islamic history of the town.

At the beginning of the 4th/10th century, Shāṭiba and Djazīrat Shuḳar (Alcira) were under the control of ʿĀmir b. Abī Djawshan, who was one of the Hawwāra Berber rulers of Shantamariyya or Santaver. From 312/924 onward, he resisted attacks by the armies of Cordova, sent by ʿAbd al-Raḥmān III. Finally, in 317/929, ʿĀmir surrendered the town under favourable conditions which allowed him to settle his affairs at Santaver before making his way with his family to Cordova.

After the fall of the caliphate, Shāṭiba acquired a new importance in the struggles for power in the eastern region of the Peninsula. ʿĀmirid Ṣaḳāliba [*q.v.*], expelled from Cordova, appropriated a piece of territory for themselves in which they sought to establish a nucleus of political legitimacy, recognising Umayyad or ʿĀmirid princes. In 408/1018, one of these Ṣaḳāliba, Khayrān, proclaimed in Shāṭiba a descendant of al-Nāṣir, ʿAbd al-Raḥmān, who took the title of al-Murtaḍā. This attempt at Umayyad restoration was of short duration and the Ṣaḳāliba proclaimed, again in Shāṭiba, a grandson of their former patron (al-Manṣūr), ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān al-Muʾtaman, who thus became ruler of Valencia. Furthermore, these Ṣaḳāliba were beset by internal rivalries, fighting among themselves to extend their territories. Mudjāhid of Dāniya (Denia), in particular, sought to dominate the region and supported the rebellion of Shāṭiba and other towns against ʿAbd al-ʿAzīz in 433/1041. The town was recaptured by ʿAbd al-ʿAzīz, but as a result of this war, he lost a major portion of his territory. Both ʿAbd al-ʿAzīz and his son and successor ʿAbd al-Malik found themselves confronted by mounting problems and were obliged to appeal to Christians, Aragonese or Castilian, for aid. The latter, led by King Ferdinand I, began an assault on the Sharḳ; the ruler of Toledo al-Maʾmūn intervened, deposed ʿAbd al-Malik and took possession of Shāṭiba and Valencia. After the death of al-Maʾmūn, these territories were taken under the control of the ruler of Saragossa, al-Muḳtadir, and Shāṭiba ultimately became subject to his son Mundhir, King of Lārida (Lérida), Ṭurṭūsha (Tortosa) and Dāniya. The last years of the 5th/11th century saw the Almoravids and the Christians in confrontation around Valencia and Shāṭiba. Power at Shāṭiba was in the hands of a certain Ibn Munḳidh when the Almoravid army, under the command of Ibn ʿĀʾisha, captured the town in 485/1092. Henceforward, the Almoravids resisted the threat posed by the Cid [SEE AL-SĪD] to Valencia, but a new army mustered at Shāṭiba, which included many volunteers, was unable to prevent the fall of the capital of the Sharḳ. From Valencia, the Cid led persistent attacks on Shāṭiba and other towns with Almoravid garrisons, and succeeded in routing the Muslim army which was compelled to take refuge in Shāṭiba. A new general, ʿAlī b. al-Ḥādjdj, was appointed to coordinate, from this town, the efforts of the Almoravids against Valencia, efforts which were not to bear fruit for some years. After the conquest of Valencia by the Almoravids, Shāṭiba entered a new phase in its history, perhaps the most splendid. The *amīr* Abū Isḥāk Ibrāhīm b. Yūsuf b. Tāshufīn established himself there as governor of the Sharḳ and had the town's defences renovated in 510/1117.

A period of stability began but it was to be disrupted, some thirty years later, by rebellions which threatened the declining Almoravid power. The dignitaries of Valencia offered authority to the *ḳāḍī* Abū ʿAbd al-Malik Marwān b. ʿAbd Allāh Ibn ʿAbd al-ʿAzīz, while the Almoravid governor, ʿAbd Allāh b. Muḥammad b. Ghāniya, took refuge with his family in Shāṭiba. Almoravids fleeing Valencia rallied to Ibn Ghāniya. Protected by its imposing fortress, they made forays into the surrounding countryside, destroying houses and abducting women and children. Ibn ʿAbd al-ʿAzīz was then obliged to besiege them, aided by the armies of Lerida and of Murcia, and succeeded in expelling them from Shāṭiba in 540/1145. The same year, however, the *djund* rebelled against Ibn ʿAbd al-ʿAzīz and recognised the authority of Ibn Mardanīsh [*q.v.*], the new ruler of the Sharḳ who resisted the progress of the Almohads in the Peninsula for many years. The latter did not take Shāṭiba and towns such as Denia and Valencia until after the death of Ibn Mardanīsh in 567/1171-2.

Again, a period of stability began for the town, the defences of which were repaired; the architectural and artistic remains which have survived date mostly from this period. The Almohads installed tribal contingents (Ṣanhādja and Haskūra) in Shāṭiba, as was the case with other cities of the Sharḳ and of the remainder of al-Andalus. But after the defeat of al-ʿIḳāb (Las Navas de Tolosa) in 609/1212, their power disintegrated. In the dynastic struggles of the Almohads, Shāṭiba took the side of the caliph of Marrākush against al-ʿĀdil, who had himself proclaimed in Murcia. The town was then governed by the *sayyid* Abū Zayd (grandson of the caliph ʿAbd al-Muʾmin) who also controlled Valencia, Denia and Alcira. Abū Zayd later recognised the authority of the caliph al-Maʾmūn, but he was unable to resist the rebellions of Ibn Hūd and of Zayyān b. Mardanīsh. Ibn Hūd, recognised by the people of Shāṭiba as *amīr*, first appointed as governor of the town Yaḥyā b. Ṭāhir, then Abu ʾl-Ḥusayn Yaḥyā b. Aḥmad b. ʿĪsā al-Khazradjī, from a distinguished family of Denia. Yaḥyā held his position for six years until his death in 634/1237. His son Abū Bakr Muḥammad, who was the *ḳāʾid* of the fortress, succeeded him as governor. During this time, the threat posed by the Aragonese intensified, and in 636/1238 King James I took possession of Valencia. The following year, he besieged Shāṭiba and took Alcira. In the face of the Christian advance, sections of the population began to flee the town, making their way with migrants from Valencia and Alcira to the Maghrib, where the caliph al-Rashīd received them. In 642/1244, James I again attacked Shāṭiba. The siege was concluded with an agreement according to which the Aragonese king took possession of part of the fortifications (the *castell menor*), with a promise on the part of the Muslims to hand over the rest of the fortress after a delay of two years. The conditions also stipulated respect on the part of the Christians for the lives, property, customs and laws of the inhabitants of the town. The Christians, however, seized the castle shortly before the end of the specified interval and the population was finally expelled from the town in 645/1248. The emigration was mainly directed towards the southern regions of the Peninsula and towards North Africa.

The intellectual life of Shāṭiba developed especially from the 5th/11th century onward, a period which saw a significant increase in the number of scholars

originating from the town. At the same time, it was visited by some eminent persons, such as Ibn Ḥazm (who wrote there his *Ṭawḳ al-ḥamāma*) or Ibn al-Barr, who settled in the town and died there. But it was especially in the 6th/12th century that Shāṭiba experienced a golden age for the Islamic sciences (the biographical dictionaries give notices of 121 scholars, originating from or born in the town, who died during the course of this century). In this context, the most illustrious son of Shāṭiba was without doubt al-Ḳāsim b. Firruh al-Shāṭibī (d. 590/1194 [*q.v.*]), who was born in the town and studied there, but spent most of his life in Egypt. An expert in Ḳurʾānic readings, he is best known for a didactic poem (*al-Shāṭibiyya*), based on the work of ʿUthmān b. Saʿīd al-Dānī (*al-Taysīr*) on this subject. The *nisba* al-Shāṭibī continued to be born by scholars long after the Christian conquest, especially at Granada. The best known example is that of Abū Isḥāḳ Ibrāhim b. Mūsā al-Shāṭibī (d. 790/1388), the author of the *K. al-Iʿtiṣām*.

In addition to part of the fortifications, still *in situ*, the Museum of Játiva preserves the artistic and architectural relics of its Islamic past: Ḳurʾānic and funerary inscriptions, the arches of a bath-house and the remains of a hall once located in the palace of Pinohermoso. The most interesting item, without doubt, is the famous "wash-basin", which has given rise to various interpretations and which is usually dated from the 5th/11th century.

(MANUELA MARÍN)

AL-**SHĀṬIBĪ**, ABŪ ISḤĀḲ IBRĀHĪM B. MŪSĀ b. Muḥammad al-Lakhmī al-Shāṭibī al-Gharnāṭī (d. 790/1388), a Mālikī *uṣūlī* scholar from al-Andalus.

Although al-Shāṭibī is known by the *nisba* of his family's place of origin, Játiva (conquered by the Christians in 645/1247), he was born and died in Granada. In that town he studied with scholars; of special importance were Abū ʿAlī Manṣūr al-Zawāwī and al-Makkarī al-Djadd (d. 759/1357), both transmitters of Ibn al-Ḥādjib's *Mukhtaṣar al-Muntahā* (based upon Fakhr al-Dīn al-Rāzī's *Maḥṣūl*), who instilled in al-Shāṭibī an interest for *uṣūl al-fiḳh* and *kalām*; the latter seems also to have introduced al-Shāṭibī to *taṣawwuf* through a special *silsila*. Abū ʿAbd Allāh al Sharīf al-Tilimsānī (d. 771/1369), author of *Miftāḥ al-wuṣūl ilā bināʾ al-furūʿ ʿalā ʾl-uṣūl* and an expert on *ʿulūm ʿaḳliyya*, was also al-Shāṭibī's teacher.

Al-Shāṭibī wrote on grammar (*Sharḥ Alfiyyat Ibn Mālik*, of which there are mss., and *K. Uṣūl al-naḥw*). He also wrote *K. ʿUnwān al-ittifāḳ fī ʿilm al-ishtiḳāḳ*, *K. al-Madjālis* (commentary of the chapter on *buyūʿ* in al-Bukhārī's *Ṣaḥīḥ*), *al-Ifādāt wa ʾl-inshādāt* (*adab* work in which are autobiographical data, ed. M. Abu ʾl-Adjfān, Beirut 1983). He also wrote poetry. He corresponded with contemporary scholars, especially *muftīs*, on different issues (on his *murāsalāt*, see al-Raysūnī, 106-22). One of them was whether a teacher (*murshid*) is necessary for the Ṣūfī novice (*murīd*). He received answers on this issue from various scholars, including Ibn Khaldūn in his *Shifāʾ al-sāʾil li-tahdhīb al-masāʾil*. Al-Shāṭibī's *fatāwā* are preserved in compilations like *al-Ḥadīḳa al-mustaḳilla* (ms. Escorial, no. 1096) and al-Wansharīsī's *Miʿyār* (see López Ortiz, *Fatwàs granadinas*, 85-6; Masud, *Islamic legal philosophy*, 106-9, 119-43) and have been edited by Abu ʾl-Adjfān, Tunis 1984 (2nd revised ed., Tunis 1406/1985). In al-Shāṭibī's *fatāwā* there is adaptation to social change and application of the concept of *al-maṣāliḥ al-mursala*, i.e. he accepts not only the *maṣāliḥ* (sg. *maṣlaḥa* [*q.v.*]) which have a specific textual basis, but also those which have not (*mursala*). Al-Shāṭibī's doctrine on *uṣūl al-fiḳh* is developed in his *al-Muwāfaḳāt fī uṣūl al-sharīʿa* (Tunis 1302/1884, Cairo 1341/1923). Al-Shāṭibī also wrote a work against innovations (*bidaʿ*), his *K. al-Iʿtiṣām* (ed. M. Rashīd Riḍā, in *al-Manār*, xvii [1333/1913]; several times reprinted). Al-Shāṭibī himself was accused of innovation and heresy, because he opposed certain practices (see Masud, 104-5) deeply rooted in the life of the Andalusī Muslim community. One of them was the mention of the *sulṭān*'s name in the *khuṭba*. His opposition to this attracted refutations and counter-refutations (Masud, 108-9). On al-Shāṭibī's transmissions, see al-Mudjārī's *Barnāmadj* (ed. Abu ʾl-Adjfān, Beirut 1982, 116-22).

Al-Shāṭibī is one of the most important scholars of the Mālikī *madhhab* and one of its renewers, especially through the notion of *al-maṣāliḥ al-mursala*, central to his doctrine on *uṣūl al-fiḳh* and also in his *fatāwā*. For example, he allowed certain taxes not mentioned in the *sharīʿa* but made necessary by the economic difficulties of the Naṣrid kingdom in Granada. Al-Shāṭibī's work has had an important influence in the writings of some modern Muslim thinkers, such as Rashīd Riḍā. Since the pioneering monograph of 1977 by M.Kh. Masud (see *Bibl.*), al-Shāṭibī's life and legal doctrine have in recent years been the object of several studies which show the originality and importance of his contribution to *uṣūl al-fiḳh*.

AL-SHĀṬIBĪ, ABU 'L-ḲĀSIM B. FIRRUH B. KHALAF b. Aḥmad al-Ruʿaynī, eminent Ḳur'ānic scholar who introduced didactic mnemotechniques in the discipline of Ḳur'ān reading (*ḳirā'a*).

He was born in 538/1144 at Játiva (al-Shāṭiba [*q.v.*]) in Muslim Spain. Although blind, he took up studies in *ḳirā'āt* and *ḥadīth* in his home town, where he also acted for one year as a preacher. He studied first with ʿAbd Allāh b. Muḥammad al-Nafzī, then with ʿAlī b. Muḥammad b. Hudhayl at Valencia (Balansiya), concentrating on al-Dānī's *Taysīr*, but taking up as well grammar and *adab*. On his way to perform the Pilgrimage to Mecca, he attended lectures by Abū Ṭāhir Aḥmad b. Muḥammad al-Silafī at Alexandria. Upon his return in 572/1175, he established himself at Cairo, where he soon became a renowned Ḳur'ān reader and was appointed by al-Ḳāḍī al-Fāḍil head instructor in the disciplines of *ḳirā'āt*, grammar and language in his new-founded al-Fāḍiliyya *madrasa*. Upon Ṣalāḥ al-Dīn's reconquest of Palestine, al-Shāṭibī payed him a visit at Jerusalem in 589/1193. He died from a painful illness at the age of 52 on 28 Djumādā II 590/19 June 1194, and was buried at the smaller Ḳarāfa cemetery.

Through al-Shāṭibī, leadership in Ḳur'ānic disciplines returned to the East from Andalusia, where it had reigned for over a century with authorities like al-Dānī (d. 444/1053 [*q.v.*]) and Makī b. Abī Ṭālib (d. 437/1046 [*q.v.*]), who had substantially developed its theoretical framework of combinatory phonetics. Al-Shāṭibī's most important achievement, which has secured him widespread fame until modern times, is, however, chiefly of a mnemonic kind. Although he wrote several prose compilations on *tafsīr* and Ḳur'ān readings (Brockelmann, I², 521-2, SI, 725-6), the subject of later continuous study has been his didactic poems, the *ʿAḳīlat atrāb al-ḳaṣā'id fī asnā 'l-maḳāṣid* (printed in *Madjmūʿa fī 'l-ḳirā'āt*, Cairo 1929), simply called *al-Rā'iyya*, a rhymed version of al-Dānī's handbook on Ḳur'ānic orthography *al-Muḳniʿ*, and a poem in *ṭawīl*, *Nāẓimat al-zuhr*, on the counting of Ḳur'ān verses. By far most prominent, however, is his *Ḥirz al-amānī fī wadjh al-tahānī* (ed. ʿAlī Muḥammad al-Ḍabbāʿ, Cairo 1937), a versification of al-Dānī's compendium of the Seven Readings, *al-Taysīr*, known simply as *al-Shāṭibiyya*, which was to constitute the basis of *ḳirā'āt* teaching from al-Shāṭibī's times until our day, and was also one of the sources used for the establishment of the Cairo edition of the Ḳur'ān in 1924. Al-Shāṭibī's poem is appreciated more especially because it answers the particular need of the discipline, sc. to ease the essential task of memorisation. Not only is the Ḳur'ān itself transmitted almost solely through memorising, but likewise is the discourse about *ḳirā'āt* and even Ḳur'ānic orthography. The reason is evident. Since the Ḳur'ān constitutes itself as text only through recitation, i.e. through being performed as a "speech act" addressed to listeners, the modalities of its performance, i.e. orthoepy and intonation, cannot be conveyed except through oral practice. It is, moreover, the personal presence of the instructor in this art that is considered indispensable, since he—occupying the final position within a chain of transmitters which goes back to the Prophet himself—guarantees the integrity of the tradition's flow from the initial and immediate situation of speech unto the contemporary listeners. The particular affinity of the Ḳur'ān-reading discipline to orality is further enhanced by the interdependence of the elements that constitute the performance of Ḳur'ān reading: the particular version of the text (*ḳirā'a*), the orthoepic rules (*tadjwīd* [*q.v.*]) and the melodical shape of the reading, the cantilena. These three parameters are constantly interacting. Any particular text version (*ḳirā'a*) requires not only a rhythm of its own, but also differs in terms of *tadjwīd*, i.e. particular issues of combinatory phonetics and the location of pauses, from any of the other versions. Again, the melodisation is conditioned by the particular *ḳirā'a*'s rhythm, and may serve to enhance the formal structuring of the text or special aspects of its contents. Finally, *tadjwīd*, the rules concerning pausa location and division of verses, determine the grammatical structuring of the phrases and thus the flow of the melody. Thus the substantially oral nature of the *ḳirā'āt* discipline makes it understandable that, already several generations before al-Shāṭibī, teaching material had been put in the form of didactic poetry. Nevertheless, all of these works were superseded by al-Shāṭibī's long *ṭawīl* poem (1,173 verses), the *Ḥirz*, which adds to the *ḳirā'āt* discourse as such a propaedeutic chapter on general phonetics. The early recognition of the work, enhanced undoubtedly by numerous commentaries, some of which were written by the author's own students (Bergsträsser, *GdQ*, iii, 222-4), may be partly due to al-Shāṭibī's personal fame as a saintly man, observant in his ritual duties, upright towards his colleagues and students, God-fearing and even credited with some miraculous powers. Undisputably, however, the poem itself possesses factual efficiency, due to a decisive new mnemonic device: the introduction of sigla into the presentation of the particular variants. These sigla, pointing at particular readers, transmitters or transmitter groups, appear in the written verse simply as initial letters of single words used within the discussion of the particular Ḳur'ānic lemmata. In order to be recognisable in their meta-lingual function, they have to be marked by a particular colour or repeated over the word they appear in. From Nöldeke (*GdQ*, i, 338) to Bergsträsser (*GdQ*, iii, 219-24), both of whom judged the *Ḥirz* from a merely literary point of view, this practice has been denounced as unconvincing. Since, however, the poem is not meant to be read silently but recited aloud, the mnemonic function of the sigla works on the phonetic level rather than on the visual; read as denoting sounds, not letters, they constitute an important contribution to the pre-modern mnemotechnics. It is only through the recent intrusion of the new phonographic medium into the transmission of Ḳur'ān reading, that the system so deeply imprinted by al-Shāṭibī has become outdated.

SHAṬRANDJ, the game of chess. The derivation of the word from Sanskrit *catur aṅga* "having four ranks" (Nyberg, 54a) is generally accepted. Arab philologists often argued in favour of a vocalisation *shiṭrandj* and offered more or less ill-advised attempts at etymology (Lane 1551c, and see R. Ermers, in *JAOS*, cxiv [1994], 294b). While the form of the word supports the game's Indian provenience as a war game, chess reached the Near East via Persia, as shown by the many Persian terms employed in it. The Muslim Near East, in turn, transmitted it to Europe. The word itself continued in use on the Iberian peninsula, as in Sp. *ajedrez*. The various vernacular European terms appear to go back to the exclamation *shāh* or *shāhak* indicating peril for the king, or perhaps to the word *shāh* with the definite article (pronounced *ashshāh* "the king") as designating the game itself.

The chronology of its westward march into the Arab world, probably in a sequence of separate episodes, cannot be determined with precision. Even if references to chess should be found in authentic pre-Islamic poetry, which does not seem to be the case, it would not mean a wide acquaintance in Arabia with a game that required a certain educational and economic level. While the abundance of remarks about chess attributed to early Muslim authorities, including the Prophet himself, is clearly due to the concerns of later chess advocates or opponents, it does speak for its early adoption in Islam. The seemingly sudden appearance of a full-fledged specialised chess literature in ʿAbbāsid times and the great popularity then acquired by the game would also point to an earlier reception, even if we allow the doubtful proposition that the dynasty's Persian connections might possibly have had a minor supporting role.

The game was played, as it is today, on a board, usually made of soft material, of eight by eight fields (*bayt*). They were, however, not marked by alternating colours, as shown by the diagrams and in miniatures as late as the 9th/15th century (see S.C. Welch, *Persian painting*, New York 1976, 105, pl. 37), although it would seem logical to assume that the European style as exemplified by Alfonso el Sabio's *Libros de acedrex, dados e tablas* (see A. Steiger, in *Romanica Helvetica*, x [1941]) has, in fact, eastern antecedents. The chessmen, distinguished by the colours "black" and "red", were set up in the familiar manner. Many different arrangements, such as "Indian" and "Persian" forms or circular chess, are mentioned, but the historicity of the attributions might, in some instances, be called into question; they certainly did not enjoy widespread, if any, popularity. Chess sets could be very luxurious; at any rate, the men could not as easily be improvised, as was the case with backgammon pieces (see al-Djāḥiẓ, *Ḥayawān*, Cairo 1323-5, v, 115, ed. Hārūn, v, 382). Their names were mostly Persian: *shāh* "king"; *firzān* (*firz*) "adviser (?)", queen; *fīl* "elephant", bishop (Ar. = P.); *baydaḳ* "footman", pawn. The forms *firzān* and *baydaḳ* are explained as retrograde singulars from, respectively, *fračīn* > **farāzīn* (Nyberg, 74a) and *bayādaḳ* (modern Persian *piyāde*), see A. Spitaler, in *Corolla linguistica. Festschrift Ferdinand Sommer*, Wiesbaden 1958, 217. Even more disputed than the original of *firzān* is the derivation of *rukhkh* rook, castle, from Sanskrit *ratha* "chariot" through Pahlavi *rakhw*, although it seems preferable to a combination with the fabulous bird *rukhkh* [*q.v.*]. Only the knight is Arabic, *faras* "horse". Among the few divergences from modern convention in their basic moves, the most important is the severe restriction of the queen to one field at a time. In a tradition attributed to ʿAlī, the chessmen are compared to likenesses of living forms, thus making them religiously suspect; this could be explained away by the assumption that they looked more lifelike in the time of ʿAlī than they did later (*Book on chess*, 13); for abstract shapes supposed to be chessmen, see E. Kühnel, *Die islamischen Elfenbeinskulpturen*, Berlin 1971, 28 ff., pl. V-VIII.

The numerous problems (*manṣūbāt*, lit. "set-ups") of middle and end games were diagrammed and discussed. Unless a game (P. *dast*) ended in a draw or stalemate, it ended with *shāh māt* "checkmate". No satisfactory Persian etymon for *māt* has as yet been traced. It was apparently understood as Ar. "he died" already in al-Yaʿḳūbī, *History*, i, 103, l. 11, and this remains the preferable explanation; the strange syntax of *shāh māt* is possibly explained as a calque on a corresponding Persian expression. For the extended linguistic usage specific to chess, see the lists in Pareja, ii, pp. ciii-cxxix, and Wieber, 270-344, as well as the brief listing of Persian terms in *EIr*, v, 396, s.v. *Chess*.

It seems quite probable that the earliest written notes on chess were diagrams jotted down by players for their own personal use. Technical monographs were first written in the 3rd/9th century by al-ʿAdlī

and al-Rāzī, who are practically unknown, and in the following century by a certain al-Ladjlādj and the famous littérateur Muḥammad b. Yaḥyā al-Ṣūlī (Sezgin, *GAS*, i, 330-1); this is known from later quotations and *Fihrist*, 155-6, where an unidentified Ibn al-Uḳlīdisī (not a son of the mathematician, see Brockelmann, S I, 387) is added. For the dubious attributions of special essays on chess to al-Djāḥiẓ, see *Fihrist*, tr. B. Dodge, New York 1970, 408; Yāḳūt, *Udabā'*, vi, 78, and to Aḥmad b. al-Ṭayyib al-Sarakhsī [*q.v.*], see Murray, 169-70.

The popularity and high standing of chess in general education stimulated the literary imagination. The stories on its origins, whose historical core, where there was one, remains obscure, were widely reported. Poets and littérateurs used references to chess in abandon. For instance, the ability of the pawn to transform itself into a queen by traversing the board served to indicate achievement of success from lowly beginnings by travel and other means. Or seriousness could give way to humour: *shaṭrandjiyya* was coined to denote a meat pie containing bones with no meat on them like chessmen, which has the diners move their hands around the bowl (Abū Hilāl al-ʿAskarī, *Dīwān al-maʿānī*, Cairo 1352, 298 ff.). A theological twist was injected into the debate about chess by a Muʿtazilī comparison of the metaphysical meaning of backgammon and chess, to the supposed disadvantage of the latter (see NARD; and Rosenthal, 165 ff., quoting Abū Zayd al-Balkhī's essay).

Chess players were ranked in five (exceptionally, six) classes. The highest, that of grand master (*ʿāliya*, pl. *ʿawālī*), at times became part of a professional description. Handicaps could be given to lesser players. Prowess in the game could bring riches and, above all, admittance to high society. Chess was, after all, the royal game "invented for kings and the rich, not for the poor and mean", as al-Sakhāwī [*q.v.*], in his monograph on chess, expressed the common thought. Skills like playing blindfold with the back to the board, playing a number of opponents simultaneously, special mixed cases such as playing two opponents blindfold (*ghā'ib^an*) and a third one open (*ḥāḍir^an*), and the like were much admired and no doubt rewarded; but even an ordinary player down on his luck could make a living from chess travelling around in the provinces, presumably by exhibition games and instruction (al-Djāḥiẓ, *Ḥayawān*, iv, 49. ed. Hārūn, iv, 147). A grand master and poet of the 8th/14th century, who was also able to teach Turkish, probably used all three qualifications to provide for his subsistence (Ibn Ḥadjar, *Inbā'*, v , 260; idem, *Dhayl al-Durar*, Cairo 1412/1992, 162; al-Sakhāwī, *Ḍaw'*, vi, 151-2). Playing chess forged strong social bonds; it could cement friendships (Ibn Abī Uṣaybiʿa, ii, 68) or provide constant companionship (al-Ṣafadī, *Wāfī*, xv, 380; Wieber, 82). It is quite remarkable how often obituaries from the 9th/15th century mention competence in and devotion to playing chess.

Having its fanatical devotees, chess also engendered bitter enemies. An example of choice vituperation by a chess hater is found in al-Thaʿālibī, *Yatīma*, iv, 18-19 (Wieber, 134-5). Moral objections were raised by religious scholars at an early date and continued to be repeated and refined. They stressed the danger of neglect of prayer and religious imperatives due to absorption in playing and the potentially illegal exchange of money often connected with it, which was probably much more extensive than the sources let on. In sum, they stressed the game's character as "empty and wrong amusement (*lahw bāṭil*)" and thus as something socially undesirable, even if it was recognised as distinguished from other gambling and play activities by its intellectual foundation. Its outright prohibition was attempted by lumping it together with backgammon and other games and amusements such as music, as indicated, for instance, by the title of al-Ādjurrī's work. In the absence of any express reference in the Ḳur'ān and the authoritative *ḥadīth* collections, al-Ādjurrī cited three traditions ascribed to ʿAlī (see above) and a very few others, among them Ibn ʿUmar's dictum that chess was worse than backgammon (cf. also J. Robson, *Tracts on listening to music*, London 1938, 34-5, 56-8, from the related *Kitāb al-Malāhī* of the earlier Ibn Abi 'l-Dunyā). A rather detailed survey of legal opinions by the modern editor of al-Ādjurrī seems to suggest to him that they were inconclusive. A grudging classification of *makrūh* was attempted early and continued to be often used. In later times, the defence of chess had to be more forceful. Ibn Abī Ḥadjala, for instance, would claim decisive support by al-Shāfiʿī (see *Kitāb al-Umm*, vi, 213; Wieber, 184) and basic *taḥrīm* by the other schools, with Mālikism often singled out for the negative stance. Under the right social and economic conditions, this was undoubtedly effective to put chess under a cloud, even if an official prohibition such as that supposedly issued by al-Ḥākim (*q.v.*, see above, at vol. III, 79a) was not the rule.

The popularity of the game spilled at times over into other cultural activities. People dreamed about it; thus dream interpreters paid attention to it in their works, for instance, ʿAbd al-Ghanī al-Nābulusī, *Taʿṭīr*, s.v. The production of chess sets often required highly skilled labour. Miniature painters created vivid chess scenes to illustrate the game's description in the *Shāh-nāma* and other works of Persian literature. A permanent mark on arithmetic was made by the famous story that the legendary inventor of chess asked that he be rewarded by the amount of wheat that would result from placing one grain of wheat (or some other unit) on the first field and then double it by geometrical progression until the sixty-fourth field was reached. This apparently insignificant reward turned out to be more than could be found in all the world. The computation (2^{63} on the last field to a total of 2^{64}-1) proved a challenge to mathematicians calling for a variety of solutions. The story was so impressive that according to Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-balāgha*, Beirut 1963-4, iii, 506), who refers to al-Bīrūnī, the Indians used the procedure to determine the age of the world.

Bibliography: The most detailed discussion of chess in Islam to date is R. Wieber, *Das Schachspiel in der arabischen Literatur von den Anfängen bis zur zweiten Hälfte des 16. Jahrhunderts*, Walldorf-Hessen 1972 (Beiträge zur Sprach- und Kulturgeschichte des Orients, 22). For the early 20th century, the authoritative high point in the large literature on the history of chess is H.J.R. Murray, *A history of chess*, Oxford 1913, repr. 1962, 1969. See further the general remarks by F.M. Pareja Casañas, *Libro del Ajedrez*, Madrid-Granada 1935, his ed. and tr. of the anonymous ms. Brit. Mus. Add. 7515, and the *Book on chess*, Frankfurt am Main 1986, a facs. of the Istanbul ms. Lala Ismail Ef. 560, prepared under the supervision of F. Sezgin. Recent editions are Muḥammad b. al-Ḥusayn al-Ādjurrī, *Taḥrīm al-nard wa 'l-shaṭrandj wa 'l-malāhī*, ed. Muḥammad Saʿīd ʿUmar Idrīs, Riyāḍ 1404/1984, and Ibn Abī Ḥadjala al-Tilimsānī, *Unmūdhadj al-kitāl fī nakl al-ʿawāl*, ed. Zuhayr Aḥmad al-Kaysī, Baghdād 1980. For chess in the

context of gambling, see F. Rosenthal, *Gambling in Islam*, Leiden 1975, 37-40, 85-96. For Middle Persian etymologies, H.S. Nyberg, *A manual of Pehlevi*, ii, Wiesbaden 1974, has been mainly used. See also J. Robson, *A chess* maqāma *in the John Rylands Library*, in *BJRL*, xxxvi/1 (1953), 111-27.

(F. Rosenthal)

SHAṬṬ (a.), lit. "bank, margin of a piece of water", Fr. Form Chott, also in English conventionally Shott, a geographical term used in the high plains of the Maghrib and the northern Sahara for the saline pasturages surrounding a *sabkha* [*q.v.*]. It has often been confused with this latter term, especially in toponomy of the colonial period, hence one must be very careful when one meets the term. Thus there are found on the high plains the Shaṭṭ Tigrīn in Morocco; in Algeria, from west to east, the Shaṭṭ al-Gharbī, the vast Chott ech-Chergui (Shaṭṭ al-Sharḳī) to the south of the town of Saʿīda, the Zahrez al-Gharbī and al-Sharḳī to the north of Djelfa, and finally, the Shaṭṭ al-Hudna, occupying the depression of the same name. These Chotts of the high plateaux may be found at altitudes of more than 1,000 m/3,280 feet.

In the "Lower Sahara" of the eastern part of the Saharan Atlas (in particular, the massifs of the Aurès and the Nementcha), the Chotts are, on the other hand, found at low levels, sometimes at below sea level in the most westerly depressions: 33 m/108 feet below at the Chott Mérouane (Shaṭṭ Marwān) and 26 m/85 feet below at the Chott Melrhir (Shaṭṭ Malghīr) in Algeria. Further to the east, some less important Chotts link this last to the Shaṭṭ al-Gharsa and then to the very extensive Shaṭṭ al-Djarīd in Tunisia, which stretches out into the Shaṭṭ al-Fadjādj as far as a few tens of kilometres from the Mediterranean in the Gulf of Gabès.

The existence of this string of Chotts (in fact, of *sabkhas*), associated with the presence of shells along their banks (especially of cockle shells, *Cerastoderma glaucum*) has fed the myth of the "Saharan Sea". It is held that this part of the Sahara was recently invaded by the sea and that it would be possible, by excavating a canal from the Gulf of Gabès, to divert the Mediterranean's waters into the Chotts. Although it has been demonstrated that this plan is impossible to realise, it was still a major item in the programme of one Algerian politician who was a candidate in the presidential elections at the end of the 1980s.

(Y. Callot)

SHAṬṬ al-ʿARAB, the name given to the united stream of the lower Euphrates and Tigris rivers in Mesopotamia.

1. Definitions.

Shaṭṭ (A., pls. *shuṭūṭ, shuṭṭān, shuṭʾān*) meant, originally, one side of a camel's hump, and *shaṭṭ al-wādī* meant a canyon's or a valley's or a stream's bank or side, or the rising ground next to the bottom (*LʿA*, Beirut 1956, vii, 334-5; Lane, *Lexicon*, 1548-9). Eventually, *shaṭṭ* became most commonly used in the sense of a stream's bank. Occasionally, this meaning was expanded to depict a plot of land, apparently close to the bank of a stream (Yāḳūt, *Buldān*, Beirut 1955-7, iii, 344). The name Shaṭṭ al-ʿArab ("Bank of the Arabs") currently referring to the tidal estuary formed by the united stream of the two rivers [see al-furāt; didjla], is very unusual, as it uses *shaṭṭ* in relation to the stream itself, rather than to its banks. In modern Mesopotamia-ʿIrāḳ, *shaṭṭ* has indeed often been used to describe a stream. This usage is a relatively recent one. Yāḳūt, who traded in the Persian Gulf, mentions Shaṭṭ ʿUthmān in the Baṣra area as being a plot of land, but he does not mention any Shaṭṭ al-ʿArab in that area (*loc. cit.*).

The early mediaeval name used by both Arabs and Persians was "Tigris" (Didjla) (*Ḥudūd al-ʿālam*, tr., 76; al-Iṣṭakhrī, Cairo 1961, 57; al-Muḳaddasī, tr. B.A. Collins, London 1994, 12-13). Other Arab names were "Euphrates and Tigris" (Ibn Baṭṭūṭa), and "One-Eyed Tigris" (*Didjla al-ʿAwrāʾ*). The reason for the addition seems to be either an island close to the mouth of the river, by the name of ʿUwayr (Ibn Khurradādhbih, 60), or the sand bar at the mouth. A mediaeval Persian (Pahlavi) name for the Tigris (and the Shaṭṭ al-ʿArab) was Erwand Rūd ("The Sublime River").

The modern Arab name, Shaṭṭ al-ʿArab, which was also used by the Ottomans, seems to be the result of extending the name of the Arab (i.e., the western) bank to include the whole river. One of the earliest modern mentions of the united stream as Shaṭṭ al-ʿArab appears in the accounts of the English traveller J.S. Buckingham, who stayed for a few months in Baṣra in 1816-17 (*Travels in Assyria, Media and Persia*, London 1829, 359-60). The modern Persian name is still Erwand Rūd.

2. Geographical description.

The confluence of the Tigris and the Euphrates is just south of al-Ḳurna, and this is regarded as the beginning of the Shaṭṭ, but there is another confluence, some 50 km further south, where another part of the Euphrates flows through the Hawr Ḥammār marshes into the Shaṭṭ just north of Baṣra. The united river flows into the Persian Gulf near the town of Faw. The Shaṭṭ receives also the waters of the Kārūn River [*q.v.*] and its tributaries. The river's width ranges between 400 and 1,200 m, and its length is about 180 km. Its navigable depth is some 36 feet (six fathoms), though there are places where it is twice that depth. It is only 24 feet (four fathoms) deep at the sand bar near the confluence of the Kārūn (Iraqi Port Administration, *Shatt al-Arab survey map*, Baṣra 1964). In the 1920s the sand bar at the mouth of the river was dredged.

The country on both sides is level. Baṣra, where the tide rises and falls some 3 m, is less than 2 m above sea level. The land along the banks is higher than further out, owing to the silt brought down by the stream. Until the mid-1970s, the land was encroaching on the sea at the rate of some 35 km every 1,000 years, but since then this rate has diminished due to much upstream damming. Rich plantations of date palms line the banks for the whole length of the river, sometimes with orange trees underneath the dates. During the Iraq-Iran War (1980-8, see 3. below), these plantations were seriously damaged.

3. Political history.

With the rise of the Ṣafawī dynasty in Persia in the early 10th/16th century [see ṣafawids], wars between the Ṣafawids and the Ottomans produced frequent boundary shifts. In 1048/1638 Sultan Murād IV finally recaptured Baghdād. The Treaty of Zuhāb of 1049/1639, which drew a frontier zone, included much of the Shaṭṭ al-ʿArab well within the Ottoman domain. As a result, it was not mentioned explicitly in the agreement. Subsequent Ottoman-Persian confrontations necessitated further treaties, notably those of Kurdān of 1159/1746 and Erzurūm of 1823, which repeatedly returned to the *status quo* of 1639. Those treaties, too, remained silent in regard to the Shaṭṭ (J.C. Hurewitz, *The Middle East and North Africa in world politics, a documentary record*, New Haven and London 1975, i, 25-8, 79-80, 219-21). The Shaṭṭ al-

ʿArab appears explicitly in the May 1847 Second Treaty of Erzurūm, reached largely due to British and Russian mediation and intervention. Except for Ottoman recognition of Persian sovereignty over Khurramshahr and its port, sovereignty over the waterway was not defined specifically, but the text implies that it was regarded as Ottoman. In effect, the border ran along the eastern bank. Continued rivalry and arguments led to renewed British-Russian intervention and to the 1913 Protocol of Constantinople, followed by a demarcation commission that published its proceedings in October 1914. In the Protocol, Ottoman sovereignty was recognised over the whole Shaṭṭ al-ʿArab and its islands, save only a few, mentioned by their names (including ʿAbbādān [*q.v.*]). Opposite the port of Muḥammara (Khurramshahr) [*q.vv.*], the border ran in the *thalweg*, some four miles above, and one mile below the confluence of the river Kārūn. As defined in the 1914 demarcation proceedings, except for these places, the border was to follow "the low-water level of the left (sc. eastern) bank". Due to the eruption of the First World War and Ottoman reservations, the agreement was never ratified.

Following the War, the British authorities established the Basra Port Directorate which controlled all matters of maintenance, navigation and policing in the Shaṭṭ. In early 1930, the old conflict erupted again and was even brought, in 1934, before the League of Nations. Persia felt that admission of ʿIrāḳī sovereignty over the waterway leading to the large port of Khurramshahr and to the fast-growing port of ʿAbbādān (where the border still ran on the eastern bank) was humiliating and intolerable. As for ʿIrāḳ, because it had no other meaningful outlet to the open sea (whereas Iran had a number of alternative ports), it insisted on retaining the *status quo*. However, in 1937, the two countries signed a new treaty in Tehran, reaffirming the 1913 Constantinople Treaty and the 1914 Proceedings with two important changes in regard to the Shaṭṭ. Firstly, five miles opposite ʿAbbādān, the border was moved to the *thalweg*, as had been the case in regard to Khurramshahr. Secondly, a convention was to be concluded, to cover all matters of [joint?] conservancy and navigation, but because of disagreements, this was never concluded.

The outbreak of the Second World War and the British military occupation of ʿIrāḳ (May-June 1941) and southern Iran (August 1941) meant that navigation on the Shaṭṭ was managed exclusively by the British-controlled Basra Port Directorate. It collected dues and appointed pilots and navigation aids, almost exclusively ʿIrāḳī nationals. This state of affairs remained unchanged after the War. From the mid-1950s, Iran's main objection to the *status quo* shifted to the economic aspects. It protested against the inequity of choosing the pilots and accused the ʿIraḳī Baṣra port authorites of misuse of the funds accruing from the passage fees. In 1960-1, with the revolutionary régime of ʿAbd al-Karīm Ḳāsim having withdrawn from the Baghdad Pact and being completely estranged from Iran and the West, Iran demanded the moving of the whole border to the *thalweg*. It also tried to appoint its own pilots, but retreated when ʿIrāḳī counter-measures paralysed the port of ʿAbbādān.

In 1969, Iran, conscious of the international isolation of ʿIrāḳ's new (1968) Baʿth régime, demanded a new agreement which would define the border as the *thalweg* throughout the Shaṭṭ and establish a joint commission to supervise maintenance and navigation, complaining of obstruction of Iranian shipping there. When this was refused, Iran abrogated the 1937 treaty. Between 1969 and 1975 relations of the two powers sank to a new low, with Iranian support for Kurds in ʿIrāḳ and attempts to stir up ʿIrāḳī Shīʿīs and ʿIrāḳī attempts to encourage dissidence amongst the ʿArabistān/Khūzistān Arabs, but in 1975 the Shāh and Ṣaddām Ḥusayn did sign a new agreement in Algiers. Conscious of its military weakness, ʿIrāḳ conceded moving the border to the *thalweg* line throughout the Shaṭṭ and agreed to joint maintenance and navigation control, whilst Iran agreed *inter alia* to cease aiding the Kurds in ʿIrāḳ and inciting the Shīʿīs. This agreement did not survive the Shāh's fall. With the triumph of Āyat Allāh Rūḥ Allāh Khumaynī [*q.v.* in Suppl.], relations worsened, with the latter aiming to export the Iranian Revolution and to support the Kurds again. In September 1980, Ṣaddām Ḥusayn, now (since 1979), President of ʿIrāḳ, declared the Algiers agreement null and void, and all-out war between the two powers began. ʿIrāḳ aimed at securing both banks of the Shaṭṭ and at pushing the Iranian front line far enough eastwards to keep the waterway beyond artillery fire. The fighting which centred round the Shaṭṭ resulted in enormous casualties for both sides; ʿIrāḳ failed to hold Khurramshahr after 1982, whilst Iran failed to capture Baṣra. The superior Iranian navy and its air power and artillery blocked the Shaṭṭ and put ʿIrāḳī shore facilities out of action, and 62 ships were trapped in the Shaṭṭ ports for the duration of the war.

After the cease-fire, peace negotiations failed, but as part of his preparations for the invasion of Kuwayt, Ṣaddām Ḥusayn indicated willingness to begin talks on the future of the Shaṭṭ; these, however, came to an end with the invasion. In 1993 ʿIrāḳ started unilateral dredging operations, so that by 1994 ships were again able to navigate the river, but the conflict over sovereignty is unresolved, and traffic on the waterway remains (1995) far below its pre-1980 level.

(AMATZIA BARAM, shortened by the Editors)

SHAṬṬĀRIYYA, a Ṣūfī order introduced into India by Shāh ʿAbd Allāh (d. 890/1485), a descendant of Shaykh Shihāb al-Dīn Suhrawardī [*q.v.*].

On reaching India, Shāh ʿAbd Allāh undertook a lightning tour of the country. Himself clad in royal dress, the disciples accompanying him wore military garb, carried banners and announced his arrival by the beat of drums. In his *Laṭāʾif-i ghaybiyya* he explained the basic principles of Shaṭṭārī discipline, which he considered to be the quickest way to attain gnosis. Shāh ʿAbd Allah settled at Māndū [*q.v.*] where he set up the first Shaṭṭārī *khānḳāh*. His work was continued by his two disciples, Shaykh Muḥammad Aʿlā, popularity known as Shaykh Ḳāḍī of Bengal, and Shaykh Ḥāfiẓ of Djawnpur. The latter had a very dynamic *khalīfa* in Shaykh Buddhan, who popularised the *silsila* in northern India. Shaykh Rizḳ Allāh, uncle of Shaykh ʿAbd al-Ḥaḳḳ Muḥaddith of Dihlī, became his disciple. Shaykh Bahāʾ al-Dīn, a spiritual descendant of Shaykh Buddhan, wrote a *Risala-yi Shaṭṭāriyya* on the principles of the order. Later on, Shaykh

Muḥammad Ghawth of Gwāliyār (d. 970/1562-3 [*q.v.*] reinforced the *silsila* by giving it a compact organisation and an ideological direction. A prolific writer, he wrote *Djawāhir-i khamsa, Kilīd-i makhzan, Ḍamāyir, Baṣāyir* and *Kanz al-tawḥīd,* and translated the *Amrit kund* into Persian as *Baḥr al-ḥayāt.* He established intimate relations with the Hindus, and provided an ideological meeting ground with them in his *Baḥr al-ḥayāt.* His hobby was keeping bulls and cows. His successors (like Shāh Pīr of Mīrath [*q.v.*] or Meerut) also kept cows. Among his distinguished *khalīfas* was Shaykh Wadjīh al-Dīn ʿAlawī, whose seminary at Aḥmadābād attracted students from different parts of the country.

The Shaṭṭārī mystic ideology was based on *daʿwat-i samā*ʾ (control of heavenly bodies which influenced human destiny) and an interiorisation of religious rites. Their social relationship was conditioned by their faith in pantheism. Shāh Muḥammad Ghawth stood up to receive every Hindu visitor. The Shaṭṭārīs established close contact with the rulers, and participated in political affairs also. Shāh ʿAbd Allāh dedicated his *Laṭāʾif* to Sultan Ghiyāth al-Dīn Khaldjī. Shaykh Muḥammad Ghawth helped Bābur in his conquest of Gwāliyār; he and his elder brother Shaykh Bahlūl developed a close association with Humāyūn and instructed him in *daʿwat-i samā*ʾ. Shaykh Ghawth migrated to Gudjarāt when Shīr Shāh came to power, and corresponded with Humāyūn when in exile. Strangely enough, his relations with Akbar were not very cordial, but the latter built the Shaykh's tomb at Gwāliyār, and Djahāngīr built domes over the graves of Shāh ʿAbd Allāh at Māndū and Shāh Pīr at Meerut. The *silsila* lost its importance after Shaykh Muḥammad Ghawth. Its mystical influence was overshadowed by the Nakshbandī and the Ḳādirī *silsilas.* However, Shāh Walī Allāh of Dihlī [*q.v.*] and his father had received *idjāzas* for the *Djawāhir-i khamsa.*

SHĀʾŪL, Anwar (1904-84), ʿIrāḳī lawyer, poet, short story writer, journalist, playwright and translator.

He was among the first generation of Jewish writers in literary Arabic language in Arabic characters in ʿIrāḳ, headed by Sālim Isḥāḳ (1877-1948), translator for the German Embassy in Baghdād, Salmān Shīna (1899-1978), the military attaché of the Ottoman army in the German army in ʿIrāḳ, Ezra Ḥaddād (1900-72), educator, and Murād Mīkhāʾīl (1906-86), poet. Shāʾūl was born in Ḥilla and on his mother's side he was the grandson of an Austrian tailor Hermann Rosenfeld, while on his father's side he belonged to the famous Baghdādī Sassoon family. He early lost his mother, and then in Baghdād he studied at the Alliance Française (1918-23), and in 1924 edited Salmān Shīna's literary and social weekly *al-Miṣbāḥ* ("The lamp") (1924-7). He worked as a lawyer and was advisor to the treasury of the ʿIrāḳī Royal Family. At the age of 25 he established and edited his weekly *al-Ḥāṣid* ("The reaper") (1929-38), one of the leading literary, social and political journals during the 1930s, in his main articles criticising the ʿIrāḳī government, its ministers and officials for their greed and shortcomings, as well as the Fascist and Nazi régimes in Italy and Germany and their supporters among the ʿIrāḳī youth. He also composed several poems against Nazi Germany and rejoiced at its fall and defeat, these and his other romantic poems appearing in his anthology *Hamasāt al-zaman* ("The whispers of time") (Baghdād 1956). A second anthology of poetry, most of which was written in Israel after his immigration thither in 1971, was published in Jerusalem 1983.

Shāʾūl was one of the two ʿIrāḳī writers who first wrote short stories; his collection *al-Ḥaṣād al-Awwal* ("The first harvest") contained 31 of these. However, his writings in prose and poetry were much influenced by French literature, and he translated from French, including a collection of stories originally written by American and European writers from various countries, *Ḳiṣaṣ min al-gharb* ("Western short stories").

His contribution to ʿIrāḳī theatre and cinema was important, and included the writing of film scripts and songs. He compiled an *English-Arabic dictionary of printing terms* (Baghdād 1967), and his Press and Publication Company (1945-62) published several important Arabic books. In both ʿIrāḳ and Israel he took an active part in social and literary circles, and published his autobiography *Ḳiṣṣat ḥayātī wādī 'l-Rāfidayn.*

(S. Moreh)

SHAWĀHID (a.), pl. form, of which the sing. *shāhid* (with the following terminology: *istashhada bi-* "call to witness, appeal to the testimony of"; *istadalla bi-* "use proofs drawn from, employ as proof"; *iḥtadjdja bi-* ... *li-ithbāt* "draw argument from ... to establish"; *dalīl, ḥudjdja* "argument, proof, probative authority") denotes a probative quotation (*locus probans*), most often testimony in verse, which serves to establish a rule in the "literary sciences" which, according to the Andalusian scholar al-Ruʿaynī (d. 779/1377 [*q.v.*]), "are six in number: lexicography, morphology, syntax, semantics of the phrase (*maʿānī*), the art of figurative expression (*bayān*) and that of the new style (*badīʿ*)" (*Khizāna*, i, 5; Lane, s.v. *sh-h-d*; R. Paret, in *OLZ*, xi [1935], 690-2; Gilliot, *Les citations probantes*, § 2). In these last three domains, the scholars declare that recourse may be had to the testimony of poets of the four leading categories: pre-Islamic poets, poets who lived both before and during Islam (*mukhaḍrams* [*q.v.*]), Muslim poets (*islāmiyyūn*, i.e. of the first century, poets of the new generation (*muwallads* [*q.v.*]) or moderns (*muḥdaths*; see shiʿr).

I. *Criteria for the acceptance of probative quotations*

As regards the three first above-mentioned disciplines which come under the heading of philology, the criteria of acceptance of poetry as a probative source depend on the attitude towards the language held by the Arab scholars. The general consensus is that it is acceptable to draw conclusions from the poetry of the poets of the first two categories. For the majority of philologists, it is also legitimate to quote as linguistic testimony poets of the third category, such as Djarīr or al-Farazdaḳ [*q.vv.*]. Regarding poets of the fourth category, most scholars decline to draw conclusions from their verse. However, some are accepted as probative, under certain conditions; such was the case in particular of al-Zamakhsharī (d. 538/1144 [*q.v.*]) and of al-Raḍī al-Astarābādhī (d. 686/1287 [*q.v.*]) (*Khizāna*, i, 6; Gilliot, § 6).

Another problem is that of verses which have not been transmitted in their entirety or of which the "author" is unknown. The prevailing opinion is that, if the quotation is made by an authority considered trustworthy in regard to the Arabic language, they may be legitimately used as a source of linguistic argument: "This is why the verses of Sībawayh are the most reliable verse testimony" (*Khizāna*, i, 16; Gilliot, § 16).

While less used by philologists, quotations in prose have given rise to an interesting debate which also involves theological considerations. Those which are drawn from the Ḳurʾān are recognised, whether the transmission of the *variae lectiones* (*ḳirāʾāt*) be "uninterrupted" (*mutawātir*) or "irregular" (*shādhdh*), as declared by Ibn Djinnī (Gilliot, § 8).

Apparently more astonishing, although conforming to the Arabo-Muslim linguistic representation, is the attitude towards *ḥadīth*. The majority of scholars do not accept it as linguistic testimony, because the specialists in *ḥadīth* declare that its transmission according to the meaning (*bi ʾl-maʿnā*) is permitted; as a result, it can never be known for certain that the current version represents the actual words of the one regarded as the best exponent of the Arabic language (*afṣaḥ al-khalḳ*), i.e. the Prophet. Some, such as Abū Ḥayyān al-Gharnāṭī (d. 745/1344 [*q.v.*]) see an additional reason for non-acceptance: the fact that the ancient grammarians, such as Abū ʿAmr b. al-ʿAlāʾ, al-Khalīl, Sībawayh, al-Kisāʾī, etc., abstained from the use of prophetic traditions as sources of probative quotations. Here, as often, non-Arabs and those of mixed blood are accused of corrupting the "native purity" of the Arabs; transmitting traditions, "they committed linguistic errors (*laḥn*) without knowing it"! Among grammarians, admittedly the later ones, exceptions in this respect are, among others, Ibn Kharūf (al-Rundī al-Ishbīlī, d. 609/1212) and Ibn Mālik (d. 672/1274 [*q.v.*]). The latter especially made extensive use of *ḥadīth*, in particular in his *Sharḥ al-Tashīl*. These two authors were criticised for this, respectively by Ibn al-Ḍāʾiʿ (al-Ishbīlī, d. 680/1281) and by Abū Ḥayyān al-Gharnāṭī (*Khizāna*, i, 10-12; Gilliot, §§ 9-10). Others adopted an intermediate position, believing it possible to distinguish between two categories of *ḥadīth*, one where transmission is according to the meaning, the other where the transmitters claim word-for-word representation of the prophetic declarations, especially those which illustrate the "excellence in language (*faṣāḥa*) of the Prophet". From this latter category "it is appropriate to draw probative quotations (*yaṣiḥḥu ʾl-istishhād bi-hi*) in Arabic". This is the position taken by Abū Isḥāḳ al-Shāṭibī (d. 790/1388; commentator on the *Alfiyya*), followed by al-Suyūṭī (*Khizāna*, i, 12-13; al-Suyūṭī, *Iḳtirāḥ*, 52; Gilliot, §§ 11-12).

Some later authors, influenced by logic and by commentaries on the third part of the *Miftāḥ al-ʿulūm* of al-Sakkākī (d. 626/1229 [*q.v.*]), in particular the *Talkhīṣ al-Miftāḥ* of al-Ḳazwīnī (d. 739/1338 [*q.v.*]), have conducted a theoretical analysis of the difference between example (*mithāl*) and probative quotation (*shāhid*). In general, they place the former in the abstract category and the latter in the concrete category. *Shāhid* is appropriate for establishing the rule (*ithbāt al-ḳāʿida*), *mithāl* for illustrating it (*īḍāḥ al-ḳāʿida*) (al-Tahānawī, *Kashshaf*, ed. A. Sprenger, s.v. *mithāl*, on the basis of *al-Sharḥ al-muṭawwal* by al-Taftāzānī (d. 791/1389), of the gloss by Abu ʾl-Ḳāsim b. al-Bakr al-Samarḳandi (wrote *ca.* 888/1483), of *al-Aṭwal* by Ibrāhīm b. Muḥammad b. ʿArabshāh al-Isfarāʾinī (d. 945/1538) and of the gloss by Ḥasan Čelebi al-Fanārī (d. 886/1481)).

II. *The literature of the genre*

1. In language and in literature.

Since works specialising in grammar and in philology contain a vast number of poetical quotations, the commentaries and glosses composed in this domain are innumerable, the majority of them evidently applying to the *Kitāb* of Sībawayh; among the score of relevant titles, six have been edited or are in manuscript-form (Sezgin, ix, 58-63; Gilliot, § 18). *Al-Djumal* by al-Zadjdjādjī (d. 337/949 [*q.v.*]) has also enjoyed favourable treatment: a dozen commentaries on his verse, of which six have been edited or are in manuscript-form. The same applies to *al-Īḍāḥ* by Abū ʿAlī al-Fārisī (d. 377/987 [*q.v.*]): nine, of which four have survived (respectively, Sezgin, ix, 88-94, 104-7; Gilliot, §§ 22, 23), in particular Ibn Barrī (d. 582/1187 [*q.v.*]), *Sharḥ shawāhid al-Īḍāḥ*, ed. ʿĪd Muṣṭafā Darwīsh, Damascus 1985 (see P. Larcher, in *Arabica*, xxxix [1992], 120-1). There have been, however, few commentaries on the verses quoted in the *K. al-Lumaʿ* by Ibn al-Djinnī (d. 392/1002 [*q.v.*]), it being understood that they are themselves hardly numerous. Worth mentioning is that of Ibn Hishām al-Anṣārī (d. 761/1360 [*q.v.*]) entitled *Sharḥ al-shawāhid al-ṣughrā*, which has not survived. In fact, the *K. al-Rawḍa al-adabiyya fī shawāhid ʿilm al-ʿarabiyya* (Ahlwardt 6752; Brockelmann, II², 31, no. 7) which has been identified with this commentary (see *MIDEO*, xx, no. 31) is nothing other than a manuscript of *al-Iḳtirāḥ* by al-Suyūṭī, with an introduction fabricated by a copyist (Sezgin, ix, 174-7; Gilliot, § 24).

The verses quoted in the commentaries on the *Alfiyya* by Ibn Mālik have in their turn attracted the attention of numerous commentators. Examples are Ibn Hishām and his *Takhlīṣ al-shawāhid wa-talkhīṣ al-fawāʾid*, incomplete, also called *Sharḥ shawāhid Ibn al-Nāẓim* (i.e. the son of Ibn Mālik, Abū ʿAlī Badr al-Dīn, d. 686/1287), ed. S.T. ʿAbd al-Sayyid, Cairo 1987 (*MIDEO*, xx, no. 31), or furthermore *al-Maḳāṣid al-naḥwiyya* by al-ʿAynī (d. 855/1451 [*q.v.*]), printed in the margins of the *Khizānat al-adab* by al-Baghdādī, Būlāḳ 1299, which comprises commentaries on the verses contained in four commentaries on the *Alfiyya*: (1) *al-Durra al-muḍīʾa* by Badr al-Dīn, son of Ibn Mālik, (2) the *Sharḥ* by Ibn Umm Ḳāsim al-Murādī (d. 749/1348), (3) *Awḍaḥ al-masālik* by Ibn Hishām al-Anṣārī, and (4) the *Sharḥ* by Ibn ʿAḳīl (d. 769/1367) (Brockelmann, I², 359-62, no. 11 and S I). The verses contained in 3 and 4 have also been the object of numerous independent commentaries (Gilliot, § 27).

The verses quoted by Ibn al-Ḥādjib (d. 646/1249 [*q.v.*]) and by the commentators on *al-Kāfiya* and *al-Shāfiya* have also been the frequent object of

commentaries: the *Khizānat al-adab* by ʿAbd al-Ḳādir al-Baghdādī (d. 1093/1682 [*q.v.*]), which is a commentary on the 959 *shawāhid* quoted by al-Raḍī al-Astarābādhī in his *Sharḥ al-Kāfiya*, is the most esteemed. This work of unique quality is not only a model of the genre, but also a veritable encyclopaedia of grammar, poetics, literature, bio-bibliography and even history. Furthermore, the new Cairo edition, now complete, with its two volumes of indices, makes it an indispensable working tool (Gilliot, §§ 1, 26). The same al-Baghdādī is also the author of *Sharḥ shawāhid* [*shurūḥ*] *al-Shāfiya*, ed. M. Nūr al-Ḥasan, *et alii*, with *Sharḥ al-Shāfiya* by al-Astarābādhī (the *Sharḥ* of al-Baghdādī is to be found in vol. iv), Cairo 1358/1939, repr. Beirut 1975, and of *Sharḥ shawāhid sharḥ al-Tuḥfa al-wardiyya*, ed. N.M. Khawādja, Faculty of Letters of Istanbul n.d.

The verses of numerous grammatical manuals of Ibn Hishām al-Anṣārī have also been subjected to commentary (Gilliot, § 29): 1. *Mughnī ʾl-labīb*, by al-Suyūṭī, in *al-Fatḥ al-ḳarīb*. *Sharḥ shawāhid al-Mughnī*, i-ii, ed. A. Ẓāhir Kūdjān, Damascus 1966, and by ʿAbd al-Ḳādir al-Baghdādī, *Sharḥ abyāt Mughnī ʾl-labīb*, i-iv, ed. ʿAbd al-ʿAzīz Rabāḥ and A. Yūsuf Daḳḳāḳ, Damascus 1973-5; 2. *Ḳaṭr al-nadā*, by ʿUthmān b. Makkī al-Zabīdī in *Maʿālim al-ihtidāʾ*. *Sharḥ shawāhid ḳaṭr al-nadā*, completed in 1312/1894, printed Cairo 1324/1906; 3. *Ḳawāʿid al-iʿrāb or al-Iʿrāb ʿan ḳawāʿid al-iʿrāb*, by Balḳāsim b. M. al-Bidjāʾī (d. 866/1462) in *Sharḥ shawāhid al-ḳawāʿid*, which includes commentary on only a few verses; 4. *Shudhūr al-dhahab* [*fī maʿrifat kalām al-ʿArab*], by Shams al-Dīn M. ʿAlī al-Fayyūmī (d. ?; see Brockelmann, II², 29-30, S II, 1477) in *Sharḥ shawāhid Shudhūr al-dhahab*, Cairo 1281/1864, 1291/1874, 1304/1886.

The criteria for the acceptance of probative verses in the "literary sciences" not being the same as those used by the grammarians, it is not surprising that other verses should also be found illustrated and elucidated in the commentaries of the genre, especially in those which are devoted to the third part of the *Miftāḥ al-ʿulūm* of al-Sakkākī, and in particular those which are applied to the *Talkhīṣ al-Miftāḥ* of al-Ḳazwīnī (Brockelmann, I², 353-6; S I, 516-19; Ḥādjdjī Khalīfa, i, 473-9; Gilliot, § 28): the best known is *Maʿāhid al-tanṣīṣ*. *Sharḥ abyāt al-Talkhīṣ* by al-ʿAbbāsī (ʿAbd al-Raḥīm b. ʿAr., d. 963/1556), i-iv, in 2 vols., ed. M. Muḥyī al-Dīn ʿAbd al-Ḥamīd, Cairo 1947. Its author not only comments on verses of the *Talkhīṣ*, giving information about the poets, but also adds verses which correspond to the subject under discussion.

2. In the Ḳurʾānic domain (Gilliot, iv/B). Works comprising commentaries on the poetical quotations contained in the Ḳurʾānic commentaries, or those which explain the rare words (*gharīb*) of the Ḳurʾān are much less numerous.

Neither the *Sharḥ abyāt al-Madjāz* (i.e. *Madjāz al-Ḳurʾān* of Abū ʿUbayda), nor the *Sharḥ abyāt Maʿānī ʾl-Zadjdjādj* (i.e. *Maʿānī al-Ḳurʾān*), both by Ibn al-Sīrāfī (d. 385/995), has survived. One which has survived, but has not been edited, is: Abū Muḥ. Ḥusayn b. Muḥ. b. Ṭāhir al-Sharīf al-Waḥīd (17th century), *Sharḥ shawāhid Madjmaʿ al-bayān* (Brockelmann, S I, 708), on the verses contained in the Ḳurʾānic commentary of the Shīʿī al-Ṭabarsī (d. 548/1153).

Others, which have been edited, include: Muḥibb al-Dīn al-Ḥamawī (Muḥibb al-Dīn Afandī, d. 1016/1608), *Tanzīl al-āyāt* [*ʿalā ʾl-shawāhid min al-abyāt*], also entitled *Sharḥ abyāt al-Kashshāf*; Khiḍr al-Mawṣilī (d. 1007/1596), *al-Isʿāf bi-Sharḥ shawāhid al-Ḳāḍī wa ʾl-Kashshāf*, a commentary on the verses which corroborate *Anwār al-tanzīl wa-asrār al-taʾwīl* by al-Bayḍāwī (d. 716/1316) and *al-Kashshāf* by al-Zamakhsharī.

3. On the literature of *ḥadīth* (Gilliot, iv/C). A single example of the genre exists: Ibn Mālik, *Shawāhid al-tawḍīḥ wa-taṣḥīḥ li-mushkilāt al-Djāmiʿ al-Ṣaḥīḥ*, ed. ʿAbd al-Bāḳī, Cairo 1957, ³1983, a grammatical commentary, divided into 71 questions, on 99 passages in al-Bukhārī's compilation. Three authors at least have composed commentaries on the verses cited in the *Gharīb al-ḥadīth* by Abū ʿUbayd, but only one of these seems to have survived.

Bibliography (besides the references in the article): ʿAbd al-Ḳādir al-Baghdādī, *Khizānat al-adab* [*wa lubb lubāb lisān al-ʿArab*], i-xiii, ed. ʿAbd al-Salām M. Hārūn, Cairo 1979-86; Suyūṭī, *al-Iḳtirāḥ*, ed. A.M. Ḳāsim, Cairo 1976; al-Bāḳir (M.ʿA. Riḍā al-Sharīf), *Djāmiʿ al-shawāhid*, Tehran 1274/1857, 1319/1901; A. Fischer and E. Bräunlich, *Schawāhid-Indices*, Leipzig and Vienna, 1934-45; ʿA.M. Hārūn, *Muʿdjam shawāhid al-ʿarabiyya*, Cairo 1972; A. al-Naffākh, *Fihris shawāhid Sībawayh*, Beirut 1970; Sezgin, ii, 89-91; Cl. Gilliot, *Les citations probantes* (šawāhid) *en langue*, to be published in two parts in *Arabica*, xliii (1996), the second part containing a comprehensive list of works and editions belonging to this genre. (Cl. Gilliot)

SHAWĀNKĀRA [see FAḌLAWAYH, BANŪ; SHABĀNKĀRA]

SHĀWAR, Abū Shudjāʿ b. Mudjīr al-Saʿdī, a vizier of the last Fāṭimid caliph, al-ʿĀḍid li-Dīn Allāh [*q.v.*], and the statesman who involved the forces of Nūr al-Dīn Maḥmūd [*q.v.*] in the affairs of Egypt.

He belonged to the Banī Saʿd, semi-settled Bedouin of Djudhām [*q.v.*], a tribal grouping both politically and militarily influential in the first half of the 6th/12th century. In Shawwāl 516/December 1122 Shāwar was released from a long period of Frankish captivity, and was established in *al-ṭāʾifa al-Maʾmūniyya*, the regiment of the vizier Maʾmūn al-Baṭāʾiḥī [*q.v.*]. He was one of the vizier Riḍwān b. Walakhashī's chief supporters in his disputes with the caliph al-Ḥāfiẓ [*q.v.*], and fled with Riḍwān to Syria. After Riḍwān's defeat in Ṣafar 534/October 1139, Shāwar first retired to Upper Egypt with his Bedouin, then was pardoned but detained in the palace at Cairo.

He was appointed governor of Upper Egypt, based at Ḳūṣ [*q.v.*], by the vizier Ṭalāʾiʿ b. Ruzzīk [*q.v.*] in 555/1160. Having feared him as a possible rival, the vizier urged his son and successor, Ruzzīk [*q.v.*], not to provoke Shāwar by attempting to replace him. The advice was not followed and in Dhu ʾl-Ḳaʿda 557/November 1162 Shāwar openly rebelled. After an initial reverse at Daldja, he moved with a small band via the Western Desert oases to Tarūdja in the Delta, gathered supporters and descended on Cairo, which he entered on Sunday 22 Muḥarram 558/30 December 1162. Shāwar was proclaimed vizier with the title *amīr al-djuyūsh*. Ruzzīk had fled, was imprisoned and later, suspected of plotting amid growing factional rivalries, was executed in Ramaḍān 558/August 1163. That same month Shāwar sent *khilaʿ* (robes of honour) to Nūr al-Dīn, who accepted them and also the funds sent with them.

On Friday 28 Ramaḍān 558/30 August 1163, Shāwar was toppled from the vizierate by another *amīr* of Bedouin origin, Ḍirghām [*q.v.*]. By Dhu ʾl-Ḳaʿda 558/October 1163, Shāwar was at the court of Nūr al-Dīn in Damascus seeking assistance. An interventionary expedition led to Shāwar's restoration (Radjab 559/May 1064; for text of his diploma, see al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, x, 310-8) and to the first

clash with the Franks, whose interests and ambitions were already deeply involved in Egypt. Two other campaigns followed (562/1167 and 564/1168-9). For the details of these events, see SHĪRKŪH.

In the end, Shāwar, attempting to exploit now one and now the other of the rival outsiders, the Syrian forces and the Crusaders, was unable to maintain his independence. He had lost the support of the palace, the local élite and even of his own family, by his high-risk policy. The burning of Fusṭāṭ in Ṣafar 564/November 1168, probably on his orders to deny the attacking Crusaders the city and its resources, cost him much popular goodwill, even if the damage and losses were not so catastrophic as they have been portrayed (see W. Kubiak, *The burning of Miṣr al-Fusṭāṭ in 1168. A reconsideration of historical evidence*, in *Africana Bulletin*, Warsaw [1976], xxv). The new dominant force in Egypt was the Syrian army of Nūr al-Dīn, elements of which plotted the assassination of Shāwar on Saturday 17 Rabīʿ II 564/18 January 1169, and its commander Shīrkūh succeeded as Fāṭimid vizier.

Ḥilmī, Cairo 1973, iii, see index; Ibn Khallikān, *Wafayāt al-aʿyān*, ed. ʿAbbās, ii, 439-48, nos. 285a and b. For the full range of historical sources, see SHĪRKŪH. (D.S. RICHARDS)

AL-**SHAWBAK**, a fortress, originally constructed by the Crusaders, in Transjordania, now also the name of the settlement which grew up round it. It lies in lat. 30° 33' N., long. 35° 36' E. at an altitude of 1,382 m/4,532 feet in the south of modern Jordan, on a strategic position commanding the al-Karak-Tafīla-Maʿān mountain road and the mediaeval Islamic route via the Wādī ʿAraba towards Egypt. The surrounding Djabal al-Sharā enjoys a good rainfall and winter snows, favouring woods and agricultural land; in mediaeval Islamic times, its famed apricots were exported to Egypt, according to Abu 'l-Fidāʾ. Its strategic position made it a coveted site for both Crusaders and Arabs, and habitation there certainly goes back to the Nabataeans.

It is reported that in 501/1107, the slopes of al-Shawbak formed part of the tributary domain of the Latin king Baldwin I of Jerusalem, under the local authority of a certain al-Aṣfahīd al-Turkumānī. Shortly thereafter, in 509/1115, Baldwin I led a military force which crossed to the site and ordered the establishment of a military fortress adjacent to two small springs, which supplied a well within the fortress that he provided with a cavalry garrison. Baldwin I gave it particular attention when he visited it the following year, and then proceeded to ʿAḳaba, where he constructed a second fortress in order to control the traffic going to the Ḥidjāz and Egypt. Crusader control became firmly established with the construction of the citadel of al-Karak in 537/1142 by Fulk of Anjou, the king of Jerusalem. The land east of the Jordan River constituted a barony, with al-Shawbak (Montréal in the Frankish sources) at its seat, subsequently to be moved to al-Karak. The sources furnish us with the names of the individuals who were in charge of the fortress, such Romanus de Podio/Romain de Puy, etc.

Al-Shawbak was a target of the Fāṭimids in Egypt, who sent a military expedition that pillaged the locality and captured some prisoners in 552/1157. The following year, the Fāṭimids placed the fortress under siege, which lasted over a year, to be lifted only after the king of Jerusalem sent gifts and asked for a truce of friendship (*muwādaʿa*). The Ayyūbids under Ṣalāḥ al-Dīn maintained their aggressive policy against the Franks east of the Jordan River. In Ṣafar 567/October 1171, Ṣalāḥ al-Dīn laid siege to the fortress, and its garrison surrendered within ten days. However, he departed before its submission when he received news that Nūr al-Dīn Zankī was approaching. The fortress finally surrendered in Rabīʿ I 585/October 1189, two years after the battle of Ḥiṭṭīn [*q.v.*]. Ṣalāḥ al-Dīn gave both al-Shawbak and al-Karak as an *iḳṭāʿ* [*q.v.*] to his brother and successor al-Malik al-ʿĀdil.

There were development schemes at al-Shawbak during the Ayyūbid period. Fruit trees were planted and the area, with its rich water resources, was rejuvenated to the extent that contemporary geographers compared it to the vicinity of Damascus. Inscriptions testify to the care that the Ayyūbids extended to it. The Franks recognised the strategic significance of al-Shawbak, and while besieging Damietta in 615/1218, they offered to lift the siege in return for Jerusalem, al-Shawbak, and al-Karak. This request was declined. This may explain al-Malik al-Kāmil's interest in the place, for in 626/1229, he paid his nephew al-Malik al-Nāṣir Dāwūd 16,000 Egyptian *dīnārs* to add al-Shawbak to his possessions, which he visited three years later while *en route* to Syria. It was part of the domains of the last Ayyūbid prince in southern Jordan, al-Malik al-Mughīth ʿUmar, from 648/1250 until 659/1261. It then passed to the new Mamlūk rulers following their victory over the Mongols at ʿAyn Djālūt. However, in 692/1292, Sultan al-Ashraf Khalīl ordered the demolition of the fortress on the advice of the local Bedouin chieftain, for whom it had been a major irritant. Later Mamlūk sultans, and in particular Ḥusām al-Dīn Lādjīn, in 697/1297-8, restored the fortress and gave it their continuous attention, as is attested by inscriptions from that period. The great flood (*al-sayl al-aʿẓam*) and earthquake that struck the region in 718/1318 may explain the observation by Ibn Faḍl Allāh al-ʿUmarī that the fortress was closed at that time.

There is no consensus in the sources regarding the status of al-Shawbak, with some referring to it as a village, others as a town, and others as a city. During the Mamlūk era it constituted an *ʿamal* with a *mutawallī*, and was part of the *niyāba* of al-Karak. Its *mutawallī* was appointed by the sultan in Cairo but reported to the governor of al-Karak. Biographical dictionaries provide the names of some individuals who held this position. A few of them may have been assigned the region as an *iḳṭāʿ*. The citadel, which was one of the postal stations to Cairo, was occasionally the seat of a *ḳāḍī*, under the jurisdiction of the *ḳāḍī* in al- Karak.

The most important Bedouin tribes in the region were the Banū Zuhayr and Banū Suniyyūn. There were also significant numbers of Melkite Christians, who distinguished themselves in trade. Some were rich enough to give financial support to Sultan al-Malik al-Ẓāhir Barḳūḳ. They formed the majority of the population, which explains why in 700/1300, they and the Christians of al-Karak were exempted from the sultan's edict to change the colour of their turbans from white to blue.

Al-Shawbak during the 10th/16th century was a seat of the *nāḥiya* as part of the *sandjaḳ* of ʿAdjlūn. Two *tapu defters* provide important statistics on the villages:

The revenues according to the first survey was 11,750 *aḳčes*, falling to 14,000 *aḳčes* near the end of the century. Christians paid the *djizya* at the rate of 80 *aḳčes* per head. The decline in population is explained

	Households	Muslims	*Imams*	Christians
Tapu Defter 970 (no date)	145	16	2	11
Tapu Defter 850 (1005/1596)	65			5

by the deterioration in security. Most Christians migrated to the coastal area of Ghazza. The two *tapu defters* provide detailed information about the tribal groups (*ṭā'ifas*), as well as the names of the villages at that time. It is interesting to note that the villagers numbered less households than those of the nomads.

Information about al-Shawbak subsequently decreases, with only occasional references, such as that in 1022/1613, stating that the fortress was inhabited by *fallāḥīn* who provided ʿAlī b. Fakhr al-Dīn with provisions. In 1812, it was visited by J.L. Burckhardt, who mentions that about one hundred *fallāḥīn* families lived there and paid tribute to the Ḥuwayṭat tribe. An uprising took place against the Ottoman garrison there in 1895. The *mutaṣarrif* of al-Karak laid siege to it, and about 200 people and 20 soldiers were killed. During the *Tanẓīmāt* period, it was part of the *mutaṣarrifiyya* of al-Karak. Al-Shawbak was connected by a branch of the Ḥidjāz Railway, no longer extant, which caused the depletion of its forests. Today, al-Shawbak is a *ḳaḍā'* that is part of the province of Maʿān.

SHĀWĪSH [see čā'ūsh].

SHĀWIYA (a., pl. of *shāwī*) "sheep-breeder or herder", a term applied to groups in various parts of the Arab world.

1. The Maghrib.

Here the term, originally applied in contempt, has become the general designation of several groups, of which the most important are, in Morocco, the Shāwiya of Tāmasnā and in Algeria, the Shāwiya of the Awrās. E. Doutté (*Marrâkech*, 4-5) mentions several other groups of less importance. An endeavour has also been made to connect Shoa, the name of a district in Abyssinia, with Shāwiya.

Wherever it is found, the term is applied to Berbers of the Zanāta and Hawwāra, more or less arabicised, mixed with purely Arab elements; almost always, moreover, these ethnic groups seem to have schismatic tendencies.

The massif of the Awrās, occupied by the Shāwiya of the department of Constantine, was in the 8th century the centre of resistance of the Ibāḍi [see ibāḍiyya] Khāridjīs, as the Mzāb still is at the present day. Now among the Shāwiya of Morocco, the successors to the heretical Barghawāṭa [*q.v.*] we find a tribe of Mzāb and the memory of "Judaising" ancestors. On the other hand, Ibn Khaldūn tells us that at the beginning of the Marīnid dynasty in eastern Morocco, a group of Shāwiya lived in contact with the Zakkāra, whose heterodox practices have been studied by A. Mouliéras.

According to Ibn Khaldūn (*Hist. des Berbères*, i, 176-82, tr. i, 271-82) the original home of the Hawwāra (*vulgo* Huwwāra [*q.v.*]) was the province of Tripoli and the adjacent part of the territory of Barḳa; conquered and oppressed by the Arabs, they had scattered through the whole of the Maghrib where, crushed by taxation and having lost that pride and independence which once characterised them, they devoted themselves to sheep-breeding, whence the name ultimately given them. As to the Zanāta, they were nomadic Berbers, like the Arabs, living in tents on the produce of their flocks and spending the summer in the Tell and the winter in the desert from Ghadāmis to the Sūs al-Aḳṣā (Ibn Khaldūn, *op. cit.*, ii, 1, tr. iii, 179-80).

The name of Shāwiya seems to be first found in Ibn Khaldūn (*Muḳaddima*, i, 22, 16, tr. de Slane, i, 256, tr. Rosenthal, i, 251; *Hist. des Berbères*, i, 179, 10, tr. i, 278; ii, 245, 3, tr. iv, 31; the Shāwiya mentioned in this last passage do not seem to correspond to those of Tāmasnā but to some people of Eastern Morocco, neighbours of the tribes of Hawwāra and Zakkāra).

Next, Leo Africanus (i, 83-4), who calls them *Soava*, tells us that they are African (i.e. Berber) tribes who have adopted the Arab way of living. The majority live at the foot of the Atlas or in the mountain range itself, living by cattle- and sheep-breeding. Wherever they dwell they are always subject to the local dynast or to Arabs. This author already knows two main groups: one in Morocco, in Tāmasnā, the other on the borders of the kingdom of Tunis and the "land of dates" (*bilād al-djarīd*).

It will be readily understood that in the Arab world, the term "sheep breeders" would have a contemptuous significance. As W. Marçais observed, "in ancient Arabia a certain disgrace seems to have been attached to the breeding of the smaller domestic stock. North African opinion has retained a prejudice against the rearers of sheep. The great camel-rearing nomads have nothing but contempt for them. In the middle ages the feeling may have been strengthened by racial antagonism, real or imaginary. But in general at this period, to abandon the camel and adopt the sheep was an avowal of a terrible downfall for a tribe. It meant renouncing the long free travels, the secure refuge of the desert and independence, to submit to local rulers, endure their blows and tolerate their fiscal exactions".

a. Shāwiya of Tāmasnā.

They occupy in the north-east the lower course of the Umm al-Rabīʿ, vast fertile plains which extend to the latitude of the little harbour of Feḍāla. They are descended, according to Leo Africanus (ii, 9), from, the Zanāta and Hawwāra whom the Marīnid sovereigns settled there and who mixed with the remnants of the Barghawāṭa, the ancient heretical inhabitants of the region, as well as with the Arabs brought from Ifrīḳiya by the Almohad Sultan Yaʿḳūb al-Manṣūr. These Shāwiya now speak Arabic; the modern tribes which seem to be of Berber origin are the Znāta, Medyūna, Mzāb, Mellīla, Zyāyda and the Ūlād Bū-Zīrī.

b. Shāwiya of the Awrās.

They occupy this mountain massif in modern Algeria, between Batna and Biskra. Ibn Khaldūn (*Hist. des Berbères*, ii, 1, tr. iii, 179-80) already mentions sections of the Zanāta settled in the Awrās alongside of Hilālī Arabs who had conquered them. It is no doubt to their living in a mountainous country that these Shāwiya have preserved a Berber dialect to the present day.

(G.S. COLIN*)

2. Syria and the Arabian Peninsula.

Shāwiya is a flexible term, centering on sheep herding for an urban market, especially live animals for meat. This, of itself, does not have derogatory overtones; what does is the buying of protection (in the past) and herding for wages (in the present), which were and are practised by some participants. *Shāwiya* describes groups who herd sheep as their main livelihood, some of whom have a low political status. Because herders needed to use seasonal grazing grounds or to secure access to markets far from their home base on a regular basis, agreements were made between herders and the "owners" of the grazing grounds and wells, or the markets. Such agreements could be contracts between "equals", groups who saw themselves as close in descent or similar in esteem, and the relationship was thus symmetrical. Those who were distant or lacked esteem paid for protection while using these areas, and thus had asymmetrical agreements.

There is a second question concerning the ownership of the sheep. Some owned the sheep they herded, while others herded sheep belonging to urban owners, village owners, or to camel herding owners, and yet others had flocks of mixed ownership. Herding one's own animals or someone else's was honourable in itself. Esteem or its lack depended on the political arrangements within which the herding took place, and on whether or not the owner and herder saw themselves as equal partners in a mutually beneficial enterprise, or as employer and employee.

These views are the current opinion (1994) of Rwala, Sardiyya, ʿUmūr, Benī Ṣakhr and Ahl al-Djabal sheep-herding tribesmen, using southeastern Syria, Jordan and northern Saudi Arabia. The confusion between a description of a means of livelihood and a description of low political status is common in casual speech, especially when talking about individuals or groups distant to the interests of the speaker. As the view that "we are all *shāwiya* now" might be thought to have modified thinking on occupation and political esteem, tribesmen were at pains to clarify that there is and was no determinative association.

Similar confusion is seen in the literature on *shāwiya* and sheep-herding in the past. Musil (*Arabia Deserta*, 223), speaking of the Bilād al-Shām in the early 1900s, says that the *shāwiya* were a low-status political category who bought protection since they herded sheep and goats, but sheep herders like the Wuld ʿAlī and Ḥessene were held in esteem (*ibid.*, 391). Dickson (*The Arab of the desert*, 109-10), from the 1930s and 40s in Kuwait and eastern Arabia, describes them as an occupational category of people who herd sheep and goats for others. Other sources for Syria, Palestine and Lebanon mention tribes herding sheep and/or goats for peasant, urban and tribal owners, but do not mention *shāwiya*; nor is the term *shāwiya* found in the literature on animal herding contracts (Firestone, 201-8).

Dickson names three *shāwiya* (town usage) or *ḥukra* (desert usage) tribes specialising in herding flocks owned by townsmen or tribal leaders: all sections of the Muntafiḳ confederation, except the al-Saʿdūn shaikhly family; two Muṭayr sections; and the Ahl al-Ghanam of the ʿAwāzim. These latter herded sheep belonging to the ʿAwāzim camel herding sections and flocks of Kuwaiti townsmen. The two lower-status Muṭayr groups herded sheep of the other Muṭayr sections. The Muntafiḳ of Banī Mālik, Āl-Bū Ṣalāḥ, and Adjwād, with their neighbours the Benī Hashāyim and some Shammar, were mostly "of good Arab descent and some married with the best tribes in Iraq" (546). They had agricultural land along the Euphrates, where some members remained all year. From mid-October, herding families moved slowly south for some two hundred miles, until by February they were south and west of Kuwait. Although Shīʿa, they were welcomed since they brought cheap mutton, butter, wool and sheepskins. They returned north at the end

of April with supplies or rice, sugar, coffee and clothes. While south, they paid *zakāt*, accepted in Saudi Arabia but returned in Kuwait.

Burckhardt described share-herding (i, 17-18) between the tribes and the villagers of the Ḥawrān, and it is implicit in the descriptions of livelihood attached to tribal listings in French Mandate records. Low status was associated with the taking of protection rather than sheep-herding as such; some sheep-herding tribes did not take protection and Musil (1927, 215) says the *s̲h̲āwiya* had "eminent chiefs". Share-herding is honourable, since both sides contribute to the success of the enterprise, and the shepherd has real responsibility. Wage-herding is not, as the herder contributes only his labour, the owner making all decisions and being responsible for sheep and shepherd. Since the 1970s, share-herding has become less common because of changes in herding practices with the development of urban markets, increased sheep numbers, decreased pasture areas and greater state control over border crossings. Most wage-earning shepherds, the current *s̲h̲āwiya* in a derogatory use by the Rwala, Sardiyya, and Benī Ṣak̲h̲r, come from tribes of the area of Rakka [*q.v.*] in Syria. The Ahl al-D̲j̲abal and ʿUmūr rarely use employed shepherds, although they sometimes engage in share-herding with urban or tribal partners. The Rwala and others also share-herd, but within the wider domestic groups as an investment strategy rather than as a commercial activity. Métral (1993, 198) mentions the *s̲h̲āwiya* of the Euphrates being among the current seasonal users of the Palmyrene steppes.

S̲h̲āwiya in this region (and it appears to be similar in parts of ʿUmān) is thus a description of sheep-herding as a means of livelihood; the methods of arranging access to the necessary means to achieve this may involve behaviour considered dishonourable.

(W. and Fidelity Lancaster)

3. The S̲h̲āwi dialects of the Middle Euphrates valley.

The S̲h̲āwi dialects occupy a large area of Northern Syria on both sides of the Euphrates, beginning east of Aleppo and stretching down to the Syrian-Iraqi border near Al-Bu Kmāl. In this whole area only two or three riverine towns (Dēr iz-Zōr, Al-Bu Kmāl, perhaps Mayādīn) have preserved a sedentary dialect. Typologically, the S̲h̲āwi dialects are Arabic Bedouin dialects of the small cattle herders (*nomades moutonniers*). The data quoted come from the vicinity of Dēr iz-Zōr.

Phonology. The interdentals *ṯ*, *ḏ* and *ḏ̣* (the latter resulting from the merger of O[ld] A[rabic] *ḍād* and *ẓāʾ*) have been preserved over the whole area (*ṯiğīl* "heavy", *iḏin* "ear", *ariḏ̣* "earth", *ḏ̣all* "he remained"). OA *ğīm* has been preserved as a voiced palato-alveolar affricate. OA *qāf* was shifted to *g* and has been preserved as such in the vicinity of back vowels (*nāga* "female camel", *ṯugul* "weight"). In the vicinity of front vowels, including the front varieties of *a* and *ā*, it has been shifted to *ğ*, thus merging with *ğ* < OA *ğīm* (*ṯiğīl* "heavy", *ğilīl* "a little"). Similarly, OA *kāf* has been preserved in the vicinity of back vowels but shifted to a voiceless palato-alveolar affricate *č* in the vicinity of front vowels (*kuṯuṛ* "large quantity", *yākul* "he eats" but *čiṯīr* "much", *ačal* "he ate", *čima* "truffles"). This results in a characteristic alternation of *g*/*ğ* and *k*/*č* in morphemes derived from the same root (*ṯuguḷ*/*ṯiğīl*, *kuṯuṛ*/*čiṯīr*, *yākul*/*ačal* etc.). Over most of the area OA *ġayn* has been shifted to *q*, i.e. a voiceless uvular stop, pronounced like the *qāf* of Modern Standard Arabic (*qanam* "sheep", *ẓiqīr* "small", *qēr* "other"). In addition to the inherited emphatic (velarised) consonants *ṣ*, *ṭ* and *ḏ̣* there is velarised *ḷ*, especially in the vicinity of *g* (< OA *q*), as well as velarised *ṛ*, *ṃ* and *ḅ* (*gāḷ* "he said", *guḷḷ* "small quantity", *kuḅāḅ* "kaboob"); most of these seem to have phonemic status, albeit with a low functional yield.

The OA long vowels *ī*, *ū*, *ā* have been preserved, whilst the diphthongs *ay* and *aw* have been monophthongised to *ē*, *ō* (*bēḏ̣* "eggs", *ğōz* "walnuts"). There are three short vowels *i*, *u*, *a* which, however, in most cases do not reflect the corresponding OA vowels. Whereas *i* and *u* in unstressed open syllables have been elided, *a* in open syllables has been shifted to either *i* or *u*, according to front or back environment, or has been retained in the vicinity of emphatics and pharyngals (*miša* "he walked", *čitab* "he wrote", *kuṃaš* "he seized", *ḏ̣arab* "he beat", *ḥalab* "he milked"). In two subsequent open syllables with short *a*, the vowel of the first syllable has usually been elided (*čtibat* < **katabat* "she wrote", *kṃušat* "she seized", *ḏ̣rubat* "she beat", *ḥlibat* "she milked"). A short vowel *i* or *u* has been inserted between word final -*CC* (*čitábit* < **katabt* "I wrote"). In the sequence *-*aXC*- (where *X* stands for one of the back spirants *x*, *ġ*, *ḥ*, *ʿ*, and *C* stands for any consonant) an *a* is inserted between *X* and *C* (the so-called "*ghawa* syndrome": *mxazūn* < **maxazūn* < **maxzūn* "stored", *aḥámar* "red", *ḥalib* "she milks", *ghawa* "coffee").

Morphology. The definite article is *al*- (*al-bēt* "the house"). In the pronoun and the verb, gender distinction in the 2. and 3. persons plural has been preserved. The following paradigm shows the independent personal pronoun and the perfect and imperfect conjugation of the verb *ḏ̣arab* "to beat":

3 sg.	m.	*huwwa*	*ḏ̣arab*	*yuḏ̣rub*
	f.	*hiyya*	*ḏ̣rubat*	*tuḏ̣rub*
pl.	m.	*hum(ma)*	*ḏ̣rubaṃ*	*yúḏ̣urbūn*
	f.	*hinna*	*ḏ̣ruban*	*yúḏ̣urbin*
2 sg.	m.	*inta*	*ḏ̣arábit*	*tuḏ̣rub*
	f.	*inti*	*ḏ̣arabti*	*tuḏ̣urbīn*
pl.	m.	*intum*	*ḏ̣arabtum*	*tuḏ̣urbūn*
	f.	*intin*	*ḏ̣arabtin*	*túḏ̣urbin*
1 sg.		*āni*	*ḏ̣arábit*	*aḏ̣rub*
	pl.	*iḥna*	*ḏ̣arabna*	*nuḏ̣rub*

S̲H̲AWḲ (A.), the verbal noun from *s̲h̲ w ḳ*, meaning "desire, longing, yearning, craving", much used as a technical term in Islamic religious thought and mysticism.

1. *The period before its adoption into Ṣūfism.*

There are various meanings and stages discernible in the development of the term in mysticism:

(a) *In pre-Islamic profane poetry.* Fragments survive attesting a semi-technical usage of *s̲h̲awḳ* as an element of profane love in the ʿUd̲h̲rī tradition (dating from the early 5th century), especially visible in the few extant poems of the two Muraḳḳis̲h̲ [*q.v.*], al-Akbar and al-Aṣg̲h̲ar (see Al-ʿUdhari, *Jāhilī poetry before Imru' al-Qais*, diss., London Univ. 1991, unpubl., 180-92).

(b) *In the Ḳur'ān and in* Ḥadīt̲h̲. The term is not found in the Ḳur'ān, but the idea of yearning figures prominently in the *ak̲h̲bār* ascribed to the Prophet David and in such manifestations of early Muslim piety as collection of prayers or *adʿiya* (sing. *duʿā'*), as in "whosoever yearns for Paradise moves swiftly towards good merit". Its early evolution as a religious term was bound up with scholastic discussions concerning the beatific vision, the possibility of seeing God in the Hereafter [see RUY'AT ALLĀH], involving the idea of the justified believer's yearning to gaze on God's countenance and to meet with him, and *s̲h̲awḳ* was especially stressed as a quality of the Prophet, in Abū ʿAlī al-Daḳḳāḳ's words, cited by al-Ḳus̲h̲ayrī, "Yearning was composed of one hundred parts. Ninety-nine of these the Prophet possessed, and the one remaining part he divided among mankind" (*al-Risāla al-Ḳus̲h̲ayriyya*, ed. Maḥmūd and S̲h̲arīf, Cairo 1966, ii, 626).

(c) *In pre-Islamic* ak̲h̲bār *literature.* Here, *s̲h̲awḳ* is a central motif in anecdotes from the Jewish and Christian traditions related by early Muslim scholars. Thus lengthy citations from *ak̲h̲bār* on the Prophet David are cited by al-G̲h̲azālī to clarify his mystical conception of *s̲h̲awḳ* (see *Iḥyā'*, iv, 324-5). Such traditions with their explicit association of technical terms like *maʿrifa, hubb, s̲h̲awḳ* and *d̲h̲ikr* show the common ground between early Islamic ascetical piety and the later development of Ṣūfī theosophical theories based on love, yearning and gnosis.

(d) *In mystical tafsīr.* Al-Sulamī's recension of the text of the Ḳur'ānic commentary ascribed to the Imām Dj̲aʿfar al-Ṣādiḳ (ed. P. Nwyia, in *MUSJ*, xliii [1967], 181-230) outlines a highly elaborate hermeneutics of love in early pietistic Islam, based on such terms as *s̲h̲awḳ ḥubb*, etc., indicating a possible provenance for the later development of *s̲h̲awḳ* in the sophisticated love theory of al-Ḥallād̲j̲ and his later followers such as Rūzbihān Baḳlī (d. 606/1209). Also, Abū Sahl al-Tustarī [*q.v.*] in his mystical *Tafsīr al-Ḳur'ān al-ʿaẓīm* expresses the idea that *s̲h̲awḳ* or yearning is merely a reflection of the more essential love and light of God (see G. Böwering, *The mystical vision of existence in classical Islam*, Berlin-New York 1980, 165-70).

2. *Its adoption into Ṣūfism.*

S̲h̲awḳ actually appears in the earliest vocabulary of speculative Ṣūfism, even antedating such terms as *maḳām* and *ḥāl* [*q.vv.*] in the literature; it expressed both a longing for the beatific vision in the Hereafter and a psycho-spiritual sentiment of yearning as a part of a complex mystical love theory, this last being concerned with the interiorisation of piety, with a focus on the *bāṭin*, the life of the soul, rather than on the *ẓāhir* of public faith. Thus the complementary nature of the two notions is seen as early as the Persian S̲h̲aḳīḳ al-Balk̲h̲ī (d. 194/810), acclaimed by al-Sulamī as a pioneer in K̲h̲urāsān to expatiate on the "mystical states" (*ʿulūm al-aḥwāl*). Soon after his time, there arose debates amongst the mystics about the relationship of love to yearning, and about which was superior. Thus Sarī al-Saḳaṭī [*q.v.*] held that *s̲h̲awḳ* was the "highest station", whereas ʿAbd Allāh al-Anṣārī [*q.v.*] considered it as the gnostic's greatest defect. Ḥārit̲h̲ al-Muḥāsibī [*q.v.*] steered a middle course in his *K. al-Maḥabba* (excerpts cited in Abū Nuʿaym al-Iṣfahānī's *Ḥilya*), that yearning was derived from love, and assisted the lover's pursuit of the divine vision. The imagery of lights and radiance appears in these works, and then in an author like Abu 'l-Ḥusayn al-Nūrī (d. 295/907), that of fire—the fires of fear, love and yearning. There was a tendency to re-direct yearning towards the beloved of the heart, seen in al-Sarrād̲j̲'s [*q.v.*] *K. al-Lumaʿ*, with a final stage of yearning, that of ineffablity, the subject having passed away (*fanā'*) in the object of yearning.

In his *Iḥyā'*, al-G̲h̲azālī has a lengthy *K. al-Maḥabba wa 'l-s̲h̲awḳ wa 'l-uns wa 'l-riḍā* (no. XXXVII), a comprehensive monograph on the philosophico-theological premises underlying the mystical understanding of the varieties of human and divine love. For him, all love derives ultimately from the love of God. Likewise, there is a first category of *s̲h̲awḳ* based on contemplation and the heart's vision and a second category based on sacred tradition and God's natural and created manifestations. The gnostic's yearning for the Divine Unknown is endless, an infinite *s̲h̲awḳ* which neither lessens in this world nor the next.

The concept appears extensively in the Persian mystical poets from the 6th/12th century onwards. Thus Sanā'ī [*q.v.*] has sections on *s̲h̲awḳ* in his mystical *mat̲h̲nawī* poems the *Ḥadīḳat al-ḥaḳīḳa* and *Sanā'ī-ābād*. We find a special emphasis on the mystical piety of love, *mad̲h̲hab al-ʿis̲h̲ḳ*, with *s̲h̲awḳ al-ḳalb*, a yearning for contemplation of the Beloved in the mystic's heart in this present world, emphasised over *al-s̲h̲awḳ ilā 'l-d̲j̲anna*, seen, e.g. in Rūzbihān al-Baḳlī. But there is also a very thorough treatment of *s̲h̲awḳ* in the Ḥanbalī mystic Ibn Ḳayyim al-Dj̲awziyya (d. 751/1350 [*q.v.*]) in his *Rawḍat al-muḥibbīn* (see. J. Bell, *Love theory in late Hanbalite Islam*, Albany 1979), and this continues in later Ḥanbalī authors, such as Marʿī b. Yūsuf al-Karmī (11th/17th century).

(L. LEWISOHN, shortened by the Editors)

S̲H̲AWḲ, TAṢADDUḲ ḤUSAYN (Nawwāb Mīrzā), Urdu poet (?-1871).

He came from a family of physicians, and his paternal uncle, Mīrzā ʿAlī K̲h̲ān, was a distinguished medical officer in Lucknow at the court of the Nawwābs of Oudh (Awadh); S̲h̲awḳ himself was well educated, not only in medicine, but also in arts and sciences. He owed his skill in poetry to the guidance of Ātis̲h̲ [*q.v.*]. He achieved for his *mat̲h̲nawīs* considerable fame in his lifetime, especially in Lucknow, and even discerning critics like Alṭāf Ḥusayn Ḥālī acknowledge his merits (in his *Muḳaddima-yi s̲h̲iʿr-ō-s̲h̲āʿirī*). S̲h̲awḳ paints vivid pictures of the Lucknow of Nawāb Wād̲j̲id ʿAlī S̲h̲āh, with its colourful customs and society. Saksena (see *Bibl.*), 30, includes S̲h̲awḳ among the [seven] "most notable" *mat̲h̲nawī* writers. Yet elsewhere (150) he appears to denigrate Lucknow poets in the genre, who depict love which is not elevated, but "of a low kind", referring specifically to *Ẓahr-i-ʿis̲h̲ḳ* and other poems by S̲h̲awḳ.

The most famous of S̲h̲awḳ's *mat̲h̲nawiyyāt* is *Ẓahr-i-ʿis̲h̲ḳ* ("The poison of love"), though from some points of view, others such as *Farīb-i-ʿis̲h̲ḳ* ("The allurement of love") are sometimes considered superior. Some argue that S̲h̲awḳ retails local stories, posing as the hero himself; others regard his stories as genuinely autobiographical. It is generally thought that his language was quite witty and acceptable, though Ḥālī

in his *Muḳaddima* suggests that it became somewhat unacceptable (554). The story tells how a rich merchant had a beautiful daughter whom the hero, who lived in the same district, saw by chance when she appeared on the roof or balcony of her house. A love affair develops somewhat in the vein of *Romeo and Juliet*. Both the heroine and the hero successively drink poison, but in the end the effect is nullified. The story is important from several points of view. First, the element of magic, which had become normal in the *mat̲h̲nawī*, is absent, save in the description of the failure of the poison to prove fatal. Secondly, the characters are not princely or noble, but ordinary, as indeed are the events. Thirdly, the poems are brief. Fourthly, at a time when Lucknow poetry seemed to concentrate on language, S̲h̲awḳ stressed meaning. A third *mat̲h̲nawī*, *Lad̲h̲d̲h̲at-i-ʿis̲h̲ḳ* ("The Pleasure of Love"), is his longest, and is more evocative of Mīr Ḥasan [*q.v.*]. This and his fourth *mat̲h̲nawī*, *Bahār-i-ʿis̲h̲ḳ* ("The Spring of Love") are said to illustrate his felicitous use of the language of the ladies of Lucknow. S̲h̲awḳ's fame seems to have been short-lived. For example, Muhammad Sadiq, *A history of Urdu literature*, London 1964, does not even mention his name; nor do his collections of two other genres of Urdu love poetry—*g̲h̲azal* and the more passionate *wāsōk̲h̲*—seem to have made much impact.

Bibliography: Probably the best account of S̲h̲awḳ's *mat̲h̲nawī* is to be found in Abu 'l-Layt̲h̲ Ṣiddīḳī, *Lak̲h̲nāw kā dabistān-ī-s̲h̲āʿirī*, Lahore 1955, 553-75, which contains substantial extracts from the poems. The sparse information to be found in Ram Babu Saksena, *A history of Urdu literature*, Allahahbad 1927, has been mentioned. There are various editions of the poetry; interesting comments on it are to be found in Alṭāf Ḥusayn Ḥālī's *Muḳaddima*.

(J.A. Haywood)

al-S̲H̲AWKĀNĪ, Muḥammad b. ʿAlī b. Muḥammad, writer, teacher and *muftī* in Ṣanʿāʾ (*ca.* 1173-1255/1760-1839). His opinions and his writings are seen as foreshadowing the Islamic modernism of the first half of the 20th century. Ras̲h̲īd Riḍā [*q.v.*] regarded him as the *mud̲j̲addid* "regenerator", of the 12th century A.H. (*Tafsīr al-Manār*, vii, 144). Many of his books exist in modern (sometimes uncritical) editions. In his *al-Ḳawl al-mufīd fī adillat al-id̲j̲tihād wa 'l-taḳlīd* (Cairo, Muṣṭafā al-Ḥalabī) he argues that it is not necessary to follow one of the established Islamic schools of law or *mad̲h̲āhib*.

Bibliography: Brockelmann, S II, 818; Sarkīs, 1160; Ibrāhīm Ibrāhīm Hilāl, *Wilāyat Allāh wa 'l-ṭarīḳ ilayhā. Dirāsa wa-taḥḳīḳ li 'l-kitāb ... li 'l-Imām al-S̲h̲awkānī*, Cairo 1969, pp. 552.

S̲H̲AWKAT ʿALĪ (1873-1938), Indian Muslim leader. Elder of the famous "ʿAlī Brothers", S̲h̲awkat was born at Rāmpūr on 10 March 1873. He received a "modern", i.e. English, education at the insistence of his widowed mother, Ābādī Begum (who later played a significant role in the Indian freedom and K̲h̲ilāfat movements) despite the opposition of her male relatives. She pawned her personal jewellery to send S̲h̲awkat to a school in Bareilly, from where he went to the M.A.O. College, ʿAlīgaṙh. He did not show brilliance in his studies, but gained fame as a sportsman.

After his graduation in 1895, S̲h̲awkat was employed in the Opium Department for the next 17 years. He took premature retirement to tour the country as the Ag̲h̲a K̲h̲ān's secretary in order to mobilise public opinion and to collect funds to convert the M.A.O. College into a full-fledged university.

Unlike his younger brother, Muḥammad ʿAlī [*q.v.*], an erudite writer and speaker, S̲h̲awkat was a practical man who fully supported his younger brother in his activities. S̲h̲awkat founded And̲j̲uman-i K̲h̲uddām-i Kaʿba ("Association of the Servants of the Kaʿba") in 1913 to protect the sacred monument in Mecca and to facilitate pilgrimage from India. At about the same time, he assumed the managerial responsibilities of the newspapers published by Muḥammad ʿAlī, (the Urdu daily) *Hamdard* and (the English weekly) *Comrade*, due to the latter's ill-health.

The ʿAlī Brothers were arrested in May 1915 on charges of arousing the Muslims against the British. They remained in prison until December 1919. S̲h̲awkat's pension from the Department of Opium was confiscated at the time of his arrest.

During the next decade the ʿAlī Brothers dominated the Indian Muslim scene and took an active part in the freedom movement. They associated themselves with the Indian National Congress and played a crucial role in bringing it, especially its leader M.K. Gandhi, closer to the Muslims in the country. They played a key role in the Non-Cooperation (*Tark-i Muwālāt*) Movement of the early 1920s, and led the K̲h̲ilāfat Movement [*q.v.*] aimed at protecting the Ottoman Caliphate.

The ʿAlī Brothers were again arrested in 1921 for passing a resolution in the All-India Khilafat Conference at Karachi on 9 July 1921 calling upon Muslim soldiers in the Indian British army to desert from it. They were tried, along with five others, in the famous Karachi Trial of the same year (details in Rafique Akhtar, *Historic trial*, Karachi 1971).

S̲h̲awkat presided over the All-India Khilafat Committee's annual conference in 1923 at Cocanada. This conference formed a socio-political group, Hindustani Sewa Dal ("Indian service corps"), to improve the social conditions of the Indian people. S̲h̲awkat presided over the first session of this organisation at Belgaum in 1924.

At this time, a belligerent Hindu nationalism, including the movement of *Śuddhi* ("purification", i.e. reconversion of Muslims to Hinduism), was raising its head. Muslims demanded assurances of a fair deal in an independent India where Hindus were going to be the majority. (The Lucknow Pact of 1916 had given some weighting to Muslim demands.) The Indian National Congress refused to give any special assurance to Muslims in the Nehru Report and the All Party Conference at Calcutta in 1928, and this caused most Muslim leaders to drift away from the Congress and demand a separate state for Muslims.

S̲h̲awkat resigned from the Congress and settled in Bombay, where he dedicated himself to the advocacy of Muslim causes through the Urdu daily *K̲h̲ilāfat* and the Urdu weekly *K̲h̲ilāfat-e ʿUt̲h̲māniyya*. Towards the end of his life, S̲h̲awkat was elected to the Central Legislative Council. He died in Dihlī on 26 November 1938.

Bibliography: Unlike his younger brother, S̲h̲awkat does not seem to have been the subject of any independent work. See for a detailed account and some primary sources about his life: Mushirul Haq, *Shawkat Ali*, in S.P. Sen (ed.), *Dictionary of national biography*, Calcutta 1974, 176-8.

(Zafarul-Islam K̲h̲an)

S̲H̲AWKAT BUK̲H̲ĀRĪ, Muḥammad Isḥāḳ, 17th-century Persian poet, died 1107/1695-6.

He spent the early part of his life in Buk̲h̲ārā, where his father worked as a moneychanger. S̲h̲awkat also took up the same profession, but then set out

for Khurāsān. In 1088/1677-8 he arrived in Harāt and entered the service of the governor Ṣafī Ḳulī Khān Shāmlū. Shawkat was also associated for a considerable time with Mīrzā Sa'd al-Dīn, vizier of Khurāsān, who treated him with great affection and kindness, but eventually he decided to sever all connection from worldly affairs and lead a life of seclusion. Ultimately, he took up residence in Iṣfahān, where he died under conditions of self-imposed poverty. He was laid to rest in Iṣfahān at the cemetery dedicated to the spiritual leader Shaykh 'Alī b. Suhayl b. Azhar Iṣfahānī.

According to some writers, the poet initially employed Nāzuk as his pen-name. His *dīwān* contains *ḳaṣīdas*, *ghazals*, *ḳiṭ'as* and *rubā'īs*. Most of his *ḳaṣīdas* are in praise of the Imām Riḍā and the poet's chief patron Sa'd al-Dīn. Shawkat is especially noted for his *ghazals*, which are distinguished by an inventiveness in meaning and expression. He is regarded among those poets whose influence was chiefly instrumental in the popularisation of the "Indian style" (*sabk-i Hindī* [*q.v.*]). Though his work failed to gain recognition from early Persian writers, he was held in high esteem in Turkey where, according to E.J.W. Gibb, "he continued for more than half a century to be the guiding star for the majority of Ottoman poets".

(Munibur Rahman)

SHAWḲĪ, Aḥmad, Egyptian poet and dramatist. Born in Cairo in 1868 into an affluent family whose genealogy shows a multifarious ancestry, mingling Turkish, Kurdish, Greek and Arab strains, he died in Cairo on 14 October 1932.

It is both convenient and realistic to distinguish between three periods in the biography of the poet. Until 1914, Shawḳī was the poet of the court (*shā'ir al-umarā'*); from 1914 to 1917 he was the poet in exile; and from 1919 to 1932 he enjoyed popular and critical acclaim, bearing the prestigious title of *Amīr al-shu'arā'*.

On leaving the School of Law of Sūḳ al-Zalaṭ in 1887, Shawḳī was awarded a grant to pursue his legal studies at Montpellier. He was resident in France until 1891. Although he considered al-Mutanabbī his principal mentor, influences on him henceforward included Victor Hugo and de Musset, his favourite French poets. Until the outbreak of the First World War, as an official of the Palace, Shawḳī was the poet of the Prince, to whom he addressed eulogies whenever the occasion arose, attempting to some extent to imitate the conduct of al-Mutanabbī with regard to Sayf al-Dawla [*q.v.*].

When war broke out in 1914, the Khedive 'Abbās was visiting Turkey. The British announced their Protectorate over Egypt, opposed the return of 'Abbās and appointed in his place the Sultan Ḥusayn Kāmil. Shawḳī sought to please both the British and Ḥusayn; however, his marked hostility towards Britain's Egyptian policy (especially at the time of the resignation of Lord Cromer) resulted in a limited form of exile; accompanied by his two sons 'Alī and Ḥusayn, he boarded a ship bound for Barcelona and was not to leave Spain until 1919.

Essentially a period of transition, these few years are marked by a relatively small volume of work, lacking any great originality (principally two plays in which he attempts to imitate two celebrated ancient models: al-Buḥturī and Ibn Zaydūn [*q.vv.*]).

On his return to Egypt in 1919, it was the contemporary Egyptian scene which claimed the poet's attention: eulogies and funeral tributes addresed to renowned Egyptians, the Milner Report, reforms at al-Azhar, creation of the Bank of Egypt, Congress of Egyptian political parties, the fiftieth anniversary of the Dār al-'Ulūm—all kinds of events were extolled by the poet, in a style far removed from the panegyrics of the court or from the nostalgic effusions of exile in Spain. The talented singer 'Abd al-Wahhāb, who was his constant companion, was to popularise sung versions of these historical *ḳaṣīdas*.

Despite sometimes acerbic criticism, the laurels awarded to Shawḳī have not withered; the fiftieth anniversary of his death was marked by spectacular commemorative ceremonies which took place in Cairo between 16 and 22 October 1982 and brought together, at the highest level, Egyptian authorities and literary figures from the Arab countries and from Europe, coming to pay their respects to the "Prince of poets".

The sources of inspiration of Shawḳī are essentially the following:

(a) The *Fir'awniyyāt*, chronicles of the centuries in the epic style of Victor Hugo.

(b) The *Islāmiyyāt*, the most celebrated of which was to be popularised by the renowned Egyptian singer Umm Kulthūm (*al-Hamziyya al-nabawiyya*).

(c) The *Turkiyyāt*, celebrating the role of the Turks as defenders of Islam, especially in the Greco-Turkish war of 1921-2.

(d) Egypt: compositions illustrating numerous and very diversified themes, reflecting the current scene and constituting in total a veritable poetical history of contemporary Egypt.

(e) Occasional pieces: panegyrics, funeral odes, *nasībs*.

(f) Theatre: although Shawḳī owes his renown to his lyrical compositions, it should not be forgotten that it was by means of drama that he made his entrance into the literary world, writing, while still resident in France, his first tragedy *'Alī Bāy al-Kabīr*. Much later, he returned to the genre with *Madjnūn Layla* (1916), then with *Maṣra' Kilyubātrā* (1917), *Ḳambīz* (performed at the Ramesses Theatre in 1931), *Amīrat al-Andalus* and *'Antara*, his last work.

Bibliography: 1. Works of Shawḳī. *al-Shawḳiyyāt*, 4th ed., i, *al-Siyāsa wa 'l-ta'rīkh wa 'l-idjtimā'*, Cairo n.d. (1964?), 302 pp.; ii, *al-Waṣf*, Cairo n.d. Badawi, Cambridge 1992, 47-8, 67-71, 358-60. (A. Boudot-Lamotte)

SHAWḲĪ EFENDI RABBĀNĪ, conventional form Shoghi Effendi (b. 1 March 1897, d. 4 November 1957), head or Guardian of the Bahā'ī religion 1921-57.

The great-grandson of Mīrzā Ḥusayn ʿAlī Nūrī Bahā' Allāh [*q.v.*], the sect's founder, Shoghi was born in Haifa, Palestine, for some time the home of his grandfather, ʿAbbās Efendi ʿAbd al-Bahā' [*q.v.*] and later the international centre for the movement. Shoghi was educated in Haifa and at the Syrian Protestant College in Beirut, after which he spent about a year at Balliol College, Oxford. In November 1921, he was recalled to Palestine on the death of ʿAbbās Efendi.

In his will, ʿAbbās had appointed his grandson first in a projected line of "Guardians of the Cause of God" (*walī-yi amr Allāh*), modelled on the Shīʿī Imāms, whose role was to interpret Bahā'ī scripture and provide infallible guidance on religious matters. Shoghi used his Western-type education and his organisational skills to create a complex international organisation for the Bahā'ī movement. He also had a marked ability to systematise, and, through the medium of several books and innumerable encyclical letters, he fashioned a coherent, schematised picture of Bahā'ī history and doctrine which has subsequently come to be the authoritative version as understood by all modern adherents. His writings, most of which are in English, include an important history of the first Bahā'ī century, *God passes by* (1944), a translation of an early Bahā'ī chronicle of the Bābī movement, *Nabīl's narrative* (1932), and interpretative translations of several important works of Bahā' Allāh (including the *Kitāb-i Īḳān*). He also supervised several volumes of the yearbook, *The Bahā'ī world*, in which a normative presentation of the faith's history, doctrines, and administrative system was developed. He remained in Haifa, creating there the nucleus of the Bahā'ī World Centre, involving extensive buildings and landscaping work.

According to official accounts, on his death in London in 1957, he left no will or verbal instructions as to the future direction of the movement. Being childless, he was expected, according to the terms of ʿAbd al-Bahā''s will, to have appointed another male member of the Bahā'ī sacred lineage to succeed him; but he had by then excommunicated all his living relatives. The line of guardians thus ended with him, and in current Bahā'ī estimation he is now "the Guardian of the Cause" *par excellence*. Overall religious authority within the movement now rests with a nine-man council, the *Bayt al-ʿAdl al-Aʿẓam* (Universal House of Justice), elected every five years. An attempt to continue the guardianship was made by the former president of Shoghi's International Bahā'ī Council, Charles Mason Remey (1874-1974), whose followers form the Orthodox Bahā'ī Faith and its sub-groups, each with its own line of guardians. Given the overwhelming influence of the Universal House of Justice, however, it seems most unlikely that a *wilāyat* system will reappear in mainstream Bahā'ism.

For a full bibliography of Shoghi Effendi's English writings, see W.P. Collins, *Bibliography of English-language works on the Bábí and Bahá'í faiths 1844-1985*, Oxford 1990, section V. Several volumes of Persian letters have been published. (D. MacEoin)

SHAWWĀL, the name of the tenth month of the Muslim lunar year. In the Ḳur'ān (sūra X, 2), four months are mentioned during which, in the year 9/630-1, the Arabs could move in their country without exposing themselves to attacks (cf. "the sacred months" in v. 5). These four months were, according to the commentaries, Shawwāl, Dhu 'l-Ḳaʿda, Dhu 'l-Ḥidjdja and Muḥarram. In *Ḥadīth*, Shawwāl is therefore among "the months of pilgrimage mentioned in Allāh's Book" (al-Bukhārī, *Ḥadjdj*, *bāb* 33, 37).

In pre-Islamic times, Shawwāl was considered ill-omened for the conclusion of marriages (*Lisān al-ʿArab*, s.v.). In order to prove this opinion baseless, ʿĀ'isha emphasised the fact that Muḥammad had married her in this month (al-Tirmidhī, *Nikāḥ*, *bāb* 10). In the modern Muslim world, there is difference of opinion concerning this point. Among the Muslim Tigré tribes of Ethiopia and Eritrea, Shawwāl is one of the months suitable for celebrating marriages; in ʿUmān, on the other hand, it is considered ill-omened in this respect.

The law recommends fasting during six days following the *ʿīd al-fiṭr* ([*q.v.*]; cf. al-Tirmidhī, *ṣawm*, *bāb* 52, "Whosoever fasts the month of Ramaḍān as well as six days of Shawwāl, has reached the *ṣawm al-dahr*"; cf. also Muslim, *Ṣiyām*, trad. 203). Nevertheless, these days usually partake of the solemn character of the "lesser festival". For the same reason Shawwāl bears not only the epithet of *al-mukarram* ("the venerated"), but also such names as *faṭer ḳadām* (Tigré), *bayram* (Turkey), *faṭri 'l-awli* (ʿUmān), *uroë raya* (Acheh).

SHĀY [see Čay].

SHAY' (a.) "thing, entity".

The philosophical term *shay'* first of all has a generally accepted meaning: it designates that which is perceived concretely by the senses (*mudrak*) and at which a finger may be pointed (*al-mushār ilayhi*), although it

cannot yet be positively defined. However, in this perception, a thing is only a thing to the extent that, in the perception, it is distinct from another. In the plural, *a<u>sh</u>yā'* are objects given purely and simply as existing externally. They are to be distinguished from *a'yān* which signify the same objects, but in the sense that they are thought of in their individualised essence. Zayd and 'Amr are *a'yān*. It could be said that all people, philosophers and theologians included, employ the word *<u>sh</u>ay'* in this vague and general sense; it is a very frequent usage. Thus the Mu'tazilīs speculate as to whether the shadow of a thing (*ẓill al-<u>sh</u>ay'*) is the thing itself or is other than it. Some consider that it is other. Al-<u>Dj</u>ubbā'ī claims that the shadow is not a notion which has meaning in itself (*ma'nā*); the meaning of the shadow is that the thing casts a covering veil, not that it has a meaning in itself (*Maḳālāt*, ii, 96).

An interesting text of Fa<u>kh</u>r al-Dīn al-Rāzī (*Mabāḥi<u>th</u>*, i, 43-4) sets out the relationship between *a'yān* and *<u>sh</u>ay'*, where it is shown that existence is not that by which the thing is constituted in being (*<u>th</u>ābit*) but that it is the very fact of being constituted in being (*nafs kawn al-<u>sh</u>ay' <u>th</u>ābit^an*). "We mean by existence only the fact that the thing supervenes (*ḥuṣūl al-<u>sh</u>ay'*), is realised and established in being .... If it is said that existence is an attribute (*ṣifa*) which demands that the thing is actualised in individual essences (*ḥuṣūl al-<u>sh</u>ay' fi 'l-a'yān*), we shall say in this regard that it is not possible that the production of the thing in the *a'yān* should be caused by an attribute which is present in it". The demonstration which follows depends essentially on the consequence of such a conception, this being the infinite sequence of causes. The conclusion is that the existence [of things] "is only the fact of being constituted in the *a'yān*".

But the philosophical reflection of the Arab thinkers has led them to state that every person who speaks of a thing will *understand* what is meant by the word which he uses. He has a *mafhūm*. The Arab thinkers underlined the importance of the *mafhūm*, and they showed that it is indefinable, for the good reason that it is by means of it that a definition is possible; it is because it is understood through the word that expresses it that a concept can be defined. Ibn Sīnā (*K. al-<u>Sh</u>ifā'*) has in this sense assimilated the being in the capacity of the being (*ens qua ens*) to the thing, that is to the *mafhūm* of the word "thing". The thing is for him the equivalent of *mā* or of *alla<u>dh</u>ī*: "that which" (in Latin *quod*). It will be said in effect: the being is that which ..., or: the being is something which ...; in other words, the being is defined through the being, or through the *mafhūm* of the word, as the thing is defined through the thing or its *mafhūm*: a thing is some thing which .... Now when "that which" or "something which" is thus said, it is understood what is said, without need of definition. And if nothing were understood, there would be no definition. The thing is therefore the being in terms of being, in other words the fundamental *mafhūm* without which there would be no thought; it is, consequently, the foundation of all thought. Thus everything which is, everything which exists, whether an object (a house, a horse, etc.) or an abstraction (a feeling, a thought, etc.) can be called a "thing", and here there is constant use of the word which may be disconcerting to the Western reader but which is one of the most typical features of Arabic philosophical and theological language.

A question which then arises is: can the non-being be called a thing? Is there a "thingness" (*<u>sh</u>ay'iyya*) of the non-being, of nothingness (*'adam*)? Theologians and philosophers have upheld opposing theses on this topic. At first sight, it is certain that if the thing is the *ens qua ens*, it would be contradictory to say that the non-being is a thing. This problem, which has tormented Arab thinkers, has a parallel in the theme of Plato's *Sophist*.

The Mu'tazilīs reckon that the non-being is cognisable and that it is consequently a thing. Al-<u>Dj</u>uwaynī made a survey of their opinions with the responses of the A<u>sh</u>'arīs (*al-<u>Sh</u>āmil*, 131-8): "If you maintain, they say, that the non-being is cognisable and is not a thing, it would be legitimate to say that there is an object perceived [by the senses] (*mudrak*) which is not a thing, which would be false". And the response is that it would be necessary to prove that there is equivalence between cognisance and sensible perception (*idrāk*). If so, any thing not perceived by the senses would be unkown, which is evidently false. Another Mu'tazilī argument is that we are aware of the negation of the impossible and the nothingness of the non-being. Here there are two negations: nothingness and non-being; impossibility and impossible. But how are we to distinguish between two negations, since negation does not contain within itself any discernment? It is necessary, however, to distinguish between, on the one hand, cognisance of the nothingness of the non-being, and on the other, the non-being itself. Cognisance of the nothingness of the non-being is thus not a non-being, as cognisance of impossibility is not impossible. It follows that the nothingness of the non-being, insofar as it is known, is *something*, since it is essential clearly to distinguish from the non-being the nothingness of the non-being which, itself, is known. And the response is that if that is the case, to distinguish the impossible from the possible, the impossibility of the impossible which cannot exist would need to be an entity (*<u>dh</u>āt*), in other words, a thing which exists.

This being so, al-<u>Dj</u>uwaynī (134) critises the notion of the "thingness of the non-being" (*<u>sh</u>ay'iyyat al-ma'dūm*) and he castigates the Mu'tazilī of Baṣra al-Naṣībī, for whom the non-being, although it is neither an essence (*<u>dh</u>āt*) nor other than an essence, can be called "thing" in a general manner (*iṭlāḳ^an*) and according to the language (*lu<u>gh</u>at^an*). But this recourse to language is based either on reason or on current usage. However, languages are not created by reason but by convention (*iṣṭilāḥ*) or by divine institution (*tawḳīf*). Conventional institution cannot be used for purposes of argument here; as for divine institution, it demands that appeal is made to it only on the basis of Ḳur'ānic usage. Specifically, al-<u>Dj</u>uwaynī's adversaries reckon that they can rely on Sūra XXII, 1: "Yes, the earthquake of the Hour [shall be] a tremendous thing (*<u>sh</u>ay' 'aẓīm*)". God thus calls it a "thing" before it has taken place, which would prove that He is using the word "thing" to denote that which does not yet exist. If it is said that there is no earthquake until the time that it exists, it can equally be said that there is no thing until the time that it exists. Furthermore, the words of the language are taken either in a literal sense or in a figurative sense. Languages, and hence the literal meaning of words, being variable, it is difficult to define in terms of a rational argument the literal meaning of the word "thing". Consequently, it must be acknowledged that this word is, in the majority of cases, used figuratively. It is thus not possible, according to al-Naṣībī's perspective, to justify the thingness of the non-being by a linguistic reference to the literal meaning of the word "thing".

Reflection on the "thing" also involves, on the one hand, the cognisance which God has of creatures, and

on the other, the divine attributes. The first question was of particular interest to the Muʿtazilīs. Hishām b. ʿAmr al-Fuwaṭī did not say that God is aware of things from all eternity; God knows that He is unique, and if it were to be said that He is aware of things from all eternity, this would be to assert that they exist eternally with Him. When he was asked if God has known from all eternity the things that would exist, he answered that this implies that the finger can be pointed at things (*ishāra ilayhā*); only that which exists can be indicated. He did not call "things" that which God has not created and which is not, but he gave this name to that which He has created and to that which He has eliminated and which has become a non-being (*maʿdūm*). Al-Naẓẓām [*q.v.*] stated that God knows things eternally "in their time" (*fi awḳātihā*), i.e. in relation to the moment when He wills their creation. This leads to the notion that God knows things, not in themselves, but by means of His power and His will to create them. An analogous theory is found in the writings of ʿAbbād b. Sulaymān: God does not cease to know things, substances and accidents. But He does not eternally know corporeal things, nor beings that are made (*al-mafʿūlāt*) and created (*al-makhlūḳāt*). This idea seems close to that of *falāsifa* of the school of Avicenna, according to whom God does not know particulars as such but only their principles and causes. As for Muḥammad b. ʿAbd al-Wahhāb al-Djubbāʾī [*q.v.*], he considered that God does not cease to know things, since things are things before being. Finally, others claimed that God does not cease to know things which have not existed and shall not exist. In fact, He knows all things which He can produce through one of His attributes: He knows them in this attribute (*Maḳālāt al-Islāmiyyīn*, i, 219-23).

A further question is: can it be said that God is "before things", or should it simply be said that He is "before", with nothing added? The disciples of ʿAbbād b. Sulaymān say that He is "before", but not that He is "before things", no more than He is after things or the first among things (*awwal al-ashyāʾ*). The disciples of al-Naẓẓām say that the Creator has not ceased to be "the anterior of things" (*ḳablu* [in the nominative case] *al-ashyāʾ*), but not before things (*ḳabla* [in the accusative case] *al-ashyāʾ*). It seems that here it is the case of the absolute anteriority of God, which the *falāsifa* call *taḳaddum* when commenting on Ḳurʾān, LVII, 3, "He is the First"; this is the sense in which the neo-Platonists hold that the One is not a number, i.e. the first of numbers, but transcends the numerical succession; on the contrary, the expression "before things" implies a relationship to the thing which is inappropriate for God. However, the majority of Muʿtazilīs teach that God is "before things" (*ḳabla ʾl-ashyāʾ*) (*Maḳālāt*, i, 249).

As for the attributes of God, are they things or are they not? Some accept it, others deny it, since a thing has attributes, and when the attribute is defined as a thing with its attributes, no progress has been made. Similarly, when it is asserted that the attributes are not things because they are eternal, there is conflict with those who refuse to say whether the attributes are eternal or not; this touches on the problem faced by the Muʿtazilīs when distinguishing between attributes of the essence and attributes of action. If they are taken to be eternal, it is permissible to say that they are not things; but this is the crux of the question. In a general sense, before knowing whether the attributes are things or are not things, it would be necessary to know what they are in relation to God. But if the Ashʿarīs are correct in saying that they are not God and that they are not other than God, then how is it to be determined that they are or are not things? It could, of course, be said that when a particular attribute, such as knowledge or power, is considered, it is a thing by virtue of being an object of thought. But it does not follow that the attributes of God as such are things. The problem of the "thingness" of the divine attributes thus remains unresolved.

(R. Arnaldez)

SHAYʿ al-ḲAWM, the name of a Safaitic deity, unknown however in the pantheon of Central and South Arabia. In Safaitic inscriptions he appears as *šyʿhḳwm*, i.e. Shayʿ ha-Ḳawm, and it is only in the Nabataean and Palmyrene inscriptions (see G. Ryckmans, *Les religions arabes préislamiques*[2], Louvain 1953 = Quillet, *Hist. gen. des religions*[2], Paris 1960, ii, 199-228) that we have the form with the regular Arabic definite article, Shayʿ al-Ḳawm.

The name may refer to a tribal deity in the form of a lion or lion cub, so that Shayʿ Allāh (this theophoric name, probably a depaganisation of the god's name, is found in the lexica, e.g. *TʿA*, v, 398 l. 29) could be parallel to the Biblical Hebrew name Ari-El (cf. Gesenius-Bahl, 65-6); according to Damascius, the ancestral god of Baalbek was worshipped in the form of a lion (W. Robertson Smith, *The religion of the Semites*, Cambridge 1894, [3]London 1927, 444-5). Recent Semitic scholarship has, however, suggested that *shayʿ* means here "comrade, companion", so that good sense may be made of the god's name as "escort, protector of the tribe" or "the fighting men of the tribe". An interesting feature, mentioned in a Palmyrene inscription by a Nabataean soldier, is the description of him as "the god that never drinks wine", a prohibition that may have extended to his devotees.

(T. Fahd)

SHAʿYĀ (also Ashaʿyāʾ), Isaiah, son of Amos, a prophet sent to Israel, unmentioned by name in the Ḳurʾān (although *tafsīr* works mention him in connection with Ḳurʾān, XVII, 4), but well known in *ḳiṣaṣ al-anbiyāʾ* literature, notably for his predictions of the coming of Jesus (ʿĪsā [*q.v.*]) and Muḥammad. The story of Isaiah falls into three periods of prophecy. The account provided by al-Ṭabarī is typical. First, Isaiah is named as a prophet during the reign of Zedekiah (or Hezekiah, as in the Bible) and prophesies the king's death. The second period of prophecy occurs in the time of the siege of Jerusalem by Sennacherib (Sanḥārīb). After Isaiah announces that the king's death has been postponed for 15 years (because God has heard the king's prayer), God destroys all of the enemy forces except Sennacherib and five scribes. After parading them around Jerusalem for 66 days, Zedekiah follows the command of God and allows Sennacherib to return to Babylon. So the events become a "warning and admonition" of the strength of God. In the third period of prophecy,

the people are leaving the ways of God in the wake of the death of the king, and Isaiah warns them of doom. This leads to his martyrdom at the hands of his fellow Israelites. Isaiah flees when threatened and takes refuge inside a tree. Satan, however, shows his enemies the fringes of his clothes and they cut down the tree, killing him in the process (see M. Gaster and B. Heller, *Der Prophet Jesajah und der Baum*, in *MGWJ*, lxxx [1936], 35-52, 127-8).

AL-**SHAYB** WA 'L-**SHABĀB** (A.), old age, senescence (lit. "white hair") and youth. This poetic theme of the Arabs has known a long and prolific history and has played, in urban post-Djāhilī poetry, a role analogous to that of the *nasīb* in the moulding of the *ḳaṣīda* [*q.vv.*].

According to its etymology, *shabāb* apparently denotes the beginnings of anything. The term, together with *shabība* and *shabābiyya*, signifies not only youth and the beginnings of adulthood, but also the vigour of this age. The synonyms *fatāʾ* and *ḥadātha* are less often used: *ṣibā* is recorded as having the same meaning (*Lieder der Hudhailiten*, Berlin 1884 [= *Hudhaliyyīn*], 96, 1.8; al-Buḥturī, *al-Ḥamāsa*, Beirut 1387/1967, [= al-Buḥturī] 194, ll.18, 19); this period extends from puberty to the end of the thirties, or from 15 to 32 years of age; it is followed by the *kuhūla* (Lane, s.v. *shabāb*).

The root *sh-y-b* features in Safaitic inscriptions in the forms *sh-y-b-t* and *'sh-y-b* (*Corpus Inscriptionum Semiticarum*, i, iv; G. Lankester Harding, *An index of Pre-Islamic Arabian names and inscriptions*, Toronto 1971, 363). *Sh-m-ṭ*, given as an equivalent of *sh-y-b*, seems to have been of more limited use (al-Nābigha, ed. Ahlwardt, *al-ʿIḳd al-thamīn*, London 1870, vii, v. 26; *LA*, xiii, 45, 1.5; al-Djāḥiẓ, *K. al-Ḥayawān*, Cairo 1938-45, i, 347, 1.10; Abū Dhu'ayb, *Dīwān*, Hanover 1926, 33, 1.6; *TA*, v, 170, 1.25: al-Akhṭal, *Dīwān*, Beirut 1891, 69, 1.6; Abū Zayd, *Nawādir*, Beirut 1894, 144, 9; *al-Sulayk b. al-Sulaka, akhbāruhu wa-shiʿruhu*, Baghdād 1404/1984, 75). The lexicographers assert in this context that only *shamṭāʾ* can be used for feminine old age. However, in the *Lisān*, a verse is cited which mentions *musbilāt shaybuhunna wābiṭu* ("women despised for letting down their white hair", *LA*, ix, 303, 1.4). *Gh-th-m* (in the form *aghtham*, "grey which is white rather than black") is also used as a synonym (Abū Zayd, *Nawādir*, 52, 1.4: *LA*, xv, 329, 1.22). Finally, it is appropriate to mention *dh-r-ʾ*, which is given as an equivalent of *shamiṭa* (*LA*, i, 74, 1.10, vi, 113, 1.24, viii, 165, 6; Abū ʿUbayda, *Madjāz al-Ḳurʾān*, Cairo 1347, i, 288, 1.1; Ibn Ḳutayba, *Maʿānī*, 1223; al-Buḥturī, 201, 1.5; al-Ṭabarī, *Tafsīr*, Cairo, ed. Shākir, xv, 296, 1.2; al-Bakrī, *Simṭ al-laʾālī*, Cairo 1354/1936, i, 480, 1.13, ii, 967, 1.3).

From the outset, semantics provides a hint of the dread engendered by the departure of youth and the appearance of the first signs of old age; thus *rāʿiyat al-shayb*, denoting the first white hair which appears on the head, derives from the root *r-w-ʿ* which expresses fright and terror (Kuthayyir ʿAzza, i, 162; al-Buḥturī, 197, 1.17; al-Sharīshī, *Sharḥ maḳāmāt al-Ḥarīrī*, Cairo 1300, ii, 222; cf. *rayʿān al-shabāb*).

It is very unusual for a poetic theme to link the real and the imaginary to the extent that *shabāb* and *shayb* have done. Initially, the entire theme appears inexplicable, since the Bedouin did not tend to live long. Al-Djāḥiẓ makes the comment in this regard: "There are among the Bedouin those who enjoy great longevity; however, accounts of them, in this respect, are tainted by numerous untruths" (*al-Ḥayawān*, i, 157). It was a society of the young; thus old people and their white hair were all the more visible and their situation all the more problematical.

1. The themes of youth and old age

a) *The real*

It is hard to comprehend the terror expressed in poems on this theme, in the light of the very widespread practice among men of dyeing the hair (*khiḍāb*), so extensive as to serve as a point of reference in the most diverse poetical texts (Imruʾ al-Ḳays, *Dīwān*, Cairo 1984, 176, where the blood of the slaughtered beast is compared with diluted henna as a dressing for the greying hair of an aged person; al-Buḥturī, 188, 1.7; *al-Mufaḍḍaliyyāt*, Oxford 1918-21, 234, 1.6, 288, 1.20; *LA*, 462, 1.25; *TA*, vii, 337, 1.30; Djarīr, *Dīwān*, Cairo 1354/1935, 18, 1.1). It is related in this context, that ʿAbd al-Muṭṭalib was the first Meccan to introduce this practice to his fellow-tribespeople; he had discovered the benefits of dyeing during a visit to Yemen, where its use was very widespread (Ibn Ḥabīb, *K. al-Munammaḳ*, Beirut 1405/1985, 112-13; Abū Hilāl al-ʿAskarī, *al-Awāʾil*, Beirut 1407/1987, 17). Men who resisted this practice must have been few; among the poets, for example, only two, al-Muraḳḳish al-Akbar and ʿAntara, seem to have rejected dyeing. In this context, a certain adage is especially revealing: *al-khiḍābu aḥad al-shabābayn* ("the dyeing of hair constitutes one of the two youths" [al-Thaʿālibī, *al-Tamthīl wa 'l-muḥāḍara*, Cairo 1961, 388]). Finally, opinions are divided as to its efficacy: while Maḥmūd al-Warrāḳ seems to favour it (Ibn ʿAbd Rabbihi, *al-ʿIḳd al-farīd*, Cairo 1359-72/1940-53, iii, 50), Mālik b. Asmāʾ sees it as an imperfect solution which is incapable of deceiving female partners (*al-Ḥamāsa al-baṣriyya*, Ḥaydarābād 1383, 188).

Within Islam, this practice receives the endorsement of the law. In *ḥadīth*, the Muslim is instructed to dye his white hair. As early as the 2nd/8th century the following tradition was in circulation: "The Jews and the Christians do not dye [their hair]; you must do otherwise" (Ibn Ḥanbal, *Musnad*, Būlāḳ 1313, ii, 240, 309, 401). Another tradition praises henna and *katm* (a black dye which masks the red of the henna (Ibn Ḥanbal, v, 147, 154, 156, 169). The sources contain copious information regarding the Companions, the Successors or *tābiʿūn* and the masters of later generations, who used the same products for the dyeing of their hair (Ibn Abi 'l-Dunyā, no. 3, ll.9-13; Ibn al-ʿArabī, *Muḥāḍarat al-abrār wa-musāmarat al-akhyār*, Beirut 1388/1968, 349-50). Currently, in Salafī circles, this method of rejuvenation is recommended for men (Maḥmūd Shaltūt, *al-Fatāwā*, Cairo 1966, *ṣabgh al-shaʿr*, 390-1; see also al-Māwardī, *al-Amthāl wa 'l-ḥikam*, Alexandria 1402, 152). In concurrence with the *Midrash* (*Pirkei Rabbī Eliʿezer ha-gadol*, Jerusalem 1973, § 51, § 52, 209), Muslim scholars declare that the Patriarch Abraham was the first man to see his hair turn white (*wa-huwa awwalu man raʾā al-shayba fi 'l-dunyā*). Astonished, Abraham asked God what this signified. He was heard to say that it was a warning which urges the attentive man to prepare himself for future life and keep himself from sin. Another tradition, still in conformity with the *Midrash*, relates that Abraham and Isaac were so alike that

people were unable to distinguish one from the other. God smote the father with *shayb* as a means of setting them apart. Others, still speaking of Abraham, assert that *shayb* is a light and a tangible sign of majesty (*waḳār*; this is an accurate translation of the Midrashic term *hādār*; Rabbi Levitas used a formula which was to find lasting favour among the Arab poets, a crown of majesty, *keter hadūr be-rosho, in Pirkei Rabbī Eli'ezer, loc. cit.*). Understanding this, the Patriarch is supposed to have asked God to give him more; his hair then became all white (Sibṭ Ibn al-Djawzī, *Mir'āt al-zamān*, Beirut 1405/1985, i, 281). All of this gives the impression of a very favourable attitude towards this age, which is further confirmed by numerous other *ḥadīths*, (Ibn Abi 'l-Dunyā, no. 2, ll.14-5, 33).

All things considered, the fear of old age can be explained by the extent to which, in pre-Islamic society, the warrior was promoted to a rank of the highest prestige. Youth, indispensable for the practice of this occupation, was considered an inestimable advantage; its loss with the coming of *shayb* must have been regarded as an irreparable misfortune. On the other hand, it seems that the status of the war veteran and that of the old man were among the most precarious. The complaints of Sā'ida b. Dju'ayya on being relegated by his kinsmen to the remotest corners of the camp, in spite of his heroic record, are confirmed by the poetry of the *mu'ammarūn*. All insist on the tribal degradation of the aged hero: his leadership is utterly revoked; the tribe carries him as a dead weight. His kinsmen are ashamed of him, he is frequently scolded, he is relegated to the remotest corners of the tent for fear of his eccentricities and, henceforward, his advice is disregarded.

All lay the blame for their misfortunes on *shayb*; all evoke with nostalgia their glorious youth (al-Sukkarī, *Sharḥ ash'ār al-Hudhaliyyīn*, Cairo 1384/1965, iii, 1122-5; al-Sidjistānī, *K. al-Mu'ammarīn*, Leiden 1889, 39, 40, 45, 47). It may be noted that the commentators on the Ḳur'ān, in their interpretation of *ardhal al-'umr* ("the worst period of life", XVI, 79; XXII, 16) have given an image identical to that sketched by the *mu'ammarūn* (utterances attributed to Ibn 'Abbās in al-Ḳurṭubī, *al-Djāmi' li-aḥkām al-Ḳur'ān*, Cairo n.d., 3756-7).

Islam, by means of the Ḳur'ān, *ḥadīth* and edifying texts, elevated the respect due to aged persons to the level of an essential moral principle. In parallel, there are traditions attacking youth; this impetuous stage is considered a branch (*shu'ba*) of folly (*al-shabāb shu'bat*[un] *min al-djunūn* al-Māwardī, *op. cit.*, 131, 151). This attitude explains the advice given to young people to attempt to resemble the old (*ibid.*, 85). Finally, a man whose beard was not tinged with white was not regarded as fit to transmit *ḥadīth* (Wakī', *Akhbār al-ḳuḍāt*, ii, 54).

The very significant indications which have just been revealed provide a hint of a situation which is different from, and even opposed to, that described by the poetry of old age; furthermore, the persistence of pre-Islamic themes and their consolidation over the centuries following the disappearance of the *Djāhiliyya* clearly show that this vast corpus of work is dependent on the imaginary. Convention is the utterly dominant factor in this context.

(b) *The imaginary*

Poets dealing with this theme adopted a resolute and monolithic attitude. The two entities are absolutely antithetical, youth being considered the Good and old age representing Evil; such an approach tends to accentuate the conventional nature of this poetry.

1. *Youth*

Youth is a precious possession and is dearly loved (semantic field jointly expressing the beautiful and the good; *ḥasan* = beautiful, al-Buḥturī, 181, l.14; *ḥamīd* and *maḥmūd* = "worthy of praise", *The Naḳā'iḍ of Djarīr and al-Farazdaḳ*, Leiden 1905-12, 963, l.10; *al-Aghānī*,[3] xii, 296, l.9; *Le dīwān de Salāma b. Djandal*, Beirut 1910, 7, l.11; *fakhir* = precious, *LA*, xvi, 61, 6; *TA*, ix, 78, 34; *li-llāhi durr 'l-shabābi* = "how excellent is youth", al-Buḥturī, 180, l.8, 186, l.7; Abu 'l-Shīṣ, 20). It is the age of vigour (semantic field expressing force, *ḳawī* = "robust", *al-Ḥamāsa*, 144, l.10; al-Mubarrad, *al-Kāmil*, Leipzig 1864-92, 766, l.16; *al-Ḥayawān*, ii, 201, l.2), of great ambitions (see below), of the good life (semantic field expressing recreation and debauchery, *lahawnā* = "we enjoyed ourselves", 'Abīd b. al-Abraṣ, *Dīwān*, Leiden 1913, 75, l.5; Aws b. Ḥadjar, *Dīwān*, Vienna 1892, 4, l.7; *makhfūḍ al-'aysh* = "living in tranquility", *al-Ḥamāsa*, 576, l.1; *ladhdha* = "pleasures", *al-Naḳā'iḍ*, 457, l.3) and of love affairs (*Hudhaliyyīn*, ed. Wellhausen, 76, l.8, Abū Ṣakhr al-Hudhalī; *al-Mufaḍḍaliyyāt*, 773, v. 9; Salāma b. Djandal, 7, v. 13; Ibn Ḳutayba, *al-Shi'r wa 'l-shu'arā'*, Leiden 1904, 147, l.13; 'Ubayd Allāh b. Ḳays al-Ruḳayyāt, *Dīwān*, Vienna 1902, 201, l.3).

2. *The loss of youth*

One is forcibly robbed of this fortunate age ('Amr b. Ḳamī'a, *Dīwān*, Cairo 1385/1965, 48-51; al-Buḥturī, 180, ll.18-21); furthermore, if al-Marzubānī is to be believed, 'Amr was the first poet to mourn over lost youth (*Mu'djam al-shu'arā'*, Cairo 1379/1960, 4). However, Abū Hilāl al-'Askarī (*K. al-Ṣinā'atayn*, Cairo 1352, ii, 155) proposes that primacy in this case belongs to 'Abīd b. al-Abraṣ. The formulas belong to the semantic field of weeping and lamentation (*'urrītu min al-shabāb* = "I have been robbed [of the attire] of youth") of Abu 'l-'Atāhiya (*al-Anwār al-zāhiya fi dīwān Abi 'l-'Atāhiya*, Beirut 1889, 32; al-Sarī al-Raffā', *al-Muḥibb wa 'l-maḥbūb*, Damascus 1407/1987, iv, 378; al-Nuwayrī, *Nihāyat al-arab*, Cairo 1342, ii, 26); those based on *bakā* ("he wept", 'Adī b. Zayd al-'Ibādī, 177; al-Buḥturī, 181, l.7-8; Di'bil, clviii, 235), on *djazi'a* ("to show grief", al-Buḥturī, 280, l.16); on *fa-ndub* ("lament!" [imper.], al-Buḥturī, 181, l.8). In other contexts, these are exclamations of overwhelming grief which try to convey the sorrow caused by the irrevocable loss of a precious possession (*yā lahfa nafsī* "what a misfortune", al-Buḥturī, 180, l.18). Furthermore, all the formulae which evoke the departure of youth stress that what is involved here is a loan which must be repaid: *al-shabāb al-musta'ār* ("the youth which has been lent to us", 'Umar b. Rabī'a, *Dīwān*, Leipzig 1901-9, 15, l.3); numerous words and combinations are borrowed from the language of death: *awdā* ("he has perished, death has claimed him", al-Namir b. Tawlab, in *LA*, i, 351, l.17, and ii, 180, l.16; other cases, al-Musāwir b. Hind, *Ḥamāsa*, 225, l.23; al-Aḥwaṣ, in al-Buḥturī, 190, l.6; al-Azharī, *Tahdhīb al-lugha*, Cairo 1384, ii, 382; etc.) *fanā* ("he has passed into annihilation", *al-Aghānī*[3], xii, 292, l.6), *wa-kullu shabāb*[in] *ilā … bilan* (all of youth is a journey towards decay, Laylā al-Akhyaliyya, in Ibn Ḳutayba, *Shi'r*, 273, l.11; al-Buḥturī, 279, l.12; *Aghānī*[3], xi, 241, l.10); at other times, the language used serves to evoke the absolute impossibility of a hypothetical return of *shabāb: hayhāti minka shabāb*[un] *kunta ta'haduhu* ("how far from you is [a state of] youth that you used to know so well" Thumāma b. 'Āmir al-Badjalī, in al-Buḥturī, 185, l.14) and the well-known *ayā layta [l-]shabāba ya'ūdu yawm*[an] of Abu 'l-'Atāhiya ("is it possible that youth may return one day?" *Dīwān*, 23).

Some ancient poets were acutely aware of the ephemeral nature of this joyous period, issuing an urgent appeal to enjoy the entertainments, pleasures and delights afforded by this age. For 'Alkama, only *shabāb* excuses licentiousness (*Dīwān, al-'Ikd al-thamīn*, London 1870, 137). 'Adī b. Zayd al-'Ibādī justifies the antics of the young man (*ladhdhat al-fatā*) by reference to death, tirelessly lying in wait. Since pleasures are regarded as exclusively physical, the age which permits their procurement takes on, in their eyes, an unequalled importance. On the other hand, every hindrance is considered a misfortune: old age is thus an enemy as formidable as *manāyā* (death) and *zamān* (infinite time).

The libertine poets and the great lovers of Damascus and Medina under the Umayyads, and those of the 'Irākī metropolises under the 'Abbāsids, did not differ in their conception of these two antithetical enties. They expressed in convincing fashion the following idea. With old age, the conquest of women becomes impossible, but desire remains as vivid as ever; the problem is how to slake it (*Shi'r al-Ḥārith b. Khālid al-Makhzūmī*, Baghdād 1972, 85; *Shi'r al-Ahwaṣ al-Anṣārī*, Cairo 1970, 175; *al-Mukhtār min shi'r Bashshār*, Cairo 1353/1934, 277, al-'Imād al-Iṣfahānī, *Kharīdat al-ḳaṣr, ḳism shu'arā' al-Shām*, Damascus 1955-64, ii, 121, Ibn al-Buwayn; Bahā' al-Dīn Zuhayr, *Dīwān*, 73). This is not solely a matter of literature; a few poetical fragments have survived, where spouses mocked their aged partners and their inability to satisfy them (al-Baghdādī, *Khizānat al-adab*, Cairo 1409/1989, vi, 427-8; B. Yamūt, *Shā'irāt al-'Arab fi 'l-Djāhiliyya wa 'l-Islām*, Beirut 1934, 179).

In poetry, the appearance of this tangible sign of old age plunges the victim into a state of despair, the intensity of which may astonish at first sight. Whether it is a case of profane poetry, libertine poetry or that of the *zuhd*, the same tragedies described in the same terms arouse certain suspicions; furthermore, the classification of the poetical material reinforces the impression that what is presented here is in fact a literary fiction. Indeed, some works of *adab* have distributed these quotations according to the well-known pattern of the *maḥāsin* (virtues) and the *masāwī'* (antitheses), in turn praising and deprecating *shayb* and *shabāb*; this process is attested in the work of al-Buḥturī, prior to the 3rd/9th century (al-Buḥturī, §§ 117, 118, 120, 121, contradictory pairs, the first evoking the negative and positive aspects of old age, the second those of youth). The structure of the chapters concerning old age in the work of pseudo-Tha'ālibī is constructed entirely according to this antitheses: paragraphs eulogising *shabāb* and *shayb* are matched by others which denigrate them (fols. 118 a-b, 118 b-119 b). The author surpasses himself in the last paragraph, where the negative and positive aspects of hair-dyeing are compared (*faṣl fī dhamm al-khiḍāb wa-madhihi*, fols. 119 b-120 b).

3. *Old age*

This is an unwanted and spurned guest (*ḍayf baghīḍ*, 'Adī b. Zayd al-'Ibādī, 176; see also al-Farazdaḳ, *Dīwān*, Paris 1870, 107, l.9; al-Akhṭal, *Dīwān*, 168, l.9; 'Umar b. Abī Rabī'a, *Dīwān*, 139, l.6), It arouses the fear of the person affected (common semantic field expressing fright, *rā'aka 'l-mashību* "old age has plunged you into despair", 'Abīd, *Dīwān*, 6, l.20; see also *Naḳā'iḍ*, 890, l.4; *djaza'* "panic", *Aghānī*, xiii, 151, l.9, Manṣūr b. Budjra; *al-Aṣma'iyyāt*, 44, l.6, *shayb faẓī'* "dreadful old age"). This guest never comes alone, but is accompanied by a retinue of evils. Those most frequently evoked are worries, solitude and physical decrepitude (Ibn Muḳbil, *Dīwān*, Damascus 1381/1962, 184, speaks of feebleness, *ḍa'af*; Ṭurayḥ b. Ismā'īl al-Thaḳafī of his infirm, *mutaḍa'ḍi'*, body, al-Buḥturī, 194, l.20; more specifically, Abu 'l-Nadjm mentions the bent back, Ibn Ḳutayba, *Shi'r*, 385, l.2) and mental decay, decline and imminent death. It is in other contexts considered an evil (*sharr*, al-Farazdaḳ, 107, l.9; *al-Ḥamāsa*, 572, l.15).

As soon as it is manifest, and can no longer be concealed, old age provokes the disgust of beautiful women (Abū Ṣakhr al-Hudhalī, *Hudhaliyyīn*, ed. Wellhausen, 76, l.8; 'Alḳama, *al-Mufaḍḍaliyyāt*, 773, l.9; al-Aswad b. Ya'fur, *ibid.*, 348, l.8; al-A'shā, *Dīwān*, London 1928, xxxiv, v. 3; Ibn Ghalaka(?) al-Tamīmī, in Abū Zayd, *al-Nawādir*, 255, l.9; al-Buḥturī, § 120, devoted to the notion; Djarīr, *al-Naḳā'iḍ*, 844, l.2; 'Ubayd Allāh b. Ḳays al-Ruḳayyāt, *Dīwān*, 201, l.3; al-Mubarrad, *al-Kāmil*, 330, l.11; Di'bil, vii, v. 44; xii, v. 52-3; xcvii, v. 3; clviii, the entire chapter, ccx, v. 1-5; Abu 'l-Shīṣ, 76, 99, 105-6, 108-9; Ibn al-Mu'tazz, *Ṭabaḳāt*, 75-6). This notion is attested in the majority of poems which have dealt with this theme, and it inspired one of the most esteemed verses on old age of the 'Abbāsid period:

Lā ta'djabī yā Salma min radjul[in]
ḍaḥika 'l-mashību bi-ra'sihī fa-baka

("Do not be astonished, O Salmā, at a man on whose head the white hair laughs, although he weeps")
(Di'bil, 204)

The poets who are affected by this condition speak of nubile women, insisting that they show restraint. In sprightly and elevated dialogues, and in defiance of his astonishment and indignation, they refer to the loss of potency which accompanies old age and to the dignity of deportment which is required in response to the first appearance of this sign; if he continues to cavort like a callow youth, he will offend social taboos. There is no excuse for excess at this age; dissipation is only to be excused among the young (Ibn Nubāta, *Dīwān*, ii, 407; al-Zamakhsharī, *Rabī' al-abrār*, ii, 424-5; *LA*, i, 324, l.9, and *TA*, i, 223, l.28, the maxim *lā shay'a akhzā min zinā'i 'l-ashyabi*, "nothing is more demeaning than fornication by one who is smitten with white hair"). This collection of motifs is called *taṣābī 'l-shaykh*. In secular poetry, this *taṣābī* constitutes the basis of the share of the dialogue allotted to the female interlocutor; it is attested, furthermore, throughout the whole gamut of Arabic poetry until the *nahḍa* ('Abda b. al-Ṭabīb, *al-Mufaḍḍaliyyāt*, 270, l.7; Ḥassān, *Dīwān*, London 1970, 116, v. 11-12; Abū Ḥayya, 43, 63, 167, 168; see also Abu 'l-Ṭamaḥān al-Ḳaynī, *Dīwān*, Baghdād 1968, 23; Durayd b. al-Ṣimma, *al-Aghānī*, x, 16, l.1; Aws b. Ḥadjar, *Dīwān*, 7, 11; Djarīr, in Ibn Ḳutayba, *Shi'r*, 307, l.16; al-Farazdaḳ, *al-Naḳā'iḍ*, 869, v. 19; al-Kumayt, *al-Hāshimiyyāt*, Leiden 1904, 27, l.1; al-Namarī, 84; Abu 'l-Shīṣ, 76). As regards this last motif, the majority of poets seem to imply that the lady has the right on her side. However, others are determined to refute these accusations. Their vigour, their youth of spirit and their force of personality have not been impaired; they implore the loved one to see *shayb* for what it really is, just a colour. The poet Kuthayyir appeals to 'Azza to continue loving an old man who remains, and always will remain, young (*yā 'Azza hal laki fī shaykh[in] fatā[n] abad[an]*); he is careful to add that, for men of his stamp, biological age has no physiological or psychological influence (for other instances of this type, Ibn al-Mu'tazz, 209; Di'bil, cliii, 197-8; al-'Ukbarī, *al-Tibyān*, Cairo 1308, i, 170). Sometimes, in his reply, the poet insistently declares to his partner that his white hair

is not due to age but to fearful ordeals that have been valiantly surmounted (al-Nābigha al-Dja'dī, in al-Ṭabarī, ii, 842, l.15, *wa-lāḳītu rawʿātⁱⁿ tushību 'l-nawāṣiyā* "I have faced terrible [battles] and the hair fringing my forehead has turned white;" see also 'Urwa b. al-Ward, *Dīwān*, Göttingen 1863, 21, l.3; Ibn Muḳbil, *Dīwān*, 368; *al-Aṣmaʿiyyāt*, 19, l.6). In this context, the same formula is attributed to the libertine al-Uḳayshir and to the *ghazal* poet Kuthayyir: *bihī shaybᵘⁿ wa-mā faḳada 'l-shabāba* ("his hair has turned white although he has not lost his youth", *LA*, ix, 99, l.12; *TA*, v, 85, l.33; al-Djāḥiẓ, *al-Ḥayawān*, iii, 60, l.9; al-Bakrī, *Simṭ al-la'ālī* ii, 729, l.1). On the other hand, in a motif related to that of the *taṣābī*, friends act in the same fashion as the lovely lady and no longer invite the unfortunate man to convivial meetings (Abū Ḥayya, 183; al-Namarī, 69; Abu 'l-Shīṣ, 36, 60, 75; Ibn al-Muʿtazz, *Ṭabaḳāt*, 77). This forced abstinence culminates in their assertion that happiness has disappeared with the ending of youth, *wallat niʿmatu 'l-ʿayshī* ("the joy of life is ended", al-Buḥturī, 180, l.6; 'Adī b. Zayd al-'Ibādī, 176-7; Abu 'l-Shīṣ, 20).

Also, *shayb* indicates the death of close friends. In the context of the onset of white hair, Ibn Abī Du'ād evokes his weariness at having to make constant visit to cemeteries to pay his respects to deceased friends. In fact, this fearful guest portends the imminence of one's own death (Wakīʿ, *Akhbār al-ḳuḍāt*, Cairo, iii, 299; Abū Nuwās, *Dīwān*, 58; al-Shāfiʿī, *Dīwān*, 13; Yāḳūt, *Udabā'*, Cairo 1936-8, v, 324; al-Bākharzī, *Dīwān*, i, 159. One *ḥadīth* asserts in this context that white hair is *iḥdā 'l-mītatayn* ("one of the two deaths", *Rabīʿ al-abrār*, ii, 421); it is thus a sign that the end is near.

While this theme is essentially concerned with physical and social degradation and with sexual abstinence, it is a fact nonetheless that this poetry evokes certain changes in behaviour which are on the whole quite avoidable. Diʿbil b. 'Alī al-Khuzāʿī comments that with the onset of old age, he has been transformed from a cheerful hedonist and *bon viveur* into a carping critic (Diʿbil, 44, v. 1: *kāna yunhā fa-nahā ḥīna 'ntahā* "he was criticised; he became a critic when nothing else was left for him;" see also Abu 'l-Shīṣ, 108). The poetry of the *muʿammarūn* stressed this transformation of the personality. Abu 'l-Sammāl al-Asadī declares that grief has become an inseparable companion (*Muʿammarīn*, 65); al-Namir b. Tawlab comments that he is content with the minimum (*ibid.*, 80); al-Rabīʿ b. Ḍabuʿ al-Fazārī admits that, with the whiteness of his hair, he has become timorous (*ibid.*, 9); Labīd laments his own tendency to recount his memories ('Abd al-Salām Hārūn, *Madjmūʿat al-maʿānī*, Beirut 1412/1992, 571). A single positive variation in this catalogue of gloom is that al-Ubayrid al-Riyāḥī takes pride in the wealth of his experience (*ibid.*, 75).

All of this may be true, and may reflect profound distress among people who have nothing to wait for but death. However, it may equally well be a part of the poetic game; in fact, in the same poetic space, the same poet is to be found taking pride in his *shayb*. Abū Kabīr al-Hudhalī observes that white hair affects people of distinction (*LA*, vii, 127, l.6; *TA*, iii, 622, l.15; the same assertion figures in the work of Ibn Faswa, in Muḥammad b. Ḥabīb, *K. al-Muḥabbar*, Ḥaydarābād 1361/1942, 143, l.2; al-Marrār al-Faḳʿasī, *al-Mufaḍḍaliyyāt*, 143, l.5; 'Umar b. Abī Rabīʿa goes so far as to assimilate with *dhū shayba* the clichés typical of eulogistic poetry or of boastfulness, *wa-dhī shaybatⁱⁿ ka 'l-badri arwaʿa azharā*, a man affected by venerable old age and shining white hair, *Dīwān*, 159, l.8; see also al-Buḥturī, 181, l.13; 182, l.12; 195, l.6; al-Khansā', *Dīwān*, Beirut 1889, 135, l.13). It is appropriate to note that this notion differs from that which declares that *shayb* has not impaired one's former abilities; here, old age is eulogised in its own right. This could, indeed, be seen as a reaction of a compensatory type, but the reality is otherwise; what is involved is a literary theme. Anthologies and works of *adab* attest to this to a point beyond all expectation. In the writings of al-Thaʿālibī, for example, the section dealing with this theme belongs, according to the author's own classification, to the category of *taḥsīn al-ḳabīḥ* ("beautification of the ugly", see *Bibl.*); this includes a collection of adages which celebrate the benefits of old age *min bāb taḥsīn al-ḳabīḥ*, such as *al-shayb nūrī* ("white hair is my light" [67]). Even the greatest of fools (*al-ghāfil*) "can find here a guide on the way to rectitude thanks to the lights of his senescence" (*idhā shāba 'l-ghāfilu sāra fi ṭarīḳi 'l-rushdi bi-maṣābīḥi 'l-shaybi, loc. cit.*). For his part, al-Mubarrad considers this poetical corpus as belonging exclusively to a convention of composition (*K. al-Fāḍil*, 72).

In the same scheme of ideas, the white hair of courageous young men who have experienced traumatic events is likewise something to be boasted of (Ibn Saʿd, *Ṭabaḳāt*, Leiden 1918, i/2, 80, l.10; *al-Naḳā'iḍ*, 442, v. 43); it is attested in martial poems in eulogies conferred upon heroes ('Āmir b. al-Walīd, *al-Aghānī*, xi, 102, l.3; Umayya b. Abi 'l-Ṣalt, *Dīwān*, Leipzig 1911, 55, v. 22; Naṣr b. Muzāḥim, *Waḳʿat Ṣiffīn*, Beirut 1340/1921, 300, l.14; Ibn Ẓāhir al-Asadī, in al-Mubarrad, *al-Kāmil*, 666, l.4; Aʿshā Ḥamdān, in *al-Aghānī*, vi, 41, l.9; Surāḳa al-Bāriḳī, in al-Ṭabarī, ii, 879, l.14).

In general, the *fakhr* genre accounts for a large proportion of Djāhili and Umayyad poetry of old age. The pattern is fairly predictable. It is admitted that it is true, my hair has changed colour; that is unimportant, since I have led an exemplary life filled with acts of generosity and heroism in war (Imru' al-Ḳays, *Dīwān*, 230-1, 335; Abū Kabīr, *Sharḥ ashʿār al-Hudhaliyyīn*, 1069-70; Ḥumayd b. Thawr, *Dīwān*, 1384/1965, 94-5; Ibn Muḳbil, *Dīwān*, 72-4, 133, 184; 'Ubayd Allāh b. Ḳays al-Ruḳayyāt, in al-Buḥturī, 309). Clearly, these are conventional notions which have long been a part of the genre; sexual prowess and the qualities of *murū'a* are combined to enhance the image of a man and to make of him a perfect model.

4. *Edifying poetry*

The appearance of *shayb* is variously interpreted. On the one hand it is supposed to favour the enhancement of moral qualities and behaviour, assiduous application to religious practices and a total adherence to precepts of prudery (al-Ḳālī, *Amālī*, Cairo 1953, ii. 95; al-Zamakhsharī, *op. cit.*, 417-20). From another perspective, the poetry of *zuhd* is intended to frighten; this is why Maḥmūd al-Warrāḳ and Abu 'l-ʿAtāhiya consider this sign as a portent (*nadhīr*) of death which sets in motion the process of *ḥiṣād* (harvesting) which gathers up people who are already of advanced age. God sends this advance warning to allow men to prepare themselves on the eve of imminent decease (Maḥmūd al-Warrāḳ, *Dīwān*, 39, 42, 78, 87, 107, 109, 114; Abu 'l-ʿAtāhiya, 39, v. 3-4, 44-5, v. 3-6 and 13-14, 51-2, starting from v. 4, 67-8, 71-2, 109-10, v. 13-6 and 21-4).

II. Poetical treatment

1. *Evolution of the theme*

At the time of the Djāhiliyya, this theme took on the form of a concise evocation in the framework of *nasīb*. More substantial and of greater thematic impor-

tance are the verses which appear in poems attributed to the *muʿammarūn*, where the contrast *s̲h̲abāb/s̲h̲ayb* constitutes the central axis on which the multiple motifs are brought into play, and the conceptual principle on the basis of which all the evocations can take shape.

With the development of urban civilisation and the appearance of a subsequent culture, poets subject this theme to original forms of literary treatment. In addition to long works, where *s̲h̲ayb* appears in an incidental fashion, fragments dealing exclusively with the theme begin to appear in ever increasing numbers; the latter, much closer to hastily conceived and executed improvisation than to mature and elaborate poetry, adopted this subject with a uniformisation of compounds, of poetic language and of the whole range of comparative tropes. These facile and ephemeral little pieces constitute a large proportion of this corpus. To this category belong the literary games between scholars (the *ik̲h̲wāniyyāt*). Protestations of friendship are found integrated there with the theme of youth and of old age, the poet delights in evoking his old age, the disappearance of beautiful women and of the *nudamāʾ* and the melancholy of a man in the twilight of his life (al-Namarī, 68-9); quite often poems of *ḥanīn ilā 'l-awṭān* ("nostalgia for the homeland") opt for the same treatment, linking the *ḥanīn ilā 'l-awṭān* to the *ḥanīn ilā 'l-s̲h̲abāb* (al-Namarī, 116); al-Masʿūdī, in a subsidiary text of *al-Tanbīh*, at a time of self-assessment, writes with the same feeling of *al-ṣibā* and Bag̲h̲dād (al-Masʿūdī, *Le livre de l'avertissement*, Paris 1846, 66-7).

The *Ẓurafāʾ al-Kūfa* ("the elegant persons of Kūfa) provide this theme with its finest artistic manifestation. Five long fragments by Yaḥyā b. Ziyād al-Ḥārit̲h̲ī (al-Buḥturī, 188-90, nos. 1,000-4) place alongside the habitual lamentations a novelty: *s̲h̲ayb* and *s̲h̲abāb* are treated in tandem, with both considered equally good. Yaḥyā's companion, Muṭīʿ b. Iyās, composed one of the best surviving specimens; indeed, this poem of 17 verses begins and ends with lamentations. Between the two, the poet evokes his youth, seen as a personal friend, with good-natured nostalgia (plethora of terms in this register: *k̲h̲alīl, ṣafī, uns, ak̲h̲ū t̲h̲iḳa*); reliving his youth, Muṭīʿ adopts a rapid and petulant rhythm, using the *munsariḥ*, one of the most musical metres of Arabic poetry. The spirit which dominates here is decidedly original. This roué is careful not to represent youth as the time of unbridled dissipation, according to the customary scheme. Like any true friend, he is attentive and encouraging; he offers loyal support, but will countenance no complacency; fighting our natural laziness, he urges us to realise our most noble aspirations; and finally, he is an always available confidant (Von Grunebaum, *S̲h̲uʿarāʾ ʿabbāsiyyūn*, Beirut 1959, 33-4). Von Grunebaum appreciated this poem, which is reminiscent in tone of Theognis of Megara.

In the 3rd/9th century, Ibn al-Rūmī is reckoned to have carried the theme to its highest point. In the prelude to a set-piece, he reflets on his past and completes the balance-sheet of his life, from callow youth to maturity. The structure of this very simple passage, beginning with *s̲h̲ayb* (vv. 1-31) and ending with *s̲h̲abāb* (vv. 32-70), gives it the appearance of an introspection, accentuated by the repetition of *yud̲h̲akkirunī 'l-s̲h̲abāba* ("my youth returns to my memory through ..."). It is important, however, to avoid overestimating the significance of these conclusions; the issue here is of individual arrangements or, if preferred, of happy accidental finds in the framework of a traditional theme (*Dīwān*, i, 255-9). Al-Mubarrad, who was also an excellent judge of poetry, comments in this regard *annahum ḳālū fī bābi taṣarrufi 'l-zamāni wa-taṣarrumi 'l-ād̲j̲āli aḳāwīla maʿnāhā wāḥid^un^* ("they (sc. the poets) have spoken, concerning the chapter on the passing of time and the ending of life, verses of which the sense is identical", Von Grunebaum, *Al-Mubarrad's epistle on poetry and prose*, in *Orientalia*, x [1941], 377-8).

A similar theme, already clearly visible in the various evocations of this theme before Ibn al-Rūmī, is accentuated in later poets: from the 4th to the 9th/10th-15th centuries, poets paraphrase Ibn al-Rūmī in longer pieces and in fragments. The two S̲h̲arīfs, al-Raḍī and al-Murtaḍā (*al-S̲h̲ihāb*, 28-52; *Dīwān al-S̲h̲arīf al-Murtaḍā*, Cairo 1958, i, 199; *al-S̲h̲ihāb*, 54-84), Bahāʾ al-Dīn Zuhayr (*Dīwān*, 73), Ibn Sanāʾ al-Mulk (*Dīwān*, 17, 52, 70, 72, 74, 459, 517, 576, 597-8), al-Fityān al-S̲h̲āg̲h̲ūri (*Dīwān*, Damascus 1966, 51), Ẓāfir al-Ḥaddād (*Dīwān*, 257-8) and many others mourn for lost youth and lament the consequences of their *s̲h̲ayb*, using the same poetic language, the same combinations and the same *maʿānī*.

2. *S̲h̲ayb and the transformation of the prelude of the ḳaṣīda*

Under the Umayyads, the *nasīb* genre had more and more recourse to the theme of lamented youth; the refinement of tastes renders it indispensable to the *ḥusn al-tak̲h̲alluṣ*. It is considered an essential intermediate link between love/memory and the quest for a patron. From another perspective, the circumstances of libertine poetry impel the poets, especially in pieces where a certain tension is expressed, to resort to a prelude redolent with an atmosphere of contrast, introducing the pairings of old age/youth and the desired woman/the woman who rejects. This procedure breathes new life into the romantic prelude, since what is observed is a very vivid exchange of opinions, a duel between the beloved woman and the lover poet, all on account of the latter's advanced age and the loss of his hair. This technique of composition also permits the setting-down of accumulations of semantic opposites and thereby arrival at a more dense poetical text (see below).

At the end of the Umayyad age, and especially under the ʿAbbāsids, despite the persistence of the former frameworks (Abū Ḥayya al-Numayrī, 34; Abu 'l-S̲h̲īṣ, 36-7), the prelude underwent a veritable revolution on account of the theme of old age. Numerous patterns are attested: (i) the poet retains from the amorous prelude the evocation of the *diyār* ("encampments") and the recollection of his past loves (when he was loved and his hair was black), and two new motifs are introduced, the mention of youth and the appearance of senescence (Abu 'l-S̲h̲īṣ, 34, 36-7); (ii) the appearance of overtures devoted exclusively to *s̲h̲ayb*, without regard to the subject of the poem. In the work of Abū Ḥayya al-Numayrī, a *muk̲h̲aḍram al-dawlatayn* poet (d. *ca.* 158/762), the opposition of these two antithetical, integrated elements constitutes the sole texture of the openings of poems. Eleven verses on *s̲h̲ayb* are attested there, a clear sign that the theme has attained full maturity, since it is only by means of it that the introduction of a long, set-piece poem is to be properly furnished (*ḳaṣīda* iii, 42-5, dedicated to al-Ḥakam b. Ṣak̲h̲r al-T̲h̲aḳafī; see also number iv of the *Dīwān*; ʿAbd Allāh al-K̲h̲aṭīb, *Ṣāliḥ b. ʿAbd al-Ḳuddūs*, Bag̲h̲dād 1968; 123; Bas̲h̲s̲h̲ār, *Dīwān*, 1369/1950, i, 362, ii, 326; al-Ḥusayn b. Muṭayr, *Dīwān*, in *RIMA*, i [1969], 226; Ibrāhīm b. Harma, *S̲h̲iʿr*, Cairo 1389/1969, 226; Marwān b. Abī Ḥafṣa, *S̲h̲iʿr*, Cairo

1973, 73, 77, 94; Diʿbil, ccx, 254-5, the well-known poem in *-īnā*, where he replies to al-Kumayt b. Zayd, pronounces a eulogy on the men of Yemen and recalls the base deeds of Maʿadd; see also xix, 59-60, the opening of an *urdjūza* dedicated to al-Maʾmūn). The variety of motifs attested in pattern (ii), despite their conventional nature, breathes new life into the prelude, an essential and indispensable component of every poem of this type. Notable here are nostalgia for past youth; the first signs of old age; the appearance of white hair; the mockeries of the beautiful woman; the retort of the elderly poet, his pride wounded, recalling his former vigour and his profligacies; finally, some poets place at the outset of an urban *ḳaṣīda* an introduction in which *nasīb, shabāb-shayb* antithesis and Bacchic poetry are combined (Abū 'l-Shīṣ, 60, 75-6, 105-6).

This transformation of the prelude should come as no surprise; the patrons, the sole recipients of poems of eulogy and occasional verses, had no wish to hear more about, or see themselves associated with, the destruction, disappearance and desolation which rule the theme of *bukāʾ ʿalā 'l-aṭlāl*.

A different elegiac opening was required, and *al-shabāb wa 'l-shayb* was eminently suitable. With the sophisticated play of oppositions and the high literary tone of comparisons and metaphors, it was possible to dabble in sentimentality without dwelling on the theme of the death which was feared, with justification, by members of the aristocracy only too aware of the precariousness of their situation. An old age of high quality offered an excellent alternative. The poet took great care to avoid mention of anything which could be disconcerting to his readers, such as physical decay or death; old age here is ahead of its time, putting forward the image of a man in the prime of life, conversing with a beautiful girl. Perfectly suited to the new mentality, the new introduction silenced the existential anguish of its pre-Islamic predecessor.

3. *Poetic techniques*

For youth, the tendency is to use combinations and metaphors where black is predominant; for old age, working on the assumption of symmetrical opposition, the preferred option is a semantic field based on white. Examples of the former are as follows: *al-raʾs al-aḥwā* ("the black head"), *ḥālik al-lawn* ("of a very dark black colour"), *ghurāb kāna aswada ḥālikī* ("a raven which was black as jet", Abū Ḥayya, 121), *ghurāb ghudāf* ("crow with black [feathers] supplied", *ibid.*, 42). Such are the emblems of *shabāb*. Examples from the opposing side are: *ʿalā wadaḥ^{un} ka-lawni hilālī* ("white hair has appeared, the colour of which is equal to that of the crescent moon", Abū Ḥayya, 63), *raʾs istanāra* ("a head which is illumined", Abū Ḥayya, 43), *ʿaḳārib bīḍ ... lahunna dabīb* ("white scorpions ... which crawl", Abu 'l-Shīṣ, 20), *raʾs ishtaʿal* (ʿAdī b. al-Riḳāʿ, 108, v. 1; cf. Ḳurʾān, XIX, 4).

In fact, this language was destined to establish a whole range of oppositions which have given the theme its characteristic appearance:

Youth	*Age*
shining black	dirty white
bodily vigour	enfeeblement
upright carriage	decrepitude of body
contentment with life	peevish resentment
inexperience and haste	wisdom and equilibrium
decisiveness	irresolution
time of pleasures	time of enforced abstinence
the admired hero	the despised dead-weight

The first column has the overall advantage. Only the fifth item accords superiority to the old, although poets repeatedly insist that they would willingly forgo this asset. On the other hand, comparisons enabled the poets to add a new series of oppositions to the poem and thus to confer on these passages a fairly pronounced air of preciosity. Thus, for example, in the analogy of the jet-black raven applied to the hair of the young man (*ghurāb aswad ghudāf*, see above). The poet opposes to it the shining whiteness of the *ṣabāḥ* ("morning"); this uniting of opposites entails a chain-reaction of a paradoxical, hence quite unexpected nature. This black crow, contrary to what is normally accepted (*ghurāb al-bayn* "the crow of separation") is appreciated and symbolises joy, good fortune and freedom from care, not the sinister desolation of wastelands. Thus all the symbolism associated with black is rejected by this poetry. On the contrary, the *ṣabāḥ* ("luminous morning") of the hair is detested; its light, once it appears, plunges a man into despair, misfortune and sorrow. The poets accumulated such paradoxes in verses and fragments on this theme, contravening ancestral patterns of expression and thought. The end-result, with urban culture, was the emergence of a poetry of *shayb* redolent of "verbal fantasy", in the words of Von Grunebaum.

S̲H̲AYBA, BANŪ, the name of the keepers of the Kaʿba (*sadana*, *ḥad̲j̲aba* [see SĀDIN; ḤĀD̲J̲IB]), whose authority does not extend over the whole of the sanctuary (*masd̲j̲id al-ḥarām*), nor even as far as the well of Zamzam and its annexes. They are the Banū S̲h̲ayba or S̲h̲aybiyyūn and have as their head a *zaʿīm* or *s̲h̲ayk̲h̲*.

Modern works only give brief references to them. Snouck Hurgronje gave the days on which they opened the door of the Kaʿba. He noted that they only admitted the faithful on payment of a fee and quoted the witty Meccan saying: "The Banū S̲h̲ayba are wreathed in smiles; this must be a day for opening the Kaʿba". They found a further source of revenue in the sale of scraps of the covering of the holy house, which was replaced every year by their care [see KISWA]. The embroidered parts reserved in theory for the Ottoman sovereign were given more or less gratuitously to the great personages who represented him at Mecca and on the *ḥad̲j̲d̲j̲*. The remainder, in accordance with custom (Wüstenfeld, *Chroniken d. Stadt Mekka*, iii, 72), was the perquisite of the S̲h̲aybiyyūn, who sold it in the little booths at the Bāb al-Salām (al-Batanūnī, *al-Riḥla al-ḥid̲j̲āziyya*, Cairo 1329/1911, 139), the ancient Bāb Banī S̲h̲ayba, the principal gate of the mosque. They also sold there the little brooms made of palm leaves, which were all alleged to have been used for cleaning the floor of the Kaʿba, a solemn ceremony in which the greatest personages gloried in participating (Ibn D̲j̲ubayr, *Riḥla*, ed. Wright, 138; al-Batanūnī, 109). They also had the charge and care of the offerings made by the faithful, which adorn the interior of the holy house. This treasure comprised the most diverse objects, articles of gold and of silver, precious stones, lamps richly adorned, foreign idols, the offerings of converts in distant lands. This treasure was regularly plundered by the Amirs of Mecca, by the governors, by its guardians and even by the S̲h̲aybiyyūn themselves (M. Gaudefroy-Demombynes, *Le Pèlerinage à la Mekke*, Paris 1923, 57) although according to tradition, the grand master S̲h̲ayba is said to have defended it against the attempts of the caliph ʿUmar (Ibn al-At̲h̲īr, *Usd al-g̲h̲āba*, iii, 8). They had charge of the interior curtains of the Kaʿba. They had at one time the care of the *Maḳām Ibrāhīm* [*q.v.*] which was considered a dependence of the holy house.

The possession of these diverse functions by the S̲h̲aybiyyūn became latterly so generally recognised that it attracted no attention. They evoked a more lively interest from earlier authors, and especially from the pilgrims. The principal narratives are those of Ibn D̲j̲ubayr in 579/1183 and of Nāṣir-i K̲h̲usraw in 437/1046. The visit to the Kaʿba accompanied by a *ṣalāt* of two *rakʿas*, made if possible, at the very spot where the Prophet performed them on the day of the taking of Mecca, is a pious act, which is not a part of the rites of the Pilgrimage, but one from which the pilgrims themselves hope to acquire further merit, although the people of Mecca seem to attach but slight importance to it. The dates of the public opening seem to have varied a little (*Le Pèlerinage*, 60 ff.) but the ceremony has remained unchanged. The *zaʿīm* alone has the key of the Holy House, the history of which is given below. When the gangway (*darad̲j̲*), which gives access to the door which is above ground

level, has been put into position by the Shaybiyyūn, their chief advances and, while he is inserting the key, one of his acolytes hides it from the gaze of the faithful. In the 6th/12th century (Ibn Djubayr, 93; *Le Pèlerinage*, 59), he held a black cloth (the 'Abbāsid colour) in his extended hands. A century earlier (Nāṣir-i Khusraw, 209), there was a curtain on the door which a Shaybī lifted to allow the *za'īm* to pass and which he let fall again behind him. The Prophet had veiled (*satarahu*) the door on opening it (al-Ya'ḳūbī, *Ta'rīkh*, ii, 61). In imitation of the Prophet, the *za'īm* enters alone or with 2 or 3 acolytes, prays the two ritual *rak'as*, then opens the door to the public, whose admission he regulates. The Persian pilgrim as well as the Spanish one made a visit to the Ka'ba and they both noted the miracle, which allowed this very small building to hold at one time such a large number of the faithful. Nāṣir-i Khusraw counted 720 in it at the same time as himself. Ibn Djubayr was particularly interested in the Ka'ba and its *ḥadjaba*. He was present at the reception of Sayf al-Islām Ṭughtigin, the brother of the Ayyūbid Ṣalāḥ al-Dīn (146-7), on whose left hand the *za'īm* of the Shaybiyyūn solemnly entered the mosque; the *za'īm* Muḥammad b. Ismā'īl b. 'Abd al-Raḥmān was his chief informant (81). He tells us that during his sojourn, the Amīr of Mecca, Mukthir, arrested the *za'īm* Muḥammad and, accusing him of such baseness of conduct as was "unworthy of the guardian of the Holy House", confiscated his goods and set up in his place one of his cousins, whom popular report accused of the same vices. Then some time after, he saw the *za'īm* Muḥammad, after paying 500 dīnārs to the Amīr, re-established in his office, strutting proudly before the gate of the Ka'ba (163, 164, 166, 179). This act of dispossession does not prove that there was any exact custom which regulated the relations of the Amīr with the Banū Shayba. Under al-Mutawakkil (232-47/847-61), they sent delegates to the caliph at Baghdād to assert, in opposition to the proposals of the governor of Mecca, their right to decide what works were necessary to undertake at the Ka'ba; the master of works sent by the caliph was to apply only to them. When he came to make his first enquiry, the master Isḥāḳ was, however, accompanied by the *ḥadjaba shaybiyyūn*, and also by the governor, by pious individuals and by the *ṣāḥib al-barīd* "the postmaster", in reality the redoubtable intelligence officer of the sovereign (*Chron. d. Stadt Mekka*, i, 210, 11).

The privilege of the Banū Shayba is very old; the historians of the 3rd/9th century Ibn Hishām, Ibn Sa'd, al-Ya'ḳūbī and the compilers of collections of *ḥadīths* confirm this; but they pile up proofs of its legitimacy in a way that makes one think it was recent and disputed.

According to tradition, Ḳuṣayy [*q.v.*], the ancestor of Ḳuraysh, had reserved the guardianship of the Ka'ba (*ḥidjāba*) for 'Abd al-Dār and his descendants. At the time of the conquest of Mecca, it was in the hands of 'Uthmān b. Ṭalḥa b. Abī Ṭalḥa 'Abd Allāh b. 'Abd al-'Uzzā b. 'Uthmān b. 'Abd al-Dār (al-Ṭabarī, iii, 2378; *Usd al-ghāba*, iii, 7, 372, etc.). Ibn Sa'd (*Ṭabaḳāt*, v, 331) has a variant story which casts doubts upon the near relationship of 'Uthmān and Shayba, while the genealogy given by the *za'īm* to Ibn Djubayr (81) intercalates an ancestor Shayba unknown to the other authors. 'Uthmān by a happy foresight was converted at al-Ḥudaybiya [*q.v.*] with other notable personages of Mecca, although several members of his family had perished at Uḥud in the ranks of Ḳuraysh (al-Ṭabarī, i, 1604; *Aghānī*[1], xv, 11; Ibn Sa'd, v, 331, etc.). On the day of the taking of Mecca, he accompanied the Prophet to the Ka'ba and the latter demanded the key from him; in general, the authorities say that he gave it up, but according to one tradition (Badr al-Dīn al-'Aynī, *'Umdat al-ḳārī*, iv, 609; *Chroniken*, i, 187), 'Uthmān, a new convert, had to get it from his mother, an infidel, who had charge of it and who refused to give it up. 'Uthmān had to threaten to kill himself before her eyes. According to another authority (*Chroniken*, i, 185), she heard in the courtyard of the house the threatening voices of Abū Bakr and of 'Umar before she decided to give it up (cf. Ibn Khaldūn, *'Ibar*, ii, 44). But another tradition which does not assume the conversion of 'Uthmān in 8/629-30, shows him on the terrace of the Ka'ba holding the key in his hand and shouting to the Prophet: "If I were sure that he is the Messenger of God, I would not refuse it to him". 'Alī climbed up, held his hand out, took the key and himself opened the door; here 'Alid bias is evident (al-Rāzī, *Mafātīḥ al-ghayb*, ii, 460; al-Ḳalḳashandī, *Ṣubḥ al-a'shā*, iv, 264). The general tradition is that the Prophet, in possession of the key, opened the door and entered with 'Uthmān, Bilāl and Usāma, prayed two *rak'as* in a spot which is to-day held sacred and went out holding the key in his hand. At this point, the traditions differ once more in detail, but end in the restoration of the key to 'Uthmān; according to one account, the Prophet either on his own motion or because of the appeals of al-'Abbās or of 'Alī, leant on the posts of the door of the Ka'ba and made a speech which ended: "Everything is under my feet except the *sidāna* and the *siḳāya* of the pilgrims, which are going to be restored to those to whom they belong". He gave the *siḳāya* to al-'Abbās and returned the key to 'Uthmān; according to the other tradition, the Prophet came out of the Ka'ba uttering verse 61 of sūra IV, which according to an opinion which al-Ṭabarī (*Tafsīr*, v, 86) accepts as only of secondary value, was revealed at this moment and applies to the *sidāna* and the *siḳāya* (Yāḳūt, *Mu'djam*, iv, 625; al-Rāzī, *Mafātīḥ*, ii, 460; *Chroniken*, i, 186).

But 'Uthmān, master of the *sidāna* and of the key, did not exercise his rights; he followed the Prophet to Medīna and died there in 42/662-3 or he was killed at Adjnādayn [*q.v.*] in 13/634. No-one mentions him further, and authors take the precaution of making the Prophet say that he returned the *sidāna* to 'Uthmān and to Shayba, and to the Banū Ṭalḥa (Ibn Taghrībirdī, *Nudjūm*, i, 138; al-Nawawī, *Minhādj al-ṭālibīn*, 407; *Usd*, iii, 372; *Chroniken*, i, 184).

This attempt to make the first cousin of 'Uthmān, Shayba b. 'Uthmān b. Abī Ṭalḥa, be present at the taking of Mecca is unfortunate. Shayba was not yet a Muslim, although some late authors tentatively tried to convert him at the taking of Mecca. They were not able to escape the legend, which grew up round the conversion of Shayba a month later. Shayba sought out the Prophet in the middle of the combat in order to take vengeance for the death of his father, who had been killed at Uḥud by Ḥamza, but from the Prophet a light emanated causing him to lose heart. Muḥammad put his hand upon his heart and caused the demon to depart from him. Shayba was converted (al-Ya'ḳūbī, ii, 64; Ibn Hishām, 845; Ibn Sa'd, v, 331; al-Ṭabarī, i, 1661, 3; *Usd*, iii, 7; *Chroniken*, ii, 46; etc.) and without the writers knowing why, Shayba became the keeper of the Ka'ba; all his family hastened to come to his assistance; his brother Wahb b. 'Uthmān, the sons of 'Uthmān b. Ṭalḥa, those of Musāfi' b. Ṭalḥa b. Abī Ṭalḥa who was killed at Uḥud: "It is

then", concludes al-Azraḳī (*Chroniken*, i, 67), "all the descendants of Abū Ṭalḥa who in general exercise the *ḥidjāba* (*Chroniken*, i, 67)". But according to all the traditionists, it was Shayba who was their chief. It was he who had the power to demolish houses dominating the Kaʿba (*Chroniken*, iii, 15). It was he who came into conflict with Muʿāwiya about the sale of a house and who at the time of the second pilgrimage of the Caliph, not wishing to be disturbed, sent his grandson Shayba b. Djābir to open the door of the sanctuary (*Chroniken*, i, 89). It was he who arbitrated between the two *ḥādjdj* chiefs, the partisans of ʿAlī and those of Muʿāwiya (al-Ṭabarī, *Annales*, i, 3448, iii, 2352; al-Masʿūdī, *Murūdj*, ix, 56-7 = § 3632); one of his sons ʿAbd Allāh or Ṭalḥa was a victim of the "abominable" al-Ḳasrī (*Chroniken*, ii, 37, 38, 175). It was he who appears in one of the versions of the *ḥadīth* where ʿĀʾisha wished to have the Kaʿba opened (*Chroniken*, i, 220, 222, 223). There were discussions with ʿĀʾisha which settled that it was lawful for the Shaybiyyūn to sell parts of the covering (*kiswa*) but only for the maintenance of the poor (*Chroniken*, i, 180, 182, iii, 70-2; al-Ḳalḳashandī, iv, 283); in spite of the efforts of the makers of *ḥadīths*, the question was discussed by jurists and in 621/1224, the Ayyūbid al-Malik al-Kāmil, the nephew of Ṣalāḥ al-Dīn, purchased from the Shaybiyyūn, for an annual fixed sum, the revenues that they drew from the opening of the Kaʿba and forced them to open it free of charge (*Chroniken*, i, 266). Shayba died in 57/676-7 or under Yazīd b. Muʿāwiya (al-Ṭabarī, iii, 2378; Ibn Saʿd, v, 331; *Usd*, iii, 8).

The tradition which gave to the Shaybiyyūn the *ḥidjāba* of the Holy House is an ancient one. It is still perpetuated in the name of the archway, which, beside Zamzam, marks the ancient boundary of the wall of the *masdjid al-ḥarām*. When the former had been enlarged, the new gate, called at the present time Bāb al-Salām, which was in a line with the Kaʿba and the ancient arcade, was called in its turn Bāb Banī Shayba (*Le Pèlerinage*, 132-3). But for this institution, as for many others, the period when it was established and merged in a pre-Islamic institution, remains obscure.

(M. Gaudefroy-Demombynes)

SHAYBA b. ʿUTHMĀN [see shayba, banū].

SHAYBĀN, an Arab tribe, one of the most important *buṭūn* of Bakr b. Wāʾil.

Ibn Khallikān, ed. ʿAbbās, v, 244, attributes to it, following Ibn al-Kalbī's *Djamharat al-nasab*, the following *nasab*: Shaybān b. Thaʿlaba b. ʿUkāba b. Saʿb b. ʿAlī b. Bakr b. Wāʾil b. Kāsit b. Hinb b. Afṣā b. Duʿmī b. Djadīla (or Djudhayla) b. Asad b. Rabīʿa b. Nizār b. Maʿadd b. ʿAdnān, as well as an identical *nasab* for the other ancestor, nephew of the first, Shaybān b. Dhuhl b. Thaʿlaba b. ʿUkāba or ʿUkūba. But there are several other *nasabs* corresponding to other branches (detailed in Ibn Ḥazm, *Djamharat al-ansāb*, ed. Hārūn, Cairo 1982, and al-Dhahabī, *al-Mushtabih fi ʾl-ridjāl*, ed. al-Badjāwī, Cairo n.d.), as well as Shaybān b. Djābir b. Murra b. ʿĀʾis or ʿĀʾish (al-Mawlā Bek, al-Badjāwī and Ibrāhīm, *Ayyām al-ʿArab fi ʾl-Islām*, Cairo 1942, 23), which should be connected with tribal groups arising from Shaybān, such as Murra b. Dhuhl, ʿĀʾish b. Rufāʿa b. al-Ḥārith and ʿAmr b. Ḳays. They form part of the imprecise network of Bakr b. Wāʾil with Ḳays b. Thaʿlaba, Dhuhl b. Taym Allāh and ʿIdjl. Al-Maḳrīzī, *Khiṭaṭ*, ii, 163, mentions the presence in Egypt of several *nasabs* for the B. Ṣabra, including the Shaybānī one of Ṣabra b. ʿAwf b. Muḥakkim b. Dhuhl b. Shaybān b. Thaʿlaba b. ʿUkāba, with a continuation identical with the one at the head of this article.

During the *Djāhiliyya*, this tribe wintered in Nadjd at Djadiyya, in an area which it shared with the B. Djusham, and moved in summer either to the upper Euphrates, the Djazīra, or eastwards to the middle and lower Euphrates, between al-Ḥīra and al-Ubulla, or even to the southwest of ʿIrāḳ, sharing pastures with Kinda, and around the Gulf. This tribe was celebrated at that time, as in the early Islamic centuries, for the remarkable quality of its poets, its use of a very pure form of Arabic language and its fighting ardour. It was frequently opposed in battle to the Yarbūʿ and Salīṭ b. Yarbūʿ, Taghlib and Tamīm (for these, see the ch. *Ayyām Rabīʿa* in al-Mawlā Bek, etc., *op. cit.*, and Yāḳūt, *Buldān*, i, 554, ii, 369, 690, iii, 686, iv, 102, 443, 487, with other mentions in the index of places inhabited or frequented by the Shaybān).

The capacity of the Shaybān for risking their lives to satisfy an amorous passion is splendidly illustrated in a story given by Ibn al-ʿAdīm, *Bughya*, ed. Zakkār, iii, 1420, also vii, 3116, a vainglorious dispute between a Shaybānī and a Dhuhlī within the clan of Bakr b. Wāʾil, settled by the arbitaration of a man from the tribe of Hamadhān, and vividly recounted.

At the time of Muhammad, the Shaybān behaved as faithful allies of the B. Hāshim, and then more particularly of the sons of ʿAlī and the ʿAbbāsids. Linked personally to the caliph rather than as a member of the *umma* as a whole, the Shaybānī al-Muthannā b. Ḥāritha played an important role in the conquest of ʿIrāḳ in the reigns of Abū Bakr and ʿUmar (F.M. Donner, *The early Islamic conquests*, Princeton 1981, and art. s.v.). After the conquests, the main sphere of action of the tribe remained around the western fringes of Mesopotamia, the Gulf and the Djazīra, and extended northwards to Diyār Rabīʿa and Mudar, as well as to Armenia and Ādharbāydjān. Outside these regions, there were groups of Shaybān also in Khurāsān and northern Syria. After the early Islamic period, Shaybān is less often mentioned than various of the groups descending from it. However, some members, or *mawlā* of the tribe, are mentioned as poets, grammarians and philologists in southern ʿIrāḳ. Abū ʿAmr Isḥāḳ b. Mirār al-Shaybānī (d. *ca.* 210/825 [*q.v.* in Suppl.]), one of their *mawālī*, was a leading figure in the school of Kūfan philologists (others cited in Ibn Khallikān, *Wafayāt*, index).

Under the caliph ʿAbd al-Malik, the strength of the Shaybān was still considerable, since one of the first great Khāridjites, Shabīb b. Yazīd b. Nuʿaym al-Shaybānī, was able to raise the Arabs of Diyār Bakr and Rabīʿa, assemble troops of cavalry and march on Kūfa. He was drowned in 77/697 whilst trying to escape from al-Ḥadjdjādj. Abū Dāwūd Khālid b. Ibrāhīm al-Dhuhlī al-Shaybānī was one of Abū Muslim's close retainers. Al-Ḍaḥḥāk b. Ḳays al-Shaybānī led a Khāridjite movement in 127/745 in the Kūfa area; this was sternly repressed, and al-Ḍaḥḥāk killed in 128/746 (see above, vol. VI, 624). On the other hand, it was by combatting the Rāwandiyya rebels that Maʿn b. Zāʾida al-Shaybānī [*q.v.*], former servant of the Umayyads, was able to secure pardon from al-Manṣūr; he was subsequently killed fighting the Khāridjites. ʿĪsā, a *mawlā* of Shaybān, rebelled with fifty followers, against al-Manṣūr, who sent against him Ziyād b. Mushkān, a *mawlā* of the B. Māzin, who killed him and his partisans (al-Balādhurī, *Ansāb*, iii, ed. al-Dūrī, 251). In his civil

warfare with al-Ma'mūn, al-Amīn had as one of his generals the chief of the Rabī'a of al-Djazīra, Aḥmad b. Mazyad al-Shaybānī, who brought with him 20,000 Arabs. His brother Yazīd (d. 185/801), governor of Ādharbāydjān, fought the Neo-Mazdakite Khurramiyya in Armenia. Under Hārūn al-Rashīd, he fought and in 179/795 killed his Khāridjite fellow-tribesman al-Walīd b. Ṭarīf al-Shārī, and he combatted Khazar incursions into Armenia. He took part at al-Hādī's side in the warfare against the Iranian ruler in Ṭabaristān, Wandād-Hurmuzd. In 207/812-13, al-Ma'mūn sent a son of Yazīd's, Mukhālid or Khālid, at the head of a troop of Rabī'a against 'Ubayd Allāh b. Sarī. In 216/831-2, Yazīd's brother 'Abd Allāh led an expedition into the Gharbiyya of Egypt (al-Maḳrīzī, *Khiṭaṭ*, i, 173, 178-9). The greater part of such Shaybānī commanders as these were great lovers of poetry and patrons of poets.

'Īsā b. Shaykh b. al-Salīl al-Dhuhlī al-Shaybānī [*q.v.*] appears in al-Mutawakkil's reign, was governor of Ramla in Palestine *ca.* 251/866, then in Damascus, then governor of Armenia, probably up to his death in 269/882-3. His son Aḥmad was governor of Diyār Bakr, Taro and Arzene. He probably had to combat his Khāridjite fellow-tribesmen in the Djazīra and at Mawṣil on behalf of al-Mu'taḍid, dying in 285/898 and having as his successor his son Muḥammad, from whom al-Mu'taḍid seized by force his last possession of Āmid in 286/899. Muḥammad was assigned a house in Baghdād but then imprisoned. In the accounts of these episodes, the quality of poetic composition for both men and women of his family is stressed. At the beginning of the Carmathian propaganda, in the Sawād of Kūfa, together with several tribes of Rabī'a, from Bakr b. Wā'il or Yashkur, Shaybān are mentioned at the side of 'Ā'ish, 'Ābbās, Dhuhl, 'Anaz(a), Taym Allāh, Tha'l (Tha'laba?) and Ḍubay'a b. 'Idjl (al-Maḳrīzī, *Itti'āẓ al-ḥunafā'*, ed. Shayyāl, Cairo 1967, i, 156; Ibn al-Dawādārī, *Kanz al-durar*, ed. al-Munadjdjid, Cairo 1961, 6, 46-8). Individuals with the tribal *nisba* are mentioned in northern Syria and in Persia. Thus under the walls of Aleppo, the great commander Ibn Rashīḳ was attacked with a lance and killed by Ibn Yazīd al-Shaybānī (Canard, *Sayf al-Daula. Recueil*, Algiers 1934, 400). The tribe is mentioned with other Ḳaysī ones with whom it acted in common. Thus Muslim b. Ḳuraysh, the 'Uḳaylid *amīr* of Mawṣil and Aleppo, wishing to attack the Saldjūḳ Tutush at Damascus, gathered around him the tribes of Numayr, 'Uḳayl and Shaybān, as well as the Kurds and *Mawālida* (Ibn al-Ḳalānisī, *Dhayl ta'rīkh Dimashḳ*, ed. Amedroz, 114; Ibn al-'Adīm, *Ta'rīkh Ḥalab*, ed. al-Dahhān, Damascus 1954, ii, 80).

After the 5th/11th century, the tribe of Shaybān as such is less often mentioned, and it is difficult to follow the subsequent fortunes of this highly-fragmented group. The last mention of it in the index to Ibn al-Athīr stems from 501/1107-8, when 85 warriors from Shaybān were killed at the side of Ṣadaḳa b. Mazyad al-Asadī in lower 'Irāḳ (*Kāmil*, x, 448).

The Arab Banū Shaybān should not, of course, be confused with the Shībānids [*q.v.*] or Shaybānids of Central Asia, descendants of the Mongol prince Shībān b. Djoči b. Čingiz Khān.

Bibliography: Given in the article. See also the various arts, in this Encyclopaedia on the various al-Shaybānīs. No diachronic study of the history of the tribe seems to have been attempted, one going beyond the simple listing of a restricted number of pieces of information concerning the Shaybān; such a work would be valuable for our knowledge of the acculturation, and then integration, of the nomadic Arabs within the conquered lands. (TH. BIANQUIS)

AL-SHAYBĀNĪ, ABŪ 'ABD ALLĀH MUḤAMMAD B. AL-ḤASAN b. Farḳad, jurist of the Ḥanafī school [see AL-ḤANAFIYYA] of the very highest eminence, immediate disciple of Abū Ḥanīfa and of Abū Yūsuf [*q.vv.*].

I. *Biography*

Usually called "Muḥammad b. al-Ḥasan", or simply "Muḥammad", in classical judicial literature, al-Shaybānī was the scion of a prosperous family, *mawlās* of the Banū Shaybān, originally from Ḥarastā in the vicinity of Damascus. It was at the end of the Umayyad dynasty that the father of Muḥammad b. al-Ḥasan, a soldier, emigrated to 'Irāḳ and settled in Wāsiṭ, where Muḥammad was born in 132/750; it was in Kūfa, the home town of Abū Ḥanīfa, that the latter grew up.

Attracted at a very early age to the "quest for knowledge" rather than to a military career, according to the biographers (see, e.g., al-Dhahabī [d. 748/1347], *Manāḳib al-imām Abī Ḥanīfa wa-ṣāḥibayhi Abī Yūsuf wa-Muḥammad b. al-Ḥasan*, Cairo n.d. 49-60), al-Shaybānī studied in Kūfa as a pupil of Abū Ḥanīfa himself for a period of time which must have been short (two years according to al-Shīrāzī, *Ṭabaḳāt al-fuḳahā'*, Beirut n.d. 142), since the latter died in 150/767 when al-Shaybānī was barely eighteen years old. In fact, it was mostly as a result of study with his senior, Abū Yūsuf, the leading disciple of Abū Ḥanīfa, that al-Shaybānī became, at a very early age, a jurist whose increasing renown was soon to arouse the resentment of his master. In Kūfa, al-Shaybānī had other teachers as well, including Sufyān al-Thawrī and al-Awzā'ī [*q.vv.*], with whom he trained as a traditionist (*muḥaddith*). At an unknown date, he also visited Medina, staying there two or three years (al-Ḳāḍī 'Iyāḍ, *Tartīb al-madārik*, Rabat 1983, i, 171), in order to study with Mālik b. Anas [*q.v.*]; he transmitted a version of the latter's *Muwaṭṭa'*, with the addition of his own annotations and commentary (last dated edition, Beirut 1984).

At twenty years old, al-Shaybānī was already teaching in one of the mosques of Kūfa where his prowess as an orator (he was reckoned a particularly fine exponent of the Arabic language), as a traditionist and as an expert in religious law "proved by the method of *ra'y* [*q.v.*]" attracted numerous students to him.

While a resident in Baghdād, al-Shaybānī was appointed judge (*ḳāḍī*) of al-Raḳḳa by Hārūn al-Rashīd with whom, in the light of various episodes recounted by the biographers, his relations were not always amicable (al-Shaybānī had an exalted opinion of his position and also, it seems, of himself), although he remained an influential member of his entourage until he was relieved of his duties, probably *ca.* 187/803, and returned to Baghdād, where he resumed his educational activities. It was during this period that his teaching exerted the widest influence, over, in particular, the most prestigious of his pupils, Muḥammad b. Idrīs al-Shāfi'ī [*q.v.*], who was later to compose a refutation addressed to him (the *K. al-Radd 'alā Muḥammad b. al-Ḥasan*, in *K. al-Umm*, Cairo 1906, vii, 277-303) while retaining immense admiration for him. Another of his leading pupils was 'Īsā b. Abān (d. 221/836). Among his other, lesser-known disciples were Ibrāhīm b. Rustam al-Marwazī (d. 211/826), Aḥmad b. Ḥafṣ al-Kabīr (d. 217/832), Khalaf b. Ayyūb al-Balkhī (d. 205/820, 215 or 220), Mūsā b. Naṣr al-Rāzī (d. ?), etc. (for a list of scholars who transmitted traditions (*ḥadīth*) according to al-Shaybānī, see al-Dhahabī, *op. cit.*, 50).

Muḥammad b. al-Ḥasan al-Shaybānī died, either in 187/803 or, which is more likely, in 189/805, according to the biographers, in Khurāsān (at Ranbuwayh or at Rayy), where Hārūn al-Rashīd had taken him as part of his entourage, having reinstated him in his judicial position. He died on the same day and in the same place as the eminent grammarian and philologist al-Kisāʾī, leading Hārūn al-Rashīd to remark that he had buried *fiḳh* and grammar side by side.

II. *His work and thought*

(a) The body of work, almost all of it preserved and published, which is attributed to Muḥammad b. al-Ḥasan al-Shaybānī, enormous. But, as has recently been shown by N. Calder (*Studies in early Muslim jurisprudence*, Oxford 1993, 39-66), extreme caution is required, concerning not so much the authenticity of this attribution but rather the precise nature of the latter. At that time, there can be no doubt that the very notion of a "book", having a single and identified author, did not exist in erudite circles: a certain disciple would collect the teachings of one or another scholar which he eventually committed to writing, accompanied by his own embellishments or commentary; this compilation would then be handed down from disciple to disciple, each in turn adding his own commentary, until a final version came into being, and was attributed to an ancient authority.

Since in the Ḥanafī school, as it developed during the classical period, Muḥammad b. al-Ḥasan was seen to be accorded the role of the one who set down in writing the *fiḳh* of the first Ḥanafīs, (principally Abū Ḥanīfa, Abū Yūsuf and himself), it is particularly difficult to make sense of his bibliography. There is no doubt, for example, that the treatise on *fiḳh* currently published under the title of *Kitāb al-Aṣl* (ed. al-Afghānī, Ḥaydarābād 1966-72, and Beirut 1990; partial Ger. tr. Wiendensohler, *Mängel beim Kauf nach islamischem Recht*, Walldorf-Hessen 1960; separate edition of the *K. al-Buyūʿ wa l-salam* by Ch. Chehata, Cairo 1954), which is also known by the name of *al-Mabsūṭ*, and which is attributed to al-Shaybānī, is in fact a compilation of forty-seven short texts on *fiḳh*, considerably adapted over the years, which Ibn al-Nadīm (d. 385/995), an early bibliographer, attributed to him in his renowned *Fihrist* (Beirut 1978, 287-8). The *K. al-Aṣl* played a vital role in the Ḥanafī *madhhab*, to such an extent that, according to some of its leading scholars, for a Ḥanafī jurist it was sufficient to memorise it for being considered a *mudjtahid* (al-Imām ʿUmar b. ʿAbd al-ʿAzīz, *Sharḥ Adab al-ḳāḍī li ʾl-Imām Abī Bakr Aḥmad b. ʿUmar al-Khaṣṣaf*, Beirut 1994, 19).

Besides this collection of opuscula, dealing with different aspects of practical law and assembled into a single whole, al-Shaybānī is also the author, again according to Ibn al-Nadīm and later biographers, of various works, including the *K. al-Djāmiʿ al-kabīr* (Ḥaydarābād 1936), *K. al-Djāmiʿ al-ṣaghīr* (publ. in the margins of the *K. al-Kharādj* of Abū Yūsuf, Būlāḳ 1884, Lahore 1909; partial Ger. tr. by I. Dimitroff in *MSOS*, xi/2 [1908], 60-206), the *K. al-Siyar al-kabīr* (publ. with the commentary of al-Sarakhsī, Ḥaydarābād 1916-17 and Cairo 1957) and the *K. al-Siyar al-ṣaghīr*, tr. M. Khadduri, *The Islamic law of nations*, Baltimore 1966. The *K. al-Aṣl*, the four works mentioned above and *al-Ziyādāt* belong, according to a classification established by the Ḥanafī biographers, to the *ẓāhir al-riwāya* of the school, in the sense that their transmission, from the origin, was supposed to be faultless, uninterrupted and substantially attested.

According to the same biographers, other texts attributed to al-Shaybānī did not enjoy the same status in terms of the quality of their transmission, with the result that their current content was considered dubious (a remark in fact applicable, from a viewpoint of contemporary criticism, as has been observed above, to the entire corpus of al-Shaybānī). Among the published works attributed to al-Shaybānī and also worth mentioning, besides the revision of the *Muwaṭṭaʾ* of Mālik already noted, are the *K. al-Āthār* (Lahore 1910 and ed. al-Afghānī, Beirut 1993 with an excellent introd.), the *K. al-Ḥudjdja ʿalā ahl al-Madīna* (Ḥaydarābād 1965-71), the *K. al-Makhāridj fi ʾl-ḥiyal* (ed. Schacht, Leipzig 1930, repr. Hildesheim 1968) and *al-Amālī* (Ḥaydarābād 1941). For more details regarding the work of al-Shaybānī, editions and the innumerable commentaries which it generated, see Sezgin, *GAS*, i, 421-33.

Since Abū Ḥanīfa himself wrote nothing on the subject of *fiḳh*, and since Abū Yūsuf apparently left behind only a very few texts, it is essentially through the intermediary of the work attributed to al-Shaybānī (and, to a lesser extent, that of al-Shāfiʿī) that the judicial opinions developed by and around Abū Ḥanīfa (and more generally, in the legal circles of Kūfa) can, with a reasonable degree of certainty, be known. This explains why E. Sachau, and other orientalists who shared his assessment, considered that al-Shaybānī had played a decisive role, more important even than those of Abū Ḥanīfa and Abū Yūsuf, in formulating the doctrines of the Hanafī school and, more generally, of Islamic law (Sachau in *SBWAW*, *phil-hist. CL.*, lxv, 723). This appraisal is, however, perhaps excessive, for two reasons. On the one hand, as explained above, al-Shaybānī cannot really be considered in anything other than a remote sense the real author of the corpus attributed to him; on the other, the vocation of *fiḳh* was originally supposed to be, and to remain, an orally transmitted discipline. It was probably only at the time when *fiḳh* definitively lost this quality, and its preferred mode of transmission became the written form, that al-Shaybānī was to have this monumental and systematic corpus, originally fragmentary and definitely far less voluminous, attributed to him by the later Ḥanafīs (the same thing occurred within the confines of the Shāfiʿī school in respect of the *K. al-Umm* attributed to al-Shāfiʿī) and in this regard, the role of the great Ḥanafī al-Sarakhsī (d. 490/1097 [*q.v.*], i.e. three centuries after al-Shaybānī) seems to have been definitive. Furthermore, so far as the Ḥanafī biographers are concerned, al-Shaybānī invariably occupies only the third rank, after Abū Ḥanīfa and Abū Yūsuf, in the hierarchy of authorities of the school.

(b) The thought of al-Shaybānī, as has been shown by J. Schacht (*The origins of Muhammadan jurisprudence*, Oxford 1979, 306-10, and *An introduction to Islamic law*, Oxford 1964, 45) represents considerable progress in relation to that of his two masters in Kūfa, Abū Ḥanīfa and Abū Yūsuf, and in many respects it prefigures the rift between the schools, dominant at that time, known as "local", and the "personal" schools which were to succeed them, as reflected in the work of his pupil al-Shāfiʿī. In this regard, it is relevant to note that, in addition to texts of practical law, al-Shaybānī seems also to be the author of a small number of writings on topics of legal theory (*uṣūl al-fiḳh* [*q.v.*]: a *K. Idjtihād al-raʾy*, a *K. al-Istiḥsān* and a *K. Uṣūl al-fiḳh* are attributed to him in the *Fihrist* of Ibn al-Nadīm (Fakhr al-Islām al-Bazdawī also attributes to him a *K. Adab al-ḳāḍī*, to which he refers in *Uṣūl al-Bazdawī*, ed. with al-Bukhārī's commentary *Kashf al-asrār*, Beirut 1991, i, 59-60). Study of the classical

literature of *uṣūl al-fiḳh*, which often draws attention to opinions of al-Shaybānī, tends to confirm the impression that he was also a theorist of *fiḳh* (see, e.g. al-Lāmishī, *Kitāb fī Uṣūl al-fiḳh*, Beirut 1995, index).

As recounted by a classic of Ḥanafī literature of *uṣūl al-fiḳh* (*Uṣūl al-Bazdawī*, 59-61), the doctrine of al-Shaybānī relating to the respective roles of "reasoning" (*ra'y*) and of tradition (*ḥadīth*) in the elaboration of *fiḳh*, a doctrine which firmly insists on their necessary complementarity (*lā yastaḳīmu al-ḥadīth illā bi 'l-ra'y wa-lā yastaḳīmu al-ra'y illā bi 'l-ḥadīth*), seems to be in perfect harmony with the *fiḳh* which he effectively formulated and which Schacht has successfully analysed, comparing it with that of his predecessors. On the one hand, al-Shaybānī takes care to justify his legal doctrine on the basis of traditions traced back either to the Prophet, or to other authorities (where necessary, he feels free to quarrel with the latter); thus "he fills his books with *ḥadīth*" (al-Bazdawī, 61). He appears in this context to stand apart from other jurists of Kūfa, and from Abū Yūsuf in particular, in according, in a non-systematic manner, priority to traditions attributed to the Prophet over those of the Companions (*al-Ṣaḥāba* [*q.v.*]). It is known that al-Shāfiʿī, for his part, was to accord probative worth to Prophetic traditions exclusively; on this point also, al-Shaybānī gives the appearance of being the initiator of Shāfiʿī-like theses (Schacht, *Origins*, 27-34). On the other hand, the judicial reasoning, the *ra'y* of al-Shaybānī, is considerably more rigorous and systematic than was that of Abū Ḥanīfa, Abū Yūsuf or Mālik. In a word, he tends to associate himself with the strict "analogical reasoning" (*ḳiyās* [*q.v.*]), of which al-Shāfiʿī was to give, in the *Risāla*, the first formal theorisation available to modern scholarship. It is not impossible that, in his *K. Idjtihād al-ra'y*, which is unfortunately lost, al-Shaybānī had preceded him in this project.

In theological matters, al-Shahrastānī (d. 548/1163 [*q.v.*]) and other heresiographers assert that, following the example of Abū Ḥanīfa Abū Yūsuf, al-Shaybānī adhered to the Murdjiʾī doctrine [*q.v.*] (*Livre des religions et des sectes*, tr. D. Gimaret and G. Monnot, Louvain 1986, i, 433; on the very close relations between Ḥanafism and Murdjiʾism, in which al-Shaybānī is just one of the participating players, see W. Madelung in *Isl.*, lix [1982], 32-39). A *Credo* (*ʿAḳīda*), preserved in manuscript form, is attributed to him, but not one of his biographers mentions its existence.

(E. CHAUMONT)

AL-SHAYBĀNĪ, ABŪ ʿAMR ISḤĀḲ B. MIRĀR, lexicographer belonging to the Kūfan school, who is often quoted under his *kunya* Abū ʿAmr. He was probably born somewhere around 120/738 in Kūfa and lived to a very great age. The biographies mention several years as his date of death, but the most probable date of death is 213/828 (Diem, *Das Kitāb al-ǧīm*, 10). According to a report in Ibn al-Anbārī (*Nuzha*, 58, l. 11), his mother was a Nabaṭī and he knew some of her language. His foreign descent is confirmed by a remark in Ibn Khallikān (i, 201, l. 6) who says that he was a *mawlā*. It is not certain whence his *nisba* ash-Shaybānī was derived; according to most sources, he received this *nisba* because he educated the sons of some members of the Banū Shaybān.

Al-Shaybānī was trained in grammar and lexicography, as well as *ḥadīth*; his teacher in poetry was al-Mufaḍḍal al-Ḍabbī [*q.v.*]. In his theological opinions he may have been a Muʿtazilī; in a report in Yāḳūt (*Muʿdjam*, vi, 84) he is said to have maintained that the Ḳur'ān was created. Among his pupils were the lexicographers Ibn al-Sikkīt and Abū ʿUbayd [*q.vv.*] and the traditionist Aḥmad b. Ḥanbal, who quotes him as a source in his *Musnad*. His fame rests mainly on his qualities as a collector of poetry. He is reported to have collected the *dīwāns* of more than eighty tribes, which have not been preserved. Both his son ʿAmr and his grandson Muḥammad b. ʿAmr transmitted lexical explanations to poems from him. In the Kūfan line, the transmission through his grandson to Abū Muḥammad b. Yaḥyā al-Marwazī (d. 298/910) was preserved in the *Madjālis Thaʿlab* (e.g., i, 137; ii, 479, 485) as a later addition to the manuscript.

Abū ʿAmr was the author of several lexicographical treatises, most of them dealing with specialised semantic domains, such as the terminology of human anatomy (*khalḳ al-insān*) and that of camels and horses. He is also said to have written a book called *al-Nawādir* and a collection of rare expressions from the *ḥadīth* (*gharīb al-ḥadīth*) (cf. Sezgin, *GAS*, viii, 121-3). The only work that has been preserved is his *K. al-Djīm* (in some sources called *K. al-Lughāt* or *K. al-Ḥurūf*; according to others these are independent books). This book was transmitted mainly by two lexicographers, al-Sukkarī [*q.v.*] and Abū Mūsā al-Ḥāmiḍ (d. 305/918), a pupil of the Kūfan grammarian Thaʿlab. Both recensions seem to have been used in the unique Escorial manuscript (no. 572; for a description of this manuscript see Diem, 12-14).

In the *K. al-Djīm*, each chapter contains words beginning with the same radical, without further criteria of division. There is a large amount of association within each chapter, so that even words beginning with different radicals are quoted when the context leads him to do so. Unlike his contemporary al-Khalīl [*q.v.*], he followed the usual alphabetical order of the Arabic alphabet rather than a phonetic order. Earlier investigators, who did not have the possibility of study-

ing the entire treatise, believed that the reason for its name is that the dictionary stops with the letter *djīm*, but Diem's analysis has shown that this is not the case, since the Escorial manuscript contains the entire alphabet. The reason for its being called thus cannot be that the book started with the letter *djīm*, either, since the Escorial manuscript starts with the letter *hamza*. The reason for the name must have been unclear from an early date onwards, since the biographers were puzzled by this question, too. Al-Suyūṭī, for instance, mentions that he believed for some time that the book was called thus because it started with the letter *djīm*, but then he saw a manuscript in which the first letter was the *hamza*. According to the explanation in the *Ḳāmūs*, the word *djīm* was a substantive with the alleged meaning of *dībādj* "brocade".

It is not unlikely that the treatise as we have it is an unfinished version. From the biographical literature we know that Abū ʿAmr did not transmit the book to any of his pupils, possibly because he intended to revise it thoroughly, but never got around to doing so. In its present form the classification and analysis of the words is rather confused. Not only is there no apparent order in each chapter, but within each lemma the information is given haphazardly.

The main corpus for his collection of words was probably his own collection of Djāhilī poetry. Within each lemma he quotes systematically and in a fixed order from 17 different *dīwāns*. The total number of poetic lines quoted is about 4,300 as against only two verses from the Ḳurʾān (Diem, 60). Krenkow's evaluation of the book as a prime source for our knowledge of pre-Islamic dialects is not confirmed by the later analysis made by Diem (74-7), since his only contribution to the study of the *lughāt* is a small number of lexical items. In general, al-Shaybānī does not elaborate on the meaning of the words, and he discusses only rare words that apparently occurred in his collection.

Although quotations from the *K. al-Djīm* are found in all the major dictionaries, including the *Ḳāmūs* and the *Tādj al-ʿarūs*, most later lexicographers did not know the work first hand, but quoted it through Ibn al-Sikkīt's *Iṣlāḥ al-manṭiḳ* (Diem, 118-9). In the *Lisān al-ʿArab* he is not one of the most frequently quoted authorities, but still the index to the *Lisān* mentions him 92 times. For some of the *shawāhid*, the *K. al-Djīm* remains the only available source.

Al-Shaybānī is almost never quoted on grammatical doctrine, but Abū Ḥayyān has a quotation from his *K. al-Faraḥ*, which is not mentioned anywhere else, in which he discusses the priority of the agent over the object in syntactic terms (*Tadhkira*, 305, cf. 538, 668, about morphology). Elsewhere (*Manhadj*, 405, l. 32), the same author reports a syntactic opinion from al-Shaybānī which had been transmitted from him by the grammarian al-Akhfash.

(K. Versteegh)

SHAYBĀNĪ, Abū Naṣr Fatḥ Allāh Khān, 19th century Persian poet, born around 1241/1825 in Kāshān, died 20 Radjab 1308/1 March 1891.

He came from a noble family claiming descent from the Shaybānī tribe, from which he took his pen name. His grandfather held the governorship of Naṭanz, Kāshān, Djawshaḳān and Ḳum during Āghā Muḥammad Khān's reign (1193-1212/1779-97), whilst his father, Muḥammad Kāẓim Khān, was employed under Muḥammad Shāh (r. 1250-64/1779-97) and later served as financial agent of the governor-general of Kāshān and Hamadān. In accordance with the family tradition, Shaybānī also was identified with the court and government, early having access to the court of Muḥammad Shāh and acting as companion in attendance to the heir-apparent (afterwards Nāṣir al-Dīn Shāh, r. 1264-1313/1848-96). In later years he was involved from time to time in important official assignments. However, despite his official preoccupations, he was essentially a private individual seeking a life of seclusion. Consequently, he resigned from public affairs and went to live on his estates. He finally decided to settle down in Tehran and died there.

Shaybānī's attachment to Ṣūfīsm, and the influence it had on his poetic outlook, may be discerned in the introspective trend often depicted in his verse. As a writer, he was competent in both prose and poetry. Included among his representative writings are his prose and verse *Durdj-i durar* "A casket of pearls", and collection of odes *Fatḥ u ẓafar* "Victory and triumph". His major prose work is the *Maḳālāt-i Shaybānī*, which is autobiographical in nature, and was composed in 1273/1856-7.

Shaybānī's poetic career spanned over a period of some fifty years, from the last part of Muḥammad Shāh's reign to about the end of Nāṣir al-Dīn Shāh's time. His output comprises *ḳaṣīdas*, *ghazals*, *rubāʿīs*, *ḳiṭʿas* and *dū-baytīs*. A selection of his verse, probably prepared by the poet, was published in Istanbul in 1308-9/1890-1. His style of writing follows the trend of the old masters, such as Rūdakī and Farrukhī [*q.vv.*], and may be identified with the Khurāsānī school of Persian poetry. He is among the leading poets of the Ḳādjār period who revolted successfully against the predominance of the "Indian style" (*sabk-i Hindī* [*q.v.*]), and strove for a "return" (*bāzgasht*) to early indigenous forms. However, the real contribution of Shaybānī's verse must be sought in the choice of his subject and the mood of his poetry. He was perhaps the first poet to criticise openly in several of his poems the decadent state of contemporary society and politics—a theme that was to become the stock-in-trade of the Persian poets in the post-Constitutional period. Moreover, his verse often reflected a subjective element that was new to native literary tradition, and evoked certain parallels with the pessimism and ultra-realism in the European literature produced during the second half of the nineteenth century (see R. Levy, *Persian literature*, London 1948, 99).

(Munibur Rahman)

AL-SHAYBĀNĪ, Ibrāhīm b. Muhammad, Abu 'l-Yusr al-Kayrawānī al-Riyādī "the mathematician" (223-298/838-911), *adīb* and author of *rasā'il*.

He was born in Baghdād, where he pursued his studies before making his way to Ifrīkiya in 261/874 during the reign of the Aghlabid *amīr* Ibrāhīm b. Ahmad al-Aghlab (261-90/874-902). Unfortunately, little is known concerning the life in Baghdād of this prolific letter writer and poet. Besides the valuable information regarding him supplied by Ibn al-Abbār in his *Takmila* (i, article 454, p. 174), stating that al-Shaybānī was the disciple and friend of writers such as al-Djāhiz, al-Mubarrad and Ibn Kutayba, and of the poets Di'bil, Abū Tammām and al-Buhturī, substantial evidence concerning his life in the East is lacking. The same cannot be said of his life in Ifrīkiya, which began in 261/874 when he was 38 years old. Al-Shaybānī settled in Aghlabid Ifrīkiya after wanderings which took him as far as Spain. He was received at Kayrawān by the three last Aghlabid *amīrs*, including Ziyādat Allāh III (290-6/902-9), who treated him with lavish generosity and entrusted to him the post of director of the Bayt al-Hikma. It is again Ibn al-Abbār who states that this epistolary writer was at the head of the Bayt al-Hikma during the reign of Ziyādat Allāh (*op. cit.*, 174). Al-Shaybānī was opportunist enough to turn away from his Aghlabid patrons just before their deposition, in a bloodless coup, by the Fātimids (296-362/909-73), and what is more, he composed panegyrics in honour of the caliph al-Mahdī (297-322/910-34); as a reward, he retained his post at the head of the above-mentioned establishment until 298/911, the date of his death at Kayrawān.

Ibrāhīm al-Shaybānī was a talented writer and a first-rate scholar, seeking to combine the pertinence of ideas and flexibility and elegance of expression with the rigour of the language. In fact, he established himself as a master of the epistolary genre on account of his flowing style, his pure language and his zest. The few biographical sources which mention him attribute to him the titles of numerous works including *Sirādj al-hudā fi 'l-Kur'ān wa-i'rābih wa-ma'ānīh*, *Musnad fi 'l-hadīth*, *Lakīt al-mardjān* (after the model of the *'Uyūn al-akhbār* of Ibn Kutayba), *Kutb al-adab*, *al-Murassa'a wa 'l-mudabbadja*. As for *al-Risāla al-'adhrā'*, composed without any doubt by al-Shaybānī and addressed to his friend and correspondent Ibn al-Mudabbir (d. 279/892), as is proved by the unique manuscript which contains it (Dār al-Kutub, Cairo, Taymur no. 80), it is "one of the most ancient treatises on administration and public life" (Gottschalk, in *EI*², iii, 880a). This letter achieved immediate and considerable success and was rapidly transmitted throughout the Muslim world; it has been continually studied, annotated and used as an educational text. However, Kurd 'Alī, who was the first to have the opportunity of establishing the unique text of the *Risāla* of al-Shaybānī (see M. Kurd 'Alī, *Rasā'il al-bulaghā'*, Cairo 1331/1913, 176-93) and who cannot have known everything about this Aghlabid letter writer, inadvertently attributed it to Ibn al-Mudabbir, this leading into error Zakī Mubārak in his *Étude critique sur la Lettre Vierge d'Ibn al-Mudabber* (*sic*), Cairo 1931, and Gottschalk in his art. IBN AL-MUDABBIR (*loc. cit.*).

In this context, the following points should be noted:

(1) The *kunya* of Ibn al-Mudabbir is Abū Ishāk and not Abu 'l-Yusr, as claimed by Kurd 'Alī, Zakī Mubārak and Gottschalk (see on this topic, *Aghānī*, Beirut 1380/1960, xxii, 151; Yākūt, *Mu'djam al-'udabā'*, Beirut, i, 226; al-Ziriklī, *al-A'lām*, i, 56).

(2) The Title of the *Risāla* as it is found in the Cairo manuscript is the following: "The virgin letter, concerning the criteria of rhetoric and of the instruments of writing, sent by Abu 'l-Yusr Ibrāhīm b. Muhammad al-Shaybānī to Ibrāhīm b. Muhammad b. al-Mudabbir (*al-Risāla al-'adhrā' fī mawāzīn al-balāgha wa-adawāt al-kitāba, kataba-hā Abu 'l-Yusr Ibrāhīm b. Muhammad al-Shaybānī ilā Ibrāhīm b. Muhammad b. al-Mudabbir*).

(3) Several paragraphs of the *Risāla al-'adhrā'* have been reproduced in the *'Ikd* of Ibn 'Abd Rabbihi and attributed without any hesitation to al-Shaybānī, although Ibn 'Abd Rabbihi gives no title to this letter (see al-*'Ikd*, Cairo 1365/1944, iv, 155-205).

SHAYBĀNĪ KHĀN [see SHĪBĀNĪ KHĀN].

SHAYBĀNIDS [see SHĪBĀNIDS].

SHAYDĀ, MULLĀ, 17th century Persian poet of India, commonly known as Mullā Shaydā, born in Fathpūr Sīkrī, near Āgra, d. in 1080/1669-70.

His father was a native of Mashhad, from where he migrated to India during the reign of Emperor Akbar. It is reported that Shaydā was attached initially to a nobleman who spotted his poetic talents, and eventually introduced him to the Emperor Djahāngīr so that he became enrolled among the *ahadīs* or "gentlemen troopers", a class of servants employed mostly for household duties. Later, he decided to seek employment with 'Abd al-Rahīm Khān-i Khānān (d. 1036/1627 [*q.v.*]), writing a *kasīda* in praise of the latter and sent it to him at Mandū, and after some time, was released from the royal staff and joined Khān-i Khānān's service in Burhānpūr.

Another patron whom Shaydā served was Prince Shahriyār (d. 1037/1628), the ill-fated youngest son of Emperor Djahāngīr, who was blinded and subsequently executed. Thereafter the poet entered the service of the Emperor Shāh Djahān among the *ahadīs*. In course of time, he retired from his job, living comfortably on the government pension granted to him, and settled in Kashmīr where he died.

Shaydā has been described as an irascible person provoked easily on mere suspicion, and he composed satirical verses attacking several of his contemporaries, so that his behaviour made him many enemies,

and he was often a target of their hostility.

Evidence is lacking about the actual extent of Shaydā's poetical output. Estimates in this connection vary from 50,000 to 100,000 couplets. The poet is also said to have composed a *mathnawī*, entitled *Dawlat-i bīdār*, "The awakened fortune", modelled after Niẓāmī's *Makhzan al-asrār*. It seems that Shaydā was negligent in the preservation of his works. The *Khizāna-yi ʿāmira* gives a description of a copy of Shaydā's works used by Āzād for his account of the poet. The contents of this manuscript included 14 lengthy *ḳaṣīdas* and a *ḳiṭʿa* dealing with some of the ornaments of rhetoric. A manuscript of Shaydā's *ghazals* is in the British Library; it contains a total of some 1,200 couplets.

Shaydā has won critical approval for his poetic achievements, being represented as a follower of the old school. In the *Maʾāthir-i Raḥīmī* he is depicted as one of the talented poets of his time who had a probing imagination, and could conceive novel subjects, but showed mental apathy in their arrangement. He wielded a facile pen which enabled him to compose lengthy *ḳaṣīdas* within the smallest amount of time. His knowledge of prosody was excellent, and is seen in his frequent use of difficult metres and rhyme.

(Munibur Rahman)

SHAYKH (a.), pl. *shuyūkh*, denotes etymologically "someone whose age appears advanced and whose hair has gone white", used for a man over fifty years old (*LʿA*, Beirut 1988, vii, 254; *TʿA*, Cairo 1869-89, ii, 267-8). The Ḳurʾānic usage of *shuyūkh*, in XL, 67, is in this sense. From pre-Islamic times onwards, the idea of authority and prestige has accordingly been attached to the term, so that *shaykh* is used for the chief of any human group, whether the family (al-Zabīdī states that a woman's *shaykh* is her husband, *TʿA*, ii, 268), a tribe, a trade guild, etc. In the early Islamic context, *al-shaykhānⁱ* denotes either the two caliphs Abū Bakr and ʿUmar (Ibn Khaldūn, *Muḳaddima*, Beirut n.d., 357) or the two best-known traditionists, al-Bukhārī and Muslim (*ibid.*, 346). The term *shaykh* may be applied to the head of a religious establishment (*madrasa*, *dār al-ḥadīth*, *ribāṭ*, etc.), and to any Muslim scholar of a certain level of attainment (in the biographical collections, the term is generally linked with others, such as *imām*). In the peripheral regions of the Islamic world, *shaykh* may have various meanings. In India, it denotes a category of the descendants of the Prophet or *ashrāf* [see hind. ii, at vol. III, 410a], whilst in Ibn Baṭṭūṭa's time, the inhabitants of Mogadishu applied it to their sultan (*Riḥla*, ii, 182, tr. Gibb, ii, 374-5).

The term *shaykh* is often found with a complement. The *sh. al-balad* can be the equivalent of the mayor of a town, or more simply, an employee looking after the good management of the town (Dozy, *Suppl.*, i, 809). Amongst the Ḥafṣids of Tunis, the grand vizier had the title *sh. al-Muwaḥḥidīn*, in reference to the Almohads, whose heirs the Ḥafṣids claimed to be (Ibn Khaldūn, *op. cit.*, 266). On the purely religious level, the honorific title *Sh. al-Islam* [*q.v.*] is found, also the function of *sh. al-iḳrāʾ* (master in instruction of the Ḳurʾān readings), and the designation *sh. al-Sunna* for traditionists or other persons scrupulously observing the *Sunna*.

In Ṣūfī mysticism, the *shaykh* is the spiritual master (pls. *shuyūkh*, *mashāyikh*). Having himself traversed the mystical path (*ṭarīḳ*(a) [*q.v.*]), he knows its traps and dangers, and is therefore essential for the aspiring novice or *murīd* [*q.v.*], who must place himself totally under his guidance (termed *iḳtidāʾ*; see esp. al-Ghazālī, *Iḥyāʾ*, Beirut, iii, 75-6; al-Suhrawardī, *ʿAwārif al-maʿārif*, Beirut 1983, 83). He thus becomes the novice's spiritual father and "educator", *al-shaykh al-murabbī* (see e.g. Ibn Khaldūn, *Shifāʾ al-sāʾil li-tahdhīb al-masāʾil*, Tunis 1991, 224, 226) or *sh. al-tarbiya*. His closeness to God makes him a *walī* or saint, and provides a firm basis for his authority; the Ṣūfīs interpret in this sense the *ḥadīth* "the *shaykh* has the same position amongst his followers as the Prophet in his community" (see e.g. the *K. Khatm al-awliyāʾ* of al-Ḥakīm al-Tirmidhī, Beirut 1965, 489, and on this tradition, al-Suyūṭī, *al-Djāmiʿ al-ṣaghīr*, no. 4969). A wider circle than his spiritual disciples seek out the Ṣūfī master not for *tarbiya* but for the spiritual influence, *baraka* [*q.v.*] emanating from him; in this case, he is envisaged as the *sh. al-tabarruk*. The *shaykh* usually officiates in a *zāwiya* [*q.v.*] founded on his personal initiative (most of the *shaykhs* whom Ibn Baṭṭūṭa met in the course of his travels were heads of this kind of institution). In Persia, the *shaykh* of a *khānḳāh* [*q.v.*] had a similar spiritual charisma, but in the Ayyūbid and the Mamlūk Near East the *khānḳāh* became a public institution, and its *shaykh*, nominated by the ruling power, belonged more to the class of *ʿulamāʾ* or administrators than to the Ṣūfīs. At Cairo and Damascus there was a supreme *sh. al-shuyūkh*, charged with the office of controlling the practice of *taṣawwuf* and whose role was often more political and diplomatic than spiritual (whence al-Subkī's severe judgement on this pompous title, see his *Muʿīd al-niʿam*, Beirut 1986, 96). At a later period, the Ottomans introduced a *sh. al-ṭuruḳ* ("head of the mystical paths" rather than "of the Ṣūfī brotherhoods") in each major city of the empire, with the same function as the *sh. al-shuyūkh*. At the beginning of the 19th century, Muḥammad ʿAlī Pasha [*q.v.*] set up a *sh. mashāyikh al-ṭuruḳ al-ṣūfiyya*, with authority over the whole range of Egyptian brotherhoods.

One should also note that titles like *shaykh*, *sh. al-shuyūkh* or *sh. al-mashāyikh* are equally used for the heads of trade and professional guilds (see, e.g. above,

vol. II, 967b, and III, 206a), evoking the affinities which existed between *taṣawwuf* and *futuwwa* [*q.v.*]. In later Ṣūfism, the *sh. al-sadjdjāda* denoted the successor—corporeal or spiritual—of the eponymous head of the order; the prayer carpet, *sadjdjāda* [*q.v.*], considered as stemming from the master, symbolises the transmission of spiritual authority to his "heir". Finally, a woman in whom is recognised the quality of a spiritual master (above all, *vis-à-vis* other women) is still today called *shaykha*.

(E. Geoffroy)

SHAYKH ʿADĪ [see ʿadī].

SHAYKH ĀDAM, Ṣafī al-Dīn b. Ṭayyib Shāh b. Malik b. Ismāʿīl, the successor to Dāwūd Burhān al-Dīn b. Ḳuṭb Shāh in 1021/1612 as the twenty-eight *dāʿī* of the Mustaʿlī-Ṭayyibī Ismāʿīlīs in India known as the Dāwūdī Bohras.

According to Ismāʿīl b. ʿAbd al-Rasūl al-Madjdūʿ (*Fahrasa*, ed. ʿAlīnaḳī Munzawī, Tehran 1966, 118; the text is corrupt and not clear), Shaykh Ādam was a descendant of either Siddharāja Jayasimha (or Jayasingha), the Rādjput ruler of Gudjarāt (1094-1143), who was converted to the Ismāʿīlī faith by Mawlāya ʿAbd Allāh, or a descendant of the latter missionary who had come from Yemen. He lived in Aḥmadābād and died there on 7 Radjab 1030/28 May 1621. The year of his birth is unknown, but Muḥammad ʿAlī, the author of *Mawsim-i bahār* (Bombay 1301/1884, iii, 259-64) states that while he was still a young boy he studied with Yūsuf b. Sulaymān, the first Indian to be appointed as the head of the *daʿwa* in 946/1539. The latter lived in his native place Sidhpur [*q.v.*] for five years after becoming the head of the *daʿwa* and then went back to Yemen, where he died in 974/1567. If Shaykh Ādam studied with Yūsuf b. Sulaymān while he was still in Sidhpur, he must have been at least ten years of age or older, which implies that he was born before 940/1533. According to the same author, he then served Djalāl b. Ḥasan, the twenty-fifth *dāʿī*, who succeeded Yūsuf b. Sulaymān and attained prominence during the time of the succeeding *dāʿī*, Dāwūd b. ʿAdjab. In 998/1590 he was delegated by the *dāʿī* to preach and propagate the *daʿwa* in the Deccan (Ḳuṭb al-Dīn Burhānpūrī, *Muntazaʿ al-akhbār*, ms. collection of Zāhid ʿAlī, 541 ff., 625-8). After the death of this *dāʿī*, the Bohra community was divided over the succession dispute; a great majority upheld the succession of Dāwūd Burhān al-Dīn and came to be known as the Dāwūdīs, whereas a minority accepted the claims of Sulaymān b. Ḥasan, the grandson of Yūsuf b. Sulaymān, and became known as the Sulaymānīs. During this time of crisis Shaykh Ādam firmly stood by the *dāʿī* Dāwūd Burhān al-Dīn, defending his succession before the court of the Mughal emperor Akbar.

His *Kitāb palī mīdū* deals with the beginning of the Mustaʿlian *daʿwa* in India, the arrival of Mawlāya ʿAbd Allāh (sent from Yemen by Lamak b. Mālik) in Cambay, and the legend about the conversion of Siddharāja Jayasimha, and the subsequent history of the *daʿwa* until the author's time (al-Madjdūʿ, *Fahrasa*, 118). It is an important source for the history of that early period: manuscript copies of it are, however, very rare.

Bibliography: In addition to the works mentioned in the text, see I. Poonawala, *Biobibliography of Ismāʿīlī literature*, Malibu, Cal. 1977, 190.

(I. Poonawala)

SHAYKH al-BALAD "the Chief of the City", the title given in Ottoman Egypt during the greater part of the 18th century to the most powerful bey in Cairo.

By the early 18th century real political power in Egypt no longer rested with the pashas, the official representatives of the Ottoman sultan in Istanbul, but with the military grandees—at first Janissary regimental commanders and then exclusively with the Mamlūk beys, who accepted the nominal Ottoman sovereignty, and whose supremacy was decided by fierce power struggles among military factions and households. The strongest bey was called by various appellations, such as *Amīr Miṣr* ("the commander of Cairo"), *Kabīr al-Ḳawm* ("the senior of the people", i.e. the Mamluks), *Kabīr al-Balad* ("the senior of the city"), until these titles were superseded by *Shaykh al-Balad*, a title which expresses not only his supremacy but also the limitation of his power to Cairo; he could not extend his rule to all of Egypt, owing to the weakness and fragmentation of Egyptian government, notably in Upper Egypt where the Arab tribes were virtually autonomous.

Shaykh al-Balad was not an official Ottoman title, and the Ottomans strongly objected to it, as it expressed the *de facto* rule of the beys and the mere symbolic position of the Ottoman pashas in Cairo. In several official decrees issued in the years 1138/1726 and 1143/1730, the Ottoman government calls this title "a devilish innovation", the source of all the trouble in Egypt, and threatens with death whoever uses it. With their accustomed flexibility, however, the Ottomans eventually put up with this show of Egyptian semi-independence, and an edict issued by the sultan in 1159/1746 names ʿUthmān Bey, a former *Amīr al-Ḥādjdj*, as *Shaykh al-Balad*.

The first bey who is called *Shaykh al-Balad* in the sources was Muḥammad Bey Čarkas in the third decade of the 18th century. During the second half of that century, the ascendancy belonged to the Ḳāzdughli Mamlūk faction and the *Shuyūkh al-Balad* came from them. By far the most famous and powerful one was ʿAlī Bey *Bulut Ḳapan* ("the cloud catcher", known as "the Great") whose incumbency (1173-87/1760-73) marked the first attempt since the early 16th century of a rebellion in Egypt against the central Ottoman government. He was succeeded by Muḥammad Abu ʾl-Dhahab [*q.v.*], ʿAlī Bey's Mamlūk, who finally turned against him and demonstrated loyalty to the Ottomans.

The title survived as long as the beys held effective power in Cairo, until the French invasion of Egypt in 1798.

(M. Winter)

SHAYKH ḤUSAYN, a saint (*walī*) of Ethiopia, whose *ḳubba*, in the Bale or Bali region of Oromo province, is the goal of an important popular pilgrimage. There are various orthographies of his name: Scec Hussèn, Schech Ussen (Italian), Shaykh Ḥusayn (Arabic), Shék Husén (Oromo, Amharic), Sheekh Xuseen (Somali), etc.

Sh. Nūr Ḥusayn is said to have lived *ca.* A.D. 1200. Coming from Merca, on the Somaliland coast, or possibly from Harar, he was reputedly the first great preacher of Islam in the region. He was a thaumaturge, who also had the gift of ubiquitousness. In the 16th century, the Oromo, then followers of traditional religions, came from the south or from the east, gained control of the region and took over the cult passed on to them by the Hadiya-Sidama peoples. Later, the cult became strengthened through a confusion with the one centred around Abba Muda (son [?] of the eponymous ancestor of the Oromo). Today, a syncretistic character of the cult of Sh. Ḥusayn is discernible, but it is only with great prudence that one can set up the equations Abba Muda = Shék Husén and Waaqa (the Oromo supreme deity, identified with the Heavens) = Allāh, God.

The place where his tomb is situated, Annajina (or Dire Shék Husén) is 250 km/155 miles as the crow flies to the south-east of Addis Ababa, to the east of Gobba, on the right bank of the upper course of the (*webi*) Shebelle [*q.v.*], at an altitude of 1,489 m/4,884 feet. The region is one of Arsi (Amhar. Arusi) Oromo farmers and herdsmen. The sanctuary's fame is such that it extends to the whole of the Oromo and Somali lands of the Horn of Africa, and each year attracts tens of thousands of devotees. A main pilgrimage takes place on the anniversary of the saint's death and a second one during the *ḥadjdj* month, both at the full moon. The ritual is inspired by that of the Meccan Pilgrimage and by practices dating from the time before the Oromo embraced Islam. But these last probably borrowed from the syncretism already reached by the Sidama.

The pilgrims (*djila*) arrive in groups, on foot or on riding beasts. They all carry a long, forked stick (*ulee*), which has a practical use but is, above all, a sign of their status as pilgrims, which opens to them doors of hospitality. They begin their devotions as soon as they gain sight of the sanctuary.

Within the sacred area properly so-called, bounded by an enclosure, even if it is forbidden to cut down trees, out of respect for their spirit (*ayyaana*), it is nevertheless recommended that shreds of cloth or skin should be hung from their branches as offerings. Near to the pool of Dinkiro, which is fed by a miraculous spring, there stands the mosque of Shaykh Ḥusayn. The tomb is in a crypt reached through a low door. The faithful crowd into there, praying, crying, singing and covering themselves with the white dust of the soil or of the walls kneaded with saliva. Outside the grills of the mausoleum, the crowd sings hymns with alternate verses (*baro*) and dances.

The pilgrim then visits sites in the valley of Kachamsaré: the Serpent Grotto, where can be seen the snake which the saint petrified by his single glance; the Grotto of Sins, where the pilgrim sets apart some of the miraculous earth and white stones which he then throws into the Valley of Sins in order to be purified from his faults; the Grotto of Grass, where he makes a vow whilst pulling a sprig of grass; etc. Strange rock formations which abound in the region are everywhere attributed to the saint's actions. The rites to be fulfilled also include fumigations with plants and incense, and the drinking of coffee and chewing of *ḳāt* [*q.v.*] (Oromo *chaatii*). Divination, and cults of possession and exorcism, are likewise practiced.

The whole of the sacred site is in the hereditary custody of one family, the Wau of the Gamuoro tribe, adherents of the Aḥmadiyya *ṭarīḳa*. The mosque, built at Annajina by ʿAbd al-Shakūr, *amīr* of Harar [*q.v.*] 1197-1209/1783-94, and dedicated by him to Shaykh ʿAbd al-Ḳādir al-Djīlānī (the maternal uncle of Sh. Ḥusayn, according to local tradition!), is the sole rallying-point for members of the Ḳādiriyya brotherhood. In the minds of many of the faithful, pilgrimage to Sh. Ḥusayn replaces the Pilgrimage to Mecca and allows the poor to fulfil the obligation of *ḥadjdj*.

The cults of Shaykh Ḥusayn, of his kindred and that of his disciples, are very strongly alive in the region. His father's *ḳubba* is situated at Annajina near to the Imaro pool, one of his sons is honoured at Harar, another in the neighbourhood of that same town, etc. The most important of these accessory sanctuaries, arising only in the second half of the last century, is that of Sof Omar (Ar. Ṣūfī ʿUmar). This is made up of a group of grottoes along the course of the Web (Amhar. Wäyb) river, some 60 km/37 miles to the south of Annajina, grottoes in which the homonymous personage is said to have lived. This mystic—one of the 6,666 disciples of Sh. Ḥusayn, according to popular enthusiasm—may have come from the Tegray/Tigré region in the north of Ethiopia in the 18th century. Sh. Ḥusayn's devotees (*garūba*, pl. *garūbatta*), frequenters of these sacred places, wander around the region, and well beyond it, living off alms.

SHAYKH AL-ISLĀM (A.), an honorific title in use in the Islamic world up to the early 20th century, applied essentially to religious dignitaries.

1. Early history of the term.

The title first appears in Khurāsān towards the end of the 4th/10th century. While honorific titles compounded with *Islām* (like ʿIzz-, Djalāl-, and Sayf al-Islām) were borne by persons exercising secular power (notably the viziers of the Fatimids, cf. M. van Berchem, in *ZDPV*, xvi [1893], 101), the title of Shaykh al-Islām has always been reserved for *ʿulamāʾ* and mystics, like other titles of honour whose first part is *Shaykh* (e.g. *Shaykh al-Dīn*; the surname of *Shaykh al-Futyā* is given by Ibn Khaldūn to the jurist Asad b. al-Furāt, cf. *Muḳaddima*, tr. de Slane, i, p. lxxviii). Of all these titles only that of Shaykh al-Islām has been extensively used. Though apparently used in some instances purely as an honorific, the consistency with which the title appears in the major cities of Khurāsān,

and the fact that no two persons bear the title in the same place at the same time, suggests a functional connotation. Some *Shuyūkh al-Islām* were Ṣūfīs and others scholars of *ḥadīth*. There is no evidence that they were generally known as *fuḳahā'* or that they delivered *fatwā*s. Rather, they seem to have been among the most admired or influential *'ulamā'* in their milieux, and there are indications that their function was to authorise the initial convening of a class for a new teacher in a city during the period before the *madrasa* took over this function. The biographer of one Shaykh al-Islām, the Ḥanbalī Ṣūfī Abū Ismā'īl 'Abd Allāh al-Anṣārī [*q.v.*] of Harāt, praises him for "the ordering of *madrasas*, teachers (*aṣḥāb*), and convents and the holding (*nuwab*) of classes", see R.N. Frye (ed.), *The histories of Nishapur*, The Hague 1965, first ms. of al-Fārisī, fol. 33b; second ms. of al-Fārisī, fol. 82b). Further indications of an educational function for the Shaykh al-Islām are given by R.W. Bulliet, *The Shaikh al-Islam and the evolution of Islamic society*, in *SI*, xxxv, 53-67.

While the office is attested in a number of Persian cities in the 5th/11th century, it seems not to have spread in its functional form to the west. In Syria and Egypt, Shaykh al-Islām became a title of honour but not an official title. It was bestowed on jurists whose *fatwā*s attained a degree of fame and acceptance, such as Ibn Taymiyya [*q.v.*], who was called Shaykh al-Islām by his supporters but denied the title by his adversaries. Later uses of the title under the Il Khāns, the Dihlī Sultanate and Tīmūrids indicate an *'ālim* of high rank performing various functions in the religious and educational arena. These figures were not generally *muftī*s. To the west, however, by 700/1300 the title had gradually become associated with the deliverance of *fatwā*s. This was the case in Syria and Egypt, but opinions differ as to whether Shaykh al-Islām was purely title or designation of the local *muftī* in Anatolia during Saldjūḳ and early Ottoman times. Insofar as it designated an office of any kind, however, it was a local rather than a state one, contrary to the practice in contemporary régimes to the east of Persia, where it was more often, though not invariably, a state post conferred by the ruler.

(J.H. Kramers-[R.W. Bulliet])

2. In the Ottoman empire.

The title *shaykh al-islām* is most famously associated with the Ottoman office of the *Muftī* of the Capital, which is to say, for by far the greater proportion of its existence, the *Muftī* of Istanbul. While several early, not altogether trustworthy uses of the title *shaykh al-islām* occur in documents around the turn of the 14th century (M. Akdağ, *Türkiye'nin iktisadî ve ictimaî tarihi*, ii, Ankara 1971, 62, n. 1), these perhaps reflecting a continuance of Saldjūḳ usage, its earliest use as a title of the *Muftī* of the Capital—with which office it became exclusively associated amongst the Ottomans—is found in the so-called *ḳānūn-nāme* [*q.v.*] of Meḥemmed II relating to state organisation (*TOEM*, supplement to parts 13-15, 10), traditionally dated to *ca.* 1480. Whatever the truth in general in the debate over the authenticity of this important document, it is certainly the case that the extant manuscripts, which date from the early 17th century, are shot through with anachronisms, of which this may well be one. It nevertheless appears that the Ottomans used the term "*Muftī*" and "*Shaykh al-Islām*" interchangeably and often together (as indeed in the passage referred to), the former being by far the more common designation in earlier centuries, the latter gaining the greater currency with the passage of time, and particularly from the 18th century (cf. İ.H. Uzunçarşılı, *Osmanlı devletinin ilmiye teşkilâtı*, Ankara 1965, 174).

The origins of the office of *Shaykh al-Islām*, or *Muftī*, are obscure from the point of view both of the identity of the first few holders of the post and of the reasons for its creation. On the former point, two separate Ottoman traditions exist in the form of lists of the holders of the office, one found at least as early as the *Dewḥa-yi meshā'ikh-i kibār* of the 18th-century writer Müstaḳīm-zāde (Müstaḳīm-zāde Sulaymān Sa'd al-Dīn Efendi: d. 1202/1787-8 [*q.v.*]), the other, rather earlier, in the *Taḳwīm al-tawārīkh* by Kātib Čelebi [*q.v.*]. Müstaḳīm-zāde's list begins with Mollā Shems al-Dīn Muḥammad b. Ḥamza b. Muḥammad al-Fenārī (Mollā Fenārī, d. 834/1431 [see fenārī-zāde]), *Muftī* in Bursa, that of Kātib Čelebi with Khiḍr Beg (d. 863/1459 [*q.v.*]), the first *ḳāḍī* of Istanbul, to whom, Kātib Čelebi says, the office of *Muftī* of Istanbul was also given at the time of the conquest (1453). Though Kātib Čelebi's account has found favour with certain later authors (e.g. Ḥusayn Hezārfenn [*q.v.*], d'Ohsson, Hammer-Purgstall), that of Müstaḳīm-zāde—which depends ultimately on the statement in Tash-köprü-zāde (*al-Shaḳā'iḳ al-Nu'māniyya*, Arabic text in margin of Ibn Khallikān, *Wafayāt al-a'yān*, Būlāḳ 1299, i, 87) that Mollā Fenārī was "*muftī* in the Ottoman lands" (*muftī fi 'l-mamlaka al-'Uthmāniyya*), this being the first occurrence of such a title in his work—has generally, and rightly, been preferred. (On the considerable problems posed by both lists with respect to the *Muftī*s of the 15th century, see R.C. Repp, *The Müftī of Istanbul*, London 1986, 137 ff.)

If the uncertainties about the facts of the lives of the 15th-century *Muftī*s make it difficult to fix a reliable line of succession, the exiguous nature of the evidence about their activities renders it equally difficult to define their functions and rôle. Several certainly, and perhaps all, taught at important *madrasas* while holding the office of *Muftī*. Fakhr al-Dīn al-'Adjamī (d. 873/1468 ?), the second (or third ?) *Muftī*, is remembered for having prevented the young Meḥemmed II [*q.v.*] from coming under the influence of the Ḥurūfiyya [*q.v.*], a fact which suggests that he (like some later *Muftī*s) may have been regarded as a personal religious adviser to the sultan: it is also noteworthy that he, unlike his one, possibly two predecessors, but like all his successors, did not hold the office of *ḳāḍī* simultaneously with that of *Muftī*. Mollā Gūrānī (d. 893/1488 [see gūrānī]), while *Muftī*, conducted an investigation into the suspect conduct of a highly-regarded scholar, while Mollā 'Arab (d. 901/1495-6) was likewise involved in several investigations of suspected heresy and was also active in persuading Bāyezīd II [*q.v.*] to make peace with the Mamlūks in 896/1491. No function can be shown to be exclusive to the 15th-century *Muftī*s, however, and none common to all of them (apart, possibly, from teaching), except, importantly, the issuing of *fatwā*s [*q.v.*], which they and all their successors, at least until the time of Abu 'l-Su'ūd (d. 982/1574 [*q.v.*]), did personally. Their pay was low, certainly compared with that of the *ḳāḍī 'askers* and *ḳāḍī*s [*q.vv.*], and there is no evidence that they were at this stage regularly consulted on affairs of state (the *Muftī* was not in the 15th century, or ever, a member of the imperial council, the *dīwān-i humāyūn* [*q.v.*]).

Despite the apparent lack of definable duties, however, several bits of evidence suggest that the office of *Muftī* was one of considerable importance from its inception. Early testimony to this effect is found in

the account of the Burgundian courtier Bertrandon de la Broquière, who was granted an audience with Murād II [*q.v.*] in Edirne in Radjab 836/March 1433. In describing Murād's entry into Edirne, he notes that he was preceded by "the grand caliph, who is amongst [the Ottomans] as the Pope is amongst us"; the editor of the work appears certain to be correct in identifying "the grand caliph" as the *Shaykh al-Islām* Fakhr al-Dīn al-ʿAdjamī (*Le voyage d'outremer de Bertrandon de la Broquière*, ed. Ch. Schefer, *Recueil de voyages et de documents*, xii, Paris 1892, 181: cf. Repp, *op. cit.*, 115-16, 120). This same Fakhr al-Dīn is likewise found in the place of honour, on the sultan's right hand, at a learned discussion during the circumcision feast of two of the sons of Meḥemmed II in 861/1457. As further evidence of the importance of the office one should note that several outstanding scholars of the time such as Mollā Fenārī, Mollā Khosrew (d. 885/1480-1 [see KHOSREW MOLLĀ]) and Mollā Gūrānī held it as the culmination of distinguished careers. And finally in this connection, for all the doubts about the authenticity of the *ḳānūn-nāme* of Meḥemmed II alluded to above, the passage therein concerning the *Muftī* cannot be ignored: "The *Shaykh al-Islām* is the chief of the *ʿulamāʾ* and the *Muʿallim-i Sulṭān* [*Khʷādja/Hoca*] is similarly the head of the *ʿulamāʾ*. It is fitting for the Grand Vizier to place them above himself out of respect. But the *Muftī* and the *Khʷādja* are many ranks higher than the other viziers and also take precedence over them." (On the questions of precedence thus raised, see further Repp, *op. cit.*, 192-6.)

The contrast between, on the one hand, the ill-defined and apparently relatively modest duties performed by the early *Muftī*s and, on the other, the considerable prestige which the office of *Muftī* seems to have enjoyed from its very beginnings, is illuminating in several respects. The lack of evidence concerning any significant administrative duties consistently and exclusively performed by the 15th-century *Muftī*s makes it difficult to accept that an administrative purpose can have lain behind the founding of the office. Thus R.W. Bulliet's thesis that the explanation of its creation lies in an attempt by the sultans to control the Muslim religious establishment by the control of the educational system through the *Shaykh al-Islām* appears untenable (*The Shaikh al-Islām and the evolution of Islamic society*, in *SI*, xxxv [1972], 53-67). (The view that the Ottoman sultans attempted to control the religious establishment is entirely tenable, but this process was accomplished through the creation of a highly elaborated hierarchy of learned offices which began in the time of Meḥemmed II (d. 886/1481), long before the *Muftī* came to head it.) Similarly, Walsh's assertion that the right to issue *fatwā*s was confined to the *Shaykh al-Islām* from the inception of the office (implicitly as a means of developing a more unified system of law) is unsustainable [see FATWĀ. ii. Ottoman Empire, and further, Repp, *op. cit.*, 299-300].

Walsh's recognition of the peculiarly non-secular character of the office is noteworthy, however, a point reflected also in the most plausible of the explanations offered by Kramers for the foundation of the office, namely that it represents "a survival of the ancient mystical religious tradition in the Ottoman state, a tradition which demanded alongside of the secular power, a religious authority having no judicial powers but representing, so to speak, the religious conscience of the people" (art. *Shaikh al-Islām*, in *EI*[1]). To regard the creation of the office of *Muftī* as meeting a need for a distinctively religious figure in the state, one who would stand apart from the secular government, who would embody the authority of the *Sharīʿa* and who would perhaps even provide a religious sanction for the régime, offers the basis for an explanation of the creation of the office which is consistent with such few facts as are known and which at the same time throws a different light on some apparent peculiarities connected with it. It is in this sense that the separation of the office of *Muftī* from a simultaneously-held post of *ḳāḍī*—an office held in deep suspicion by the more devout *ʿulamaʾ*—which occurred with the appointment of Fakhr al-Dīn al-ʿAdjamī is important. The *Muftī*'s relatively low salary and his not being a member of the *dīwān-i humāyūn*, moreover, far from being signs of the relative unimportance of the office in the 15th century, as they have usually been regarded, should rather be seen as a conscious effort to protect the office from the taint of secularism. Why the need for such an office was felt—whether in some way it was a response to the defeat at the hands of Tīmūr (804/1402), which had been widely seen as divine retribution for the godlessness of the reign of Bāyezīd I (1389-1402: see H. İnalcık, *The rise of Ottoman historiography*, in B. Lewis and P.M. Holt (eds.), *Historians of the Middle East*, London 1962, 155) and/or possibly to heterodox movements in the first quarter of the 15th century—cannot be known on the basis of the evidence currently available.

Notable amongst the 16th-century *Muftī*s were Mollā ʿAlāʾ al-Dīn ʿAlī al-Djamālī [see DJAMĀLĪ], Kemāl Pasha-zāde [*q.v.*], and Abu ʾl-Suʿūd [*q.v.*]. ʿAlī al-Djamālī's long period as *Muftī* (908-32/1503 to 1525-6) saw the office acquire significant additional duties in the form of the responsibility for the teaching at Bāyezīd II's newly-built *madrasa* in Istanbul (in later times assumed by a deputy, the *ders wakīli*) and for the supervision (*naẓāra*) of his *awḳāf*, this latter responsibility being one not infrequently assigned by the sultans to the Grand Vizier. He is likewise credited with having restrained Selīm I [*q.v.*] on several occasions from harsh acts on the grounds of a proper concern for that sultan's welfare in the after-life; though angered, Selīm attempted to reward him with appointment to the offices of the two *ḳāḍī ʿasker*s combined, an offer which ʿAlī Djamālī refused.

Kemāl Pasha-zāde (d. 940/1534), with Abu ʾl-Suʿūd perhaps the most noted of Ottoman scholars of the classical period, is also associated with him in a famous assessment of their respective accomplishments as *Muftī*: "Truly the effect of their *idjtihād* [individual reasoning] was the harmonising of the Ottoman *ḳānūn*s [*q.v.*] with the noble *Sharīʿa* and the ordering of religious and state affairs on the best possible basis" (Newʿī-zāde ʿAṭāʾī [see ʿAṬĀʾĪ], *Ḥadāʾiḳ al-ḥaḳāʾiḳ fī takmilat al-Shaḳāʾiḳ*, Istanbul 1268, 185).

It was in Abu ʾl-Suʿūd's tenure of the office of *Shaykh al-Islām* (952-82/1545-74) that it was to become the head of the already well-established learned hierarchy and to take on definitively the form it was to have until the 19th century. Greatly valued by Süleymān I [*q.v.*], Abu ʾl-Suʿūd strove, as the passage just quoted suggests, to bring together the requirements of the *Sharīʿa* and those of the administration of the state into a workable legal framework. He was active in the issuing of private *fatwā*s as well as *fatwā*s on matters of public policy. In the latter category, his *fatwā* authorising the taking of Cyprus from Venice (see Pečewī, *Taʾrikh*, 2 vols., Istanbul 1281-3, i, 486-7) may represent the first time a *muftī*'s *fatwā* was regarded as sufficient religious sanction for an important matter of state policy (in later centuries, the *Muftī* appears

to have become at the least the spokesman for the *ʿulamāʾ*, though he continued to consult widely before delivering his opinion: cf. I. Mouradgea d'Ohsson, *Tableau général de l'Empire othoman*, 7 vols., Paris 1788-1824, iv, 511-13, 528. On the difficult question of the status of the *Muftī*s' *fatwā*s, see Repp, *op. cit.*, 113-15, 212-21, 279-90). If not actually instituted before his death, the *Muftī*s' close involvement in appointments to the higher offices in the learned profession, a function which they took over from the *ḳāḍī ʿasker*s, was certainly mooted in Abu 'l-Suʿūd's time, with the intent that he should take on this fundamentally important duty (Repp, *op. cit.*, 293-5). Abu 'l-Suʿūd's achievements were recognised by substantial rewards, notably a greatly enhanced salary which, at least from 973/1566, came to surpass that of the *ḳāḍī ʿasker*s.

Further systematic work needs to be done on the nature of the office in the 17th and 18th centuries, during which time (and indeed until the end of the empire) the *Muftī* was recognisably a state official, having gradually been absorbed into the hierarchy, at its head, from the previous position of having stood entirely outside it. He was now frequently, if not invariably, drawn into the decision-making process, in which he played an important part, on matters of state policy such as the making of war and peace or the deposition of a sultan, not in the forum of the *dīwān-i humāyūn*, of which, as mentioned earlier, he was not a member, but through the medium of "consultations" (*müs̲h̲āwere, mes̲h̲were*). The very much greater involvement in affairs of state and the consequent demands on his time meant that the function of the preparation of *fatwā*s, and particularly "private" *fatwā*s, a function of such importance in the early years of the office, passed largely into the hands of a deputy, the *fatwā emīni*, who became with the passage of time a highly influential figure in his own right (on this post, and the organisation of the *Muftī*'s deputies generally, see Uzunçarşılı, *op. cit.*, 195 ff.; U. Heyd, *Some aspects of the Ottoman fetvā*, in *BSOAS*, xxxii [1969], 35-56). It might be speculated that this absorption into the learned hierarchy, at its head, of an office which had originally stood outside it, and much of whose *raison d'être* lay in its independence from the secular government, had its cost. Certainly in purely material terms, though the *Muftī*s gained greatly in terms of salary, perquisites and defined powers, they lost the tenure of the office for life which the early *Muftī*s had almost without exception enjoyed; removal from the office was by now a common occurrence.

In 1241/1826, following the destruction of the Janissaries, Maḥmūd II [*q.v.*] gave the residence of the Ag̲h̲a of the Janissaries near the Süleymaniye mosque to provide an office for the *S̲h̲ayk̲h̲ al-Islām* and his department. The *S̲h̲ayk̲h̲*s now for the first time had a permanent location for their work, having previously carried out their functions in their own residences or in rented accommodation [see BĀB-I MES̲H̲ĪK̲H̲AT]. The diminution of the powers and influence of the *ʿulamāʾ* generally in the 19th century affected the position of the *S̲h̲ayk̲h̲ al-Islām*s as well: they gradually lost their influence, more particularly after the revolution of 1908. The last holder of the office, the 131st, resigned on 4 November 1922 in the wake of the abolition of the sultanate a few days earlier. The office came formally to an end following the abolition of the caliphate on 3 March 1924.

Bibliography: Given in the article.

(R.C. REPP)

S̲H̲AYK̲H̲ MŪSĀ NAT̲H̲RĪ, modern Persian writer dealing in historical novels. The details concerning his life are at the best sketchy. By profession, he was involved in educational activities, serving as principal of the government college *Nuṣrat* in Hamadān and as Director of Education in Kirmāns̲h̲āhān (for his latter designation, see *Armag̲h̲ān* [March-April 1930], 73). He edited the periodical *Ittiḥād* which was published from Hamadān in 1293/1914 (Ṣadr Hās̲h̲imī, *Tārīk̲h̲-i d̲j̲arāyid u mad̲j̲allāt-i Īrān*, i, Iṣfahān 1343/1964-5, 46). An article from him, entitled *S̲h̲āʿir kīst* "Who is a poet?", appeared after his death in the July-August 1968 issue of *Armag̲h̲ān*, suggesting that he died not later than that year.

S̲h̲ayk̲h̲ Mūsā Nat̲h̲rī was among the pioneers of the modern historical novel in Persian. His first work in that genre, entitled *ʿIs̲h̲ḳ u salṭanat* "Love and kingship", was published at Hamadān in 1337/1919 (repr. Bombay 1342/1924), and deals with the exploits of Cyrus the Great, founder of the Achaemenid dynasty. The material for the narrative was borrowed by the author from the French translation of Herodotus's account and historical works in French, as well as from the Avesta. The author claimed that his work was the first historical novel in Persian composed after Western literary models, but Buzurg Alavi has pointed out that Muḥammad Bāḳir Mīrzā K̲h̲usrawī's *Shams u tughrā* is earlier (1328/1910). However, as a piece of fiction, it hardly stands up to artistic scrutiny. According to the criticism of E.G. Browne (*LHP*, iv, 465), the book "is overloaded with dates, archaeological and mythological notes and prolix historical dissertations." It was the first of a trilogy; the others, which appeared later, are *Sitāra-yi Līdī* "The Lydian star" (Bombay 1344/1925-6) and *Sargud̲h̲as̲h̲t-i s̲h̲ahzāda k̲h̲ānum-i Bābilī* "The story of a Babylonian princess" (Kirmāns̲h̲āhān 1311/1932). These show only a slight advance upon their predecessor, and not surprisingly have received little attention from Persian critics. The only aspect of S̲h̲ayk̲h̲ Mūsā Nat̲h̲rī's literary exercises finding approval concerns his language, which tends towards a simplified form. His works, therefore, must be judged not so much for their artistic merit as for their place in the overall historical evolution of modern Persian fiction.

(MUNIBUR RAHMAN)

S̲H̲AYK̲H̲ ṢAFĪ [see ṢAFĪ AL-DĪN ARDABĪLĪ].

AL-S̲H̲AYK̲H̲ SAʿĪD, a monsoon harbour on the straits of Bāb al-Mandab [*q.v.*], lying just north of the so-called Small Strait on a cape whose high cliffs dominate the island of Mayyūn [*q.v.*]. This Strait is also called Bāb Iskandar because Alexander the Great is said to have built a town here. The harbour, named after S̲h̲ayk̲h̲ Saʿīd whose tomb is found on the northern side of the cape, has been identified by Sprenger and Glaser with ancient Ocelis or Acila, which is mentioned by Pliny, Ptolemy and in the *Periplus Maris Erythraei*, and conceals perhaps some

name like ʿUḳayl. The harbour is said to have belonged to the pre-Islamic Ḳatabān [*q.v.*], then to the so-called Gebanites and finally to the Ḥimyarites. Its name is also connected with Mahra b. Ḥaydān b. ʿAmr b. al-Ḥāf, the ancestor of the Mahra [*q.v.*].

The cape was acquired from the local sultan by the French admiral Mahé La Bourdonnais in 1734. Napoleon Bonaparte wished to garrison the cape, a proposal which was also suggested by the French government to Muḥammad ʿAlī Pas͟ha [*q.v.*]. When the latter was preparing to put the plan into force in 1838, he encountered the resolute opposition of the British, who occupied Aden in 1839 and established a coaling station on Mayyūn (Perīm) in 1857. The cape was bought from the local sultan ʿAlī Tabat by a Marseilles firm, and turned over to the Société de Bāb al-Mandab in 1871. In 1884 the harbour was occupied by the Turks, who fortified the cape, notwithstanding continuous but fruitless attempts by the French to enforce their claims. Al-S͟hayk͟h Saʿīd was bombarded by the British in 1914, but the Turks held out, being supported in 1915 by troops sent by the Zaydī Imām Yaḥyā b. al-Manṣūr. The Turks even bombarded Mayyūn and temporarily closed the Straits of Bāb al-Mandab.

S͟HAYK͟H AL-ṬĀʾIFA (see AL-ṬŪSĪ, MUḤAMMAD B. AL-ḤASAN).

AL-S͟HAYK͟H AL-YŪNĀNĪ, the disguise of one of the participants in the transmission of authoritative Neoplatonic thought to Islam based upon a translation of large portions of books IV-VI of the *Enneads* of Plotinus. Fragments with this designation have been recovered without, however, allowing a reconstruction of the form and extent of his work. It is also debatable whether al-S͟hayk͟h al-Yūnānī was substituting for the name of a given philosopher and even might have belonged to the entire lost Arabic Plotinus source. The wide range of meaning of *s͟hayk͟h* [*q.v.*] permits a choice between "Greek Teacher" and "Greek Old Man"; occasional Greek references to some Neoplatonists as *gerōn*, among them Porphyry (see Kutsch), might perhaps tip the scales in favour of "Old Man", whether Porphyry's role in the Arabic Plotinus reflects historical links [see FURFŪRIYŪS] or not (see Zimmermann). In addition to the fragments from the *Enneads*, al-S͟hayk͟h al-Yūnānī is credited with a brief treatise on topics of Neoplatonic philosophy. In this case, as well as in other references, there can hardly be any doubt that he was understood to be one and same person, even where he is brought into contact with ancient philosophers or, rather mysteriously, is described as a pupil of Diogenes (see *Ṣiwān al-ḥikma*, ed. D.M. Dunlop, 56-7, 58-61). The manifold problems connected with this figure cannot be separated from the entire complicated and fateful history of the Arabic Plotinus, for which see UT͟HŪLŪD͟JIYĀ.

(F. Rosenthal)

S͟HAYK͟HIYYA, an important school of speculative theology within Twelver S͟hīʿism, influential mainly in Persia and ʿIrāḳ since the early 19th century. Although at times its leaders have been excommunicated and its doctrines condemned as heretical, S͟hayk͟hism (also known as the Kas͟hfiyya) has accommodated itself fairly successfully with the majority Uṣūlī establishment and is generally regarded as a school (*mad͟hhab*) rather than a sect (*firḳa*). Bābism [see BĀB, BĀBĪS] began in the 1840s as a radical development of S͟hayk͟hī heterodoxy.

1. Early history.

The origins of S͟hayk͟hism are to be found in a highly original attempt to effect a synthesis between (1) the theosophical S͟hīʿism of Mullā Ṣadrā S͟hīrāzī [*q.v.*] and the School of Iṣfahān, (2) the waning Ak͟hbārī tendency, and (3) what Amanat calls a "diffuse gnosticism", influenced by crypto-Ismāʿīlī and related ideas. Later S͟hayk͟hī doctrine owes much to a wish to play down the school's own distinctiveness and effect a compromise with the Uṣūlī establishment.

The school's originator, S͟hayk͟h Aḥmad al-Aḥsāʾī (1166-1241/1753-1826 [*q.v.*]), is still reckoned one of the leading S͟hīʿī *ʿulamāʾ* of the early Ḳād͟jār period, and a thinker of considerable force. His early life in al-Aḥsāʾ, a backwater with few provisions for religious learning, was unpropitious for one with ambitions to scholarship; but by the time of his arrival in the S͟hīʿī shrine colleges of ʿIrāḳ in the early 1790s, he already possessed a prodigious knowledge, not only of *fiḳh* and *kalām*, but of the theosophical texts that were to form the basis of a wide-ranging critique in later years.

More importantly, he had experienced numerous dreams and visions, chiefly of the Imāms, allowing him to claim privileged understanding of the Ḳurʾān and Traditions. This claim to intuitive knowledge sets al-Aḥsāʾī apart from the representatives of the two main currents of S͟hīʿī thinking then contending for dominance: the Uṣūlīs, with their emphasis on *id͟jtihād* through reasoning, and the Ak͟hbārīs [see AK͟HBĀRIYYA in Suppl.], who stressed a literal adherence to the texts themselves, without recourse to *id͟jtihād*.

Having acquired licences from several eminent *mud͟jtahids*, in 1221/1806 al-Aḥsāʾī travelled to Persia. Here he remained for almost twenty years, patronised by Fatḥ ʿAlī S͟hāh [*q.v.*] and a succession of Ḳād͟jār notables. He lived mainly in Yazd (1806-14) and Kirmāns͟hāh (1814-21), where he enjoyed the patronage of Muḥammad ʿAlī Mīrzā and wrote some of his most important books, including the *S͟harḥ al-ziyāra al-d͟jāmiʿa al-kabīra* (his *magnum opus*) and commentaries on the *Risāla al-ʿilmiyya* of Muḥsin Fayḍ al-Kās͟hānī and the *ʿArs͟hiyya* and *Mas͟hāʿir* of Mullā Ṣadrā.

In 1822 in Ḳazwīn, al-Aḥsāʾī first encountered a

charge of apostasy, and in the last four years of his life, spent largely in Karbalā', he became the object of a campaign of vilification. He died on his way to Mecca on 21 Dhu 'l-Ḳa'da 1241/27 June 1826, aged seventy-three.

Al-Aḥsā'ī was succeeded in Karbalā' by a younger Persian disciple, Sayyid Kāẓim Rashtī (d. 1259/1844; birth dates range from 1198/1784 to 1214/1799-1800 [*q.v.*]), like his mentor the product of a non-clerical family. Rashtī remained in Karbalā' until his death and, despite repeated denials that he had established a new *madhhab* within Islam and insistence that he was no more than an expounder and defender of the views of al-Aḥsā'ī, became an effective focus for the allegiance of a small but influential grouping of *'ulamā'* and laymen. A school had effectively been created: on Rashtī's death, his followers split into radically different factions. This division, which has recently been studied in some detail by Amanat, Bayat, and MacEoin, is of wide significance, since it encapsulates some of the most important tensions in Ḳādjār Shī'ism.

The two most extreme divisions to emerge after 1844 were Bābism, which rapidly outgrew its Shaykhī origins to proclaim a new revelation and a new *Sharī'a*, and a conservative branch based in Tabrīz. This latter group included leading *'ulamā'*, merchants, government officials, and notables; after a period of wholesale separation from the religious mainstream, it merged with it and lost its character as a distinct school.

The successive claims of Sayyid 'Alī Muḥammad Shīrāzī, the Bāb [*q.v.*], were a logical development of several strains in Shaykhī thinking, most importantly the emphasis on intuitive knowledge and the concept of a single individual, the Perfect Shī'ī or *bāb*, who could act as an infallible guide to the Imām. Both al-Aḥsā'ī and Rashtī seem to have been regarded (and to have regarded themselves) in this light; the latter divided the dispensation of Islam into two distinct periods: a cycle of outward observances (which came to an end after twelve centuries) and one of inner truth (which began with the appearance of al-Aḥsā'ī).

2. Kirmānī Shaykhism.

The Bāb's chief rival for the allegiance of the school was Ḥādjdj Muḥammad Karīm Khān Kirmānī (1225-88/1810-70), the eldest son of Ibrāhīm Khān Ẓahīr al-Dawla, the governor of Kirmān and Balūčistān (1803-24) and one of al-Aḥsā'ī's leading patrons in Persia. A member of the ruling Ḳādjār family by birth and marriage, Karīm Khān's role as a religious leader in the Kirmān region was both strengthened and complicated by his position as the senior member of the powerful Ibrāhīmī clan and his control of its financial resources. The history of Kirmānī Shaykhism is closely linked both to the fortunes of the Ibrāhīmī family and wider political developments.

A prolific writer and would-be polymath, Karīm Khān sought to reconcile Shaykhī teaching with Uṣūlī orthodoxy, insisting that the school agreed in all its main principles (*uṣūl*) with traditional Shī'ī doctrine, while differing only in practice (*furū'*). The clear heterodoxy of the Bāb and his followers was both an impetus to this policy and an aid in furthering it. Hence his ambivalence over the doctrine of the Fourth Support (*al-rukn al-rābi'*), with which he became particularly associated. In a novel reworking of the traditional five bases of religion (divine unity, prophethood, resurrection, divine justice, and the imamate), Kirmānī reduced them to three (knowledge of God, prophethood, and *imāma*) and added a fourth pillar, knowledge of the friends and enemies of the Imams. In its original formulation, this doctrine leaned towards recognition of a single, divinely-appointed mediator between the Imām and the faithful (identified with al-Aḥsā'ī, Rashtī, and, it would seem, Kirmānī himself). Later, however, almost certainly as a reaction to the Bāb's advancement of similar claims, this was modified to a more general advocacy of the *'ulamā'* and other holy figures as representatives of the Imām. In many respects, this debate prefigures that around Khumaynī's concept of *wilāyat al-faḳīh* and whether its application should be to a single individual or a collective body of *mudjtahids*.

Kirmānī's most significant break with the doctrine of an inspired guide came, however, with his appointment of his own son, Muḥammad Khān (1263-1324/1846-1906) and the creation of a spiritual dynasty similar to those found in Ṣūfism. Leadership of the school was passed down through a series of Ibrāhīmī khāns (generally known by the title Sarkār Āḳā): Ḥādjdj Zayn al-'Ābidīn Khān (1276-1360/1859-1942), Abu 'l-Ḳāsim Khān (1314-89/1896-1969), and 'Abd al-Riḍā Khān (d. 1979). This period saw mounting conservatism, particularly with regard to social reform and acceptance of Western ideas. Bayat speaks of intellectual stagnation in a situation where original Shaykhī doctrine was taught privately while public profession was made of orthodoxy (Bayat, 181).

During the leadership of Ḥādjdj Muḥammad Khān, tension between Shaykhīs and their opponents, known as Bālāsarīs, erupted into violence on several occasions, culminating in virtual civil war in 1905 (MacEoin, *Bālāsarī*). Identification of the Shaykhīs with Ḳādjār interests, and Muḥammad Khān's own hardline royalist stance, encouraged a widening of the issues to a point where the original dispute was eclipsed by growing agitation for a constitution.

Following the assassination of 'Abd al-Riḍā Khān in the aftermath of the Iranian revolution of 1979, the headquarters of the school was moved to Baṣra in 'Irāḳ, where leadership passed to Ḥādjdj Sayyid 'Alī Mūsawī.

At its height in the last century, Shaykhism was an influential school with converts in all the main Persian cities, 'Irāḳ, India, and eastern Arabia. In Persia, the membership included high-ranking government officials and even Muẓaffar al-Dīn Shāh [*q.v.*]: in this respect, it appears to have been an acceptable alternative to Ṣūfism, following the collapse of the Ni'matullāhī revival of the early 19th century.

3. Doctrine.

In broad terms, Shaykhī doctrine differs very little from that of orthodox Twelver Shī'ism, and is generally little further from it than the views of the theosophical thinkers: if anything, al-Aḥsā'ī and Rashtī made greater efforts than Ṣadrā and his followers to remain part of the official religious system. Despite an obvious debt to Ibn al-'Arabī and the Shī'ī theosophers, al-Aḥsā'ī disagreed with them on several important issues, in particular the doctrine of the oneness of existence (*waḥdat al-wudjūd*). Since God remains ontologically separate from and inaccessible to creation, al-Aḥsā'ī emphasised the role of the prophets and imāms as intermediaries between the divine and human worlds. Within this context, he regarded the imāms as the four causes of creation: active (they are the locations of the divine will); material (all things have been created from the rays of their lights); formal (God created the forms of all creatures from the lights of their forms); and final (God created all things for their sake).

It was this view that led to one of the earliest arguments against al-Aḥsā'ī, namely, that he held the

imāms to be creators instead of God. Although he denied this criticism in its extreme form, and argued that his views were based on well-known traditions, there is no doubt that the imāms and their role as manifestations of the divinity played a central role in his theology. Belief in the necessity for the continuing presence of an imām combined with al-Aḥsā'ī's own conviction of the possibility of visionary contact and inspiration to produce a central doctrinal focus on intermediacy in each generation.

This itself led to the view that religious truth has developed through the ages, mankind being likened to a growing child in need of progressively stronger diets. Alongside the idea of an age of inner truth succeeding one of outward observance, Shaykhī teaching proposed that humanity had either come of age or was about to do so—a doctrine which had its strongest impact on Bābism and its successor, Bahā'ism [*q.v.*].

Rashtī's belief that a new age of spirituality had started with al-Aḥsā'ī seems to have given rise to speculation within the school as to the possibility of the advent of the Twelfth Imām's imminent advent, but how extensive such chiliastic expectation really was it is very hard to establish. The Kirmānī Shaykhīs naturally play down all suggestions of messianism, while modern Bahā'īs exaggerate its role on the basis of oral statements. In their writings, both al-Aḥsā'ī and Rashtī adopt a conventional attitude to the question of the Imām's return. Nevertheless, the fact that Rashtī's death was immediately followed by a frantic outburst of millenarianism suggests that, at the very least, talk of living gates to the Imām had excited speculation that the Mahdī himself might soon make his appearance.

In their lifetimes, however, orthodox criticism of al-Aḥsā'ī and Rashtī found a particular focus in the former's teaching on the eschatology of the individual. In several works—notably the *Sharḥ al-ziyāra*—he developed an original doctrine of resurrection based on a complex system of physical and spiritual bodies (for details, see MacEoin, *Cosmology*, Corbin, *Terre céleste*, 146-74). According to this scheme, man possesses four bodies: two *djasad* and two *djism*. For the orthodox, the crucial problem with this system, which involves resurrection in an interworld known as Hūrḳalyā, was its denial of a return for the first *djasad*, the fleshly body of terrestrial elements. Although the Shaykhī doctrine does not entirely spiritualise the process of resurrection, it tended to be interpreted in that way by the school's opponents.

4. Literature.

The corpus of written materials produced by the school's leadership is enormous, although very little has been penned by adherents. A great deal still exists only in manuscript form, although the Shaykhī community of Kirmān has made microfilm copies of all the originals in its own library. Their Sa'ādat Press has published reliable editions of works by all the shaykhs, amounting to several hundred volumes, and plans to issue more. A full bibliography of Shaykhī writing from al-Aḥsā'ī to Abu 'l-Ḳāsim Khān may be found in the latter's *Fihrist*, to which Momen's *The works of Shaykh Aḥmad al-Aḥsā'ī* is useful addition.

SHAYKHŪ, LUWĪS, conventionally L. Cheikho, with the correct name Rizḳ Allāh b. Yūsuf b. ʿAbd al-Masīḥ b. Yaʿḳūb (1859-1927), Jesuit scholar and polygraph. He was the author of many works on Arabic language and literature, especially, Christian Arabic, and founder of the journal *al-Mashrik*. Originally from upper Mesopotamia, he spent most of his life in Beirut.

Born at Mārdīn [*q.v.*], now in Turkey, he came to Beirut at the age of nine for secondary education. He entered the Jesuit order in 1874, studied for four years in France, and on his return to Lebanon, taught in the Jesuit secondary school in Beirut where he began publication of his *Madjānī al-adab*. After further studies at the Université de Saint-Joseph, in England, Austria and Paris, where he became familiar with libraries there and with current orientalist scholarship, he returned in 1894 to Beirut and stayed there substantially until his death, devoting himself to work on Arabic language and literature and to editing *al-Mashrik*, founded by him in 1898.

A catalogue of his impressive literary output, virtually exhaustive, has been given by C. Hechaïmé, his successor as editor of *al-Mashrik*, in his *Bibliographie analytique du Père Louis Cheikho, avec introd. et index*, Beirut 1979, which also includes (161-78) everything which had until then appeared on Shaykhū, during his lifetime and afterwards, and in both the Arab world and that of Orientalist scholarship.

Of his 2,750 writings, the greater part of which—though not the most important—appeared in *al-Mashrik*, some 979 titles are devoted to Christianity and its writings, not directly concerned with Arabic studies. But his major works included his anthology of Arabic literature, the *Madjānī al-adab fī ḥadā'iḳ al-ʿArab*, Beirut 1882-3, 6 vols.; his *Sharḥ* on it, 3 vols.; and its *Fahāris*. The whole work had a great success, with many editions. He edited, from manuscript, the Arabic version of *Kalīla wa-Dimna* [*q.v.*] (1905), the *dīwāns* of Abu 'l-ʿAtāhiyya (1886, 1887), of al-Khansā', and above all, of the *Ḥamāsa* of al-Buḥturī (1910). In the

field of philology, he edited Ibn al-Sikkīt's *K. Iṣlāḥ al-manṭiḳ* and *K. al-Alfāẓ*; two general works on the Arab literature of the 19th century and the first quarter of the 20th century respectively; and his *Catalogue raisonné des manuscrits de la Bibl. Or. de Beyrouth* (191-3-26), a library of which he was in effect the founder and the donor of a large part of its mss.

A lifelong concern of Shaykhū was to highlight the contribution of Arab Christians to the Arabic language and literature, a topic little noticed until his time. It was this fact, plus criticisms from some Western and Arab scholars, which led him to write, from 1910 onwards, one of his most important and controversial works, *al-Naṣrāniyya wa-ādābuhā bayna ʿArab al-Djāhiliyya/Le christianisme et la littérature chrétienne en Arabie avant l'Islam.* He had already written on the topic earlier in his career, but this work excited, when gathered together in three vols. 1912-23, lively polemics, well studied in Hechaïmé, *Louis Cheikho et son livre: Le christianisme et la littérature chrétienne en Arabie avant l'Islam*, Beirut 1967. Shaykhū was criticised for including as Christians poets whose religious allegiance was doubtful or unclear, but Hechaïmé points out that he had the over-enthusiasm of a pioneer but was breaking new ground in bringing the topic forward for critical assessment and examination.

Yet undoubtedly his major achievement was *al-Mashriḳ*, founded in 1898 and having appeared, with interruptions from the two World Wars, continuously ever since; it is thus, with Zaydān's *al-Hilāl*, the sole journal of the late 19th century to have survived till the present time. His declared aim for it was "strenuously to support the cause of the Christian religion, and to promote seriously the disciplines of oriental scholarship and the diffusion of the sciences". Like many other founders of journals of the *Nahḍa*, he threw himself totally into it, writing numerous articles, almost all its reviews of works appearing at the time: a total of 2,700 writings, making up *ca.* 7,000 pages. If some of his apologetic concerns are now less prominent, the journal remains highly valuable for reconstituting the intellectual milieu of the late 19th century in the East, and is an immensely valuable source on the Arabic language and literature of its time.

Shaykhū, disregarded by some, strongly criticised by others, at times not always himself showing a sense of discernment, could never be ignored, given the stature of his personality, his immense literary output and his restless character. He remains, with others of his colleagues at Beirut, such as L. Maʿlūf, A. Ṣalḥānī, H. Lammens and J.B. Belot, a major figure in Arabic letters of the *Nahḍa*.

Bibliography: Given in the article. Brockelmann's notice, S III, 428, is very short and has errors. Those of Y.A. Dāghir, Beirut 1956, ii, 515-24, of Kaḥḥāla, *Muʾallifīn*, viii, 161-2, and Ziriklī, *Aʿlām* ⁵Beirut 1980, iii, 246-7, are equally succinct.

(L. Pouzet)

SHĀYḲIYYA (*sic*; the name comes from the eponym, Shāyḳ; there is no medial *hamza*), a tribe of the northern Nilotic Sudan, first mentioned in 1529 (R.S. O'Fahey and J.L. Spaulding, *Kingdoms of the Sudan*, London 1974, 28). The approximate historical boundaries of their territory stretched from al-Dabba, at the southern end of the great bend of the Nile, upstream to just above the Fourth Cataract.

Despite claims to ʿAbbāsid descent, the Shāyḳiyya are undoubtedly Arabised and Islamised Nubians (J.L. Spaulding, *The Old Shaiqi language in historical perspective*, in *History in Africa*, xvii [1990], 283-92). In the 16th century, they were subjects of the Fundj Sultanate [*q.v.*] under the latter's northern governors, the ʿAbdallāb. At the end of the 17th century the Shāyḳiyya revolted against ʿAbdallāb rule; thereafter, they were *de facto* independent until the Turco-Egyptian conquest of 1820, which they fiercely resisted.

On the eve of the 1820 conquest, the Shāyḳiyya were divided into four kingdoms—Ḥannikāb, Kadjabī, ʿAdlānāb and ʿUmarāb. Under Turco-Egyptian rule (1820-85), many Shāyḳiyya horsemen served the régime as irregular soldiers (*bāshībūzuḳ*), while others took service with the Khartoum traders in the southern Sudan. During the time of the Mahdist rebellion and state (1882-98 [see MAHDIYYA]), many Shāyḳiyya went over to the Mahdī, while others resisted. During the Anglo-Egyptian Condominium (1898-1956), many Shāyḳiyya joined the Sudan Defence Force; upon independence in 1956, a significant proportion of the officer class were Shāyḳī.

SHAYṬĀN (A.), evil spirit, demon, devil.

1. In pre-Islamic Arabia.

According to the lexicographers, *shayṭān* is derived from the verb *shaṭana* "to detain somebody in order to divert him from his intention and his destination", *shaṭan* being "a cord" and *shāṭin* "an evil man". The verbs *shayṭana* and *tashayṭana* signify "to behave like the *shayṭan*".

The *shayṭān* is an evil, rebellious spirit, inhabiting Hell-Fire; he cannot be seen, but he is imagined as a being of great ugliness (al-Djāḥiẓ, *Ḥayawān*, vi, 213). Proverbs underline his wickedness, his cunning and his malice. He is called by this name for having turned aside from the righteous path and for rebellion; hence the name is applied to any impertinent rebel among humans, *djinn* and animals (Yāḳūt, *Muʿdjam*, Beirut 1957, iii, 384). Defining the *djinn* [*q.v.*], al-Djāḥiẓ (*Ḥayawān*, vi, 291) states: "If he is faithless, dishonest, hostile, wicked, he is a *shayṭān* (demon); if he succeeds in supporting an edifice, lifting a heavy weight and listening at the doors of Heaven (*istirāḳ al-samʿ*) he is a *mārid* (rebel); if he is more than this, he is an *ʿifrīt* (powerful demon); more still, he is an *ʿabḳarī* (genie of great intelligence)". Prior to this (vi, 191) he has declared: "If he is pure, clean, untouched by any defilement, being entirely good, he is a *malak* (angel)".

This definition corresponds closely to the notions of the pre-Islamic Arabs, for whom the *shayṭān* is a rebellious *djinnī*. This emerges from Ḳurʾānic statements, which on numerous occasions evoke a degree of identity between *shayṭān* and *djinn* or *djānn*. This applies in particular to the passages relating to the story of Solomon (II, 102; XXI, 82; XXXVIII, 377), to the Revelation (XXVI, 210, 221; VI, 112, 121), to the guarding of the doors of Heaven (XV, 17; XXXVII, 7; LXVII, 5) and to the kidnapping of humans by spirits (VI, 71). There are numerous passages where *shayāṭīn* denotes the deities of paganism (II, 14; IV, 76, 117, 119-120; V, 90-1; XIX, 44-5; etc.). The same sense is also given to *djinn* in VI, 100, and XXXIV, 41.

In the most ancient Arab traditions, reflected in the lexica, in the Ḳurʾān and in the *Ḥadīth* and the

Akhbār, the *shayṭān* is seen as a "genie", sometimes good and sometimes evil. He accompanies man in all his activities. The Prophet is reported to have said: "There is not one of you who does not have a *ḳarīn* derived from the *djinn*" and "There is no descendant of Adam who does not have a *shayṭān* attached to him (see al-Damīrī, *Ḥayāt al-ḥayawān*, i, 242, 246, quoting Muslim, see *Concordance de la Tradition Musulmane*, s.v. *shayṭān*). This "inseparable companion" appears in Ḳur'ān L, 24, 27, as a second witness on the Day of Judgment, in parallel with the *sā'iḳ* and *shahīd* (v. 21) who is the man's guardian angel. The angel being a foreign importation, the composer of the text has judged it appropriate to mention his rival, more familiar to those for whom the Revelation is intended.

A man's activity seems to be conditioned by the presence of this *ḳarīn* beside him or within him. Through his superhuman intelligence, the latter seems to be at the origin of all progress. In fact, in the Ḳur'ānic story of Solomon, it is said that the latter received from God, among other favours, *shayāṭīn* builders (*bannā'*) and divers (*ghawwāṣ*), functions which were imposed upon them (XXXVIII, 37). Al-Djāḥiẓ, speaking of the intelligence of the *shayṭān*, writes: "The *shayāṭīn* are, by comparison with us, more subtle, less harmful, more intelligent, less curious, of lighter body, of more extensive knowledge and of more profound wisdom. For proof of this, all that is needed is general agreement that there is nothing on the earth that is of marvellous innovation, subtle, majestic, nor any secret or manifest transgression, emanating from passion and desire, which is not the consequence of a solicitation by the *shayṭān* and a seduction exerted by him" (*Ḥayawān*, Cairo 1323/1905-6, vi, 83-4). In fact, in the folklore of pre-Islamic Arabia, every work "of genius" is attributed to the *shayṭān* (e.g. the construction of Iram Dhāt al-'Imād).

One of the well-known roles of this *ḳarīn*, called *tābi'* "follower" or *ṣāḥib* "companion", is to act as inspirer to soothsayers and prophets (see Fahd, *La divination arabe*, 91 ff.). The Angel Gabriel, inspirer of the Prophet, is called *shayṭān* by a woman of Ḳuraysh (*abṭa'a 'alayhi shayṭānuhu* "his *shayṭān* has been late in coming"). It was after this delay on the part of the Angel that sūra XCIII was revealed (see al-Bukhārī, ed. Būlāḳ 1289/1872, i, 146).

Still better known is the *shayṭān* of the poet. Al-Djāḥiẓ relates that the Arabs "claimed that every great poet (*faḥl*) had a *shayṭān* of whom he was merely the mouthpiece" (*Ḥayawān*, vi, 225-9). This *shayṭān* could have its own name: that of al-Farazdaḳ was called 'Amr (see I. Goldziher, *Die Ginnen der Dichter*, in *DZMG*, xlv [1891], 685 ff.; Tor Andrae, *Mahomet, sa vie et sa doctrine*, Paris 1938, 28, compares this *shayṭān* to the "muse" of the poet). It was reckoned to be either male or female: Abu 'l-Nadjm boasted that the *shayāṭīn* of all the other poets were female, whereas his was male (quoted in *La divination arabe*, 74, no. 1); another claimed that, despite his youthful age, "his *shayṭān* was the greatest among the *djinn*" (al-Djāḥiẓ, *Ḥayawān*, *loc. cit.*). The poet was in a relationship of absolute dependence with regard to his *shayṭān* (see e.g. *Aghānī*, vii, 67, quoted in *La divination arabe*, *loc. cit.*). This dependence and the loyalty which it supposedly entailed earned poets the nickname of *kilāb al-djinn* "the dogs of the *djinn*" (al-Djāḥiẓ, *Ḥayawān*, *loc. cit.*).

The Ḳur'ān abhors the poet on account of the mystical and magical nature conferred upon him, both through the mystery of the secret knowledge which he possesses and through the fact that he is the habitation of a spirit at whose behest he speaks and composes his verses; all of this makes him a dangerous member of society. Ḥudjr, the last king of Kinda, is supposed to have expelled his son Imru' al-Ḳays and to have "sworn not to dwell in his presence in order to avoid the shame [which would have attached to him], resulting from the fact that his son spoke in verses" (*Aghānī*, ix, 44; *La divination arabe*, 74). Accused by his enemies of being a poet, Muḥammad vehemently refutes the charge. Numerous sūras stress the absence of any similarity between his message and that of the poet: "We have not taught him poetry" (XXXVI, 69); "This is not the speech of a poet" (LXIX, 4). The basis of this reaction was definitely the belief deeply ingrained among Arabs that poetic inspiration was demonic in origin. The spirit which inspired Ḥassān b. Thābit [*q.v.*], Muḥammad's own poet, was, at the outset of his career, a female *djinnī*. A text of al-Djāḥiẓ exposes an attempt at the depaganisation of poetic inspiration in Islam. In effect, the Prophet would have replaced this *shayṭān* with "the holy spirit" (*rūḥ al-ḳudus*). "Speak, he was told, and Djibrīl shall be with you; 'holy spirit' being one of the names given to Djibrīl" (*Ḥayawān*, *loc. cit.*; *La divination arabe*, 72-3). The *djinnī* of 'Abīd b. al-Abraṣ made him swallow a hair-roller in his sleep and caused him to rise; he rose speaking in verse, something that he had never done before, and he became the poet of the Banū Asad (*Aghānī*, xix, 84; *La divination arabe*, 73).

The angelology and demonology of primitive Islam remained rudimentary and anthropomorphic. "The conception of inspiration and revelation from these sources is deeply felt. The *ḥadīths* assembled by Ibn Sa'd (*Ṭabaḳāt*, i/1, 131 f.) regarding the various attitudes of the Prophet at the time when he was under the influence of inspiration, illustrate such a conception" (*La divination arabe*, 75 ff.). For more substantial information, see Fahd, in *Sources orientales*, viii [1971], 155-214, section *Angels, demons and djinns in Islam*.

Bibliography: Besides the references made in the text, ample documentation is to be found in the article mentioned above (212-14) and in the voluminous notes. See also Fahd, *La divination arabe*, Paris 1987. For the pagan deities (Nuhum, Ḳuzaḥ, Ṭāghūt, etc.) considered to be *shayāṭīn*, see idem, *Le panthéon de l'Arabie Centrale à la veille de l'hégire*, Paris 1968, index s.v. *shayṭān*. The notions of al-Djāḥiẓ, al-Damīrī, al-Ḳazwīnī, etc. have been assembled by G. van Vloten in *Dämonen, Geister und Zauber bei den alten Arabern*, in WZKM, vii [1893], 169-87, 233-47, viii (1894), 59-73, 290-2. In this article, the emphasis is laid on lexicographical material. See also: A.S. Tritton, *Spirits and demons in Arabia*, in *JRAS* (1934), 715-27; A. Eichler, *Die Dschinn, Teufel und Engel im Koran*, Leipzig 1928; Goldziher, *Abhandlungen zur arabischen Philologie*, i, Leiden 1896, where *djinn*, *shayṭān*, *hidjā'*, *la'na*, etc. are examined.

Among the Arabic sources, the following should be cited: Ṭabarī, i, 79 ff. (where there is a compilation of traditional notions on the origin and organisation of angels, demons and *djinn*); Ḳazwīnī, *'Adjā'ib al-makhlūḳāt*, i, 55-63 (Ger. tr. with commentary by S.J. Ansbacher, *Die Abschnitte über die Geister und die wunderbaren Geschöpfe aus Kazwini's Kosmographie*, Kiel 1905; F. Taeschner, *Die Psychologie Ḳazwīnī's*, Kiel-Tübingen 1912). Considering the importance of the material contained in the *K. al-Ḥayawān* of Djāḥiẓ (the references of van Vloten being based on manuscript sources), the passages concerned are the following (ed. 'Abd al-Salām Hārūn, Beirut 1388/1969): i, 153, 300: *shayṭān al-ḥamāṭa*; i, 153, 300;

iv, 133; vi, 192: *ḥayya* - *shayṭān*; i, 153; vi, 193: the pride of the *shayṭān*; i, 291; vi, 190-1: definition of the *djinn*; vi, 194-5: the *djinn*, the ascetics and the traditionists; iv, 39-40; vi, 211: *ruʾūs al-shayāṭīn*; vi, 220-2: images of *djinn*, *ghūls*, angels and humans; vi, 22: *ḥadīths* on the existence of the *shayāṭīn*; vi, 225-9: the *shayāṭīn* of the poets; vi, 230, 265-81: *istirāḳ al-samʿ*; vi, 231-3: *shayāṭīn* of Shām and of India; i, 299, 300; vi, 213, 214, 218: *varia*.

(T. Fahd)

2. In the Ḳurʾān and Islamic lore.

The word is used 70 times in the Ḳurʾān in the singular form, including six times in the indefinite (IV, 117, XV, 17, XXII, 3, XXXVII, 7, XLIII, 36, LXXXI, 25), plus 18 times in the plural *shayāṭīn*, always definite. Etymologically, the word is related to the Hebrew *sāṭān*; the route of its passage into Arabic is not evident, although it is generally thought to have passed into Arabic through Christian languages (especially Ethiopic).

In the singular usage, al-Shayṭān is a personal name equivalent to Iblīs [*q.v.*] and its employment is parallel to the Jewish and Christian use of the name. The relationship between the names Iblīs (used only 11 times in the Ḳurʾān) and al-Shayṭān is noteworthy. The name Iblīs figures mainly in the stories of the creation of Adam and the subsequent fall of the devil (the context of 9 passages is "bowing" before Adam). Al-Shayṭān, on the other hand, is the one who tempts Adam and Eve, but his role in scripture extends well beyond this one myth. Iblīs, then, is the one who is proud and disobedient, while al-Shayṭān is the tempter and it is in that role that the emphasis falls within the Ḳurʾān in speaking of him in other contexts as well. The two names are used within the same narrative (II, 30-9) in such a manner that it does not seem possible to suggest that there has been a blending of separate myths related to these two names. The implication (most likely derived from Christian sources) may be that, within the telling of the myth which is reflected in the Ḳurʾān, Iblīs gained the name al-Shayṭān after his disobedience (see e.g. al-Ṭabarī, i, 80).

According to the Ḳurʾānic picture, among Satan's attributes are his ability to cause fear (III, 175), cause people to slip (II, 36, III, 155), lead astray (IV, 60), precipitate enmity and hatred (V, 91), make people forget (VI, 68, XVIII, 63), tempt (VII, 27, XLVII, 25), cause to forget (XII, 42), and provoke strife (XVII, 53). He is described as a comrade to unbelievers (IV, 38), a manifest foe (VII, 22), an enemy (XII, 5). Guile (IV, 76), defilement (VIII, 11) and abomination (V, 90) are associated with him. The image of evil as a "path", like that of righteousness, is conveyed: Satan takes steps and his followers take steps towards him (II, 168, 208, VI, 142, XXIV, 21; see also IV, 83). Satan is thus seen as an influence towards a number of specific as well as more general sins, actions which take people away from God. Among his tools to do this are a number of vocal attributes: he calls (XXXI, 21), simply speaks (XIV, 22, LIX, 16), promises (II, 268), and whispers (VII, 20, XX, 120; see also L, 16, CXIV, 4-5). The subtlety of the evil influence is especially suggested by the onomatopoeic *waswasa* ("whisper") in its root repetition, in its insistence that Satan does not just call or speak but comes over and over again.

The proper name al-Shayṭān may be distinguished from the Ḳurʾānic plural usage *shayāṭīn*, which is often thought to reflect Arabian notions of devils, although it is used in a sense which is not unknown within the Biblical tradition also (e.g. "adversaries" in 1 Samuel, XXIX, 4). These "devils" can be humans or *djinn* [*q.v.*; see Ḳurʾān, VI, 112] and come in varying ranks [see e.g. ʿifrīt]. The references suggest that the word is used to refer to the hosts of evil (e.g. Ḳurʾān, II, 102, VI, 121), the evil leaders among humans (e.g. II, 14, VI, 112) and mischievous spirits very similar to *djinn* (e.g. VI, 71, XXI, 82). They are the friends of the unbelievers (VII, 27), they make evil suggestions (XXIII, 97) and they were believed by Muḥammad's opponents to be the source of his inspiration (XXVI, 210, 221) (see A.T. Welch, *Allah and other supernatural beings: the emergence of the Qurʾanic doctrine of* tawḥīd, in *Jnal. of the American Academy of Religion*, thematic issue, XLVII [1979], 744-5).

The phrase *al-shayṭān al-radjīm* in XVI, 98 (see also III, 36), which has led to widespread practices for protection from the evil influence of Satan, especially in Ḳurʾānic recitation (*istiʿādha* [see taʿawwudh and tadjwīd]), presents its own particular problems. While the word *radjīm* [see radjm] literally means "stoned" and is sometimes taken as a reference to the stoning of the pillars of Satan in the ḥādjdj [*q.v.*] and related to the stories of Abraham and the sacrifice of his son, it has been suggested that the word is an Ethiopic loan word from meaning "accursed" (see A. Jeffrey, *Foreign vocabulary of the Quran*, Baroda 1938, 139-40). The indefinite usage in the phrase *kull shayṭān radjīm*, "every accursed satan", in XV, 17, and LXXXI, 25, suggests a plurality of such satans. This may be understood as parallel to the construction *kull shayṭān marīd*, "every rebel Satan", in XXII, 3, and XXXVII, 7 (see also IV, 117). The linking of these to a literal notion of stoning Satan is probably derived from LXVII, 5 (see also XXXVII, 6-7), which speaks of "lamps" (*maṣābīḥ*) in the heavens (i.e. stars) being objects to throw at the satans.

In *Ḥadīth*, the name Satan continues its Ḳurʾānic prominence, with Iblīs not mentioned often (8 lines of references to Iblīs, versus about 120 lines to al-Shayṭān, in A.J. Wensinck, *Concordance*, viii, Indices, *ad loc.*). Satan is spoken of as the cunning force of evil who interferes with human activity. He is especially prevalent at prayer: "ʿĀʾisha asked Muḥammad about those who glance about in prayer. He said, 'That is the portion which Satan steals from the prayer of anyone.'" (al-Bukhārī, *Kitāb badʾ al-khalḳ, bāb ṣifat Iblīs wa-djunūdihi*). God provides assistance to the believer against Satan, although each person has a satan resting on his shoulder as a constant tempter who is spoken of as "my satan". From here, the popular image of satans, their appearance and their influence develops.

In exegetical material and other literature reflecting more popular images, the Ḳurʾānic predominance of the evil influence of al-Shayṭān on humans becomes overtaken by the personality of Iblīs, ultimately reaching the point of Ṣūfī meditation on the "disobedience of Iblīs" because of his ascetic, worshipping nature and because of his personality which reflects human ambiguity and complexity [see iblīs]. This is by no means to the total neglect of the word *al-shayṭān*, however. Rūmī, for example, suggests in his *Mathnawī* (ed. and tr. R.A. Nicholson, London 1925-40, iii, 3196), "The ego and Satan were also one from the beginning and were enemies and enviers of Adam" in common with a motif which identifies the "lower" self with Satan in the Ṣūfī struggle against the *nafs* (see e.g. Annemarie Schimmel, *Mystical dimensions of Islam*, Chapel Hill, N.C. 1975, 113).

In theological thinking, the existence of al-Shayṭān

as a force of evil has been accepted without a great deal of speculation as to its implications. The emphasis in Islamic thinking has always been that individuals are responsible for their own "fall", as in the case of Adam, and while the role of Satan as a tempter is real (and satisfies a human psychological need, as F. Rahman points out), he provides no excuse for evil behaviour on the part of the individual. Al-Ash῾arī's statement in his credal summary (*Maḳālāt al-islāmiyyīn*, ed. H. Ritter, Istanbul 1929-30, 296) "And that God bestows His sustenance upon His servants, be it lawful or prohibited; and that Satan whispers to men, and makes them doubt, and tramples upon them" reflects the acceptance of the reality of Satan but affirms his lack of real power to effect evil.

Awn, *Satan's tragedy and redemption. Iblīs in Sufi psychology*, Leiden 1983. (A. Rippin)

SHAYṬĀN al-ṬĀḲ "the demon of the arcade", the name by which non-Shī῾ī Muslim authors usually referred to the Imāmī Shī῾ī theologian of the 2nd/8th century Abū Dja῾far Muḥammad (b. ῾Alī) b. al-Nu῾mān b. Abī Ṭarīfa al-Badjalī al-Kūfī (also called al-Aḥwal "the squinter"). No precise dates for him are known; it is only known that he died after 183/799, if it is true (as al-Baghdādī and then al-Ṣafadī state) that he was one of those who "categorically affirmed" (*ḳaṭa῾a*) the death of Mūsā al-Kāẓim.

At the outset, his by-name of Shayṭān does not seem to have been felt as derogatory. Ibn al-Nu῾mān functioned in Kūfa as a money-changer (*ṣayrafī*), at the spot called *Ṭāḳ al-maḥāmil* "Arcade of the litters"; it was his skill in detecting spurious coins which is said to have earned him the by-name. This does not affect the fact that, in general, Imāmī authors themselves prefer to call him Mu'min al-Ṭāḳ, Shāh al-Ṭāḳ or, more simply, Ṣāḥib al-Ṭāḳ. In Sunnī heresiography, his followers are habitually called the Shayṭāniyya, the sole exception being al-Shahrastānī, who uses the term Nu῾māniyya.

Shayṭān al-Ṭāḳ was a skilful controversialist, and had discussions notably with his compatriot Abū Ḥanīfa. Amongst his works (all lost) there appear amongst others several pro-Shī῾ī works of propaganda (*K. al-Imāma*, *K. al-Radd ῾alā 'l-Mu῾tazila fī imāmat al-mafḍūl*, *K. al-Djamal fī amr Ṭalḥa wa 'l-Zubayr wa-῾Ā'isha*, etc.), as well as a *K. al-Ma῾rifa*, and also what was probably a treatise on *fiḳh* called *If῾al lā taf῾al* "Do, don't do!". He was also a poet in his spare time, and al-Marzubānī cites him in his anthology of poets of the Shī῾a.

In *kalām*, his theses cannot be differentiated from those of the Imāmī theologians of his time, except on points of detail. Like the great majority of them, he thought that, basically, God only has knowledge of things at the moment when He created them; that our own personal "items of knowledge" (i.e. those concerning God) cannot be the result of an act of reasoning, but it is God who creates them within ourselves by "constraint" (*al-ma῾ārif kulluhā iḍṭirār*); that ability to act (*istiṭā῾a*) is simply health (*ṣiḥḥa*) and is necessarily, arising from this fact, anterior to the act. Going further, in this respect, than Hishām b. al-Ḥakam [*q.v.*], he held, like the other Hishām (sc. b. Sālim al-Djawālīḳī), that all that exists in this present world is body, including our movements and all our other acts. It thus seems also that, whilst not allowing himself to apply formally this term to God (cf. al-Baghdādī, *Farḳ*, 216 ll. 14-15; al-Shahrastānī, *Milal*, 404 ll. 8-9), he represented Him as likewise being a body; according to al-Kulaynī (*al-Uṣūl min al-Kāfī*, Tehran 1375/1955, i, 101 ll. 1-2), he pictured God, like Hishām b. Sālim and others, "with a hollow body as far as the navel, and the rest full and solid (*ṣamad*)".

Bibliography: Ibn al-Nadīm, *Fihrist*, Tehran 1391/1971, 224; Kashshī, *Ma῾rifat akhbār al-ridjāl*, Bombay 1317, 122-6; Nadjāshī, *Ridjāl*, Bombay 1317, 228; Ṭūsī, *Fihrist*, Nadjaf 1356/1937, 161-2; idem, *Ridjāl*, Nadjaf 1961, 302, 359; Marzubānī, *Akhbār shu῾arā' al-shī῾a*, Nadjaf 1388/1968, 83-92; Ṣafadī, *Wāfī*, iv, 104-5; Ibn Ḥadjar, *Lisān*, v, 108-9, 300-1; Ash῾arī, *Maḳālāt*, Wiesbaden 1963, index; Baghdādī, *Farḳ*, ed. ῾Abd al-Ḥamīd, Cairo n.d., 69, 71; idem. *Uṣūl al-dīn*, Istanbul 1928, 260; Shahrastānī, *Milal*, ed. Badrān, Cairo 1947-55, 403-6, tr. Gimaret and Monnot, *Livre des religions et des sectes*, Paris 1986, i, 539-41; J. van Ess, *Theologie und Gesellschaft im 2. und 3. Jahrhundert Hidschra*, Berlin-New York 1991-3, i, 336-42, v, 66-8.

(D. Gimaret)

SHAYYĀD, a term that meant primarily "speaker" or "one who recited or sang stories or poems in a loud voice", as used in Persian and Turkish between the 7th/13th and 10th/16th centuries. Although probably the emphatic form of the Arabic root *sh-y-d*, meaning "one who highly praised someone or something", it was never used in Arabic. Indeed, Arabic commentators and writers sought its meaning in the Persian word *shayd* ("deceit") and equated it with *kādhib* ("liar"). Thus some saw it as the Arabic emphatic form of *shayd*, i.e. as an Arabised Persian term. *Shayyād* was not included, however, in the great Persian dictionaries of the 11th/17th and 12th/18th centuries. It was first listed in the *Ghiyāth al-lughāt* published in 1242/1826-7, but not all subsequent Persian dictionaries included it. All this has contributed to much confusion about its true meaning.

Shayyād seems to have first appeared in Sa῾dī's *Gulistān* (656/1258) and later in such works as Ḥamd Allāh al-Mustawfī al-Ḳazwīnī's *Ta'rīkh-i Guzīda* (730/1330) and Aflākī's *Manāḳib al-῾ārifīn* (754/1353-4). Disagreement over its meaning began with the earliest translations of, and commentaries on, the *Gulistān*. Some writers generally equated it with "liar" or "trickster", but others, almost all the 10th/16th-century Turkish writers, defined it as a person who elegantly addressed assemblies or told tales and, in the course of doing so, raised his voice; and they used it interchangeably with the Persian *ḳiṣṣakhwān* (Turkicised as *ḳiṣṣakhān*). Sometimes they added to this the connotation of "conjurer" or "masquerader", making it synonymous with the Persian *ma῾rakagīr*.

Some 19th-century European writers, based on Sylvestre de Sacy, also added to *shayyād* the meaning of "dervish". In *EI*[1], s.v. *Shaiyād*, F. Köprülü categorically made this word synonymous with *ḳalender* or vagabond dervish, as well as *῾ayyār* [*q.vv.*]. He also provided his own subjective definition to link *shayyād* to "dervish". He did not, however, provide any historical evidence to show that *shayyāds* were a special Bāṭinī dervish group in Anatolia between the 7th/13th and 10th/16th centuries, as he believed. Because some dervishes, including poets like Shayyād Ḥamza [*q.v.*], had the byname *shayyād*, he assumed that this was a term for another kind of dervish. In his *Risāla-yi ta῾rīfāt*,

the 10th/16th-century Turkish poet Faḳīrī, whom Köprülü cited in this regard, provides no proof that *shayyāds* had any relationship to Bāṭinism or being dervishes as such. He only says that, shouting at the top of his voice, a *shayyād* would describe the battles of ʿAlī and Ḥamza b. ʿAbd al-Muṭṭalib in an exaggerated manner. A *shayyād* could be a dervish, but Faḳīrī does not mention this word in his discussion of dervish groups. Moreover, neither Wāḥidī (*fl.* beg. of 10th/16th century) in his *Menāḳib-i Ḥādjdja-yi Djihān*, nor Ḳaraḳash-zāde ʿÖmer Efendi (*fl.* end of 10th/16th century) in his *Nūr al-hudā li-man ihtadā*, in their accounts of contemporary dervish groups, mention this term. Aflākī, in his *Manāḳib al-ʿārifīn*, mentions *shayyāds* in the circle of Mawlānā Djalāl al-Dīn al-Rūmī and his first *khalīfas* [*q.v.*]. But again, this does not mean that *shayyāds* were by definition any group of dervishes. From much of the contextual evidence, F.N. Uzluk has, in fact, concluded that *shayyāds* were minstrels or *saz* [*q.v.*] players who were often found at Mawlawī gatherings (*Şeyyad sözü hakkında araştırma*, in *DTCFD*, viii [1949], 587-92).

It is especially worthy of note that the great Ottoman historian Muṣṭafā ʿĀlī (d. 1008/1600), in his *Mawāʾid al-nafāʾis fī ḳawāʾid al-madjālis*, never discusses *shayyāds* in the context of dervish groups, although he had a thorough knowledge of such groups and included them in this work. Muṣṭafā ʿĀlī characterises *shayyāds* and *ḳiṣṣakhāns* as people who told lies without reason and swore oaths in order to convince their listeners of what they were saying. This resulted from their attempts to explain unbelievable events in an exaggerated manner. Altogether, the *shayyāds* appear to have been a class of people who had the profession of speaking as narrators or storytellers in a loud voice before large groups. In the early 11th/17th century, the term *shayyād* began to disappear from use and was replaced by such words as *ḳiṣṣakhān*.

Bibliography: For a thorough discussion, see *İA*, art. *Şeyyād* (Ö.F. Akun). (G. Leiser)

SHAYZAR, a town of northern Syria, on the right bank of the Orontes (*nahr al-ʿĀṣī* [see AL-ʿĀṢĪ]) some 20 km/12 miles to the north-west of Ḥamā, ancient *Sizara*, Byzantine Greek *To Sezer*. It is mentioned from earliest recorded times in Egyptian texts, notably the Amarna tablets. The town was refounded by the Seleucids at the end of the 4th century B.C. under the name of Larissa, but resumed its original name in the Roman period. The name Shayzar is attested in the pre-Islamic Arabic literature, e.g. in Imruʾ al-Ḳays. According to al-Balādhurī, *Futūḥ*, 131, the town was conquered by the Arabs under Abū ʿUbayda in 17/638; under the Umayyads, it became an *iḳlīm* or district of the *djund* of Ḥimṣ.

All through the mediaeval period, Shayzar, which controlled one of the Orontes crossings, held a strategic position of the first order. At the end of the 4th/10th century, it was a pawn in the struggles amongst the different masters of Syria: Byzantines, Fāṭimids and Ḥamdānids. Thus the Greeks occupied it 968-70 and again in 994-8, it having passed in the interim into the hands of the Ḥamdānids and then the Fāṭimids. After 999, for nearly 80 years, the town reverted to the Byzantine emperors.

The real apogee of the town came at the end of the 5th/11th century with the installation of the Banū Munḳidh [*q.v.*] at Shayzar in 474/1081. Five princes of this family governed it until 552/1157: Sadīd al-Mulk ʿAlī (474-5/1081-2), then his son Abu ʾl-Murhaf Naṣr (475-91/1082-98), and another of his sons, Abū Salāma Murshid (491/1098), who renounced power in favour of one of his brothers, Abu ʾl-ʿAsākir Sulṭān (491-?549/1098-?1154). The last Munḳidh prince, Tādj al-Dawla Muḥammad, son of the preceeding, died in 552/1157. The Banū Munḳidh, from the Arab tribe of Kināna, had settled in northern Syria at the opening of the 11th century when they entered the service of the Mirdāsids [see MIRDĀS, BANŪ] of Aleppo. The latter ceded to them, in the first place, *ca.* 1025, the territories at around Shayzar which they were controlling at that time. In 474/1081 Sadīd al-Mulk ʿAlī purchased from the Byzantine bishop of al-Bāra the town of Shayzar, and from this time onwards, the Banū Munḳidh resided in the citadel of Shayzar. We know of the town's history under them especially well from the autobiography, the *K. al-Iʿtibār*, of a member of the family, Usāma Ibn Munḳidh. For three-quarters of a century the family succeeded in forming their territories into an autonomous, petty principality. But it was the object of many covetous rivals, given its position at the centre of the ambitions of the princes of Antioch, Aleppo and Damascus. The Munḳidh *amīrs* nevertheless succeeded in preserving their autonomy autonomy by diverse means. The payment of tribute to a nearby prince assured them of protection, as in the 1080s with the prince of Aleppo Muslim b. Ḳuraysh, and also enabled them to obtain the evacuation of hostile armies from their territories. Thus in 1110 and 1121, there was secured the departure of the Franks of Antioch, who had established themselves on the fringes of Shayzar. The same means were used in July 1133 regarding the prince of Damascus, Shams al-Mulūk, who was besieging the fortress. The Munḳidh princes conducted a skilful policy of alliances and of playing off one power against the other. Thus in the 1080s, the *amīr* married one of the daughters of the Saldjūḳ of Damascus Tutush, who was at that time envisaging the conquest of the whole of Syria. In the 1120s, at the time when the Crusaders were at their most dangerous, Abu ʾl-ʿAsākir Sulṭān succeeded in establishing friendly relations with King Baldwin II of Jerusalem. After the end of that decade, the decisive alliance was that with the new ruler of Aleppo, Zangī, which allowed Shayzar to resist the implicit alliance between the Börids or Būrids of Damascus and the Crusaders. Even so, the principality was in real danger on two occasions during the first half of the 6th/12th century. First, the Assassins or Ismāʿīlīs succeeded within a few hours in seizing the fortress of Shayzar, left temporarily deserted by the Banū Munḳidh. Then in 1138, the citadel was besieged by a coalition organised by the Byzantine emperor John Comnenus and including the Crusaders and the Damascenes. The town was saved by a lifting of the siege before it could succeed, probably to be connected with dissensions in the besiegers' camp.

The Munḳidh period of Shayzar's history was also one of a relatively significant cultural development of the principality, due first of all to members of the ruling family such as the prince-poet Abū Salāma Murshid, or his famous son Usāma, both famed in the realm of letters. There were also a number of refugees from the Crusaders, fugitives from places like Tripoli, Maʿarrat al-Nuʿmān or Kafarṭāb at the court of Shayzar. These included political refugees, such as the *amīr* of Tripoli Fakhr al-Mulk Ibn ʿAmmār in 502/1109, but above all, scholars and teachers of Usāma like the poet Ibn al-Munīra and the Andalusian grammarian Abū ʿAbd Allāh, who had worked at the *dār al-ʿilm* in Tripoli.

The violent earthquake of 552/1157 brought about the death of the greater part of the Munḳidh fam-

ily, who were present at an entertainment in one of the rooms of the citadel at the time of the quake. Nūr al-Dīn profited from the opportunity to seize Shayzar in face of the Franks and the Assassins who were coveting it. The town was given to a family who were probably of Kurdish origin, the Banu 'l-Dāya, who, apart from a brief period of disgrace 570-2/1174-6, administered it for Nūr al-Dīn, for Ṣalāḥ al-Dīn and then for the Ayyūbids of Aleppo until 630/1233. The first governor of this family, Madjd al-Dīn Abū Bakr Ibn al-Dāya, was the foster-brother of Nūr al-Dīn. His successors were his brother Sābiḳ al-Dīn ʿUthmān and then the latter's son and grandson ʿIzz al-Dīn Masʿūd and Shihāb al-Dīn Yūsuf. Yūsuf was dismissed by the ruler of Aleppo, al-Malik al-ʿAzīz, probably because he had for a certain time given allegiance to al-Malik al-Muʿaẓẓam of Damascus. Shayzar then lost its relative autonomy and was given to a Kurdish *amīr* called Ibn al-Dunyār, who was directly responsible to the Ayyūbid ruler of Aleppo. The fortress, whose garrison had been reduced after the end of the Banu 'l-Dāya, was dismantled some years later in face of the Mongols.

The town of Shayzar was divided into a lower town or *madīna* (in European sources, *suburbium, pars inferior civitatis*), occupied today by a hamlet, and an upper town dominated by the citadel (*kalʿa*) (the *praesidium, oppidum, pars superior civitatis*). The lower town, to the north of the fortress, between it and the bridge used as a crossing over the Orontes, was several times occupied by besiegers, although it was probably protected by a wall. The fortress, however, was sited on rocky outcrop oriented north-southwards and called by al-Dimashḳī, 205, "the cock's crest". On the southern side, to strengthen the site's defences, a deep ditch had been dug by cutting into the rock for several metres. Of the fortress of the Banū Munḳidh, nothing remains for certain, everything having been destroyed by the earthquakes between 552/1157 and 565/1170. The oldest remains now visible are ostensibly, according to Max Van Berchem, those of the southern keep, said to date from the time of Nūr al-Dīn. The inscriptions still *in situ* speak of works undertaken by the Ayyūbid sultan of Aleppo al-Malik al-ʿAzīz in 630/1233, and then, after the devastating appearance of the Mongols, by the Mamlūk sultans Baybars (659/1260) and Ḳalāwūn (689/1290). From the 14th century onwards, mentions of Shayzar become rare. The fortress never recovered the importance which it has had in the 12th and 13th centuries, and was probably definitively abandoned under the Ottomans.

AL-**SHAYZARĪ**, AMĪN AL-DĪN ABU 'L-GHANĀ'IM MUSLIM b. Abi 'l-Thanā' Maḥmūd b. Sanad al-Dawla Djamāl al-Mulk Abi 'l-Faḍā'il Niʿma b. Sanad al-Dawla Abi 'l-ʿAṭā' Arslān (Raslān) b. Yaḥyā, *adīb*, poet and astronomer.

His grandfather and great-grandfather belonged to the *mamālīk*, in the rank of an *amīr*, of Usāma b. Munḳidh (d. 584/1188 [see MUNḲIDH], lord (*ṣāḥib*) of Shayzar [*q.v.*] on the Orontes. His father (d. after 565/1169) was an *adīb* and poet at the court of Usāma, but acquired also a reputation as grammarian (*naḥwī*) in the Great Mosque at Damascus (ʿImād al-Dīn, *Kharīda* [al-Shām], Damascus 1375/1955, i, 575-9); Ibn al-Ḳiftī, *Inbāh*, Cairo 1374/1955, iii, 273; Ibn Khallikān, Beirut 1389/1969, ii, 524-5, in no. 310). Al Shayzarī was born in Damascus where he also grew up; later he went to Yemen at the court of the Ayyūbid al-Malik al-Muʿizz Ismāʿīl b. Ṭughtigīn (r. 593-8/1197-1201). To the latter he dedicated his anthology *ʿAdjā'ib al-ashʿār wa-gharā'ib al-akhbār*, consisting of 25 chapters. The unique manuscript, dated 690/1291, is in the Maktabat Dār al-ʿUlūm al-Islāmiyya in Peshawar; a modern copy of this manuscript is at Leiden (R. Weipert, in *ZGAIW*, ii [1985], 241, in addition to Brockelmann, S I, 460 and to Sezgin, ii, 80). Al-Shayzarī composed a second anthology soon after 622/1225, called *Djamharat al-Islām dhāt al-nathr wa 'l-niẓām*. It comprises 16 books, which start with *madḥ* and end with *djawāb/khiṭāb*, and each has 10 chapters, the first 5 of which—according to the author—always deal with poetry (*naẓm*) and the other 5 with prose (*nathr*; with very many verses!) of poets and literary people of the Islamic period, i.e. from the 1st to the 7th centuries A.H., occasionally with exact dates. The work was composed for the last Ayyūbid in Yemen, al-Malik al-Masʿūd Ṣalāḥ al-Dīn Yūsuf b. al-Malik al-Kāmil Muḥammad (r. 612-26/1215-29) and contains at the end of each of the 16 books—additionally also, in other places—a poem in his honour composed by the author, who sporadically designates himself as *mamlūk*, and a second one by his son Aḥmad. This *adab* work is an interesting and informative source, for it gives not infrequently *abyāt* (with explanations), *ḥikāyāt, rasā'il* and excerpts or accounts of all sorts from texts, from traditions of the period and of families, and from his own life, preserved otherwise only covertly or not at all (cf. Brockelmann, I[2], 302, S I, 374, xi, 5; see for this *Arabica*, i [1954], 237; Kh. Mardam Bak, in *MMIA*, xxxiii [1377/1958], 3-20). The unique manuscript of Leiden of 697/1298 is available in a facsimile edition by F. Sezgin, Frankfurt/Main 1986 (with reference to the Ph.D. thesis by M.D. Ahmad, *An introduction to and analysis of the Leiden ms. ... with a critical edition of some ... passages*, Oxford [1954?]). Another work by al-Shayzarī which has been preserved (al-Ziriklī, *al-Aʿlām*[4], Beirut 1979, vii, 223) and which was also composed on behalf of al-Malik al-Masʿūd, is *ʿĀdāt al-nudjūm*, an almanac "which closely resembles the celebrated *Calendar of Cordova*. The astronomical information contained in al-Shayzarī's almanac, such as the solar meridian altitude (52½° at the equinoxes) and midday shadow lengths for each month, indicates that the work was *not* compiled for use in the Yemen" (D.A. King, *Mathematical astronomy in medieval Yemen. A biobibliographical survey*, Malibu 1983, 22; idem, *A survey of the scientific manuscripts in the Egyptian National Library*, Winona Lake, Indiana 1986 [= American Research Center in Egypt, Catalogs, vol. v], 66). When and where al-Shayzarī died cannot be ascertained.

Bibliography: Given in the article.

SHEBEK [see SHABAK].

SHEBELLE, a river of the south of Ethiopia and of Somalia, the Shabeelle or Webi Shabeelle, perhaps thus named because it was pointed out to the first travellers as the river (Som. *webi*) [of the land of] leopards (Som. *shabeel*, sc. *Felis pardus nanopardus*), an animal which abounds in these regions. But the dwellers along the river simply call it "the river" (Som. *webi-ga*). The name of the Shebele, an ethnic group settled before the Somali, may have played a role.

It is the longest stretch of water in the Horn of Africa, both in regard to its length (2,488 km/1,546 miles) and in regard to the extent of its catchment area (200,000 km²). It rises in Ethiopia on the fringes of Bale, Arsi and Sidamo, at Hogiso, at an altitude of 2,680 m/8,790 feet, 225 km/140 miles south of Addis Abeba, to the north of Mount Guramba and not far from the sources of another important river, the Ganale, which combines its waters with other rivers to form, in Somalia, the Juba. After the explorations of Christopher (1843), Sacconi (1883) and Baudi di Vesme (1888, 1891, etc.), its course was explored and its sources pinned down by an Italian expedition under the Duca degli Abruzzi, Luigi Amedeo di Savoia (1928-9).

After an origin in rugged country, it flows in a vast bend towards the north-east, rapidly losing height, and then turns southwards. In its upper course it receives numerous affluents from the Harärge and Arsi mountains before forming the southwestern border of the Ogādēn [*q.v.*]. When approaching Mogadishu [see MAḲDISHŪ], at Balʿad it runs parallel to the coast for 1,200 km and ends its course in a marshland between Jilib (Gelib) and the sea, not far from the mouth of the Juba, with which, when very swollen with flood waters, it may sometimes join up.

The Shebelle is, with the Juba, the only permanent river in Somalia. Both of them traverse arid regions, in such a way that they have been compared to the Tigris and Euphrates and the region which they encompass in Mesopotamia. The river has made possible sedentary and agricultural life along its banks, which contrasts with the nomadism dominant on the plateaux through which it flows. The first attempts at modern agricultural activity were made by the Italians. Carletti, governor of Somalia 1906-10, reserved several million hectares for colonists, and an experimental agricultural station was opened in 1912; but it was only after the First World War, under the Fascist governor De Vecchi (1923-8), that new efforts led to a transformation of the economy of Somalia. The main protagonist here was the Duca degli Abruzzi, who set up the Società Agricola Italo-Somala (1920) and was able to involve the population there (the Bantu Shidle, etc.) in projects for producing cotton, sugar, bananas, rice, oil-yielding seeds, etc. The economic value of the valley has continued up to our own time, and has called for numerous hydraulic works in damming the waters and dividing them up into channels, thereby compensating for the river's irregularity of flow. An important barrage is planned in Ethiopia.

The populations of the lands traversed by the river are in overwhelming majority Cushitic and Muslim, Oromo on the Ethiopian side and Somali in the Somalia Republic.

SHEBÎN ḲARAḤIṢÂR [see ḲARĀ ḤIṢĀR].

SHEBṢEFÂ (SHEBIṢEFĀ, SHEBṢAFĀ) **ḲADÎN**, Ottoman princess (d. 1220/1805), probably the sixth in rank among the *ḳadîns* of Sultan ʿAbdülḥamīd I. She was the mother of a prince who died young and of Princess Hibetullāh Sulṭān (b. 1202/1788). In 1212/1798 she acquired the *čiftlik* of Djihān-zāde Ḥüseyin Beg, and also owned agricultural land in the vicinity of Salonica or Selānik [*q.v.*], apart from a pension out of the funds of the Istanbul customs. Shebṣefā Ḳadîn is noted for the foundation bearing her name in the Istanbul area of Zeyrek, established in 1202/1787 according to the inscription over the entrance to the mosque. Originally built on different levels, the foundation consists of mosque, primary school and *česhme*, along with the grave of the foundress. A *waḳfiyye*, dated 1220/1805, specifies that the school was also to be open to girls, a provision which has earned Shebṣefā Ḳadîn the reputation of a pioneer in Ottoman female education.

(SURAIYA FAROQHI)

SHEFÎḲ MEḤMED EFENDI, called Muṣarrif-zāde, Ottoman imperial chronicler, poet and prose stylist, d. 1127/1715, best known for his *Shefîḳ-nāme*, a history of the events of the year 1115/1703.

Little is known of his family and early years. He was born in Istanbul, and later adopted the pen-name Shefîḳ. His father is thought to have been employed in the accounts office of the imperial kitchens (*maṭbakh-i ʿāmire*). Meḥmed himself entered the bureaucratic service as a clerk (*kātib*) *in the dīwān-i hümāyūn*, where he later rose to become head of one of its scribal bureaux. In the 1690s he served as a clerk in the Ottoman military campaigns against Venice, Austria and Russia. Around the beginning of the 18th century, his fortunes took a distinct turn for the better when he became a confidant of Rāmī Meḥmed Pasha [*q.v.*], the incumbent *Reʾīs ül-Küttāb* [*q.v.*], an office which was even then evolving into the Ottomans' Ministry of Foreign Affairs. After Rāmī Meḥmed became *Wezīr-i Aʿẓam* in 1115/1703, Shefîḳ Meḥmed was named an official chronicler of the realm, although apparently without the title of *waḳʿa-nüwīs*.

Shefîḳ Meḥmed's principal work, the *Shefîḳ-nāme*, records in heavy, allegorical style the so-called *Edirne Waḳʿasî*, the events surrounding the deposition of Sultan Muṣṭafā II [*q.v.*] in 1115/1703, and the role of Muṣṭafā's imperial *Imām* and *Sheykh al-Islām* Sayyid Feyḍ Allāh Efendi [*q.v.*]. The same "Edirne Episode" was also responsible for the fall of Shefîḳ Meḥmed's patron Rāmī Meḥmed, and consequently for his own eclipse. Although the same events are discussed in another of his works, entitled *Muwaḍḍaḥ-i Shefîḳ-nāme*, this version has been all but overlooked because of the *Shefîḳ-nāme*'s fuller, if opaque, treatment. F. Babinger in *EI*¹ refers to yet another manuscript on the same subject, called *Taʾrīkh-i ʿAbd Allāh*, which he attributes to Shefîḳ

Meḥmed as well. A copy of the work, bearing this title, is apparently held by the Vienna National Library, but its relationship to the other manuscripts remains in question. Manuscript copies of the *Sheftḳ-nāme* and *Muwaḍḍaḥ* can be found in numerous libraries in Turkey and Europe. Of the variously titled versions (if they are all, indeed, Shefīḳ Meḥmed's), only the *Sheftḳ-nāme* has been printed. Although probably written around 1118/1706, that is, about three years after the events described, it was first published in 1866. Later editions appeared in the 1870s, sometimes including either the commentary of Maḥmūd Djelāl al-Dīn Pasha (entitled *Rawḍat al-kāmilīn*, printed Istanbul 1289/1872-3) or that of Shefīḳ Meḥmed's contemporary, ʿAbd Allāh Meḥmed b. Aḥmed Efendi. Manuscript copies of both commentaries are also available in many of Istanbul's libraries, including Istanbul University, Topkapı Sarayı and Süleymaniye. Although Shefīḳ Meḥmed remained active through his historical writings and poetry in the years after the 1115/1703 revolution, he did not achieve wide public notice until 1125/1713, when his friendship with the new *Wezīr-i Aʿẓam*, Dāmād ʿAlī Pasha [*q.v.*], secured him a place in the *Wezīr*'s circle of intimates and he was rewarded with the chief post in the small accounts bureau (*küčük muḥāsebedjilik*) of the *ewḳāf*. He died in Istanbul in 1127/1715. Like many Ottoman littérateurs, he was proficient in Persian and Arabic, and was a member of the Mawlawī Ṣūfī order [see MAWLAWIYYA].

(MADELINE C. ZILFI)

SHEHIR EMĀNETI (T.), a term used for two successive institutions of the Ottoman empire.

The first of these appears in the person of the *shehir emīni* mentioned in the *Ḳānūn-nāme* of Meḥemmed II as ranked below the *defterdār* and *defter emīni* but above the *reʾīs ül-küttāb*, without his function being defined. His appearance just after the conquest of Constantinople led Byzantine scholars of the 19th century, perhaps inspired by a passage of Count Andreossy, who translated this function as "prefect of the town" and followed by some Turkish authors (ʿOthmān Nūrī, in *Medjelle-yi Umūr-i Belediyye*, i [Istanbul 1922], 1358-9), to put forward the hypothesis that this official was the successor of the Byzantine *eparchos*, himself the heir of the Roman *praefectus urbis*. However, later Turkish scholars, starting with Fuat Köprülü (*Bizans'in osmanlı müesseselerine te'siri*, Istanbul 1931, 266-7), have rejected this idea, noting, quite rightly, the dissimilarity between the two offices. In effect, the eparch, the leading administrator of the capital, responsible for its provisioning, judge and police chief and deputy for the emperor during his absence (L. Brehier, *Les institutions de l'Empire byzantin*, Paris 1949, 186-92), seems rather to have fulfilled the urban functions of the Grand Vizier, or at least those of his lieutenant, the *ḳāʾimmaḳām*, than the much more modest ones of the *shehir emīni*, who appears to have functioned more like intendant of the royal buildings in pre-Revolutionary France.

The *shehir emīni*'s functions, so far as they can be deduced from the various documents in which he is mentioned, involved the construction, repair, provisioning and payment of salaries of the personnel of the imperial palaces in Istanbul, sc. the New one (Ṭopḳapî) and the Ancient one, as well as those of Ghalaṭa Saray and of Ibrāhīm Pasha, serving as barracks for the *ʿAdjemī oghlans*. Together with the *maṭbakh-i ʿāmire emīni* (head of the imperial kitchens), the *ḍarbkhāne emīni* (head of the imperial mints) and the *arpa emīni* (head of the imperial stables), he was one of the four great civilian dignitaries (*khʷādjegān*) of the outside administration (*bīrūn*) of the palace. He was thus the superior in rank of the head architect and his services, and supervised the building of the imperial buildings, apart perhaps from the greatest building operations, such as complexes of religous buildings, etc., for which an *ad hoc* supervisor was appointed.

He seems to have been a more important personage in the 16th century, and often to have been assimilated to the military class, since we see a *müteferriḳa* becoming *shehir emīni* and a *shehir emīni* becoming a *čāwūsh bashî*, than he was in the 18th century, when the office was held by persons previously in the rank of *ketkhüdā*. This decline in status entailed a conflict of authority with that of the chief architect, and in 1831 the two functions were suppressed and replaced by that of the director of imperial buildings (*ebniye-yi khāṣṣe, müdīri*), but the appointment to this latter office of the last chief architect, ʿAbd ül-Ḥalīm Bey, shows that it was really the second which absorbed the first.

The second *shehir emīni* appears 24 years after the disappearance of the first when, in a report of 13 June 1855, the High Assembly of the *Tanẓīmāt* proposed suppressing the Ministry of *Iḥtisāb*, which had in 1826 succeeded to the functions of the traditional *muḥtesib* with the same functions of urban policing, and its replacement by a *shehir emīni* flanked by a municipal council made up of "the members of the trade corporation with the highest profile" (ʿOthmān Nūrī, *op. cit.*, 1371-2). If this new office of *shehir emāneti*, translated in texts of the time as "Préfecture de la ville", seems directly inspired by the French prefectorial system, whilst taking into account the assimilation of the term *shehir emīni* to that of town prefect, proposed by Andreossy, the duties for which he became responsible, of cleansing and keeping tidy the city, as well as the new *shehir emīni*'s responsibility to tour the markets and bazaars, merely perpetuated the functions of the old *muḥtesib*.

The date of the creation of this new office corresponds to that of the Crimean War, when the presence of a large number of foreigners in the Ottoman capital brought a demand for municipal services like paved streets and street lighting. Since neither the ancient services of the *iḥtisāb* nor those of the *shehir emīni* were capable of responding to the new needs of a municipality, the *intiẓām-i shehir ḳomisyonu*, translated into French as "Commission municipale" was set up on 6 May 1856 with the participation of several members of the city's European colony. It made up the nucleus of the "sixth circle", *altîndjî dāʾire*, the first municipality of the Ottoman empire, limited to the quarters of Pera (Beyoğlu) and Ghalaṭa, largely occupied by Europeans and the non-Muslims subjects of the Porte. Founded in December 1857, it was merged after 1869 in the Istanbul municipality with the creation of a municipal council responsible to the *shehir emīni*, who thus became mayor of the city.

After the foundation of the Republic, a *shehir emāneti* was also created for Ankara on 16 February 1924. Finally, by the law of 3 April 1930, a uniform system of municipalities (*belediye*) was created for the whole country.

(St. Yerasimos)

SHEHIR EMĪNI [see shehir emāneti].

SHEHIR KETKHÜDĀSĪ (t.), an official of the pre-modern Ottoman empire, who had financial and administrative duties. His prime function was to collect the specified taxation from a town or its quarters (a function thus corresponding to that of the *shaykh al-balad* in Egypt), whereas the *aʿyān* [*q.v.*] acquired tax-farming rights in the rural areas of the provinces. As with the *aʿyān*, the office of *shehir ketkhüdāsī* tended to become hereditary; and there was, obviously, much scope in it for oppression of the taxpayers. Having lasted from the time of Süleymān the Magnificent, the office was abolished in the early 19th century as part of Maḥmūd II's [*q.v.*] reforms.

Bibliography: Pakalın, iii, 317-18, and see baladiyya. 1. Turkey. (Ed.)

SHEHR [see shahr].

SHEHR-I SEBZ [see kash].

SHEHZĀDE (p., T.), a title of Ottoman princes.

The term *shehzāde* (or *shāhzāde*, from Pers. *shāh* "king" + *zāda* "born of"), "prince", was one of the titles used for the male children born to a reigning Ottoman sultan. It is said to have been introduced by Meḥemmed I (816-24/1413-21) for his own sons, and over subsequent decades gradually superseded the earlier term *čelebi*. *Shehzāde* came into use around the same time as the title *pādishāh* [*q.v.*], as part of the general elevation of Ottoman political and cultural pretensions following Meḥemmed I's reunification of the state, and continued in use until the reign of ʿAbd ül-Ḥamīd I (1187-1203/1774-89), when *efendi* became the preferred princely title.

As a title (particularly from the mid-10th/16th century onwards), *shehzāde* was regularly used in conjunction with the basic title *sulṭān* [*q.v.*], by which all adult sons of the reigning sultan were also known: i.e. "Shehzāde Sulṭān X" (and even "Shehzāde Sulṭān X Khān [*sic*]", the designation applied by Pečewī to all six sons of Aḥmed I, see *Taʾrīkh-i Pečewī*, Istanbul 1281/1864, ii, 347-9). A clear distinction was thus made between the ruler and his sons. *Shehzāde* was also widely used in a purely descriptive sense, synonymous with *oghul*, "son": e.g. *shehzādeleri Sulṭān Bāyezīd... we Sulṭān Muṣṭafā* "his [Meḥemmed II's] sons Sultan Bāyezīd... and Sultan Muṣṭafā" (Tursun Bey, *Târîh-i Ebü 'l-Feth*, ed. M. Tulum, Istanbul 1977, 84).

Bibliography: A.D. Alderson, *The structure of the Ottoman dynasty*, Oxford 1956, 112-20; İ.H. Uzunçarşılı, *Osmanlı devletinin saray teşkilâtı*, Ankara 1984, 107-45. (Christine Woodhead)

SHEKER BAYRAMI [see ʿīd al-fiṭr].

SHEMʿDĀNĪ-ZĀDE Süleymān Efendi, also known as Fīndiḳlīlī Süleymān Efendi, 18th century member of the Ottoman *ʿulemāʾ*, provincial judge (*ḳāḍī*), and author of the *Mürʾī 'l-tewārīkh*, was born in Fīndiḳlī, Istanbul, at an unknown date. He was the son of a Tokat merchant, Shemʿdānī Meḥmed Agha, who reputedly stood up to rebels who were attempting to raid the Istanbul Customs Office during the events of the Patrona Khalīl [*q.v.*] rebellion in 1143/1730. He was later recognised for his bravery by the Grand Vizier Yegen Meḥmed Pasha [*q.v.*], who had been the Customs Officer in Istanbul at the time of the events in question (Aktepe, p. xvii). Süleymān Efendi, then, was a member of a prominent Istanbul family, which had settled in Istanbul at least by 1143/1730, if not earlier. He apparently preferred the religious profession over commerce, and chose to be a judge (Aktepe, p. xviii). Information on his career is scant, but a few details are scattered throughout his history. He is known to have been appointed judge at Ismāʿīl in Rumeli in 1178/1765, where he served as a guide and host for the passage of Selīm Giray Khan into Ottoman territory. Of other Balkan towns, he was appointed to Beypazarı and Pravişte at dates unknown. In 1183/1769, he was appointed to Ankara; in 1185/1771, to Tokat and in 1190/1776, to al-Fayyūm [*q.v.*] in Egypt. He died in Istanbul in 1193/1779, and was buried in Eyyūb (Aktepe, pp. xvii, xviii).

Süleymān Efendi wrote his *Mürʾī 'l-tewārīkh* as a supplement to Kātib Čelebi's [*q.v.*] *Taḳwīm al-tewārīkh*, written in 1058/1648, and extended by Meḥmed Sheykhī and Ibrāhīm Müteferriḳa [*q.v.*] to 1145/1733. Süleymān Efendi had intended to end his work with 1188/1774, presenting it to the new sultan ʿAbd ül-Ḥamīd I [*q.v.*], but he extended it to 1191/1777 to include some of the post-war events and appointments (Aktepe, pp. xxi-xxii). He acknowledged his debt to the official historians Ṣubḥī and ʿIzzī Süleymān, whose works he consulted and incorporated until the year 1165/1752. The value of the work lies in Süleymān Efendi's original contribution for the period from 1165-91/1752-77, especially for the 1768-74 Russo-Turkish War, when, as *ḳāḍī* of Tokat, for example, he was responsible for enrolling a regiment of Janissaries for the battlefront (Aktepe, ii/b, 61). His description offers historians one of the few realistic pictures of the difficulties of 18th-century Ottoman mobilisation, and his work supplements the other chronicles of the same period, those of Enwerī and Wāṣıf [*q.vv.*].

Bibliography: *Sidjill-i ʿothmānī*, iii, 86; *ʿOthmānlı müʾellifleri*, iii, 144; Babinger, 306-7; *Mürʾī 'l-tewārīkh*, Beyazit ms. 5144, published in Istanbul in 1919, with foreword by Aḥmed Tewḥīd; additional biographical data and an analytical bibliography of manuscript copies in M.M. Aktepe's edition, *Şemʾdânî-zâde Fındıklılı Süleyman Efendi târihi Mürʾi't-tevârih*, Istanbul 1976-81. (Virginia Aksan)

SHEMʿĪ, the *takhalluṣ* or pen-name of a Turkish translator and commentator of Persian literary works who flourished in the second half of the 10th/16th century. In his own works and in most of the biographical sources only this name is mentioned. B. Dorn, referring to "two manuscripts" of Ḥādjdjī Khalīfa, asserted that he was properly called Muṣṭafā Darwīsh. Even more uncertain is the name Shemʿ-Allāh Perzerīnī which Bursalī Meḥmed Ṭāhir attributed to him; this was based perhaps on the confusion with another Shemʿī, a Ṣūfī poet from the town of Prizren [*q.v.*], or Perzerīn, who belonged to the mystical tradition of Sheykh Wefā (d. 896/1490-1) and died in 936/1529-30 (see Ḥādjdjī Khalīfa, ed. Flügel, iii, 287, and Laṭīfī, *Tedhkere*, Istanbul 1314/1896-7,

210-2, tr. O. Rescher, Tübingen 1950, i, 164-5). The dates mentioned in the sources for the death of the commentator Shemʿī, sc. about 1000/1591-2 (Ḥādjdjī Khalīfa, ii, 53) and 1005/1596-7 (Thüreyyā), cannot be correct because his commentary on Djāmī's *Subḥat al-abrār* was completed in 1009/1600-1, and as late as 1012/1603-4 a verse translation of *arbaʿīn* traditions, entitled *Miftāḥ-i futūḥāt*, was dedicated by Shemʿī to Sultan Meḥemmed III (see Blochet, ii, 169). Also, very little is known about his life. He is described as a man of mystical inclination who made a living as a private teacher of "the sons of the people and the servants of the great and the exalted" (Naʿīmā). The numerous commentaries on Persian classics which he wrote are obviously related to this profession. Several of these works were dedicated to officials of the Ottoman court during the reigns of Murād III (982-1003/1574-95) and Meḥemmed III (1003-12/1595-1603).

Shemʿī wrote commentaries on: (1) Farīd al-Dīn ʿAṭṭār's *Pand-nāma*, with the title *Saʿādat-nāma*, and a dedication to Zīrek Agha, a courtier of Murād III (cf. e.g. Ḥādjdjī Khalīfa, ii, 68; Dorn, 333-5; Dozy, ii, 115; Rieu, *Turkish mss.*, 154-5; Blochet, i, 319; H. Ritter, in *Oriens*, xiii-xvi [1961], 232-3). (2) *Manṭiḳ al-ṭayr* by the same (1005/1596-7), at the request of Ḥasan Agha, the *agha* of the Janissaries (cf. e.g. Ḥādjdjī Khalīfa, vi, 190; H. Ritter, in Oriens, xi [1958], 55). (3) Niẓāmī's *Makhzan al-asrār*, dedicated to Ghaḍanfer Agha, the *ḍābiṭ-i Bāb al-saʿādet* (cf. Ḥādjdjī Khalīfa, ii, 975). (4) Saʿdī's *Gulistān* (977/1569 or 979/1571), at the request of Meḥmed Čelebī, the intendant of the sultan's gardens (cf. e.g. Ḥādjdjī Khalīfa, v, 231; Pertsch, 93-4; Rieu, *Persian mss.*, ii, 607; idem, *Turkish mss.*, 156-7; Blochet, i, 350, 384; Ateş, 193). (5) *Būstān* by the same (about 1000/1591-2) (cf. e.g. Ḥādjdjī Khalīfa, ii, 53; Rieu,*Turkish mss.*, 156; Ateş, 198; Leiden, ms. Or. 12448). (6) Djalāl al-Dīn Rūmi's *Mathnawī-yi maʿnawī* (*ca.* 999/1590-1) in six books, by order of sultan Murād III (cf. e.g. Ḥādjdjī Khalīfa, v, 375; Rieu, *Persian mss.*, ii, 589; idem, *Turkish mss.*, 155). (7) Ḥāfiẓ, *Dīwān* (981/1574), for his patron Aḥmed Ferīdūn (cf. e.g. Ḥādjdjī Khalīfa, iii, 273; Rieu, *Persian mss.*, ii, 631; idem, *Turkish mss.*, 158). (8) Djāmī's *Bahāristān* (between 982-7/1574-9), dedicated to the Grand Vizier Ṣoḳollī [*q.v.*] Meḥmed Pasha (cf. e.g. Dozy, ii, 357; Rieu, *Persian mss.*, 755). (9) *Tuḥfat al-aḥrār* by the same (1006/1597), for Meḥemmed III's *Khādim* Ḥasan Pasa (cf. e.g. Ḥādjdjī Khalīfa, ii, 219; Pertsch, 105; Dozy ii, 120; Ateş, 443). (10) *Subḥat al-abrār* by the same (1009/1600), dedicated to Ghaḍanfer Agha (cf. e.g. Ḥādjdjī Khalīfa, iii, 575; Blochet, ii, 331; Ateş, 439). (11) Shāhī, *Dīwān*, for his patron Aḥmed b. Meḥmed (cf. e.g. Ḥādjdjī Khalīfa, iii, 286; Dozy, ii, 119-20; Blochet 341).

Shemʿī used a fairly simple method. Invariably, the main element of his comment was a full Turkish paraphrase of the Persian text, to which very short explanatory remarks were added. Not inappropriately the term "translation" (*terdjüme*) is sometimes applied to his commentaries. His work, as well as that of his confrère Surūrī [*q.v.*], is often criticised in Sūdī's [*q.v.*] commentary on the *Dīwān* of Ḥāfiẓ.

(J.T.P. de Bruijn)

SHEMS al-DĪN GÜNALTAY, in modern Turkish, Şemseddin Günaltay, 20th-century Turkish statesman and historian. A prolific historian and a professor, Shems al-Dīn Günaltay (1883-1961) served as the Prime Minister of the Turkish Republic during its decisive transition to a multi-party system in the mid-century.

After obtaining a degree in science at a teachers' college, he graduated from the University of Lausanne, where he studied natural sciences. Privately, he mastered Arabic and Persian. After teaching and serving as principal at various high schools, he was in 1914 appointed *müderris* or professor of Turkish history and the history of Islamic nations at the University of Istanbul. He also taught the history of religion and Islamic philosophy at the Süleymāniyye Madrasa. In 1915 he became a member of the Ottoman Parliament, where he served until its dissolution. During the national liberation struggle (1919-22), he was a member and Deputy Chairman of the Istanbul Municipal Council.

A staunch supporter of Muṣṭafā Kemāl Pasha (Atatürk [*q.v.*]) and his successor, President İsmet İnönü [*q.v.* in Suppl.], Günaltay served more than 30 years as a parliamentary deputy (first for Sivas, then for Erzincan). From January 1949 to May 1950 he was Prime Minister. As such, he introduced legislation for direct parliamentary elections and enabled Turkey to have its first free national elections, as a result of which his party fell from power. From May 1950 to his death in October 1961, Günaltay was successively parliamentary deputy, Chairman of his party (the Republican People's Party) for Istanbul and Member of the Council of Deputies and Senator.

During much of his political life, Günaltay continued to teach history at the University of Istanbul. He also served as President of the Turkish Historical Society from 1941 onwards.

Bibliography: Günaltay's major scholarly works include *Taʾrīkh-i edyān* ("History of religions", 1922), *Islām taʾrīkhi* ("History of Islam", 1925), *Islāmda taʾrīkh we müwerrikhler* ("History and historians in Islam", 1923-1925), *Islām dīnī taʾrīkhi* ("History of the Islamic religion", 1924), the 5-volume *Mufassal Türk taʾrīkhi* ("Comprehensive history of the Turks", 1928-1933), the 4-volume *Yakın şark tarihi* ("History of the Near East", 1937-51, and *Türk tarihinin ilk devirleri* ("Early periods of Turkish history", 1937).

(Talat Sait Halman)

SHEN-SI, Shaanxi, a province in the northwest of China, bounded in the north by the province of Suiyüan, in the south by the provinces of Ssu-ch'uan and Hu-pei, in the west by the provinces of Kan-su and Ning-hsia, and in the east by the provinces of Shan-si and Hê-nan. Shen-si has been of geographical and political importance, as many dynasties (from the Cho in the 12th century B.C. to the Tang in the 10th century A.D.) established their régimes in this area, previously called Kuan-chung. The capital of Shen-si is Hsi-an (previously called Ch'ang-an), which was a cosmopolitan city in the past.

It was a centre of Muslims during the Tang (A.D. 618-907), Sung (A.D. 960-1279) and Mongol-Yüan (A.D. 1206-1368) periods. Muslims were assigned an autonomous district in the city during the Tang period, and one of the oldest Chinese mosques, named Hua-chüeh-hsian Ta-shi (also called Tang-ta Shi), originally built around A.D. 742, is located here.

After the Mongol conquest of China, a mass Muslim migration from Central Asia into China took place. In 1289, when the Mongol prince Ananda (who succeeded his father Prince Mangala) was appointed as Prince An-hsi to govern Shen-si, more Muslims were brought into this province. Ananda and his son Ürlüg Temür had close contact with Central Asian Muslims. It is said, according to the author of the *Djāmiʿ al-tawārīkh*, that they were converted to Islam and gave strong support to it. Muslim communities in Shen-si, especially in the north, thus increased and gradually developed into one of the biggest Muslim population concentrations. (By the mid-19th century, before the great rebellions, the Muslim population in Shen-si was probably around 4,000,000; but after the suppression of the rebellions, the population was reduced to around 500,000.)

Chinese Islamic *madrasa* education has been regarded as starting from Shen-si, and from there spread all over China. Hu Têng-chou (1522-97), a Shen-si native of Hsien-yang, with the Islamic name Muḥammad ʿAbd Allāh Ilyās, was the founder of the so-called Shen-si school of Chinese *madrasa*-mosque education (another one is the Shan-tung school). Hu's teaching was said to emphasise interpretation of the doctrine of *Tawḥīd* and Islamic philosophy. He adopted a great number of Arabic works as textbooks, and invented a so-called Ching-t'ang Yü (*madrasa* language) in his *ḥalḳa* teaching. Ching-t'ang Yü is, in fact, a hybrid of Chinese and Islamic (Arabic and Persian) languages. This language is still employed in Islamic college teaching at the present time. Hu's inclination to an Arabic form of Islam, since he spent quite a long period studying in Arabia, distinguished the Shen-si school from the Shan-tung school, which was more inclined to Persian Islam.

Shen-si has always been rather a poor province in natural resources, while its people were notorious for being truculent and violent in nature. Likewise, Shensi Muslims were also known for their militant characteristics. Throughout modern Chinese history, Muslims from this region played a significant role in local rebellions; however, it was not until the mid-19th century that Shen-si Muslims fought for their own lives and religion. Shen-si Muslim insurrections in 1860s and 1870s resulted from social, economic and religious conflicts between the Han and the Muslims, and political oppression from corrupt local Manchu bureaucrats. It has also been suggested that the Muslim insurrections echoed the Taiping Revolt. Muslim rebellions in Shen-si, were certainly influenced by the Djahriyya Ṣūfī (a sub-order of the Naḳshbandiyya) reform movement led by Ma Minghsin [*q.v.*] early in the 19th century. Ma's movement stimulated the Muslims' consciousness and strengthened their Islamic identity. The best known Shen-si Muslim rebel leader was Pai Yen-hu [*q.v.*], who later, together with his followers, fled to Sinkiang to join Yaʿḳūb Beg's [*q.v.*] movement, then fled to Kazakhstan and Kirghizia and eventually settled there; they were the forefathers of the present Dungans.

(Chang-Kuan Lin)

SHENLIK (t.), an Ottoman term for public festivities which marked special occasions and, unlike ceremonies limited to certain groups, involved the participation of the entire populace.

The main festivities of the empire included religious ones such as the commemoration of the death of Ḥusayn on 10 Muḥarram, the eve of the Prophet's birthday and the end of Ramaḍān, marked and celebrated by holidays. The Pilgrimage provided other opportunities for public festivities: the departure of the royal caravan and pilgrims for Mecca on 12 Radjab and their return on the third month of the year were publicly honoured. On the return of the Pilgrimage caravan, for instance, houses were decorated, the pilgrim's door was painted green, and everyone sought the pilgrim's blessing and intercession. Another religious celebration of non-Muslim origin occurred on 23 April when all celebrated St. George's Day, on which the Muslims commemorated Khiḍr, as a festival for spring when many went on picnics.

Non-religious public festivities included the girding of the sultan which marked the formal acknowledgement of his succession, as well as the birth or circumcision of his children, the sons' initiation into formal education, the wedding of a member of the sultan's family or some noted dignitary, and the reception of certain ambassadors. Another major occasion was the departure of the Ottoman army on campaign, often accompanied by the firing of cannon, beating of drums, and performances by military bands; major victories and the homecoming of the army were also extensively observed, with mock battle scenes and illuminations. Fireworks, including small rockets (*fishek*), were often the most significant feature here. In many instances, the sultans also promoted spectacular pageants, mock battles between Muslims and Christians, water triumphs, illuminations and fireworks in order to keep up the morale of the populace in times of defeat and other calamities. There were also parades of trade guilds before the sultan, lasting for as long as three days or more, in which they displayed their professional techniques on large floats. The mingling of religious with secular events often enhanced its splendour. Many Ottoman works, such as the *Sūrnāme-yi hümāyūn* (Topkapı Palace Archives doc. no. R. 283) and *Sūrnāme-yi Wehbī*, (Topkapı, Palace Archives doc. no. A. 3539), contain depictions of such public festivities.

(Fatma Müge Göçek)

SHERBET (Ar. Pers. Tk.), a fruit-based drink; the term is derived from the Arabic *sharba*, meaning a drink or beverage. Sherbet was first recorded in English in the early 17th century, and there are many other European cognate forms, viz. *sorbet* (Fr.), *sorbetto* (It.), *sorbete* (Sp.), etc. According to Turkish and European sources, in Istanbul sherbet was made from a variety of ingredients, of which the most common was lemon juice, mixed with sugar, honey and water, and sometimes with musk and ambergris, often cooled with ice or snow in summer, and served warm by itinerant vendors in the winter time. Other ingredients might include violets, *nīlūfer* (water-lily flowers), rhubarb, roses, lotus, tamarind and grapes. Richard Knolles, *The general history of the Turkes*, London 1621, describes a dinner given for foreign ambassadors in Istanbul in 1603, when "the table ... thus furnished, the guests without any cerimonie of washing sat downe on the ground ... and fell on their victuall, and dranke out of great earthen dishes, water prepared with sugar, which drink they call Zerbet"; elsewhere he mentions that it is made of "the juice of lymons, water and sugar". George Sandys, *A relation of a journey begun An.Dom.1610*, London 1615; an anonymous manuscript in the British Museum of 1027/1618 (Add. 23880); and J.-B. Tavernier, *a new relation of the Inner-Part of the Grand Seignor's Seraglio*, London 1677, all describe the composition and serving of sherbet in detail.

The Turkish historian Ewliyā Čelebi, *Narrative of travels in Europe, Asia and Africa*, tr. J. von Hammer, London 1834-50, lists the ingredients of a variety of sherbets, and another fruit-based drink, *khō shāb* (possibly with an alcoholic content) which was equally popular in the 17th century. He names the various districts where the sherbet-makers lived, such as Top Hane, Fındıklı and Scutari, and their special products. He also describes a procession in 1042/1633, when the merchants of musk sherbets (*eshribe-yi mümesseke*) "pass exposing to public view in china vases and tankards every kind of sherbet made of rhubarb, ambergris, roses, lemons, tamarinds, etc., of different colours and scents, which they distribute among the spectators".

The lemon juice which was so important a component of sherbet, came from lemons (*līmūn*), almost exclusively imported from the island of Chios; see Sandys, Du Loir, *Les Voyages*, Paris 1654, and R. Mantran, *Istanbul dans la seconde moitié du XVII^e siècle*, Paris 1962, for the Turkish sources. Sherbet was served in pottery or glass covered bowls; a Turkish painting of a *sherbetdji* shows the sherbet seller at his stall, working a hand-pump in order to activate a sherbet fountain (Warsaw University Library, Teka 171, no. 536). A by-product of the sherbet industry was the ingenious invention, at Kütahya in the early 12th/18th century, of pottery lemon-squeezers with a concealed trap; see J. Carswell, *The lemon-squeezer: an unique form of Turkish pottery*, in *IV^eme Congres International d'Art Turc*, Univ. de Provence, Etudes historiques 3, Aix 1976.

(J. Carswell)

SHEREF, ʿABD AL-RAḤMĀN (1853-1925), late Ottoman historian and statesman.

ʿAbd al-Raḥmān Sheref was born in Istanbul, the son of a chief clerk at the Imperial Arsenal (*Ṭopkhāne-yi ʿāmire*), whose family hailed from Safranbolu in northwestern Anatolia. ʿAbd al-Raḥmān Sheref graduated from the famous Galatasaray Lycée in 1873. After this he taught at several different establishments, from the *Makhredj-i Aḳlām* (a college for civil servants which existed between 1864 and 1876) to the *Dār al-Fünūn* (University), which was re-opened in 1900, having been closed since 1880. All through the long reign of ʿAbd al-Ḥamīd II (1876-1909 [*q.v.*]) he was a central figure in the educational establishment, serving for sixteen years as director of the Civil Service Academy (*Mekteb-i Mülkiyye*) and for fourteen as director of the Galatasaray Lycée.

After the Constitutional Revolution in 1908, ʿAbd al-Raḥmān Sheref gained even more prominence. He was appointed to the Senate (remaining a member until the end of the Empire) and was made Minister for the *Defter-i Khāḳānī* (Revenue Register). He also served as Minister of Education for three short spells and as Minister of Pious Foundations (*Ewḳāf*) and President of the Council of State. As Minister of Education, he took the initiative in founding bilingual (French-Turkish) "model" (*nümūne*) secondary schools.

From 1909 until the end of the empire in 1922 he was the last offical chronicler (*waḳʿa-nüwīs*) of the Ottoman Empire. In this capacity, he finished the eighth and last volume of the history of his predecessor Luṭfī Efendi. His own chronicle of the years 1908-18 has remained unpublished. ʿAbd al-Raḥmān Sheref's importance for the study of Ottoman history lies not so much in any great originality or depth but in his work as an organiser and populariser. He published fourteen books and numerous articles. Some of the former, such as the *Taʾrīkh-i dewlet-i ʿothmāniyye* (1883) and the *Fedhleke-yi taʾrīkh-i dewlet-i ʿāliye-yi ʿothmāniyye* (1884) were widely used as textbooks in schools. He also wrote a regular historical column for the newspaper *Waḳit* ("Time"). ʿAbd al-Raḥmān Sheref was instrumental in establishing history as a modern discipline in Turkey. The most important step in this direction was the establishing in 1910 of the *Taʾrīkh-i ʿOthmānī Endjümeni*, (Society for Ottoman History). This society, of which he became permanent president, concentrated on translating European works on Ottoman and Turkish history and on text editions. Its main aim, the publication of a large-scale Turkish history of the Ottoman Empire, was not realised during his lifetime, but the institute's journal, *Taʾrīkh-i ʿOthmānī Endjümeni Medjmūʿasi* (*TOEM*), published from 1910 to 1924 and continued under the title of *Türk Taʾrīkhi Endjümeni Medjmūʿasi* until 1928, was the first of its kind in the Empire.

In 1923, ʿAbd al-Raḥmān Sheref was elected to the National Assembly in Ankara as one of the representatives for Istanbul. He also headed the Turkish Red Crescent Society. In 1925 he fell ill; he died at Istanbul at the age of 72 and was buried in his native Eyüp.

(E.J. Zürcher)

SHEWḲĪ BEG (Şevki Bey in present-day Turkish orthography), Turkish composer of great popularity, was born the son of a comb-maker in 1277/1860 in the Fātiḥ quarter of Istanbul. The exceptionally gifted young man was accepted at the Sultan's music school (*Mūzīḳa-i hümāyūn mektebi*) under the aegis of Callisto Guatelli (1868-99), and studied there under

the celebrated composer Ḥādjdjī ʿĀrif Beg (Hacı Ârif Bey, d. 1302/1885). Strongly addicted to alcohol and unable to pursue a normal existence, he lived a dervish-like (*rindī*) variant of a Romantic artist's life. At the age of 31, he died on 2 Dhu 'l-Ḥidjdja 1307/19 July 1890 and was buried at Beylerbeyi on the Bosphorus.

Shewkī Beg, sometimes called the "Turkish Schubert", is known for his songs in the form of *sharkī* (*şarkı*), the "Lied" form of Turkish art music that had gained a new quality and popularity by the compositions of his famous teacher. In his own lyric-melancholic style, Shewkī Beg composed several hundred *sharkī* songs. In contrast to Ḥādjdjī ʿĀrif Beg, he contented himself with a relatively small selection of modes (*maḳām* [*q.v.*]/*makam*) and metres (*uṣūl*/*usûl*). About one-third of the pieces attributed to him are composed in one and the same *maḳām*, called "lovers" (*ʿushshāḳ*/*uşşak*)—a remarkable correspondence to the main subject of his song texts. The most popular of these texts were recorded, together with indications of mode and metre, in contemporaneous and later song text collections.

Some of his melodies have survived in musical notation. Suphi Ezgi (1870-1962), who knew Shewkī Beg personally, is said to have written down 120 of his songs. He published fifteen of them in his voluminous book on Turkish music (see below). A few more are included in other printed and handwritten song collections.

Bibliography: Suphi Ezgi, *Nazarî ve ameli türk musikisi*, i-v, Istanbul 1933-53, *passim*; İbnülemin Mahmut Kemal İnal, *Hoş sadâ*, Istanbul 1958, 276-8; Y. Öztuna, *Şevki Bey*, Ankara 1988 (lists 234 works, presents 140 song texts; full bibl.); idem, *Büyük türk mûsikîsi ansiklopedisi*, Ankara 1990, ii, 355-9.

(E. Neubauer)

SHEYKH-OGHLU, Ṣadr al-Dīn Muṣṭafā (modern Turkish: Şeyhoğlu, Sadrüddin Mustafa) (b. 741/1340-1), sometimes referred to as Sheykh-zāde, under which name he was dealt with in *EI*[1]. He should not be confused with the translator of *Ḳirḳ wezīrler ḥikāyeleri* [see sheykh-zāde. 3].

Poet, translator and court dignitary, Sheykh oghlu was an important figure in the development of Ottoman *dīwān* poetry, especially the *methnewī* genre, in the 8th/14th century. He extended the focus of the *methnewī* to romance and human love rather than just religion and mystic love, an approach seen also in the *Djemshīd we-Khurshīd* written in 805/1403 by his rival Aḥmedī [see aḥmadī]. Outstripped as a lyricist by the latter, Sheykh-oghlu also drew less attention than later writers of such *methnewīs* as *Leylā and Medjnūn*, *Yūsuf and Zelīkhā* and *Khusrew and Shīrīn*. He is, however, a figure about whom many contradictory and erroneous statements have been made in the sources both old and recent, Turkish and European. Most common of the errors, which we find in the earliest of Ottoman literary biographies, the *Hesht bihisht* of Sehī (d. 994/1586 [*q.v.*]), is to identify him with Djemālī the nephew of Sheykhī [*q.v.*], who completed his uncle's *Khusrew ü Shīrīn*, used the *laḳab* of Sheykh-zāde or Sheykh-oghlu, and was still alive in the last decade of the 15th century (see Hüseyin Ayan, *Şeyhoğlu Mustafa* Ḫurşîd-nâme (Hurşîd ü Ferahşâd), *inceleme-metinsözlük-konu dizini*, Erzurum 1979, 8; and Ömer Faruk Akün in *İA*, art. *Şeyhoğlu*).

Sheykh-oghlu's birthdate is given as 741 or 742 (1340-1), but it is not known where he was born, nor when and where he died. A statement at the end of his *Kenzü 'l-küberā* indicates that he completed that work in 789/1401, but he must have died after 804/1401 and before 812/1409.

The name Muṣṭafā, by which he has been known over the centuries, was one acknowledged by Sheykh-oghlu himself and recorded also by Aḥmedi, but it has now been shown that be also used the name Ṣadr al-Dīn. As a result, two translations (see below), previously credited to an unknown Ṣadr al-Dīn have been credited to Sheykh-oghlu (Zeynep Korkmaz, *"Ḳābūs-nāme" ve "Marzubān-nāme" çevirleri kimindir?*, in *Türk Dili Araştırmaları Yıllığı* [1966], 267-78; Kemal Yazuv, *Şeyhoğlu* Kenzü'l Küberâ ve Mehekkü'l-Ulemâ (*inceleme-metin-indeks*) Ankara 1991).

Statements in Sheykh-oghlu's works show that his forebears included high officials and scholars, and that his family was an influential one at the court of the Germiyān *amīrs* of Kütahya [see germiyān-oghullarī]. It seems that he was brought up there during the reign of Meḥmed b. Yaʿḳūb I and given a *medrese* education. As an adult, he acted as chief of chancery and treasurer to Meḥmed b. Yaʿḳūb's successor Süleymān Shāh (d. 789/1387). Süleymān was a ruler well-known as a patron to men of letters, encouraging them to execute translations from Arabic and Persian and to produce original works in Turkish. On the death of Süleymān, Sheykh-oghlu served the Ottoman Yïldïrïm Bāyezīd until that ruler was defeated by Tīmūr at Ankara in 805/1402, after which he transferred his allegiance to Bāyezīd's son, Prince Süleymān supporting him in the struggle for the throne.

There is still uncertainty about Sheykh-oghlu's total literary output. Poems by him appear in some old collections and he is said to have written an *ʿAshḳ-nāme*, but no manuscript has been discovered. Well-known are his *Khurshīd-nāme* and a *Kenz ül-küberā*. The former, a *methnawī* romance completed in 789/1387, comprises close to 8,000 *bayts* (see Ayan, 24 ff.). In his preface, Sheykh-oghlu refers to it also as *Shehristān-i ʿushshāḳ*, and sources have labelled it variously as *Khurshīd ü Ferahshād* (or *Ferakhshād*), *Khurshīd ü Ferrukhshād*, or simply *Ferrukh-nāme*. The text indicates that, although Sheykh-oghlu began the work for Süleymān Shāh of Germiyān, after the death of that patron in 789/1387 he presented it to Bāyezīd. As for the origin of the work, Sheykh-oghlu's statement that it came from "a pleasant Arab story" (A. Bombaci, *La letteratura turca*, Milan 1969, 295), has to be weighed against the fact that it draws heavily on the *Shāh-nāmā* and the general literary tradition of Iran for themes and motifs, but also includes strong personal views as well as elements from the history and traditions of the Turks (see Ayan, 31 ff.). Most of the characters in the work have Persian names, exceptions being Bogha Khān the Tatar ruler, and Turumtay his vizier (which, Akün suggests, indicates a memory of Īlkhānid days in Anatolia). The introductory sections cover the usual topics required of a *methnewī*, and the main story is structured on the motif of falling in love "sight unseen", one frequently encountered in both Persian and Turkish literature, the protagonists being Khurshīd, daughter of the Khān of Īrān, and Ferahshād, son of the ruler of the Maghrib. The *Kenz ül-küberā*, a prose work liberally interspersed with verse, was completed in 803 Radjab/March 1401 and is believed to have been Sheykh-oghlu's last work. Categorised by Kemal Yavuz as the second example (after the *Ḳutadghu bilig* [*q.v.*]) of a "Mirror for Princes" in a Turkic language, the work resembles in format, but is not a translation (as has been suggested) of Nadjm al-Dīn Rāzī's *Mirṣād al-ʿibād* (Yavuz, *op. cit.* 10-11). It opens with appropriate

introductory material. Then in four chapters Sheykh-oghlu discusses the status and responsibilities of rulers, state officials, legislative, scholarly and religious functionaries, supporting his views with anecdotal material that shows him to be well-versed in scholarship and literature, and makes the work an important source of information on 9th/15th-century society.

As for the two translations now credited to Sheykh-oghlu, and undertaken at the command of Süleymān Shāh, these are: (1) *Marzubān-nāme* (believed to be the earlier), based on the Warāwīnī version of the original 4th/10th-century work, was itself later translated into Arabic [see MARZBĀN-NĀMA]. With its didactic nature, typical of Persian *andarz* literature, the use of animal fables as in *Kalīla wa-Dimna*, and motifs in its frame story reminiscent of *Ḳutadghu bilig*, the work must have been especially attractive to Sheykh-oghlu, and presumably influenced the writing of his own last work, *Kenz ül-kübera* (see Yavuz, 11). (2) *Ḳābūs-nāme*, written by the Ziyārid ruler of Ṭabaristān and Gurgān, Kay Kāwūs b. Iskandar [*q.v.*] for his son Gīlān Shāh in 475/1082-3, a work also in the *andarz* and "Mirror for Princes" tradition.

In addition to Sheykh-oghlu's importance for the literary, intellectual and social aspects of Anatolia, he has a place in the development of the Turkish language as a literary vehicle in the 8th/14th century. Said to have complained (fashionably) about the unsuitability of Turkish as a vehicle for poetry, he nevertheless stressed the importance of producing works in that language and is praised for the style that he accomplished (see Akün, 483, and Ayan, 11, 15; the Zeynep Korkmaz study of the *Marzubān-nāme* supplies a detailed analysis of his language).

Bibliography: The main sources are given in the article. For further titles and details of mss., see the bibls. in Akün, Korkmaz and Yavuz.

SHEYKH-ZĀDE, the name of various figures in Ottoman Turkish literature.

1. A name sometimes used in reference to SHEYKH-OGHLU, Ṣadr al-Dīn Muṣṭafa [*q.v.*].

2. The *lakab* of Djemālī, nephew of Sheykhī [*q.v.*].

3. An unidentified Ottoman writer referred to by sources also as Sheykh-zāde Aḥmed or Aḥmed-i Mīṣrī and said to have presented to Murād II a collection of stories, *Ḥikāyet-i erbaʿīn-i, ṣubḥ u mesā*, translated from Arabic. The Arabic original is considered no longer extant and, contrary to earlier studies, a recent work in Turkey (Mübeccel Kızıltan, *Kırk vezirler hikâyeleri. Metin-dizin-kaynakça*, doktora tezi, İstanbul Üniversitesi 1991) posits that two writers are involved, an Aḥmed-i Mīṣrī who translated the work from Arabic and presented it to Murād II (1421-51), and a Sheykh-zāde who took up the text later, presenting it to both Murād II and Meḥemmed II (1451-81). The collection of stories, related in a frame-style format and centred on the motif of a chaste youth and lustful stepmother, is well-known in English through E.J.W. Gibb, *The history of the forty Vezirs*, London 1886.

(KATHLEEN BURRILL)

SHEYTĀNLİḲ (Grk. Gyaros, vernacular Gioúra), the Tkish. name (lit. "devilry, craftiness") for an island of the Aegean Cyclades group, lying to the northwest of Syros or Shire [*q.v.*]. From Roman times onwards, up to the period 1936-74, it has served as a place of exile and imprisonment for political prisoners, but may also have acquired its name from its great vulnerability to pirate attacks. In Byzantine times, as in Antiquity, shells for purple dye were fished for there (see K.R. Setton, in *Speculum*, xix [1944], 196). From 1206 to 1566 it was part of the Archipelago Duchy of Naxos (see NAKSHE and map XIV in Pitcher, *Hist. geogr. of the Ottoman empire*), but was seized temporarily by Khayr al-Dīn Pasha [*q.v.*] in 1537; it then became part of a petty Italian maritime state with strong Roman Catholic influence until the Ottomans took it over in 1617 (see K.R. Setton, in *Camb. med. hist.*, iv/1², 426). Greek pirates used it as a base during the War of Independence (1821 onwards), preying on European shipping, as attested by the contemporary Jourdain (*Méms. hist. et militaires sur les événements de la Grèce*, Paris 1828, ii, 225). At present, the island is uninhabited.

(A. SAVVIDES)

SHEYYĀD ḤAMZA, modern Turkish Şeyyad Ḥamza, a 7th/13th-century Turkish mystical poet mentioned in 10th/16th-century biographies but about whose life details are elusive.

He probably lived mainly in the Akşehir-Sivrihisar area, and a tombstone in Akşehir [see AKSHEHIR] is reported to be that of a daughter Aṣlī Khātūn (Rıfkı Melûl Meriç, *Akşehir türbe ve mezarları kitabeleri* in *TM*, v, 179). Mehmed Fuad Köprülü was the first to note him in this century, publishing a 15-*beyt* remnant of a *methnewī* of his contained in Egerdirli Ḥādjdjī Kemāl's *Djāmiʿ al-neẓā'ir* (on this genre see Nihat Sami Banarlı, *Resimli Türk edebiyatı tarihi*, Istanbul 1971, 617-8) and characterising him and his *laḳab* as typical of the Bāṭinī trends [see BĀṬINIYYA] current in Anatolia during the period of the Mongol invasion (see Köprülü's *EI*¹ art. SHAIYĀD ḤAMZA). Subsequent research has uncovered more of Ḥamza's works, produced other theories on his *laḳab* (see Vasfi Mahir Kocatürk, *Tekke şiiri antolojisi*, Ankara 1968, 13-15, and *İA* art. *Şeyyad* by Ömer Faruk Akün, cf. also SHAYYĀD), and questions about his Bāṭinī connection, pointing to his importance as a predecessor of Yūnus Emre [*q.v.*] and his place in the early experimental period of Ottoman literature. Ḥamza was familiar with both the folk and *dīwān* poetic tradition. Some of his folk poems contain coarse elements and reflect the turmoil of 7th/13th-century Anatolia. In general, however, they express with simple lyricism his moral and religious views. His *dīwān* works include *naʿts* (in praise of Muḥammad), a *naẓīre* on a *ghazel* of Rūmī, amatory verse and admonitions concerning the vanity of the world and inexorable death. Important is his 1529-*beyt methnewī* entitled *Destān-ı Yūsuf* ("Epic [or Tale] of Joseph"), a work based on the Ḳur'ānic version of the Joseph story [see YŪSUF U ZALĪKHĀ], uniting popular Islamic tradition with mystic concepts. The format, while adhering in general to the Persian *mathnawī* tradition, replaces interspersed *ghazels* with five *nükte* or moral commentaries. The poem's general tone is strongly reminiscent of folk narrative. The Turkish (largely free of Arab- or Persianisms) requires frequent prosodic licence to achieve the chosen (*remel*) metre, and the rhyme structure lacks polish. The M.A. thesis (1992) of Stephanie B. Thomas at Columbia University comprises a study of the work in the context of the Joseph tradition, with an annotated translation of a 952/1545 manuscript as published by Dehri Dilçin (*Şeyyad Hamza: Yusuf ve Zeliha*, Istanbul 1945). Another 76-*beyt methnewī* is entitled *Hādhā dāsitān-i Sulṭān Maḥmūd* ("This is the tale of Sultan Maḥmūd [of Ghazna]"). Its topic (found earlier in Persian) is an encounter between Maḥmūd and a poor dervish. A dialogue between the two debates the worth of worldly values, establishing that control of the lower self (*nefs*), not rank and riches, ensures a place in Paradise (Sadettin

Buluç, *Şeyyad Hamza'nın bilinmeyen bir mesnevisi*, in *TM*, lxxv [1968], 247-57).

Bibliography: For additional sources, see the work of Banarlı cited above; *IA* art. *Şeyyad Hamza* (Sadettin Buluç); and Metin Akar, *Şeyyad Hamza hakkında yeni bilgiler*, in *Türklük Araştırmaları*, ii (1986), 1-16. (Kathleen Burrill)

SHIHAWRĪ [see shihrī].

SHĪʿA, in the broad sense, refers to the movement upholding a privileged position of the Family of the Prophet (*ahl al-bayt* [*q.v.*]) in the political and religious leadership of the Muslim Community. The name is derived from *shīʿat ʿAlī*, i.e. the party or partisans of ʿAlī, which was first used in the inter-Muslim war during ʿAlī's caliphate distinguishing them from the *shīʿat ʿUthmān*, the partisans of the murdered caliph ʿUthmān opposed to ʿAlī. The present article will deal with the origins and early development of the Shīʿa until the emergence of the major sectarian branches. For these, see the individual articles on Ithnā ʿashariyya, Ismāʿīliyya, Zaydiyya, etc.

In the lifetime of Muḥammad, his close kin enjoyed a raised religious status of purity recognised by the Ḳurʾān. As his kin (*dhawu 'l-ḳurbā*), there were counted the descendants of his great-grandfather Hāshim and, to some extent, the descendants of Hāshim's brother al-Muṭṭalib. They were, like the Prophet himself, not allowed to receive or to handle alms (*zakāt*) as these were considered unclean. In compensation for this exclusion they were entitled to receive a portion of the *khums*, the fifth of war booty reserved to the Prophet, and of the *fayʾ* [*q.v.*], property which fell to the Muslims without war effort. After Muḥammad's death, the establishment of the caliphate by Abū Bakr on the basis of a privileged position for the tribe of Ḳuraysh as a whole, and the confiscation of Muḥammad's property, deprived the Prophet's Family of the special status, as they were disinherited and lost their title to their Ḳurʾānic share of the *khums* and *fayʾ*. The Banū Hāshim vainly protested against these developments by refusing to pledge allegiance to Abū Bakr for six months. The disestablishment of the Family of the Prophet after his death was the ultimate motive for the rise of the Shīʿa.

As leader of the Banū Hāshim was first generally recognised Muḥammad's cousin ʿAlī because of his close association with the Prophet, his marriage to Muḥammad's daughter Fāṭima and his early merits in Islam. Early Shīʿī support, however, was not restricted to him and his descendants. Throughout the Umayyad age there was broad awareness that the Prophet's Family comprised all of the Banū Hāshim, as is evident, for instance, in the poetry of al-Kumayt entitled *Hāshimiyyāt*. There were, however, preferences, partly on a local basis, for some particular branch of the Family. In Baṣra, descendants of al-Ḥārith b. ʿAbd al-Muṭṭalib b. Hāshim occasionally enjoyed support as kin of the Prophet since they were settled there. In Kūfa, where ʿAlī resided during his reign, his descendants were most often preferred to others. Support of descendants of al-ʿAbbās and of ʿAlī's brother Djaʿfar should not be seen as an illegitimate deviation from early Shīʿī backing of the ʿAlīds.

A popular movement in favour of ʿAlī first emerged in Kūfa under the governorship of al-Walīd b. ʿUḳba during the first half of ʿUthmān's caliphate. Its spokesmen, many of them Ḳurʾān readers (*ḳurrāʾ* [*q.v.*]), later appear as leaders of the *shīʿat ʿAlī* under the latter's caliphate and, if they survived, after his assassination. They were calling for the removal of ʿUthmān from the leadership and for allegiance to ʿAlī. One of them, Mālik b. al-Ḥārith al-Ashtar [*q.v.*], became the leader of the Kūfan revolt which overthrew ʿUthmān's governor Saʿīd b. al-ʿĀṣ [*q.v.*] and installed Abū Mūsā al-Ashʿarī [*q.v.*] in his place. He also led the Kūfan rebel group which joined the groups from Egypt and Baṣra converging on Medina to press for the resignation of ʿUthmān. Although he and the Kūfans did not join in the siege of the caliph's palace carried out by the Egyptians, he played a major part in securing the succession of ʿAlī to power against the rival candidacy of Ṭalḥa [*q.v.*] and subsequently in rousing Kūfan support for ʿAlī against ʿĀʾisha, Ṭalḥa, and al-Zubayr in the Battle of the Camel, in spite of the neutralist stand of the governor Abū Mūsā al-Ashʿarī.

ʿAlī's reign bore from the outset the character of a counter-caliphate. He was heralded by his supporters and officials as the most excellent of Muslims after the Prophet, and was acclaimed in poetry and eulogies as the *waṣī*, the legatee, of Muḥammad. Such claims, which put the legitimacy of the caliphate of his predecessors in question, lent the conflict between him and his opponents a religious dimension apart from the political one. Already in the Battle of the Camel, ʿAlī's opponents spoke of a "religion of ʿAlī (*dīn ʿAlī*)", a notion deeply resented by the Prophet's cousin, who insisted that he represented the religion of Muḥammad.

ʿAlī's own attitude to the legitimacy of his predecessors' reign, as expressed in his speeches and letters, was complex. He praised Abū Bakr's and ʿUmar's conduct in office highly and reprimanded any of his followers who depreciated them. He severely criticised ʿUthmān for misgovernment and arbitrary innovations. Holding that ʿUthmān had provoked the rebellion against himself, he refused to condemn the rebels, while not expressly condoning the murder of the caliph and distancing himself from any personal involvement in the rebellion. He asserted that he personally had a better right to the succession of Muḥammad than any other Companion, on the basis of his close kinship and association with him as well as his outstanding merits in the cause of Islam. The Community of the Faithful as a whole deserved blame for having turned away from him after the death of Muḥammad. It was ʿAlī who first gave the *ḥadīth* of Ghadīr Khumm [*q.v.*] publicity by inviting those Companions who had heard the Prophet's statements there to testify on the square in front of the mosque of Kūfa. These statements have traditionally been understood by the Shīʿa as an implicit appointment of ʿAlī to the succession in the leadership of the Community. ʿAlī made plain that he considered the Family of the Prophet to be entitled to the leadership of the Community as long as there remained a single one of them who recited the Ḳurʾān, knew the *sunna* and adhered to the true faith.

The most basic distinguishing beliefs of the Shīʿa thus go back to ʿAlī, who must to this extent be considered its founder and first teacher. This fact has been largely unpalatable to Sunnī historiography, which therefore created and propagated as the founder of the Shīʿa the figure of ʿAbd Allāh b. Sabaʾ [*q.v.*], the malicious Yemenite Jew who first stirred up the rebellion against ʿUthmān and invented the doctrine of ʿAlī being the legatee of Muḥammad, ending up with extremist fiction denying the death of ʿAlī and deifying him. Only this latter aspect may well have had a historical foundation. Ibn Sabaʾ appears to have been active in al-Madāʾin after ʿAlī's death and to have propagated belief in his return (*radjʿa*) and ultimate victory over his enemies.

When ʿAlī was assassinated in 40/661, his parti-

sans in Kūfa were evidently convinced that only a member of the Prophet's Family could legitimately succeed him. Although ʿAlī, probably following the Prophet's precedent, refused to appoint a successor after having been mortally struck, his eldest son al-Ḥasan [*q.v.*], grandson of Muḥammad, was immediately recognised without dissent. A few months later, al-Ḥasan abdicated in favour of the Umayyad Muʿāwiya [*q.v.*] on the basis of a treaty which stipulated a full amnesty and safety of life and property for the *shīʿat ʿAlī* and which denied Muʿāwiya the right to appoint a successor. According to some accounts, it provided for al-Ḥasan to succeed him, according to others for election by a council (*shūrā*), evidently on the model of the electoral council appointed by ʿUmar. Although the abdication aroused general disappointment and some protest among the Shīʿa, it was not regarded as a renunciation by al-Ḥasan of his ultimate title to the leadership, and he continued to be recognised as the legitimate Imām. Al-Ḥasan died in 49/669 or 51/671, poisoned, it was widely suspected, by one of his wives at the instigation of Muʿāwiya. The Shīʿa now turned to his younger brother al-Ḥusayn [*q.v.*] and, disaffected by what they regarded as the oppressive and vindictive nature of Muʿāwiya's rule, urged him to rise to restore the legitimate reign of the Prophet's Family. Although by character more inclined to pursue the leadership actively than his brother, al-Ḥusayn declined to act as long as Muʿāwiya was reigning, evidently recognising the continued validity of al-Ḥasan's agreement.

The Shīʿī riot in Kūfa in 51/671, for which Ḥudjr b. ʿAdī [*q.v.*] and other leaders were executed, was not an attempted revolution but an incident intentionally provoked by Muʿāwiya and his governor Ziyād b. Abīhi [*q.v.*] with the aim of crushing latent opposition to the Umayyad rule. Muʿāwiya had, in breach of the spirit, if not the letter, of his treaty with al-Ḥasan, ordered his governor of Kūfa, al-Mughīra b. Shuʿba [*q.v.*], to curse ʿAlī from the pulpit in the Friday prayers and to insist on the presence of several Shīʿī leaders, among them Ḥudjr. Al-Mughīra had done so, but failed, evidently against Muʿāwiya's intentions, to discipline those who protested against the cursing. Al-Mughīra's successor Ziyād took the occasion of pebbles being thrown at his deputy in protest against the cursing to intervene, ordering the rounding-up of Ḥudjr and other Shīʿī leaders. There was some fighting between police and rioters in which no-one was killed. Ḥudjr eluded Ziyād for a time, finding refuge in the quarters of various tribes. Eventually, he surrendered voluntarily on the promise of being sent to Muʿāwiya. Ziyād drew up an accusation of armed rebellion against the Shīʿī leaders and had it signed by representatives of the Kūfan nobility. Muʿāwiya offered them pardon if they would renounce their loyalty to ʿAlī and curse him. As they refused, he ordered the execution of Ḥudjr and five others. The law of Islam and practice so far prevalent allowed only imprisonment and exile for insurrection. These executions amounted to murder. The incident, rather than crushing the opposition, inflamed the sense of outrage of the Kūfan Shīʿa.

After the death of Muʿāwiya and the succession of his son Yazīd [*q.v.*], the Kūfan Shīʿa and many of the tribal leaders wrote letters to al-Ḥusayn inviting him and offering him their backing. Al-Ḥusayn had, together with other members of the Islamic aristocracy, declined to pledge allegiance to Yazīd during Muʿāwiya's lifetime and, after his death, fled from Medina to the Sanctuary in Mecca in order to avoid being forced to do so. He sent his cousin Muslim b. ʿAḳīl [*q.v.*] ahead of him to test the ground in Kūfa. On receiving at first a favourable report from Muslim, al-Ḥusayn set out for Kūfa. Determined action by the governor ʿUbayd Allāh b. Ziyād, however, induced the Kūfan tribal leaders to abandon their backing of the revolt. Muslim b. ʿAḳīl was killed, and al-Ḥusayn soon faced a Kūfan army preventing him from proceeding or returning. He and over twenty members of the Prophet's *ahl al-bayt*, brothers and sons of al-Ḥusayn, sons of al-Ḥasan, and descendants of ʿAlī's brothers ʿAḳīl and Djaʿfar, were massacred at Karbalāʾ on 10 Muḥarram 61/10 October 680.

The violent death of the Prophet's grandson at the hands of a Kūfan army, after the Kūfans had first invited him and then failed to stand up for him, had a profound effect on the Shīʿa. The passion motive, the call for repentance and martyrdom, became permanent aspects of Shīʿī spirituality. In immediate reaction, a movement of penitents (*tawwābūn*), calling for self-sacrifice and revenge for al-Ḥusayn, sprang up among the old partisans of ʿAlī led by Sulaymān b. Ṣurad al-Khuzāʿī. It gathered strength after the death of the caliph Yazīd as Kūfa came nominally under Zubayrid rule. In 65/684-5 some 4,000 volunteers left Kūfa, visited Karbalāʾ to weep and make vows on the grave of al-Ḥusayn, and moved against an Umayyad army near ʿAyn al-Warda. They were defeated, and the majority, including Sulaymān b. Ṣurad, were killed.

As the old guard leaders of the Shīʿa were killed off, new forces came to the fore. After the death of the caliph Yazīd, al-Mukhtār b. ʿUbayd al-Thaḳafī [*q.v.*], nephew of ʿAlī's governor of al-Madāʾin Saʿd b. Masʿūd, sought the leadership of the Shīʿa in Kūfa, promising to take revenge for the blood of al-Ḥusayn more effectively than his rival Sulaymān b. Ṣurad. When the latter was killed, most of the Shīʿa turned to him, although some of the conservatives remained aloof from his movement. Al-Mukhtār claimed to be acting on behalf of ʿAlī's non-Fāṭimid son Muḥammad b. al-Ḥanafiyya [*q.v.*], whom he proclaimed the Imām and the Mahdī [*q.v.*], who would restore justice on earth. This choice was natural after the death of al-Ḥasan and al-Ḥusayn, since Muḥammad b. al-Ḥanafiyya was the only surviving son of ʿAlī closely associated with him during his reign. Ibn al-Ḥanafiyya gave limited encouragement to al-Mukhtār, especially to his aim to seek revenge for al-Ḥusayn, but declined to assume personal leadership of the movement and to come to Kūfa. Al-Mukhtār took possession of Kūfa by revolt in 66/685. Although he attempted to reconcile the defeated tribal chiefs, initially restraining his followers from taking revenge on those involved in the killing of al-Ḥusayn, conflict soon arose as he accepted substantial numbers of non-Arab clients (*mawālī*) into the ranks of his movement. The tribal chiefs staged a revolt but were defeated. Now fully in control, the radical Shīʿīs took revenge for al-Ḥusayn, seeking out and killing those most guilty in his death. Shortly afterwards, the Kūfans defeated a Syrian army on the river Khāzir, killing ʿUbayd Allāh b. Ziyād. Many of the tribal chiefs and their supporters had found refuge in Baṣra, governed by Muṣʿab b. al-Zubayr [*q.v.*], and agitated for action against al-Mukhtār. The latter was killed as the Baṣrans took Kūfa in 67/687. Muṣʿab b. al-Zubayr allowed the Kūfan nobles to massacre their opponents, and 6,000 to 8,000 of al-Mukhtār's followers are said to have been killed.

The movement founded by al-Mukhtār survived,

however, and spread, chiefly among the lower classes, outside Kūfa also. It was commonly called that of the Kaysāniyya [*q.v.*], after the chief of al-Mukhtār's bodyguard Abū ʿAmra Kaysān [*q.v.*], and espoused a distinctly messianic Shīʿism. The name Sabaʾiyya also applied to it by early contemporaries evidently connects it with the earlier messianic teaching of ʿAbd Allāh b. Sabaʾ concerning ʿAlī in al-Madāʾin. Muḥammad b. al-Ḥanafiyya continued to be recognised as the Imām and Mahdī until his death in 81/700. After his death, which was denied by many, he was generally expected to return and to reign in glory. Other beliefs and practices of the followers of al-Mukhtār also aroused hostility and scorn among conservative Shīʿīs as well as Sunnīs. Al-Mukhtār had made predictions in rhymed prose like the pre-Islamic soothsayers, and was widely called by his opponents a magician or false prophet although he did not claim prophethood. He instituted or allowed the public veneration of an empty chair, practiced especially by some Yemenite tribes. The chair was said to be a relic from ʿAlī and was compared to the Ark of the Covenant of the Jews. The failure of some of al-Mukhtār's predictions to be realised is said to have given rise to the doctrine of *badāʾ* [*q.v.*], the possibility of a change of God's will. Upholding a radical interpretation of ʿAlī's attitude towards the caliphs preceding him, the Kaysāniyya definitely rejected their legitimacy.

The usurpation of the rights of the Family of the Prophet by the early caliphs was also at the core of the Shīʿī teaching of ʿAbd Allāh b. al-ʿAbbās (d. 68/687-8) in Mecca. Ibn al-ʿAbbās [*q.v.*], cousin of Muḥammad and ʿAlī, had been drawn by the caliph ʿUmar close to himself and became initially ʿAlī's most trusted associate during his reign, though there arose later disagreement between them. After ʿAlī's death he backed al-Ḥasan's caliphate, urging him to resume his father's war against Muʿāwiya. After al-Ḥasan's resignation he became the main spokesman for the rights of the *ahl al-bayt*. He consistently countered the reports of Abū Bakr's daughter ʿĀʾisha which described her father as the closest intimate of Muḥammad, chosen as his successor by his appointment to lead the communal prayers during Muḥammad's final illness. Contrary to her claim, the Prophet had not insisted on Abū Bakr leading the prayers when she pleaded for him to be excused. Rather, he had suggested that ʿUmar should lead them. The latter declined, however, to take precedence before Abū Bakr. ʿUmar had thwarted the mortally ill Muḥammad's intention to dictate a testament as guidance for the faithful, insisting that the Prophet was delirious and the Ḳurʾān was sufficient guidance for them. Muḥammad had not died in ʿĀʾisha's arms, as she claimed, but leaning on ʿAlī's chest. Although critical of some aspects of ʿAlī's conduct, Ibn al-ʿAbbās made clear that the Banū Hāshim, and he himself, were convinced of ʿAlī's legitimate right to the succession to Muḥammad, of which he was deprived by Abū Bakr with the backing of the majority of Ḳuraysh. Muḥammad's kin had protested against Abū Bakr's usurpation, first by burying the Prophet privately in his house, thus denying the caliph the occasion to do the last honours for his predecessor. The election of Abū Bakr in the Hall of the Banū Sāʿida, which took place at the time of the preparation of Muḥammad's burial, had later been described by ʿUmar in public as a *falta*, a precipitate, arbitrary act, excusable only because God had bestowed success on it. Abū Bakr had illegitimately denied the Banū Hāshim their inheritance from the Prophet and their Ḳurʾānic share of war booty and *fayʾ*. ʿUmar had attempted to satisfy their just claim by offering them partial restitution, but they had declined his overtures as being insufficient.

Ibn al-ʿAbbās warned al-Ḥusayn of the danger of his rising and did not back it. Jointly with Muḥammad b. al-Ḥanafiyya, however, he resisted the demands of the anti-ʿAlid counter-caliph ʿAbd Allāh b. al-Zubayr that they should pledge allegiance to him. Ibn al-Zubayr imprisoned them together, and they were freed by a Kūfan Shīʿī cavalry troop sent by al-Mukhtār. Ibn al-Zubayr accused ʿAbd Allāh b. al ʿAbbās and his brother ʿUbayd Allāh of trying to "raise the banner of Abū Turāb (sc. ʿAlī) which God had lowered and of gathering the muddleheads from ʿIrāḳ around themselves."

The descendants of Fāṭima were, after the massacre of Karbalāʾ, for a generation eclipsed in the leadership of the Shīʿa. Al-Ḥusayn's only surviving son ʿAlī Zayn al-ʿĀbidīn [*q.v.*] kept aloof from Shīʿī activity and attracted no substantial following. Al-Ḥasan's senior son al-Ḥasan also avoided involvement with the Shīʿa. Only al-Ḥusayn's grandson Muḥammad b. ʿAlī, known as al-Bāḳir [*q.v.*], after his father's death in 94/713-14 actively engaged in Shīʿī teaching, while refusing to be drawn into revolutionary activity, and became the founder of systematic Shiʿī religious law. His teaching in particular raised the religious rank and spiritual authority of the Imāms who were endowed with a divinely inspired knowledge. The Imām was described by him as *muḥaddath*, "spoken to" by the angel of revelation. The term was taken from a variant reading of Ḳurʾān, XXII, 52, "We have not sent before you any Messenger of Prophet" adding "or *muḥaddath*", which was contained in the codex of ʿAbd Allāh b. al-ʿAbbās and was interpreted as a form of revelation ranking below that reserved for prophets. The Imām was not expected, however, to add in any way to the message and the law revealed by the Prophet, but rather to preserve it in its integrity through his divinely-granted authority. The world was in permanent need of such an Imām and could, in the absence of a prophet, never exist for a moment without him. In a hostile environment, the Imām was protected by his and his followers' license and obligation to practice *taḳiyya* [*q.v.*], the precautionary concealment of their religious beliefs and practice.

Al-Bāḳir's legal and ritual teaching comprised most of the features which were later seen as distinctive of Shīʿī law, such as the *ḥayʿala* in the call to prayer [see ADHĀN], the prohibition of the *masḥ ʿalaʾl-khuffayn* [*q.v.*] in the ritual ablution, and the permission of *mutʿa* [*q.v.*], temporary marriage. The latter permission (which was not upheld by Zaydī and Ismāʿīlī law) also reflects influence of the doctrine of ʿAbd Allāh b. al-ʿAbbās, who taught that *mutʿa* had been practised in the time of Muḥammad and Abū Bakr and had been prohibited only by ʿUmar. Al-Bāḳir's quietist conduct aroused little suspicion among the authorities, and he was widely respected as a traditionist among Sunnī scholars. Among the Shīʿa in Kūfa, his prestige was widely recognised.

The activist Shīʿa who had backed al-Mukhtār went underground after his death. The leadership in Kūfa fell to Salama b. Budjayr of the Banū Musliya Madhhidj. His father Budjayr b. ʿAbd Allāh had been a close associate of Muḥammad b. al-Ḥanafiyya and al-Mukhtār, and was executed by Muṣʿab b. al-Zubayr. Salama became intimately attached to Muḥammad b. al-Ḥanafiyya's son Abū Hāshim, who took a more active part than his father in the organisation of a

tightly-knit secret movement spreading S͟hīʿī revolutionary propaganda. After his father's death, Abū Hās͟him was recognised by the movement as their Imām. After Abū Hās͟him's death in 98/718 there were rival claims among his followers, that he had appointed as his successor either the ʿAbbāsid Muḥammad b. ʿAlī b. al-ʿAbbās or the Dj̲aʿfarid ʿAbd Allāh b. Muʿāwiya b. ʿAbd Allāh. Salama b. Bud̲j̲ayr is said to have recognised the ʿAbbāsid, but he died shortly afterwards. Decisive was the arbitration of the dispute by Abū Riyāḥ Maysara al-Nabbāl, a *mawlā* of the Azd, in favour of Muḥammad b. ʿAlī. The Banū Musliya and their clients now backed the ʿAbbāsid and, after him, his son Ibrāhīm. The movement had, still under Abū Hās͟him, begun to spread to K͟hurāsān, mainly through the missionary activity of Bukayr b. Māhān, son of a client of the Banū Musliya. While in Kūfa its appeal remained limited, it attracted a broad following among Arab and Persian Muslims during the last decades of the Umayyad caliphate.

A few years after al-Bāḳir's death, his brother Zayd b. ʿAlī came to visit Kūfa in a dispute about a debt. He was immediately surrounded by S͟hīʿīs who persuaded him to lead a rising. Initially, he enjoyed broad backing, but his refusal to denounce Abū Bakr and ʿUmar as apostates and to condemn their conduct, even though he upheld the prior title of ʿAlī to the succession to Muḥammad, was taken by many of the former supporters of al-Bāḳir and other radicals as a motive to withdraw. They now generally recognised al-Bāḳir's son Dj̲aʿfar al-Ṣādiḳ [*q.v.*] as the legitimate Imām. Zayd's revolt failed and he was killed in 122/740.

The schism during Zayd's revolt was decisive for the further development of the S͟hīʿa, giving rise to its Imāmī and Zaydī branches. Dj̲aʿfar al-Ṣādiḳ, who may be considered the founder of the Imāmiyya, closely followed and elaborated the teaching of his father. The teaching authority of the Imāms was further strengthened by the doctrine of their immunity from error and sin (*ʿiṣma* [*q.v.*]). The imāmate was based on a divinely-guaranteed explicit designation (*naṣṣ* [*q.v.*]) of the Imām, and, after al-Ḥasan and al-Ḥusayn, was handed down from father to son among the descendants of the latter. Knowledge of and obedience to the rightful Imām were incumbent upon every believer. By ignoring the explicit *naṣṣ* of the Prophet for ʿAlī and by backing the caliphate of Abū Bakr and ʿUmar, the mass of the Community had fallen into apostasy. The radical tendencies of the following of Dj̲aʿfar al-Ṣādiḳ were strengthened by their gradual absorption of the remnants of the Kaysāniyya and adoption of some of their controversial doctrines like *badāʾ* and *rad̲j̲ʿa* and their messianic expectation of the Mahdī. This expectation was blunted, however, by al-Ṣādiḳ's strict prohibition of his followers engaging in revolutionary activity and his insistence that the rising of the legitimate Imām as the Ḳāʾim or Mahdī would occur only in the distant future. The nascent Imāmiyya thus combined radical S͟hīʿī religious dogma with political quietism.

The sectarian movement arising out of the supporters of Zayd's revolt, later known as the Zaydiyya, was, by contrast, moderate in its S͟hīʿī doctrine and deviation from the religious views of Sunnism, but politically militant. The imāmate could be claimed only by someone prepared to rise with the sword actively seeking the leadership, in addition to being qualified by religious knowledge. The first Imām after al-Ḥusayn was thus Zayd b. ʿAlī. Neither his more learned brother al-Bāḳir nor his father were Imāms. There was no need for an Imām at all times and, after ʿAlī, al-Ḥasan, and Ḥusayn, no designation of a successor, though recognition and support of a legitimate claimant was a religious obligation. The Imām was not immune from error and sin and had no superior teaching competence; rather, a collective religious authority of the Family of the Prophet was generally acknowledged. Since the designation of ʿAlī as Muḥammad's successor had been obscure (*naṣṣ k͟hafī*), the Community, in recognising Abū Bakr and ʿUmar as caliphs, had not fallen into a state of apostasy but at most into a state of sin. Others held that their caliphate was justified since ʿAlī had recognised it. Messianic tendencies were generally weak among the Zaydiyya.

Zayd's son Yaḥyā, who escaped to K͟hurāsān after the collapse of his father's revolt, was tracked down by the Umayyad authorities there and killed in 125/743. His murder strengthened the hand of the S͟hīʿa in K͟hurāsān, and revenge for Zayd and Yaḥyā became one of the slogans of the rapidly-expanding revolutionary movement. The leader of the movement was now, after the death of the ʿAbbāsid Muḥammad b. ʿAlī, his son Ibrāhīm. Its propaganda, however, was in favour of the reign of "the one agreed upon of the Family of Muḥammad (*al-riḍā min Āl Muḥammad*), suggesting a broad choice among the Banū Hās͟him.

As the imminent overthrow of the Umayyad caliphate became predictable, leading representatives of the Banū Hās͟him met in a secret gathering at al-Abwāʾ, on the road to Mecca, to discuss the choice of a common candidate for the reign. Present were especially Ḥasanids and ʿAbbāsids, including Ibrāhīm b. Muḥammad. The senior Ḥasanid, ʿAbd Allāh b. al-Ḥasan b. al-Ḥasan b. ʿAlī, promoted the candidacy of his son Muḥammad b. ʿAbd Allāh, a namesake of the Prophet, whom he had been grooming for the role of the Expected Mahdī. He gained the support of the ʿAbbāsid Abū Dj̲aʿfar, the later caliph al-Manṣūr, and Muḥammad b. ʿAbd Allāh, known as al-Nafs al-Zakiyya [*q.v.*], received the pledge of allegiance of those present. However, Dj̲aʿfar al-Ṣādiḳ, who arrived later, refused to recognise him as the Mahdī and maintained that he would not pledge allegiance to him in the presence of his father ʿAbd Allāh b. al-Ḥasan, the senior among the descendants of ʿAlī. Given the large following of Dj̲aʿfar in the S͟hīʿa, his opposition was a severe setback for the efforts to unite the Prophet's Family behind a common leader, and this encouraged the ʿAbbāsids to seek the caliphate for their own candidate.

The rivalry between ʿAlids and ʿAbbāsids erupted into open conflict as soon as the Family of the Prophet achieved their victory over the Umayyads. As the ʿAbbasid Imām Ibrāhīm b. Muḥammad b. ʿAlī was discovered, imprisoned, and killed by the last Umayyad caliph Marwān, the ʿAbbāsids fled to Kūfa. The local leader of the revolutionary movement there, Abū Salama al-K͟hallāl [*q.v.*], sheltered them but hesitated to pledge allegiance to Ibrāhīm's chosen successor Abu ʾl-ʿAbbās al-Saffāḥ. In accord with the general sentiment in Kūfa, he was inclined to back an ʿAlid candidate. His hand was forced, however, by the K͟hurāsānian army commanders who pledged allegiance to Abu ʾl-ʿAbbās. A few months later he was murdered for his display of disloyalty by an emissary of Abū Muslim al-K͟hurāsānī [*q.v.*]. The inaugural address of al-Saffāḥ, partly delivered by his uncle Dāwūd b. ʿAlī, stressed the right of the ʿAbbāsids to rule as members of the Prophet's Family and denounced those S͟hīʿīs who asserted a superior title of the ʿAlids.

The Ḥasanid Muḥammad b. ʿAbd Allāh remained,

together with his brother Ibrāhīm, in hiding after the establishment of the ʿAbbāsid caliphate, and his supporters spread propaganda for him as the Mahdī. The second ʿAbbāsid caliph, Abū Djaʿfar al-Manṣūr, was seriously worried and made vain efforts to find him, imprisoning his father and at least nine others of his Ḥasanid kin as they refused to reveal his whereabouts. When Muḥammad revolted in Medina in 145/762-3, al-Manṣūr murdered his imprisoned kinsmen. In spite of widespread popular backing, Muḥammad and Ibrāhīm were defeated and killed. Al-Manṣūr now gave his own son and heir-apparent Muḥammad the title *al-Mahdī* in an attempt to attract popular messianic sentiments to the ʿAbbāsid house. His bloody repression of the Ḥasanids, however, rather strengthened the pro-ʿAlid sympathies in the Shīʿa. The Zaydiyya first restricted their backing to the Ṭālibids, the descendants of ʿAlī's father Abū Ṭālib, and then the descendants of al-Ḥasan and al-Ḥusayn.

The Khurāsānian Shīʿa, who had initially recognised the imāmate of the ʿAbbāsid caliphs, were at the same time substantially reduced, first by the defection of the supporters of Abū Muslim al-Khurāsānī after he was killed by al-Manṣūr, then by al-Manṣūr's suppression of those extremists deifying him, and finally, by the defection of the supporters of his nephew ʿĪsā b. Mūsā, who had been appointed by al-Saffāḥ to succeed al-Manṣūr but was replaced by the latter's appointment of his own son Muḥammad al-Mahdī. Al-Mahdī tried during his reign to tie the ʿAbbāsid Shīʿa more closely to the ruling house by denying the imāmate of ʿAlī and his offspring and by asserting the sole right of al-ʿAbbās and his descendants to the Prophet's succession. His son Hārūn al-Rashīd saw no interest in maintaining a Shīʿī following and preferred to identify fully with orthodox Sunnism. The ʿAbbāsid Shīʿa disintegrated under his reign. The attempt of his son al-Maʾmūn to recover broad Shīʿī support for a caliphate of the Banū Hāshim, including ʿAlids as well as ʿAbbāsids, by appointing Djaʿfar al-Ṣādiḳ's grandson ʿAlī al-Riḍā as his successor, ended in failure. There was stubborn opposition from the ʿAbbāsids and little appreciation among the Shīʿa, who were now upholding the sole right of the descendants of the Prophet through his daughter Fāṭima. When ʿAlī al-Riḍā died, al-Maʾmūn did not seriously renew his efforts. The ʿAbbāsid caliphate had become virtually Sunnī and the Shīʿa strictly ʿAlid.

SHIʿĀR (a.), a term having various significations. The root *sh-ʿ-r* involves, *inter alia*, the ideas of knowing something; being aware of something; being a poet; being hairy; notifying, making aware of something; marking something; etc.

Shiʿār stems from the latter semantic field. It denotes:

1. The rallying signal for war or for a travel expedition, war cry, standard, mark indicating the place of standing (*wuḳūf*) of soldiers in battle or pilgrims in the Pilgrimage (ʿArafa: the idea of "recognising" this mark). The war-cry of the Prophet's Companions was "*Amit, amit*! O victorious ones, go forward, go forward!", thus presaging victory (*TʿA*, s.v.). The ancient Arabs departed for the Pilgrimage as for war, round their chief and their banner, with each tribe having its own fixed place at ʿArafa and Minā [*q.vv.*] around the standard or the decorated tent of the chief. They had their own cry, imitating that of the totem animal or bird of the tribe, and also the distinctive ritual formula of the *talbiya* [*q.v.*], indicating readiness to serve the chief and also uttered before the completion of the separate rites of the Pilgrimage. See on this, T. Fahd, *Le pèlerinage à la Mekke*, in *Le pèlerinage. Etude d'histoire des religions*, i, Paris 1974, 65-94.

2. The idea of a mark is extended to the *budna*, victim intended to be slaughtered in sacrifice (*hady*) at the time of the Pilgrimage (see refs. in Wensinck, *Concordance*, iii, 136, 143), marked by a knife-cut on the two sides of the back (*sinām*). Whence *shiʿār* is synonymous with *idmāʾ* "to draw blood". *Ushʿira* can be said of a slain ruler instead of *ḳutila*, and it was said of ʿUmar when a man wounded him on the forehead at the time of the throwing of stones at Minā, *ushʿira amīr al-muʾminīn*; he was murdered on his return from the Pilgrimage. The blood-money for the *mushʿar* was 1,000 camels (*TʿA*, s.v.).

Shāʿira, denoting the *budna*, is extended, in the plural *shaʿāʾir* (Ḳurʾān, II, 158, XXII, 32, 36) to all the rites of the Pilgrimage: standing places, journeyings, runnings, throwing of stones at Minā, sacrifices, the *talbiya*, etc. *Al-Mashʿār al-Ḥarām* (II, 198) is the journey between ʿArafa and Minā and that between al-Ṣafā and al-Marwa.

3. The places where these rites were performed were also called *mashāʿir*. A *mashʿar* was any place or thing which puts one in the presence or gives a feeling of the sacred or of a divinity: symbols of the divine, such as animals, trees, hills and standing stones. According to H. Lammens, *ishʿār* denoted the place where victims meant for sacrifice were marked; similarly, *manāsik* (Ḳurʾān, II, 128, 200, XXII, 34, 67) originally denoted the places where sacrifices to the gods were offered, places along roads and on the Pilgrimage route, marked by the presence of some source of coolness (water, a tree or a rock), eventually denoting those cult places frequented by the pious (cf. *TʿA*, vii, 87). On those places marked out as sacred (*mashāʿir*, *anṣāb*, *mawāḳif*, *manāsik*, *djamarāt*, *masādjid*, etc.), see Lammens, *Les sanctuaires préislamites das l'Arabie Occidentale*, in *MUSJ*, xi (1926), 39-169, at 78 ff.; Fahd, *Le panthéon de l'Arabie Centrale à la veille de l'hégire*, Paris 1968, 238 ff.

4. *Shiʿār* also denotes the distinctive clothing, etc., which the Dhimmīs [see dhimma] were required to wear in ʿAbbāsid and later times; see for this, ghiyār.

Bibliography: Given in the article. On the *manāsik*, see the refs. in Brockelmann, S III, index, 962. (T. Fahd)

SHIʿB DJABALA, one of the three most famous *ayyām* [*q.v.*], battle-days of the Arabs in pre-Islamic times, the other two being the First Day of al-Kulāb and Dhū Ḳār [*q.v.*]. The *yawm* is variously dated to around A.D. 550 or 570. The two main contestants in this *yawm* were the tribes of Tamīm and ʿĀmir, in which ʿĀmir emerged victorious over Tamīm.

The chief instigator of the *yawm* was the Tamīmī chief Laḳīṭ b. Zurāra, who wanted to avenge the

death of his brother Maʿbad at the hand of ʿĀmir after he had been captured at the *yawm* of Raḥraḥān during the preceding year. Laḳīṭ was able to muster against ʿĀmir a large tribal host, consisting of almost the whole of Tamīm, Asad, Dhubyān and al-Ribāb. In addition to these tribes that belonged to Muḍar, the large tribal group, Laḳīṭ invoked and received the assistance of the Lakhmid king of al-Ḥīra [*q.v.*], al-Mundhir b. al-Nuʿmān, who sent to him his brother Ḥassān, and of the Kindī king in Hadjar (Yamāma), al-Djawn, who sent to him two of his sons, according to one account Muʿāwiya and ʿAmr. The confederate tribal host advanced against ʿĀmir, ʿAbs and other tribal contingents, which had fortified themselves in the ravine or *shiʿb* in the mountain called Djabala in Nadjd; hence the name of the *yawm* as Shiʿb Djabala. A stratagem, conceived by the ʿAbsī chief Ḳays b. Zuhayr that sent the ferociously thirsty camels out of the ravine, followed by the infantry, and then the cavalry of ʿĀmir and ʿAbs, carried the day. Laḳīṭ fought heroically but was killed, as was one of the two Kindī chiefs, while the other was captured.

The *yawm* was remarkable for the participation of the prestigious Kinda [*q.v.*]; the battle is sometimes referred to as Yawm al-Djawnayn after the two Kindī chiefs; and one of them, Muʿāwiya, assigned the banners to the various tribal detachments before the battle was joined. But the *yawm* also contributed to the further decline of Kinda's power among the Northern Arabs and to its ultimate departure to Ḥaḍramawt, whence it had originally emigrated to central and northern Arabia.

Bibliography: Iṣfahānī, *Aghānī*, Beirut 1957, xi, 125-52; Ibn ʿAbd Rabbihi, *ʿIḳd*, Beirut 1982, v, 141-6; Ibn al-Athīr, *Kāmil*, Beirut 1965, i, 583-7. Better than Yāḳūt and Bakrī on the topography of Shiʿb Djabala is the Saudi traveller M. b. Bulayhid al Nadjdī, in *Ṣaḥīḥ al-akhbār*, 1972, iii, 216. The best discussion of Yawm Shiʿb Djabala remains the one by G. Olinder, who analysed the sources and the various accounts in *Āl al-Ǧaun of the family of Ākil Al-Murār*, in *MO* xxv (1931), 208-29.

(IRFAN SHAHÎD)

SHIBĀM, the name of three fortified places, whose first mentions go back to Antiquity, and of a mountain, all in Southwest Arabia. They have been distinguished, from the times of Hamdānī and Yāḳūt onwards, by suffixing the name of a neighbouring settlement or the local region.

1. Shibām Ḥaḍramawt, in lower Ḥaḍramawt, in the wadi of the same name, famed for its lofty houses in sun-dried brick, warranting its designation as a UNESCO site of world significance.

In South Arabian inscriptions, it appears as S^2bm from the end of the 3rd century A.D. and in the 4th century, the time of the conquest of Ḥaḍramawt by Ḥimyar. Islamic Shibām was known above all as a centre for the Ibāḍiyya [*q.v.*] after their defeats in the 120s/740s, and for three centuries it seems to have been part of an Ibāḍī principality. According to Hamdānī, the western part of the region belonged to Kinda; it was an important town at this time, with 30 mosques (*Ṣifa*, 86). Its history then merges into that of the dynasties of western Yemen (Ṣulayḥids, Ayyūbids, Rasūlids, etc.), until a local power of Ḥaḍramawt established its authority in the 9th/15th century, that of the Kathīrid sultan ʿAlī b. ʿUmar, consolidated by his great-grandson Abū Ṭuwayriḳ Badr (d. 977/1570). After him, Ḥaḍramawt became again fragmented, but the main Kathīrid line persisted till the end of the 18th century, until another Kathīrid came from Indonesia and divided power there with the Yafiʿīs. Then the whole area passed to the Ḳaʿātīs in 1858 until their removal in 1967.

Shibām is a fortress town, with walls and towers which made it impregnable. The houses rise to eight storeys, utilising the cramped defensive site, a height unusual in Ḥaḍramawt. Water is gained by a sophisticated system for storing up rainwater and by wells. Shibām has enjoyed a prosperity not easily explicable by the modest agricultural resources of the surrounding territory, but stemming from commercial revenues drawn by its people, situated as it has been on the caravan route from the ports of al-Shiḥr and al-Mukallā towards the direction of Ṣanʿāʾ. Before the decline of caravan traffic in the 1930s, each month the town received 400 to 1,000 camels. There were also, until after the Second World War, important remittances from male members of the population who had emigrated to India, Singapore and Indonesia. The village of al-Saḥīl has grown up *extra muros*, and today, with 15,000 inhabitants, is more populous than Shibām itself with 8,000.

(A. ROUAUD and CH. ROBIN)

2. Shibām Kawkabān (also Sh. Aḳyān or Sh. Ḥimyar in ms. sources), a large settlement, with 2,000 inhabitants at the time of the 1975 census, 37 km/20 miles to the northwest of Ṣanʿāʾ and on the plain of Ṣanʿāʾ, dominated by the vertical wall of the Djabal al-Ḍulāʿ (3,140 m/10,300 feet).

It is mentioned in inscriptions from the 3rd century A.D. onwards (S^2bm or S^2bm^m) as centre of the Dhu Hagarān Shibām tribe. The name Sh. Aḳyān preserves the name of the *ḳayls* or lords of the local principality, the Banū Dhū Kabīr Aḳyān. In early Islamic times, Sh. Kawkabān was the birthplace of the local Yuʿfirid dynasty (232-387/847-998), founded in High Yemen, and contributing to the disappearance of ʿAbbāsid caliphal authority in Yemen. The Great Mosque of the town may date from the Yuʿfirids or earlier. At this time, according to al-Hamdānī, the local population were still considered "Ḥimyarite", including in language; this presumably implied a claim to continuity with the old South Arabian culture and a local language close to Arabic but with some unusual features. From the 10th/16th century, Sh. Kawkabān was a bastion of the ʿAlid Sharaf al-Dīn family, who provided two Zaydī Imāms of Yemen; today, it comes within the area of the tribe of Hamdān. At all times it has played a notable role in Yemeni affairs, as frequent references in the chronicles attest, arising from the agricultural richness of the region around it, the strength of the fortress of Kawkabān and its proximity to Ṣanʿāʾ.

3. Shibām al-Ghirās (also Sh. Sukhaym in ms. sources), a small village and archaeological site 24 km/15 miles northeast of Ṣanʿāʾ, and near the western slope of the Djabal Dhū Marmar. In old inscriptions, it appears as S^2bm^m (1st-2nd century A.D.), and was the chief centre of the tribe of Yursam (*Yrs¹m*). The name of the village of Ghirās (population 500 in 1975) serves to distinguish it from the other Shibāms. Its main claim to fame is its vast mosque containing the tomb of the Imām al-Mahdī Aḥmad b. al-Ḥusayn (d. 1092/1681), whose reign was marked by the expulsion of the Jews of Ṣanʿāʾ and their exile to the region of al-Mawzāʿ in 1090/1679 in the aftermath of the messianic movement of Shabbatay Ṣwī [*q.v.*]. At present, there are alabaster quarries in the neighbourhood of the village.

4. Shibām Ḥarāz, a peak of 2,940m/9,643 feet in the Ḥarāz massif west-south-west of Ṣanʿāʾ, with a

fort on its summit of the same name. In 429/1037-8, according to the Sunnī sources, the founder of the Ṣulayḥids [*q.v.*] ʿAlī b. Muḥammad, raised his standard near here and launched the Fāṭimid *daʿwa* in Yemen. The fort and the nearby town of Manākha formed one of the main strong points of the Ottoman occupation of Yemen 1871-1918.

Other minor Shibāms exist in Yemen. Hence toponyms of this root, unknown elsewhere in the Arab world, have been especially popular here. The root itself seems to have two main semantic spheres: "band, gag" and "coldness", neither explaining these place-names. However, Landberg, *Glossaire datînois*, s.v., gives the meanings for *shabama* "to be high", *shibām* "height", which fits better; the toponyms in question are all at the foot of slopes and cliffs or refer to a peak.

(Ch. Robin)

(Ch. Robin and A. Rouaud)

SHĪBĀNĪ KHĀN (also known as Shāhī Beg, Shāh Bakht, and Shībak/Shībak) Muḥammad b. Shāh Budāḳ (gh) b. Abi 'l-Khayr, conqueror of most of western Central Asia between 1500 and 1509 and reviver of the Činggisid khānate. His genealogical claim to the Činggisid legacy rested on his lineal descent from Shībān, the fifth son of Djoči b. Činggis Khān. His royal clan is therefore called the Shībānid one, although it should more properly be known as the Abu 'l-Khayrid/Shībānid one (to distinguish it from, among others, the Yādgārid or ʿArabshāhid Shībānid clan who gained control of Khwārazm at about the time of his death.)

Muḥammad Shībānī was born in 855/1451 and died at the age of 61 (lunar years) at the end of Shaʿbān 916/late November or early December 1510. After the death of his father (Shādī/S.K. Ibragimov, 50, gives the obituary date 864/1459-60), his grandfather, Abu 'l-Khayr [*q.v.*] took custody of the two sons, placing him and his brother, lifelong companion and fellow adventurer, Maḥmūd (858-907/1454-1501), first in the care of a "Uyghūr Bāy Shaykh" and then in the hands of an *amīr*, Ḳaračīn Beg. The former was probably responsible for Shībānī's early book learning and the latter for his hunting and military skills. Shībānī's childhood and adolescence were spent in and around Sīghnāḳ [*q.v.*] on the lower Syr Darya (Jaxartes), his grandfather's headquarters.

Muḥammad Shībānī's career did not start very promisingly. When he was in his late teens his grandfather died (872/1468) and the confederation which he had created along the Syr Darya, already in the process of disintegration, collapsed. Ḳaračīn Beg, who still exercised some control over the two teenagers, took them to Astrakhān, presumably seeking the protection and patronage of the Djočid khāns there. But problems in Astrakhān soon forced the three to leave.

The chronology of the period before 905/1500 is uncertain. The information on Shībānī Khān's career comes from the pens of men writing after he had established himself in Samarḳand in 1500 who view the preceding period as prelude (Kamāl al-Dīn Bannāʾī, the anonymous author of *Tawārīkh-i guzīda—Nuṣrat-nāma*, Mullā Shādī, Muḥammad Sāliḥ, Bābur and Khwāndamīr.) His fluctuating fortunes during the quarter-century or so after his grandfather's death may be inferred from what is known of his peregrinations during this time.

After leaving Astrakhān, he and his brother returned to Sīghnāḳ and the Syr Darya plain. His apparently unsuccessful attempt to establish himself in the region prompted his taking refuge at Bukhārā far to the south of his homeland. There the Arghūn *amīr*, ʿAbd al-ʿAlī Ṭarkhan (d. *ca.* 1494), hired him, presumably as a mercenary, and there he stayed for two years. He eventually gravitated back to the middle Syr Darya, where the commander of the fortress of Arḳūḳ offered his allegiance. (The commercial importance of Arḳūḳ at this time is evident from Khundjī, 85, who calls it "an entrepôt (*bandargāh*) for merchants coming from Samarḳand and Bukhārā.") Shībānī then continued down-river and seems to have taken or been given Sīghnāḳ, his grandfather's old capital. But the entire Syr Darya watershed remained an object of contest between the "Ḳāzāḳ" Djočids who had split with Abu 'l-Khayr in the mid-1460s, the Mīrānshāhī Tīmūrids who held Samarḳand and Bukhārā and whose *amīrs* (like Muḥammad Mazīd Tarkhān) were active in the middle and upper Syr Darya basin, and the Čaghatāy Činggisids (Yūnus Khān, d. 892/1487, and his sons, Sulṭān Maḥmūd, d. 914/1509, and Sulṭān Aḥmad d. 909/1504) whose centre was Tashkent. In this fluid situation, Shībānī seems to have enjoyed only occasional military success, usually in service to others.

Muḥammad Shībānī does not seem to have come into his own as a significant force until the early 890s/mid-1480s when he carried out successful raids in Khwārazm (then subject to the ʿUmar-Shaykhī Tīmūrids of Harāt). In the course of these forays, he briefly captured Adāḳ (or Awāḳ) and Tīrsāḳ (Dirsak), important fortresses on the main north-south route east of the Caspian (see V.V. Bartol'd, *K istorii orosheniya Turkestana*, St. Petersburg 1914, repr. in *Sočineniya*, iii, 95-233, Moscow 1965, 68-9, who dates this episode to 891/1486). The booty taken in these raids was considered noteworthy by at least one source. (*Tawārīkh-i guzīda-Nuṣrat-nāma*, fols. 122b-123a). Another story (Khwāndamīr, *Ḥabīb*, 274) indicating his growing influence has to do with his participation in the 893/1488 campaign of the Mīrānshāhī Tīmūrid ruler of Samarḳand, Sulṭān Aḥmad Mīrzā (r. in Samarḳand 873-99/1469-94) to take Tashkent from the Čaghatāy Činggisids. At Tashkent, Khwāndamīr reports his defection to the Čaghatāy side, the consequent defeat of the Samarḳand expeditionary force and his being re-

warded by Sulṭān Maḥmūd Khān of Tashkent with the town of Arḳūḳ. Bābur in discussing the battle (17, 25) makes no mention of Shībānī Khān's role in the defeat of Sulṭān Aḥmad.

The next decade or so is a particularly obscure one and Muḥammad Shībānī and his family do not clearly re-appear in the narratives until his spring 905/1500 campaign to take Samarḳand, ostensibly on behalf of Sulṭān Maḥmūd Khān who had already tried unsuccessfully to capture the city after the death of Sulṭān Aḥmad Mīrzā in 899/1494.

From this point onwards, his career is easier to follow. In 905-6/1500 he captured Samarḳand, symbolic site of Tīmūrid authority. Although the Mīrānshāhid Ẓahīr al-Dīn Bābur took it and held it over the winter of 1500-1, Muḥammad Shībānī re-captured it after a long siege the next spring. The second taking of Samarḳand began a busy period of territorial conquest for the fifty-one year old warrior. His success there prompted increasing defections to his side of the Turko-Mongol tribes supporting the Tīmūrids and the Čaghatay Čingisids and gave him the means now to conduct campaigns of conquest and expansion.

Shībānī Khān was a relentless campaigner, rarely spending more than a month or two (usually during the winter) in any one place. In addition, he could rely on his brother's son ʿUbayd Allāh and his own son Muḥammad Tīmūr to conduct independent campaigns in his name. Between 906/1501 and the end of 912/spring 1507, he added most of the region of Transoxania, Khwārazm and Balkh to his domains. In mid-Muḥarram 913/late June 1507 he took the capital of Khurāsān, Harāt, and followed that with an attempt the same year on Ḳandahār. The campaign season of 914/1508 was mainly spent in the west taking brief control as far west as Astarābād and south to Bisṭām. After spending the summer near Bisṭām, the khān returned to Bukhārā where he spent the winter, celebrating the *ʿĪd al-fiṭr* (23 January 1509) in the city. Shībānī Khān then led a lightning campaign (detailed by Khūndjī Iṣfahānī, 199-263) against the Ḳāzāḳs in the Dasht-i Ḳipčāḳ. His itinerary in these last two years of his life indicate a frenetic pace of travel and fighting which took him across the Ḳizil Ḳum desert to Sïghnāḳ, then north deep into the Dasht-i Ḳipčāḳ, back along the Syr Darya to Ṣawrān, Yasī and Arḳūḳ and thence to Samarḳand. From there he went briefly to Bukhārā, returned to Samarḳand, rode south to Ḳarshī, then headed west for Marw and Mashhad, where he performed *ziyārat* at the shrine of the Imām Riḍā. From there he rode directly to Harāt, reportedly led a long raid to Kirmān, returned to Harāt and led a punitive expedition against the Hazāras and Nīkūdārīs of the Hazāradjāt. He was still in Harāt in October 1510 when news of Shāh Ismāʿīl Ṣafawī's march on Khurāsān reached him. He moved immediately to Marw, and near Marw in a battle with the Ṣafavid Ḳizilbāsh army he was killed, on or about 27 Shaʿbān 916/29 November 1510 (see Bartol'd, *Otčet o komandirovke v Turkestan*, in *ZVOIRAO*, v [St. Petersburg 1904], 15, [repr. in *Sočineniya*, viii, Moscow 1973, [119-210], at 144). In all, Muḥammad Shībānī may have travelled as many as 4,000 miles in the last two years of his life in an attempt to hold together the territories he had succeeded in conquering.

Muḥammad Shībānī's main political achievements were the elimination of Tīmūrid authority in Transoxania and Khurāsān; expulsion of the Čaghatay Čingisid line from Tashkent and the Farghāna Valley, and forging a confederation of Turko-Mongol tribal groups (Djalāyir, Dūrmān, Ḳunghrāt, Manghït, etc.) under the acknowledged khānate of the Abu 'l-Khayrid/Shībānid clan, thus laying the foundation for the political structure that would govern the oases of Transoxania and Balkh for most of the 16th century.

Like his Tīmūrid predecessors, Muḥammad Shībānī was a patron of scholarship and the arts. Khūndjī and the anonymous author of *Tawārīkh-i guzīda-Nuṣrat-nāma* detail the discussions of social and religious issues over which he presided and the scholars who attended his convocations. His patronage and his own production of literature in Persian and Turkish have been studied (Hofman, 226-8).

Among his architectural projects was the Madrasayi Khāniyya in Samarḳand, a bridge over the Zarafshān, a pleasure palace at Kān-i Gil (*čahār bāgh* with *ʿimārat* and *īwān*) and another at Ḳarshī (on these latter two, see Khūndjī, 291, 318-19).

Bibliography: 1. Sources. The major sources for Muḥammad Shībānī's life are: (1) Kamāl al-Dīn Bannāʾī (or Bināʾī), *Shaybānī-nāma* (for bibliographic information, see Bregel-Storey, ii, 1117-18; listing of chapter headings and partial text—fols. 34b-38b of 42 fols. Leningrad ms., in A. Samoilovich, *Sheibani-name, Persidskii unicum biblioteki Khiwinskago khana*, in *ZVOIRAO*, xix [1909], 0164-0176; selected translations of fols. 1b-36b in S.K. Ibragimov *et al.*, *Materiali po istorii Kazakhskikh khanstve XV-XVIII vekov*, Alma-Ata 1969, 96-127) (Bināʾī was in Shībānī Khān's entourage 907-13/1501-7); (2) Mullā Shādī, *Fatḥ-nāma* (composed *ca.* 1501-2; Bregel-Storey, 1120-1, a partial tr. in Ibragimov *et al.*, 53-90 (fols. 56a-77b, 111b-122b of Leningrad University ms. no. 962) (on Shādī, see Ibragimov, 44-8); (3) Muḥammad Ṣāliḥ, *Shaybānī-nāma* (Caghatay text), ed. P.M. Melioransky and A.N. Samoilovich, St. Petersburg 1908, German tr. A. Vámbéry, *Die Scheibaniade*, Stuttgart 1872 (Muḥammad Ṣāliḥ joined Shībānī Khān's entourage in 1500 at Samarḳand, see Ibragimov, 11); (4) anon., *Tawārīkh-i guzīda-Nuṣrat-nāma*, ed. A.M. Akramov, Tashkent 1967 (Akramov proposed (14) that the author was the above Muḥammad Ṣāliḥ, but see Ibragimov *et al.*, 10-11; excerpts tr. in *ibid.*, 16-43); (5) Faḍl Allāh b. Rūzbihān-i Khūndjī, *Mihmān-nāma-yi Bukhārā*, ed. M. Sutūda, Tehran 1341/1963 (Khundjī fled from the Imāmī Ḳizilbāsh régime of Shāh Ismāʿīl Ṣafawī and in 910/1504 was granted asylum by Shībānī Khān. His work was finished in September 1509); (6) ʿAbd Allāh b. Muḥammad b. ʿAlī Naṣrallāhī Balkhī, *Zubdat al-āthār* (see D. Deweese, *A note on manuscripts of the* Zubdat al-āthār, *a Chaghatay Turkic history from sixteenth-century Mawarannahr*, in *MME*, vi [1992], 96-100; Ibragimov, 128-34) (Balkhī, an employee of the Tīmūrids, joined Shībānī Khān after the conquest of Harāt in 913/1507).

The preceding authors were all very favourably disposed towards Shībānī Khān. Contemporary authors hostile to him include Khwāndamīr, *Ḥabīb al-siyar*, Tehran, Ābān 1333/1954, iv, and Ẓahīr al-Dīn Bābur, *The Bābur-nāma in English* (*Memoirs of Babur*) tr. A.S. Beveridge, London 1922, repr. Delhi 1979, and *Baburnama*, 3 vols. Turkish transcription, Persian ed. and English tr. W.M. Thackston, Cambridge, Mass. 1994. A mid-16th-century Central Asian work very hostile to Shībānī Khān is Mīrzā Muḥammad Ḥaydar Dughlāt, *A history of the Moghuls of Central Asia, being the Tarikh-i Rashidi of Mirza Muhammad Haidar, Dughlát*, ed. N. Elias and tr. E. Denison Ross, London 1895.

For information on Shībānī Khān's connections with literary figures of his time see, besides Khūndjī,

Zayn al-Dīn Wāṣifī, *Badā'i' al-waḳā'i'*, ed. A.N. Boldîrev, 2 vols., Moscow 1961, and Kh^w^ādja Bahā' al-Dīn Ḥasan Nithārī, *Mudhakkir al-aḥbāb*, ed. Syed Muhammad Fazlullah, New Delhi 1969, esp. 13-16 of introd., 15-22 of text. This latter work emphasises, perhaps apocryphally, Shībānī Khān's close ties with the Naḳshbandīs of Bukhārā.

Other useful, though retrospective, sources are: (late 16th century) Ḥāfiẓ-i Tanīsh, *Sharaf-nāma-yi shāhī* (*'Abd Allāh-nāma*), facs. ed. of St. Petersburg (Leningrad) IVAN ms. no. D88, ed. and tr. M.A. Salakhetdinova, Moscow 1983 (vol. i of four projected vols.) and (mid-17th century) Maḥmūd b. Amīr Walī, *Baḥr al-asrār fi manāḳib al-akhyār*, vi/3, Tashkent IVAN, inv. no. 1375. Ṣafawid sources (e.g. Ḥasan-i Rūmlū, *Aḥsan al-tawārīkh*, ed. C.N. Seddon, Baroda 1931, *passim* to p. 123) should also be consulted for Shībānī Khān's Khurāsān campaigns.

SHĪBĀNIDS, a Turco-Mongol dynasty of Central Asia, the agnatic descendants of Shībān, the fifth son of Djoči son of Činggis Khān, more especially two distinct branches of those descendants, the Abu 'l-Khayrids and the 'Arabshāhids-Yādgārids who, in the early 10th/16th century, seized control of the urban oases of Transoxania or Mā warā' al-nahr and Kh^w^ārazm [*q.vv.*] from the Tīmūrids [*q.v.*].

I. History and politics

For nearly the entire 10th/16th century the Abu 'l-Khayrids ruled most of what is now southern Kazakhstan, eastern and southern Uzbekistan, Tajikistan, Kyrgyzstan and northern Afghanistan. The 'Arabshāhid-Yādgārid branch held what is now Turkmenistan and western Uzbekistan, i.e. the lands of the lower Amū Daryā and its extensive delta and the oases along the northern slopes of the Kopet Dagh for much of the 10th/16th and 11th/17th centuries. During the 10th/16th century, the Shībānids of Kh^w^ārazm were dominated by the Shībānids of Transoxania, whose centres were Bukhārā, Samarḳand, Tāshkent and Balkh.

The proximate origin of Shībānid sovereignty in Transoxania and Kh^w^ārazm was the khānate of Abu 'l-Khayr Khān [*q.v.*] in the Ḳipčaḳ Steppe (the prairie north and east of the Aral Sea) the traditional homeland (*yūrtgāh*) of the house of Shībān b. Djoči. The Turkish and Mongol groups (Kerait, Djalayir, Ḳunghrat, Durman, Onggut, Manghît, Saray, Nayman, etc.) which provided the military manpower for these Shībānids came to be generically known, for reasons no longer clear, as Özbegs [*q.v.*], a term eventually adopted by outsiders to signify the entire political organization including both the non-Činggisids, the Özbegs proper, and the Činggisid royal clan.

In a political environment which gave precedence to descendants of Činggis Khān, the Abu 'l-Khayrid/Shībānid clan under a skilled tactician, Muḥammad Shībānī [*q.v.*] (grandson of Abu 'l-Khayr) emerged as the sovereign clan, when it ousted the then-dominant sovereign family, the Tīmūrids [*q.v.*], from Transoxania at the beginning of the 10th/16th century. By 913/1507, eastern Khurāsān (including Harāt, Marw and Mashhad), Transoxania (Bukhārā, Samarḳand, Kash, Ḳarshi, Tashkent), Kh^w^ārazm (Khīwa, Urgāndj and Wazīr), Turkistān, and the Farghāna Valley had been conquered and claimed by Muḥammad Shībānī, and many of the military supporters of the Tīmūrids had joined forces with the Shībānids. But in 916/1510, when Muḥammad Shībānī was killed at Marw in battle with the newly-emergent Ṣafawid state of Persia, his cousins and their Özbeg backers temporarily lost those urban centres. Two years later, however, led by 'Ubayd Allāh b. Maḥmūd [*q.v.*], a nephew of Muḥammad Shībānī; Djānī Beg b. Kh^w^ādja Muḥammad, a cousin and Suyūndj Muḥammad b. Abi 'l-Khayr, an uncle, the Abu 'l-Khayrids regained control of Bukhārā, Samarḳand and Tashkent. They and their descendants held those regions until 1006/1598, adding Balkh and the land between the Hindū Kush and the Amū Daryā in 1526. The Murghāb basin generally proved to be the westward limit of Abu 'l-Khayrid authority, although the Shībānid clan contested with the Ṣafawids for Harāt [*q.v.*] and eastern Khurāsān throughout the century; Harāt was captured briefly in the 1530s and then taken and held for a decade at the end of the century (1588-98). To the east and south, the T'ien-shan, Pamir and Hindū Kush ranges and the polities which lay beyond them, the remnants of the Čaghatay [*q.v.*] khānate in Eastern Turkistan and the Mughal state in India created by the Tīmūrids expelled from Transoxania, contained Shībānid expansion. To the north, the Syr Darya basin tended to mark the northern limits of the clan's jurisdiction.

Both neo-Shībānid states preserved a tradition of corporate or clan rule. According to this tradition, described by Faḍl Allāh b. Rūzbihān Khundjī, the eldest member of the royal clan held the nominally supreme, but largely ceremonial, position of *khān* (see *Table*). At an assembly (*ḳuriltay, kangesh*) of the eligible clan members, the khān presided over the distribution (*taḳsīm*) of territory in the form of appanages. Each family (or cousin clan, see Dickson) within the royal clan received a territory or territories as an appanage over which it exercised independent authority. As generations matured and increasing numbers of princes (*sulṭāns*) demanded a share of the corporate legacy, appanages had to expand either by annexing non-Shībānid territory or through the elimination or subordination of cousin-clans.

The four major sub-clans in the Abu 'l-Khayrid khānate (and their appanage holdings after the restoration in 918/1512) were the Suyūndjuḳids (Tāshkent

Table. The Abu 'l-Khayrid or Shībānid Khāns

Khān	*Regnal dates*	*Clan*	*Relation to predecessor*
Muḥammad Shībānī b. Shāh Budaḳ	907-16/1501-10	Shāh Budaḳid	Grandson (of Abu 'l-Khayr)
Kūčkūndji Muḥammad b. Abi 'l-Khayr	918-37/1512-30	Kūčkūndjid	Uncle
Abū Saʿīd b. Kūčkūndji	937-40/1530-3	Kūčkūndjid	Son
ʿUbayd Allāh b. Maḥmūd	940-6/1533-40	Shāh Budaḳid	First cousin once-removed
ʿAbd Allāh b. Kūčkūndji	946-7/1540	Kūčkūndjid	First cousin once-removed
ʿAbd al-Laṭīf b. Kūčkūndji	947-59/1540-52	Kūčkūndjid	Brother
Nawrūz Aḥmad (Baraḳ) b. Suyūndjuḳ	959-63/1552-6	Suyūndjuḳid	First cousin
Pīr Muḥammad b. Djānī Begi	963-8/1556-61	Djānī-Begid	First cousin once-removed
Iskandar b. Djānī Beg	968-91/1561-83	Djānī-Begid	Brother
ʿAbd Allāh b. Iskandar	991-1006/1583-98	Djānī-Begid	Son
ʿAbd al-Muʾmin b. ʿAbd Allāh	1006/1598	Djānī-Begid	Son
Pīr Muḥammad b. Sulaymān	1006-7/1598-9	Djānī-Begid	First cousin once-removed

and the Farghana Valley), the Kūčkūndjids (Samarḳand), the Shāh Budaḳids (Bukhārā) and the Djānī Begids (Karmīna, Miyānkāl and, after 1526, Balkh). From approximately 1512 to 1550, these four Abu 'l-Khayrid sub-clans consolidated their holdings, carried out campaigns of expansion in Khurāsān and Khʷārazm and also occasionally collided with each other's territorial ambitions. But, generally speaking, until the middle of the century, succession of the eldest Abu 'l-Khayrid was preserved and the integrity of cousin clan appanage rights respected.

The third quarter of the century was a period of inter- and intra-clan struggle. Individual clans sought to expand at each other's expense and succession within appanages also became subject to contest. The first cousin clan to disappear was the Shāh Budaḳid, Muḥammad Shībānī's own clan and holder of the Bukhāran appanage. Disagreement among Shāh Budaḳids over succession to the Bukhāran appanage led to intervention by the Djānī-Begid clan and its eventual capture of the Bukhāran oasis in 964/1557. The Kūčkūndjid sub-clan at Samarḳand, whose head was recognised, on the basis of seniority, as reigning Abu 'l-Khayrid-Shībānid khān from 1512-52 (except for the years 1533-40) was the next to be ousted from its appanage. Long-standing internal tensions invited the interference of the Suyundjuḳids in Tāshkent and the Djānī-Begids of Bukhārā. In 986/1578, the Kūčkūndjids finally lost their home appanage of Samarḳand. Over the next four years, continual contests between the Suyūndjuḳids and the Djānī-Begids resulted in the ascension of the latter as the dominant cousin-clan.

The Djānī-Begids themselves endured intra-clan struggles, particularly between the Balkh and Bukhāran branches. The single-minded efforts of one of the Djānī-Begid *sulṭāns*, ʿAbd Allāh b. Iskandar [*q.v.*] first to unify the Djānī-Begid appanage under his father and then to expand Djānī-Begid control at the expense of the Kūčkūndjids and then the Suyūndjuḳids, temporarily at least transformed the Abu 'l-Khayrid state from one of more or less equally powerful appanages centred on Bukhārā, Samarḳand, Tāshkent and Balkh to one more closely resembling an imperial entity with a single powerful dynastic family (the Djānī-Begid) intent on limiting succession to the khānate to its own lineage. Although ʿAbd Allāh enjoyed some success in the short term, especially because he was able to create a military force able to make major advances against the Ṣafawids in the west, the Mughals in Badakhshān, and the Shībānids of Khʷārazm, his struggle to create an imperium eventually ran counter to the interests of the non-Čingisids, the Özbegs *amīrs*, whose interest lay in preserving Čingisid traditions, especially the system of appanages with their amirid sub-infeudations which gave the *amīrs* the resources needed to maintain their tribal identities.

After eliminating the Kūčkūndjid and Suyūndjuḳid clans, ʿAbd Allāh embarked on a series of external campaigns which covered the period 992-1004/1584-96. In 992/1584, Badakhshān fell to the Djānī-Begid. Three years later he turned his attention to Khurāsān. Harāt surrendered in 996/1588, Mashhad in the following year and Sabzawār and Nīshāpūr soon thereafter. Sīstān, too, was eventually conquered, and even the Ṣafawids in Ḳandahār acknowledged Bukhāran hegemony. Two campaigns against Khʷārazm in 1002/1593 and 1004/1595-6 put that region firmly if briefly under the control of Bukhārā. He also led a campaign force as far as Kāshghar in 1003/1594-5. But establishing Bukhāran control here proved impossible.

But any dynastic ambitions ʿAbd Allāh Khān may have had perished with him in 1006/1598. His son, ʿAbd al-Muʾmin, antagonised important Özbeg *amīrs* and was assassinated six months after his father's death. Another Djānī-Begid, Pīr Muḥammad b. Sulaymān, was recognised very briefly by the *amīrs* at Bukhārā. But by the spring of 1007/1599, a new Čingisid line, descendants of the thirteenth son of Djoči, Toḳā (Tughā) Tīmūr (and known as Ashtarkhānids or Djānids [*q.v.*]), was installed in Samarḳand and Bukhārā with the backing of most of the Özbegs *amīrs*.

In Khʷārazm, the ʿArabshāhid/Yādgārid Shībānid clan underwent a similar process of succession, clan contests and eliminations in the name of the Čingisid tradition.

II. Society, economy, culture

Most of Shībānid society was engaged in agrarian pursuits typical of an early modern pre-industrial society. The written record identifies three élite groups, understood as having distinctive characteristics: the royals (those of Čingisid descent), the *amīrs* (ranking members of Özbeg tribes), and the intellectuals—the religious scholars, heads of saintly orders, administrators of shrines, poets, artists and a range of others acknowledged by society as distinctive and worthy because of some innately spiritual or intellectual capacity. The (male) royals were distinguished by the titles *khān* (the sovereign) and *sulṭān* (an individual eligible to succeed to the khānate). A range of military and administrative offices was reserved for *amīrs* (*atalīḳ, dīwānbegi, ḥākim, parwānadjī*, etc.). Similarly, specific administrative offices, and at least one military office were reserved for the intellectuals (*shaykh al-islām, ḳāḍī, muftī, mudarris* and *naḳīb* [*q.vv.*]). Court protocol, including the seating arrangements and thus hierarchy of office, was ascribed to the *yasa* of Čingis Khān. The evolution of offices and office-holding from Tīmūrid times has yet to be studied.

Intellectual families such as the Djūybārīs of Bukhārā, the Aḥrārīs of Samarḳand and the Pārsāʾīs [*q.v.*] of Balkh enjoyed great local authority under the Shībānids. They were the hereditary recipients of the local offices of *shaykh al-islām* and *ḳāḍī al-ḳuḍāt*, and as administrators (*mutawallīs*) of shrines, they disposed of great wealth in endowments. The rise of these great shrine families is a significant feature of Shībānid history. Based on surviving records, after the middle of the 10th/16th century, at the latest, the wealth of these families seems to have surpassed that of any of the royals or *amīrs* from their own regions. These families played a leading role as patrons of art and architecture.

Judging by the recorded activities of the rich, wealth was produced first by land and only secondarily by import-export exchange. Land under private ownership (*milk*) prevailed through the Shībānid era. State land (*mamlaka*) seems to have been generally of minor importance, while endowment (*waḳf*) land seems to have steadily increased in importance under the Shībānids.

Historically, the Shībānid territory produced and exported fresh and dried fruits, fibres, some precious metals and livestock, notably horses. Although there are no meaningful trade figures for the Shībānid period, the main trading partner appears to have been Mughal India. Certainly, the establishment of a Central Asian dynasty (the Tīmūrids of India) in northern India early in the 10th/16th century encouraged the expansion of all contacts between the two regions including economic ones. Bābur records many of the Central Asian products and goods desired in northern India and describes the large trade in horses through Kābul. An apparent boom in commercial construction in Bukhārā in the late 10th/16th century suggests generally flourishing if not expanding inter-regional trade under the Shībānids.

With the emergence of the Ṣafawid state as the Shībānids' main political rival, Shībānid patronage of sectarian activities concentrated on sponsorship of Ḥanafī Sunnī scholarship. Khundjī's *Mihmān-nāma-yi Bukhārā* reflects the early convergence of Shībānid political interests and sponsorship of Ḥanafī Sunnī scholarship in the detailed record of debates (*mabāḥith*) on theological issues conducted under the aegis of Muḥammad Shībānī Khān. The sectarian ambiguity manifested by the late Tīmūrid political authorities, at a time when their rivals did not use a distinctive theology for self-definition, was superseded by a careful clarification of the Ḥanafī Sunnī foundations of the new state, clearly meant to contrast with the Imāmī Shīʿī symbols displayed by the Ṣafawids. Bukhārā and Samarḳand became refuges for prominent Ḥanafī scholars and the building and endowment of *madrasas*, a favoured use of any capital accumulated by the Shībānid and Özbeg leaders.

Bibliography: I. History and politics. The major contemporary indigenous sources for Shībānid political history (in approximate order of composition): Faḍl Allāh b. Rūzbihān-i Khundjī, *Mihmān-nāma-i Bukhārā*, ed. M. Sutūda, Tehran 1341/1963 and ed. and partly tr. A.K. (R.D. McChesney)

SHIBARGHĀN, a town situated in Djūzdjān [*q.v.*] province of northern Afghānistān, in lat. 36° 35' N. and long. 65° 45' E. Arab geographers referred to it as Shaburḳān or Sabūrḳān. Excavations of graves at Ṭila Tepe, in 1978, 5 km/3 miles north of the town, have revealed the area was an important trade and cultural centre from as early as the Iron Age. Kushan-Sāsānid ceramics dating from 1st to 7th century A.D. have also been found in the area (V. Sarianidi, *Raskopki Tillya-Tepe v severnom Afganistane*, Moscow 1972; W. Ball, *Archaeological gazetteer of Afghanistan*, Paris 1982, i, 1079, 1192).

In the 4th/10th century Ibn Ḥawḳal states that Shibarghān, along with Yahūdiyya or Yahūdhān (now Maymana [*q.v.*]), Andkhūd (now Andkhuy [*q.v.*]) and Anbār (now Sar-i Pul [*q.v.*]) and other places was located in the district of Djūzdjān. In the early Islamic era, the main trade route between Harāt and Balkh [*q.vv.*] appears to have passed through Shibarghān. The anonymous author of the *Ḥudūd al-ʿālam*, a native of the area, remarks that "Ushbūrḳān" was "situated on a steppe (*ṣaḥrā*) on the high road. It abounds in amenities and has running waters" (tr. Minorsky, 107, comm. 335). Mustawfī states that the town's climate was temperate and grain was cheap (*Nuzha*, ed. Le Strange, 155, tr. 153). Indeed, throughout history, Shibarghān has had a reputation for the fertility of its loess dunes (*čūl*) and soil which produces an abundance of fruit (grapes and melons in particular) and wheat.

Shibarghān seems to have experienced an economic and political decline following the demise of the Ghaznawids [*q.v.*] in the mid-6th/12th century. This was probably due to the rise of Ghūrid empire to the south and the increasing importance of the easier, Maymana-Andkhūy road for caravan trade. By the time of the Mongol conquest of the region (619/1221-2), the fortress towns of Fāryāb [*q.v.*] (near modern Dawlatābād), Ṭālaḳān and Yahūdiyya, had eclipsed the settlements which lay further east. Shibarghān, however, appears to have been spared by the Mongols and doubtless profited by the almost total destruction of its economic rivals, Fāryāb and Ṭālaḳān. Some fifty years after the Mongol invasion (1275), Marco Polo records that Shibarghān was a thriving market town and an important staging post on the caravan route. The famous melons of the town were dried and exported to India and China, where the fruit was considered a delicacy. It was also renowned for its wild fowl and game.

Under the Tuḳāy-Timūrid ruler of Balkh, Nadhr Muḥammad Khān (1000-60/1591-1650 [*q.v.*]), Shibarghān and Andkhūy were regarded as a single *iḳṭāʿ* and its revenue assigned to his sixth son, ʿAbd al-Raḥmān. Following the Moghul occupation of Balkh (1056-7/1646-7), Nadhr Muḥammad withdrew to Shibarghān before fleeing to Persia. The latter half of the 11th/17th century saw the decline of the appanage system and the rise of amīrid power. The Mīng *amīrs* of Shibarghān and Maymana engaged in a long and bitter struggle with the eastern *amīrs* of Ḳaṭaghān for control of Balkh. In 1164/1751, following the evacuation of Balkh by Nādir Shāh Afshār's [*q.v.*] garrisons, Ḥādjī Bī Mīng, *ḥākim* of Maymana, enlisted the support of Aḥmad Shāh Durrānī [*q.v.*] and thus subjugated his Ḳataghānid rivals. Ḥādjī Bī's unpopular alliance with the Afghāns and his despotic rule, however, led Īzbāsir, *ḥākim* of Shibarghān, to rebel. Though this uprising was suppressed, the dynasty Īzbāsir founded (?) survived until the third quarter of the 19th century. During this era, the *ḥākims* of Shibarghān played an important part in resisting Afghān encroachment and annexation. Shibarghān's last independent ruler, Ḥakīm Khān, was deposed by Amīr Shīr ʿAlī Khān in 1875. In 1865 the town was totally destroyed by a violent earthquake in which an estimated 3,000 people perished.

By 1934 Shibarghān was "a ruined place" (R. Byron, *The road to Oxiana*, London 1934). From 1960 onwards, however, it experienced an economic renaissance following the discovery of vast gas reserves in the vicinity. Shibarghān is presently (1995) the headquarters, and home town, of the *amīr* of the northern provinces (*Wilāyat-i Shamāl-i Afghānistan*), General Dūstam.

SHIBITHTH (A., in popular parlance *shibitt*, *shabath*) is dill (*Anethum graveolens L., Umbelliferae*).

Like Akkadian *šibittu*, the name goes back to Aramaic *šəḇittā* (W. von Soden, *Akkadisches Hand-wörterbuch*, iii, 1227b). The Greek name ἄνηθον (*anīthūn*), which lives on in Mozarabic *anītū*, was taken from the *Materia medica* of Dioscurides; the Berber synonym *aslīlī* circulated also. When blossoming, dill resembles the

fennel (*basbās* [*q.v.* in Suppl.], *Foeniculum vulgare, L.*); like the latter, dill is an ancient plant and is used in kitchen and medicine in the same way as the fennel. The main areas of origin of the cultivated dill are middle and southeastern Europe; wild dill is found in the Mediterranean area and in the Near East. Roots, seed and herb of the dill contain an aromatic, ethereal oil. From old times, the young sprouts have been used as spices for cucumbers and salads.

The main significance of dill, however, was already in ancient Egyptian times in the field of medicine. It was used as a stomachic, carminative, diuretic and vermifuge drug. Its peculiarity consists in the fact that it dispels colic originating from flatulence, heavy gases, and mucus coming from stomach and intestines; it also puts one to sleep. Its seeds, pulverised and cooked in water, cause heavy vomiting and purify the stomach from dyscratic juice (*ruṭūbāt*). A hip bath in an extract from dill is good for pains of the womb. Applied as a poultice, dill divides the swellings originating from flatulence. Its ashes are good for soft (*mutarahhil*), heavily festering ulcers, and its decoction for pains of kidneys and bladder, caused by constipations or flatulence. Pulverised and boiled with honey until concentration, and then applied on the backside, dill has a strongly laxative effect. Taken in soup or broth, its seeds strengthen the flowing of milk. The freshly blossoming dill in particular is good for colic, haemorrhoids and sticky vomit from the stomach.

SHIBL AL-DAWLA [see MIRDĀS, BANŪ].

AL-SHIBLĪ, ABU BAKR DULAF B. DJAḤDAR, a Sunnī mystic. Born in Sāmarrā' or Baghdād (of a family which came from Transoxania) in 247/861, he died there in 334/945. Before his conversion to Ṣūfism he was an official at the ʿAbbāsid court in Sāmarrā', apparently a chamberlain or *ḥādjib* of the caliph's brother Abū Aḥmad al-Muwaffaḳ [*q.v.*] as well as, or subsequently, a *wālī* or deputy-governor of Damāwand. He was a reputed scholar in Mālikī law and an assiduous student of *ḥadīth*.

At the age of about 40 he converted to the mystical life, under the influence of the Ṣūfī Khayr al-Nassādj of Sāmarrā' (d. 322/934). Soon after, Khayr sent al-Shiblī on to al-Djunayd [*q.v.*], in Baghdād, for further spiritual training. He remained a novice of al-Djunayd until the latter's death in 297/910. The intense relationship between master and novice became the object of countless stories based on the twin motif of al-Shiblī being rebuked by al-Djunayd for 1. his restlessness, "drunkenness", theopathic language and pretension (*daʿwa*) as well as for 2. his public preaching. For some time, al-Shiblī associated with al-Ḥallādj [*q.v.*], but he denied him before the vizier and went, it is said, to accuse him at the foot of the scaffold (309/922). Al-Shiblī affected a bizarre mode of life, cultivating "eccentricities" of speech and action which caused his repeated internment in the lunatic asylum in Baghdād. He was criticised, in particular, by the Ḥanbalī scholars Ibn ʿAḳīl and Ibn al-Djawzī [*q.vv.*], for the pretentiousness in his speech (some Ṣūfīs pointed out that he discoursed on "states", and "stations", not on unity, *tawḥīd*), for his claim of being empowered with universal intercession, for a lack of respect for the data of revelation (angels, hellfire, prophets), for his wastefulness and concomitant neglect of his family, as well as for his painful and humiliating penances.

He has left no works, but his sayings (or "allusions", *ishārāt*) figure in the Ṣūfī manuals and collections on *shaṭḥ* [*q.v.*], as do his deliberate eccentricities, ecstatic states and penances. His *ishārāt* were counted by contemporary Ṣūfīs to be one of the "three miracles of Baghdād/of the world". A considerable number of mystical poems have been recorded from him, many of which are quotations of bacchic poets like Ibn al-Muʿtazz or amatory poets such as Abū Nuwās, Bashshār b. Burd, and most importantly, Ḳays, the *madjnūn* [see MADJNŪN LAYLĀ], whose example of excessive love al-Shiblī adopted as a model for loving God.

As a master of novices he trained numerous disciples, often in rough, sometimes violent ways (visitors flee from him; al-Djunayd warns his pupils to speak to al-Shiblī "from behind the throne; for his swords drip with blood"). Al-Shiblī demands of his pupils to see nothing in him but the traces of divine power and instructs them through "eccentric" behaviour: he throws stones at them to teach them about true love; he cuts his beard off to indicate that one should not mourn over the dead but make the Living God one's sole concern; he burns his clothes as they distract from worship. He had servants or *khuddām*, attending to his and his family's needs, as well as pupils, who received an initiatory garment, like Naṣrābādhī, Abū ʿAmr al-Zadjdjādjī and Ibn Khafīf al-Shīrāzī [*q.v.*]. In the classical transmission of the *khirḳa* [*q.v.*] al-Shiblī figures as a link in the chain, between al-Djunayd and al-Naṣrābādhī. Ibn Khafīf is said to have received "the white garment of al-Djunayd" (*djāma-yi safīd*) out of al-Shiblī's hands, which was passed thereafter on to al-Kāzarūnī [*q.v.*]. The anonymous author of the Ṣūfī manual *Adab al-mulūk*, possibly identical with ʿAlī b. Djaʿfar al-Sīrawānī, a pupil of al-Shiblī based in Mecca, presents him as the most important authority in Ṣūfism after al-Djunayd. He had disciples in Khurāsān, such as Muḥammad al-Farrā' (d. 370/980-1), a student of the Sunnī *kalām* theologian and Ṣūfī Abū ʿAlī al-Thaḳafī (d. 328/939-40), who was spied upon by order of al-Shiblī; Abū Sahl al-Ṣuʿlūkī (d. 369/980), a student of al-Ashʿarī; and the governor (*malik*) of Harāt. Ibn Abī Dhuhl (d. 378/988-9), who "spent a fortune on al-Shiblī". His closest disciple, however, was Abu 'l-Ḥasan al-Ḥuṣrī of Baghdād (d. 371/982), "the true inheritor of al-Shiblī" (Anṣārī). By contrast, everyone else was but a "hearer of his word". Al-Shiblī's claim that the eastern side of the Tigris was safeguarded against the Shīʿī Būyids only through his presence, coupled with the fact that shortly after his death the Daylamīs completed their conquest of Baghdād, indicates that al-Shiblī's influence at the end of his life extended even to the highest ranks of government. His tomb in Baghdād was still visibly intact in 1982.

AL-SHIBLĪ, ABŪ ḤAFṢ ʿUMAR B. ISḤĀḲ b. Aḥmad al-Ghaznawī al-Dawlatābādī al-Hindī al-Ḥanafī Sirādj al-Dīn, celebrated *faḳīh*, more commonly known by the *nisba* al-Hindī.

Born in India *ca.* 704/1304-5, he studied *fiḳh* in Dihlī with Wadjīh al-Dīn al-Dihlawī al-Rāzī, Shams al-Dīn al-Dūlī al-Khaṭīb, Sirādj al-Dīn al-Thaḳafī al-Dihlawī, Rukn al-Dīn al-Badāʾūnī, pupils of Abu ʾl-Ḳāsim al-Tanūkhī (d. 670/1271-2), and *ḥadīth* in Cairo with Aḥmad b. Manṣūr al-Djawharī and others. Having made the pilgrimage to Mecca, where he also studied, he came to Egypt in *ca.* 740/1339-40 where he continued his studies, related traditions and held several religious posts. He cultivated relations with both *ʿulamāʾ* and *umarāʾ* and gained favour with Sultan al-Nāṣir b. Ḳalāwūn (748-52/1347-51, 755-62/1354-61). With the help of the *amīr* Ṣarghitmish, Sirādj al-Dīn obtained the office of *ḳāḍī ʾl-ʿaskar* in 758/1357. Previously, the Ḥanafī chief judge (*ḳāḍī ʾl-ḳuḍāt*) of Egypt Djamāl al-Dīn Ibn al-Turkumānī had appointed him as his deputy. Upon the death of the latter in Shaʿbān 769/March-April 1368, al-Shiblī replaced him as Ḥanafī *ḳāḍī ʾl-ḳuḍāt* and held that office until his death on 7 Radjab 773/14 January 1372. As Ḥanafī *ḳāḍī ʾl-ḳuḍāt*, he used his influence with the Mamlūk élite to promote the status of the Ḥanafī judgeship, seeking privileges previously attached only to the Shāfiʿī chief judgeship. Despite good relations with members of this élite, al-Shiblī did not hesitate to oppose their attempts to abase religious functionaries, as, for example, when he berated Aldjāy al-Yūsufī, *nāẓir al-awḳāf* at the Ibn Ṭūlūn mosque, who begrudged them an increase in their salaries. He had also Ṣūfī tendencies; in Mecca he associated with the *shaykh* Khiḍr, and was later a follower of Ibn al-Fāriḍ [*q.v.*] (cf. below), associating with those Ṣūfīs inclined toward ideas of monism (*al-ṣūfiyya al-ittiḥādiyya*).

His best known works are: 1. *al-Tawshīḥ*, a commentary on the *Hidāya* of al-Marghīnānī (cf. Brockelmann, I², 466, no. 24); 2. a second commentary on the *Hidāya* in syllogistic form; 3. *al-Shāmil fī ʾl-fiḳh*, dealing with *furūʿ*; 4. *Zubdat al-aḥkām fī ʾkhtilāf al-aʾimma al-aʿlām*; 5. a commentary on the *Badīʿ al-niẓām fī uṣūl al-fiḳh* of al-Sāʿātī (cf. Brockelmann, I², 477, no. 49, 2); 6. a commentary on *al-Mughnī fī ʾl-uṣūl* of al-Khabbāzī (cf. Brockelmann, I², 476-7, no. 48); 7. *al-Ghurra al-munīfa fī tardjīḥ madhhab Abī Ḥanīfa*; 8. *Kitāb fī fiḳh al-khilāf*; 9. a commentary on *al-Ziyādāt* of al-Shaybānī (cf. Brockelmann, I², 178, no. II); 10. an unfinished commentary on *al-Djāmiʿ al-kabīr* (identical with the *Mukhtaṣar al-talkhīs*, *ibid.*, no. III, preserved in his autograph; the work is said to have originally included also *al-Djāmiʿ al-ṣaghīr*); 11. a commentary on *al-Tāʾiyya* of Ibn al-Fāriḍ (cf. Brockelmann, I², 305-6); 12. a work on *taṣawwuf*; 13. a commentary on *al-Manār fī ʾl-uṣūl* of al-Nasafī (cf. Brockelmann, II², 250, no. I, 1); 14. a commentary on *al-Mukhtār fī ʾl-fatāwā* of al-Buldadjī (cf. Brockelmann, I², 476, no. 47, 1); 15. *Lawāʾiḥ al-anwār fī ʾl-radd ʿalā man ankara ʿalā ʾl-ʿārifīn laṭāʾif al-asrār*, 16. *ʿUddat al-nāsik fī ʾl-manāsik*; 17. a commentary on the *ʿAḳīda* of al-Ṭaḥāwī (cf. Brockelmann, I², 181, no. 7, 7; where a ms. is quoted); 18. *al-Lawāmiʿ fī sharḥ Djamʿ al-djawāmiʿ* (of al-Subkī; cf. Brockelmann, II², 109, no. 1); 19. Brockelmann finally gives a collection of his *fatwās*. On manuscripts of the surviving works cf. Brockelmann, II², 96, no. 9.

Samʿānī, *Ansāb*, facs. ed. 329a, 9 ff.; Yāḳūt, *Muʿdjam*, iii, 256; Brockelmann, I², 216, no. 6; Massignon, *al-Hallâdj*, passim; *Isl.*, xv, 121.

(J. SCHACHT-[LINDA S. NORTHRUP])

SHIBLĪ NUʿMĀNĪ (1857-1914), leading Urdu writer of the ʿAlīgaṙh Movement, was born into a well-to-do family at Bindūl, in the Aʿẓamgaṙh [*q.v.*] District of the then United Provinces.

Early in life he became preoccupied with the Ḥanafī law school, and acquired expertise in the languages and literatures of Arabic, Persian and Urdu. Islamic history and biography, and literary criticism in Persian and in general, became his métiers, and he composed poetry in both Persian and Urdu, but though superficially he seems to challenge comparison with that other ʿAlīgaṙh polygraph, Alṭāf Ḥusayn Ḥālī [*q.v.*], he does not equal him as a poet. The turning point in his career came in 1882 when he first visited ʿAlīgaṙh, where his brother was a student. The two influences there were Sir Sayyid Aḥmad Khān [*q.v.*] and his liberalism, and secondly Dr. Thomas Arnold, Professor of Philosophy, who introduced him to Western literary criticism. Sir Sayyid appointed him lecturer in Persian and Arabic. After the latter's death in 1898, Shiblī broke his relationship with ʿAlīgaṙh, having founded a rival National English School in Aʿẓamgaṙh. He became a sort of free-lance scholar and author, spending his time in various places, such as Kashmīr and Ḥaydarābād, and wrote an account of his travels in Egypt and Turkey, *Safar-nāma-i Miṣr-ō-Rūm-ō-Shām*; his Urdu prose style is simple and clear, and not overladen with English vocabulary, as that of Sir Sayyid and Ḥālī. He died in Aʿẓamgaṙh.

Shiblī is described by Saksena (287) as "one of the most striking personalities of his age, a versatile genius with a remarkable career", listing a dozen aspects of his activities. Elsewhere (292), he names about two dozen of his literary works in a rather confused manner, both incomplete and inaccurate. Shiblī was ambitious, and felt an urge to produce large-scale works; thus Muhammad Sadiq tells us (275) that he planned an encyclopaedia of Islamic history, combining Western and Oriental methods, but had to restrict himself to a number of monographs, including *al-Fārūḳ* (1899), a study of the second caliph ʿUmar; *al-Ghazālī* (1902); *Sawāniḥ-i Rūmī*; and *Sīrat al-Nabī* (published posthumously, completed by Sulaymān Nadwī, 1916). His second major project, which he almost, but not quite, completed, was his critical history of Persian poetry,

Shiʿr al-ʿAdjam, of which vol. i was published in 1908, ii in 1909, iii in 1910, and iv in 1912; vol. v was published posthumously in 1918. It is a brilliant account of Persian poetry, which had played so important a role in the emergence of Urdu poetry.

Finally, reference must be made to his Urdu poetry, which he composed all through his life; he also took part in *mushāʿaras* [*q.v.*] (poetical contests and celebrations). Abu 'l-Layth Ṣiddīḳī and a number of collaborators divided his poetry into four stages in an Urdu anthology, *Urdū niṣāb* (see *Bibl.*). They stress that, as a poet, he was original, not basing his poetical techniques on any teacher. The outstanding stage was the fourth (1908-14), which was a period of turmoil in the Islamic world. In this period he wrote both political and ethical poetry, and some Islamic historical poetry. Among the most famous was *Shuhadā'-i ḳawm* ("The martyrs of the nation"), which commemorates the death of Muslims killed by British troops in the "Cawnpore incident" of 1912 [see KĀNPUR].

Bibliography: Shiblī's prose works will be found in various editions. For a reliable assessment of his achievements and ideas, see Muhammad Sadiq, *A history of Urdu literature*, London 1964, 274-85, and see 161-3 for Shiblī's *Muwāzana-yi Dabīr-ō-Anīs* (dated 1907), his major critical work on Urdu literature, which is important for the study of Urdu *marthiya* [*q.v.*]. His poetry has already been mentioned; see Abu 'l-Layth Ṣiddīḳī *et alii*, *Urdū niṣāb*, Lahore 1969, 144-6, which includes the text of *Shuhadā'-i-ḳawm*. Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1927, 287-94, also contains useful information on it. (J.A. HAYWOOD)

SHIFĀ'Ī IṢFAHĀNĪ, Ḥakīm Sharaf al-Dīn Ḥasan, Persian physician and poet of the Ṣafawid period. He was born in 956/1549 (Gulčīn-i Maʿānī) or 966/1558-9 (Ṣafā) at Iṣfahān. His *nom-de-plume* refers to the medical profession, which was a tradition of his family. He was also a student of speculative mysticism, but he achieved his greatest fame as a poet. His literary work consists of *ghazals* and *ḳaṣīdas*, written respectively in the style of Bābā Fighānī and Khāḳānī (cf. Rypka, 300), as well as poems in several other forms, including a series of *mathnawīs*. His best known poem is the didactic *mathnawī Namakdān-i ḥaḳīḳat*, written in imitation of the *Ḥadīḳat al-ḥaḳīḳa*, which has sometimes been mistaken for a work by Sanā'ī [*q.v.*] himself (Munzawī, iv, 3286). Other works in the same form are *Dīda-yi bīdār* or *Dīdār-i bīdār*, after the model of Niẓāmī's *Makhzan al-asrār* (cf. Munzawī, iv, 2820; Ethé, 836; Bertel's, 210), *Mihr u maḥabbat*, on the theory of love, completed in 1021/1612-3 (cf. Munzawī, iv, 3252; Ateş, 510), and a poem, called either *Madjmaʿ al-baḥrayn* or *Maṭlaʿ al-anwār*, based on Khāḳānī's *Tuḥfat al-ʿIrāḳayn* (cf. Ethé, 835; Rypka, 300). Shifā'ī also left a *sāḳī-nāma* (published by Gulčīn-i Maʿānī in *Tadhkira-yi may-khāna*, 532-4).

Shāh ʿAbbās I [*q.v.*] held him in high esteem and gave him the honorary titles *malik al-shuʿarā' wa mumtāz-i Īrān*. Contemporary critics acknowledged him as one of the best poets of his time, but at the same time feared his sharp and often scurrilous wit. Apologising to the Shāh in a short poem, he mentioned satire as an element indelible from his identity (*māhiyyat*), "just as one cannot wash away from amber the attraction of straw" (Iskandar Beg Munshī, 1083). According to most sources, Shifā'ī died on 5 Ramaḍān 1037/9 May 1628 at Iṣfahān and was buried at Karbalā'.

Already during his lifetime, a selection from his poems, to the amount of 5,000 *bayts*, was brought to India (Fakhr al-Zamānī, 523). In 1040/1630-1 a comprehensive collection of 20,000 *bayts* was assembled by Mīrzā Muḥammad Taḳī Dawlatābādī (cf. Gulčīn-i Maʿānī, *Shahrāshūb*, 54).

SHIGHNĀN [see SHUGHNĀN].

SHĪḤ (A., from Aramaic *sīḥā*) is the plant species Artemisia, *Compositae*.

The word was probably used by the Arabs as a collective noun for the some 200 types of this species, spread in the Mediterranean area and the temperate latitudes. These types occur as herbs and shrubs, many of them being aromatic. In medicine, the herb and its ethereal oil as well as the blossoming buds and their ethereal oil are used mainly as aromaticum amarum, as a stomachic, digestive, carminative, choleretic drug, and the blossoming buds also as an anthelminthic. It was further used as spice in the kitchen and as a stimulus of appetite. The Arab authors note mainly the following types of Artemisia: 1. *Shīḥ* in the specific meaning of *Artemisia iudaica L.*; 2. *Sārīfūn* (σέριφον), probably *A. maritima*; 3. *Ṭarkhūn*, *A. dracunculus*, tarragon; 4. *Ḳayṣūm*, *A. abrotanum*, southernwood or "Old man"; 5. *Birindjāsaf*, *A. vulgaris*, mugwort, often identified with *ḳayṣūm*; 6. *Afsantīn* or *abū shinthiyā*, the wormwood (absinth), *A. absinthium*; 7. (?) *A. arborescens*.

It should, however, be realised that the descriptions of plants hardly suffice for determining the types, because nomenclature and synonymy are so vague. The most accurate, yet inadequate, botanical description may be presented here by way of example. It is found in *Dioscurides triumphans* (see *Bibl.*) iii, 107, under the entry *arṭāmāsiyā* (ἀρτεμισία), where five types of *ḳayṣūm* are described: "One of its types has many twigs, which come forth from a single root, about one yard long. Its leaves are attached to the twigs at some distance from one another, resemble those of the small type of the anemone (*al-nuʿmān* [see SHAḲĪḲAT AL-NUʿMĀN], are denticulated (*musharraf*) on both sides and grow smaller and smaller the more they are found near the upper end. At the end of each twig there are yellow-coloured blossoms, round and closely connected like a bunch (*djamāʿa*) of heads of absinth (*ru'ūs al-afsantīn*). They vary in smell from pleasantly to repulsively, and their taste is bitter. This type has roots like those of the white hellebore (*al-kharbaḳ al-abyaḍ*). A second type ramifies already at the soil from a single root and rises about one yard ... A third type

buds three or four twigs from one single root, just one yard long, to which leaves are attached in the same way as they are to the blue stock (*al-khīri al-azraḳ*) ... A fourth type grows in riverbeds and ponds ... The fifth type has many twigs, ramifying from one single root, just about two yards long. Its leaves resemble those of the olive tree (*al-zaytūn*), white on the side turned towards the ground and green on the side turned upwards, but smaller than those of the olive tree ... [At the end:] The first type is the common sage (*arṭāmāsiyā*), called in Spain *fasāṭāyun* (= *afsantīn*). The second is called *al-ʿabaytharān*, also named "the fox's basilicum" (*rayḥān al-thaʿālib*), the third is "the golden one" (*al-mudhahhab*), the fourth is called in Romance *yundja* (*juncia*). The fifth and last one is called *furubina* (Romance *flor de pena*), also "olive of the castles" (*zaytūnat al-ḥuṣūn*) and *abrūshiyā* (ἀμβροσία), of which *al-mudhahhab* is a type". For the complete text and the explanation of the terms, see *Dioscurides triumphans, loc. cit.* The first type, with many twigs and a pungent odour, is probably *A. arborescens L.* The fourth type, with one twig, which grows in inland water, could be *A. campestris*. For one of the other types the widespread *A. vulgaris* is probably to be taken into account. As one can see, the description of the types mentioned follows a rather fixed scheme: outward appearance, twigs, roots, leaves, blossoms, then taste and odour.

The Arab authors give many details about the medicinal use of *shīḥ*. It resembles absinth, but does not have the latter's astringent power. Taken with rice and honey, it kills intestinal worms. The Artemisia from the mountains (*al-shīḥ al-djabalī*) is bitter, divides and dissolves flatulence and is less astringent than absinth. Its ashes, taken with almond oil, are good for loss of hair (*dāʾ al-thaʿlab*). It makes the itch disappear (*al-ukla*), is good for laboured breathing and aids urination and menstruation.

(A. DIETRICH)

SHIHĀB, BANŪ, a dynasty of *amīrs* who held the tax-farm or *iltizām* [*q.v.*] of the Lebanon mountain districts of the *sandjaḳ* of Sidon-Beirut, and later also those of the *wilāyat* of Tripoli, from 1697 until 1841.

The Banū Shihāb were already the recognised chieftains (*muḳaddamūn*) of Wādī al-Taym, a valley of the Anti-Lebanon, at the time of the Ottoman conquest of Syria (922/1516). Their involvement in the affairs of the Lebanon resulted from their alliance and intermarriage with the Banū Maʿn [*q.v.*], the paramount Druze chiefs of the Shūf [*q.v.*] region, who held the *iltizām* of the mountain districts of Beirut-Sidon almost continuously from *ca.* 998/1590 until 1108/1697. When the Maʿnid line died out, this *iltizām* was transferred by the Ottomans to their Banū Shihāb relatives, allegedly with local consent (1108/1697). Subsequently (1124/1712), the Banū Shihāb fixed the organisation of the territory assigned to them in fiscal units called *muḳāṭaʿāt*, assigning the administration of each unit to the strongest family of *mashāyikh* among the local Druzes or Maronites.

As newcomers to the Lebanon, the Banū Shihāb, who were Sunnī Muslims, faced strong opposition among the Druzes of the country from the very start. But the Druzes were further alienated by the consistent Shihābī support for the Christian Maronites. This alienation worsened as leading Shihābī *amīrs* began to convert to Christianity and become Maronites, a process starting in the latter decades of the 18th century. The subsequent alliance of the Banū Shihāb with Muḥammad ʿAlī Pasha [*q.v.*], and their collaboration with the Egyptian occupation of Syria (1832-40), set them on the collision course with the Ottomans which was the direct cause of their downfall.

The Banū Shihāb survive today in two branches, one Maronite, the other Sunnī Muslim. A member of the Maronite branch, General Fuʾād Shihāb, was elected president of the Lebanese Republic for the period 1958-64.

SHIHĀB AL-DAWLA [see MAWDŪD B. MASʿŪD].

SHIHĀB AL-DĪN [see MUḤAMMAD B. SĀM].

SHIHĀB AL-DĪN AḤMAD B. MĀDJID [see IBN MĀDJID].

SHIHĀB AL-DĪN DAWLATĀBĀDĪ [see AL-DAWLATĀBĀDĪ].

SHIHĀB AL-DĪN AL-ḤUSAYNĪ, SHĀH, a Nizārī Ismāʿīlī dignitary and author of the 13th/19th century. Shihāb al-Dīn, also called Khalīl Allāh, was born around 1268/1851-2, probably in ʿIrāḳ; he was the eldest son of Āḳā ʿAlī Shāh, Āghā Khān II (d. 1302/1885), the forty-seventh *imām* of the Nizārī Ismāʿīlīs, and the elder half-brother of Sulṭān Muḥammad Shāh, Āghā Khān III (1294-1376/1877-1957), the forty-eighth Nizārī *imām*. Shihāb al-Dīn spent the greater part of his life in Bombay and Poona, where he died in Ṣafar 1302/December 1884, being eventually buried in the family mausoleum at Nadjaf.

Shihāb al-Dīn Shāh was a learned member of the Āghā Khāns' family; he was also regarded as one of the *pīrs* or *ḥudjdjas* of the Nizārī Ismāʿīlīs, particularly by the Nizārī Khōdjas (see Muḥammad b. Zayn al-ʿĀbidīn Fidāʾī Khurāsānī, *Kitāb-i Hidāyat al-muʾminīn al-ṭālibīn*, ed. A.A. Semenov, Moscow 1959, 178-9; W. Ivanow, *Ismailitica*, in *Memoirs of the Asiatic Society of Bengal*, viii [1922], 66-7). Shihāb al-Dīn composed a few treatises in Persian dealing particularly with the ethical and mystical aspects of the Nizārī Ismāʿīlī doctrines. His works, preserved in India and Central Asia, in fact represent the earliest examples of a literary revival, initiated in the second half of the 13th/19th century and utilising the Persian language, in the life of the Nizārī Ismāʿīlī community. His writings include the *Khiṭābāt-i ʿāliya* (ed. H. Udjāḳī, Ismaili Society series A, no. 14, Bombay 1963) and the unfinished *Risāla dar ḥaḳīḳat-i dīn* (ed. and tr. W. Ivanow, Islamic Research Assocation series, no. 3, Bombay 1933). Later editions and English translations, by W. Ivanow, of his *Risāla* were published in 1947, 1955 and 1956 in the series of publications of the Ismaili Society of Bombay; this work has also been translated into Arabic, Urdū and Gudjarātī (see Shihāb al-Dīn Shāh al-Ḥusaynī, *True meaning of religion*, tr. W. Ivanow, Bombay 1956, Preface).

SHIHĀB AL-DĪN AL-ḲARĀFĪ, Abu 'l-ʿAbbās Aḥmad b. Abi 'l-ʿAlāʾ Idrīs b. ʿAbd al-Raḥmān b. ʿAbd Allāh b. Yallīn (626-84/1228-85), Mālikī jurist and legal theoretician from the North African Berber tribe of the Ṣanhādja. He apparently grew up in al-Ḳarāfa in Old Cairo, whence his sobriquet of al-Ḳarāfī. Later, he came to head the Mālikī school of Cairo and to occupy the Mālikī professorship at the famous Ṣāliḥiyya *madrasa*. He also held a professorship at the Mālikī-Shāfiʿī Ṭaybarsiyya college and presided over a *ḥalḳa* at the Cairo Friday mosque. He was probably the greatest Mālikī legal theoretician of 7th/13th-century Egypt. As such, many scholars, Mālikī and non-Mālikī alike, travelled from Syria and North Africa to study *uṣūl al-fiḳh* with him. His six-volume opus on Mālikī law, *al-Dhakhīra*, testifies to his mastery of the positive branches (*furūʿ*) as well. None of this would be enough, however, to induce him into accepting a position as judge.

In addition to his legal activities, al-Ḳarāfī also had a hand in several other disciplines. His *al-Istibṣār fīmā tudrikuhu al-abṣār*, for example, was a response to some questions on ophthamology and astronomy from Frederick II of Sicily. His *al-Adjwiba al-fākhira ʿan al-asʾila al-fādjira* (cited by Brockelmann as *al-Ghurba al-fākhira radd^an ʿalā al-milla al-kāfira* and hailed as "the greatest apologetic achievement in Islam", S I, 665) includes actual citations from the Hebrew Bible (in Arabic script). In theology he followed the school of al-Ashʿarī. Though a committed rationalist, however, he was far from extreme in his judgments of non-Ashʿarīs, including Ḥanbalīs and other traditionalists, even so-called *ḥashwīs*. As for Ṣūfism, he appears to have had little interest in it.

Among al-Ḳarāfī's most important teachers was the redoubtable Shāfiʿī jurist ʿAbd al-ʿAzīz (better known as ʿIzz al-Dīn) b. ʿAbd al-Salām (d. 660/1262), who deeply influenced him but whose effective endorsement (in Shāfiʿī-dominated Cairo) of the notion that might made right would ultimately become al-Ḳarāfī's *bête noire*. In attempting to come to terms with this problem, al-Ḳarāfī introduces a rather sophisticated doctrine of *taḳlīd* and looks to the *madhhab* as the chief means of protecting minority views from being overridden by *ʿulamāʾ* associated with state power. This is most clearly reflected in one of his most important works, the *Kitāb al-Iḥkām fī tamyīz al-fatāwā ʿan al-aḥkām wa-taṣarrufāt al-ḳāḍī wa 'l-imām*, which also includes an important discussion on the limits of law. Of the many other works he composed, mention should be made of *K. al-Furūḳ* (also known as *Anwār al-burūḳ fī anwāʾ al-furūḳ*), on *ḳawāʿid* or legal precepts, *Nafāʾis al-uṣūl fī ʿilm al-uṣūl*, a commentary on Fakhr al-Dīn al-Rāzī's *al-Maḥṣūl*, on *uṣūl al-fiḳh*, of which he also composed an abridgment, *Sharḥ tanḳīḥ al-fuṣūl*.

Bibliography: Ḳarāfī, *al-Adjwiba al-fākhira*, Cairo 1407/1987, 236, 139; *al-Furūḳ*, 4 vols., Beirut n.d.; *al-ʿIḳd al-manẓūm fī 'l-khuṣūṣ wa 'l-ʿumūm*, ms. Istanbul, ii, 135, 1615-16; Brockelmann, S I, 665.

(S.A. JACKSON)

SHIHĀB IṢFAHĀNĪ, the pen-name of Mīrzā Naṣr Allāh, a prominent Persian poet of the Ḳādjār period, *flor.* in the 19th century.

According to a reference in *Gandj-i shāygān* by Mīrzā Ṭāhir Iṣfahānī Shiʿrī, it may be assumed that Shihāb was born during the twenties of the 19th century. His birthplace was Simīrum, a small town in the Iṣfahān district. His family had a long history of supplying military judges to the government from among its members. Shihāb, however, devoted himself from the beginning to the study of Arabic and had an inclination towards writing poetry. In 1254/1838-9 he went to Tehran, where he was engaged in literary activity for several years before attracting the attention of Muḥammad Shāh (r. 1250-64/1834-48). The latter admired Shihāb's work, and honoured him eventually with the title of Tādj al-Shuʿarāʾ. Shihāb's closest patron was Ḥādjdjī Mīrzā Āḳāsī, prime minister of Muḥammad Shāh, from whom he received many favours. The poet's fortunes continued to prosper during the reign of Muḥammad Shāh's successor, Nāṣir al-Dīn Shāh (1264-1313/1848-96). Besides writing poems, which brought him financial rewards, he was officially assigned the task of organising mourning assemblies commemorating the death of Ḥusayn. Towards the later part of his life he retired to Iṣfahān, where he died in 1291/1874-5.

Shihāb's chief field of poetic exercise seems to have been the panegyric, in which he reportedly wielded a fluent pen and could compose lengthy *ḳaṣīdas* within a short time. A critical remark by Dīwān Begī (ii, 889) regarding his poetic style confirms the view that he was fond of grandiloquence, allusions and metaphors. The Sipahsālār Library in Tehran owns a manuscript copy of his *dīwān* containing a collection of *ḳaṣīdas* and comprising some 8,000 couplets.

Bibliography: *Fihrist-i Kitābkhāna-yi Madrasa-yi ʿĀlī-yi Sipahsālār*, ii, Tehran 1316-18/1937-9, 619-20; Sayyid Aḥmad Dīwān Begī Shīrāzī, *Ḥadīḳat al-shuʿarāʾ*, ed. ʿAbd al-Ḥusayn Nawāʾī, Tehran 1365/1986, ii (also contains an extract from *Gandj-i shāygān*, supplied by the editor); Riḍā-ḳulī Khān Hidāyat, *Madjmaʿ al-fuṣaḥāʾ*, ed. Maẓāhir Muṣaffā, Tehran 1339/1960, ii/1; Muḥammad ʿAlī Tabrīzī (Mudarris), *Rayḥānat al-adab*, Tabrīz (?) 1328/1949, ii; Dihkhudā, *Lughat-nāma*, s.v. *Tādj al-Shuʿarāʾ*; Yaḥyā Āryanpūr, *Az Ṣabā tā Nīmā*, Tehran 1350/1971, i; Wizārat-i Farhang u Irshad-i Islāmī, *Nām-āwarān-i farhang-i Īrān*, Tehran 1988 (?).

(MUNIBUR RAHMAN)

SHIHĀB TURSHĪZĪ, the pen-name of the Persian poet Mīrzā ʿAbd Allāh Khān, b. probably *ca.* 1167/1753 (Bahār, *Armaghān*, xiii/1, 37), d. 1215/1800-1.

He started his poetic career in his home town of Turshīz in Khurāsān, but left it in 1189/1775-6 for Shīrāz, the capital of Karīm Khān Zand [*q.v.*]. His ambition took him from place to place in search of suitable patronage. Finally, in 1203/1788-9, he entered the service of Shāhzāda Maḥmūd Durrānī b. Tīmūr Shāh, the Afghān governor of Harāt (who subsequently became ruler of Afghānistān); Shāhzāda Maḥmūd had employed the poet's father, Ḥabīb Allāh Turshīzī, for thirty years (see Shihāb's verses quoted in Buzurgniyā's article published in *Armaghān*, vi/9, 557). Shihāb remained with his patron for some nine years, becoming his poet-laureate and chief astronomer as well as attaining the rank of Khān. Their association came to an end with Shāhzāda Maḥmūd losing the governorship of Harāt in 1212/1797-8 in an internal power struggle. Thereupon, Shihāb retired to Turbat-i Ḥaydariyya [*q.v.*], where he died not long afterwards.

Apart from poetry, Shihāb was also skilled in other fields such as astronomy, painting, the art of making pen-boxes and calligraphy. He was the author of several poetical works which included *Khusraw wa Shīrīn*

(*Durrat al-tādj*), *Yūsuf u Zulaykhā*, *Bahrām-nāma* and *ʿIkd-i gawhar*, a piece dealing with astronomy. Some of his writings which remained incomplete were a *Tadhkirat al-shuʿarāʾ* and a *Murād-nāma*, the last-named being an account of the events and affairs during the reign of ʿAlī Murād Khān Zand, who ruled Iṣfahān 1193-9/1779-85. In 1206/1791-2 Shihāb, according to his own statement, compiled a *dīwān* of his verse, at the instance of his patron. His total output has been estimated at 20,000 verses (*Nigāristān-i Dārā*, 213), but the copies of his collected poems found in Persia are said to contain between 3,000 and 10,000 verses only (*Tārīkh-i tadhkirahā-yi Fārsī*, 303).

Shihāb was a prominent poet of the period of literary "return" (*bāzgasht*), which marked the end of the influence of the Indian style (*sabk-i Hindī* [*q.v.*]) in Persian poetry, and the revival of earlier indigenous models. His speciality was the *kaṣīda*, in which he imitated the examples of early masters like Anwarī and Khākānī. The main figures in whose praise he composed his poems were Karīm Khān and ʿAlī Murād Khān Zand; Shāhzāda Maḥmūd Durrānī, who was his chief patron; and Fatḥ ʿAlī Shāh Kādjār.

Another distinguishing feature of Shihāb's literary activity was his satirical verse, directed against fellow-poets, certain tribes and clans, as well as against such places as Shīrāz, Yazd, Tehran, Sīstān and Kāshān. In the *ghazal*, his individuality of style found expression in the choice of rhymes which differed from those employed by such established *ghazal* writers as Saʿdī and Ḥāfiẓ.

(Munibur Rahman)

SHIḤNA (a.), an administrative-military term in the mediaeval eastern Islamic world.

From the end of the 3rd/9th century, the term, which in a general sense meant a body of armed men, sufficing for the guarding and control of a town or district on the part of the sultan, is occasionally found in the specific sense of the *shurṭa* [*q.v.*] (Tyan, *L'organisation judicaire en pays d'Islam*, Paris 1938-43, ii, 366, n. 5). As the designation for a military governor of a town or province, the term *shiḥna* belongs primarily to the period of the Great Saldjūks, though Abu 'l-Faḍl Bayhakī (writing in 450-1/1058-9) uses the term in the sense of the commander of a body of armed men in charge of a town or district on behalf of the sultan (*Tārīkh-i Bayhakī*, ed. ʿAlī Akbar Fayyāḍ, Mashhad 1350/1971, 22, 23, 24) and his office as *shiḥnagī* (*ibid.*, 9, 10, 25, 26, cf. also Doerfer, iii, 320-1). The term is found throughout the Il-Khānate and survives into the period of the Turkoman dynasties of the Kara Koyunlu and the Ak Koyunlu [*q.vv.*]. Thereafter, it disappears except in a debased sense in some provincial districts, being superseded by the term *dārūgha* [*q.v.*]. The *shiḥna* belonged to the military classes and officials of the *ʿurf* jurisdiction. The authority which he held was, like that of other officials, essentially delegated authority.

Niẓām al-Mulk [*q.v.*] appears to have regarded the terms *mukṭaʿ*, *wālī* and *shiḥna* as broadly synonymous (*Siyāsat-nāma*, ed. Schefer, 28). There are cases of the same individual being referred to variously as *shiḥna*, *wālī* and *mukṭaʿ*. The *amīr* ʿAbbās (d. 541/1146-7) is called *shiḥna* of Ray by Ibn al-Djawzī (*Muntaẓam*, x, 102) and *wālī* of Ray by Awliyāʾ Allāh Āmulī (*Tārīkh-i Rūyān*, ed. M. Sotoodeh, Tehran 1348/1969, 126). ʿImād al-Dawla wa 'l-Dīn Kumādj (d. 548/1153-4), who succeeded his father ʿAlāʾ al-Dīn Abū Bakr Kumādj and his grandfather ʿImād al-Dīn Kumādj in the governorate (*ayālat*) and office of *shiḥna* of Balkh (Muntadjab al-Dīn Badīʿ al-Kātib al-Djuwaynī, *ʿAtabat al-kataba*, ed. ʿAbbās Ikbāl, Tehran 1329/1951, 76, 77), is called *mukṭaʿ* of Balkh by Ibn al-Athīr (xi, 116), whereas Rāwandī states that he was *wālī* of Balkh and then made *shiḥna* of the Ghuzz (*Rāḥat al-ṣudūr*, ed. Muḥammad Ikbāl, Leiden-London 1921, 177-8; see also Lambton, *The administration of Sanjar's empire as illustrated in the* ʿAtabat al-kataba, in *BSOAS*, xx [1957], 380-3, repr. in eadem, *Theory and practice in medieval Persian government*, Variorum, London 1980, and eadem, ch. "The internal structure of the Saljuq empire", in *Camb. hist. Iran*, v, 244-5, repr. in *Theory and practice in medieval Persian government*).

Generally speaking, the *shiḥna* was the military governor of the town, or the town and district, to which he was appointed. His functions were the preservation of public order, security on the roads and the suppression of bandits and robbers (cf. the document in the *ʿAtabat al-kataba*, 61, for Sayf al-Dīn Yurunkush as *shiḥna* of Djuwayn, a document in the *Mukhtārāt min al-rasāʾil*, ed. Īradj Afshār, 1355/1976-7, 264, and a draft diploma for the office of *shiḥna* in the *Dastūr-i dabīrī* of Muḥammad b. ʿAbd al-Khālik al-Mayhanī, ed. Adnan Erzi, Ankara 1962, 113-14; and see H. Horst, *Die Staatsverwaltung der Grosselğūqen und Ḫorazmšāhs*, Wiesbaden 1964, 93-6). He presided over a *dīwān* to which, presumably, cases concerning public order were referred, and he apparently had at his disposal a body of men to enable him to apprehend evil-doers and to execute such orders as might issue from his *dīwān*. He may also in some cases have executed the decrees of the *kāḍī*'s office. He did not have power to appoint officials other than those in his own *dīwān* (which differentiated him from a *wālī* or governor). He was paid by dues (*rusūm, marsūm*) collected from the local population and levied according to custom (the rate is not stated in the sources).

As well as *shiḥnas* of towns, there were also *shiḥnas* of tribal groups. In the case of Balkh, the two offices were held by the same person, but this was not always so (cf. the document in the *ʿAtabat al-kataba*, 80-3, for the appointment of Inanč Bilge Ulugh Djāndār as *shiḥna* of the Turkomans of Gurgān, and an undated document in the *Mukhtārāt min al-rasāʾil*, 263-4, for the appointment of a *shiḥna* of the Atash (?) Turks of ʿIrāk and Kurdistān).

The *shiḥna* of Baghdād in the Saldjūk period held a special position, in that he was not only the military governor of the town, but also the representative,

as it were, of the sultan vis-à-vis the caliph.

Under the Saldjūḳs of Rūm, the *shiḥna* appears to have been the military governor of a town or the head of the garrison of a town (Cl. Cahen, *La Turquie pré-Ottomane*, Istanbul-Paris 1988, 198).

In the sources for the Mongol invasions and the Il-Khānate, there is a lack of precision in the use of the term *shiḥna*. It is used at times synonymously with *basḳāḳ*, *dārūgha* (*dārūghačī*) and *nā'ib* (D.O. Morgan, *Who ran the Mongol empire?*, in *JRAS* [1982], 129, and see Lambton, *Mongol fiscal administration in Persia*, in *SI*, lxiv [1986], 80 n. 2). By the reign of Ghazan (694-703/1295-1304 [*q.v.*]) the *shiḥna* and *basḳāḳ* were distinguished from each other and from the commander of the citadel of a town (see below). However, in a document for the appointment of a *shiḥna* in the *Dastūr al-kātib* of Muḥammad b. Hindūshāh Nakhdjawānī, ed. A.A. Ali-zade, ii, Moscow 1976, 36, *shiḥnagī* and *basḳāḳī* appear to be used synonymously.

The importance of the *shiḥna* varied; some, like *sulṭāns* and *maliks*, received large *payzas* when their appointment was registered; others, who were of lesser rank, and medium *maliks* (*malikān-i mutawassiṭ*) smaller *payzas* (Rashīd al-Dīn, *Tārīkh-i mubārak-i ghāzānī*, ed. K. Jahn, London 1940, 295).

According to Djuwaynī (i, 96, tr. Boyle, i, 122), Čingiz Khān appointed a group of persons to the office of *shiḥna* in Samarḳand after its conquest. Yeme and Subetey, as they pursued Djalāl al-Dīn Muḥammad Khwārazmī through Khurāsān, left *shiḥnas* in the towns through which they passed with an *al-tamgha* as a sign of the surrender of the population (*ibid.*, i, 177; also 113, 115, 120, 121, 136-7). When Abū Bakr Sa'd b. Zangī, the ruler of Fārs, sent his brother Tahamtam to Ögedey with his submission, tribute was laid on the province and a Mongol *shiḥna* appointed (Waṣṣāf, *Tārīkh*, ed. M.M. Iṣfahānī, lith. Bombay 1269/1852-3, B. Spuler, *Die Mongolen in Iran*[4], Leiden 1985, 117-18). In 650/1252-3 Mengü-Ḳa'an appointed governors (*ḥākimān*), *shiḥnas* and scribes to assess the taxes and to number the population (Djuwaynī, iii, 72-3, tr. ii, 596). As the conquests proceeded and the Mongols established an administration, *shiḥnas* were appointed over towns and districts (Spuler, *op. cit.*, 284-5).

As in the Saldjūḳ period, the *shiḥna* was concerned with the administration of customary law. There is, however, a *yarligh* for the appointment of *ḳāḍīs* issued by Ghazan, in which it is stated that *shiḥnas*, *maliks*, *bitikčiyān*, *ḳāḍīs*, 'Alawīs and *'ulamā'* were to assemble in the Friday mosque in the *dīwān al-muṭāla'a* to hear cases between Mongols, or between Mongols and Muslims, and other cases which were difficult to decide, and to settle them according to the *sharī'a* (Rashīd al-Dīn, *op. cit.*, 219), but this probably merely reflects Ghazan's policy to convert the Il-Khānate into an Islamic state. Clearly, the *shiḥna*'s activities were conducted mainly according to customary law. A document for a certain Shaykh Dorsun as *shiḥna* of such-and-such a province (*wilāyat*), which instructs him to investigate thoroughly *yarghu'ī* affairs and to decide them according to justice and the *yasaḳ* (*Dastūr al-kātib*, ii, 37), most probably reflects general practice. Another document in the same collection, concerning the complaint of the people of Salmās [*q.v.*] against the extortion of their *shiḥna*, states that the latter had been dismissed and his successor ordered to settle affairs justly according to the rule of the *yasaḳ*. The people were to refer *yarghu'ī* matters to him (*ibid.*, 38-9). It would seem from the document that cases were submitted by the *shiḥna* to the *yarghu* (*ibid.*, 39). A letter to a *ḳāḍī* in the *Dastūr al-kātib* forbids *yarghučiyān*, *shiḥnagān* and others from interfering in *shar'ī* affairs (i/2, Moscow 1971, 455). Ghazan's *yarligh* on the unification of weights and measures was addressed to *shiḥnagān*, *maliks*, *bitikčiyān* and others (Rashīd al-Dīn, *op. cit.*, 257); this implies that these matters were within the purview of the *shiḥna*. Under Ghazan, the *shiḥna* also appears to have been concerned with the general provincial administration. When he decided that grain should be stored in the provinces for the use of the army, the *shiḥna* of the province was ordered to take delivery of the grain and to pay cash for it (*ibid.*, 301). Together with provincial governors (*ḥākimān*), the *shiḥnas* were in charge of the billeting of *ilčis* and others in the provinces, a practice which Ghazan forbade (*ibid.*, 356-7).

The payment of the *shiḥna*, as in former times, was by dues. In the *Sa'ādat-nāma* of 'Alā-yi Tabrīzī, an item is included in the provincial expenses of Tabrīz of 1,000 dīnārs for the office of *shiḥna* (*shaḥāniyya*), 5,000 dīnārs for the garrison of the citadel (*al-isfahsālāriyya bi-ḳal'a muḳaddamuhum fulān*) and 15,000 dīnārs for the officials of the *tamgha* (*'ummāliyyat al-tamgha*); the sum for the *basḳāḳ* was 10,000 dīnārs (Mirkamal Nabipour, *Die beiden persischen Leitfäden des Falak 'Alā-ye Tabrīzī über das staatliche Rechnungswesen im 14. Jahrhundert*, Göttingen 1973, Persian text, 134). A document in the *Dastūr al-kātib*, ii, 29, states that the *wazīr* was to get from the *shiḥna* a bond (*malčakā*) that he would not take more from the province and its population than was laid down in the *dīwān* as the due of the *shiḥna*. From other documents in the collection (cf. ii, 36, 38-9, 305-6, 323-4) it would seem that extortion by *shiḥnas* was not unknown (cf. Rashīd al-Dīn, *op. cit.*, 244).

Under the Ḳara Ḳoyunlu and the Aḳ Ḳoyunlu, the *shiḥna* is found as a local official concerned with the maintenance of public order, ranking among the *dārūghas*, *maliks* and *kadkhudās* (cf. a *farmān* of the Ḳara Ḳoyunlu Djahānshāh dated 853/1449, in A.D. Papazyan, *Persidskie dokumenti matenadarana i ukazi, vïpusk pervïy* (*xv-xvi vv.*), Erivan 1956, 245). Faḍl Allāh b. Rūzbihān Khundjī Iṣfahānī mentions *shiḥnas* and *kotwāls* [*q.v.*] (fortress commanders) of various towns and fortresses belonging to Diyār Bakr in 882/1478 (*Tārīkh-i Amīnī*, ed. J.E. Woods, London 1992, 126). Under the Ṣafawids, the term *shiḥna* was no longer in general use.

(ANN K.S. LAMBTON)

AL-SHIḤR a town and region on the South Arabian Indian Ocean coast approximately 330 miles east of Aden [see 'ADAN], the main port of Ḥaḍramawt [*q.v.*] until the 19th century, when al-Mukallā rose to prominence. The port is particularly well known as a fishing and trading centre, but is throughout the centuries associated with the incense trade: Ibn Khurradādhbih (147-8) calls the area the Land of Incense (*bilād al-kundur*) and quotes the following line of poetry:

Go to al-Shiḥr; don't go to Oman (*'Umānā*); if you don't find dates, you will find incense (*lubānā*)!

Niebuhr, writing in the 18th century (*Description de l'Arabie ...*, Amsterdam and Utrecht 1774, iii, 244), reports that incense was still exported through the port of al-Shiḥr, and Serjeant (*The ports of Aden & Shihr (mediaeval period)*, in *Les grandes escales I. Recueils de la Société Jean Bodin*, xxxii [1974], 221) informs us that it was still handled in the port. The town itself is walled and is situated along a long sandy beach, access to ships in the anchorage being by boat. It is divided into two by the wadi bed, al-Misyāl, the west-

ern quarter bearing the name Madjraf and the eastern one al-Ramla. The quarter system within the town is still strong and there are several markets: Sūḳ al-Lakham (shark), Sūḳ al-Hunūd (despite the fact that there can be few Indians left in the town), Sūḳ Shibām, named after the inland town [*q.v.*], etc. Fishing is still an important local industry and the major port commodity apart from incense is fish-oil. Ambergris (*'anbar Shiḥrī*) was also a well-known product of the coast, at least in earlier times. The incense comes from the upper reaches of the mountains in the Shiḥr region. There are graves along the shore said to be those of the victims of the Portuguese attacks on the town from the 10th/16th century onwards (see below). It was from al-Shiḥr that many Ḥaḍramīs migrated to East Africa and they were thus called Shihiris (Serjeant, *Ports*, 221). The region is now in the governorate of Ḥaḍramawt in the Yemen Arabic Republic and comprises the following settlements: al-Days, al-Ḥāmī, al-Rayda and Ḳaṣīr/Ḳuṣayr (*al-Mawsū'a al-Yamaniyya*, eds. Aḥmad Djābir 'Afīf *et alii*, Ṣan'ā' 1992, 549).

Having a much more limited hinterland than Aden, the port was always of less importance. Its early history is far from clear, but it appears to have been controlled by the Ziyādids (*ca.* 203-371/818-981), a Tihāma-based Yemeni dynasty (Ibn al-Mudjāwir, *Ta'rīkh al-Mustabṣir*, ed. O. Löfgren, Leiden 1951-4, 67). The Banū Ma'n (5th/11th century vassals of the Ṣulayḥids [*q.v.*] in Aden) also held al-Shiḥr (Abū Makhrama, in Löfgren, *Arabische Texte zur Kenntnis der Stadt Aden im Mittelalter*, Uppsala etc. 86). The town is mentioned on occasions during the Rasūlid period (626-858/1228-1454), but figures much more prominently in the history of the Portuguese off the South Arabian coast. The town, which they called Xaer/Xael, was always vulnerable from the sea and they attacked it on more than one occasion and plundered the port (e.g. Serjeant, *The Portuguese off the South Arabian coast*, Oxford 1963, 67). In 867/1462, the Kathīrī sultan Badr b. Ṭuwayriḳ captured al-Shiḥr from the Ṭāhirids (858-923/1454-1517), the successors in the south of the Yemen to the Rasūlids. However, it later came under the control of the Ḳu'ayṭī sultanate of al-Mukallā (Serjeant, 25).

Al-Hamdānī (51) says the name of al-Shiḥr is derived from *shaḥar al-arḍ*, which, he adds, is the salinity (*sabakh*) of the soil where bitter plants grow. Perhaps more plausible is Abū Makhrama's suggestion (66) that its inhabitants were the Shaḥrā' of Mahra and that the *alif* and *hamza* have been dropped and the *shīn* vocalised with a *kasra* instead of the original *fatḥa*. The latter, al-Shaḥr, is in any case an alternative pronunciation. Other sources (e.g. al-Hamdānī, 134, and al-Idrīsī, *Opus geographicum*, Naples and Rome, i-ii, 1970-1, 52, 154-5) state that the inhabitants do not speak good Arabic, and this may be rather a reference to their speaking a language other than Arabic (Mahri?). The latter source says specifically that the Arabs do not understand the language of al-Shiḥr at all and he calls it "old Ḥimyarī". Yāḳūt (*Mu'djam*, Beirut 1979, iii, 327) prefers to associate the name with *shiḥra*, a narrow tract of land.

Bibliography: Apart from the references given in the text above, the rare Government of Bombay, *An account of the Arab tribes in the vicinity of Aden*, Bombay 1909, contains an interesting and informative chapter, pp. 125-48, entitled *Historical résumé of Mokalla, Shehr and Hadthramût*. (G.R. Smith)

SHIḤRĪ or Shaḥrī, the common term by Arabs and Arabists for the Modern South Arabian language Śḥeri (in older literature also called Šḥauri/Shahari), spoken in the mountains of Ẓufār ('Umān) by about 50,000 speakers. As the word Śḥero (pl.) designates only the underprivileged, non-tribal part of the population, Johnstone (*Jibbāli lexicon*, p. XI) established the term "Jibbāli", a translation into Arabic (Śḥehr = mountains), in order to avoid old social distinction. Together with the other non-Arabic languages of southern Arabia (Mehri [see mahrī], Soḳoṭri [see soḳoṭra], Ḥarsūsi [see ḥarāsīs], Baṭḥari [see baṭāḥira] and Hóbyót), Śḥeri belongs to a group of closely connected languages called "Modern South Arabian". A special trait of Śḥeri, not found in any other of the Modern South Arabian languages, is the existence of nasal vowels, a result of the disappearance of "m" in intervocalic position. According to Johnstone (*Jibbāli lexicon*), three main dialects can be distinguished, of which the western one is hardly known. A distinctive mark of the central dialect is the existence of the two phonemes *š* and *š̃* (spoken like *š* but without touching the alveoles with the tip of the tongue) instead of *ś* in the eastern dialect. The origin of Śḥeri and the other Modern South Arabian languages is controversial. Even though they are not direct descendants of Epigraphic South Arabian, they have so many common features with them (perfect 1st and 2nd persons with *k*, three sibilants *s*, *š*, *ś*) and with the languages of Ethiopia (ejectives), that they should be incorporated in the group of South Semitic to the exclusion of Arabic.

Bibliography: See that to mahrī. The most important work is T.M. Johnstone, *Jibbāli lexicon*, Oxford 1981. Recent publications include: J. Rodgers, *The subgrouping of the South Semitic languages*, in *Semitic studies in honor of Wolf Leslau on the occasion of his 85th birthday*, ed. A.S. Kaye, Wiesbaden 1991; A. Lonnet, *La découverte du sudarabique moderne. Le Ehkili de Fresnel (1838)*, in *Materiaux Arabes et Sudarabiques*, iii (1991); M.-C. Simeone-Senelle, *L'expression du "futur" dans les langes sudarabiques modernes*, in *Materiaux Arabes et Sudarabiques*, v (1993). (W. Arnold)

SHIKĀRĪ (p.), a form current in Muslim India, passing into Urdu and Hindi and derived from Pers. *shikār* "game, prey; the chase, hunting", with the senses of "a native hunter or stalker, who accompanied European hunters and sportsmen", and then of these last sportsmen themselves (see Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*, ²London 1903, 827-8, s.v. *Shikaree, Shekarry*).

The native hunters stemmed from the many castes in India whose occupation was the snaring, trapping, tracking, or pursuit of birds and beasts, but the caste which adopted or received the word Shikārī as its tribal name was found chiefly in Sind by the early 20th century. A writer in 1822 said: "Shecarries are generally Hindoos of low caste, who gain their livelihood entirely by catching birds, hares, and all sorts of animals", but the Shikārīs of Sind seem to have abandoned the occupation from which they take their name. They are described as outcast immigrants from Rādjputāna, found from Bengal to the Pandjāb, the origin of whose honourable appellation was unexplained, though they probably possessed, like other aboriginal races, a knowledge of wild animals and skill in tracking and were employed by the Muslim nobility in quest of sport. They were subsequently engaged in making baskets, and as sweepers and scavengers, and appear to have corresponded in most points, to the Bhangīs of Bengal and Hindūstān. They ate carrion, and, even when professing Islam, were considered unclean, and not allowed to enter a mosque,

unless they underwent a ceremony of purification by fire, after which they were classed as Māččhīs. Those whose occupation was the taking of life were naturally held in small esteem in a land which has been permeated by the principles of Buddhism, Djainism, and Brahmanism, but the purification ceremony demanded by Muslims before admitting Shikārīs to their worship was an example of the extent to which Islam in India had been affected by the attitudes of Hinduism.

SHIKĀRPŪR, the name of two places in Sind.

1. That in upper Sind, situated in lat. 27° 57′ N. and long. 68° 40′ E., was founded in 1667 by the Dā'ūdpūtras, a warrior/weaver tribe, on the *Shikārgāh* or hunting ground [see shikārī] of the Mahars, hence the name. In 1701 they were defeated by the first Kalhōra chief, Yār Muḥammad (1701-18); his son Nūr Muḥammad (1718-54) drove them eastward where they founded Bahāwalpūr [*q.v.*].

In 1739 the Mughal Emperor, Muḥammad Shāh [*q.v.*], had to cede all the region west of the Indus to Nādir Shāh, who in 1740 invaded Sind to punish Nūr Muḥammad and annexed Bhakkar, Sībī and Shikārpūr. He restored Shikārpūr to the Dā'ūdpūtras, but in 1754 the Kalhōras recovered it when Aḥmad Shāh Durrānī [*q.v.*] made Murād Yār governor over the whole of Sind.

During the period of vassalage to Kandahār (1746-1825), the region, now known as the *Mughūlī Pargana*, saw a great influx of Paṭhān settlers who received lands on reduced rents (*Paṭṭadārī*). At the same time, Shikārpūr became an entrepot for trade with the regions of eastern Persia, Afghānistān and Central Asia, a trade monopolised by the Hindus, and its merchants and covered market were famous throughout Asia.

Sind's vassalage to Afghānistān was broken by the Tālpūrs in 1789, who recovered Shikārpūr also in 1825.

The period of British rule (1843-1947) saw a gradual decline in Shikārpūr's importance, since their control of the Frontier region and Balūčistān, and the opening up of the Khyber pass route and the railway link to Quetta, ended its strategic and economic role.

Reduced to the position of a country town on the eve of Pākistān's creation (1947), it gradually began to develop as a centre of agriculturally-based industries. It became a District headquarters (1977) and now possesses a municipality. Its population, estimated at 20,000 to 25,000 by the middle of the 19th century, is now 88,000.

Its most celebrated literary and spiritual figure was Shāh Faḳīr ʿAlwī (d. 1780), an Afghān migrant, and founder there of the Ḳādirī *khānḳāh* and a *madrasa*; venerated by rulers like Aḥmad Shāh Durrānī, he wrote books in Arabic, Persian and Pashto, and his letters and books like *Futūḥāt al-ghaybiyya* won general recognition. Also, Munshī ʿAṭā Muḥammad (d. 1855) wrote the *Tāza nawā'i maʿārik*, a contemporary account of the Tālpūrs and their relations with the rulers of Kābul (ed. H. Rashīdī, Karachi 1959).

2. That in Lower Sind was founded by the Phanwars seven miles away from Dādū town, and was also captured by Nūr Muḥammad in 1701. It was renamed (old) Khudābād and remained the Kalhōra capital till Ghulām Shāh (1757-72) transferred it to nearby Ḥaydarābād. Devastated by the Tālpūrs in 1781, it is now in ruins.

3. There exist other Shikārpūrs in the subcontinent, including in the Bulandshahr District of U.P. and in Mysore (Karnataka). See *Imperial gazetteer of India*², xxii, 277-8.

SHIKASTA [see khaṭṭ].

SHIḲḲ 1. Shiḳḳ is the name of two diviners or *kāhins* who allegedly lived shortly before the rise of Islam. According to the *Abrégé des merveilles*, Shiḳḳ the Elder was the first diviner among the ʿArab al-ʿĀriba. He is a completely fabulous personage. Like the Cyclops, he had only one eye in the middle of his forehead or a fire which split his forehead into two (*shaḳḳa* "to split"). He is also confused with al-Dadjdjāl [*q.v.*], Antichrist, or at least Dadjdjāl is of his family. He is said to have lived chained to a rock on an island where volcanic phenomena occurred. The second Shiḳḳ, called al-Yashkurī, was the most famous of his time, along with Saṭīḥ [*q.v.*]; he expounded a vision of Rabīʿa, son of Naṣr the Lakhmid prince of Yeman, foretelling the conquest of Yemen by the Abyssinians, its liberation by Sayf b. Dhī Yazan and the coming of the Prophet.

2. According to al-Ḳazwīnī, the Shiḳḳ are a kind of Shayṭān, forming part of the group of *mutashayyaṭīn*; they are in the shape of a half-man, with one arm and one leg. The Nasnās, other halves of men, are produced from Shiḳḳs and whole men. These Shayṭāns appear to travellers. It is said that ʿAlḳama b. Ṣafwān b. Umayya met one of them one night near Ḥawmān and after an exchange of high words, the man and the djinnī killed one another.

Wüstenfeld, Göttingen 1848-9, i, 371. On the *kāhin* in general, see Balʿamī, *Chronique de Tabari*, tr. H. Zotenberg, Paris 1867, ii, 169, and kāhin. A new analysis of the documentation used in this article, with some additions, has been made by T. Fahd in his *La divination arabe*, ²Paris 1987, see esp. 44, 66, 83, 101, 125, 186-9, 250. (B. Carra de Vaux-[T. Fahd])

SHIḲḲA BANĀRIYA [see al-kāf].

al-**SHĪLĀ** or al-**SĪLĀ**, the term for Korea in Arabic geographers of the 3rd/8th century.

Ibn Khurradādhbih describes in his *Kitāb al-Masālik wa 'l-mamālik*, 68-70, cf. 170, the sea route from West Asia to China, describing the provinces, routes and products encountered. According to him, starting from Sanfu (Champa) [see ṣanf] and travelling eastward along the coasts, there were Chinese ports, such as al-Wāḳīn (or Lūḳīn, to be identified with Chia-chou at Hanoi), Khānfū [*q.v.*] (Kuang-chou or Kuang-tung), Djāndjū (Chüan-chou) and Ḳāntū (Yang-chou); and beyond China, there were regions called Wāḳ-wāḳ (perhaps Japan) and al-Shīlā, with high mountains and rich gold mines. Judging from the geographical situation in the T'ang period, Sīlā would appear to

be a region of Korea or Japan. S͟hīlā or Sīlā is presumably a word derived from Si-ra (> Sila). Sira was originally called Sin-ra, which was one of the ancient Korean Kingdoms (*ca.* B.C. 57-A.D. 935). It thus appears likely that the ancient name of the Korean Kingdom of Sin-ra (> S͟hīlā, Sīlā) was transmitted, by way of Chinese merchants or other informants, to Arabic geographers of the 3rd/8th century.

(T. SAGUCHI)

S͟HILB, modern Silves in southern Portugal, a town of medieval al-Andalus in the *kūra* of Uks͟hūnuba.

Arabic geographers describe it as being in a fertile region, with many trees, especially pines, orchards and watercourses. The town itself is on a slight hill at the side of a river (the *nahr S͟hilb*, modern Arade), which supplied the town with water. It was linked to the roads of the south-west of the Peninsula, and its nearness to the sea (15 km/9 miles) gave access to maritime produce and trade. Roman remains have been found on the site; the exact date of the Arabic conquest is unknown, but Islamic pottery from the 2nd/8th century has been found. There was a Yemeni element in the Arab population, and local scholars with *nisbas* such as al-Awdī, al-Lak͟hmī, al-Ḥimyarī, etc., are mentioned but there were also local lineages, such as that of the Banū Abi 'l-Ḥabīb.

In Umayyad times, S͟hilb took part in the decentralisation movement notable throughout al-Andalus in the later 3rd/9th century. A lord of *muwallad* origin, Bakr b. Yaḥyā, dominated the Uks͟hūnuba region, and the *amīr* ʿAbd Allāh b. Muḥammad I had to confirm his son Yahyā as governor of S͟hilb. In 317/929, ʿAbd al-Raḥmān III, in his endeavours to restore unity in the kingdom, attacked Bakr's grandson K͟halaf, who nevertheless managed to retain his position as caliphal governor in return for paying taxes and promising not to aid rebels. When the Umayyad caliphate fell, local notables seized power at S͟hilb, as at other places. The chronology here is obscure, and it is uncertain whether one or two separate families are involved, but the sources agree that a *ḳāḍī* of S͟hilb, ʿĪsā b. Muḥammad from the Banū Muzayn, assumed power and founded a petty dynasty, which was soon attacked by al-Muʿtaḍid b. ʿAbbād of Seville, who conquered the town in 455/1063, nominating his son al-Muʿtamid as governor there. The prince-governor was accompanied by his friend and *wazīr*, Ibn ʿAmmār [*q.v.*], himself a native of S͟hilb, and it was there that al-Muʿtamid met his future favourite wife, Iʿtimād. When al-Muʿtamid succeeded to power in Seville, he left the town to his son ʿUbayd Allāh al-Muʿtadd, but like the rest of the ʿAbbādid lands, S͟hilb soon fell to the Almoravids.

A new stage in the history of the south-west of the Peninsula was the revolt of Ibn Ḳasī [*q.v.*], who was supported by the people of S͟hilb and Yābura (Evora), who gave their allegiance in 539/1144, with Ibn al-Mund͟hir becoming Ibn Ḳasī's governor at S͟hilb. Attacks by the forces of S͟hilb and the *kūra* on Seville and Cordova failed, but Ibn Ḳasī ended up as governor of S͟hilb for the incoming Almohads. However, he and the notables of S͟hilb did not give their allegiance, amongst representatives of al-Andalus, to the caliph ʿAbd al-Muʾmin at Salé, and he began negotiations with the Portuguese. His death, at the hands of a plot of the S͟hilb citizens, is attributed to this attempted rapprochement with the Christians. The Almohads then attached the whole *kūra* to Seville, nominated Almohad governors and settled troops (*munad͟jd͟jadūn*) and their families in the region. The fortifications of the fortresses of S͟hilb and Bād͟ja (Beja) were repaired, but in 585/1189 the Portuguese captured S͟hilb after a fierce siege, and the inhabitants had to abandon it, leaving behind all their possessions. The Almohad caliph al-Manṣūr recovered it in D͟jumādā II 587/June 1191, and the last years of Muslim control there saw S͟hilb under the dominion of the lord of Labla (Niebla), S͟huʿayb b. Muḥammad b. Maḥfūẓ, who rose against the Almohads in 631/1234. The town finally passed into Portuguese hands in 1240, and it is Christian sources which describe this conquest, led by Santiago Paio Peres Correia.

A good number of poets stemmed from S͟hilb, with Ibn ʿAmmār probably the most famous, but one should also note two poetesses, Maryam bt. Abī Yaʿḳūb al-S͟hilbī (5th/11th century) and al-S͟hilbiyya (6th/12th century). Today, the fortress is the most important relic in the town of the Islamic period; there has been preserved an inscription on the base of a tower of the enceinte dated 624/1227, together with epigraphic and ceramic fragments and coins.

(MANUELA MARÍN)

AL-**S͟HILLĪ**, Abū ʿAlawī Muḥammad b. Abī Bakr, biographer and historian from Tarīm [*q.v.*]. Born in 1030/1621-2, he died at Mecca in 1093/1682. He studied theology, sciences and, above all, mysticism in his native town, in Ẓufār, in India and in Mecca and Medina. After the death of S͟hayk͟h ʿAbd Allāh b. Abī Bakr b. al-D͟jamāl in 1072/1661-2, he began to lecture at the Great Mosque in Mecca, but had to renounce his teaching activities after four years because of ill health. On the basis of a number of works on Ḥaḍramī *sayyids* and Ṣūfīs [see BĀ ʿALAWĪ],

he brought together more than 280 biographies in his *al-Mashraʿ al-rawī fī manāḳib al-sāda al-kirām Āl Abī ʿAlawī*, published Cairo 1319/1901-2. His *al-Sanāʾ al-bāhir bi-takmīl al-Nūr al-sāfir ʿan akhbār al-ḳarn al-ʿāshir* is a supplement to ʿAbd al-Ḳādir b. Shaykh al-ʿAydarūs al-Hindī [see ʿAYDARŪS, 4], *al-Nūr al-sāfir ...*, ed. Baghdād 1353/1934. He also wrote *ʿIḳd al-djawāhir wa 'l-durar fī akhbār ahl al-ḳarn al-ḥādī ʿashar*.

SHIMSHĀṬ, a mediaeval Islamic town in eastern Anatolia/western Armenia. It lay, at a site whose definite location is unknown, on the left bank of the southern headwater of the upper Euphrates, the classical Arsanias, modern Murad Su. Its location was, according to Yāḳūt, *Buldān*, ed. Beirut, iii, 362-3, between Bālūya (modern Palu) and Ḥiṣn Ziyād or Khartpirt [*q.v.*] (modern Harput), and it is not to be confused with Sumaysāṭ [*q.v.*] on the Euphrates further south. It was in the borderland between the Arabs and the Greeks, and possession of it must have oscillated between the two peoples. It was the place of origin of a 4th/10th century poet of a certain distinction, Abu 'l-Ḥasan ʿAlī al-Shimshāṭī [*q.v.*], and we know that in 326/938 it was still in Arab hands, for in that year, the Ḥamdānid Sayf al-Dawla [*q.v.*] fell back on it before the Byzantine Domesticus after besieging Ḥiṣn Ziyād (E. Honigmann, *Die Ostgrenze des byzantinischen Reiches*, 76). By Yāḳūt's time, however (early 7th/13th century), Shimshāṭ was in ruins, with only a tiny population.

Bibliography: See also Le Strange, *The lands of the Eastern Caliphate*, 116-17; J. Marquart, *Südarmenien und die Tigrisquellen*, Vienna 1930, 242-4.

(C.E. BOSWORTH)

AL-**SHIMSHĀṬĪ**, ABU 'L-ḤASAN ʿALĪ B. MUḤAMMAD b. al-Muṭahhar al-ʿAdawī, Arab philologist, minor poet and anthologist. As poetic occurrences of his *nisba* and the town to which it refers show (Yāḳūt, *Buldān*, Beirut 1376/1957, iii, 363a, l. 4; and *Irshād*, Cairo n.d., xvii, 241, l. 5), the name-form "al-Sumaysāṭī", given in Flügel's ed. of the *Fihrist* and, as an option, by Brockelmann, *GAL* S I, 251, should be discarded. Sumaysāṭ and Shimshāṭ refer to two different places (Yāḳūt, *Buldān*, s.vv., and cf. Le Strange, *Lands of the Eastern Caliphate*, 116-17 (Shimshāṭ), 108 (Sumaysāṭ), and cf. map iii). According to Ibn al-Nadīm, who used to know al-Shimshāṭī, the latter was still alive when he was writing, i.e. in 377/987 (*Fihrist*, 154, ll. 24-5; the year is given by Yāḳūt, *Irshād*, *loc. cit.*, 240, ll. 12-13). No other precise dates of his life are known.

He was attached to the court of the Ḥamdānids in Mawṣil, where he served as a teacher to Abū Taghlib b. Nāṣir al-Dawla and his brother. For this reason he was also known by the nickname "the teacher" (al-Muʿallim), e.g. in a mocking poem that Sayf al-Dawla [*q.v.*] himself wrote about al-Shimshāṭī (Yāḳūt, *Buldān*, *loc. cit.* at l. 5, and cf. *Fihrist*, 235, l. 1).

He was of Shīʿī convictions, and thus has an entry in al-Nadjāshī (who was his disciple, *Ridjāl*, 186 ff.), which also contains the longest list of his works.

He is known, first and foremost, for the only extant work of his, the *K. al-Anwār wa-maḥāsin al-ashʿār*. This is an anthology of poetry, roughly of the *K. al-Maʿānī* type, usually with longish chunks of poetry and combined here and there with prose accounts. The chapters deal with the following topics: 1. Weapons; 2. Battle-days of the ancient Arabs (explicitly devoted to the lesser-known ones, of which he includes thirty); 3. Horses; 4. Land and camels, sea and ships; 5. Former encampments and mirages; 6. Houses and castles; and 7. Hunting.

From his *adab* work *al-Nuzah wa 'l-ibtihādj*, a fragment dealing with a dispute between the two grammarians al-Zadjdjādj (Baṣran) and Thaʿlab (Kūfan) [*qq.v.*], of whom the former is the first-person narrator, is preserved in Yāḳūt, *Irshād*, i, 137-43; in al-Suyūṭī, *al-Ashbāh wa 'l-naẓāʾir*, Ḥaydarābād 1359-61, iv, 123-6; and presumably also in a small independent work by Ibn Ṭūlūn (see Sezgin, *GAS*, viii, 99; and for Ibn Ṭūlūn, Brockelmann, II², 481-3).

Bibliography: Apart from the sources given in the article, see the eds. of *al-Anwār wa-maḥāsin al-ashʿār*, by al-Sayyid Muḥammad Yūsuf, i (all publ.?), Kuwait 1397/1977, and by Ṣāliḥ Mahdī al-ʿAzzāwī, Baghdād 1976; also al-Sayyid Muḥammad Yūsuf, *al-Shimshāṭī wa-kitābuhū al-Anwār wa-maḥāsin al-ashʿār*, in *RAAD*, xlviii (1973), 359-70.

(W.P. HEINRICHS)

SHĪN [see SĪN].

SHĪNĀ, SALMĀN (1898-1978), ʿIrāḳī Jewish journalist, lawyer and a member of the ʿIrāḳī Parliament. Born in the Jewish quarter of Baghdād, he received a conventional religious Jewish education in a Ḥeder (equivalent to the Muslim *kuttāb*), and then continued his primary and secondary studies at the secular Jewish school of the Alliance Française Israëlite in Baghdād, and excelled in languages. Later, he joined the Ottoman Secondary School in Baghdād and was recruited to the Ottoman Army as a reserve officer during the First World War, as an adjutant and interpreter to the German General von Becker at the Turkish Headquarters.

After the defeat of the Ottoman army in ʿIrāḳ, he was taken prisoner, but refused to join the British forces on the grounds that the Ottomans had always helped the Jews, especially after their expulsion from Spain in 1492. He became a prisoner of war in India, but was repatriated to ʿIrāḳ in February 1919.

In 1920 he joined the Law College in Baghdād where many ʿIrāḳī politicians such as Ṣāliḥ Djabr, later on Prime Minister (1947-8) studied. On 10 April 1924 his weekly magazine *al-Miṣbāḥ* was first issued, subtitled in Hebrew letters *Ha-Menorah* ("The Candelabrum"), with its Jewish emblem. This was the first Jewish literary and cultural weekly magazine published in literary Arabic in Arab script in ʿIrāḳ. Shīnā edited his magazine, writing its main articles and translated many news items and articles from European and American magazines concerning Jewish and Zionist activities and achievements, in the Holy Land and abroad. The young poet and writer, Anwar Shāʾūl [*q.v.*] joined him in editing the literary part of the weekly, and many other young Jewish poets and writers became contributors. Their works were among the first romantic poems and short stories published in ʿIrāḳ, being influenced both by European literature and by the Arabic Mahdjar [*q.v.*] school in the USA. Shīnā and Anwar Shāʾūl also encouraged theatrical activities among the Jewish community in ʿIrāḳ, and among the plays performed was an Arabic translation of Corneille's *Le Cid* (1925). He also established, with other Zionist activists, The Hebrew Literary Association (*al-Djamʿiyya al-ʿIbriyya al-Adabiyya*) as a club and library, where Jewish journals in Hebrew, English and French were received.

In 1925 Shīnā started practising as a lawyer, serving the Jewish community and defending its interests after the rise of the Nazi and Palestinian national activities in ʿIrāḳ, where there were many Palestinians headed by the Muftī al-Ḥādjdj Amīn al-Ḥusaynī [*q.v.* in Suppl.], who were later, in October 1939, joined by their leader. Their activities culminated in the *coup d'état* of Rashīd ʿĀlī al-Gīlānī, defeated in May 1941 by the British Army, followed by the Pogrom against the Jews of Baghdād on 1-2 June 1941.

In 1947 Shīnā was elected a member of the ʿIrāḳī Parliament and served until 1951, the most critical years in the history of the Jews of ʿIrāḳ, which ended with their mass immigration to Israel. Shīnā himself resigned from the Parliament and emigrated to Israel, where he worked as a lawyer, serving his community and protesting against what he termed "discrimination against the Jews of ʿIrāḳ", whose properties were frozen in ʿIrāḳ and who were without community leaders in the new Israeli society. In 1956 he unsuccessfully stood as a candidate for the Knesset. He continued as a lawyer and activist until his death at Ramat-Gan in 1978.

(S. Moreh)

SHINĀSĪ, Ibrāhīm Efendi (1826-71), Ottoman poet, journalist, playwright. A pioneer in the Westernisation of Ottoman Turkish literature, Ibrāhīm Shināsī Efendi (in modern Turkish: İbrahim Şinasi) is credited with many firsts—the first play for the legitimate stage, the first translations of French poetry, the first privately-owned Turkish newspaper and some of the earliest journalistic articles, the use of punctuation, incipient modern literary criticism in prose, as well as the introduction of the norms and concepts of French political theories, culture and literature.

Shināsī was born in Istanbul in 1826, the son of an artillery officer. After his early education at a neighbourhood school, he became an apprentice clerk at the Bureau of the Tophane Imperial Arsenal, where he was trained by several senior staff members in Arabic, Persian and French.

In 1849, through the good offices of the Grand Vizier Muṣṭafā Reshīd Pasha [*q.v.*], he was sent to France where, in addition to literature, he studied public finance. Gaining fluency in French, he reportedly made the acquaintance of Renan, Lamartine, and the family of the prominent orientalist Sylvestre de Sacy; according to some sources, he became associated with the Société Asiatique.

During his studies in Paris, Shināsī prepared a compilation entitled *Ḍurūb-i emthāl-i ʿothmāniyye* ("Ottoman proverbs"), published in 1863. The first edition contained about 1,500 proverbs and some 300 aphorisms, couplets, and expressions. (In 1870 he published an enlarged second edition which featured more than 2,000 proverbs and over 400 maxims.) This work, with its substantive introduction on paremiology and folk wisdom, stimulated among the Ottoman educated élite an interest in popular culture.

Upon his return to Istanbul in 1852 or early 1853, he worked briefly at the Arsenal again, following which the sultan appointed him to the Council of Public Education. Although some literary histories claim that he also served as a member of the *Endjümen-i Dānish*, this has never been documented. Shināsī's official status wavered, depending on the political vicissitudes of his protector, Muṣṭafā Reshīd Pasha.

In 1859, Shināsī published *Terdjüme-yi manẓūme* ("Translation of verses"), a small selection of poems by Racine, Lamartine, Gilbert, La Fontaine, and Fénélon, rendered into Turkish verse. E.J.W. Gibb attributes considerable seminal influence to this volume, claiming that the translations "mark the turning-point in the history of Ottoman poetry". Shināsī's renditions are quite smooth in style and faithful to the originals. They served as the first Ottoman taste of the poetry of the Western world in Turkish.

In October 1860, Shināsī started to publish, together with Āgāh Efendi (1832-85), a weekly newspaper named *Terdjümān-i Aḥwāl* ("Interpreter of events"), the first unofficial, privately-owned Turkish newspaper. Here, Shināsī articulated his commitment to enlighten the public "in an easily comprehensible language".

Shāʿir ewlenmesi (Eng. tr., *The wedding of a poet*, by E. Allworth, New York 1981), a one-act comedy, written by Shināsī in 1859, was serialised in *Terdjümān-i aḥwāl* in 1860 and published in book form the same year. Designed as a play of social criticism, mainly of the hazards of the traditional custom of arranged marriages, it interfuses some of the techniques of European comedy with devices and personae from the *Orta oyunu* [*q.v.*] (the Ottoman *Commedia dell'arte*). *Shāʿir ewlenmesi* stands as the first Turkish play written for the express purpose of being produced on the legitimate stage. Its first production, however, did not take place until 1908 (in Salonica).

Because of disagreements with Āgāh Efendi, Shināsī left *Terdjümān* in the spring of 1861, and launched, in June 1862, his own journal *Taṣwīr-i afkār* ("Chronicle of opinions"), which became a platform for innovative ideas based on European-type rationalism and technological reform for the salvation of the Ottoman state. Shināsī wrote many articles dealing with urban problems, agriculture, industry, and governmental corruption, and advocated the rule of law based on the rights of the people, political rationalism, secularisation, and a system of governance sustained by national sovereignty, freedom, and citizenship rights.

Shināsī was joined in 1863 by the young Nāmiḳ Kemāl (1840-88 [*q.v.*]), in spreading the vision not only of a progressive civil society but also of a modern literature for the Ottomans. Together in *Taṣwīr-i afkār* they endeavoured to promote a new *Weltanschauung* derived from Western civilisation. Many of their themes and recommendations came to play a prominent role during the last half-century of the Ottoman state.

Significantly, it was Shināsī who introduced to the Ottoman political and intellectual circles such concepts as "republic", "popular sovereignty", "art for society's sake", "political economy", "secularism", etc. In both *Terdjümān* and *Taṣwīr*, he pursued his goal of not only "informing the people about events and new ideas" but also "communicating to the government the will of the nation". In this two-way process, he revitalised the vernacular through his use of a simplified vocabulary and streamlined journalistic style. Shināsī's *Taṣwīr* printing house constituted a meeting place for young Ottoman men of letters and intellectuals and a breeding-ground for ideas seeking to create a new Ottoman society and literature.

In 1865 Shināsī departed for Paris, leaving *Taṣwīr-i afkār* in Nāmiḳ Kemāl's hands. His departure was probably prompted by his fear of becoming implicated in a plot to assassinate the Grand Vizier ʿĀlī

Pasha. In Paris he was supported by Muṣṭafā Fāḍil Pasha, but had little or no contact with the Young Ottomans, choosing to stay out of politics. During his four years there, interrupted by a short visit to Istanbul, he concentrated on a dictionary of the Turkish language. This ambitious enterprise, as reported by Ebüzziyā Tewfīḳ (1848-1913), was left unfinished, with 19 of the 31 letters of the Ottoman alphabet completed and 14,000 pages produced—a claim disputed by numerous scholars. No part of this dictionary—which Shināsī had discussed with the linguist Emile Littré and the orientalist Pavet de Courteille—has survived. (Reportedly, Shināsī had also produced, possibly around 1855, a grammar for schools entitled *Mebādī-yi ʿilm-i ṣarf*, but no copy of it has ever been found, if it was published at all.) Following his return to Istanbul in the fall of 1869, Shināsī rented a small house, where he also set up a printing press to republish some of his books. He died on 13 September 1871.

Shināsī's poetry, most of it written in the early period of his life, is hardly distinguished by high literary merit. He published *Muntakhabāt-ī ashʿār* ("Selected poems") in 1862, and his complete *Dīwān* came out posthumously in 1885. His output consists of an *ilāhī* (hymn), a *münādjāt* (supplication), a small number of *ghazals*, a few chronograms and encomiastic verses, a handful of "parallel" or "imitative" poems and didactic verses, and independent (often aphoristic) couplets. Among his most appealing poems are several La Fontainesque fables. His major poems include four *ḳaṣīdas* composed for his benefactor Muṣṭafā Reshīd Pasha. These are of interest for several reasons, aside from the fact that Shināsī wrote full-scale panegyrics exclusively for this Grand Vizier. He introduced formal revisions (principally the elimination of the *nesīb* or exordium section), used the *ḳaṣīda* as a vehicle for his positivist ideas, and praised his subject in such terms as "the president of the nation of virtue", "the apostle of civilisation", even courageously asserting that "your legislation puts the Sultan in his place".

Shināsī employed conventional Ottoman stanzaic forms and adhered to the aesthetic values of *Dīwān* (classical, élite) poetry. His innovations were of a limited nature: they indicated, however, the possibility of taking certain liberties with tradition. He composed one whole poem in what he called "pure Turkish" in which he kept out words borrowed from Arabic and Persian. In some of his critical writings and in a polemical exchange, he helped to introduce a new and strong sense of the integrity of the Turkish language.

Shināsī was also the first Ottoman poet to translate some of his own lines of poetry into French. (Samples of his renditions appear in his *Muntakhabāt* and *Dīwān*.) His universalist ideal is contained in one of his most frequently quoted lines: "My nation is mankind, my country is the face of the earth".

SHĪNĪ, SHĪNIYYA, SHĀNĪ (A.), a type of mediaeval Arabic warship used in the Mediterranean. The *shīnī* is mentioned briefly in SAFĪNA. 1 (b) as a type of galley, but its importance in naval history of the time merits separate notice.

Ancient and mediaeval Mediterranean shipbuilding is poorly documented, and, while the study of cargo-carriers has been somewhat enhanced by an increasing number of discovered wrecks, the only ancient wreck of a war vessel we possess is the Punic ship of Marsala (A. Guillerm, *Archaeologic excavations and experimental archaeology. The Punic ship of Marsala and Trireme Olympias*, in *Tropis*, iii [1995], 193-6). We are left mainly with the literary evidence and a few schematic designs of ships in both the Arab and Byzantine sources, the comparative study of which is necessary before any conclusions are drawn.

The type of the Byzantine *dromon*, which was used as a model for the Arab *shīnī*, followed the classical Mediterranean tradition, i.e. the "shell technique" of shipbuilding, the ribs being added after the planks had been joined together (M. Daeffler, *Late 17th century conception of French galleys, in Septième Colloque International d'Archéologie Navale*, Saint-Vaast-la-Hougue 1994, 15). Nevertheless, the Byzantine *dromon* of the middle 7th century, and consequently the first Arab warships, were very different from the earlier *dromons* of the 5th and 6th centuries, which had been swift, small, 30-oared vessels (the word *dromon* comes from δραμεῖν "to run, to move quickly").

Though the Arab *shīnī* followed in general the type of the Byzantine *dromon*, there was at first a substantial difference in that the fighting crew engaged were better-paid Muslims, while the sailing crew were lesser-paid Christian Egyptians. Eventually, of course, Muslim sailors with nautical experience entered the ranks of the sailing crew.

The 7th-century Byzantine *dromon* and the Arab *shīnī* sacrificed speed and manoeuvrability for heavy machine equipment, mainly stone-throwing catapults, hence the main weapon of earlier times, the ram, was abandoned by both types of ship: thus in the famous naval battle of Dhāt al-Ṣawārī (34/655-6 [*q.v.* in Suppl.]) no use of the ram is reported (see V. Christides, *The naval engagement of Dhāt aṣ-Ṣawārī A.H. 34/A.D. 655-56*, in *Byzantina*, xiii [1985], 1331-45).

Arab and Byzantine naval technology reached their peaks in the 9th and 10th centuries, when, in addition to the heavy stone-throwing machinery, Greek Fire began to be used by Arabs and Byzantines on their warships, and then in Mamlūk times, gunpowder and cannons (see NAFT, 2, and BĀRŪD. iii, and the chapter on incendiary weapons in A.Y. al-Hassan and D.R. Hill, *Islamic technology*, Cambridge 1986, 106 ff.).

The Arabic sources provide us with many details concerning the function of the Arab warships which do not appear in other sources. Thus the *shīnī* was two-banked, with a separate leader in each bank, and in the lower level, a sick bay was placed with the proper medical personnel (Christides, *Naval warfare in the Eastern Mediterranean (6th-14th centuries). An Arabic translation of Leo VI's Naumachica*, in *Graeco-Arabica*, iii [1984], 143). Like its counterpart the *dromon*, it had lateen sails, originally two and later three. Arab warships were usually painted black and their sails were white (idem, *Byzantine dromon and Arab shīnī*, in *Tropis*, iii [1995], 118). The *shīnī* was propelled by sails and oars. Ibn al-Mammātī states that it sailed with 140 oars, leaving open the question of the number of oarsmen as well as that of the fighting men who were placed above them (*K. Ḳawānīn al-dawānīn*, ed. A.S. Atiya, Cairo 1934, 340). It seems that in the Arab warships, as in the Byzantine *dromons*, one person manned one oar; we can assume, therefore, that in every war vessel there were about 150 to 165 sailors, if we

add the supplementary crew (Arabic iconography attests the use of one man to each oar in each ship; see D. Nicolle, *Shipping in Islamic art: seventh through sixteenth century A.D.*, in *The American Neptune*, xlix/3 [1989], 168-97). Nevertheless, the number of the oarsmen in the average *s̲h̲īnī* appears different in the Arabic sources and cannot be defined precisely; likewise, the number of the warriors, which probably varied in each warship, is unknown.

The average *s̲h̲īnī* had a castle placed next to the main sail or just under it (for the position of this castle in both Arab and Byzantine warships, see Christides, *Ibn al-Manqalī (Manglī) and Leo VI. New evidence on Arabo-Byzantine ship construction and naval warfare*, in *Byzantinoslavica* [1995]).

In addition to the average *s̲h̲īnī*, there were bigger warships with the same name but with a crew of 200 (Ibn al-Manglī, *al-Adilla al-rasmiyya fi 'l-taʿābī al-ḥarbiyya*, ed. M.S. K̲h̲aṭṭāb, Bag̲h̲dād 1988, 243).

(V. Christides)

S̲H̲INĶĪṬ, a town of the mediaeval Islamic Sahara.

Various hypotheses have been put forward regarding the name S̲h̲inķīṭ/S̲h̲ind̲j̲īṭ, of which the following two merit discussion. The first gives to it the meaning "source of horses", with *sen* = "sources" and *gīti* = "horses". According to the various proponents of this etymology, the word's origin could be either from Azayr or Azer (a Soninké tongue, now extinct, formerly spoken in the Western Sahara) or else Zenāga Berber. The second hypothesis derives the name from *s̲h̲in*, said to be a deformation of *sen* or *sin*, which in the Adrar and the Tangant conveys the idea of height in relation to the rest of the countryside and *giti*, the name of a hill near the town of S̲h̲inķīṭ.

Although S̲h̲inķīṭ was to become famous to the point that it was used to denote the whole Moorish territory from Sāķiyāt al-Ḥamrā' to the Senegal River, it was never mentioned by the mediaeval Arabic geographers. Is this because the town did not at that time exist, or because it was relatively little known, compared to the great urban centres of the Sahara? The question remains open, but it is nevertheless true that Valentim Fernandès, a Moravian author living in Lisbon, was the first, in his *Description of the African coast from Ceuta to the Senegal* (1506-7), to draw the attention of the Western world to the existence of S̲h̲inķīṭ. However, this does not tell us anything about the origin of the town: at the earliest, in the 14th century, according to H.T. Norris, in his art. MŪRĪTĀNIYĀ, at VII, 624a, whilst al-K̲h̲alīl al-Naḥwī, *Bilād al-S̲h̲inķīt, al-manāra wa 'l-ribāt*, Tunis 1987, 72, claims that S̲h̲inķīṭ was actually founded in 660/1262 on the ruins of an ancient S̲h̲inķīṭ (the mythical Abbwayr) founded in 160/772.

From the 17th century onwards, the Banū Ḥassān, a branch of the Arab Maʿķil tribe, came into the western Sahara with permanent effects there, imposing their dialect (Ḥassāniyya) and gradually establishing amirates, including that of the Adrar, in which S̲h̲inķīṭ was situated. Nevertheless, out of respect for its scholars and saints, the *amīrs* of the Adrar never levied tribute on S̲h̲inķīṭ, which, despite its fame, never became a political capital, although it became more renowned than any other town of Mauritania in the central lands of the Muslim world. The men of scholarship and piety of S̲h̲inķīṭ were, in this regard, respected everywhere, and attracted students, all the Islamic sciences being taught in their mosques or in the homes of these *ʿulamā'*. When they completed their studies and left S̲h̲inķīṭ, most of these former students would style themselves S̲h̲anāķiṭa (pl. of S̲h̲inķīṭī).

The Pilgrimage to Mecca also contributed to the fame of S̲h̲inķīṭ, whose permanent population can never have exceeded more than a few thousand persons at most. However, according to Sīdī ʿAbd Allāh b. al-Ḥād̲j̲d̲j̲ Brāhīm (d. 1233/1878), author of the sole treatise on the history of S̲h̲inķīṭ (the *Ṣaḥīḥat al-naķl fī ʿAlawiyyat Idaw ʿAlī wa-Bakriyyat Muḥammad G̲h̲ūl*), "numerous pilgrims from different parts of the Moorish lands used to join the Pilgrimage caravan of S̲h̲inķīṭ when leaving on this quest. All the pilgrims of the Muslim West used to pass as S̲h̲anāķiṭa". Hence these persons formed a bridge between S̲h̲inķīṭ and the Orient, with several of them settling in this last region, retaining their S̲h̲inķīṭī genealogy and decisively contributing to the cultural influence of this small town. In the course of their travels, they would bring back books and treatises procured in Arabia or elsewhere in the Orient or Muslim West and containing the conventional learning of the Islamic sciences, which they would then spread amongst the peoples of the Southern Sahara, still in course of being Islamised.

As intermediaries between the Arab world and the black peoples, the S̲h̲anāķiṭa, notably the Idaw ʿAlī of S̲h̲inķīṭ, contributed considerably both to the spread of Islam, in the shape of the Ṣūfī brotherhoods, and to the spread of Arabic language and culture into the south of the Sahara, a region which they visited also for commercial purposes.

(Ousmane Kane)

AL-**S̲H̲INĶĪṬĪ** (Sīd) Aḥmad b. al-Amīn (b. 1280/1863 or 1289/1872, d. 1331/1913), Mauritanian scholar and author, whose reputation in the Muslim World principally rests upon his written description of Mauritania and the Western Sahara and his appreciation of the poetic masterpieces of the Moors in Classical Arabic and in their colloquial dialect, *Ḥassāniyya*. He was born into a scholarly family of the Īdaw ʿAlī Zwāya who were resident in al-Mad̲h̲ard̲h̲ra in the Trārza [see MŪRĪTĀNIYĀ]. His mother, a pious and well-educated lady, stemmed from the Ag̲h̲lāl of S̲h̲inķīṭ. His early years were spent in the study of Arabic language and literature and the Islamic sciences in the nomadic schools. Later, he

undertook extensive journeys inside Mauritania and he stayed for some time at the *zāwiya* of Shaykh Māʾ al-ʿAynayn [*q.v.*] at Smāra.

He undertook the *ḥadjdj* in 1317/1899 and he met scholars in Mecca and Medina. He returned to Egypt, though he made *détours* into Syria, to Izmir, Istanbul and into Russia. Why he chose to visit the latter is unknown, nor is it known where he stayed, though a visit to Kazan seems likely. He arrived in Cairo in 1320/1902. He lived there for the remainder of his bachelor life, writing and publishing books and mixing socially with the scholars of al-Azhar.

His masterpiece, *al-Wasīṭ*, a compendium of Mauritanian verse accompanied by a concise survey of the geography, history, folklore and proverbs of the Moors, made the Arabs of the *Mashriḳ* aware, for the first time, of the profound scholarship which was then a living tradition in the furthest Saharan regions. He was the first scholar to write extensively on the prosody and the oral and sung poetry (*leghna*) amongst the Shanāḳiṭa. *Ḥassāniyya* is extensively vocalised in his book. Few of the Mauritanian classical poets whom he quotes have biographies. An exception is Muḥammad Maḥmūd b. al-Talāmīd al-Turkuzī, a Mauritanian scholar who was highly regarded in Egypt and with whom he had sharp exchanges on religious and literary matters (*al-Wasīṭ*, Cairo 1378/1958, 381-97).

Aḥmad b. al-Amīn was devoted to Ṣūfism. He, together with Shaykh Abū Bakr Muḥammad Luṭfī, wrote a commentary upon *Ṣahāridj al-luʾluʾ* (Maṭbaʿat al-Hilāl, Cairo 1324/1906) by al-Sayyid Tawfīḳ al-Bakrī (see F. de Jong, *Ṭuruq and Ṭuruq-linked institutions in nineteenth-century Egypt*, Leiden 1978, 182-8). In the foreword to this commentary, Aḥmad b. al-Amīn remarks (in eloquent *sadjʿ*) that, having left Shinḳīṭ and having travelled extensively in the Middle East, he was honourably received by al-Sayyid Tawfīḳ "chief of the *Sharīfs* of Egypt and *Shaykh* of the Ṣūfī orders". He wrote a spirited defence of the Tidjāniyya *ṭarīḳa*, of which he was a member, against attacks made against it by Shaykh Yūsuf al-Nabhānī.

Works. Ahmed-Baba Miské (1970, 35-6), lists fourteen works by the author. Some of them were original compositions, others were works edited by him. Most of the latter are commentaries upon pre-Islamic and early Islamic poetry. A *Dīwān* of al-Ḥuṭayʾa's verse is also attributed to him. It is unlikely that the list, which Miské provides, is complete. In view of the fact that these works (including *al-Wasīṭ*) were printed between 1302/1902 and 1331/1912, the author was astonishingly productive during the years when he was resident in Cairo. He was helped by Aḥmad Taymūr Bāshā, the keeper of the Taymiyya library and he was given every assistance in his literary activities. Two works (*Ṭahārat al-ʿArab*, 1326/1908 and *Dīwān Ṭarafa b. al-ʿAbd*, 1327/1909) were printed in Kazan. It is perhaps significant that, following his Russian visit, Cairo was to be the forum for the Universal Islamic Congress, advocated by Ismāʿīl Gasparli [see GASPRINSKY], held in 1907 [see *RMM*, iv [1908], 103 ff.).

(H.T. NORRIS)

SHINTARA (or Shantara), Arabic name of the modern Cintra, a little town in Portugal, at a height of 207 m/700 feet above sea-level, 28 km/16 miles to the north-west of Lisbon. It was quite prosperous under Muslim rule, and the Arab geographers remark on the fertility of the country round; its apples were universally famous. Cintra always shared the destinies of its great neighbour Lisbon as long as it was in the hands of the Muslims; it was reconquered in 1147 by Alfonso Henriquez, king of Portugal. After it had become Christian again, it was the favourite residence of the Portuguese kings; it was in the palace of Cintra that Dom Sebastian decided in 1578 upon the expedition against Morocco which ended disastrously on the banks of the Wādī ʾl-Makhāzin near al-Ḳaṣr al-Kabīr.

The modern Cintra is dominated by the ruins of an old stronghold of the Muslim period. Of this fortress, now called *Castello dos Mouros*, built at a height of 429 m/1430 feet, there only remain two masses of masonry with the remains of a chapel and baths.

SHĪR [see ASAD].

SHĪR WA KHŪRSHĪD [see NISHĀN. 1].

SHĪR ʿALĪ (*ca.* 1823-79), Amīr of Afghānistān 1863-79.

He was the fifth son and successor of Amīr Dūst Muḥammad (d. 9 June 1863). His mother, Khadīdja, was both Dūst Muḥammad's favourite wife and a Bārakzay (daughter of Raḥmat Allāh Khān Popalzay) and probably for these reasons he was nominated heir following the death of his full brother, Ghulām Ḥaydar, on 2 July 1858, having previously served as governor of Ghaznī. In 1863 Shīr ʿAlī's claims were opposed by his elder half-brothers, Muḥammad Afḍal (1811-67) and Muḥammad Aʿẓam (1818-69), other brothers joined the conflict and a civil war ensued which lasted until 1869. Shīr ʿAlī's forces were alternately victorious and defeated, and in 1867 he was reduced to the possession of Harāt only, with Afḍal and then Aʿẓam ruling in Kābul. In 1868 he recovered Ḳandahār and then Kābul, although it was not until the beginning of 1869 that he finally defeated Aʿẓam and his nephew, the future Amīr, ʿAbd al-Raḥmān (*ca.* 1844-1901, the only son of Afḍal) and re-established full control of Afghānistān.

As Amīr after 1868, Shīr ʿAlī continued and extended the policy of his father in attempting to build a stronger, more centralised state in Afghānistān. He suppressed rebellions by his sons, Muḥammad Yaʿḳūb (*ca.* 1849-1923) and Muḥammad Ayyūb (*ca.* 1856-1914), and extended his authority over northern Afghānistān. He centralised the administration, established a rudimentary system of ministries, developed communications including roads, bridges and a postal system (the first Afghan postage stamps appeared in 1870), attempted to reform the currency with the introduction of the *afghānī* in place of the former rupee,

and founded a periodical, S̲h̲ams al-Nahār (1875-9) and the first state school. He restricted the political influence of the ʿulamāʾ, and exalted the status of the ruler, seeking but not adopting the title of S̲h̲āh. In 1874 he established a short-lived consultative council. Revenues were increased three-fold between 1863 and 1878. Over 40% of the revenue was spent on the army, which was the central feature of S̲h̲īr ʿAlī's reforms. He reduced the size of the tribal militia and the feudal army and strengthened the standing army, which was trained and equipped in European style, modelled on the British-Indian forces and often led by British-trained officers. By 1878 the standing army numbered 56,000, including 58 infantry and 12 cavalry regiments. In addition, S̲h̲īr ʿAlī developed the artillery, creating workshops to manufacture modern iron weapons. By 1878 he had 370 guns. The workshops also manufactured small arms including Sniders and Martini Henrys. The army was deployed through Afg̲h̲ānistān mainly with a view to the needs of internal security. In developing the state institutions, S̲h̲īr ʿAlī relied especially on G̲h̲ilzays and Wardaks, who provided 80% of the standing army. These tribes, together with Persians, Harātīs and Parsiwāns, dominated the administration. The Durrānī tribes were largely excluded from power.

S̲h̲īr ʿAlī's foreign affairs were dominated by his dealings with Russia and, especially, with British India. During the civil war, the Government of India had followed a policy of non-interference, known as "masterly inactivity". The various contenders for power had been given *de facto* recognition in accordance with their holdings, but material assistance claimed under the 1857 treaty made with Dūst Muḥammad was refused until November 1868. In March 1869 S̲h̲īr ʿAlī met the new Governor-General, Lord Mayo, at Ambāla, and asked for an offensive-defensive treaty, a regular subsidy and recognition of his son, ʿAbd Allāh D̲j̲ān (1862-78), as heir. Mayo offered only general assurances, money and arms, including artillery. S̲h̲īr ʿAlī was seemingly satisfied, although in subsequent years he renewed his demands. British interest in Afg̲h̲ānistān derived from border problems, commercial hopes and, especially, concerns about the expansion of Russia in Turkistān towards the northern Afg̲h̲ān border. Without consulting the Amīr, Britain sought agreement with Russia on the northern boundaries of Afg̲h̲ānistān, which were roughly defined in 1873. The Amīr was obliged to abandon his hopes of extending his territories beyond the Oxus. Britain also assumed responsibility for defining part of the western frontier with Persia; by the Goldsmid arbitration of 1873, Sīstān was divided between Persia and Afg̲h̲ānistān. S̲h̲īr ʿAlī's unhappiness was further increased by the British occupation of Quetta [see KWAṬṬA] on 8 December 1876.

The occupation of Quetta was one element in a new British policy (the so-called "forward policy") inaugurated by the Conservative Government in 1875 and carried on by the Governor-General, Lord Lytton, from 1876. A major background factor in his new policy was the development of the Eastern Crisis of 1875-8, which led to war between Russia and the Ottoman Empire in 1877 and threatened the possibility of war between Britain and Russia. Such a war could have extended to Central Asia, and the attitude of Afg̲h̲ānistān became of major importance. Lytton was prepared to offer S̲h̲īr ʿAlī a new alliance, stronger guarantees of protection, an annual subsidy and recognition of ʿAbd Allāh D̲j̲ān, in return for the acceptance of British agents in Afg̲h̲ānistān and effectual British control of Afg̲h̲ānistān's foreign relations. Negotiations were carried on in 1876 and 1877, but no agreement had been reached when Lytton broke off negotiations in March 1877. Lytton now applied pressure on S̲h̲īr ʿAlī either to force him to agree to British demands or to overthrow him. An Ottoman embassy was sent to Kābul in an effort to persuade the Amīr to renounce contacts with Russia. The reception of a Russian envoy in Kābul in July 1878 gave Lytton the excuse to demand the reception of a British mission and a promise by the Amīr to sever all relations with Russia. In September 1878, S̲h̲īr ʿAlī refused to admit the British mission and in November, Lytton's forces invaded Afg̲h̲ānistān. S̲h̲īr ʿAlī's army proved incapable of effective resistance and in December S̲h̲īr ʿAlī fled north, resigning authority to his oldest and former rebel son, Muḥammad Yaʿḳūb (ʿAbd Allāh D̲j̲ān had died in August 1878). It is uncertain whether S̲h̲īr ʿAlī formally abdicated in December. On 21 February 1879 S̲h̲īr ʿAlī died at Mazār-i S̲h̲arīf and was succeeded briefly by his son Muḥammad Yaʿḳūb K̲h̲ān.

(M.E. Yapp)

SHĪR SHĀH SŪR, Farīd al-Dīn, son of Miyān Ḥasan Sūr, the founder of a line of Dihlī Sultans, the Sūrīs [*q.v.*], which ruled during the interval between the first and second reigns of the Mughal Humāyūn [*q.v.*], sc. 947-62/1540-55, Shīr Shāh's own reign spanning 947-52/1540-5. The Sūrs were a small Afghān tribe from Rōh [*q.v.*], the north-west frontier region of India.

His father Miyān Ḥasan seems to have been in the service of one of the leading nobles of the Lōdī Sultans of Dihlī, the Khān-i Aʿzam ʿUmar Sarwānī and then from 901/1496 was in Djawnpur [*q.v.*], where he received the *pargana* of Sahsarām [*q.v.*] as his *iḳṭāʿ* for maintaining 500 *suwārs* or cavalrymen. Farīd al-Dīn himself entered the service of Ibrāhīm Khān Sarwānī till the latter's death in battle in 926/1520 against the Rādjput Rānā Sāngā of Mēwāŕ [*q.vv.*], and then entered that of Sultan Ibrāhīm Lōdī till the latter's death at the first battle of Pānīpat [*q.v.*] (932/1526). It was shortly after this that Farīd al-Dīn was awarded the honorific of Shīr Khān, in token of his bravery in the field, by Bahār Khān Nūhanī, rebel against the Lōdīs in Bihār, where he had assumed the title of Sultan Muḥammad Shāh and had become the rallying-point for Afghān opposition to the incomer Bābur [*q.v.*]. Shīr Khān nevertheless gave his support to Bābur in 933-4/1527-8, whilst still retaining the confidence of the Afghān chiefs in Bihār who supported Maḥmūd Lōdī, proclaimed sultan there against Bābur.

With Humāyūn's victory of 937/1531 over the Afghāns, Shīr Khān made his peace with the Mughal, retaining his base in Bihār as Humāyūn's vassal and warding off invasions from Bengal in 938/1532 and 940/1534. In 941/1535 he assumed the title of Shīr Shāh and struck his own coins, a declaration of independence, whilst Humāyūn was pre-occupied in Gudjarāt. He defeated the sultan of Bengal Maḥmūd Shāh and made him his tributary, with a further expedition against the latter's capital Gawr or Lakhnawatī [*q.v.*] in 944/1537. Humāyūn invaded Shīr Shāh's territories from Agra, but was repulsed and twice defeated in 946/1539 and 947/1540, on the second occasion being compelled to retreat hurriedly to the Pandjāb and then Sind and eventually to Persia.

Shīr Shāh was now master of northern India, and began his five years' sultanate in Dihlī and Agra. He eliminated various rival chiefs and nobles and, in anticipation of extending his empire southwards, attacked Mālwa [*q.v.*] and drove out its ruler Mallū Khān Ḳādir Shāh, after which he entrusted the governorship of Mālwa to Shadjāʿat Khān Sūr; and in 949/1542-3 he attacked the Rādjā of Djodhpur [*q.v.*] in his principality of Mārwāŕ, in Rādjputānā. Shīr Shāh's death came about accidentally during the siege of Kālindjar in 952/1545. He was succeded by his son Islām Shāh.

Shīr Shāh was one of India's great rulers, whose achievements might well have equalled or surpassed those of Akbar, had his reign not been cut short by death. In military affairs, he employed artillery and musketeers extensively in his armies. He is praised by historians like Badāʾūnī for the peace and order of his kingdom, and for his caravanserais and other provision for travellers and merchants, Muslim and Hindu alike, along the roads. He broadened the base of his originally Afghān support by awarding positions and estates to Rādjput chiefs also, here foreshadowing Akbar's policy. He placed the governance of his empire on a firm footing by retaining the *sarkār*, composed of a number of *parganas*, as the optimum fiscal and administrative unit.

SHIʿR (a.), poetry.

1. In Arabic.

(a) The pre-modern period.

It is the supreme ornament of Arab culture and its most authentically representative form of discourse. The ideas articulated by poetry and the emotional resonances which it conveys earn it, even in the present day, where numerous new literary forms are in competition with it, the approval of scholars and the populace alike.

Despite the phonetic resemblance, *shiʿr* is totally unconnected with the Hebrew *shīr*; the *ʿayn* is a "hard" consonant which persists in the roots common to the two languages. The term is attested in ancient Arabic (G. Lankester Harding, *An index and concordance of pre-Islamic Arabian names and inscriptions*, Toronto 1971, 350-1) and very often used in pre-Islamic poetry.

I. *Shiʿr and its synonyms.*

The equivalents here are not simple synonyms; they stress one aspect or another of the poetics of *shiʿr*. (i) It is appropriate to cite in the first instance the terms, the content of which suggests the notion of quality and of major artistic merit; thus *ḳaṣīd* would denote artistic poetry as opposed to *radjaz* (Lane, root *ḳ-ṣ-d*, 2531b-2532a; ʿAlī al-Djundī, *al-Shuʿarāʾ wa-inshād al-shiʿr*, Cairo 1969, 13). The same is true of *ḳawāfī*: *ḳafā*, in the first form, signifies the honouring of some person with a mark of distinction (Ibn Ḳutayba, *al-Shiʿr wa 'l-shuʿarāʾ*, 61; al-Nahshalī, 27, quoting Abū Tammām; Goldziher, *Abhandlungen*, i, 3, 14-15; Gaudefroy-Demombynes, 60); the same is true of *durr* (poetry) or *durar* (sing. *durra* "pearl", *Sīra*, Göttingen 1858-60, 862, l. 10; *LA*, xvi, 56, l. 19, the poet al-Zafayān; Ibn Ḳutayba, *op. cit.*, 508, l. 15; Labīd, *Dīwān*, Leiden 1891, 22, l. 15; *Aghānī*³, x, 285, l. 20) and *al-muḥabbar* (fabric of high quality manufactured in the Yemen, Ruʾba, *Dīwān*, Berlin 1903, 61, xxxvi, v. 22; Ibn al-Muʿtazz, *Ṭabaḳāt al-shuʿarāʾ*, 385, quoting ʿAlī b. ʿĀṣim al-ʿAnbarī, Goldziher, *op. cit.*, i, 129-31);

(ii) terms which express perfect order and symmetry are also attested. *Naẓm* "the arrangement of pearls in a necklace" is said to express better than anything else this necessity, raised to the status of a guiding principle (*al-Mufaḍḍaliyyāt*, Oxford 1918, 717, l. 14; al-Marzubānī, *al-Muwashshaḥ*, Cairo 1343, 14, l. 14; ʿUbayd Allāh b. Ḳays al-Ruḳayyāt, *Dīwān*, Vienna 1902, 238, l. 1; al-Djāḥiẓ, *Ḳiyān*, in *Rasāʾil*, Cairo 1979, ii, 159, l. 12; Muḥammad al-Ḳalāʿī, *Aḥkām ṣanʿat al-kalām*, Beirut 1985, 40; Muḥammad Zaghlūl Sallām, i, 37). Another necklace of pearls, *simṭ*, denoted an entire poem; thus the *Muʿallaḳāt* were called *sumūṭ*; in the same range of ideas, the poem of ʿAlḳama was considered the best necklace of all time, and each of its verses, a pearl. *Nasadja*, sometimes associated with *ḥāka*, *nasīdj* and *nasdj* "to weave, weaving" (see Ibn Khaldūn, *al-Muḳaddima*, iii, 332) belong to the same category (Wellhausen, *Lieder der Hudailiten*, Berlin 1884, 116, l. 17; Ibn Ḳutayba, *K. al-Maʿānī al-kabīr*, Ḥaydarābād 1369/1946, 633, l. 19; 814, l. 9; *Abū Dahbal*, in *JRAS*, [1910], 1051, l. 2; al-Marzubānī, *op. cit.*, 318, relates an opinion of Marwān b. Abī Ḥafṣa, *innī ḳad ḥuktu ḳāfiyat*[an] *tuwāzinu hādhā ʾl-shiʿra* "I have already woven [= composed] verses which constitute the equivalent of this poetry"; Goldziher, *op. cit.*, i, 132-3); (iii) the profession *ṣināʿa* in the sense of poetry is also attested (see below, *The poetics of effort*), and *adab* in the sense of rhymed speech, very frequent, is said to have insisted on a period of apprenticeship for the acquisition of culture by the novice-poet before full acceptance into the world of poetry. This equivalence seems to have been something ancient: in a tradition related by al-Nahshalī (*al-Mumtiʿ*, 24) the poet ʿAbd Allāh b. Ahtam (*fl.* in the reign of the caliph ʿUthmān) takes pride in belonging to a family of *udabāʾ*. Textually, it is established from the last decades of the Umayyad period onward with Muḥammad b. Kunāsa (d. 161/778) (*Aghānī*³, xiii, 344, l. 4; see also Ruʾba, *Dīwān*, 16, vi, 40; S.A. Bonebakker, *Early Arabic literature and the term Adab*, in *JSAI*, v, 1984, 399, Bashshār b. Burd; al-Mutanabbī: *anā ʾl-ladhī naẓara ʾl-aʿmā ilā adabī* "I am he whose poetry the blind man has seen", (see *al-ʿArf al-ṭayyib fī sharḥ dīwān Abi ʾl-Ṭayyib*, Beirut 1887, 343, l. 11; Ibn Nubāta (d. 405/1015) who describes poets as *udabāʾ*, al-ʿAlawī, *Naḍrat al-ighrīḍ*, 347; see also al-Nahshalī, 18, 24). The term *ḳarīḍ* would add the idea of cutting into the living flesh of words, a material which resists and does not let itself be easily manipulated (al-ʿAlawī, *op. cit.*, 8; Von Grunebaum, *Growth and structure*, 127; Ibn Ḳutayba, *ibid*, 222, l. 14, ʿAmr b. Ḳamīʾa; al-Farrāʾ, *Maʿānī al-Ḳurʾān*, Cairo 1374, 140, l. 6, Ḥumayd b. al-Arḳaṭ; *al-Mufaḍḍaliyyāt*, 180 l. 1; al-Aʿshā, *Dīwān*, London 1928, clv, v. 8; ʿUmar b. Abī Rabīʿa, *Dīwān*, Leipzig 1901-9, 43, l. 3; Zubayr b. Bakkār, *Djamharat nasab Ḳuraysh*, i, 42, l. 8; *al-Aghānī*³, x, 285, l. 2; Goldziher, *op. cit.*, i, 120-1).

Finally, it is appropriate to note that, for the archaic period and under the Umayyads, *shiʿr* also signified *hidjāʾ* [*q.v.*]. Among numerous examples, worth mentioning is *fa-hādhā awānu ʾl-shiʿri sullat sihāmuhu* "this is the moment of [injurious] poetry, the darts of which have been drawn from the quiver" (*al-Ḥamāsa*, Bonn 1828, 646, l. 11, anonymous poet). Al-Farazdaḳ expresses grief on account of the false attribution to him of versified insults, a *shiʿr* which he is supposed to have addressed to Khālid b. ʿAbd Allāh al-Ḳasrī (*wa-rawwū ʿalayya ʾl-shiʿra wa-mā anā ḳultuhu* "they have recounted [injurious] poetry under my name, that which I have never said", *Dīwān*, Paris 1870, 222, l. 2; see also *al-Ḥamāsa*, 54, l. 28; al-Ṭabarī, ii, 1829, l. 2; Ibn Ḳutayba, *Maʿānī*, 708, l. 15; al-Balādhurī, *Ansāb al-ashrāf*, v, Jerusalem 1936, 318; *Naḳāʾiḍ Djarīr wa ʾl-Farazdaḳ*, Leiden 1905-12, 126, l. 17). Finally, al-Mutawakkil al-Laythī (d. *ca.* 72/691) claims that he has never aimed the darts of *shiʿr* against a Muslim (*al-Aghānī*³ xii, 165, l. 2).

II. *Periodisation.*

At a very early stage, as early in fact as the 2nd/8th century, the familiar distinction between three periods in the development of poetry is already evident in the writings of al-Djumaḥī (d. 231/845): pre-Islamic, the poetry known as *mukhaḍram* straddling the Djāhiliyya and Islam, and Muslim poetry written by poets born after the Revelation (Ibn Sallām al-Djumaḥī, *Ṭabaḳāt fuḥūl al-shuʿarāʾ*, 1394/1974, 23-4). With Ibn al-Muʿtazz (d. 296/908), this periodisation becomes more precise, since he mentions the verse of the ancient poets (*ḳudamāʾ*), of the *mukhaḍramūn*, of the *awāʾil al-islāmiyyīn* (the former Islamic poets), i.e. the Umayyad poets, and of the *muḥdathūn* (modern poets), i.e. the poets of the 2nd-3rd/8th-9th centuries (*Ṭabaḳāt al-shuʿarāʾ*, 201). Currently, in spite of certain criticism which will be revealed shortly, the periodisation of Ibn al-Muʿtazz is followed unanimously, although some contemporary scholars would have preferred a less political and more genuinely literary division. Gibb, Blachère, Bencheikh and Heinrichs propose a more strictly cultural periodisation, distinguishing between four periods. Gibb identifies the heroic age, the age of expansion, the golden age (750-1055), the silver age (1055-1258), concluding with the age of the Mamlūks (1258-1800). The problems of such a classification are obvious: it is based on value judgment and assumes uninterrupted decadence during the period extending from 750 to 1800. Blachère (*Moments tournants dans la littérature arabe*, in *SI*, xxvi [1966], 5-18) and Bencheikh (*Poétique*, 11-18) identify the four following divisions: archaic period, a century of transition, the golden age and decline. Filshtinsky opposes the notion of cultural decline and asks how this conception is to be reconciled with the intense poetical activity attested in Egypt over three centuries (Filshtinsky, *La périodisation dans la littérature arabe médiévale*, in *Narodî Azii i Afriki*, 1962/4, 144-56).

To avoid the pitfalls of a historical division, W. Heinrichs proposes distinguishing three movements in the development of Arabic poetry, each of which has produced a type of poetry. The first, that of the Ḥidjāzī school, produced *ca.* 650 a form of love poetry characterised by a narrative theme describing the actions and reactions of persons drawn from life who address the audience directly (Heinrichs, 24). The second, that of *badīʿ*, opted for a poetry resolutely based on rhetorical embellishments, which have gradually been transformed into an artistic principle (25). "Fantastic" poetry constitutes the third movement: here the poet's attention is turned away from reality and towards imagery. The poets of this movement offer their public images which could have no real existence. In later times, poems overloaded with ornamentation constitute in fact a combination of all the known genres; the end result is an increase in affectedness (52). This original conception, if recognised as valid, could prove extremely fruitful; however, Sperl denounces it as tainted with historicity and recommends that it should be avoided (*Mannerism*, 3-4).

III. *Poetic discourse and its original meaning.*

(1) *Origins.* From the second half of the 3rd century A.D. onward, *shiʿr*, in its contemporary form, seems to be associated with song (see below, the tradition mentioned by Sozomen; Djawād ʿAlī, ix, 85-8; Adonis,

Poétique, 19-20; Ḥassān, *Dīwān*, London 1970, 420: "Sing in each poem that you speak, song is surely the favoured place of poetry"; T̲h̲uwaynī and ʿAwwād, *al-Sulayk b. al-Sulka ak̲h̲bāruhu wa-s̲h̲iʿruhu*, Bag̲h̲dād 1984, 32-3, 50-1; Ibn Saʿīd, *Nas̲h̲wat al-ṭarab*, ʿAmmān 1982, i, 436 and bibl., where the poet offers to sing (*ug̲h̲annīkum*) a poem to the keepers of the flocks; *al-Ag̲h̲ānī*[3] xviii, 78, where Durayd b. al-Ṣimma, at the time of the recitation of a poem, is said to be in the process of singing (*tag̲h̲annā*); ʿAlī al-D̲j̲undī, *op. cit.*, 6, 22, 24-5; S̲h̲. Ḍayf, 51; Muḥammad Zag̲h̲lūl Sallām, i, 36). The poetry/song association should not be regarded as a peculiar phenomenon; among the Greeks, the poet is primarily called the bard, the singer. This *s̲h̲iʿr mug̲h̲annā* contradicts the generally accepted hypothesis on the beginnings of this form. Originally, it is said, it was linked with *sad̲j̲ʿ* and had taken its definitive form 150 years before Islam (al-D̲j̲umaḥī, *op. cit.*, 112-13; al-D̲j̲āḥiẓ, *K. al-Ḥayawān*, Cairo, i, 74; resumed by al-Marzubānī, *op. cit.*, 74; al-Suyūṭī, *al-Muzhir*, Cairo n.d., ii, 477; according to al-Nahs̲h̲alī, *al-Mumtiʿ*, 22, poetry allegedly took on its definitive form in the period of ʿAbd al-Muṭṭalib b. Hās̲h̲im b. ʿAbd Manāf or his father, in other words the great-grandfather or grandfather of the Prophet). Modern scholars do not disagree (Blachère, *HLA*, ii, 187-93; Adonis, *Poétique*, 22-3).

Vestiges of spontaneously-spoken poetry shed some light on the question. Al-Suyūṭī, quoting al-Aṣmaʿī, relates that the most ancient poetry of the Bedouin of the D̲j̲āhiliyya, that of the *awāʾil al-ʿArab*, amounted to a small number of verses spoken by men and women in response to a pressing emotional need (*al-Muzhir*, ii, 477). The poems of the wells (a case of ancestral usage among the Semitic peoples, cf. the Biblical *s̲h̲īrat habeʾer*, Num. xxi. 18-20), with striking structural, thematic and stylistic resemblances between the Bible and the verse of the Bedouin of the D̲j̲āhiliyya (D̲j̲awād ʿAlī, ix, 410-12, has assembled a large number of specimens of this poetry), lullabies and other fragments associated with infancy (Saʿīd al-Daywad̲j̲ī, *As̲h̲ʿar al-tarḳīṣ*, Bag̲h̲dād 1970, *passim*), funereal dirges (Goldziher, *Bemerkungen zur arabischen Trauerpoesie*, in *WZKM*, xvi [1902], 308) and verses evoking skirmishes—all of these, rather than rhymed prose, supplied the first foundations.

Chronologically, it seems that *al-s̲h̲iʿr al-ḳadīm*, as it is known to us, is considerably older, if credence is to given to a tradition cited by the Greek historian Sozomen. This historian writing at the turn of the 4th-5th centuries, relates that the Arabs of the desert celebrated their victory over Queen Mavia and the Roman emperor Valens (i.e. between 364 and 378) with the singing of ballads (*odai*). This plural suggests that there was a cycle of poems; this cycle preceded the fragments of a similar cycle, that of the War of Basūs [*q.v.*], the specimen generally regarded as the oldest verse chronicle of the Arabs. It would therefore seem reasonable to move the appearance of this material back in time to the last quarter of the 3rd century, by virtue of the poetical tradition associated with Ḥīra and, more specifically, with ʿAmr b. ʿAdī, the first Lak̲h̲mid king of Ḥīra whose maternal uncle D̲j̲ad̲h̲īma lived in the 3rd century; ʿAmr, a historical figure, was allegedly the author of poetic fragments in classical Arabic aimed at ʿAmr b. ʿAbd al-D̲j̲inn (ʿIrfān S̲h̲ahīd, *The composition of Arabic poetry in the fourth century*, in *Studies in the history of Arabia*, ii, *Pre-Islamic Arabia*, Riyāḍ 1404/1984, 87-91).

(2) *The poetic ritual.* Arabic poetry is rooted in the oral; it was a voice before it acquired an alphabet, and what results from this is a concurrence between speech and its affective and emotional connotations. This aspect guides discourse towards the following stable procedures: (i) a poetic style overladen with a multiplicity of synonyms and comparisons; (ii) a predilection for allusive expression; (iii) recourse to a specialised language very different from daily speech; (iv) the use of stable poetic hybrids; and (v) the obligation to be predictable and to abstain from upsetting the audience (M. Zwettler, *The oral tradition of Classical Arabic poetry, its character and implications*, Columbus, Ohio 1978, 98-102, 109-20, 170-2; McDonald, *Orally transmitted poetry in pre-Islamic poetry, Arabia and other pre-literate societies*, in *JAL*, ix [1978], 26-30; J.T. Monroe, *Oral composition in pre-Islamic poetry*, in *ibid.*, iii [1972], 36-8).

The poet knew that if he wanted to be heard and not to risk disappearance into obscurity, he was obliged to construct his discourse on the basis of an auditory aesthetic. This demanded the exclusion from his discourse of distant allusions and of hermetic or ambiguous statements; otherwise, he was in danger of breaking the continuity of the contact which linked him to the public. Thus in the pre-Islamic period, poetry declared that which the audience already knew, and poetic individualism consisted not in what was said but in the manner of its saying. Oral recitation was to leave on Arabic poetry a mark that would last for centuries; it would be, in Bencheikh's words, an art of expression and not an art of creation. The recitation of pre-Islamic poetry was strangely reminiscent of a ritual; the officiating poet, who did not create poetry for himself, but for others, encouraged active participation on the part of his public as a means of appealing to the hearts of his hearers. Poetic engagement derived in this case from the limpidity of the verse and the familiarity of experienced listeners with the wording and with the thematic sequence of the *ḳaṣīda* (A. Hamori, *On the art of medieval Arabic literature*, New York 1974, 21-2, 24; Adonis, *Poétique*, 34-5).

This ritualistic aspect of poetry was consolidated by the concept of divine inspiration, already current in the earliest periods. If traditions are to be believed, the great bards of the D̲j̲āhiliyya considered that the poem was the speech of a god or of a d̲j̲innī (demon). It is alleged in this context that ʿAbīd b. al-Abraṣ (*fl.* in the D̲j̲āhiliyya) saw in a dream a messenger who touched him with a ball of hair (*kubba min s̲h̲aʿr*, cf. the graphical resemblance between *s̲h̲aʿr* and *s̲h̲iʿr*); he commanded him to awake; he rose and began reciting *rad̲j̲az* (*al-Ag̲h̲ānī*[1], xix, 84) and became a poet. He is no different from the prophet Isaiah, who was touched by the angel with a burning coal, in a dream, and began prophesying immediately afterwards (Isa. vi. 5-8). More often, the d̲j̲inn are evoked both before and after Islam (Muḥammad Zag̲h̲lūl Sallām, i, 34-5; *CHAL*, i, 41). Von Grunebaum has emphasised, rightly, their resemblance to the Muses: Hesiod, describing his encounter with the Muses, records an experience which is comparable, structurally, to that of Ḥassān with the d̲j̲inn at the time of his first steps in poetry (*Aesthetic*, 333).

This discourse, communicated to the poets by supernatural creatures, possesses a magical force on account of its provenance and also on account of the perfect arrangement of the verbal veneer; this is true not only for curses, as has been proved magisterially by Goldziher (see HID̲J̲Āʾ; Von Grunebaum, *Growth*, 123), but also for the *madīḥ* who enjoys lasting renown. A Bedouin declares, after receiving a reward from ʿAlī b. Abī Ṭālib, "the eulogy keeps perpetually alive the name of the one who practises it" (Ibn Ras̲h̲īḳ, i, 29; see also Gaudefroy-Demombynes, p. xviii).

This concept, albeit somewhat modified, persists after Islam (al-Djundī, *op. cit.*, 19-20, quoting Ruʾba). Abān al-Lāḥiḳī (d. *ca.* 200/816) falsely accused by Abū Nuwās of being homosexual, finds himself deprived of his role as lector to the Barāmika. His patrons know it well, but even tendentious poetry is irreversible; they tell him, quoting a pre-Islamic verse:

[*basīṭ*]
Ḳad ḳīla mā ḳīla in ṣidḳ^an wa-in kadhib^an
fa-mā iʿtidhāruka min ḳawl^in idhā ḳīlā
"What has been said has been said, be it true or false,
How can you be excused against words already spoken?"
(Ibn al-Muʿtazz, 204).

(3) *Artistic poetry*. In order to be effective, poetic discourse needed to be distinguished by its high aesthetic tone and to express the values of ambient society.

The role allotted to poetry seems to have been that of giving to the generality a unique image in a unique language. Throughout the period, this discourse is seen as definitely and definitively evolving. The diverse dialects and various approaches are blended in a literary language which develops to encompass metre and other disciplines; new types of comparisons come into being (Von Grunebaum, *Growth*, 123). In the pagan era, spontaneous poetry coexists with fashioned creations which are extremely demanding in their pursuit of a more developed aesthetic. This pursuit reflects the effort of generations of poets who have broadened their range of enquiry and their vision; from the spontaneous glimpse of nomadic life and of the mundane, there is progress towards more profound reflection and interpretation of life. The best and most successful example of this seems to be the exceedingly elaborate treatment of human time. Beyond the existential anguish deriving from the confrontation between human duration and objective time, the majority of poets have considered time to be a cyclical process wherein tension arises from the opposition between the eternal renewal of temporal units and the limited nature of the units of existence allotted to man. Poetry of sterling quality can triumph over time. Consequently, the poet raises the praxis to a very high artistic level. This is primarily an exercise in recollection; the poet evokes memories of love and acts of valour. Verbs in the perfect tense predominate, perhaps to emphasise the fixed and intangible, hence unalterable nature of the *murūʾa* of the poet's family, of himself and of his patron. Other favourite themes sung by the poets, such as nostalgia for past loves or lamentations for the dead (*rithāʾ*) take on, sometimes, a poignant tone. Only descriptions of animals are in the imperfect tense, with the scene unrolling before our eyes. This is no longer a function of memory, rather of events-in-progress.

In the thematic patterns of eulogy, of lamentations and evocations of tribal glory, the poet expressed the group more than he expressed himself. First person singular became subsumed by first person plural, but the poet's role as spokesman remained distinct. He was the witness and the singer. In all other classes of poetry, the poet plays the leading role: he sings of his individual success, and his personal determination to confront the desert and its perils in the camel-related sections. The human, through individual effort, triumphs over the void and the negation symbolised by the desert (A. Miquel, *al-Ṣaḥrāʾ fī muʿallaḳat Labīd*, in *Ḥawliyyāt al-Djāmiʿa al-Tūnisiyya*, xii [1975], 63-88). It is not at all coincidental that this section concludes with the release of the hunted animal and its coupling which presages a new life (the *plerosis*, cf. Hamori's analysis, *op. cit.*, 21-5).

One of the paradoxes of pre-Islamic poetry is touched upon here. It is individual, emotional and passionate on the one hand; on the other hand, the self, frequently transcended by the tribe, appears to reflect a collective consciousness (Adonis, *Poétique*, 19).

Accordingly, rhymed speech adopts a dual course with the existence, alongside tribal poetry, of another which is urban or semi-urban. Ibn Sallām al-Djumaḥī notes a definite contrast between *shiʿr ahl al-bādiya*, the poetry of the Bedouin of the desert, and that of the Meccans, characterised by softness (*līn*) and facility; he adds to them the poetry of ʿAdī b. Zayd, of al-Aʿshā and of Umayya b. Abi 'l-Ṣalt. All of these and many others among the tribal poets are tied to patrons who provide for their upkeep in exchange for bombastic eulogies. *Takassub*, earning one's living, dates back to the Djāhiliyya and does not constitute, by any means, a stylistic vice associated with post-Djāhilī urban civilisation. In the archaic period, the phenomenon was anything but limited; very few poets of the 6th century escaped its attractions.

While tied to patronage, this body of poets maintained its links with the tribal group through the intercessory role which it played in its contacts with patrons. On several occasions Zuhayr b. Abī Sulmā and the two Nābighas, al-Dhubyānī and al-Djaʿdī, intervened in defence of the interests of their fellow-tribesmen. However, a development of the very highest importance took place when a poetry devoid of any tribal association came to the forefront. This poetry ceased to play a tribal role; hencefoward it was obliged to appeal to an audience more refined than tribesmen and itinerants, to more demanding connoisseurs; in this, poetry was the winner. This amounted in fact to progress.

An unmistakable sign of this ascent towards more constraining artistic demands is supplied by conventions at the level of expression which underline the inclusion of this form of discourse among the highest strata of speech (Blachère, *HLA*, ii, 386; Bencheikh, *Poétique*, 8).

On the level of expression, it is appropriate to note not only the use of the dual, the apostrophising of two companions, but also clichés such as the comparison of the traces of an encampment in the sand with tattoos or with letters drawn by a scribe, the various tropes in the descriptions of animals, the description of weapons of war and of the beloved woman. From the archaic period onward, the codification of the poetic text is an established feature. The poet, far from feeling trapped in a straitjacket of constraining and dominating elements, settles comfortably into a protective tradition; or, more accurately, convention constitutes an instrument which he fashions as he pleases, but which he cannot change on pain of derogation. Conventions constitute a code to which conformity is obligatory; otherwise, damage is done to the harmony and to the perfect arrangement supplied by poetic discourse.

A great modern Arab poet and original thinker, Ṣalāḥ ʿAbd al-Ṣabūr, has stressed the utility of the conventions. While it is true that the greatest talents are capable of dispensing with them, the majority of poets find in these constraining rules a stock of tropes, of hybrids and poetical expressions sanctified by usage and by the sanction of ambient society, a stock which they are only too eager to plunder (*Ḳirāʾa djadīda*, 13).

(4) *New horizons*. It was to be a few decades before

the new religion changed the poets' vision of the universe; the great conquests suddenly immersed the victors in an urban environment and contributed to the fragmentation of the various clans, already weakened by war and the crises of the time. Although paganism disappeared, an Islamic verbal art was yet to emerge. The majority of poets seem to have considered Islam a social and political movement rather than a profound spiritual experience. All of this contributed to the straining of relations between the tribe and poetry. The poets were to follow the course previously traced by the incense-bearing poets of pre-Islam, notably the poets of Ḥīra. The domestication of poetry was now complete: caliphs and governors encouraged these artists to compose eulogies for them with the aim of consolidating their régimes and bolstering their personal prestige. Henceforward, *s̲h̲iʿr* was transformed into a privilege reserved for the prince and his courtiers. Committed and personal poetry was now of secondary, even marginal importance, as the poets harnessed their best artistic resources to the requirement of official compositions.

As a result of this process, lasting and very fruitful mutations transformed the world of poetry. A new artistic liberty was born, freed from the modes dictated by genres of secular life, and a poetry of conflicts and contradictions came into being. In ʿIrāḳ, and specifically in Kūfa, a poetry of libertinism and pleasure prefigured the most successful examples of *mud̲j̲ūn* [*q.v.*] composed by the *ẓurafāʾ* of Kūfa and the innovatory poets of the 2nd/8th century. Poems celebrating the variegated humanity of taverns by al-Uḳays̲h̲ir al-Asadī (d. 80/699, most fragments in *al-Ag̲h̲ānī*[3], xi, 251-76), the cruel and acidly humorous portraits by ʿAbd Allāh b. Zabīr al-Asadī (d. *ca.* 80/699, fragments in *ibid.*, xiv, 216-62) and the gallant exploits of Ismāʿīl b. ʿAmmār al-Asadī (d. towards the end of the Umayyad dynasty, in *ibid.*, xi, 364-79; Ibrāhīm al-Nad̲j̲d̲j̲ār, *Mad̲j̲maʿ al-d̲h̲ākira*, Tunis 1989, 221-33)—all of these introduce an original tone, with previously unknown metaphors and themes coexisting with the content of the *mād̲j̲in* concept. Such poems as these are apt to flourish among poets when restrictions are removed and all constraints relaxed. These poems, as well as the amorous works of the poets of the Ḥid̲j̲āz, demonstrate that poetic discourse served for them as a catharsis; by means of it, they could escape from dispossession, from tensions, from oppression and from massacres (*CHAL*, i, 394).

The *ḳaṣīda*, quintessence of the pre-Islamic artistic traditions, underwent certain modifications, although the descriptive passages are remarkable for their fidelity to the archaic model. The urban poems composed according to traditional models do not have the coherence which is characteristic of the most successful poems of pre-Islam. The great poets of the period, with the exception of al-Ak̲h̲ṭal (d. 92/710) and D̲h̲u 'l-Rumma (d. 117/735) [*q.vv.*], succeeded only with rather disjointed and pluri-thematic poems; numerous poems by D̲j̲arīr and al-Farazdaḳ included several topics which were not linked conceptually. Only the artifice known as *ḥusn al-tak̲h̲alluṣ* "good transition" made it possible at a later stage to effect a formal fusion of heterogeneous motifs. At the same time, there developed in the Ḥid̲j̲āz a poetic movement of constantly increasing influence; this was the Ḥid̲j̲āzi school, mentioned above. Numerous poets of this school created a narrative poetry in the full sense of the term. This original approach furnished well-crafted compositions and discourse with a degree of continuity, since the omnipresent concept of the verse as an independent unit is seriously challenged here (Von Grunebaum, *Growth*, 132-3; Heinrichs, 47).

(5) *The poetical profession according to the testimony of the poets.* Poetical texts, which are supposedly texts of the period, are unanimous in presenting poetry as a recalcitrant material, which is only to be tamed by dint of painful and prolonged effort. This testimony is highly significant since it is attested in a neutral context. In his testament, al-Ḥuṭayʾa (d. *ca.* 50/652-3 [*q.v.*]) takes stock of the whole of his career and gives his own perspective on patterns of composition. The dominant theme which emerges is as follows. The difficulty of composing, since the tortuous paths of *s̲h̲iʿr* are strewn with perils, means that the poet needs to confront this constantly; only a solid training (*ʿilm*) enables him to control the material which he seeks to fashion (*Dīwān*, Cairo 1987, 291).

Kaʿb b. Zuhayr [*q.v.*] (d. in the reign of Muʿāwiya b. Abī Sufyān) does not disagree. The outstanding poem is a fabric of superb quality; it is the result of prolonged effort and commitment on the part of the poet-artisan. In a quatrain composed in response to an explicit request from al-Ḥuṭayʾa, one of his father's pupils, he describes in lavish detail the process of polishing by which the poem is turned into a smooth piece of woven material, free of knots and of the same density throughout. In other words, in order to attain a harmonious and symmetrical discourse of outstanding quality, it is necessary to control the verbal core and to fashion it by means of incessant arrangement and rearrangement. Recourse to the term *t̲h̲aḳḳafa* dispenses with the need for any commentary. In its original sense, it signifies to rectify, straighten; it was used in the making of spears, at the stage of straightening wood which is naturally curved; it is thus a process of rectification of an inert material (Gaudefroy-Demombynes, 59, bibl. n. 60).

Tamīm b. Muḳbil, himself a *muk̲h̲aḍram* poet (d. *ca.* 70/690), expresses similar concepts. Verse is by nature rebellious (root *m-r-d*); as a superb poet, he has succeeded in overcoming the stubborn mountains of poetry (*ḥuzūn d̲j̲ibal al-s̲h̲iʿr*) and reducing them to amenable plains; once controlled, verse reveals all its hidden beauty and attracts the admiration of the public (*Dīwān*, Damascus 1962, 136). At no time is the poet found boasting of his facility at composition, or developing a poetry of improvisation or of immanent inspiration. Only Imruʾ al-Ḳays boasts of the abundance of his inspiration; verses come rushing to him in such numbers that they risk becoming congested; he repels them energetically (*ad̲h̲ūdu 'l-ḳawāfiya ʿannī*) before proceeding to a choice, retaining only the most perfect and discarding the minor pearls (Gaudefroy-Demombynes, 60).

The craft and the polishing were indispensable for the acquisition by poets of two cardinal qualities, *nafas* (breath) and *d̲j̲azāla* (robustness and purity of poetic language), necessary for the composition of set pieces. However, it would be a mistake to exaggerate the importance of the notion of apprenticeship and its defining role; it amounted to nothing more than an idealised approach conceived at a late stage, in the 3rd/9th century, in order to justify a certain conception of *fuḥūla* and of archaic poetry. In fact, poetry was considered a natural gift (*ṭabʿ*), an innate predisposition. If natural talent did not exist in a person, no apprenticeship could make him a poet.

The Umayyad poets expressed views similar to those of their D̲j̲āhilī forbears regarding the nature of poetry and the criteria of composition. *S̲h̲iʿr* is conceived as a challenge between two equally-determined adver-

saries, the poet and the poetry. There is insistence on hard work and effort. At no time is there any reference to a poet in a state of grace, cut off from the rest of the world as he composes, with a seething mass of ideas and images bubbling in his breast and seeking release by way of his mouth.

In the framework of a *ḳaṣīda* of threats, Suwayd b. Kurāʿ (born at the beginning of Islam, he reportedly reached the era of Djarīr and al-Farazdaḳ), devotes eight verses to describing, in bombastic tone, his manner of composing superior verses. The ideas developed are as follows: poetry, like a disobedient young camel (cf. ʿARŪḌ; one of its meanings is a camel very difficult to control), allows itself to be tamed only by the best riders. The verses (*ḳawāfī*) are described as *ʿawāṣī* (disobedient) and as a band of recalcitrant wild animals (*sarb*[an] *min al-wuḥūshi nuzzāʿ*); it must be treated with a great deal of patience; humbly, the poet needs to display tact and to devise strategems during sleepless nights (*abītu bi-abwābi 'l-ḳawāfī ... ukāliʾuhā ḥattā uʿarrisa* "I spend nights at the gates of rhymes ... until I possess them"). This is the price at which it allows itself to be possessed; the term *ʿarras* shows that the possession is carnal. The poet-possessor must show great vigilance, for with poetry everything is problematical: once mastered, it must be carefully confined in the depths of one's heart (v. 10); otherwise, the verses will flee faraway; they can only be recaptured by means of prodigious efforts which leave indelible traces in the body of the poet (Ibn Ḳutayba, *op. cit.*, 17). ʿAdī b. al-Riḳāʿ, a contemporary of Suwayd, considers his role as that of a craftsman, planning terms and verses in order to smooth the rough areas and promote harmony among the verses, thus succeeding in composing a *ḳaṣīda* of the highest quality. Dhu 'l-Rumma employs the same images in his attempt to characterise the composition of the poem as closely resembling the training (*riyāḍa*) of a weaned animal (*Dīwān*, Cambridge 1919, 329-30, vv. 26-9; Goldziher, *op. cit.*, 94; partially translated by Gaudefroy-Demombynes, 60).

The approach expressed by these poets, all of them from the first century of the Hidjra, suggests a stable profession and a perfect mastery of the tools of the trade. For a poet, to compose means enhancing the fruits of his inspiration by means of the memorisation which mobilises, every time that the artist creates his poem with the memory which utilises the finest realisations of his linguistic and poetic heritage, retained since the period of his training. Ṣalāḥ ʿAbd al-Ṣabūr considers this strenuous poetic technique an act of homage on the part of the poet towards an immeasurable legacy: in some sense, he writes, the poet presents his poem to this stock which constitutes the quintessence of sensibility and its perfect expression as realised in the ancient poetry (*Ḳirāʾa djadīda*, 15).

IV. *The effervescence of urban poetry.*

Cultural prosperity, the practice of translation which was institutionalised from the end of the 2nd/8th century onward, the development of written translation according to rigorous criteria in the various disciplines, major conflicts of ideas and the constitution of an Arabic prose capable of expressing the most complex thoughts—all of these factors exerted influence on both poetry and poetics.

(1) *The evolution of discourse.* Under the earlier ʿAbbāsids, Arabic poetry remained an essentially lyrical text, descriptive in character. This lyricism reflected the unwillingness of the poet, unless commanded to do so, to deal with exterior phenomena or social relations. In this framework, poems denouncing the vanities of the world (*zuhdiyyāt*, according to Heinrichs, 25), the poetry of sexual perversion (*mudjūniyyāt*, according to *ibid.*) and Bacchic poetry (*khamriyyāt*) were treated with special favour. Complaints about life and its misfortunes are liberally scattered in numerous poems of this period. This is not, strictly speaking, a poetry of asceticism but rather an absolute denunciation of life; it could be said that the texts delight in demonstrating the campaign of systematic annihilation conducted by life against the human being. Evoked here are the deterioration and subsequent death which accompany the process of life; also stressed is the absence of any metaphysical dimension and the desire merely to detach the man from the world below, a hunting-ground reserved for villains and sensualists. The *shakwā 'l-zamān* is a poetry of setback and of impotence. More than is the case with *zuhd*, it constitutes at the most a decidedly superficial poetry of edification. As for sexual perversion, the distinction is drawn between poems dedicated to the ephebe with the *ẓurafāʾ* of Kūfa, Abū Nuwās, al-Ḥusayn b. al-Ḍaḥḥāk and Dīk al-Djinn, versus phallic poems with Abū Ḥakīma, Ibn al-Ḥadjdjadj and Ibn Sukkara, or the poems in praise of onanism by Abu 'l-ʿAnbas al-Ṣaymarī. These poems, in which exacerbated emotional states are to be detected, seem to have expressed, at least initially, a rebellion against society and a refusal to subscribe to its values. Later, this poetry was to enjoy social indulgence, at least with the poetry dedicated to ephebes, and its usages became generalised even in the work of poets who did not practise perversions.

At the same time, a clear demarcation further widens the gulf between longer pieces and fragments, or if preferred, between set-piece and impromptu poetry. This distinction facilitates a more profound understanding of the evolution of poetry in the 2nd/8th century. Much is owed here to the specific contribution of Jamel Bencheikh. The impromptu, as Bencheikh rightly declares, comprises several rhymed phrases, of great simplicity and with a single theme (Heinrichs, 36, describes these very short poems as spontaneous poetry; they address a single theme). What matters here is the rapidity of the response and its spiritual quality. It is therefore the nimbly-elevated impromptus which most delight the literary coteries. The themes of this elegant discourse are well known and were worn threadbare by long service; they are confined to love-sickness, invitations to trysts, excuses, reproaches, compliments or wise aphorisms. The ʿAbbāsid coteries preferred this supposedly "natural" poetry to the *ḳaṣīda* with its immutable conventions. In fact, poets did not have a choice; in the *madjlis*, they were under instructions to improvise forthwith or to reply in the course of a contest. This poetry, of rather lofty formal elegance, expressed stereotypes briskly in a minor tone, sometimes in fairly exaggerated style. In fact, this amounts to an exercise in re-use of the acquired skills of set-piece poetry rather than a creation at the level of composition (Bencheikh, *Poétique*, 68-79). On the other hand, the long piece is a product of reflective creation and demands prolonged and laborious preparation, essential if the poet is to invent original hybrids, thus expressing new *maʿānī* and a large number of motifs (*ibid.*, 80; 113; Muṣṭafā Haddāra, *Ittidjāhat al-shiʿr al-ʿarabī fi 'l-ḳarn al-thānī al-hidjrī*, Cairo 1963, 148-9, 162).

This situation leads furthermore to the depreciation of poetry; it is considered an amusement or, at best, little more than pleasing discourse.

(2) *Poetics.* These centuries are the golden age of theoretical writing. Most striking is the profusion of these works and their diversity; alongside the poets, there is a proliferation of transmitters, essayists, *mutakallimūn*, philologists, critics and philosophers. The result does not fail to impress, in spite of the absence of systematic thought, the constitution of clearly-defined poetics and the tendency of poetical treatises to be pragmatic rather than theoretical; it is appropriate to mention here one substantial exception, the writings of the philosophers. The contribution of Von Grunebaum in this domain has been decisive.

A. The poets

Generally, but not always, they maintain their conception of the poetics of effort. In the works of Abu ʾl-ʿAmaythal (d. in the 3rd/9th century) the same clichés are found, referring to the rectification of material which is naturally misshapen (ʿAlī al-Djundī, *op. cit.*, 115); to the weaver bent over his work in the writing of al-Sayyid al-Ḥimyarī (d. *ca.* 179/795, term *aḥūk*, *ibid.*, 114); Ibn al-Rūmī (d. 283/896) adds to the analogies of his two predecessors the well-known one of the wild camel, but he also insists on the efforts that he invests in embellishment and refinement (*arhaftuhā* and *rakkaktuhā*, *Dīwān*, Cairo 1993, 359-60, vv. 2-9). It is not until the second half of the 3rd/9th century that the term *ṣanʿa* in its poetic sense is attested in a poem among the works of al-Nāshiʾ al-Akbar (d. 293/906), in a verse praising his expertise and the harmony (*taʾlīf*) of his verses (Muḥammad Zaghlūl Sallām, *Min turāth al-nakd al-ʿarabī, Abu ʾl-ʿAbbās al-Nāshiʾ al-Akbar wa-kitābuhu fi ʾl-shiʿr*, in *Madjallat Kulliyyat al-Ādāb, Djāmiʿat al-Riyāḍ*, v [1977-8], 179, v. 1). Furthermore, as a result of titivation and corrective work (*tahdhīb*), his poem acquires an inimitable quality and, thereby, provokes embarrassment and surprise (*yataḥayyaru ʾl-shuʿarāʾu*): in fact, the form (*al-lafẓ*) and the content (*al-maʿnā*) are integrated in absolute fashion (*alfayta maʿnāhu yuṭābiku lafẓahu*) and its apparent facility conceals the inability of other poets to compose a comparable text. It is only at this price that the durability of poems can be assured (v. 7).

In the second long section of 18 verses devoted to poetic genres, the four opening verses provide a detailed survey of the content of this concept among poets and the various tasks which it entails. *Ṣanʿa* implies a rectification of the distortion of material (*zaygh*), the consolidation of the texture of the poem (*shadd al-mutūn bi ʾl-tahdhīb*); the poet should plug the gaps in his discourse by means of prolixity, assert his finest qualities by means of concision, impose harmony through the conciliation of opposites and clarity through the juxtaposition of analogous or similar *maʿānī* (*ibid.*, 192). The poets of this period evince vigorous opposition to the poetics of facility; such a conception is quite rare in poetical compositions (see e.g. *Shiʿr Abī Ḥayya al-Numayrī*, Damascus 1975, 160, vv. 1-3). *Ṣināʿa* and *shiʿr* were so closely linked that they have been used as synonyms in two instances in the writings of Abu ʾl-ʿAtāhiya (*wa-radjaʿnā ilā ʾl-ṣināʿati lammā * kāna sukhtu ʾl-imāmi tarka ʾl-ṣināʿah*, "I returned to poetry when the Imām was seized by wrath following [my] abandonment of poetry"; the poet refers to his decision to relinquish poetry on account of his religious convictions, and to al-Rashīd's decision to imprison him in order to compel him to return to composition, *al-Aghānī*[1], iii, 160, l. 20; see also 149, l. 20).

B. The critics

(a) Ṣanʿa *as opposed to* ṭabʿ.

Numerous tendencies are in collision here, dictated by literary attitudes, but determined also by controversies unrelated to poetry. At a very early stage, from the 2nd/8th century onward, the poetics of effort are called into question as critics extol the virtues of natural talent, *maṭbūʿ*. The factor giving rise to this attitude seems to have been the revival, after a temporary eclipse caused by the hostility of the new religion, of the theory of inspiration, deriving from occult and supernatural forces. Discourse placed in the mouth of the poet, which is a receptacle and nothing more, by its very nature requires no improvement. From another perspective, it seems that the Muʿtazilī circles of Baṣra, including al-Djāḥiẓ, considered true eloquence to be that which is uttered spontaneously without the least effort; ideal poetry would not differ at all from improvised discourse; this quality belongs naturally to the Bedouin of the Djāhiliyya and their poets. The profession objected to this postulate, it being, according to the Baṣran thinker, the contrary of eloquence. Other scholars of the same city, in particular Ibn Sallām al-Djumaḥī, al-Aṣmaʿī and his school, responsible for the constitution of the classical corpus, were of the same opinion. All of them must have been profoundly influenced by the improvised contests held in the Mirbad [*q.v.*].

One of the most ancient texts on poetics is the *ṣaḥīfa* of Bishr b. al-Muʿtamir. Here the author develops, in Heinrich's words, a rudimentary theory of *ṭabʿ* (talent) and of *nashāṭ* (creative force) (*Arabische Dichtung*, 286). The primary condition for being in a position to compose is, he asserts, the creative force; all depends on this and on its favourable disposition (*idjāba*). Once this has been acquired and beyond the obligation to adopt *al-lafẓ al-sharīf* (a noble poetic language) and *al-maʿnā al-badīʿ* (the most original modalities of expression), Bishr advises the artist to avoid unduly laborious efforts which could result in affectedness. On the contrary, he should opt for discourse which is fluent in terms of pronunciation, for easy and direct *maʿānī*. In parallel, he should set aside hermetic figures and complicated hybrids, since there is a risk that these will undermine the themes and neutralise the impact of the words. In common with the other classical critics, he takes great care to separate *al-lafẓ* from *al-maʿnā*. Four qualities are required for the language: softness, elegance, majesty and fluency. As for modalities (*maʿānī*), those chosen should be clear and immediately comprehensible (al-Djāḥiẓ, *Bayān*, i, 135-6, 137).

Al-Djāḥiẓ, too wise a connoisseur to fail to understand the importance of the *ṣanʿa* element, confines himself to recording his distate for these over-finical poets whom he calls *ʿabīd al-shiʿr* ("the slaves of poetry") and his objection to excessively polished poems, *al-shiʿr al-ḥawlī* ("poems taking a year to compose"). However, it should be stressed that over-worked, i.e. excessively re-worked poetry was not considered bad poetry. The reverse was the case. Ibn Ḳutayba considers the poetry resulting from study an excellent discourse, solidly constructed (*djayyid muḥkam*). But the experts have no difficulty identifying the patterns, the prolonged reflection and the strained thought of the author; furthermore, the latter does not refrain from recourse to poetic licences (*ḍarūrāt*); connoisseurs can tell that he has omitted the modalities of expression which were necessary; on the other hand, he praises the facility of composition of the *maṭbūʿ* and his total mastery of the material; immediately obvious are the splendour of his talent (*rawnaḳ al-ṭabʿ*) and the wealth of his temperament; finally, he does not fail to admire the transparency of the *maʿānī* since, he says, the first hemistich prefigures the end of the verse and the beginning gives a clear impression of rhyming style

(Gaudefroy-Demombynes, 24-6). The deliberations of Ibn Ḳutayba reveal the veritable point at issue. Beyond spontaneity and the gift of improvisation, there is a certain conception of poetry which is considered legitimate: the facile and transparent text is alone held to conform to the genius of a poetic sensibility and its modes of expression.

In post-Djāḥiẓian poetics, these concepts take on a rather different meaning. *Ṣināʿa* in the sense of "titivation" was never denounced by the ancient theoreticians, on the contrary (Shawḳī Ḍayf, 19-37). The rapidity of inspiration, and the talent, coming quickly once summoned, are followed by a phase of labour and refinement aimed at eliminating the dross; the poet casts and recasts and purifies his material through a process of quite intensive alteration (fine passages recorded by Gaudefroy-Demombynes, pp. xxix-xxxi). With the first successes of the school of *badīʿ* (the *taṣnīʿ* of Shawḳī Ḍayf, 219-39) and the extension of *ṣanʿa* to all phases of composition, the critics established a distinction between the craft of the Ancients which derives from a *sadjiyya* (natural tendency) and that of the Moderns. Among the latter, it signifies "artificial and acquired", since their poetic language is the fruit of study and of reflection (*al-taḥṣīl wa 'l-riwāya*); it is incompatible with *ṭabʿ* (natural disposition), being *mutaṣanniʿ*, *mutakallif* or artificial, M. Ajami, 53-4. Curiously, Abū Hilāl al-ʿAskarī reports the champion of *ṭabʿ*, al-Buḥturī, as a conscientious craftsman, rejecting after the first draft everything which he found unsatisfactory. On the other hand, the representative of the meticulous poetical approach is presented as an unconditional partisan of the free-and-easy attitude, delivering the fruit of his inspiration without embellishing it; his phrase is thus tainted with numerous defects (Bencheikh, *Poétique*, 87). Most curiously, *ṭabʿ* seems to accompany intensive work in the phase which follows natural composition; *takalluf* appears to characterise the poetry of inspiration. The paradox is rather more apparent than real. In the process of creation, the *maṭbūʿūn* poets proceed after the composition of the verse to the embellishment of expression. Among the poets of *badīʿ*, gestation must have been very painful at the time of the translation of the poetical idea into images; having suffered so much, the poet refused to relinquish even the most preposterous image. Among the poets of this school, imagery reigns supreme. The poetical conception of Abu Tammām integrates creativity and craft in the process of the material translation of the image.

The *ṭabʿ* of the Ancients, confronting the affectedness of the Moderns, received its most systematic interpretation through the theory of *ʿamūd al-shiʿr*, and later through that of the *tarākīb al-ʿArab* or that of the *uslūb al-ʿArab* of Ibn Khaldūn which legitimises a certain tradition of composition, that of the Bedouin of the Djāhiliyya, to the exclusion of all others (M.J. Ajami, *ʿAmūd al-shiʿr: legitimation of tradition*, in *JAL*, xii [1981], 30-48; Ibn Khaldūn, *al-Muḳaddima*, iii, 329-33; Iḥsān ʿAbbās, *Naḳd*, 41-2, 627-30; Bencheikh, *Poétique*, 56-8).

This approach dominates for several centuries and has seldom been challenged. ʿAbd al-Ḳāhir al-Djurdjānī (d. 471/1078 [*q.v.* in Suppl.]), a very original critic, declines to separate the diverse elements of a poem, which is considered as the fruit of an alchemy; combined in it are creative acuity, *iḥsān* (faculty of perfection), *ibdāʿ* (spirit of invention) and above all, *ṣanʿa*. According to him, it amounts to a spiritual force of creativity which sets in motion the imagination of the poet and enables him to illuminate the meagre or prosaic reality in a discourse which describes an unequalled splendour (*Asrār al-balāgha*, 241-2, 244, 250, 315-16).

The poet-theoretician Ibn Shuhayd (d. 426/1053 [*q.v.*]) anticipates in certain respects post-Djāḥiẓian criticism and the approach which considers *ṭabʿ* a spiritual force (*mawādd rūḥiyya*). On the basis of this principle, he reaches the conclusion that poetry is the fruit of imagination. His theory of beauty, a divine emanation, possesses strong neo-Platonian resonances, which are quite rare in classical poetry among the Arabs (Monroe, 140-2).

(b) *Poetry as an* ʿilm.

According to a tradition attributed to Ibn Sīrīn, ʿUmar b. al-Khaṭṭāb is supposed to have stated that poetry was the most authentic *ʿilm* of the Bedouin of the Djāhiliyya (Ibn Sallām, i, 24, § 32; al-Suyūṭī, ii, 473); similar opinions are attributed to ʿĀʾisha, to Ibn ʿAbbās, and to other major figures of Islam (Ibn ʿAbd Rabbihi, v, 247; Ibn Sallām, i, 10; Ibn Rashīḳ al-Ḳayrawānī, 30; al-Muẓaffar al-ʿAlawī, *Naḍrat al-ighrīḍ*, 356-7; al-Zamakhsharī, v, 218-19, § 132). From the 3rd/9th century onward, works of criticism follow the same line. Ibn Ḳutayba asserts in this context that poetry is the mine of sciences of the ancient Arabs, the book of their wisdom, the archives of their history, the treasury of their great days (sc. battles) and the rampart which defends their glory (*ʿUyūn al-akhbār*, Cairo 1925, ii, 185). Military, cultural, linguistic, literary and social history are found condensed in this discourse.

On the other hand, empirical observations of zoology, meteorology and botany accumulated in the same texts. Like any science, to be in a position to serve, it is essential that this poetry be authentic; otherwise, it has no utility. In effect, poetry of high quality is the proper means of inculcating the values of the Ancients, who were models of human behaviour. By means of the exalted *maʿānī* which it puts at the disposal of the cultivated man, it enables him to compose verses, adages and sentences which are so well cast that they appeal to the sympathies of audiences in all periods. ʿAbbāsid critics considered pre-Islamic poetry as a great reservoir of quotations of considerable utility for talented folk of all periods. The purpose of every poem is to dispense wisdom; in this, they are removed from our current conceptions which are alone responsible for the aesthetic finality.

In fact, these precious materials are in a sorry state on account of the considerable number of falsifications which have intruded (Ibn Sallām, 4, § 3, *wa-fi 'l-shiʿri muftaʿal^{un} mawḍūʿ^{un} kathīr^{un}* "in poetry, a considerable portion is false, forged and counterfeit"). This defect results from the written *tadāwul* (mode of transmission). In poetry, Ibn Sallām declares, it is necessary to set aside the gleanings of scriptory transmission (*wa-laysa li-aḥad^{in} an yaḳbala ʿan ṣaḥīfat^{in} wa-lā yarwī ʿan ṣuḥufī* "all persons should refuse to accept a poem deriving from a register; they should decline to repeat the transmission of a connoisseur [trained] in the registers", Ps.-al-Khalīl b. Aḥmad, *K. al-ʿAyn*, Baghdād 1967, iii, 120). Furthermore the term *taṣḥīf* [*q.v.*] (forgery) was allegedly derived from *ṣaḥīfa* (al-Djawharī, *al-Ṣiḥāḥ*, Beirut 1979, vi, 1384, b., 1.1).

Beyond the willingness to create a new branch of poetics, that of *taṣḥīf*, an attempt is observed on the part of Ibn Sallām to determine the identity of those entitled to transmit the classical heritage. It is from this perspective that it is appropriate to consider the charges against Ḥammād and members of his school. Was it his wish to entrust these tasks to scholars who worked according to the methods of the School of

Baṣra and to shun the disciples of the School of Kūfa? The stakes were high; if this principle were followed, Baṣran scholars would become the sole guardians of pre-Islamic poetry or, in other words, the sole guarantors of the Arabic poetical corpus.

This attempt seems to have been long-lasting since the works of Ḥamza al-Iṣfahānī and of Abū Hilāl al-ʿAskarī on *taṣḥīf* contain an impressive list of Baṣran *ʿulamāʾ*. There is nothing Saussurian about this hostility towards the scriptory which emanates from conceptual intransigence. Writing, being by nature defective, did not permit an accurate and faithful transmission of texts. Works of poetics, of *adab* and of grammar teem with anecdotes concerning the errors and changes introduced by transmitters, errors attributable to graphical mistakes and to defective readings (Gaudefroy-Demombynes, 20-1, 71 [nn. 82, 84]; Ḥamza al-Iṣfahānī, *al-Tanbīh ʿalā ḥudūth al-taṣḥīf*, Baghdād 1967, 55; al-Suyūṭī, *op. cit.*, ii, 355).

The *shiʿr—ʿilm* parity could derive, as Heinrichs maintains, from the care taken by theoreticians to exclude any trace of fiction from poetry. Whatever the case, this parity has made it possible to express in new terms the relations between the latter and religion.

Poetry and Islam

In Islam, the religious disciplines represent the ultimate *ʿilm*. The afore-mentioned equivalence legitimised poetry and conferred on it a status immediately below the sciences of religion in terms of the rigour and of the demands of authenticity. The noisy conflicts of the early stages soon gave way to a degree of tolerance, itself replaced in the 2nd-3rd/8th-9th centuries by a honeymoon: *shiʿr* is accepted in the most orthodox circles as a privileged discipline of Islamic culture when it fulfils certain conditions; the very orthodox Ibn Ḳutayba writes in this context, *wa-kullu ʿilm*^{in} *muḥtādj*^{un} *ilā ʾl-samāʿi wa-aḥwadju ilā dhālika ʿilmu ʾl-dīni thumma ʾl-shiʿru* "every science must be transmitted orally; and this requirement is nowhere so great as in the religious sciences, and after these in poetry" (*op. cit.*, 20, tr. Gaudefroy-Demombynes; see also 70-1, nn. 79-81, much valuable information provided by this eminent scholar). This mutation of *shaʿara* (to feel) to *shaʿara* (to know) in religious circles takes on in the opinion of the poet-theoretician Adonis the significance of a veritable revolution. Henceforward, poetry ceases to depend on simple sensation, i.e. the primary degree of cognition, and belongs to the universe of the most exalted truth (*Poétique*, 77).

Poetry also figures prominently in the classification of sciences established by leading scholars.

Examination of such a list would seem to be considerably more informative than recourse to always unreliable traditions, regarding a favourable attitude on the part of the Prophet, of ʿĀʾisha, of one or other Companion or Successor (traditions compiled and annotated by Muṣṭafā ʿUlayyān, *Naḥw nahdj islāmī fī riwāyat al-shiʿr wa-naḳdihi*, ʿAmmān 1944; al-Nahshalī, 22; Gaudefroy-Demombynes, p. xxvi) (*HAL*, i, 391; Cantarino, 28-34, emphasise the negative attitude of these same figures with regard to poetry). In the course of time, the problem posed by these relationships ultimately loses all cultural or religious significance; it then recurs in *adjzāʾ*, pl. of *djuzʾ*, formally arranged in antithetical sections (ʿAbd al-Ghanī b. ʿAlī al-Muḳaddasī, *Djuzʾ aḥādīth al-shiʿr*, ʿAmmān 1989, 37-80, favourable traditions, 81-98, unfavourable point of view.

Ibn Ḥazm (d. 456/1064 [*q.v.*]) places the *ʿilm al-shiʿr* immediately after the sciences of the Ḳurʾān, of grammar and of lexicography. Like his predecessors, he assigns to this *ʿilm* a double aim, moral and utilitarian, and distinguishes three branches: one which is illicit in the case where a man devotes himself to it entirely; a second which is licit but subject to numerous reservations, since here the man devotes to it the most lucid part of his time; a third is strongly recommended, being the case in which the believer devotes to it a part of his time. Thus conceived, this science of poetry is of undoubted utility; it inculcates in the one who practises it wisdom (*ḥikma*) and a more profound understanding of Arabic grammar and language (*Risālat al-talkhīṣ li-wudjūh al-takhlīṣ*, in *Rasāʾil Ibn Ḥazm al-Andalusī*, Beirut 1981, iii, 163-4).

It should be clearly stated that at no time was there objection to poetry as such. Furthermore, only the believer who composes *hidjāʾ* or eulogies to someone who does not deserve this, or who composes frivolous poems evoking the fineries of women, is judged impious (*fāsiḳ*).

(c) *The school of* badīʿ *or poetics according to Abū Tammām.*

The ʿAbbāsid critics associate the appearance of *badīʿ* with modernity: the poets of their era opted for this poetic language because of their late arrival. For Ibn Ṭabāṭabā, the Ancients said everything because they preceded all others. Their verses encapsulated original *maʿānī* in the most elegant and the purest language. Modern poets could not compete with them in this domain. They thus exerted all their ingenuity to composing extremely reflective poems, their superiority residing in the subtlety of exceedingly elaborate thought. Their poems are the fruit of a sustained effort, they are *mutakallifs* in comparison with the natural fluidity of their predecessors (Ibn Ṭabāṭabā, 15). And then *badīʿ* appeared. The facts seem to confirm this analysis beyond all expectation. In fact, the first fruits are associated with Muslim b. al-Walīd [*q.v.*] *alias* Ṣarīʿ al-Ghawānī (d. 208/823). It is said that he attempted in his poems to convey the message in terms of its finest image. He is the first, according to Ibn Ḳutayba, to have softened verse and rendered the sense subtle; he was also the source of inspiration of Abū Tammām (*Shiʿr*, 528). Ibn Ḳutayba's remarks clearly show that Abū Tammām is considered the undisputed champion of this school.

Von Grunebaum sees in the appearance of this poetic school a reaction against the platitudes engendered by the conceptions of modernist poets, who expressed their thoughts in excessively limpid language in short verses. The poetry of Abū Tammām constitutes an attempt to halt these modernists (*Growth*, 132-3).

The poetics of *badīʿ* comprise the following elements: (i) the poetics of Djāhilī orality, based on a logical and apparent line between the signified and the signifier, is definitively rejected; images are dismantled, as are the hybrids and the inherited expressions which constituted the reservoir exploited by the poets of subsequent generations. The new imagery disconcerted critics and scholars with its original character; they saw it as eccentric poetry, bordering on anti-poetry, to borrow an expression of Ibn al-Aʿrābī. (ii) Rhetorical embellishment is consciously pursued; sometimes this is taken to absurd lengths, as was the case with Abū Tammām (Heinrichs, 25). Flourishes are raised to the status of essential principle of composition; they no longer constitute a device for enhancing the beauty of the discourse. (iii) Henceforward, the image constitutes an end in itself. The poets of *badīʿ* were prodigious builders of images: swords, in a poem of al-Mutanabbī, are dejected and emaciated by love-sickness (*al-ʿArf al-ṭayyib*, 147, v. 1, *ka-annamā*

yubdīna min ʿishki 'l-rikābi nuhūlā). (iv) An extensive and profound knowledge of the treasures of the language is required for the unfettered composition of hybrids and metaphors, without which the language could constitute an obstacle. (v) The faculty of inventing *maʿānī* or that of forming new ones by means of derivation (*tawlīd al-maʿānī*) is considered a necessity. In fact, what is involved is the thorough exploitation of one *maʿnā* before moving on to another; this contributes to the cohesion and organic unity of the poem. By this procedure, the *badīʿ* school is clearly distinguished from previous methods of poetry, content to put forward the *maʿnā* or to deal with it very briefly. (vi) Poetic creativity is turned further towards original discovery. (vii) *Badīʿ* locates poetry in writing, all the more so since certain flourishes depend on a visual and graphical effect (cf. the very informative analysis by Adonis, *Poétique*, 50-5, 65-7).

This more reflective, more intellectualised poetry first astonished, then aroused strong reservations; theoreticians considered it a text dependent on reason rather than on sensation or song. In comparisons between Abū Tammām and al-Buhturī, it is conventional to see in the former a thinker who speaks to the intellect and in the latter a singer who addresses the emotions. Furthermore, it perhaps facilitated the appearance of the theory of poetic obscurity.

(d) *Limpidity as opposed to obscurity in poetry.*

In the 2nd/8th century, writing had not succeeded in suppressing the orality of poetry; writing served as an instrument of memory for poets, and their discourse did not experience notable changes, particularly the separation of poetry from thought. On the basis of this principle, al-Djāhiz proceeded to promote a poetry which would be beyond any interpretation and understood without exertion of thought. For this, easy and supple speech was an essential condition; to this end, recourse to *gharīb* (rare terms) is denounced; on the other hand, the poet is encouraged to use words which are conventional, agreeable and easily heard, and thereby immediately grasped. In short, clarity is the supreme quality in poetry. More than any other, al-Djāhiz advocated the poetics of *wudūh* or limpidity (*Bayān*, i, 106; Bencheikh, *Poétique*, 84-6). This conception enjoyed lasting success, in the opinion of critics from Abū Hilāl al-ʿAskarī (Arazi, 485-7), by way of Ibn Sinān al-Khafādjī (*Sirr al-faṣāha*, Cairo 1932, 290-1; Arazi, 482) to Ibn al-Athīr (*al-Mathal al-sāʾir*, ii, 415-7; Arazi, 483). It is interesting in this context to note the high esteem in which *tashīm* is held (= the quality of a poem where the hearer, having heard the first hemistich is in a position to foresee the remainder of the verse and to anticipate with the recitation of the second). This procedure requires a poetic language of crystal transparency and a stability of relations between poet and public, such as existed at the time of the Djāhiliyya (D. Semah, *Poetry and its audience according to medieval Arab poeticians*, in *IOS*, xi [1991], 91-105).

On the other hand, a decidedly less important trend opts for the mysterious in poetry. For Abū Hilāl al-Ṣābī, the best poem is that in which the basis is wrapped in obscurity. This poetical obscurity constitutes the very essence of this form of discourse (*wa-afkharu 'l-shiʿri mā ghamuḍa fa-lam yuʿṭika gharaḍahu illā baʿda mumāṭalatin wa-ʿarḍin minka ʿalayhi* "the best poetry is poetry surrounded by mystery, which yields up its intentions only after numerous tergiversations and a request that you address yourself to it" [Arazi, 498, § 2]). Prose, to be effective, needs to be immediately understood; this is why it depends on limpidity. As regards *shiʿr* the obscure constitutes, according to al-Ṣābī, a necessity on the level of creative activity. Being confined within tightly-drawn limits, i.e. the verse, this discourse is constrained, as a result of fragmentation at the level of the line, to move within extremely narrow limits and to express brief thoughts which are considerably more superficial than those of letters (the critics of the period were satisified with the concept of the independent verse as a unit of composition conveying one meaning, Ibn Sallām, *op. cit.*, i, 360-1; al-Mubarrad, *al-Kāmil*, 44). The *kātib* has at his disposal unlimited space and is not subject to any yoke hampering his freedom of expression; he can thus give to ideas an almost absolute priority. On the other hand, the poet, confined within a narrow space, that of the verse, is obliged, to avoid falling into platitude, to veer towards an excess of *maʿānī* (*faḍl fi 'l-maʿnā*) and the ideas expressed err on the side of exaggerated concision. The inevitable result is a certain affectedness, an expression remote from the natural and an elliptical style (Ibn al-Athīr, *op. cit.*, ii, 415; Ibn Abi 'l-Ḥadīd, 303, 305; ʿĪd Radjāʾ, *Dirāsāt*, 1979, 34; Arazi, 478). It is appropriate to stress that al-Ṣābī introduces to us a constitutive element of poetry, which characterises the most successful examples. In developing this notion of poetics, al-Ṣābī was probably thinking of the poetry of his time, that of *badīʿ*, which responds partially, it is true, to this aesthetic of obscurity.

Abū Ḥāzim al-Ḳarṭādjannī [*q.v.*], in the 7th/13th century, was perhaps the theoretician who best systematised this concept. Through a game of contrasts cleverly set in motion, he sets out to integrate limpidity of language with obscurity of modalities and of thoughts (al-Ḳarṭādjannī, 172). Numerous cases were foreseen by this theoretician (they are revealed in Arazi, 480-1). His conclusion does not fail to astonish with its modern resonance: the *maʿnā* must be delicate and subtle by definition; the more that thoughts err on the side of subtlety, the more the poetic phrase will need to mobilise an excess of clarity; thus is achieved a fine equilibrium where the two entities are opposed and integrated (al-Ḳarṭādjannī, 177-8). Von Grunebaum correctly observes in this context that poetic obscurity existed in poetry in mediaeval Europe and that it consisted of an extension of Aristotelianism (*Aesthetic*, 328-9).

Unfortunately for Arabic poetry, the ideas of al-Ṣābī were generally misunderstood by classical critics as well as by certain modern researchers, who have seen here a call for obscurantism in poetic language (Arazi, 483-5, § 1.3.1.). Accorded a hostile reception, they seem to have played only a marginal role in poetics.

(e) Al-lafẓ wa 'l-maʿnā.

The critics were fascinated by the concrete formulation of the poetical idea. Much less clear was the question, should this formulation be considered as dependent on the treatment of the words or on the conceptual content? Since the objective of poetry is not the thing stated but the manner in which it is stated, it was in the natural order of things to establish a distinction between the two entities and to prefer *lafẓ* over *maʿnā*. Furthermore, the confinement of the *maʿānī* within a limited space, which was not to be overstepped, persuaded poets to concentrate all their efforts on finding the formal garment best suited to the allotted space, and it induced them to adopt the same attitude as that held by the critics. The poet exercises the highest degree of control over his material, which is language. An intangible sign of this

control is the concision which is strongly recommended. Al-Djāḥiẓ played an essential role in the constitution of this conception; he was followed enthusiastically by later scholars of poetry (*al-Ḥayawān*, iii. 131-2; al-ʿAskarī, *Ṣināʿatayn*, 58; Von Grunebaum, *Aesthetic*, 327; Heinrichs, *Arabische Dichtung*, 286-7).

In the 5th/11th century, ʿAbd al-Ḳāhir al-Djurdjānī was concerned to stress the negative nature of the Djāḥiẓian concept of *maʿānī*. First of all, the separation of *lafẓ* and of *maʿnā* seemed to him an aberration; it was hardly conceivable to separate the objective which is sought, i.e. the modalities of expression, from their projection into words. On the other hand, he challenges the notion that the literary merit of a poem emanates solely from the beauty of the terms used, conceived as preponderant units. A term cannot be *faṣīḥ* in itself, but only through its concurrence with the *maʿānī* and the harmony which it establishes between the different elements of expression. If al-Djāḥiẓ is to be followed, thoughts and their modalities will come to be excluded from the domain of eloquence and poetry will be reduced to verbal juggling, banishing the beauty of the composition (*al-naẓm*) and the quality of the texture of the poem (*al-taʾlīf*) (Djamīl Saʿd, 175-90).

It is, however, appropriate to mention the existence, at a very early stage, of an approach opposed to the supremacy of formalism. According to a work of Ibn Abī Ṭāhir Ṭayfūr (d. 280/893 [*q.v.*], thus a contemporary of al-Djāḥiẓ), *al-Manthūr wa ʾl-manẓūm*, it is possible to state that it was the *maʿānī* which conferred on pre-Islamic poetry its undisputed primacy. It needs to be recalled that *maʿnā* is a mixed entity dependent simultaneously on style and on thought, on form and on essence and on the treatment of words and the content. This integration of *lafẓ* and of *maʿnā* is a very healthy element in poetry, since it establishes no distinction between essence and form. The Seven long [poems] (*al-sabʿ al-ṭiwāl*) possess in common a profusion of *maʿānī* of unrivalled beauty: *fa-mina ʾl-shiʿri ʾl-ladhī lā mathīla lahu al-ḳaṣāʾidu ʾl-sabʿu ʾl-ṭiwālu ʾl-latī ḳaddamthā ʾl-ʿulamāʾu ʿalā sāʾiri ʾl-ashʿāri fa-inna ʾl-wāḥidata minhā tashmilu ʿalā maʿānin lā mathīla lahā* "in this poetry which has no equal, the Seven long [poems] which the scholars placed above all other poems; each in fact includes numerous *maʿānī*, unique in their genre" (Beirut 1977, 21-2). If the poems of Imruʾ al-Ḳays, of Zuhayr, of ʿAntara, of Labīd, of ʿAmr b. Kulthūm, of al-Ḥārith b. Ḥilliza and of al-Nābigha al-Dhubyānī are counted among the pearls of Arabic poetry, it is because of the beauty of their motifs. The superiority of every poet depends on the range of the *maʿānī* which he has enunciated, and the grading of poets according to categories (*ṭabaḳāt*) is done in accordance with these criteria. This conception developed by al-Ḥirmāzī (*flor.* in the time of al-Rashīd, 170-93/786-809, preceding al-Djāḥiẓ by a generation) was adopted by Ibn Ṭayfūr, Ibn Djinnī and al-Djurdjānī, but remained a minority and somewhat marginal view.

C. The philosophers

The influence of Aristotelian ideas on the evolution of Arabic poetics has been decisive; these have been the ideas most systematically explored by the Muslim philosophers. Unlike the theoreticians, the philosophers were concerned to clarify a complete poetic art; they conceived poetry as a universal cultural phenomenon. Their speculations possess a hitherto unknown scientific rigour, since they considered poetic discourse as a subdivision of logic. They thus deny any role in poetry to the imagination and establish incompatibility between reason and poetry (Von Grunebaum, *Aesthetic*, 323).

These poetics of the philosophers do not derive from a more or less accurate paraphrase of the *Poetics* of Aristotle. It is rather a question of commentaries expressing the personal opinions of those philosophers who took inspiration from the notions expressed in *al-Muʿallim al-awwal*. Three essential principles dominate the poetic art as viewed by the philosophers: truth (and falsehood), imitation and evocation.

(i) Aristotelian theory makes of poetical beauty an ornament and a generalisation of the truth. According to the philosophers, and more specifically Ibn Rushd, the poet should evoke, with eloquence and plausibility, a chosen and average nature which is true for all times and for the greatest public, thus detaching the permanent from the ephemeral; this is called *al-ḥaḳīḳa*, the truth (Cantarino, 37). However, poetry is accorded the right to turn away from obligatory truth; this is the well-known poetic *kadhib* which differs from its homonym as employed by the critics. The latter understood it as meaning falsehood in the literal sense. On several occasions, traditions recount very flattering anecdotes regarding the veracity of certain poets, in particular, Zuhayr; the qualities attributed to patrons in his eulogistic poems are genuine qualities. In this context, the maxim *aʿdhabu ʾl-shiʿri aṣdaḳuhu* "the finest of poems is the most truthful" makes its appearance. Beyond this ethical aspect (Von Grunebaum, *Spirit*, 46-7; Iḥsān ʿAbbās, *Naḳd*, 34-6) critics have questioned the exactitude of *maʿānī*, as in the work of al-Āmidī. In consequence, everything dependent on the impossible is bad. This attitude does not lack positive results, such as the necessity for the urban poet to employ a poetic language which accords with the milieu in which he lives and with clarity (*ibāna*) of expression (Von Grunebaum, *Critic*, 104).

Among the philosophers, this concept rather signifies the right accorded to poetry to turn away from objective truth. In fact, from this perspective, recognition is given to the legitimacy of poetical subjectivity, or to that of the imagination which is the cause of *muḥākāt* (see below). For the poet, this faculty prevails over thought, as is affirmed by al-Fārābī, Ibn Sīnā and Ibn Rushd (al-Rūbī, 114-15, with abundant bibl.). As the imagination conceives and expresses a mimesis and a resemblance and not reality, it is a case of a *kadhib*, and the best poem is that which succeeds more than others in giving the illusion of reality, in inducing belief in the veracity of this *muḥākāt*.

(ii) *Takhayyul* denotes the power of creating images; it is stimulated, according to Ibn Sīnā, by an emotion which arouses the poet, by respect or admiration, by sadness or gaiety (*Fann al-shiʿr min kitāb al-Shifāʾ*; *Djawāmiʿ al-shiʿr*, 67-80). This power derives from a faculty called *al-mutakhayyila* (according to al-Kindī, *al-muṣawwira*, for al-Fārābī, *al-ḳalb*) responsible for the re-actualisation of images which have been perceived in the past. At the time of inspiration, the *mutakhayyila* does not confine itself to reviving these images, it restructures them, initiates new combinations of images which did not exist in this form in reality (al-Fārābī, *Ārāʾ ahl al-madīna al-fāḍila*, 70-2). The poet is therefore obliged to keep in mind those images stored in his memory, perhaps also the *maʿānī* inherent in these images and to remodel them in a new, or even divergent fashion. Ibn Sīnā adds to this the entire stylistic apparatus, such as poetic language, technical procedures, rhyme, metre and even *maʿānī* (*Fann al-shiʿr min kitāb al-Shifāʾ*, 163). Thus conceived, *takhayyul* ultimately encompasses the whole process of creation.

The Islamic philosophers ranked it above the *ḳuwwa nāṭiḳa* or logical force, but made it subservient to the intellect (*al-ʿaḳl*) on which it depends totally. The process of *al-takhayyul al-shiʿrī* appears to be a kind of emanation (*fayḍ*) or of vague and imprecise inspiration (*ilhām ghāmiḍ*). Such a conception confers on poetry a status resembling that of prophecy or something close to it; both are phenomena of conscious inspiration involving subjects endowed with natural dispositions. If poetry is part of logic, the fact remains that it lies in the eighth and last position according to the classification adopted by al-Kindī and, later, by al-Fārābī (al-Rūbī, 54-6).

All visions of *takhyīl*, translated into language, are transformed into *muḥākāt* or *aḳwāl muḥākiya*, i.e. symbols, mimeses and enigmas. Were it not for *muḥākāt*, the human *mukhayyila* would be incapable of operating and would remain at the stage of virtuality.

(iii) Arts such as drawing and painting are based on *muḥākāt* or imitation. Only poetry, among all the other arts, is a *muḥākāt* in the form of words. This faculty reconstructs the real into a better or worse form through the allocation of excess of beauty or of ugliness. Poetic discourse thus surpasses and transcends the real. In fact, this discourse, which is itself the fruit of *muḥākāt*, constitutes a subjective apprehension, since it depends on the vision which exists in the *mukhayyala* of the poet. In these terms, al-Fārābī stresses, a poem does not constitute a totally identical imitation of reality, but there is a relation of resemblance.

Ibn Sīnā gives valuable particulars regarding the nature and functioning of this force; it does not operate in the case of fables and of stories set to metre and rhyme. Neither of these belongs to the category of poetry. In the versified *Kalīla wa-Dimna* [*q.v.*] and in stories or tales, all is fictitious. They cannot be classed as *shiʿr*, which is concerned with things that exist or could exist. The Islamic philosophers followed the Aristotelian concept of the poet's role as transmitter of an event which is real or which could be so. Poetry, from this point of view, is closely akin to philosophy; both aspire to express global verities.

As regards the objectives which poetry sets out to retain, beyond aesthetic pleasure which is the primary aim, it is considered a school for the improvement of the soul. It is thus essentially a didactic discourse, being more easily digested by the "common people". It is the only means by which the latter can assimilate wisdom. Thus the ethical aspect, so highly esteemed by the puritans, is brought into play. The discourse which inflames the instincts and induces men to commit evil acts is thus denounced, and for this reason al-Fārābī reviles Arabic poetry as a school "of cupidity and mendacity". Ibn Miskawayhi advises that young people should not be instructed in the poetry of the *nasīb*, since it encourages fornication; on the other hand he sees educational merit in poems which celebrate courage and manliness.

D. The first grammarians

The first grammarians showed great interest in archaic poetry. Modern scholars have insisted on stressing the primal role played by versified texts in the researches of Arab grammarians and in the development of *ʿArabiyya*, the classical Arabic language. *Al-shiʿr al-ḳadīm* took the role of *shāhid*, proof text, and thus guardian of validity, of legitimacy of usage and of quality (Blachère, *HLA*, i, 89-96, 111-12). H. Fleisch asserts that treatises of grammar from the 2nd/8th century to the period of the *Nahḍa*, in fact present the grammar of Djāhilī poetry. Classical Arabic grammar allegedly revealed, studied and codified a stage of the language, that represented by ancient poetry (*Traité de philologie arabe*, i, 1961, 9-10; see also, J. Fück, *ʿArabiyya*, Paris 1955, 5; ʿAbd al-Ḥamīd al-Shilkānī, *al-Aʿrāb al-ruwāt*, Tripoli (Libya) 1391/1982, introd., 7, 29; Ibrāhīm Anīs, *Min asrār al-lugha*, Cairo 1958, 321).

Careful study of Sībawayhi's *Kitāb* reveals the dominant role of the speech of Bedouin heard directly from their own mouths. Furthermore, discernible in the approach of the great grammarian is a certain reluctance to use *shiʿr* to legitimise a linguistic facet (Sībawayhi, *Kitāb*, Paris 1881-5, 7). In § 7 of the *Kitāb*, he declares that the rules governing *kalām* differ from those governing *shiʿr*; in other words, as grammar seeks to codify the rules of the language, it cannot rely on poetry. Furthermore, having quoted a verse and studied the form of expression which it initiates on the level of morphology and syntax, Sībawayhi adds *wa-hādhā lā yadjūzu illā fi 'l-shiʿri wa-fī ḍaʿf^{in} mina 'l-kalām* "this is only permissible in poetry and in approximative speech" (*ibid.*, 18, l. 3). This equivalence of poetry = approximative discourse dispenses with any commentary. This manner of regarding the poetic language derives from a broader conception of this form. This disciple of al-Khalīl b. Aḥmad seems to have had little appreciation for the very artificial figures and expressions adopted by the poetic language. When he introduces poets, he criticises them "for being ready to accept aberrant forms and figures to such a point that they use words improperly, because they are [metrically] convenient and are not vitiated by any deficiency as regards the measure" *wa-yaḥtamilūna ḳabḥa 'l-kalāmi ḥattā yaḍaʿūhu fī ghayri mawḍiʿihi li-annahu mustaḳīm^{un} laysa fīhi naḳṣu* (*ibid.*, 9). For his part, Ḥamza al-Iṣfahānī (4th/10th century [*q.v.*]) also fulminates against aberrant figures and the violence done to the language by poets (*ʿasf al-lugha*) on account of the tyrannies of form to which they are subject (*al-Tanbīh ʿalā ḥudūth al-taṣḥīf*, Beirut 1992 [= Damascus 1968], 97-101). Later, the linguistic quest changes on account of the closure of the doors of *idjtihād* in grammar, and visiting the desert is seen as futile on account of the degradation of Bedouin speech. Consequently, ancient poetry is endowed with incomparable prestige in the eyes of grammarians: it is the perfect expression of good usage. In relatively late grammatical works, only the poetical *shawāhid* are retained for purposes of testimony.

V. *Unregulated poetry.*

Unregulated is used here in the sense of unrestrained, excessive (*Grand Robert*, s.v.). This is in fact the period of the fantastic, to borrow the expression of Heinrichs, in the long evolution of Arabic poetry. By means of an intensive and original usage of tropes, the poets break all logical links between the elements in a comparison; they opt for an imagery totally divorced from nature and proceed towards constructions dependent on the imaginary, in other words a fantastic creation. The later ʿAbbāsid poets show themselves consummate masters of this art. An example given by Heinrichs is the image whereby al-Ṣanawbarī compares red anemones tossed by the wind with banners made of rubies set on a background of chrysolites (Heinrichs, 26).

In order to understand the full significance of this approach, it needs to be linked to the role of the image in the poetics of al-Djurdjānī. Metaphorical language, he asserts, is magic (*Asrār*, 40). The image reconciles the irreconcilable, unites incompatible opposites and introduces us to a world of the bizarre, in which images are not immediately comprehended by the imagination (*ibid.*, 140, 144, 150, 188). Evidently,

what is involved here is an artificial creation, even a discourse full of affectation. There is nothing pejorative in this concept. Modern conceptions of aesthetics consider it on the contrary as an art form tending towards irrealism, refined and sophisticated, drawn to fantasy and paradox and transcending affectation and oddity; the subjects here are unashamedly fantastic, even esoteric. This important process of evolution proceeded for several centuries. Beginning in the 4th-5th/10th-11th centuries, it reached its zenith in the 6th-12th century. The centuries of affectation are characterised by an intense poetic activity directed entirely towards a single objective: what matters in poetry is literature, i.e. recourse to a formed and formalised language.

(1) *The revival of established genres.*

The poets of these centuries are outstanding painters. In the Ayyūbid and Mamlūk periods, descriptive poetry demonstrates an intense love of nature; the poets of Spain, of Syria and of Egypt celebrate it with enthusiasm. The countryside is transformed here into a cornucopia of colours and scents bathed in abundant water (Ibn Munīr al-Ṭarābulusī, *Dīwān*, Beirut 1986, 149-50, 178, the perfumes of Damascus); human arrangements, *ṣihrīdjs*, places of libation (*madjlis*), wells, etc., are shown in the forefront of the scene (Ibn Munīr al-Ṭarābulusī, 133, § 40, 134, § 42; al-Suyūṭī, *Ḥusn al-muḥāḍara*, Cairo 1967, 358-63). Similarly, rivers and lakes are very often celebrated (Umayya b. ʿAbd al-ʿAzīz, *Dīwān*, Beirut 1990, 81, 85, 133, 145; Muḥammad Zaghlūl Sallām, *al-Adab fi 'l-ʿaṣr al-mamlūkī*, Cairo 1971, 115-16).

This attachment to nature remains a powerful influence under the Mamlūks and the Ottomans, and the tendency to sing the praises of its more enchanting aspects becomes a regular feature among the poets of the two periods: Ibn Ẓāfir al-Ḥaddād, Ibn Ḳasīm al-Ḥamwī (d. 542/1156), al-Shihāb al-Shāghurī (d. 615/1218), and for the Ottomans, Ibn al-Naḳīb (d. 1081/1670, Ibn al-Naḥḥās al-Ḥalabī (d. 1052/1642) and Abū Maʿtūḳ al-Mūsawī (1087/1676) have evoked in numerous instances the beauties of Syria and, in the case of Egypt, the Nile and its verdant banks. At the same time, this taste for nature is revived by love of the soil, by literary reminiscences and the introduction of a new poetical form which wallows in nature, the *muwashshaḥ* [*q.v.*] of Andalusian origin. Also encountered in the texts is a sustained interest in the climate and in meteorological phenomena, rains, wintry weather (al-Suyūṭī, ii, 398), snowflakes and the cheerful nature of the spring (*ibid.*). Furthermore, conventional or scientific objects such as the astrolabe (Umayya b. ʿAbd al-ʿAzīz, 90-1, § 111), censers (*ibid.*, 93, § 118), candles, tooth-picks (*Shadharāt al-dhahab*, vi, 59), etc., which could seem prosaic at first sight, are frequently evoked.

Description adopted a poetic language which was sometimes elliptical, most often enigmatic, and *maʿānī* which, far from revealing the object, screened it in a subtle and pleasurable manner through the adoption of procedures of affectation and fantasy. Very often, the poet gave to his description an enigmatic form by recourse to the interrogative pronoun "what-is-it-that?" (*mā*), and an allegorical language. Fityān al-Shāghūrī, describing the cupola of the Umayyad Mosque, transforms it into a young woman (*ghāda*) of great beauty born by a vulture (al-Shihāb al-Shāghūrī, *Dīwān*, Damascus 1967, 245). Nothing in the poem helps the reader to penetrate the secret of this fantastic image. In these conditions, it can be understood how works of poetics under the Mamlūks insisted on *tawriya* [*q.v.*] or double-meaning, the less common interpretation being envisaged. No fewer than three works are attested by al-Ṣafadī, Ibn Ḥidjdja and Ibn Khātima (Muḥammad Zaghlūl Sallām, *Taʾrīkh al-naḳd*, ii, 332, 366, 369) which clearly illustrate the tendencies of this poetry.

(2) *The vigour of religious poetry.*

Ṣūfī poetry experienced the most ostentatious period of its history. The works of Ibn al-Fāriḍ (d. 632/1231) and of Muhyī 'l-Dīn Ibn ʿArabī (d. 638/1240) gave the impetus to a trend which was to be maintained until the *Nahḍa* [*q.v.*]. Sharaf al-Dīn al-Anṣārī (d. 662/1264), al-Shābb al-Ẓarīf (d. 688/1293), ʿAfīf al-Dīn al-Tilimsānī (690/1291), al-Ẓahīr al-Irbilī (d. 697/1302), Ibn al-Naḥḥās al-Ḥalabī (d. 1052/1642) and ʿAbd al-Ghanī al-Nābulusī (d. 1142/1731) are the loyal heirs of their illustrious predecessors. In the best examples, the discourse aspires to escape from the rational. The language is allegorical and the words take on a symbolic meaning which can be penetrated only by initiates. This essentially subjective poetry transcends semantics to express that which transcends words. Here, there is no self-modelling according to the exigencies of a well-defined dogma. In a sense, the involvement here is with open texts, bearing multiple suggestions. Furthermore, the Ṣūfī poems of the period renew acquaintance with an ancestral tradition closely associated with the use of song among mystics (al-Ahwānī, *Ibn Sanāʾ al-Mulk wa-mushkilat al-ʿuḳm wa 'l-ibtikār*, Cairo 1962, 197). Furthermore, no doubt influenced by the mystical poems of the Persian *sāḳī-nāma*, the Ṣūfī *khamriyya* [*q.v.*] enjoys a certain vogue; numerous poems based on this pattern are attested from the 7th/13th to the 12th/18th century. Finally, it should not be forgotten that it is this period which sees the emergence and proliferation of the poems called *al-madāʾiḥ al-nabawiyya* or eulogies of the Prophet: generally long pieces, constructed on a binary base, the opening being reserved for the *nasīb nabawī* (a love-song addressed to the Prophet) which is combined with the *naʿt al-nabī* (portrait of the Prophet), praises and accounts of his miracles, his virtues and his fine deeds (Zakī Mubārak, *al-Madāʾiḥ al-nabawiyya fi 'l-adab al-ʿarabī*, Cairo 1967, index). A woman, ʿĀʾisha al-Baʿūniyya (d. 922/1516), seems to have been particularly distinguished in this field: she devoted a special *dīwān* (*dīwān mustaḳill*) to this type of poem. Certain researchers see in this renewal of religious poetry an attempt to find a refuge from an unbearable reality and a reaction to the decline in status of the professional poet. Henceforward, their numbers were to contract and they were replaced by scholars, in particular, by *ḳāḍīs* possessing profound affinities with religious motifs (Muḥammad Zaghlūl Sallām, *Adab*, 109).

Imitation and decline

During the five centuries from the 5th-10th/11th-16th, Arabic poetry ceases to be regarded exclusively as entertainment and regains a part of its ancient primacy. Circumstances favoured this development. Various campaigns and victories over the Crusaders stirred up among contemporaries, poets in particular, a great wave of enthusiasm and optimism. The victories of Ṣalāḥ al-Dīn and those of al-Ẓāhir Baybars inspired numerous poems on the part of the *ḳāḍī* al-Fāḍil, al-ʿImād al-Iṣfahānī, Abu 'l-Faḍl and al-Djilyānī, who were not lacking in epic spirit (Abū Shāma, *al-Rawḍatayn*, Cairo 1956-62, ii, 102-18; Ibn Wāṣil, *Mufarridj al-kurūb*, Cairo 1953-60, 234 ff.; for the Baybars cycle, Ibn Taghrī-birdī, *Nudjūm*, Cairo 1929-56, xii, 322; Bāshā, i, 530-3).

This poetry is produced by epigones; the poets of

this period made imitation of the ancients and slavish adherence to established models into an institution.

New forms, the *muʿāraḍa* [*q.v.*], the *takhmīs* [*q.v.*] and the *tasmīṭ* [see MUSAMMAṬ], impose on the poet the need to introduce whole poetical phrases, ranging from the hemistich and the verse to the totality of the *ḳaṣīda*. The later poet becomes, at best, a commentator and his poem a continuation and elucidation of that of the model. The case of Ṣafī al-Dīn al-Ḥillī seems typical in this respect: a considerable proportion of his poems are *muʿāraḍas* of poems of al-Mutanabbī, or *tasmīṭs* of the *ḳaṣīda* of Ḳaṭarī b. al-Fudjāʾa, of the *lāmiyya* of al-Samawʾal and of the *nūniyya* of Ibn Zaydūn; another poem includes the *Lāmiyyat al-ʿArab* of al-Shanfarā: verses by the *ṣuʿlūk* poet are cited textually (*taḍmīn*), separated one from another by those of the Mamlūk poet. The same procedure is attested with the *maḳṣūra* of Ibn Durayd, two integral poems of al-Mutanabbī and of al-Ṭughrāʾi and the second hemistiches of the *Ḥamāsa* of Abū Tammām. Originally, it is quite possible that the later poets were induced to follow these procedures through their admiration for a valued heritage, or as a means of protecting and conserving it. In this regard, under the Ottomans, the poets Ibn al-Naḳīb and Amīn al-Djundī (d. 1257/1841) proceeded in an absolutely identical fashion. Furthermore, the former, no doubt considering himself a memorialist, and still with the aim of conveying a culture, composed a poem of 119 verses entitled *Djamharat al-mughannīn* and dedicated to musicians, singers, favourites and drinking companions (*nudamāʾ*) from the Umayyads to al-Rāḍī; he also evokes here the sweetness of life among the Barmakids and the enjoyable parties given by al-Ṣāḥib Ibn ʿAbbād and al-Muhallabī. All these evocations were strewn with quotations from verses composed in earlier periods (al-Muḥibbī, *Khulāṣat al-athar fī aʿyān al-ḳarn al-ḥādī ʿashar*, Cairo 1384, ii, 396-7). On reading Mamlūk and Ottoman compositions, there is no justification for speaking of decadence or of lexicographical poetry. Admittedly, since the time of the Ayyūbids there is a marked tendency among poets to engage in extravagant rhetorical games: the verses known as *al-abyāt al-mushadjdjara*, which can be read from beginning to end, but also from end to beginning, constitute, at best, a verbal prank and a tangible sign, perhaps the only one, of undeniable mastery of the language. Finally, poets were much fewer in number, as the culture itself had contracted and was upheld only in small and isolated enclaves. Looking to a past which it sought to safeguard and deprived of any regenerative element, it perpetuated a patently outdated discourse. At this time, poetry had lost its momentum and was evidently awaiting a change—which came with the *Nahḍa* [*q.v.*].

(b) The modern period.

The science of literature (*ʿilm al-adab*) among the Arabs is defined as "the systematic science of literature that deals with language in the form of poetry and prose from the point of view of purity of language and rhetoric" (Cheikho, *ʿIlm al-adab*). The Arabic language is considered by the Arabs as the most "poetic language" (*al-lugha al-shāʿira*) created by God, a language whose characteristics distinguish it from other languages. As the language of the Holy Ḳurʾān, Arabic acquired an aura of sanctity, stability and eternity. Thus the poetics of Arabic language should conform to the language of the Ḳurʾān and address itself to serious subjects. As such, a fundamental difference exists between Arabic and European poetics. The European understanding of poetics as a systematic science of literature, as art, as communication, as an expression of culture in history and as a personal creation, was a concept which was not rediscovered by Arab poets until the 20th century.

In fact, throughout the history of Arabic literature there are clear-cut definitions of poetry and prose, distinguishing one from the other, so as not to allow prose to be confused with poetry, though the former may have rhyme, rhythm, metaphor or any other poetical technique except metre and the intention to write poetry. The revolt against conventional Arabic metres reflected a problem with a long-disputed course of development. Although poetry has in the recent years lost its prominence, nevertheless the problem of the rigid rules of Arabic metre which started at the beginning of the 20th century is still going on.

Poetry written in literary Arabic is considered among the Arabs as the most venerated and most sublime literary trend of Arabic literature. Hence colloquial poetry was excluded as a literary genre. During the 19th and beginning of the 20th centuries, under the impact of the West, some Arab poets tried to introduce new poetic diction, metaphors, themes and to find new forms and music which suited them, in order to be able to avoid what they considered the enslaving style, monometre and monorhyme, and the sonorous and declamatory tone of the classical Arab poetry.

Arab poets noticed that the most distinctive features in European poetry when compared with Arabic are the dramatic, narrative and epic poetry, which use stanzaic form and blank verse, while the most prominent trend in Arabic poetry is confined to the lyrical monorhymed ode (*ḳaṣīda* [*q.v.*]). However, most of the Arab poets, mainly the neo-classicists of the second half of the 19th century, who were convinced of the richness of their language, agreed that rhyme is essential in Arabic poetry. It provides a musical effect and adds melody through the harmony of sound; it proves the ability of the poet and attracts attention; it adds dignity and helps in memorising the sequence of lines; it divides the poem into equal and parallel verses; it raises and satisfies the expectation of the listener; and it helps to make the verse more memorable and binds the lines together with one common bond.

The neo-classical trend emerged in an epoch when poets were still using the diction, style and poetic forms of the stagnation period in which the dominant social trend of poetry recorded happy and sad occasions, was composed with emphasis upon form and verbal play on words, spurious embellishment, paronomasia (*tadjnīs*), plagiarism, alliterations, antithesis and different types of parallelism (synonymous, antithetical and climactic). Various types of pun were also used, with an emphasis upon form, such as verses in which all the words are without diacritical marks. Alternately, one word may bear the diacritical marks while the other words remain unmarked. It was also prevalent to use *tashṭīr*, i.e. to add to each verse of

a well-known poem a second hemistich to its first hemistich and a first hemistich to the second one, padding its meaning and extending it. Many such poems end with a verse denoting the year of the event according to the numerical value (*ḥisāb al-d̲j̲ummal* [*q.v.*]) of the alphabetic letters of the last hemistich or verse. These forms in which the poet tries to show his wit and his ability to draw on the supply of classical methods stored in his memory, inventing new puns or tricks, transformed Arabic poetry into pseudo-classical poetry, into an intellectual game and an intelligent form of frivolous entertainment admired by the élite.

During the second half of the 19th century, a new generation of poets influenced by European poetry, strove to revive the classical *ḳaṣīda*, its form, diction, metaphors and themes, after its decline to low levels of weak and pseudo-classical verse mentioned above. The revival of the conventional Arab ode by neo-classical poets began in Egypt and the Arab world when the revival of the Arab-Islamic heritage was considered the best response to the foreign, hostile and invading Christian European culture. The neo-classical trend began with Arab poets such as Nāṣīf al-Yāzid̲j̲ī (d. 1871 [*q.v.*]) in Lebanon and Maḥmūd Sāmī al-Bārūdī (d. 1914 [*q.v.*]) in Egypt. The form of the *ḳaṣīda* ideally suited the poets who served the ruling courts, high government officials, influential families, the Arab national and social movements and the religious revival.

Although European literary critic theories began to show their initial influence, yet the conventional definition of poetry was the dominant one among Arab scholars and prosodists. Conservative poets and writers still dealt with the usual themes such as *madīḥ* (panegyric), *rit̲h̲āʾ* (elegy), *g̲h̲azal* (erotic poetry), *waṣf* (description), *tahānī* (congratulation) and served rulers and influential personalities. In this neo-classical Arabic literature, Arab poets revived the rhetoric and declamatory style and the religious and fatalistic spirit of classical poetry. The new poetics sought to emulate the conventions and the basic canons of poetics through *muʿāraḍa* [*q.v.*] (imitation of an excellent classical poem using the same metre, rhyme and theme with the intention of surpassing it). This trend of platform poetry developed not only to serve rulers, religious and national revivals but also to emphasise national ideas by recalling the glorious and profound classical heritage.

When the Ottoman consul-general in Bordeaux, Rūḥī al-K̲h̲ālidī [*q.v.*] compared the *ʿilm al-adab* among the Arabs and the Europeans, he said in his monumental *Taʾrīk̲h̲ ʿilm al-adab* that European writers claim that Arab poets were interested in word-juggling and artificial embellishment with and without diacritical dots and in rhetorical devices, yet with no thought or fictional imagery. Moreover, these European writers say that the *maḳāmāt* [*q.v.*] deal with deception, with erotic subjects directed towards males and with perverted love. To these accusations, they add that when great Arab poets and writers deal with deep thoughts, they express them in an artificial and difficult language (2nd ed., 71-2).

Yet the neo-classical poets were proud to achieve the purity of diction, strength of texture, polished language, aristocratic tone, rhetorical devices considered as making up the only perfect and sublime poetry, expressive of the collective conscience and aesthetics of their religion and culture. Any other form or style was considered inferior or unsuitable for the "serious" subjects of traditional poetry. The neo-classical poets' identity and confidence in their culture were not shaken. They saw their achievement as a step toward the restoration of the magnificent Arabic heritage and its glorious past, and precisely for this reason, any attack upon neo-classical poetry by modernist Arab critics and poets was considered as an attack on Islam.

Modernist critics and poets sought to formulate new poetic theories by combining Arabic conventional poetics with modern European theories. Even in 1949, after the rise of three romantic schools in Arabic poetry, *al-Rābiṭa* (1920-31) in the USA, *al-Dīwān* (1921), and *Apollo* (1932-4) in Egypt and their new theories of poetics, the Egyptian critic al-K̲h̲afad̲j̲ī in his *Fann al-s̲h̲iʿr* ("The poetic art") defined Arabic poetry as "speech versified according to the Arabic metres, with the intention of using metre, expressing sense and using rhyme". Earlier, numerous definitions were attempted, which the Lebanese-American romantic poet, writer and critic Mīk̲h̲āʾīl Nuʿayma [*q.v.*] considered to be dull and inaccurate. Influenced by Russian poetics, especially by the critic V.G. Belinski (1811-48), he cautioned that, in addition to metre, rhyme, emotion and imagination, poetry should communicate pantheistic and metaphysical sensitivity. Such critics maintained that poetry, as established in classical Arabic literature, is the most artistic of all literary genres. Poetry employs language in a particular manner: it makes use of alliteration and onomatopoeia, and it is far more tolerant of metaphors and symbols than prose.

The new vision of the modernists rebelled against the neo-classical platform orator poet, in short, the elegant poet whose ambition was to become a poet-laureate on the pay-roll of the ruler or of the Muslim religious endowments (*awḳāf*). Modernists, in contrast, demanded from the poet independence in the humanist European tradition. The poet was now freed to depict his own life, emotions and thoughts as the subjects of his compositions. Unfortunately these poets and critics derived their deals haphazardly from heterogenous European critical, scientific and philosophical theories, showing an indiscriminate fascination with all Western products in the context of their desperate quest for a theory of contemporary poetics that would explain the dichotomy between word and meaning, form and content.

The pioneer modernists calculated that, by adopting the forms and themes of Western poetry, a revolution in Arabic literature and a general change in the spirit of Arabic culture and poetry would ensue. Their objective was to attack the major neo-classical poets and establish their own new poetic movement. This struggle came to be known as the struggle between the old and the new (*al-ṣirāʿ bayn al-ḳadīm wa ʾl-d̲j̲adīd*). This resulted in the romantic trend in modern Arabic poetry, involving a vehement struggle on the part of the poet for freedom to express his own ideas and emotions and his own personal experience. In effect, the modernists denounced the neo-classical blind imitation of classical themes, such as the yearning for the place of the beloved, or the lamenting over the ruins of encampments, experiences which they had never themselves known.

Only during the second half of the 20th century, after the split in Arabic poetry into two distinct trends, have Arab poets and critics succeeded in formulating a completely new conception of Arabic poetics. Poetry is no longer defined in terms of its form, i.e. as speech in metre and rhyme. Rather, the evaluation is based on the poem's expressive value and its organic unity. The following themes have come to assume paramount

importance: humanistic trends, optimistic, psychological and rational undercurrents, and universal experience. The emphasis is now on thematic content; poetry becomes a vehicle for narrative, dramatic, epic and lyrical trends, and form is secondary. Form was liberated, into free verse (*shiʿr ḥurr*) in the sense of *vers irrégulier* or the Cowleyan ode; blank verse (*shiʿr mursal*), employing conventional Arabic feet in unrhymed verses, or rhymeless verses of irregular number of feet; in poetic prose (*shiʿr manthūr*), using the music of thought based upon repetition and parallelism; and even the prose poem (*kaṣīdat al-nathr*) advocated by Adonis (ʿAlī Aḥmad Saʿīd) in accordance with the French *poème en prose.*

For the Romantic Arab poets and critics, contrary to the classical view, the first criterion of poetic excellence is that poetry should contain human values and not only embellished language.

After the Second World War, the social-realistic trend in modern Arabic literature replaced the romantic trend. The poets of this trend acquired a common ideology and employed similar artistic techniques and diction, forming a literary school in the proper sense of the word. This school insisted on utilitarian values and practiced engaged or purposive literature. They formed an ideology consisting of a blend of socialism and existentialism, describing their new brand of literature as "realistic, optimistic and constructive literature". Committed literature was viewed by its practitioners as a revolt against romantic poetics, which they dismissed as emotional, metaphorical, pessimistic and destructive.

With the gradual decline of social, political, patriotic, national and descriptive trends in Arabic poetry during the mid-20th century and the success of the Romantic Arab poets in achieving harmony between form and content, a new trend arose. This was led by the *Shiʿr* ("Poetry") magazine, established in Beirut in 1957 by Yūsuf al-Khāl and its theoretician the Syro-Lebanese poet Adonis. The group of poets who edited and supported the magazine dealt with the question of the dichotomy between the literary and colloquial Arabic, and gave it precedence over the question of words and meaning. They believed that language in poetry is not a means of expression but of creation. For the *Shiʿr* group, words were expected to suggest and inspire rather than express. In addition, the new poetry was to have a dominant metaphysical tendency; it should strive to go beneath the surface level to the deeper reality of the universe.

The argument of the new trend of post-modern poets is that political events cannot be the object of poetic inspiration but only of prosaic forms of literature. To love beauty teaches people to rebel against oppression; as such, didactic and socio-political poetry are superfluous. Poetry should reflect the personality, mentality and psychological mood of the poet, a particular self-image and a unique inner life. On the other hand, those who defend the obligation of the poet to his society are the proponents of a national literature which expresses itself in the social-realistic trend.

The post-modern poets maintain that their new poetry has outgrown the conventional themes and rules, just as the modern age has superseded preceding ages. Poetry, they argue, is an expression of a poetic experience which should not be confined to the personal emotions. Conventional poetry recorded events and emotions, but did not go beyond them. Modern poetry is less limited, since it attempts to reveal the essence of life and not merely to be moved by it. It assumes a more positive stand. The essence of modern poetry is creative and evolutionary thought, not precise description. It is a comprehensive realisation of the Arab existence, a call to give expression to life's deepest meaning. It stems from a metaphysical sensitivity, which does not feel things according to their essence, but is a quality which only the imagination can reach. This quality allows modern poetry to break the chains of time, events, reality and predetermined ideas. It is not a reflection of something, but a conquest revelation of a new world. The search in a poem is not for images, but for a poetic universe and for connections with the human being and his situation.

With the flexible form of Arabic free verse and *poème en prose* of the new trends of Arabic poetry, the modernisation of Arabic poetics was completed. This new poetry was influenced by classical Arabic poetry as well as by Western thinkers and critics from Plato and Aristotle to Rousseau, Darwin, Nietzsche, Schopenhauer, Renan, Sainte-Beuve, Auguste Comte, Bergson, Coleridge, Hazlitt, Sartre and Camus, as well as European and American poets from Shakespeare, Baudelaire, Eluard, Poe, Eliot, Blake, Byron, Shelley, Wordsworth and Whitman to Pasternak.

The influence of these thinkers and poets has gone beyond changing the form and content of modern Arabic poetry; they have also enabled Arabs to understand better their classical heritage. This point has been discussed by the defender of the poetics of Arab modernity, Adonis, who has admitted that "I did not discover this modernity in Arabic poetry from within the prevailing Arab cultural order and its systems of knowledge. It was reading Baudelaire which changed my understanding of Abū Nuwās and revealed his particular poetical quality and modernity, and [it was] Mallarmé's work which explained to me the mysteries of Abū Tammām's poetic language and the modern dimension in it. My reading of Rimbaud, Nerval and Breton led me to discover the poetry of the mystical writers in all its uniqueness and splendour, and the new French criticism gave me an indication of the newness of al-Jurjānī's critical vision. I find no paradox in declaring that it was recent Western modernity which led me to discover our own, older, modernity outside our 'modern' politico-cultural system established on a Western model" (Adonis, *An introduction to Arab poetics*, 81).

As in the case with Western literature, modern Arabic poets use mythology, religious symbols, Greek and Eastern legends as well as Christian, Muslim and Hebraic symbols to communicate their new poetic vision. These symbols are employed even by practising Muslim poets and by formerly active Communists, who in this respect follow Boris Pasternak and other Russian poets. Eastern, and especially Syro-Phoenician, Babylonian and ancient Egyptian mythology and gods, have returned to the East through Western poetry.

These religious and mythological symbols are used in modern Arabic poetry not as expressions of religious experience, but in order to convey mental and physical states. Their main purpose is to communicate the psychological mood of the poet, who feels persecuted and alienated from his politically suppressive society. His efforts to reform his society and country are futile because of the military or semi-military régimes dominant in Arab countries. In this pessimistic context, most of the symbols used are tragic ones. Christ is the favourite symbol of the poet who sacrifices himself for his country and people. Other symbols connected with the Crucifixion are also used, such as Christ bearing the Cross, an image denoting

the long path of suffering through which the poet has to pass.

Already in 1965, these symbols provoked tremendous objections by official and the growing conservative circles in the Arab world who announced that their duty was to guard the sacred and stable values of Muslim society. They argued that the destruction started by the new trends has encroached upon the Arabic language itself. Poetry, the art and glory of choice language, have a strong connection with the national spirit. Moreover, they have accused modern poetics of allowing corrupting foreign elements to penetrate the Arab existence. Among these alien elements, they have warned, is the practice of incorporating ideas and symbols derived from non-Muslim religions. Some of these ideas had already been rejected by Islam, such as Original Sin, the Crucifixion and Redemption. Moreover, the poets have used the word *ilāh* "deity" in its original pagan sense. These attacks by official circles in the Arab world represent a serious blow and a severe setback to Arabic thought. These conservative arguments preceded the assassination of the Egyptian thinker Dr. Faradj Fūda, the attempt by Muslim fundamentalists in Egypt on the life of the Nobel Prize laureate of literature, Nadjīb Maḥfūẓ in 1994, and the threat to assassinate the writer, thinker and philosopher Anīs Manṣūr. On the other hand, poets such as Nizār Ḳabbānī and Maḥmūd Darwīsh remained rather conservative in their political attitudes and in their use of metaphor and religious symbols.

2. In Persian.

In the introduction to *Miʿyār al-ashʿār*, a Persian textbook of prosody written in 649/1251-2, and ascribed to Naṣīr al-Dīn Ṭūsī [*q.v.*], *shiʿr* is said to be "imitative and measured speech" (*kalām-i mukhayyal-i mawzūn*), according to the logicians, or speech "with measure and rhyme" (*mawzūn-i muḳaffā*) in popular usage. These definitions, which refer to the Aristotelian *mimesis* as well as to the basic prosodical features, express a conformity to a concept of poetry commonly held in traditional Islamic civilisation. This is rooted in the paradigmatic role assigned since early Islam to Arabic poetry and the formal rules governing that poetry. Persian classical poetry, the beginnings of which can be traced back to the 3rd/9th century, is the oldest example of the adaptation of an indigenous poetic tradition to the Arabic standards. Although several fragments of Persian poems, dating back as far as the 1st century A.H., are on record, until the 3rd century all lack the characteristics of metre and rhyme marking classical poems. They are remnants from the pre-Islamic poetry of Persia, which was almost exclusively an oral art. The prosody of that tradition is still imperfectly understood, but it was undoubtedly very different from the classical standards, especially because of the absence of quantitative metres and regular rhyme. Persian critics of the Middle Ages refused to recognise anything as poetry that was not written according to these standards. Shams-i Ḳays [*q.v.*] went as far as to state that prosody was in all its aspects an invention of the Arabs to which the Persians had added nothing new (*Muʿdjam*, 68).

In modern times, the Indian scholar U.M. Daudpota still put much emphasis on the virtual identity of the two traditions. However, Hellmut Ritter, examining the aesthetic function of imagery in the poetry of Niẓāmī, found a fundamental difference in the prevalence of explicit poetic comparisons in Arabic poetry on the one hand, and a Persian preference for metaphorical expression on the other (*Bildersprache*, 13-21; see also *Geheimnisse*, 1*f.) This immediate and flexible use of imagery provided Persian poetry with a manneristic idiom which for centuries dominated the literary language, both in poetry and in prose. Benedikt Reinert has clarified the complex relationship between Arabic and Persian poetry by pointing out that there was in fact an interplay of literary influences from both sides. The ʿIrāḳī phase in the history of Arabic poetry, when the *muḥdathūn* [*q.v.*] poets introduced rhetorical innovations and new genres into the tradition inherited from the Djāhiliyya, was the immediate ancestor of Persian poetry, but was itself influenced by Middle Persian forms of poetry. Features favoured in particular by the Persian poets were, among others, the use of the *radīf* rhyme, a strict application of the quantitative principle in Persian metrics, a different structure of poetical comparisons, an excessive use of hyperbole, the introduction of the heroic and didactic genres and the description of nature as a theme for the *nasīb* (*Probleme*, see esp. 72-82).

Writers on various aspects of literature have left statements about the values attached to poetry in Persian culture. Kay Kāwūs [*q.v.*], the author of the oldest Persian Mirror for Princes, classified poetry among the intellectual pursuits, warning at the same time against difficult poetry which would be in need of a commentary and could therefore fail to speak directly to those for whom it was written (*Ḳābūs-nāma*, 187). Being concerned in particular with the usefulness of poetry to a ruler, Niẓāmī ʿArūḍī [*q.v.*] pointed to the catharsis which could be effected by poetry, for instance in politics, as well as to the publicity value which provided one of the most important justifications for traditional court poetry. In rhetorical textbooks, the practical advantage of a critical knowledge of poetry was emphasised for any one who was concerned with composition, including especially official scribes, because the stylistic convention prescribed the embellishment of prose by means of poetic insertions.

More fundamental are the attempts to establish the metaphysical status of poetry by emphasising its connection with human speech and logic. Such considerations are to be found as more or less obligatory introductions to anthologies, e.g. of ʿAwfī's *Lubāb al-albāb* and Dawlats͟hāh's *Tad͟hkirat al-s͟huʿarāʾ*. Speech (*sukhan*) constitutes God's special gift to mankind, by which the human species is distinguished from all other living beings. On account of its privileged relationship to the capacity of speech, the writing of poetry belongs to the highest pursuits of the soul. Poets also frequently express their views on this particular aspect of their art. Passages on the relationship between speech, or logic, and poetry have found their place among the subjects treated in the introductions of *mathnawī* poems. A remarkable specimen is the long and intricate introduction which Niẓāmī Gand͟jawī [*q.v.*] added to the dedication of his didactic poem *Mak͟hzan al-asrār*. Defending the originality of his work, he makes use of the allegory of a spiritual journey in search of the inspiration which only the poet's own heart can provide. Poetry is related to the *logos* but also to the Divine word of revelation; the latter association gives the poet a spiritual status close to that of the prophets. Niẓāmī also points out that poetry is an immaterial art, in spite of the fact that it uses all the elements of the cosmos as the raw material for its imagery (*Mak͟hzan al-asrār*, ed. A.A. Alizade, Baku 1960, sections xii-xviii).

Such a high opinion of poetry could not fail to lead to a discussion about the permissibility of the "mercenary" panegyrics of the court poets. This question became particularly acute since the 6th/12th century, when Persian poetry came to be used more and more for religious purposes. Sanāʾī [*q.v.*] reduced the conflict between his calling as a homiletic poet and the practices of professional court poetry to a choice between "the Law" (*s͟harʿ*) and "poetry" (*s͟hiʿr*). Farīd al-Dīn ʿAṭṭār [*q.v.*], claiming the rightful use of poetry by the mystics, harmonised the opposition implied in Sanāʾī's word play by adding a third term, viz. "the (heavenly) throne" (*ʿars͟h*), symbolising the goal of the mystical search, which in his view sprang from the same source as literary art and the obedience to the Law of Islam, just as the three words shared the same letters (*Muṣībat-nāma*, 46-7).

By then, poetry was firmly established as a medium for the expression of mystical experience and religious and ethical instruction. Remarkable for this development were the greater importance of the *g͟hazal* [*q.v.*], and of the didactical *mat͟hnawī* [*q.v.*], which became enriched by the often intricate use of narrative elements. The scope for secular epics became restricted, except on the level of popular literature. The panegyrical *ḳaṣīda*, as well as the stanzaic poems, were used for other purposes more suitable to religious interests such as didacticism, religious hymns and elegies on the S͟hīʿī martyrs. The dichotomy between court and religion is only a simplified model of the actual situation. There was an exchange of motives and themes, going into both directions, which gave Persian poetry the ambiguity which became one of its most fascinating features.

According to many modern critics, Persian poetry reached its culmination point in the 8th/14th century, especially with Ḥāfiẓ [*q.v.*], and then ceased to develop any further. During the Tīmūrid period, a decline already began, marked by the mere imitation of earlier poets and an empty display of rhetorical virtuosity. Under the Ṣafawids [see ṢAFAWIDS. III. Literature], there was a brief and limited revival of creativity, exemplified especially in the 16th century by the stylistic fashion of *wuḳūʿ-gūʾī*, and subsequently by the rise of the *sabk-i Hindī* [*q.v.*]. In Persia, the Indian style was not long accepted as an avenue to escape from the impasse, though it produced at least one generally recognized master in the poet Ṣāʾib [*q.v.*]. About the middle of the 18th century, a reaction to the Indian style, afterwards styled the "literary return" (*bāzgas͟ht-i adabī*), took the form of a neoclassicism which continued to dominate poetry until the 20th century. This revival was founded on the early court poetry, which was admired for its harmony, natural grace and simplicity. Nearly all poetry written in the Ḳād͟jār period is at best a clever imitation of poetry produced at the courts of the Sāmānids, G͟haznawids and Sald͟jūḳs.

In the first decade of this century, the Constitutional Revolution (*inḳilāb-i mas͟hrūṭa*) again challenged the inventiveness of Persian poets. The novelty of the *mas͟hrūṭa* poetry consisted mainly in the introduction of new subjects, derived from current events, and in an attitude of *engagement* towards society, both of which had been virtually unknown to the classical tradition. Formal innovation was still only incidental to the main concern with contents, but a few experiments with prosody can be noticed, e.g. the choice of new rhyme schemes by Dihk͟hudā (1879-1956) and Bahār's [*q.v.*] use of uncommon variations of the stanzaic poems, like the *mustazād*, an extension of the classical *mat͟hnawī*. More interesting was the turn towards forms hitherto restricted to oral poetry: both ʿĀrif [*q.v.*, in Suppl.] and Bahār recognised the effectiveness of the *taṣnīf*, a ballad already in use for popular comments on political events, to reach mass audiences during public performances of poetry and music. The strength of the tradition showed itself not only in the overall tendency to stick to the timeworn vocabulary and imagery, but also in attempts to provide individual poems from the past with a topical meaning. A striking example is the treatment of K͟hāḳānī's famous *ḳaṣīda* on the ruins of the Sāsānid palace at Ctesiphon as a symbol of the modern longing for the rebirth of vanished greatness. Muḥammad Riḍā ʿIs͟hḳī (1893-1924 [*q.v.*, in Suppl.] chose Ctesiphon as the setting for his poems *Rastāk͟hīz-i salāṭīn-i Īrān* and *Kafan-i siyāh*, written in the novel form of musical drama. In an ode on the Communist Revolution, Lahūtī (1887-1957 [*q.v.*]) transferred this theme to the Kremlin. The form of the strife poem (*munāẓara*), used by Asadī (11th century), was transformed into a medium for modern social and moral criticism by Parwīn Iʿtiṣāmī (1906-41 [*q.v.*]).

The impact of Western poetry, which has been

instrumental in the process of literary modernisation in all non-Western cultures, made itself felt comparatively late in Persia. Debates between the proponents of change and the defenders of traditional poetry (*shiʿr-i sunnatī*) went on until after the Second World War, although the first signs of Western influence can already be noticed in the early 1920s. Among the first to turn to Western models were ʿIshkī, with his musical dramas, and Īradj Mīrzā (1874-1924), whose *Zuhrā u Manūčihr* was an imitation of Shakespeare's *Venus and Adonis*. The allegorical narrative *Afsāna* (1922) is in retrospect seen as a landmark in the development of modern poetry, although the poet Nīmā Yūshīd [*q.v.*] did not yet depart much from traditional prosody. More important are the atmosphere, which reminds one of French romantic poetry of the 19th century, the realistic descriptions of nature and the reflections on the future of Persian poetry in the discussions of the poet and his muse. In the following decades, Nīmā began to question the principles of classical Persian verse. He rejected its isometric lines and tight rhyme schemes as unsuitable for contemporary poetry, because they forced the poet to use superfluous words in order to fill empty spaces in prescribed patterns and thereby limited his creative freedom. Instead, metre and rhyme should be subservient to poetic expression. In his "broken metrics" (*ʿarūḍ-i shikasta*), the ancient metrical feet can still be recognised, but their number in each line varies according to the expressive needs of the poet. Rhyme also was freed from its formal rigidity; this opened the possibility for various kinds of irregular rhymes as well as for blank verse. Even more radical were Nīmā's experiments with a new poetic imagery which equally were inspired by modern literary trends in the West, notably by surrealism.

For a long time, Nīmā remained a more or less isolated and controversial pioneer. Only *ca.* 1950 did a number of young poets accept his ideas as the basis of a modern Persian poetry. Starting from the nucleus of his fundamental rules, they developed themselves into various directions. The most radical innovator among them was Aḥmad Shāmlū, who also broke through the barrier which had always divided the language of written poetry from spoken Persian. The debate between the modernists and the defenders of the tradition gradually lost most of its heat. Although prominent poets like Shahriyār [*q.v.*] could still make a meaningful use of the ancient forms, by the 1960s the new poetry had become generally accepted.

The political events in Persia after 1941 affected poetry as much as the Constitutional Revolution had done this. Political and social *engagement* (*taʿahhud*) became again an avowed task of poetry, although political oppression and censureship did not leave a very large scope for the expression thereof. External conditions often forced poets into opaque symbolism. However, the desire to be in line with international trends of modern poetry also gave much modern Persian poetry an obscurity which made it difficult to understand for readers who were still attached to the poetic idiom of the past.

The process of poetic modernisation fostered the rise of literary criticism on a scale which Persia had not known before. Nīmā's own theories were expounded in private letters and scattered articles which were only recently collected and published by Sīrūs Ṭāhbāz. To most critics, they constitute the basics of their own evaluation of modern poetry.

3. In Turkish.

A. The pre-Ottoman period [see ʿOTHMĀNLĪ. III. (a) 1; TURKS. Literature].

B. The Ottoman period [see ʿOTHMĀNLĪ. III. (a), (b), (c)].

C. The Republican period.

When the Ottoman Empire dissolved, the overornate *Dīwān* poetry of the élite, written in *ʿarūḍ* [*q.v.*] using Ottoman Turkish, lost its frame of reference. Republican values envisaged that the literature should go to the people and reflect their lives and values using their language, i.e. spoken Turkish. Although the roots of a search for new forms and expressions for a wider audience go back to the *Tanẓīmāt* period (mid-19th century), it was during the War of Independence and after the declaration of the Republic (1923) that Turkish intellectuals moved outside Istanbul to acquire a first-hand experience of Turkey and its people. For the poets, the Anatolian villager, the folk poetry in spirit and form (its traditional syllabic metre and various poetic forms) and the wealth of folk traditions which had been so far neglected, now became major sources of inspiration as well as providing vast amount of subject-matter. *Dīwān* poetry and *ʿarūḍ* did not vanish immediately after the Republic; in fact, its influence can be traced even in contemporary poets in a synthesised form. Ahmet Haşim (1885-1933), Mehmet Akif Ersoy (1873-1936) and Yahya Kemal Beyatlı (1884-1958) continued to write in *ʿarūḍ* after the 1920s. Atilla İlhan (1925-), Edip Cansever (1928-85), and Behçet Necatigil (1916-79) make use of the *Dīwān* style, but without *ʿarūḍ*, in their works. Beginning with the *Tanẓīmāt* period, and during the early years of the Republic, it was the French poetic tradition which inspired the Turkish poets; e.g. Beyatlı was

under the influence of the Parnassians, and Ahmet Haşim (1884-1933) of Symbolism. One way of looking at modern Turkish poetry is by decades, although the time span is short and the same poets will have continued to write in the next decade, possibly with a change in style.

a. 1923-38. This was the decade when excitement about the new state and the newly-discovered populism and nationalism was deeply felt. The poets of the old school, such as Abdülhak Hamid Tarhan (1852-1937), Ahmet Haşim, Yahya Kemal Beyatlı, Celal Sahir Erozan (1883-1935), and Mehmet Akif Ersoy [see MEḤMED ʿĀKIF] continued to write, usually with *ʿarūḍ* but using a purer Turkish than before. Beyatlı lauded the magnificence of the Ottoman Empire and the pain of losing it, as expressed in "The Open Sea":

> While my childhood passed in Balkan cities./ There burned in me a longing like a flame./In my heart the melancholy that Byron knew./

Haşim, the Symbolist, talked of spiritual exile, and declared "We ignore the generation which has no sense of melancholy"; these two poets were to influence the coming generations more than any of the other poets of the era. Ersoy, writer of the lyrics of the Turkish national anthem, adapted *ʿarūḍ* to spoken Turkish masterfully and his use of the style of the Islamic *khuṭba* created a most original effect. His poetry was heroic, didactic, idealistic, preaching purity of the soul, and his elegy "For the Fallen at Gallipoli" is one of the most famous poems of the period:

> Soldier, you who have fallen for this earth/Your fathers may well lean down from heaven to kiss your brow./You are great, for your blood saves the True Faith./Only the heroes of Badr are your equals in glory./

For the populist/nationalist poets of the period, inspired by folk poetry, Ziya Gökalp (1876-1924) [see GÖKALP, ZIYA], and Mehmet Emin Yurdakul (1869-1944) [see MEḤMED EMĪN] are the best examples, didactic in tone and close to folk poetry in form. Faruk Nafiz Çamlıbel (1898-1973) [see ČAMLÎBEL, in Suppl.] wrote about Anatolia and its people with the eyes of an urban intellectual observing the rural scene for the first time. Halit Fahri Ozansoy (1891-1971), Orhan Seyfi Orhon (1890-1972) [see ORKHAN SEYFĪ], Yusuf Ziya Ortaç (1913-1975) [see ORTAČ, YŪSUF ḌIYĀ], Enis Behiç Koryürek (1891-1949) [see ḲORYÜREK], Cahit Külebi (1917-) and Ceyhan Atuf Kansu (1919-78) began to write also during this period. Most of these poets were teacher-poets. Through the Halkevi or "People's Houses" [see KHALḲEVI] organisation and its publication, they were able to disseminate their ideas and poems, and an interest in folk culture became popular among the masses through them. A painter and a poet, Bedri Rahmi Eyüboğlu (1913-75) [see EYYŪBOGHLU, in Suppl.], not only used the folk poetry tradition but also depicted the colours and the art of Anatolia using words. Some of these poets were more didactic than others; e.g. Behçet Kemal Çağlar (1908-69) dedicated his poetry to the love of Atatürk and the Republican ideals. The poets painfully observed the wretched economic and social condition of Anatolia, and some perceived the Russian Revolution as a new source of hope. This brings Nazım Hikmet (1902-63) [see NĀẒIM ḤIKMET] to mind. Under the influence of Mayakovski in his earlier poems, he launched his free verse and, although he also wrote sensitive and tender love poetry, he is better known by his poems of revolution. In the "Epic of Şeyh Bedrettin"; using modern verse, he united, with great skill, the traditions of *Dīwān* poetry and folk literature:

> It was hot/very hot./The heat was a knife with a bloody handle/and a dull blade,//It was hot./The clouds were loaded,/ready to burst/to burst right away.//Without moving, he looked down/from the rocks/his eyes, like two eagles, descended on the plain./There/the softest and the hardest/the stingiest and the most generous/the most loving/the greatest and loveliest woman/the EARTH/was about to give birth/to give birth right away.//

The era was not dominated only by Nazım Hikmet; there was also much diversity. While Necip Fazıl Kısakürek (1905-83) used religious and mystical themes, a group of young poets believing in art for art's sake gathered their poems into a book called *Yedi meşale* "The Seven Torches" (1928). These were Muammer Lütfi (1903-47), Sabri Esat Siyavuşgil (1907-68), Yaşar Nabir Nayır (1908-81), Vasfi Mahir Kocatürk (1907-61), Cevdet Kudret Solok (1907-) and Ziya Osman Saba (1910-57). They asserted that they were tired of the current state of poetry and sought new ways, but on close reading, their poetry is clearly under the influence of Parnassianism, and the movement was in any case short-lived. Their contemporaries were Ahmet Hamdi Tanpınar (1901-62), Ahmet Muhip Dranas (1909-80), both students of Yahya Kemal, who wrote under the influence of Haşim and Valéry, whilst Ahmet Kutsi Tecer (1901-67) wrote in traditional syllabic metre in stanzaic form expressing genteel sensibilities and Cahit Sıtkı Tarancı (1910-56) achieved popularity with his sincere love of humanity and celebration of life.

b. 1940-60. Politically, the early part of the period was marked by the move from a single-party system to pluralistic democracy and liberalisation, whereas the second part is marked by the crises of democracy and military intervention. In poetry, the 1940s bring to mind firstly the *Garip* "Strange" or *Birinci Yeni* "First New" movement. Orhan Veli Kanık (1914-50) [*q.v.*], Oktay Rifat Horozcu (1914-88) [see OKTAY, RIFAT] and Melih Cevdet Anday (1915-) caused a literary upheaval when they published their poems in a book called *Garip* in 1941. In this they called for abandoning everything that Turkish literature had so far been teaching, including conventional rigid forms and metres. They asked for less rhyme and for a language reduced to a bare minimum, and an avoidance of metaphors and word plays; instead, their theme would be to celebrate the common man and their aim to write for him. Kanık's poem "Epitaph", which talks about the corns of Süleyman Efendi, is a good example. There was little room for sentimentality, but the love and joy of life were always there, mixed with a sinister sense of humour and poetic reality; his "For the Homeland", often recited even today, is one such poem:

> All the things we did for our country/Some of us died/Some of us gave speeches./

Oktay Rifat caught the underlying political desperation of his contemporaries in his "Underdeveloped".

> To fall behind; in science, in art, leafless/ Unflowering in the spring; an aching star/ Imprinted on the forehead.

But Kanık died young, and the other members of the group were to leave it in the 1950s. This latter decade in Turkey saw the liberalisation of political life. There was a growing middle class which did not care too much for poetry; the beginnings of industrialisation (with all its pain) and emigration to the

big cities caused complex socio-economic changes. The *Garip* movement in poetry had outlived its time, and its followers had by now turned to other more personal styles: Rifat took up Neo-Surrealism, and Anday began to write in an epic style, intellectually complex poetry. Some of the poets of the period grew tired of the "poetic realism" which had become fashionable with the *Garip* movement. Salah Birsel (1919-) wrote:

> Take "Love for Mankind" as your topic/And free verse as your prosody./Relevant or not,/ Whenever it occurs to you,/Insert the word "Hunger"/At a convenient spot./Near the end of the poem/Rhyme "Strife" with "the Right to Good life."//There, that's the way to become A Great Poet.

More organised reaction to the *Garip* came in the form of the *İkinci Yeniler* "Second New" movement (1955-65), which advocated "art for innovation's sake". In the 1960s, a monthly review called *Papirüs* edited by Cemal Süreyya (1931-90) brought the proponents of this together; İlhan Berk (1916-), Cemal Süreyya, Turgut Uyar (1927-85) and Edip Cansever (1928-86) are the better-known poets of this movement. They tried their hands at new rhythms and more modern imagery, with distortion of language to the degree of meaninglessness as their mark. They tried to recover the poetic qualities banished by the *Garip* poets, but they were neither élitist nor anti-populist; on the contrary, they tried to depict the experiences of the individual in the city. They were esoteric, individualistic and metaphysical. Thus Cemal Süreyya is witty, subtle and full of clever imagery, with love, understanding, warmth and irony as the major features in his works:

> The clock chimed like a Chinese jar./Bending my brim hat over my misery,/Out of my white insomnia, I,/Exiled to your face,/You woman,/ You were in every secret corner,/Your shadow nettled on the dark street,/(from "Country")

Edip Cansever, influenced by T.S. Eliot, told of the alienated man in an urban setting; Ece Ayhan (1931-) was obscure in his prose poems about history and the underworld; Sezai Karakoç (1933-) was inspired by Islam; whilst Kemal Özer (1936-) was politically committed.

During the 1950s, the proponents of classical Turkish poetry formed a circle around the journal *Hisar* (ran until the 1980s), with such prominent names involved in it as Munis Faik Ozansoy (1911-75), Orhan Seyfi Orhon and Mehmet Çınarlı (1925-).

c. 1960-. The striking feature of the 1960s was the politicisation of the young poets after the military takeover, which advocated a firm return to populism and the teachings of Atatürk. The young poets of the 1960s were a sober group, critical of anyone who did not write for a political purpose, so that Nazım Hikmet and Ahmet Arif (1926-91) became their heroes. Ataol Behramoğlu (1942-), Süreyya Berfe (1943-), İsmail Özel (1944-) started a joint action against what they called the bourgeois writers under the name of "Revolutionary Young Poets". But after the military intervention of 1971, Behramoğlu abandoned crude propaganda and his didactic attitude; Berfe identified with the underprivileged and wrote with a folk style and popular language and İsmet Özel turned to Islam.

Amongst the other poets of the period may be mentioned Hasan Hüseyin (1927-84), Özdemir İnce (1936-), Arif Damar (1925-), Refik Durbaş (1944-), Özkan Mert (1944-), Kemal Özer (1935-), Turgut Uyar (1927-85), Metin Eloğlu (1927-85) and Edip Cansever (1928-85), whilst Atilla İlhan (1925-) and Can Yücel (1926-) became influential also. Atilla İlhan combined the elements of classical with folk poetry, and his exotic and romantic imagery made him popular among the young generation in the 1960s. Yücel is subtle in his irony, combined with lyricism and sensitivity; he tackles politics and sex with the same ease, and his mastery of both Ottoman and folk expressions and puns have contributed to his popularity:

> We can show you two kinds of people/who've learned a thing or two about political finesse:/ politicians and convicts./The reason is there for all to see:/for politicians, politics is the art of staying/out of jail,/for convicts it is the prospect of freedom. (Poem no. 26).

General characteristics of modern Turkish poetry are thus the discovery of Turkish, as used by the folk, in its various forms and its wealth of expressions; and a synthesis of centuries of oral tradition, folk literature, *Dīwān* poetry and universal literary traditions. Halman (1982, 21) lists some of the themes and concerns of Turkish poetry as "nationalism, social justice, search for modernity, Westernization, revival of folk culture, economic and technological progress, human dignity, mysticism, pluralistic society, human rights and freedoms, democratic ideals, hero-cult, populism, Atatürkism, proletarianism, Turanism, Marxist-Leninist ideology, revival of Islam, humanism—in fact, all aspects and components of contemporary culture".

4. In Urdu.

The word has two common meanings in Urdu. Firstly, it means poetry in general, as an art form. It has a synonym, *s͟hāʿirī*, and the two words are sometimes combined in the expression *s͟hiʿr-ō-s͟hāʿirī*. Another Arabic word, *naẓm*, is also used. The second meaning of *s͟hiʿr* is a verse or couplet, pl. *as͟hʿār*. There was comparatively little interest in Urdu prose in India until the end of the 18th century. But poetry, following Persian models, thrived in the South—the Deccan—under the patronage of local Muslim rulers, such as those of Golkonḍa and Bid͟jāpūr, from the early 17th century onwards. Whether the language used is better described as a dialect of Urdu, or as a distinct Dakhani language, is for linguisticians to decide. What cannot be denied is that poetry in the Urdu *lingua franca* of northern India owed much to a few years' stay in Dihlī by a poet of the Deccan, Walī; it is not entirely fanciful to suggest that he is to Urdu poetry what Chaucer is to English.

The forms and techniques of the poetry were based on those of Persian, which in their turn were based on Arabic. The favourite theme was love, embodied in *g͟hazal* [*q.v.*] poetry. The poet complained of his beloved's neglect of him, each poem consisting of between ten and twenty verses. The verse consisted of two hemistiches (*miṣraʿ*), each second one having the same rhyme. The rhyme was also established in the first hemistich of the first verse. In some *g͟hazals*, the beloved might be God, whilst when this

beloved was human, it might be masculine rather than feminine.

There were other forms of monorhyme poetry, the most important being *ḳaṣīda* [*q.v.*] or eulogy, and satire or *hidjāʾ* [*q.v.*]. There were various types of stanzaic poetry, the simplest, used for longer narrative poems, being *mathnawī* [*q.v.*] in rhymed couplets. Elegy (*marthiya* [*q.v.*]) was at first in verses of four, then later six, hemistiches. In addition, mention should be made of short poems (*ḳiṭʿa*, pl. *ḳiṭaʿ*), consisting of as few a one or two verses. These might, for example, serve as chronograms, giving birth or death dates of famous men in Arabic letters instead of numbers.

Authoritative critical and analytical books about poetry in Urdu did not appear until the 19th century. By this time, the so-called Dihlī school of Urdu poetry, which owed its origin to Walī, was on the decline. Political instability, due to Afghan and Marāthī incursions, had made the capital of the Mughal Empire a difficult place of residence, and poets gravitated to Lucknow. India fell increasingly under the control of the British, through their East India Company. This control was strengthened by the Sepoy Mutiny of 1857. Education followed British criteria. This affected the ʿAlīgaṛh Movement led by Sir Sayyid Aḥmad Khān [*q.v.*]. Among the major influences on Urdu poetry were loosening of the stranglehold of *ghazal* and of Persian influence, and the rise of literary criticism. As Muhammad Sadiq says (*op. cit.* in *Bibl.*, 269 ff.), the *Muḳaddama-yi-shiʿr-ō-shāʿirī* by Alṭāf Ḥusayn Ḥālī "Marks the dawn of historical and scientific criticism in Urdu ... it is the first formal treatise on poetry in Urdu." Ḥālī saw poetry as a civilising instrument instilling morality. Its degeneration in the East was due largely to political reasons. Despotism killed sincerity and encouraged exaggeration. To end this decadence, poetry should not only be subordinate to morality but should also eschew the supernatural and follow reality. Ḥālī refers to English, Persian and Arabic as well as to Urdu poetry. He aimed to commend poetry to the puritanical Indian middle classes who were highly suspicious of it. He was himself a poet; he did not always live up to his own standards, but in his *Musaddas* (a long poem subtitled "The flow and ebb of Islam", in stanzas of six hemistiches) he found a theme worthy of his genius.

A second major study of Urdu poetry is *Āb-i-ḥayāt*, by Muḥammad Ḥusayn Āzād (1830-1910) (see Sadiq, 288 ff.). But much of our information about Urdu poets comes from a literary form called *tadhkira* [*q.v.*]: that is, short notes on a number of poets illustrated by short quotations. In the earlier examples, the biographical information tended to be in Persian.

The popularity of poetry was both illustrated and stimulated by the social institution of the *mushāʿara* [*q.v.*]. This took the form of a meeting of poets who would recite their poems in rivalry—not unlike that of the mediaeval German Minnesingers. These played a major role in the emergence in Lucknow in the mid-19th century of the *marthiyas* of Anīs and Dabīr [*q.vv.*] as rivals to *ghazals* in popularity.

This article is not intended to be a history of Urdu poetry. For this, reference should be made to the two general works by Muhammad Sadiq, and Ram Babu Saksena in the *Bibl.*, and to the individual articles on poetical forms and individual poets in this *Encyclopaedia*. As with modern Arabic poetry, one sees classical traditions modified by Western notions. Those notions in Urdu came largely from English, though occasionally from Russian and (in the case of Iḳbāl) German. Until the present century, it was quite common for poets to produce Persian *dīwāns* as well as Urdu ones—not infrequently as copious as or even more copious than their Urdu *dīwāns*. This applied to Ghālib (1797-1869 [*q.v.*]), considered by many as the last of the great classical Urdu poets, but it also applies to Muḥammad Iḳbāl (1873-1938 [*q.v.*]), the "national poet of Pakistan."

Bibliography: Muhammad Sadiq, *A history of Urdu literature*, London 1964, is a mine of information on the subject, often unrivalled in the analysis and discussion of important aspects. Examples are his accounts of Walī, Ḥālī and Āzād. Particularly helpful are the numerous Urdu quotations, with English translations. Unfortunately, these are lacking in the other major study, Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1927. For a general account in Urdu, see ʿIbādat Brēlwī, *Shāʿirī awr shāʿirī kī tanḳīd*. For the *tadhkira*, see Farmān Fatḥpūrī, *Urdū shuʿarāʾ kē tadhkirē awr tadhkira nigārī*, Lahore 1972. Among the many editions of Ḥālī's *Muḳaddama-yi-shiʿr-ō-shāʿirī*, one may mention that edited by Waḥīd Ḳurēshī, Lahore 1953. Āzād's *Āb-i-ḥayāt* was first published in 1881, but made no mention of the important poet Muʾmin [*q.v.*]; consequently, a later edition should be used.

(J.A. HAYWOOD)

5. In Malay and in Indonesia [see Suppl.].

6. In Swahili [see SWAHILI. 2. Literature].

7. In Hausa.

Hausa *waka* includes all forms of song, including a number of categories borrowed from Classical Arabic literature. The most important of these are: *madahu* (< *madh, madīh*), or sometimes *begen annabi*, basically "pleading with the Prophet"; *wa'azi* (< *waʿẓ* "warning, admonition"), which dwells on the torments of Hell Fire for the wicked and the joys of Paradise for the believer; *wakokin tausari* or *wakokin najumi*, astrological verse, dealing with the Zodiac and other astronomical and astrological matters; *wakokin tauhidi* (< *tawḥīd*), which sets out the essentials of Islamic theology; and *wakokin fikih*, dealing with Islamic law. These categories are, however, only approximate, and there is much overlapping; thus *wa'azi* verse may include material pertaining to *tauhidi* or even *madahu*.

For a fuller treatment, and for bibliography, see HAUSA. iii. Literature. (M. HISKETT)

SHIRĀʾ (A.), verbal noun of the root *sh-r-y*, a technical term of early Islamic religion and, more generally, of Islamic commercial practice and law. The word appears to be one of the *aḍdād* [*q.v.*], words with opposing meanings, in this case, buying and selling; the basic meaning must be to exchange or barter goods.

Early theological usage was based on such Ḳurʾānic texts as II, 203/207, "Amongst the people is the one who sells (*yashrī*) himself, desiring God's approval (or: to satisfy God)"; II, 15/16, "These are those who have purchased (*ishtaraw*) error for right guidance/bartered guidance for error"; and XII, 20, "They sold him (*sharawhu*, sc. Joseph) for a low price". The *sabab* of II, 203/207, is said by Ibn Kathīr (*Tafsīr*, Beirut 1987, i, 254), from Ibn ʿAbbās, to have been when the Companion Ṣuhayb al-Rūmī lost his wealth by making the *hidjra* to Medina, and the Prophet told him that he had in fact gained a profit. Al-Ashʿarī (*Maḳālāt al-islāmiyyīn*, ed. H. Ritter, Istanbul 1929, i, 102) reports that the leader of the Ḥafṣiyya sub-sect of the Ibāḍiyya sect of the Khāridjites, Ḥafṣ b. Abī Miḳdām [see IBĀḌIYYA, at vol. III, 660a], interpreted the verse as referring to the assassin of ʿAlī, Ibn Muldjam [*q.v.*].

Thus this concept became especially associated with the Khāridjites [*q.v.*], who interpreted the Ḳurʾānic references as applying to Khāridjite believers who sacrificed their lives in opposing an unjust ruler and thereby "purchased" Paradise. Accordingly, the active participle *shārī*, pl. *shurāt*, becomes a name for the Khāridjites in general (see al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, viii, 13).

Hence in legal practice, *shirāʾ* has the predominant meaning of buying rather than selling. The importance of *shirāʾ* as a legal term can be found in its nature as a positive action that formulates the purchasing element of the contract of sale. However, the legal literature on *shirāʾ* seems to treat it as a subsidiary component of *bayʿ* [*q.v.*] and is therefore dealt with as part of that contract. The contract subject (*maḥall al-ʿaḳd*) of both *bayʿ* and *shirāʾ*, is covered by the maxim that applies to all contracts of exchanges, i.e. what is prohibited to take is prohibited to give.

Shirāʾ appears to be discussed, as an identified issue, when it can lead to a prohibited transaction. To avoid the possibility of interest (*ribā* [*q.v.*]) the buyer is prohibited from reselling a commodity before purchasing it unless it is in the form of *murābaḥa* (see below). In the civil laws of Islamic countries like Egypt, Syria, Libya and ʿIrāḳ, the sale contract creates three fundamental obligations upon the purchaser (*al-mushtarī*): payment of the price, payment of the contract's expenses, and collecting the goods. The *Madjalla* [see MEDJELLE] agrees with the principle of these three obligations, giving a definition of the *mushtarī* as "he who buys" (art. 161). This definition could be understood to include "any person" who buys, whether for the purpose of consuming the goods or reselling them. The inclusion of the two types of buyer in one definition, without distinguishing their contracts on the base of their intention, can be significant in the case of the *murābaḥa* contract when the intention of the buyer to resell is clearly declared. *Murābaḥa* is a permissible form of sale that allows a purchaser to buy with the intention of subsequently reselling to a designated buyer with a fixed profit rate. The payment of the sale price, inclusive of the agreed profit margin, may be immediate or deferred. *Murābaḥa* also serves to protect the innocent general consumer who is inexperienced in trade. According to Udovitch, by basing the sale price on the original price, the customer was provided with a modicum of protection against unfair exploitation by merchants. Today, *murābaḥa* is considered as the most popular mode of financing used by Interest-Free Banking. The views on the legitimacy of *murābaḥa* banking are divided regarding the nature of the guarantee that some Interest-Free Banks "expect" from the client/consumer for whom they purchased the commodity. If the customer is given total freedom to purchase the commodity or not, it is a legitimate practice; otherwise it is treated with doubt, as it could mask interest (*ribā*) in the guise of a legitimate form of sale. The above definition in the *Madjalla* appears to open the gate to include both kinds of *murābaḥa*, whether with a designated buyer or without, since "any" buyer can fit the category.

The rights of the *mushtarī* appear to be well taken care of in Islamic law under the institution of *ḥisba* [*q.v.*] However, he seems to be more protected by *ḥisba* before the contract than after it. If the item is purchased and then appears to be fraudulent, then the dispute can only be settled in court on the ground of *gharar* or *ghishsh* in the same way as any other contract.

(M.Y. IZZI DIEN)

AL-**SHIʿRĀ** (fem., with *alif maḳṣūra*), the old Arabic name for Sirius (α Canis Maioris), the brightest fixed star in the sky (apparent magnitude -1.46).

The origin and meaning of the name are debated; while some scholars, less probably, assume a derivation of *al-shiʿrā* from the star's Greek name Σείριος (on this, cf. Scherer, 111 ff.), others, with more probability, maintain a genuine Arabic origin (see the discussion and references in Kunitzsch [1], 117-18, nos. 1 and 3; Eilers, 124). In the dual, *al-shiʿrayān* designated the two stars Sirius, α Canis Maioris, and Procyon, α Canis Minoris, together. Both of them were also given specifying adjectives, Sirius as *al-shiʿrā al-ʿabūr* ("*al-sh.* which has crossed [the Milky Way]") and *al-shiʿrā al-yamāniya* ("the southern *shiʿrā*") and Procyon as *al-shiʿrā al-ghumayṣāʾ* ("*al-sh.* with eyes filthy from weeping") and *al-shiʿrā al-shaʾāmiya* ("the northern *shiʿrā*"), and each of them could be named by one of the adjectives alone (cf. Kunitzsch [2], nos. 289a/b, 290a/b). In *anwāʾ* books and other texts it is often mentioned that *al-shiʿrā* is "in *al-djawzāʾ*" which refers to its position, in ecliptical longitude, in the zodiacal sign of *al-djawzāʾ* = Gemini, the Twins. In Greek-based "scientific" astronomy, following Ptolemy, Sirius is located on the mouth of the Greater Dog. In the star catalogue of his *Almagest*, Ptolemy gives the proper name of the star as ὁ Κύων ("the Dog", a name identical with the name of the whole constellation, Canis Maior, the Greater Dog; the classical name, Σείριος, is not mentioned here), which was rendered in the Arabic versions as *al-kalb* ("the Dog"), for which elsewhere *kalb al-djabbār* ("Orion's Dog") is also found (cf. Kunitzsch [2], nos. 139-40). In modern times, Sirius is reported as being called *el-Mirzem* in Central Arabia (Hess, 221, and others; in classical tradition *al-mirzam* designated β Canis Maioris, β Canis Minoris and γ Orionis; cf. Kunitzsch [2], nos. 164a/b/c, 165a/b, 166a/b) and, perhaps, *ʿalib* in some places in the Yemen (cf. Gingrich, 161-2, and others). *Al-shiʿrā* is frequently mentioned in classical Arabic poetry. Some Arabs counted *al-shiʿrā* among the *anwāʾ* asterisms, though not as one of the 28 lunar mansions [see ANWĀʾ; MANĀZIL], and they had *radjaz* verses on its heliacal rising (around 27 June; see Pellat, 23, nos. 13-14). There are traditions saying that *al-shiʿrā* was one of the stars worshipped in pre-Islamic times by certain tribes, this star being indicated for the Ḳays (Henninger, 66 ff.). Ibn Ḳutayba specifically tells that Abū Kabsha was the first to worship *al-shiʿrā* (*K. al-Anwāʾ*, Ḥaydarābād 1956, 46). It is obviously with regard to this pagan superstition that the Ḳurʾān asserts "He [i.e. God] is the Lord of *al-shiʿrā*" (LIII, 49). In the *tafsīr* literature (*ad locum*) this item was afterwards discussed extensively. In another context it is well known that Sirius ("Sothis") was of special importance in ancient Egypt; its heliacal rising indicated the rise of the Nile and determined the beginning of the new year (cf. van der Waerden, 11 ff.). In Hellenistic times there developed a genre of

astrological and astrometeorological literature describing weather prediction and other prophecies related to the heliacal rising of Sirius, partly in connection with observations of the Moon (cf. Gundel, index s.vv. Sirius, Sothis). In the course of the transmission of the ancient sciences to the Arabs, texts of this kind also reached the Islamic world and are now found in numerous manuscripts, often ascribed to such pseudo-authors as Hermes or Ptolemy; one such treatise was also written by the famous Egyptian astronomer Ibn Yūnus, d. 399/1009 (see Sezgin, *GAS*, vii, 54, 67, 173, 199, 312, 317; Fahd, 488-9, 494; Ullmann, 284, 291). A reflex of these traditions is also found in the *anwāʾ* book of Ibn Māsawayh, d. 243/857 (*K. al-Azmina*, ed. P. Sbath, in *BIE*, xv (1933), 235 ff., esp. 254, ll. 3-8 = tr. G. Troupeau, in *Arabica*, xv (1968), 113 ff., esp. 132, on 19 July).

SHĪRAWAYH, Abū Shudjāʿ b. Shīrawayh b. Shahradār b. Shīrawayh b. Fannākhusrū al-Daylamī al-Hamadhānī (b. Hamadhān 445/1053, d. 509/1115), traditionist and historian. His father, his son Shahradār and his grandson Abu 'l-Ghanāʾim Shīrawayh were all scholars and traditionists of great erudition (Subkī, *Ṭabaḳāt*, vi, 193). Abū Shudjāʿ pursued his studies as a pupil of the greatest masters of the period, in particular: Abu 'l-Faḍl Muḥammad al-Kūmasānī, Yūsuf b. Muḥammad al-Mustamlī and Aḥmad b. ʿĪsā al-Dīnawarī.

Having acquired a sound and thorough education, especially in jurisprudence (*fiḳh*), in tradition (*ḥadīth*) and in history, he devoted himself to teaching in the *madrasa* of Hamadhān. He was then tutor to numerous pupils, including his son Shahradār, Muḥammad b. al-Faḍl al-Isfarāʾīnī and Abū Mūsā al-Madīnī who, in their turn, became eminent traditionists (Subkī, *op. cit.*). Shīrawayh died on 9 Radjab 509/29 November 1115 (*op. cit.*) at 64 years of age.

He composed numerous monographs, most of which no longer exist, such as his *Taʾrīkh Hamadhān* ("History of Hamadhān") to which he owed his reputation among his contemporaries. Unfortunately, no information is currently available regarding this book. Fortunately, however, three other works of his, of *ḥadīth* and of history, have been preserved; numerous manuscripts, as yet unedited, are kept in various libraries (see Brockelmann, I[2], 419-20, S I, 586):

(1) The *Firdaws al-akhbār bi maʾthūr al-khiṭāb al-mukharradj ʿalā K. al-Shihāb* ("The Paradise of stories"). This is a collection of traditions, drawn from the *Shihāb al-akhbār* of Muḥammad b. Salāma al-Kuḍāʿī (d. 454/1062). Like its author, this work was evidently much appreciated by the specialists of the period. It contains some ten thousand *ḥadīth*s, accompanied by complete chains of transmitters (*isnād*s) and divided into chapters arranged in alphabetical order (*Bāb al-alif, Bāb al-bāʾ, Bāb al-tāʾ*, to *Bāb al-yāʾ*). Later traditionists followed his example; al-Suyūṭī (d. 911/1505 [*q.v.*]), among others, adopted the same method of classification in his *Djāmiʿ al-ṣaghīr* (cf. Ḥadjdjī Khalīfa, *Kashf*, ii, 1254). In numerous instances, the *Firdaws* of Abū Shudjāʿ has been annotated, supplemented or summarised. His son Shahradār (d. 558/1162) enriched it with a supplement, the *Musnad al-Firdaws*, in four volumes, where he assembled 558 chains of transmitters (*isnād*s) used by his father (ms. Rāmpūr, no. 359). A certain ʿAlī b. Abi 'l-Ḳāsim b. ʿAlī composed a summary of it entitled *Bustān al-mustakhradj min al-Firdaws* ("The Garden", extract from the *Firdaws*), contenting himself with only 1,140 traditions. An abbreviated manuscript of this book is to be found in the Algiers Library (no. 496). Numerous manuscripts of the *Firdaws* of Shīrawayh are still preserved in several libraries, especially in Cairo, Rāmpūr, Berlin etc. (cf. Brockelmann, *loc. cit.*).

(2) *Riyāḍ al-uns li-ʿuḳalāʾ al-ins* ("Garden of amusement for the sages of mankind"). In this work, the author traces, in great detail, the history of Islam from the birth of the Prophet Muḥammad to the time of the ʿAbbāsid caliph al-Mustaẓhir bi-llāh (487-512/1094-1118), his contemporary. Apparently, a single manuscript of this work, which comprises 86 leaves, has survived. It is kept in the National Library of Cairo (no. 48 *ma*). The copyist, Abū Muḥammad b. ʿAbd al-Malik b. Abi 'l-Ḥasan, claims to have copied it in 585/1190 from an autograph manuscript.

(3) *Nuzhat al-aḥdāḳ fī makārim al-akhlāḳ* ("Survey of ethics"). This also constitutes a small collection of traditions. Like the *Firdaws*, it is subdivided into chapters arranged in alphabetical order; it seems that only one manuscript is still in existence.

Bibliography: Dhahabī, *Tadhkirat al-ḥuffāẓ*, Ḥaydarābād 1958, iv, 1258; idem, *al-ʿIbar*, Kuwait 1960, iv, 18; Ṣafadī, *al-Wāfī bi 'l-wafayāt*, Istanbul 1949, xvi, 217-18; Yāfiʿī, *Mirʾāt al-djanān*, Ḥaydarābād 1989-91, iii, 198; Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, Cairo 1964-76, vii, 111-12; Ibn Taghrībirdī, *al-Nudjūm al-ẓāhira*, Cairo 1929-52, v, 211; Ḥādjdjī Khalīfa, *Kashf al-ẓunūn*, Tehran 1967, ii, 1254, 1684; Ibn al-ʿImād, *Shadharāt al-dhahab*, Cairo 1931-32, iv, 23-4; Baghdādī, *Hadiyyat al-ʿārifīn*, Istanbul 1951-55, i, 420; idem, *Īḍāḥ al-maknūn*, Istanbul 1951, i, 599; Brockelmann, I[2], 419-20, S I, 586; Ziriklī, *al-Aʿlām*, Beirut 1969, iii, 268; Kaḥḥāla, *Muʿdjam al-muʾallifīn*, Damascus 1960, iv, 313; Ahlwardt, *Verzeichnis der arab. (Moktar Djebli)

SHĪRĀZ, which has the title *dār al-ʿilm*, the capital of the province of Fārs, is an Islamic foundation, on a continually inhabited site, which may go back to Sāsānid, or possibly earlier, times. It was probably founded, or restored, by Muḥammad the brother of Ḥadjdjādj b. Yūsuf, or by his cousin Muḥammad b. al-Ḳāsim, in 74/693 (A.J. Arberry, *Shiraz, Persian city of saints and poets*, Norman, Okla. 1960, 31). It is situated at 5,000 ft. above sea level in 29° 36' N. and 52° 32' E. at the western

end of a large basin some 80 miles long and up to 15 miles wide, though less in the vicinity of Shīrāz. A river bed, which is dry for most of the year, bounds the northern part of the city and runs southeastwards towards Lake Māhalū (J.I. Clarke, *The Iranian city of Shiraz*, University of Durham, Department of Geography Research Papers series no. 7, 1963, 8).

According to Mustawfī, there were eighteen villages, irrigated by *ḳanāt*s, in the surrounding district (*ḥawma*) of Shīrāz, which belonged to the city (*Nuzhat al-ḳulūb*, ed. and tr. Le Strange, text, 116). A network of roads radiates from Shīrāz (see Le Strange, *Lands*, 195-8). It is approached on the south from the Persian Gulf through high mountain passes, and on the north through a series of hills which separate it from the plain of Marwdasht. Its water supply comes mainly from *ḳanāt*s, of which the most famous is that of Ruknābād [*q.v.*], made by Rukn al-Dawla b. Būya (Mustawfī, *Nuzhat*, 115). July is the hottest month with a mean temperature of 85°, February the coldest with 47°. The annual rainfall is 384.6 mm (*Camb. hist. of Iran*, i, *The land of Iran*, ed. W.B. Fisher, Cambridge 1968, 249). There have been several major earthquakes; those of 1824 and 1853 caused heavy loss of life and destruction of property (Clarke, 11). Over the centuries, the city has also suffered from floods, famines epidemics and sieges.

Throughout the Middle Ages, Shīrāz was a centre of learning, where Islamic theology, mysticism and poetry flourished. Ibn Khafīf (d. 371/982 [*q.v.*]), who founded a *ribāṭ* there, is buried in the city. *Ḳāḍī*s, *ʿulamāʾ* and Ṣūfīs and, to some extent, the rulers of the city as well as the people generally, shared in the vigorous religious life which prevailed (see Ibn al-Balkhī, *Fārs-nāma*, ed. Le Strange, London 1921, 117-18, on the *ḳāḍī*s of Shīrāz; Abu 'l-ʿAbbās Aḥmad b. Shihāb al-Dīn Zarkūb, *Shīrāz-nāma*, ed. Ismāʿīl Wāʿiẓ Djawādī, Tehran AHS 1350/1971-2, on the *ʿulamāʾ*; and Djunayd, *Shadd al-izār*, ed. Muḥammad Ḳazwīnī and ʿAbbās Iḳbāl, Tehran AHS 1327/1948-9 on the Ṣūfīs). Mustawfī mentions that the people of Shīrāz were much addicted to holy poverty and were of strict orthodoxy (*Nuzhat*, 115, Fr. 113). Ibn Baṭṭūṭa also states that they were distinguished by piety, source religion and purity of manners, especially the women (*The travels of Ibn Baṭṭūṭa A.D. 1325-1354*, tr. H.A.R. Gibb, ii, Cambridge 1962, 300). The Dhahabiyya order, established in the early 11th/17th century had, and has, its centre in Shīrāz (see R. Gramlich, *Die Schiitischen Derwischorden Persiens*, in *Abhandlungen für die Kunde des Morgenlandes*, Bd. xxxvi, 1, 1965, Bd. i, 2-4, 1976, Bd. xlv, 2, 1981; and see TARĪḲA). The poet Ḥāfiẓ [*q.v.*], who lived in Shīrāz under Shāh Shudjāʿ b. Mubāriz al-Dīn Muḥammad (759-86/1357-84 [*q.v.*]), is buried outside the city, as also is Saʿdī [*q.v.*], who flourished at the court of the Atabeg Abū Bakr b. Saʿd (623-59/1226-61).

In the early centuries, Shīrāz was under caliphal governors. Al-Iṣṭakhrī mentions the tax rates prevailing in Shīrāz (157). He states that the land in the bazaars belonged to the government (*sulṭān*) and private persons paid ground rents (158). In the middle of the 3rd/9th century, Yaʿḳūb b. Layth, the Ṣaffārid [*q.v.*], having seized Fārs, made Shīrāz his capital. His brother ʿAmr b. Layth [*q.v.*], who succeeded him, built a cathedral mosque on the site of which the present *masdjid-i djāmiʿ* stands [see FĀRS]. ʿAlī b. Būya ʿImād al-Dawla [*q.v.*] took Fārs in 321/933. He was succeeded by his nephew ʿAḍud al-Dawla b. Rukn al-Dawla [*q.v.*], who ruled Fārs from 338/949 to 366/977 and ʿIrāḳ and Fārs from 366/977 to 372/983. Under his rule, Shīrāz became an important economic and cultural centre. The anonymous *Ḥudūd al-ʿālam* (written in 372/982-3) states that Shīrāz was a large and flourishing town with two fire-temples (tr. Minorsky, 126; see also Spuler, *Iran*, 191-2). ʿAḍud al-Dawla built there a large library, a hospital, mosques, gardens, palaces, bazaars and caravanserais and a cantonment for his troops called Kard Fanā Khusraw. This became a small town in which business flourished. It provided an annual revenue of 16,000 *dīnārs*. According to Ibn al-Balkhī, Shīrāz and Kard Fanā Khusraw together accounted for 316,000 *dīnārs* out of the total revenue of Fārs of over 2,150,000 *dīnārs* (*Fārs-nāma*, 132, 172). After the death of ʿAḍud al-Dawla, Kard Fanā Khusraw fell into decay and was nothing but a hamlet when Ibn al-Balkhī was writing in the first decade of the 6th/12th century, and its estimated revenue (*ʿibrat*) was 250 *dīnārs*, though the sum collected was not more than 120 *dīnārs* (*Fārs-nāma*, 132-3). The hospital by this time was also in decay, but the library, which had been cared for by the family of the *ḳāḍī al-ḳuḍāt* of Fārs, was still in good condition (*ibid.*, 133-4).

Towards the end of the Būyid period, there was much disorder in the neighbourhood of Shīrāz. Ṣamṣām al-Dawla Bā Kālīdjār, fearing attacks, built a strong wall round the city (Ibn al-Balkhī, 133). According to al-Muḳaddasī, the city had eight gates (430), though some authorities mention eleven. The accounts of Fārs during the early years of Saldjūḳ rule are somewhat confused. In 439/1047-8 Abū Kālīdjār b. Sulṭān al-Dawla made peace with Ṭoghrïl Beg (Ibn al-Athīr, ed. Beirut, ix, 536) and governed Shīrāz on his behalf. He was succeeded by his son Fulād Sulṭān, who was overthrown in 454/1062 by Faḍlūya, the Shabānkāra [*q.v.*] leader, who was, in turn, defeated in the following year by an army from Kirmān under Ḳāwurd [*q.v.*]. Shīrāz was repeatedly plundered during these years (Ibn al-Balkhī, 133). After the death of Malik Shāh (485/1092), Saldjūḳ control over Fārs weakened, but various of the Saldjūḳ governors, in spite of frequent struggles between rival *amīr*s for control of the province, appear to have established a degree of security and good government in Shīrāz. Among them were Čawlī Saḳaw, Ḳarača, Mengü-Bars, and Boz-Aba [see BŪZ-ĀBEH]. The first-named was assigned Fārs by Muḥammad b. Malik Shāh [*q.v.*] in 502/1108-9 or 503/1109-10, and he went there with Čaghrī, Muḥammad's infant son, to whom he was atabeg (Ibn al-Athīr, x, 517, Ibn al-Balkhī, 141, 146-7). Ḳarača, who was atabeg to Saldjūḳ Shāh b. Muḥammad, built and endowed a *madrasa* in Shīrāz, which was still one of the great *madrasa*s of the city in the 8th/14th century (Zarkūb, *Shīrāz-nāma*, 64-5).

Mengü-Bars also built a *madrasa* in Shīrāz, and during his government Abū Naṣr Lāla founded a *madrasa* near the Iṣṭakhr Gate, which was in excellent condition when Zarkūb was writing (*Shīrāz-nāma*, 65). After the death of Mengü-Bars, Boz-Aba took possession of Fārs in 532/1137-8. He was turned out by Ḳara Sunḳur, but retook the province in 534/1139-40. He died in 542/1147. His wife Zāhida Khātūn is reputed by Zarkūb to have governed Shīrāz for twenty-one years (this must have been both during Boz-Aba's lifetime, when he was presumably often absent from the city on campaigns, and thereafter). She built a magnificent *madrasa* in the city and constituted numerous *awḳāf* for it. Sixty *fuḳahāʾ* received allowances daily and many pious and learned men dwelt there. It had

a high minaret but this, Zarkūb states, was in ruins when he was writing (*Shīrāz-nāma*, 66-7).

The Salghurids [*q.v.*] established themselves in possession of Fārs by the middle of the 6th/12th century. Under their rule, Shīrāz flourished. They and their ministers made many charitable foundations in the city. Sunkur b. Mawdūd (d. 558/1162-3), the founder of the dynasty, built the Sunkuriyya *madrasa* and a mosque, and a minaret near the latter and a *sikāya* near the former (*ibid.*, 72-3). His tomb was in the Sunkuriyya mosque, and 208 years after his death the people of Shīrāz were still seeking fulfilment of their vows at it and the *shar'ī* judge accepted oaths invoking the name of his tomb (*ibid.*, 73). Zangī b. Mawdūd (d. 570 or 571/1175-6) constituted several large villages and pieces of land into *wakf* for the shrine of Ibn Khafīf (*ibid.*; Mustawfī, *Tārīkh-i guzīda*, ed. Ḥusayn Nawā'ī, Tehran AHS 1336-9/1958-61, 504). He also built a *ribāṭ* in Shīrāz (Zarkūb, 73). Amīn al-Dīn Kāzirūnī (d. 567/1171-2), the *wazīr* of Tekele b. Zangī, who succeeded Zangī b. Mawdūd, built a *madrasa* close to the 'Atīk mosque and a *ribāṭ* (*ibid.*, 72). After a period of internecine strife during which agriculture was ruined and famine and pestilence broke out (Mustawfī, *Guzīda*, 504-5), Sa'd b. Zangī (591-623/1195-1226) established his supremacy, and prosperity was restored in the early years of the 7th/13th century. According to Waṣṣāf, Sa'd's tax administration was lenient (*Tārīkh-i Waṣṣāf*, ed. M.M. Iṣfahānī, Bombay 1269/1852-3, 161). He built a wall round the city, a splendid new *djāmi'* and the Atābakī Bazaar (Waṣṣāf, 155; Zarkūb, 77). His *wazīr* 'Amīd al-Dīn Abū Naṣr As'ad also built a *madrasa* in the quarter of the Iṣṭakhr Gate (*ibid.*, 79). Sa'd, who had extended his rule to include Kirmān, made an expedition into 'Irāk in 613/1216-17 but was defeated by the Khwārazmshāh Muḥammad. On his return to Shīrāz, his son Abū Bakr, displeased with the terms he had made with the Khwārazmshāh, refused him entry into the city. In the fighting which ensued, Sa'd was wounded, but the people of Shīrāz let him into the city by night. He seized and imprisoned Abū Bakr. However, on Sa'd's death in 628/1230-1, Abū Bakr succeeded him (Mustawfī, *Guzīda*, 505).

The Mongols were meanwhile advancing on Persia, and so Abū Bakr sent his nephew Tahamtam to Ögedey offering submission and agreeing to pay tribute (Waṣṣāf, 156). Shīrāz was thus spared devastation by the Mongols, though Mongol *shiḥnas* came to Shīrāz and lived outside the city (*ibid.*, 157). However, the favourable tax situation which had prevailed under Sa'd b. Zangī did not continue. The demands of the Mongol commanders, and the establishments of the Mongol princesses, together with the needs of Abū Bakr's army and administration, increased. A new settlement, the *mīrāthī* settlement, was drawn up by 'Imād al-Dīn Mīrāthī, the head of Abū Bakr's *dīwān al-inshā'*. Under it, new and higher taxes were imposed on Shīrāz, including house taxes (*dārāt*), *ṭayyārāt* (the meaning of this term is uncertain; it may have meant in this context water taxes), imposts upon the import of cloth, taxes on horses, mules, camels, cattle and sheep, and *tamgha* taxes on foodstuffs apart from wheat and barley (Waṣṣāf, 161-2; Zarkūb, 82). Despite higher taxation, Abū Bakr is well spoken of by the sources. He made many charitable bequests (Mustawfī, *Guzīda*, 506). He built a hospital in Shīrāz and a *sikāya* at the 'Atīk mosque and constituted many *awkāf* for them (Zarkūb, 85). Two of his ministers, Amīr Mukarrab al-Dīn (d. 665/1266-7) and Fakhr al-Dīn Abū Bakr, emulated him; the former built a *madrasa* in the Shīrāz bazaar and a *ribāṭ* adjoining the 'Atīk mosque, a *dār al-ḥadīth* and hospital and a *sikāya* by the 'Atīk mosque and constituted many *awkāf* for them, while the latter built a *djāmi'*, *dār al-ḥadīth*, hospital and *sikāya*. The *djāmi'* was in good repair when Zarkūb was writing and the Friday prayers were held in it (*Shīrāz-nāma*, 84).

On Abū Bakr's death in 659/1261, Fārs fell into a state of disorder (Waṣṣāf, 180). Finally, Hülegü sent an army to Shīrāz to avenge the murder by Saldjūk Shāh b. Salghur Shāh of two *baskaks* whom Hülegü had sent to Shīrāz. He was defeated and killed in 662/1263-4 (*ibid.*, 183-9). The last of the Salghurids was Abish bt. Sa'd (d. 685/1286-7). She was married to Tash Möngke, Hülegü's son, and was given estates in Shīrāz and a grant on the taxes of the city as her marriage portion (*mahr wa shīr bahā*) (Lambton, *Continuity and change in medieval Persia*, 272). At the beginning of 665/1266, two Mongol officials were sent to Shīrāz to take what was in the provincial treasury and to collect the annual taxes, a task which they were unable to carry out. The next few years were troubled by much disorder (Waṣṣāf, 190-3). In 680/1281 Abaka died. Tegüder appointed Tash Möngke as governor of Shīrāz with orders to dismiss Bulughan, Abaka's *baskak*. Bulughan fled, and Fārs submitted to Tash Möngke. When Tash Möngke returned to the *urdu* in 682/1283-4, his wife Abish was made governor of Shīrāz by Tegüder. Her appointment coincided with the outbreak of three years of drought and famine in 683-5/1284-7, during which, Waṣṣāf alleges, over 100,000 persons died (*Tārīkh-i Waṣṣāf*, 209; Lambton, *op. cit.*, 272 ff.). After the death of Abish in 685/1286-7, disorders broke out in Shīrāz. Djočī, who was sent by Arghun to restore order, made heavy exactions on the people (Waṣṣāf, 225).

During the Ilkhanate, repeated demands for alleged arrears of taxation by *ilčis* [see ELČĪ] and others were made on the province of Fārs and there is no reason to suppose that Shīrāz was exempt from these demands (Lambton, *Mongol fiscal administration in Persia, II*, in *SI*, lxv [1987], 104-15). The situation was further worsened by natural disasters. Spring rains failed again in 698/1299; pestilence broke out and an epidemic of measles (*surkhadja*), from which, Waṣṣāf alleges, 50,000 people died in Shīrāz and the surrounding districts (*Tārīkh*, 359). Under Ghazan [*q.v.*] various steps were taken to reform the administration of the province, but according to Waṣṣāf these measures were not successful (*ibid.*, 115-22). Mustawfī mentions the absence of justice in Shīrāz in his time (*Nuzha*, 115). He states that the taxes of Shīrāz were levied as *tamgha* and farmed for 450,000 *dīnārs* (*ibid.*, 116). There were 500 charitable foundations (*buk'a*) in Shīrāz, which had been made by wealthy people in the past and which had innumerable *awkāf*, but, he continues, "few of these reach their proper purpose: for the most part they are in the hands of those who devour them" (*ibid.*, 115). He states that the city had 9 gates and 17 quarters (114). Ghazan made a *dār al-siyāda* in Shīrāz (Rashīd al-Dīn, *Tārīkh-i mubārak-i ghāzānī*, ed. K. Jahn, London 1940, 204) and in 702/1302-3 a *yarligh* was issued for a high wall and deep moat to be made round the city. Five *tumans zar* from the taxes, presumably of Shīrāz, for that year were allocated to this purpose, and when this proved insufficient, the order was given for the revenue for the whole year to be allocated (Waṣṣāf, 385). Whether the work was ever completed is not stated.

Küdüdjin, the daughter of Abish Khātūn and the eldest of Tash Möngke's many daughters, was given

a permanent contract (*muḳāṭaʿa-i abadī*) on the taxes of Fārs by Abū Saʿīd, the last of the Il-Khans, in 719/1319-20. Waṣṣāf praises her care for the people. He records that she paid particular attention to the upkeep of the buildings made by her forbears, including the ʿAḍudī *madrasa* in Shīrāz (*Tārīkh*, 625). This *madrasa* was built by Terken Khātūn, the wife of Saʿd b. Abī Bakr, and possibly named after her son Muḥammad, who had the *laḳab* ʿAḍuḍ al-Dīn. Waṣṣāf states that the revenues of the *awḳāf* of the *madrasa* amounted to over 200,000 *dīnār*s when he was writing (i.e. in 727/1326) and that Kürdüdjin expended them on their proper purposes and increased them (*ibid.*, 624-5; Lambton, *Continuity and change*, 275-6).

During the reign of Abū Saʿīd, Maḥmūd Shāh, the son of Muḥammad Shāh Indjü, who had been sent to Fārs by Öldjeytü to administer the royal estates, succeeded in making himself practically independent in Shīrāz and Fārs [see INDJŪ]. He was succeeded by his son Masʿūd, who surrendered Shīrāz to Pīr Ḥusayn, grandson of Čoban [see ČŪBĀNIDS], in 740/1339. He was driven out two years later by his nephew Malik Ashraf. On the latter's withdrawal in 744/1342-3, Abū Isḥāḳ, the youngest son of Maḥmūd Shāh, established his rule. It was during his reign that Ibn Baṭṭūṭa visited Shīrāz for the second time in July 1347. In spite of the extortion and financial disorders in Shīrāz under the Ilkhanate described by Mustawfī and Waṣṣāf, there seems to have been a revival under the Indjüids. Ibn Baṭṭūṭa states that the revenue yield was high (*Travels*, tr. Gibb, ii, 1962, 307). He speaks highly of the bazaars of Shīrāz (*ibid.*, 299). He describes how Abū Isḥāḳ conceived the ambition to build a vaulted palace like the Aywān Kisrā at Ctesiphon and ordered the inhabitants of Shīrāz to dig its foundations. When he saw this edifice, it had reached about 30 cubits from the ground (*ibid.*, 310). Among the sanctuaries of Shīrāz, Ibn Baṭṭūṭa mentions especially that of Aḥmad b. Mūsā, which was highly venerated by the Shīrāzīs. Tash Khātūn, the mother of Abū Isḥāḳ, built at his tomb a large college and hospice, in which food was supplied to all comers and Ḳurʾān readers continually recited the Ḳurʾān over the tomb. Ibn Baṭṭūṭa states that the Khātūn made a practice of going to the sanctuary on the eve of every Monday, and on that night the *ḳāḍī*s, the doctors of the law and *sharīf*s would assemble there. He was told by trustworthy persons that over 1,400 *sharīf*s (children and adults) were in receipt of stipends (313). The tomb-mosque of Aḥmad b. Mūsā was known locally as Shāh Čirāgh. It was rebuilt in 1506 and again later, but by then the *madrasa* and hospice no longer existed (313, 135 n.). Ibn Baṭṭūṭa also mentions the mausoleum of Rūzbihān Baḳlī (316) and the tomb of Zarkūb (317).

In 754/1353 Mubāriz al-Dīn Muḥammad the Muẓaffarid [*q.v.*] captured Shīrāz. Abū Isḥāḳ fled, but was captured and executed in 758/1357. Tīmūr invaded southern Persia in 789/1387 and placed the Muẓaffarid Shāh Yaḥyā in control of Shīrāz, but after Tīmūr's withdrawal Shāh Manṣūr wrested Shīrāz from him. In 795/1393 Shāh Manṣūr was killed in an encounter with Tīmūrid forces outside Shīrāz. There appears to have been a cultural revival under the Tīmūrids. Iskandar b. ʿUmar Shaykh (r. 812-17/1409-14), made a number of new buildings (J. Aubin, *Le mécénat timouride à Chiraz*, in *SI*, viii [1957] 75-6), and during his government and that of Ibrāhīm b. Shāhrukh [*q.v.*], who was appointed governor of Fārs in 817/1414, a new style of painting flourished in Shīrāz (H.R. Roemer, *Persien auf dem Weg in der Neuzeit*, Beirut 1989, 172; B. Gray, in *Camb. hist. of Iran*, vi, *Timurid and Safavid periods*, ed. P. Jackson and L. Lockhart, Cambridge 1986, 849).

The later Tīmūrids disputed possession of Fārs with the Ḳara Ḳoyunlu [*q.v.*] and the Aḳ Ḳoyunlu [*q.v.*]. During the reign of Uzun Ḥasan [*q.v.*], who eventually defeated Djahānshāh, the last of the Ḳara Ḳoyunlu in 872/1467, and the Tīmūrid Abū Saʿīd in the following year, Shīrāz once more became a thriving city. Josafa Barbaro, the Venetian, whose travels spanned the years 1436-51, states that Shīrāz was a great city, full of people and merchants, with a population of 200,000, and that it had a prosperous transit trade. Large quanties of jewels, silks and spices were to be found there. The city had high mud walls, deep ditches and a number of excellent mosques and good houses. Security prevailed in the city (*Travels to Tana and Persia by Josafa Barbaro and Ambrogio Contarini*, London 1873, 74). Ludovico di Varthema (who set out for the east in 1502) also states that large quantities of jewels were be found in Shīrāz (*Travels ... A.D. 1503-1508*, tr. J.W. Jones and ed. G.P. Badger, London 1863, p. iii).

In 909/1503 Shīrāz fell to the Ṣafawids (K. Röhrborn, *Provinzen und Zentralgewalt Persiens in 16. und 17. Jahrhundert*, Berlin 1966, 10). Under the early Ṣafawids, Shīrāz was ruled by Dhu 'l-Ḳadr governors. However, ʿAbbās I appointed the *ḳullar aḳasi* Allāhwirdī Khān (d. 1022/1613) governor in 1004/1595-6. He was succeeded by his son Imām Ḳulī Khān. Under their rule Fārs enjoyed a considerable degree of independence, and Shīrāz prospered. Allāhwirdī Khān built the Khān Madrasa for Mullā Ṣadrā [*q.v.*], who returned to Shīrāz and taught there during the last thirty years or so of his life (Iskandar Beg and Muḥammad Yūsuf, *Dhayl-i Tārīkh-i ʿĀlamārā-yi ʿabbāsī*, ed. Suhayl Khʷānsārī, Tehran AHS 1317/1938, 299). Imām Ḳulī Khān built a palace in the *maydān* and walls round the city and planted cypress trees on both sides of the Iṣfahān road in imitation of the Čahār Bāgh of Iṣfahān (Lockhart, *Persian cities*, London 1960, 46). He entertained the English envoy Sir Dodmore Cotton at Shīrāz in 1628. He was suspected by Shāh Ṣafī (1038-52/1629-42) of harbouring rebellious intentions, and was murdered on the latter's orders in 1042/1632. The administration of Shīrāz was then placed under the control of the central *dīwān* under a *wazīr*, Muʿīn al-Dīn Muḥammad (Iskandar Beg and Muḥammad Yūsuf, *op. cit.*, 295; Röhrborn 37, 55).

Many European travellers passed through Shīrāz, which was on the direct line of communications from the Persian Gulf to Iṣfahān, the Ṣafawid capital, and recorded their impressions of the city. Among them were Della Valle (1612-21), Thomas Herbert (1628), Tavernier (1632-68), Thévenot (1663), Chardin (1666-9, 1672-7), Fryer (1676-8), Kaempfer (1683), and Cornelius de Bruin (1702-4). When Herbert passed through the city, part of the old walls were still standing, but they had disappeared by the time Tavernier and Chardin visited the city. In 1617 the English East India Company set up a factory in Shīrāz, but by the middle of the century trade had been much reduced as a result of the rivalry of the Dutch East India Company. A Carmelite house was established in Shīrāz in 1623. It was temporarily closed in 1631 and reopened in 1634 (*A chronicle of the Carmelites in Persia*, London 1939, i, 322, ii, 1056-7).

In 1630 and 1668 the city was partially destroyed by floods, which on the latter occasion were followed by pestilence, but when Fryer visited Shīrāz in 1676 the town had largely recovered (Lockhart, *op. cit.*, 47). Several European visitors to Shīrāz mention ceramic

manufactures in the 11th/17th century. Some wine was exported to Portugal. It was made mainly by Jews, of whom there were some 600 families in Shīrāz according to Tavernier (*Voyages en Perse*, repr. Geneva 1970, 309-10).

After the fall of the Ṣafawids in 1722, Shīrāz suffered in the fighting between the Ghalzay Afghāns [see GHALZAY] and Nādir Ḳulī (later Nādir Shāh [*q.v.*]). In 1723 an Afghān force marched on Shīrāz. The governor refused to yield. The city held out for nine months before famine compelled its defenders to surrender in 1136/1723. Nearly 100,000 persons are said to have perished during the siege (Muḥammad Shīrāzī, *Rūz-nāma*, ed. ʿAbbās Iḳbāl, Tehran AHS 1325/1946, 3; Ḥasan b. Ḥasan Fasāʾī, *Fārs-nāma-yi nāṣirī*, lith. Tehran 1313/1895-6, i, 161. See also Lockhart, *The fall of the Ṣafavī dynasty and the Afghan occupation of Persia*, Cambridge 1958, 203). In 1729 Nādir, who had driven the Afghāns out of Iṣfahān, defeated an Afghān force near Shīrāz, which then fell into his hands. He gave orders for the city to be restored, part of the city and practically all of the gardens having been destroyed in the course of the final struggle with the Afghāns. He contributed 1,500 *tūmāns* for the restoration of the Shāh Čirāgh mosque (Lockhart, *Nadir Shah*, London 1938, 46). In 1733-4 Muḥammad Khān Balūč rebelled in Fārs, declaring in favour of the Ṣafawid pretender Ṭahmāsp. He was defeated by Nādir and escaped to Shīrāz and thence to Ḳays Island (*ibid.*, 72-8). Nādir reoccupied Shīrāz and appointed Mīrzā Taḳī Khān Shīrāzī b. Ḥādjdjī Muḥammad, *mustawfī* of Shīrāz, as deputy governor of Fārs. His family had held in their possession from generation to generation the office of *mīrāb* of Ḳumisha and Shīrāz (*ibid.*, 80, and see Fasāʾī, *Fārs-nāma-i nāṣirī*, ii, 74-5). In January 1744 Taḳī Khān rebelled. A force sent by Nādir laid siege to Shīrāz, which fell after four months. The city was then sacked and many of the population put to the sword. Two towers of human heads were erected and the gardens round the town devastated. Plague broke out after the siege and allegedly carried off 1400 people (Lockhart, *op. cit.*, 241-2).

Nādir Shāh died in 1747. Between his death and the rise of Karīm Khān Zand [*q.v.*], Shīrāz was repeatedly plundered by the contending parties. By 1179/1765 Karīm Khān had emerged as the undisputed ruler of Persia apart from Khurāsān (see J.R. Perry, *Karim Khan Zand*, Chicago 1979; and ḲĀDJĀR). In 1180/1766-7 he made Shīrāz his capital, which thus became the capital not simply of a province but of the kingdom, a position which it had not held since the death of ʿAḍud al-Dawla. Under Karīm Khān's rule, security, by all accounts, prevailed in Shīrāz. The city was repopulated and prosperity returned. Commerce and foreign trade were encouraged (*A chronicle of the Carmelites*, i, 665). Customs dues were paid on all goods coming into the city (Francklin, *Observations made on a tour from Bengal to Persia in the years 1786-7*, London 1790, 148-9). Provisions were cheap and their price regulated by the *dārūgha* [*q.v.*] (*ibid.*, 146). Glass was made in Shīrāz and great quantities exported to other parts of Persia (*ibid.*, 147-8). Wine was also made, chiefly by Jews and Armenians, and exported to the Persian Gulf for the Indian market (*ibid.*, 143).

Prosperity was temporarily interrupted by famine which affected southern Persia in 1775 (Perry, *op. cit.*, 241), and after Karīm Khān's death decay set in (Francklin, 147). According to Muḥammad Hāshim Rustam al-Ḥukamāʾ, the price of wheat bread in Shīrāz rose during the famine to 250 *dīnārs* per Tabrīz *man*. The state granaries were not opened in Shīrāz because it was thought wise to keep the stores for the army, but grain was brought to Shīrāz from *dīwānī* granaries elsewhere. Although the cost of this is alleged by Rustam al-Ḥukamāʾ to have worked out at 1,400 *dīnārs* per Tabrīz *man*, Karīm ordered the wheat to be sold for 200 *dīnārs* per Tabrīz *man* and barley for 100 *dīnārs*. All livestock were sent to Ray, Ḳazwīn and Ādharbāydjān because of lack of fodder (*Rustam al-tawārīkh*, ed. Muḥammad Mushīrī, Tehran AHS 1348/1969, 421-2).

Karīm Khān undertook a massive building programme in his capital, to take part in which craftsmen and workmen came from all over Persia (*ibid.*, 414). He built a new wall and a dry ditch round the city. William Francklin, who was in Shīrāz in 1786-7, shortly after Karīm Khān's death, states that the wall was 25 ft. high and 10 ft. thick with round towers at a distance of 80 paces from each other and that there were six gates (*op. cit.*, 52-3). According to Rustam al-Ḥukamāʾ, 12,000 labourers were employed in digging the ditch (*op. cit.*, 420). Karīm Khān also built, or repaired, the fortress (*ḳalʿa*) of the city and built a citadel (*arg*), in which his successor Djaʿfar Khān resided (Francklin, 54-5; Fasāʾī, i, 216), a *dīwān-khāna*, artillery park (*tūp-khāna*) and a magnificent brick-built covered bazaar, known as the Wakīl Bazaar, the shops of which were rented to merchants by the Khān at a monthly rent (Francklin, 56-9). The foundations for a splendid mosque and associated buildings were laid but not finished before Karīm Khān died (*ibid.*, 64-4). Karīm Khān also built several thousand houses for the Lurs and Laks who belonged to his army (Fasāʾī, i, 216). The city had eleven quarters, five of which were Ḥaydarī quarters and five Niʿmatī (*ibid.*, ii, 47). The eleventh quarter was inhabited by the Jews, who had grown in number. The Armenians, who were mainly engaged in the wine trade, had also increased in number (Perry, 240).

On the death of Karīm Khān, Āḳā Muḥammad Khān Ḳādjār [*q.v.*], who had been held hostage in Shīrāz, escaped. In 1204/1789-90 he made an expedition to the south. Luṭf ʿAlī Khān Zand [*q.v.*], who had succeeded Djaʿfar Khān in 1203/1789, fled to Shīrāz, where he was besieged. After three months, Āḳā Muḥammad Khān raised the siege, his attention being required to deal with disorders by the Yamut and Goklan Turkmens. In 1205/1791 Luṭf ʿAlī Khān made an abortive attempt to recover Iṣfahān, leaving Ḥādjdjī Ibrāhīm, the *kalāntar*, in charge of Shīrāz. During Luṭf ʿAlī Khān's absence, Ḥādjdjī Ibrāhīm seized the city and entered into negotiations with Āḳā Muḥammad Khān to surrender the city to him.

The government of Fārs under the Ḳādjārs, as that of other major provinces, was for much of the time in the hands of Ḳādjār princes. Shīrāz remained the provincial capital, but the governors were frequently absent on military expeditions or visits to the court. The administration was largely in the hands of the *wazīrs* of Fārs (see appendix in H. Busse, *History of Persia under Qajar rule translated from the Persian of Ḥasan-e Fasāʾī's Fārsnāma-ye Nāṣerī*, New York 1972, 422-5 for a list of governors and *wazīrs* of the province of Fārs under the Ḳādjārs). The distance from Tehran made control by the central government precarious and intermittent. In Djumādā II 1209/December 1794-January 1795, Fatḥ ʿAlī Mīrzā (Bābā Khān) [see FATḤ ʿALĪ SHĀH] was appointed governor of Fārs, Kirmān and Yazd by Āḳā Muḥammad Khān. He proceeded to Shīrāz. On the murder of Āḳā Muḥammad Khān in 1797, he returned to Tehran. Having established himself as shāh, he appointed his brother Ḥusayn

Ḳulī Mīrzā governor of Fārs. The latter arrived in Shīrāz in Rabīʿ I 1212/September 1797. In the following year he rebelled, but submitted almost immediately. The governorship of Fārs was then conferred upon Muḥammad ʿAlī Khān Ḳādjār Ḳoyunlu. He was succeeded in 1214/1709 by Fatḥ ʿAlī Shāh's son Ḥusayn ʿAlī Mīrzā Farmān-Farmā, who was accompanied to Fārs by 800 riflemen (*tufangčīs*) from Nūr in Māzandarān. They were joined two years later by their families and took up residence in the Murdistān district of Shīrāz (which had been inhabited by Laks in the time of Karīm Khān and then destroyed by Āḳā Muḥammad Khān). They were unpopular and committed many disorders, and in 1244/1828-9 were ordered to return to Tehran (Fasāʾī, ii, 55).

Scott Waring, who was in Shīrāz in 1802, states that at least a fourth part of the city was in ruins (*A tour to Sheeraz by the route of Kazroon and Feerozabad*, London 1807, 33); Sir William Gore Ouseley, who passed through the city in 1811 on his way to Tehran, also notes its apparent decay (*Travels in various countries of the East, more particularly Persia*, etc., London 1819, ii, 17). James Morier estimated, with reservation, the population of Shīrāz in 1810 to have been not more than 19,000 (*A second journey through Persia, Armenia and Asia Minor to Constantinople, between the years 1810 and 1816*, London 1818, 110-11).

Ḥusayn ʿAlī Mīrzā's governorship of Fārs, and the 19th century in general, were marked by natural disasters, the spread of family and tribal rivalries and financial maladministration. Pestilence (*wabā*) broke out in 1237/1822, and Fasāʾī alleges that, in the space of five or six days, 6,000 people died in Shīrāz (i, 368). Outbreaks of cholera were frequent. In 1247/1830-1 Shīrāz suffered famine as a result of locusts, which ravaged southern Persia, and plague (*ṭāʿūn*) (Ahmad Seyf, *Iran and the great plague of 1830-1*, in *SI*, lxix [1989], 151-65). Severe famine again set in 1860 and continued until 1871-2 (see C.J. Wills, *In the land of the Lion and the Sun, or Modern Persia*, London 1893, 251-5). On this occasion, Muḥammad Ḳāsim Khān, who was appointed governor of Fārs in 1288/1871, prepared a number of workhouses (*gadākhāna*) in Shīrāz, each with a capacity of 50-60 persons. He undertook responsibility for six of these himself and made several others the responsibility of the great men of Shīrāz (Fasāʾī, i, 331).

Farhād Mīrzā Muʿtamid al-Dawla, who was appointed governor of Fārs for the second time in 1293/1876, made an attempt to regulate the building trade in Shīrāz. At the beginning of the year the brickmakers, stucco workers and cement workers were assembled, and the number of bricks, their cost and the amount of cement needed, and the due of the master bricklayer (*ustād*), were fixed (Fasāʾī, i, 33). In 1299/1881-2, on the orders of Fatḥ ʿAlī Ṣāḥib Dīwān, *wazīr* of Fārs, the streets of the city were stone-paved, and on the orders of Ḳawām al-Mulk a brick roof was made for the coppersmiths' bazaar and the shops from the Iṣfahān gate to the Wakīl Bazaar.

By the beginning of the Ḳādjār period, Ḥādjdjī Ibrāhīm had become the leading man of Shīrāz. He became Āḳā Muḥammad Khān's first minister. When he was seized and put to death with many of his family by Fatḥ ʿAlī Shāh in 1215/1801, the family suffered a temporary setback. However, in 1226/1811-12, his son Mīrzā ʿAlī Akbar was made *kalāntar* [*q.v.*] of Fārs and in 1245/1829-30 given the *laḳab* Ḳawām al-Mulk. He and his descendants, who became the leaders of the Khamsa tribal federation, played a major role in provincial and city politics. Their main rivals were the *ilbegis* and chiefs of the Ḳashḳāʾī tribe [see KASHKĀY]. The *ʿulamāʾ* also played an important part in city politics.

Morier mentions that there was great discontent in Shīrāz in *ca.* 1811 over the price of bread, which had risen because of the cornering of grain by an official believed to have been acting together with the prince governor's mother. The populous had recourse to the Shaykh al-Islām and expressed their grievances in a tumultuous way. The price of bread was lowered for a few days and the bakers were publicly bastinadoed (*Second journey*, 102-3).

A variety of tolls and dues was levied in the city by different officials. Scott Waring states that the commander of the citadel (*kutwāl*) levied a toll on every beast of burden which entered the city carrying a load (*op. cit.*, 80). Binning, who was in Shīrāz in the middle of the century, states that each craft and trade paid a lump sum in taxation to the government, which sum was apportioned among the members of the craft by mutual agreement (*A journal of two years' travel in Persia, Ceylon, etc.*, London 1857, i, 278-9). He also gives a list of prices of commodities in Shīrāz *ca.* 1857 (*ibid.*, 328-9). Consul Abbott, writing in the middle of the 19th century, states that the bazaars of Shīrāz contained about 1,200 shops. A few articles of hardware and cutlery guns, swords, daggers and knives, and *khātam* work were produced (*Cities and trade. Consul Abbott on the economy and society of Iran, 1847-1866*, ed. A. Amanat, London 1983, 88).

Irregularity in the collection of the provincial taxes gave rise to frequent disputes with the central government. In 1244/1828-9 Fatḥ ʿAlī came to Shīrāz to look into the question of arrears. He accepted 200,000 *tūmāns* from Ḥusayn ʿAlī Mīrzā in settlement. In 1247/1831-2 a remission of taxes was given on account of ravages by locusts and plague. Failure to remit the provincial taxes, however, continued and in 1834 Fatḥ ʿAlī again set out for Shīrāz to collect arrears. He fell ill in Iṣfahān and died there on 23 October 1834. Ḥusayn ʿAlī Mīrzā thereupon read the *khuṭba* in his own name in Shīrāz and marched on Iṣfahān. His forces were defeated near Ḳumisha. Rioting broke out in Shīrāz. Ḥusayn ʿAlī Mīrzā surrendered and later died. Muḥammad Shāh meanwhile appointed his brother Fīrūz Mīrzā governor of Fārs.

During the 19th century, there were frequent outbreaks of disorder in Shīrāz. An insurrection, provoked in part by the conduct of the Ādharbāydjānī Turkish soldiers in Shīrāz and fomented by Shaykh Abū Ṭurāb, took place in 1254-5/1839 and led to the dismissal of Firaydūn Mīrzā Farmān-Farmā, who had been appointed governor in 1252/1836 (Fasāʾī, i, 296. See also Great Britain. Public Record Office. F.O. 60: 74. Sheil to Palmerson, no. 42. Erzerum, 24 August 1840 and enclosures). In 1261/1845 Sayyid ʿAlī Muḥammad declared himself to be the Bāb. He was arrested and expelled from the city [see BĀB]. Consul Abbott remarks on the unruly nature of the population of Shīrāz, and states that during the government of Bahrām Mīrzā (1264-6/1848-9) the city was often the scene of riot and bloodshed. He also notes that the Ḥaydarīs and Niʿmatīs indulged in frequent factional strife (*Cities and trade: Consul Abbot on the economy and society of Iran 1847-1866*, 88, 175-6; see also Binning, *op. cit.*, i, 273 ff.). In 1853 there were reports that the venality and oppression of the local authorities were alienating the sympathy of the people from the shāh and his government (F.O. 60: 180. Thompson to Clarendon, no. 63. Camp nr. Tehran, 13 July 1853). Communications with the capital were

improved when the Indo-European telegraph line from Tehran to Bushire, which passed through Shīrāz, became operational in March 1865 (W.K. Dickson, *The life of Major-General Sir Robert Murdoch Smith*, London 1901, 225).

Ẓill al-Sultan, who had been made governor of Iṣfahān in 1874, was given the government of Fārs in 1881 also, and until he was deprived of all his governments except Iṣfahān in 1887, most of southern Persia, including Fārs, was virtually independent of the central government. He continued to have his seat in Iṣfahān and governed Fārs and Shīrāz through subordinate officials. According to the census made in 1301/1883-4, there were 6,327 houses in Shīrāz, and the population of the eleven quarters numbered 25,284 men and boys and 28,323 women and girls (Fasā'ī, ii, 22-3). In 1891, at the time of the Tobacco Régie, there was violent opposition to the Régie in Shīrāz (see Lambton, *The Tobacco Régie, a prelude to revolution*, in *SI*, xxii [1965], 127, 131-2, also in eadem, *Qājār Persia*, London 1987, 230-1, 234).

The movement for constitutional reform at the beginning of the 20th century spread to Shīrāz as to many other cities, though Shīrāz did not become one of the major centres of the movement. There were disturbances there in 1906 and riots in March 1907. Much of Fārs was in a state of turmoil, and during the First World War disorders continued. The officers of the Swedish gendarmerie were favourably disposed towards the Central Powers; and in the autumn of 1915 the Ḳashḳā'ī and mutinous gendarmerie seized the British consulate, the offices of the Imperial Bank of Persia (which had been opened in May 1891) and the Indo-European Telegraph Company in Shīrāz, and took members of the British community prisoner (Sykes, *A history of Persia*[3], London 1969, ii, 445-7, C. Skrine, *World War in Iran*, London 1962, pp. xx-xxi). In 1916 and 1917 order was to some extent restored in Fārs, and the Southern Persian Rifles were formed and officially recognised by the Persian Government in March 1917 (Sykes, ii, 476). By May 1918 the situation had again deteriorated, and in the summer of that year the Ḳashḳā'īs invested Shīrāz but were defeated in October (*ibid.*, ii, 499 ff.). In the influenza epidemic of 1918 10,000 persons in Shīrāz lost their lives (*ibid.*, ii, 515). In the 1920s the tribal areas in Fārs were in a state of turmoil until Riḍā Shāh [*q.v.*] reduced them. During his reign Shīrāz did not have a major share in the industrial developments which took place in some parts of Iran, but in the years after the Second World War there was considerable development. By 1961-2 the population of the city of Shīrāz had risen to 129,023 (*Farhang-i djughrāfiyā'ī-i Īrān*, ed. Ḥusayn ʿAlī Razmārā, Tehran AHS 1330/1961-2, vii, 148) and to *ca.* 325,000 by 1972.

Lambton)

SHĪRĀZĪ, the *nisba* of the Sultans of Kilwa [*q.v.*], in frequent use by Africans and Europeans to perpetuate a myth of a "Shīrāzī" period of history and of "migration" into East Africa.

The *nisba* is first recorded in Barros' translation of a dynastic history of Kilwa of *ca.* 1506, and in the independent Arabic *Kitāb al-Sulwa fī akhbār Kulwa* (*ca.* 1550; B.L. Or. ms. 2666); and on two seals, in a treaty between the Sultan of Kilwa and a French slave-trader, 4 November 1776. Various Swahili histories collected in the 19th century and after, on the coast and as far as the Comoro Islands, repeat it. These all claim that the Kilwa dynasty originated from Shīrāz in Persia, albeit they situate Shīrāz on the coast. Members of the family were still using the *nisba* in 1958.

A "Shīrāzī" colonisation of East Africa has been postulated by European archaeologists and historians, by Justus Strandes (1899), A.C. Hollis (1900), Pearce (*ca.* 1920), and elaborated by W.H. Ingrams (1931). It was popularised by L. Hollingsworth's *Short history of the East African Coast* (1935), an official school textbook translated into Swahili. They claimed that "Shīrāzīs" introduced stone buildings, Shī'ism (albeit the people are Sūnnis), manufacture of lime and cement, woodcarving and weaving cotton. Krumm (1940) went further to claim that Swahili contains numerous Persian words; nevertheless, such borrowings can be shown to have been transmitted through Arabic. One might expect Persian inscriptions: only two mention Persians in Mogadishu among numerous Arabic inscriptions; a Persian inscription, a fragment only of a tile, was recorded by Burton on a tomb at Tongoni, Tanzania, but is now lost. It has also been claimed, in Zanzibar [*q.v.*], in Pemba [*q.v.*], and on the mainland coast, that the celebration of Nau Ruzi [see nawrūz. 2.] proves Persian origin, whereas the Naw Rūz calendar was used by seamen throughout the Indian Ocean. At Manda [*q.v.*] H.N. Chittick claimed to have excavated what was originally a colony of the 9th century from Sīrāf [*q.v.*]. Subsequent excavations nearby and in Zanzibar and Pemba by M.C. Horton, while showing Sīrāfī influences in architecture, have produced no evidence for any connection with Shīrāz.

In addition, certain institutions connected with the royal houses of Pate, Malindi, Mombasa, Vumba and Kilwa have been attributed to the Shīrāzī. They include royal drums and trumpets, and ceremonial chairs. There is nothing identifiable in these with Shīrāz more than a possibly-connected *nisba*.

The popular legend of a "Shīrāzī" period was widely believed by one and all in colonial times. It was used in contradistinction to "African" to demonstrate a civilised historical past. This usage has since largely disappeared. In Zanzibar, in the 1950s, and in Pemba, "Afro-Shīrāzī" became the name of a political party opposed to the 'Umānī sultanate and to colonial rule. It was successful in the revolution of 1964 which ended the 'Umānī dynasty [see al bū sa'īd]. There were then numerous persons who claimed "Shīrāzī" descent, whereas in the time of Ingrams (1931) the number had been negligible. On the coast between Fundi Island, Kenya, and Tanga, in Tanzania, a distinct tribe on fishermen and mangrove cutters emerged at an unknown time. Among recent historians, Trimingham used the term for the 13th to 17th centuries, and Pouwels for the tenth to 16th centuries. Other than legitimately as a *nisba*, it may be doubted whether the term has any value at all or ever did.

Bibliography: See those to the arts. malindi, maḳdishū, mombasa, kilwa and nawrūz. 2. J. de V. Allen, *The "Shirazi" problem in East African coastal history*, in *Paideuma*, xxviii (1982), has an exhaustive bibl. (G.S.P. Freeman-Grenville)

SHĪRĀZĪ, the *nisba* of a family of prominent Shī'ī *'ulama'* active in Persia and 'Irāḳ over the last century and a half.

1. Mīrzā Muḥammad Ḥasan b. Maḥmūd, called Mīrzā-yi Shīrāzī-yi buzurg and al-Mudjaddid (1230-1312/1815-95).

Born in Shīrāz, he studied in Iṣfahān and Nadjaf, and after Murtaḍā Anṣārī's [*q.v.* in Suppl.] death in 1281/1864, became the leading Shī'ī scholar and sole *mardja' al-taḳlīd* [*q.v.*]. He is best known for his opposition to the Tobacco Régie in Persia (1891) [see nāṣir al-dīn shāh], and it seems that his famous *fatwā* was in part provoked by Djamāl al-Dīn al-Afghānī's [*q.v.*] letters to him against the Persian government's policy over concessions. Mīrzā Ḥasan's intervention began with a telegram to the Shāh in July 1891 protesting against disrespect shown to another scholar, Sayyid 'Alī Akbar, expelled to Nadjaf after voicing opposition to the Régie. Shīrāzī tried to prove that the concession of any monopoly to foreigners was against God's command. In December, a nation-wide protest culminated in a boycott of tobacco, with a *fatwā* attributed to Shīrāzī against the use of tobacco in any form. He had already shown hostility to the Ḳādjārs, having refused to receive the Shāh when he visited the Holy Shrines in 'Irāḳ in 1870. Only in January 1892, when the concession had perforce to be abandoned, was the ban on tobacco lifted by Shīrāzī.

He was also important for having organised the teaching of *fiḳh* on lines which have continued till today, founding his own school at Sāmarrā' and making it a major centre of Shī'ī learning. He was also active there in social and charitable activities, acting as a mediator in sectarian conflicts and appealing for Islamic unity under the banner of the Ottomans, despite religious differences. He wrote no book of note, but was the teacher of the most prominent scholars of the next generation, such as Ākhund Khurāsānī (d. 1911), fervent supporter of the Constitutional Movement of 1905-11, and several others. He died at Sāmarrā'.

2. Mīrzā al-Sayyid Ismāʿīl b. Sayyid Raḍī (1258-1305/1842-88).

Born in Shīrāz, he studied under no. 1 above, his cousin and brother-in-law, and worked with him in establishing the new centre at Sāmarrāʾ; he was considered to be the successor of Mīrzā Ḥasan, but died before his teacher. He wrote in Arabic and Persian, including poetry.

Bibliography: Amīnī, 262; Ṭihrānī, i/1, 156-6; Ḥirz al-Dīn, i, 109; Rāzī, i, 277 ff., v, 424-5; *al-Shadjara al-ṭayyiba*, 53.

3. Mīrzā ʿAlī Āghā (1287-1355/1870-1936).

Son of no. 1, went, about 25 years after his father's death, to Kāẓimayn and finally, to Nadjaf. After the death of Muḥammad Taḳī (no. 6), he became *mardjaʿ*. His son Muḥammad Ḥasan is one of the contemporary *ʿulamāʾ* of Nadjaf.

Bibliography: Amīnī, 264; Ḥirz al-Dīn, ii, 138-40; Rāzī, v, 434; *al-Shadjara al-ṭayyiba*, 54.

4. Mahdī b. al-Sayyid Ḥabīb Allāh al-Ḥusaynī (1304-80/1887-1960).

Related by birth and by marriage to several other members of the Shīrāzī family, he was born and died in Karbalāʾ, and was educated there and at Sāmarrāʾ and Kāẓimayn. His elder sons Muḥammad (see below) and Ḥasan (no. 7) played a leading role in the Shīʿī opposition to Ṣaddām Ḥusayn's régime, and his two younger sons Ṣādiḳ and Mudjtabā are active today as religious scholars in Persia. After the First World War, he took part in the rebellion against the British, and later, during ʿAbd al-Karīm Ḳāsim's [*q.v.*] régime, he was one of the *ʿulamāʾ* who attacked the Communist Party in a barrage of *fatwā*s, declaring that the prayers and fasting of Muslims who had embraced Communism were unacceptable to God, that Muslims could not buy meat from a Communist butcher and that a Communist son could not inherit from a Muslim father (cf. Hanna Batatu, *The old social classes and the revolutionary movements of Iraq*, Princeton 1978, 954).

His son, Āyatullāh al-Sayyid Muḥammad (b. 1347/1928-9, still living), has been active in ʿIrāḳ as spiritual leader of an opposition group there, the Islamic Task Organisation (*Munaẓẓamat al-ʿAmal al-Islāmī*); expelled from ʿIrāḳ in 1979, now teaching in Ḳum, he is a prolific writer, see Kūrkīs ʿAwwād, *Muʿdjam al-muʾallifīn al-ʿirāḳiyyīn*, Baghdād 1969, iii, 247-50.

Bibliography: Amīnī, 265; Ḥirz al-Dīn, iii, 166; Rāzī, v, 451; *al-Shadjara al-ṭayyiba*, 66 ff., 143; J.N. Wiley, *The Islamic movement of Iraqi Shiʿas*, Boulder, Col.-London 1992, 36-7, 53, 78.

5. Mīrzā ʿAbd al-Hādī (1305-82/1888-1962).

Son of no. 2, he was brought up by nos. 1 and 3 after his father had died shortly after his birth, and studied at Nadjaf and Sāmarrāʾ. He took part, with Mīrzā Muḥammad Taḳī (no. 6) in Karbalāʾ, in the Shīʿī anti-British movement, and after its failure, devoted himself to *fiḳh* and eventually announced his readiness to be considered as *mardjaʿ al-taḳlīd*. He was prominent in the Shīʿī campaign against Ḳāsim and the ʿIrāḳī Communist Party, and visits to Persia multiplied his following there. After the death of Burūdjirdī in 1961, he inherited a considerable number of his followers and was already seen as his successor, but died shortly afterwards. His three sons, as well as sons-in-law, are all religious scholars in Nadjaf, Tehran or Ḳum. His writings include several *fiḳh* treatises as well as some poems in both Arabic and Persian.

Bibliography: Amīnī, 265; Ṭihrānī, i/3, 1250-5; *EIr*, art. s.v. (H. Algar); Ḥirz al-Dīn, ii, 77-81; Kaḥḥāla, *al-Mustadrak ʿalā Muʿdjam al-muʾallifīn*, Beirut 1985, 444; Momen, 248; Rāzī, i, 276, v, 432-3, vii, 271; *al-Shadjara al-ṭayyiba*, 58.

6. Muḥammad Taḳī b. Muḥibb ʿAlī Ḥāʾirī, called Mīrzā-yi Shīrāzī-yi kūčik and Zaʿīm al-thawra al-ʿirāḳiyya (1269-1338/1853-1920).

Distantly related to nos. 1 and 4, he was born in Shīrāz and studied at Karbalāʾ and Sāmarrāʾ, where he became *mardjaʿ*. He is particularly associated with the struggle against the British occupation of ʿIrāḳ [see ʿIRĀḲ, at vol. III, 1258a]. In 1914 he had issued a *fatwā* calling for *djihād* against the British, and in 1918 moved to Karbalāʾ and became involved in setting up an anti-British secret society, the *Djamʿiyya waṭaniyya islāmiyya*. His *fatwā*s of 1919 and 1920 certainly precipitated the 1920 revolt against the British Mandate. One in 1919 proclaimed that "no Muslim should elect or choose any non-Muslim as his ruler", and its wide circulation made it difficult for the occupying power to use a plebiscite for installing a British governor in ʿIrāḳ. It enhanced Shīrāzī's prestige and led to his official recognition as *mardjaʿ al-taḳlīd* after Yazdī's death in 1919. In 1919 he endeavoured to mediate between and unite the tribes and to appeal for foreign backing, writing to the Sharīf Ḥusayn in Mecca and the latter's son Amīr Fayṣal in Damascus. President Wilson of the U.S.A., whose "Fourteen Points" had impressed the Shīʿī religious leaders, was even contacted (see Luizard, 377 ff.). In late 1919, resistance to the British was still peaceful, but the situation deteriorated after the arrest and temporary exile of six scholars and prominent citizens. In spring 1920 Shīrāzī tried to unify *ʿulamāʾ*, *sayyid*s, *sharīf*s and tribal chiefs for a general insurrection, and appealed also to Sunnīs; military conflict broke out in June, continuing till the movement was crushed in January 1921. Karbalāʾ was the centre for the organising of the revolt during Shīrāzī's lifetime until he died in August 1920, after which Nadjaf became the rebellions's centre.

Amongst Muḥammad Taḳī's writings is a famous treatise on *fiḳh*, *Ḥāshiya ʿalā 'l-makāsib* (Ṭihrānī, *Dharīʿa*, vi, 218), and he was the teacher of many famous scholars.

Bibliography: ʿĀmilī, xliv (1960), 121-2 = (1986) ix, 192; Amīnī, 263-4; Tiḥrānī, i/1, 261-4; Abdul-Hadi Hairi, *Shiʿism and constitutionalism in Iran*, Leiden 1977, 122 ff.; Ḥirz al-Dīn, ii, 215-18; Kaḥḥāla, ix, 133; Luizard, index, esp. 374 ff.; Djaʿfar al-Shaykh Bāḳir Āl Maḥbūba, *Māḍī 'l-Nadjaf wa-ḥāḍiruhā*, Nadjaf 1955-8, i, 358-62; Momen, index; Wiley, 16-7, 122.

7. (Āyatullāh) Ḥasan b. al-Mahdī al-Ḥusaynī (1354-1400/1935-80).

As the younger brother of Muḥammad b. al-Mahdī (see no. 4, at end), he was also an opponent of the Ba'th régime in 'Irāḳ, and was imprisoned in 1969 and exiled to Lebanon in the next year. He was especially active in setting up mosques and institutions for religious education, welfare and social affairs, and at three of the *ḥawzas* for religious education, in Damascus, Beirut and Sierra Leone, he taught personally for a while. He likewise founded an Islamic publishing house, Dār al-Ṣādiḳ, to propagate *da'wa*, and wrote numerous books on religion and ethics before he was assassinated in Beirut in May 1980, just after he had denounced the execution in 'Irāḳ of Āyatullāh Bāḳir al-Ṣadr and his sister.

Bibliography: al-Shadjara al-ṭayyiba, 157 ff.; Wiley, 46, 53, 55, 78, 80.

(ROSWITHA BADRY, shortened by the editors)

AL-**SHĪRĀZĪ**, ABU 'L-ḤUSAYN 'ABD AL-MALIK B. MUḤAMMAD, mathematician, who flourished about the middle of the 6th/12th century. He studied Greek mathematics and astronomy. In his time, there was already available a good Arabic version of the *Conic sections* (χωνιχά) of Apollonius of Perga by Hilāl b. Abī al-Ḥimṣī (d. 270/883-4) and Thābit b. Ḳurra al-Ḥarrānī (211-88/826-901 [*q.v.*]). With the help of this he prepared a synopsis of the contents of the χωνιχά, the Arabic version of which is in Oxford (Bodl. 913, 987, 988); it was translated into Latin by Ravius (publ. Kiel 1669). There is also attributed to him a compendious version (*Mukhtaṣar*) of the *Almagest* of Ptolemy, from which Ḳuṭb al-Dīn al-Shīrāzī (633-711/1236-1311 [*q.v.*]) prepared a Persian translation of the *Madjisṭī*. The Arabic versions of the *Conic sections* of Apollonius are of great value for the history of mathematics because the three last of the seven books of this important work only survive in Arabic, while the eighth book of the χωνιχά (Ar. *Makhrūṭiyyāt*) had already disappeared from knowledge by the time of the Arab translator.

AL-**SHĪRĀZĪ**, al-Shaykh al-Imām ABŪ ISḤĀḲ IBRĀHĪM B. 'ALĪ b. Yūsuf al-Fīrūzābādī, eminent jurist whose work constitutes one of the major reference sources of the Shāfi'ī school [see AL-SHĀFI'IYYA].

1. *Biography*

Of decidedly humble origins, Abu Isḥāḳ al-Shīrāzī ("al-Shaykh Abū Isḥāḳ" in classical Islamic literature) was born in Persia, at Fīrūzābād in the vicinity of Shīrāz, in 393/1003. Regarding the early years of his life, the biographers have nothing to say. From 410/1019 to 415/1024 he pursued a legal education—which he had begun at Fīrūzābād—at Shīrāz and at Baṣra as pupil of various Shāfi'ī masters (an article is devoted to each one of them by al-Shīrāzī himself in his *Ṭabaḳāt al-fuḳahā'*, Beirut n.d., 133 and 140-1). In 415/1024 he was in Baghdād, where he attended classes given by al-Ḳazwīnī (d. 440/1048, cf. *Ṭabaḳāt al-fuḳahā'*, 137), the jurist and proponent of the legal thinking developed by al-Bāḳillānī [*q.v.*], and where, more significantly, he became the leading disciple of the *Ḳāḍī* Abu 'l-Ṭayyib al-Ṭabarī (died at one hundred years of age in 450/1058 [*q.v.*]) and his accredited assistant (*mu'īd*).

In 428/1036, al-Shīrāzī's long career in teaching began: first in various *masdjids* of Baghdād and subsequently, from 459/1066 onward, in the prestigious Niẓāmiyya *madrasa*, constructed in his honour by the Saldjūḳid minister Niẓām al-Mulk (d. 485/1092 [*q.v.*]) (an honour which initially al-Shīrāzī had refused to accept, possibly for political reasons, although this is by no means certain).

The biographers depict al-Shīrāzī as endowed with a gentle, refined and affable personality and leading a life of asceticism, a personality which did not prevent him, in 469/1077, from demonstrating great firmness of character, doubtless with the aid of his political supporters, against the Ḥanbalīs under the leadership of the *Sharīf* Abū Dja'far (d. 470/1078), a cousin of the caliph, at the time of the episode involving Abū Naṣr al-Ḳushayrī (the son of Abu 'l-Ḳāsim al-Ḳushayrī [*q.v.*], the renowned author of *al-Risāla al-ḳushayriyya*). The Ḥanbalīs of Baghdād attempted forcibly to prevent al-Ḳushayrī, passing through Baghdād and a guest of al-Shīrāzī at the Niẓāmiyya, from publicly manifesting the Ash'arī doctrines, and violent riots ensued. At the end of the affair, al-Shīrāzī gained the upper hand by means of the restrained support of Niẓām al-Mulk to whom he had complained, with other scholars of Baghdād, about the fanaticism of the Ḥanbalīs.

The political role played by al-Shīrāzī is further illustrated by a remark of al-Subkī, stating that his intervention was decisive in the accession to the caliphate of al-Muḳtadī bi-Amr Allāh (r. 467-87/1075-94) (*wa-kāna al-shaykh Abū Isḥāḳ sabab*[an] *fī dja'lihi khalīfat*[an]: al-Subkī, *Ṭabaḳāt al-shāfi'iyya al-kubra*, Cairo n.d. iv, 223). As a general rule, the Shāfi'ī biographers firmly insist on the legitimism of al-Shīrāzī (*wa-huwa khādim min khuddām al-khalīfa*, al-Subkī writes, iv, 219), doubtless because this legitimism could seem to be compromised (Ḥanbalī authors openly allege this) on account of al-Shīrāzī's favourable relations with the Saldjūḳs, the real holders of political power at the expense of the 'Abbāsids.

Although principally of sedentary habits (according to the biographers, he lacked the means to make the Pilgrimage), towards the end of his life al-Shīrāzī undertook a highly successful journey to Khurāsān, negotiating on the caliph's behalf with the Saldjūḳ authorities. This was an opportunity for Shaykh Abū Isḥāḳ to assess his popularity among the common people and in Ṣūfī circles, and his influence with the intellectual élite. At Nīshāpūr, he was to encounter his colleague Abu 'l-Ma'ālī al-Djuwaynī (d. 478/1085 [*q.v.*]), the other great Shāfi'ī jurist of the period, and likewise the director of a *madrasa* constructed in his honour by Niẓām al-Mulk, with whom he conducted several sessions of judicial controversy (the text of these *disputatios* is preserved in al-Subkī, iv, 252-6).

In Baghdād, al-Shīrāzī maintained cordial links with numerous scholars of enduring renown, such as the Ḥanbalī jurist Abu 'l-Wafā' Ibn 'Aḳīl (d. 513/1119 [*q.v.*]) and the Shāfi'ī historian al-Khaṭīb al-Baghdādī (d. 463/1071 [*q.v.*]). The number of his disciples and pupils was immense (the most important are listed in M.Ḥ. Hītū, *al-Imām al-Shīrāzī*, Damascus 1980, 136-57). Al-Shīrāzī died on Wednesday, 24 Djumādā II 476/November 1083.

2. *His work and his thought*

Mostly extant and published, the work of al-Shīrāzī extends to all the legal disciplines cultivated in the 5th/11th century, the golden age, in part as a result of his efforts, for these sciences. Al-Shīrāzī's youthful

works all belong to the realm of judicial controversy envisaged from a point of view which is either practical (*al-ikhtilāf*), or theoretical (*al-djadal* and *ikhtilāf* in matters relating to *uṣūl al-fikh*). One should not be too surprised at the extent to which the pedagogy of the time accorded an essential role to controversy in the training of tyro jurists and, according to the biographers, al-Shīrāzī showed particular brilliance in this field (al-Subkī relates that he was "a lion of the *disputatio*": *ghaḍanfar fi 'l-munāẓara*). These youthful texts, composed between *ca.* 425/1034 and *ca.* 450/1058 are: (1) The *K. fī Masā'il al-khilāf fi 'l-furū'* (ms. copied during the author's lifetime, in 466/1073, preserved in Istanbul under the title *Ikhtilāf al-fukahā'*; the section of this text devoted to transactions (*al-mu'āmalāt* [*q.v.*]) has been the subject of an unpublished thesis by al-Miṣrī); (2) *al-Mulakhkhaṣ fi 'l-djadal* (ms., apparently edited by Niyāzī but not published, dated 590/1194, Istanbul); (3) The *K. al-Ma'ūna fi 'l-djadal* (ed. 'A.-M. Turki, Beirut 1988) is a summary of the preceding, possibly composed after 450/1058; (4) The *K. al-Ḳiyās* (lost) is not mentioned by the biographers, but al-Shīrāzī refers to it several times in *al-Mulakhkhaṣ*; and (5) *al-Tabṣira fi 'l-khilāf* (ed. under the title *al-Tabṣira fi 'l-uṣūl* by M.Ḥ. Hītū, Damascus 1982) is the first work of *uṣūl al-fikh* composed by al-Shīrāzī. It approaches only the controversial aspects of this science.

The works of al-Shīrāzī's mature period testify to a change in direction: the brilliant controversialist is replaced by a genuine *mudjtahid* anxious to establish his own doctrine. It was principally the works of this phase, and more specifically his two treatises on practical law (*fikh*) which were to confer upon him the prestigious status within the Shāfi'ī school which he still enjoys today. These two treatises on *fikh* are: (1) The *K. al-Tanbīh fi 'l-fikh* (Cairo 1929; French tr. G.-H. Bousquet, *Le Livre de l'Admonition*, i-iv, Algiers n.d.), a summary composed between 452/1060 and 453/1061 which has been the object of more than seventy commentaries (see Hītū, *op. cit.*, 169-77); and (2) *al-Muhadhdhab* (2 vols. Beirut n.d.), written between 455/1053 and 469/1076, which may be considered as al-Shīrāzī's crowning achievement and which has, like the aforementioned, been the object of a vast amount of critical apparatus (including the *Madjmū' fī sharḥ al-muhadhdhab* of al-Nawawī, 18 vols. Cairo n.d.). These two texts belong to a group of five key works of reference of the Shāfi'ī *madhhab* (al-Nawawī (d. 676/1277 [*q.v.*]), *Tahdhīb al-asmā' wa 'l-lughāt*, Beirut n.d., i, 3).

In terms of legal theory *uṣūl al-fikh*, the influence of Shīrāzī was no less important, principally on account of his summary *al-Luma' fī uṣūl al-fikh* composed *ca.* 450/1058 (numerous editions since Cairo 1908; critical ed. and French tr. E. Chaumont forthcoming) and his own commentary on it (ed. by 'A.-M. Turki, partially under the title *al-Wuṣūl ilā masā'il al-uṣūl*, Algiers 1979, and in entirety, *Sharḥ al-luma'*, 2 vols. Beirut 1988).

The *Index of jurists* (*Ṭabaḳāt al-fukahā'*), composed *ca.* 452/1060, is one of the oldest examples of its genre which has been preserved. It is interesting in that it is also the last which fulfils the original function of this literature: recording the *totality* of jurist-*mudjtahids*, irrespective of schools, whose advice should be sought for the purpose of constituting a unanimous agreement (*idjmā'* [*q.v.*], the third source of *fikh*) (see *Ṭabaḳāt al-fukahā'*, 13). Subsequently, the literature of *Ṭabaḳāt*, within each *madhhab*, would be confined to the evocation of jurists of one and the same allegiance (a sure sign of serious malfunction, predictable and long foreseen by Mu'tazilī scholars, in the exercise of *idjmā'* as theoretically defined).

Furthermore, al-Shīrāzī is also the presumed author (the mss. attribute them to him formally) of two small texts of *uṣūl al-dīn*: the *K. al-Ishāra ilā madhhab ahl al-ḥaḳḳ* and the *'Aḳīdat al-salaf* (ed. M. Bernand, *La Profession de foi d'Abū Isḥāq al-Šīrāzī*, IFAO, Cairo 1987; ed. 'A.-M. Turki in respectively *Sharḥ al-luma'*, *op. cit.*, 91-116 (incomplete text) and *K. al-Ma'ūna*, *op. cit.*, 91-102). The question of al-Shīrāzī's theological opinions has always posed problems—was he an Ash'arī or closer to the creed of the Ḥanbalīs?—among mediaeval Muslim writers as well as his modern interpreters; the question seems to be resolved, and his Ash'arism confirmed, with the appearance of these two texts, if they are authentic (not one of the biographers mentions them, not even Ibn 'Asākir (d. 511/1175) who was determined to prove the Ash'arism of al-Shīrāzī, see *Tabyīn kadhib al-muftarī*, Beirut 1979; on this question, see Cl. Gilliot, *Deux professions de foi ...*, in *SI*, lxviii [1988], 170-86, and, in response to the latter, Chaumont, *Encore au sujet ...*, in *SI*, lxxiv [1991], 168-77).

Other minor texts are attributed to al-Shīrāzī, including an *Epistle on ethics* (*Risālat al-Shīrāzī fī 'ilm al-akhlāḳ*, Cairo 1901; possibly the *Advice to the scholars* (*Nuṣḥ ahl al-'ilm*) which is attributed to him by al-Subkī, *op. cit.*, 215, and Ibn 'Asākir, *op. cit.*), *al-Nukat*, a list of 555 points of divergence between Abū Ḥanīfa and al-Shāfi'ī (probably a summary of the *K. fī masā'il al-khilāf fi 'l-furū'* (see above), the *Book of Definitions* (*K. al-Ḥudūd*, lost) and the *Mulakhkhaṣ fi 'l-ḥadīth* (ms. B.N., Paris) which is of very dubious authenticity.

Fundamentally, the legal thinking of al-Shīrāzī expresses a radical insistence on the autonomy of the sphere of the legal sciences in relation to theology. In his treatises on *uṣūl al-fikh* (and it has to be assumed *a priori* that his writings on *fikh* represent the practical interpretation of its principles), al-Shīrāzī demonstrates unusual rigour in recognising the precise nature of the revelation of the Law as legal *discourse* (the Ḳur'ān, ultimate expression of the *Sharī'a*, is in fact a text). Furthermore, this discourse needs to be envisaged, according to the Ḳur'ān itself (logically, al-Shīrāzī invokes verses XII, 2, and XLI, 44), as a *common* discourse, in other words one that was immediately comprehensible to Arabic speakers at the time of the revelation (who, according to al-Shīrāzī, had perfect knowledge of their language and its nuances but were not born to be theologians). Thus the science of the basic comprehension of the Law borrows in his writing the form of a strict "grammar" of legal discourse, always attentive to the modes of the "speech of the Arabs" and consciously indifferent to the "thinking of the theologians" who, according to all indications, were at this time only too eager to intervene in debates belonging to the domain of the legal sciences (on this point, see G. Makdisi, *The juridical theology ...*, *SI*, [1984], 5-47 and, in a different perspective, Chaumont, *Bāqillānī ...*, in *SI*, lxxix [1994], 79-102).

Bibliography: The long article devoted to al-Shīrāzī by al-Subkī in his *Ṭabaḳāt* constitutes the principal source of information regarding his life and work. The book by M.Ḥ. Hītū (*al-Imām al-Shīrāzī ...*, *op. cit.*), is a compilation of everything which ancient literature has to say about al-Shīrāzī, and a study of the evolution of his legal doctrine. Al-Shīrāzī's milieu is studied by Makdisi in *Ibn 'Aqīl et la résurgence de l'Islam traditionaliste au XI[e] siècle*, Damascus 1963, but too much credence is given

here to Hanbalī sources. Al-Shīrāzī's theory of *idjtihād* is tackled in Chaumont, *La théorie classique*..., in *SI*, lxxv [1992], 105-39. (E. Chaumont)

SHĪRĀZĪ, Rafī' al-Dīn (*ca.* 947-1030/1540-1620), historian of the 'Ādil Shāhī dynasty of Bīdjāpūr [*q.v.*]. A native of Shīrāz, he travelled to India as a merchant, and from the age of twenty served Sultan 'Alī 'Ādil Shāh, and later Sultan Ibrāhīm, in various capacities, including as ambassador to Aḥmadnagar [*q.v.*], the capital of the Niẓām Shāhīs [*q.v.*], governor of the Bīdjāpūr fort, and treasurer. While he wrote abridgements of Mīr Khwānd's *Rawḍat al-ṣafā'*, Khwānd Amīr's *Ḥabīb al-siyar*, and a *Farhang-nāma*, he is best known for his *Tadhkirat al-mulūk*, history of the 'Ādil Shāhī dynasty and contemporary Indian and Persian régimes, begun in 1017/1608-9 and completed three years later (for mss., see Storey, i, 743, to which add Sālār Djang, i, 406, no. 362 [Hist. 142] and Āṣafiyya, handlist 5280). The *Tadhkirat al-mulūk* is divided into an introduction and ten *faṣls* (expanded to twelve in some mss.), with a supplement on Indian temples, jewel mines, rivers, and wonders of the region. Rafī' al-Dīn Shīrāzī has been neglected as an historian, partly due to the canonisation of Firishta [*q.v.*] by the British, but the *Tadhkirat al-mulūk* remains an important, independent source of Indo-Persian history.

al-**SHĪRĀZĪ**, Ṣadr al-Dīn [see mullā ṣadrā shīrāzī].

al-**SHIRBĪNĪ**, Yūsuf b. Muḥammad b. 'Abd al-Djawād b. Khiḍr, an 11th/17th-century Egyptian author best known for a work with the punning title of *Hazz al-kuḥūf bi-sharḥ ḳaṣīd Abī Shādūf*, "The shaking of skull-caps (or: the stirring of yokels) in commenting the poem of Abū Shādūf." It mentions that he went on Pilgrimage in 1075/1664-5, that the work was undertaken at the behest of the Imām Aḥmad b. 'Alī al-Sandūbī, and that among his teachers was Shihāb al-Dīn Aḥmad b. Aḥmad b. Salāma al-Ḳalyūbī (d. 1069/1659).

The work is in two parts. The first abounds in anecdotes, often more scatological than witty, on the grossness of manners and tastes of the peasants (*fallāḥīn*) of the Nile valley and their teachers' misunderstandings of the Law. It also pokes fun at spurious examples of folk poetry and at pretentious poets of the past. It ends with a 193-line *urdjuza* in literary Arabic in which he summarises the customs and ways of the peasants whom he has just depicted. Part II is devoted almost entirely to a fictitious peasant poet, Abū Shādūf, and his monorhyme poem of 47 lines in colloquial Arabic. It parodies with verve classical commentaries, and is studded with precious social and linguistic information.

Throughout, the peasant is depicted as irredeemably brutish. To read this—as do Shawḳī Ḍayf and al-Baḳlī (see below)—as a disguised condemnation of his oppressors is far-fetched.

There are lithographed editions (Cairo n.d. and Alexandria 1289), and printed ones (Būlāḳ 1274 and 1308, and Cairo 1322). A bowdlerised version was published by Muḥammad Ḳandīl al-Baḳlī (Cairo 1963).

The author mentions another work of his on peasant weddings. Manuscripts attributed to him (Brockelmann, S II, 987) appear to be of a single moralistic text.

(M. Ben Cheneb-[P. Cachia])

SHIRE, the Turkish name of the Aegean Greek island of Syros, vernacular Syra, Ar. Shira, an important island of the Cyclades lying south of Andros/Andire and northwest of Para.

Mentioned by al-Idrīsī (tr. Jaubert, ii, 127) when it was under Byzantine control, it was captured by the Venetians after the Fourth Crusade and became part of the Archipelago Duchy after 1207. Renamed Lasudha (la Souda), it experienced a long Latin period, and over the centuries, the majority of the population became Latin Catholics (see G. Hoffmann, *Vescovadi catolici della Grecia. III. Syros*, Rome 1937; A. Sigalas, *I nomi e cognomi veneto-italiani nel' isola di Sira*, in *Studi Bizant. e Neoellen.*, viii/3 [1921], 194-200). Throughout the Latin and Turkish period, it retained the densest westernised population of the area, the *Frankosyrianoi* or "Frankish Syriots", becoming a bastion of Catholicism in the Aegean.

Sultan Meḥemmed I in 1419 recognised it as a Venetian possession, but in the 16th century, Shire suffered both Ottoman Turkish and Italian corsair raids, including those in 1515 by Ḳurtoghlu and in 1537 by Khayr al-Dīn Barbarossa [*q.v.*] (cf. Uzunçarşılı, *Osmanlı tarihi*, ii⁵, 375, 479, iii/2⁴ 101-2). These caused depopulation and famine, and only under Joseph Nasi's rule (1566-79) [see nakshe; para] was there relative prosperity. In 1566 the island received a favourable *'ahd-nāme* or treaty of dependence from the Ottoman government, renewed in 1580 and 1648, giving the local Greek authorities self-government; these last maintained representatives in Istanbul, the Syriot *ḳapukahyas*, 31 of whose letters are extant, giving valuable information on contemporary administrative and economic issues. On Nasi's death, Shire, with Andros, Nakshe, Para, Santorin and Melos were leased by the Porte to Süleymān Beg (1579-82) and later, to the Greek Comnenus-Choniates (1598-1601). But corsair raids continued, and in 1617 the *ḳapudan pasha* 'Alī Čelebi hanged the Latin bishop and abducted 300 captives. After then, the Syriots and Meliots paid *kharādj* to Istanbul. Roman Catholicism grew in importance after the 1630s, with the arrival of Jesuit missionaries, and in 1700 the French traveller Tournefort mentions a Latin bishop and forty priests, but only a few Turks with their *ḳāḍī*. In the Russo-Turkish War of 1768-74, Shire was occupied by the Russian fleet, but in 1774 sultan 'Abd ul-Ḥamīd I had the local Beg beheaded and granted the island as a *timār* to Selīm III's sister Shāh Sulṭāna. By the end of the 18th century, the island's population had reached 5,000, with a commerce based on its cotton, figs and wine.

Because of the dominance of Roman Catholicism, neither Shire nor Nakshe were fervent participators in the 1821-9 Greek War of Independence, but the modern capital of Syros, Ermoupolis, was founded by refugees from Sakiz/Chios and Psara at this time, becoming subsequently a major trading centre. In the Cretan outbreak of 1866-9, Syros sheltered Cretan refugees, and a naval engagement was fought off its

port between the Greek battleship *Enosis* and a Turkish squadron under the English admiral Hobart Pas̲h̲a; it was in Ermoupolis harbour, too, that the Turkish cruiser *Ḥamīdiyye* sank the Greek battleship *Macedonia* during the First Balkan War of 1912. The population of Syros in 1981 was 19,794.

S̲H̲ĪRĪN [see FARHĀD WA-S̲H̲ĪRĪN].

S̲H̲ĪRĪN MAG̲H̲RIBĪ, MUḤAMMAD, celebrated Persian Ṣūfī poet. His full name is given by Ḥāfiẓ Ḥusayn Karbalāʾī Tabrīzī (*Rawḍāt al-d̲j̲inān wa d̲j̲annāt al-d̲j̲anān*, ed. D̲j̲aʿfar Sulṭān al-Ḳurrāʾī, Tehran 1344/1965, i, 367, 566), as Abū ʿAbd Allāh Muḥammad b. ʿIzz al-Dīn b. ʿĀdil b. Yūsuf Tabrīzī. In literary and Ṣūfī circles, however, he is better known as Mullā Muḥammad S̲h̲īrīn Mag̲h̲ribī.

According to D̲j̲āmī (*Nafaḥāt al-uns*, ed. M. Tawḥīdīpūr, Tehran 1336/1957, 613), he was born in the village of Ammand near Lake Urūmiya and died aged 60 in 809/1406-7. But a chronogram composed by ʿAbd al-Raḥīm K̲h̲alwatī (d. 859/1454; "Mas̲h̲riḳī"), which Ibn Karbalāʾī cites (*Rawḍāt*, i, 73-5), commemorates Mag̲h̲ribī's death as 810/1407-8, and this is probably more correct.

Mag̲h̲ribī should be accounted as the most important Persian Ṣūfī poet—after ʿIrāḳī (d. 688/1289), Ḳāsim-i Anwār (d. 837/1433 [*q.v.*]) and Maḥmūd S̲h̲abistarī (d. *ca.* 740/1339-40 [*q.v.*])—of Ibn ʿArabī's school in the late 13th/early 14th century. The primary theme of his poetry (see *Dīwān-i Muḥammad S̲h̲īrīn Mag̲h̲ribī*, ed. L. Lewisohn; Tehran-London 1993, containing 1223 lines of Arabic poetry, 199 Persian *g̲h̲azals*, two *tard̲j̲īʿbands*, and 35 *rubāʿiyyāt*) is the "Unity of Being" (*waḥdat al-wud̲j̲ūd*). Although the imagery of romantic Persian poets such as Salmān Sāwad̲j̲ī (d. 778/1376) and Humām Tabrīzī (d. 714/1314) also fills his verse, lending it a particular brillance and graceful beauty, it is as an exponent and exegete of the theomonistic doctrine of Ibn ʿArabī that his poems achieved their principal fame. In his own introduction to the *Dīwān* (*ibid.*, iv, 15-16) the poet admits that "the composer of this type of poetry in accordance with true visionaries and visionary men of Truth says the same thing which the author of the *Tard̲j̲umān al-as̲h̲wāḳ* [= Ibn ʿArabī] says." Since both D̲j̲āmī (*Nafaḥāt*, 613) and M. Nūrbak̲h̲s̲h̲ (*Silsilat al-awliyāʾ*, ed. M.T. Dānis̲h̲-Paz̲h̲ūh, in S.H. Nasr (ed.), *Mélanges offerts à Henri Corbin*, Tehran 1977, no. 60) customarily referred to Ibn ʿArabī as "Ibn al-Mag̲h̲ribī", it is apparent that the poet adopted "Mag̲h̲ribī" as his *tak̲h̲alluṣ* in honour of the S̲h̲ayk̲h̲ al-Akbar. Thus, when Ibn Karbalāʾī (*Rawḍāt*, i, 367)—citing a certain ʿAbd al-Raḥīm Bizzāzī, one of the poet's disciples—speaks of him as *al-Mag̲h̲ribī mad̲h̲hab*^{an} ("Mag̲h̲ribī in religion"), it is obvious that he is alluding to the poet's Akbarian persuasion; and it is to this same connotation that Riḍā Ḳulī-K̲h̲ān Hidāyat in the *Mad̲j̲maʿ-i fuṣaḥā* (Tehran 1339/1965, iv, 57-8) alludes in stating that "Mag̲h̲ribī's creed is the Unity of Being and his particular mystical sensibility is the enjoyment of contemplative vision (*mad̲h̲habis̲h̲ waḥdat al-wud̲j̲ūd-ast wa mas̲h̲rabis̲h̲ lad̲h̲dhat al-s̲h̲uhūd*)".

After his celebrated *Dīwān*, Mag̲h̲ribī's other works listed by Ibn Karbalāʾī include: (1) *Asrār-i fātiḥa* (not extant); (2) *Risāla-yi d̲j̲ām-i d̲j̲ahān-namā* (consisting mainly of selections from Farg̲h̲ānī's commentary on Ibn Fāriḍ's *Tāʾiyya* entitled *Mas̲h̲āriḳ al-darārī*, ed. D̲j̲. Ās̲h̲tiyānī, Tehran 1979; this *Risāla* has been published by Mīr-ʿĀbidīnī in his edition of Mag̲h̲ribī's *Dīwān*, Tehran 1979); (3) *Durr al-farīd fī maʿrifat al-tawḥīd* (a work still extant, see *Fihrist-i Kitāb-k̲h̲āna-yi Sipahsalār*, ii, 682, wherein it is said to be in Persian, treating in 3 chapters the divine Unity, Actions and Qualities); (4) *Nuzhat al-sāsāniyya* (evidently not extant and not listed in Munzawī's *Fihrist-i nak̲h̲ahā-yi fārsī*, Tehran 1979). Other works ascribed elsewhere to Mag̲h̲ribī include a *Naṣīḥāt-nāma* (mentioned in Munzawī's *Fihrist*, ii, 1706) and *Irāʾat al-daḳāʾiḳ fī s̲h̲arḥ-i Miʾrāt al-ḥaḳāʾiḳ*, on which see H. Ethé, *Catalogue of Persian manuscripts in the India Office Library*, i, no. 2914, fols. 94b-113b).

Mag̲h̲ribī had five *silsila* affiliations according to Ibn Karbalāʾī (*Rawḍāt* i, 67-9) as follows: (1) Bahāʾ al-Dīn Hamad̲h̲ānī; (2) Ibn ʿArabī; (3) Saʿd al-Dīn; (4) Ismāʿīl Sīsī and (5) ʿAbd al-Muʾmīn al-Sarāwī, although his principal master was Sīsī (for a detailed study of the other masters, see Lewisohn, *A critical edition of the Divan of Maghrebi: with an introduction into his life, literary school and mystical poetry*, diss., London 1988, i, 60-83), who counted among his protégés and disciples three of the greatest Ṣūfī poets of the 8th/14th century, sc. Kamāl K̲h̲ud̲j̲andī (d. 803/1400), Ḳāsim-i Anwār, and Muḥammad ʿAṣṣār Tabrīzī (d. 792-3/1390-1). Sīsī was a Kubrāwī *s̲h̲ayk̲h̲*, having been a disciple, either directly or indirectly, of ʿAlāʾ al-Dawla Simnānī (d. 736/1336). Mag̲h̲ribī was said to have experienced an illumination during an *arbaʿīn* held under Sīsī's direction, and recorded his enlightenment in a *g̲h̲azal* (on which, see Lewisohn, *Mohammad Shirin Maghrebi*, in *Sufi*, i, [1988], 33). Sīsī's other important disciples include Zayn al-Dīn K̲h̲wāfī (d. 838/1435), whose connection with Mag̲h̲ribī is discussed by H.T. Norris, *The Mirʾāt al-ṭālibīn of Ẓain al-Dīn Khawāfī of Khurāsān and Herat*, in *BSOAS*, liii (1990), 57-63; and Lewisohn, *A critical edition*, 75-9.

As a poet of the Akbarian school, Mag̲h̲ribī follows very closely the imagery and thought of S̲h̲abistarī and Saʿd al-Dīn Farg̲h̲ānī. Mag̲h̲ribī's poetic style was imitated by S̲h̲āh Niʿmat Allāh (d. 834/1431) and Muḥammad Lāhīd̲j̲ī ("Asīrī", d. 912/1506-7 [see LĀHĪD̲J̲Ī, S̲H̲AMS AL-DĪN]), the latter author quoting extensively from Mag̲h̲ribī's *Dīwān* throughout his famous *Mafātīḥ al-iʿd̲j̲āz fī s̲h̲arḥ-i Guls̲h̲an-i rāz* in order to illustrate S̲h̲abistarī's symbolism and doctrine (see Lewisohn, *Beyond faith and infidelity: the Sufi poetry and teachings of Maḥmūd Shabistarī*, London 1995, ch. 7). Many of the images and expressions of Mag̲h̲ribī's poetry have become proverbs in Persian (cf. ʿA.A. Dihk̲h̲udā, *Amt̲h̲āl wa ḥikam*, Tehran 1984, iii, 1242, 1319, 1343, 1347), and his influence can be seen in the writings of many of the Persian *Is̲h̲rāḳī* philosophers up to the present day. Quotations from his poetry, for instance, can be found scattered throughout the writings of the 19th-century *ḥakīm* Mullā Hādī Sabzawārī (d. 1289/1873).

Bibliography (in addition to references already given): M.D̲j̲. Mas̲h̲kūr, *Tārīk̲h̲-i Tabrīz tā payān-i ḳarn-i nuhum-i hid̲j̲rī*, Tehran 1352/1973, 766 ff.; ʿAzīz Dawlatābādī, *Suk̲h̲anwarān-i Ād̲h̲arbāyd̲j̲ān*, Tabriz 1357/1978, ii, 217-19; Browne, *LHP*, iii, 330-44. For fuller details, and a fuller discussion of the problems involved, including analysis of the historical and literary evidence, see L. Lewisohn, *A critical edition ...* (L. LEWISOHN)

S̲H̲IRK, a term from the religious vocabulary, of Ḳurʾānic origin, which signifies the act of "associating" with God, in other words, accepting the

presence at His side of other divinities; it may be translated either literally, by *associationism* or, in more explicit fashion, by *polytheism*. In numerous instances in the Ḳur'ān there is criticism of the "associators" (*al-mushrikūn*, 42 occurrences; also encountered nine times is the phrase *alladhīna ashrakū*), defined as those who invoke (*yad'ūna*), adopt (*yattakhidhūna*) and worship (*ya'budūna*), besides God (*min dūni 'llāh*), other gods (*āliha*), give Him "associates" (*dja'alū li 'llāhi shurakā'*) and equals (*andād*).

It may be noted that the actual word *shirk* features seldom in the Ḳur'ān (five occurrences in all), and that in fact it is used only twice in this sense of "associationism" (XXXI, 13, XXXV, 14). Originally, *shirk* signifies "association" in the passive, not the factitive sense of the term. It is this sense which it has in XXXIV, 22; XXXV, 40; XLVI, 4, where it is denied that false gods would have been associated [with the true God] (*lahum shirk*[un]) in the creation of the heavens and of the earth. The proper term for "associationism" would normally be *ishrāk*, corresponding to the diverse forms of the verb *ashraka* which are extensively used, in this sense, in the Ḳur'ānic text. Clearly, it is *ḥadīth* which has imposed the usage of *shirk* in the factitive (and religious) sense of the term: certain practices (for example sorcery, ornithomancy) are denounced here as *shirk*; there is reference to the *ahl al-shirk* (as opposed to the *ahl al-islām*), to the *arḍ al-shirk*, etc. (cf. Wensinck, *Concordance*, iii, 114-16). Furthermore, in *ḥadīth* itself, certain uses of the word in its primary signification, i.e. as an equivalent of *shirka* or *sharika*, "association", appear occasionally: with reference to the common ownership of land (cf. Muslim, *musāḳāt* 135), of a slave (Bukhārī, *sharika* 14; Muslim, *'itḳ* 47-48), or even to participation in a sacrifice (*shirk fī dam*, al-Bukhārī, *ḥadjdj* 102).

To return to the Ḳur'ān, it is quite dangerous to claim to determine, even approximatively—as was attempted by Björkman in his article for *EI*[1]—at what point in time words from the root *sh-r-k* first entered the text. If Björkman is to be believed, they do not appear in "the most ancient sūras". But which are the most ancient sūras? In verse LXVIII, 41, the text reads: "Do they have associates (*shurakā'*)? Then let them come with their associates, if they are truthful!" Now, according to the chronology traditionally accepted in Islam, sūra LXVIII would be the second in the order of revelation (and v. 41 would not be among the Medinan additions). Without going so far as this, Weil and Nöldeke likewise dated this sūra in the "early Meccan period". It is true that, in the verse in question, the identity of the said "associates" is controversial (cf. al-Rāzī's commentary). But there is also LII, 43, which is considerably more explicit and where it is said, in conformity with numerous other passages in the Ḳur'ān, *subḥāna 'llāhi 'ammā yushrikūn* "how God is above that which they associate [with Him]!" Now, while the traditional chronology places this other sūra among the last revealed at Mecca, Blachère, Weil and Nöldeke agree in locating it on the contrary in the "early Meccan period"! All that can be said with certainty in this context is that in fact, in those sūras *unanimously* accepted as the earliest, the terms in question do not feature, and that those where they appear most often are, in descending order, VI (28 instances), IX (12) and XVI (11).

Who precisely are these "associators" of whom the Ḳur'ān speaks? It would normally be anticipated that they would include all those who, in one way or another, accept the existence of gods other than the one God. It would therefore be logical to expect to find the Christians described as such, seeing that, according to the Ḳur'ān, the Christians make of God "the third of three" (V, 73), they deify Christ (V, 72), and "take for two gods beside God (*ilāhayn*[i] *min dūni 'llāh*)" Jesus and his mother (V, 116). However, this is not the case. The Christians belong to the "People of the Book" (*ahl al-kitāb*), and the Ḳur'ān takes care to distinguish—even if they are considered comparable to disbelievers (*kuffār*)—between "associators" and the people of the Book (or "those to whom the Book has been given"), cf. in particular, II, 105; III, 186; V, 82; XXII, 17 (with reference not only to Jews and Christians, but also "Sabeans" and Mazdaeans); XCVIII, 1, 6. The same distinction, as al-Rāzī points out (on Ḳur'ān, IX, 29), is drawn implicitly in the first quarter of sūra IX: God first prescribes the treatment to be applied to "associators" (IX, 5), then that to be applied to "those to whom the Book has been given" (IX, 29). In other words, the Ḳur'ānic term *mushrikūn* does not in fact denote all those who, in some manner, practise a form of associationism, but only a minority among them—those among whom this associationism is most flagrant—i.e. the worshippers of idols (*'abadat al-awthān*). Admittedly, in the eyes of the commentators this distinction between "associators" and "people of the Book" is not always valid. With regard to IX, 30, where it is said that Jews and Christians proclaim 'Uzayr/Esdras and Jesus respectively the sons of God, al-Rāzī comments that God thus shows that Jews and Christians are also "associators", since, he says, "there is no difference between him who worships an idol and him who worships Christ or any other; the word *shirk* signifies nothing other than the man giving himself someone to worship in addition to God (*an yattakhidha 'l-insānu ma'a 'llah ma'būd*[an]); therefore, wherever anything of this sort is practised, there is associationism" (*Tafsīr*, ed. Tehran n.d., xvi, 33). And on XCVIII, 1, al-Ṭabarī mentions an exegesis according to which "associators" and "People of the Book" are indistinguishable (cf. moreover, al-Ṭabarī himself on XCVIII, 5).

For the Ḳur'ān, in any case, it is evident, in view of the clear distinction indicated above, that the "associators" represent a category of disbelievers other than that of the "People of the Book", i.e. the category of committed polytheists, these polytheists being identified at the time with idolators. Of the pseudo-divinities which they worship, it is said in fact, in numerous instances, that they do not hear, that they do not answer (VII, 194; XIII, 14; XXXV, 14; etc.), that they are incapable of inflicting harm or of being useful (V, 76; VI, 71; X, 18; etc.). In the time of the Prophet, the "associators" are those who, at Mecca or elsewhere, worship al-Lāt, al-'Uzzā and Manāt (in sūra IX, which is historically dated, the *mushrikūn* evidently denote the Meccan polytheists, recently vanquished). In the past, they were predominantly the idol worshippers of the time of Abraham (the words *aṣnām, awthān*, or even *tamāthīl* being designedly used, cf. VI, 74; XIV, 35; XXI, 52, 57; XXIX, 17, 25), Abraham of whom it is said that he was not, for his part, counted among the associators (*mā kāna min al-mushrikīn*, cf. II, 135; III, 67, 95; VI, 79, 161; etc.).

Shirk is the worst form of disbelief. The treatment to be applied in this world to the "associator" is that prescribed in IX, 5 (the "verse of the sword", *āyat al-sayf*): death, at least if they do not become Muslims (whereas the "People of the Book" are, for their part, allowed to maintain their religion, so long as they pay the *djizya*, IX, 29). In the next world, they will be assuredly consigned to damnation; the Ḳur'ān

states in fact, twice, that God can pardon all sins save one, that of associationism (*inna 'llāha lā yaghfiru an yushraka bihi wa-yaghfiru mā dūnā dhālika li-man yashā'*, IV, 48, 116). The Ḳur'ān relates furthermore how, in the next world, these alleged "associates" of God who are worshippped by the *mushrikūn* will then disown their worshippers (VI, 94; X, 28-9; XVIII, 52; XXVIII, 62-3; etc.).

Shirk, by definition, is contrary to Islam, since the first article of faith of the Muslim is precisely the denial of all associationism, the affirmation of the single God: *lā ilāha illā 'llāh*. In the formula of the *talbiya* [*q.v.*] recited particularly during the Pilgrimage, it is said and repeated, *lā sharīka laka* "You have no associate".

In theological polemic, accusations of *shirk* are rife. With regard in particular to the status of the voluntary human act, the Sunnī theologians charge their Mu'tazilī adversaries with associationism, on the grounds that the latter attribute to man a creative power comparable to that of God (cf. al-Bāḳillānī, *Tamhīd*, ed. McCarthy, Beirut 1957, §§ 523, 540; D. Gimaret, *Théories de l'acte humain en théologie musulmane*, Paris 1980, 297-8); the Mu'tazilīs, for their part, level the same accusation at the Sunnīs, on the grounds that, for the latter, the voluntary human act would result from an association between God, who creates it, and man, who "acquires" it (cf. Gimaret, *op. cit.*, 292).

(D. Gimaret)

SHĪRKŪH, Abu 'l-Ḥārith b. Shādī, Asad al-Dīn al-Malik al-Manṣūr, one of Nūr al-Dīn Maḥmūd's [*q.v.*] generals and statesmen, and the penultimate vizier of Fāṭimid Egypt.

His family was Kurdish (of the Rawādiyya clan) from Dvin in Armenia, where Shādī, his father, had served the Shaddādid dynasty [*q.v.*]. Later "noble" genealogies are fanciful. Ibn Abī Ṭayyi' says, "None of the Ayyūbid family knows any ancestor beyond Shādī" (quoted in *Rawḍ*, ii, 534-5). Shīrkūh served in the Saldjūḳ state, where his elder brother Ayyūb was governor of Takrīt. Because of assistance given to Zangī [*q.v.*] in 526/1132, and perhaps also because Shīrkūh had killed a Christian in the service of Bihrūz, the *shiḥna* of 'Irāḳ, the brothers fled to Mawṣil, where Zangī gave them *iḳṭā'*s in his Mesopotamian lands, and Shīrkūh fought in Zangī's Syrian campaigns.

After Zangī's death, Shīrkūh and his brother served Nūr al-Dīn. Shīrkūh became commander of his armies and held Ḥimṣ and Raḥba as *iḳṭā'*s. Ibn al-Ḳalānisī documents Shīrkūh's military activities in Syria on behalf of Nūr al-Dīn in the years 549-54/1154-9. In 556/1161 Shīrkūh performed the *ḥadjdj* in great magnificence.

In Dhu 'l-Ḳa'da 558/October 1163 the ousted Fāṭimid vizier Shāwar [*q.v.*] came to Damascus seeking aid towards his restoration and promising a third of the resources of Egypt to help the *djihād* in Syria. Shīrkūh was appointed commander of the Syrian force by Nūr al-Dīn (in various accounts each had doubts about the undertaking), and he set out in Djumādā I 559/April 1164 on the first of three expeditions. Shāwar was restored as vizier (Radjab/May) but refused to fulfil his promises and turned for support to the Kingdom of Jerusalem, which was already receiving annual tribute from Cairo, and now embarked on a period of direct intervention in Egyptian affairs. Shīrkūh chose Bilbays as a defensive base and after a siege of several months he agreed on 15 Dhu 'l-Ḥidjdja/3 November to a settlement and the withdrawal of both external parties, being ignorant of Frankish anxiety at Nūr al-Dīn's successes in Syria.

Now convinced of the opportunities offered in Egypt, Shīrkūh persuaded Nūr al-Dīn to sanction a second expedition, which set out in Rabī' I 562/January 1167. Shāwar again sought aid from the Franks. Shīrkūh crossed the Nile at Aṭfīḥ and spent 50 days or so at Gīza, facing the combined enemy, before they effected a river crossing and pursued Shīrkūh south as far as Ashmūnayn. At a place called al-Bābayn, Shīrkūh won a hard-fought victory on 25 Djumādā I/18 March. He returned north and left his nephew Saladin [see ṣalāḥ al-dīn] and part of the army in Alexandria, with the Sunnī notables of which he had already made contact. Shīrkūh kept his mobility and ranged widely in Upper Egypt, while Saladin sustained a siege of four months. Eventually a new settlement was reached in Shawwāl/August, which allowed for an indemnity of 50,000 dīnārs for the Syrian force and, in principle, the withdrawal of both armies. By Dhu 'l-Ḳa'da/September Shīrkūh was back in Damascus.

About a year later, the Franks made another attack on Egypt, prompted by exiled enemies of Shāwar and hoping to exploit Nūr al-Dīn's absence in northern Syria. Besieged in Cairo, Shāwar appealed again to Nūr al-Dīn for assistance. Unwilling to abandon Egypt to the Franks, Nūr al-Dīn and Shīrkūh responded energetically. By Ṣafar 564/December 1168 a force of 5,000 had been enlisted and reviewed near Damascus. Nūr al-Dīn added 2,000 of his own troops with several of his *amīrs*. By Rabī' II/January 1169 Shīrkūh was at Cairo and the Frankish invaders had fled back to Palestine without a battle.

According to some versions, Shīrkūh established good relations with Shāwar, but on the other hand there are hints of secret negotiations with the caliph al-'Āḍid li-Dīn Allāh [*q.v.*] to remove Shāwar, who had certainly shown himself unreliable enough in the past. Shīrkūh, however, is even said to have warned Shāwar of plots against him by the Syrian officers. 'Izz al-Dīn Djurdīk, one of Nūr al-Dīn's *mamlūks*, played a leading part in the coup, although later ideas of what was fitting also assigned a major role to Saladin. At all events, Shāwar was led into a trap and assassinated on Saturday 17 Rabī' II 564/18 January 1169. The caliph "by the custom of the Egyptians" demanded his head and issued a document appointing Shīrkūh as vizier with the title *al-malik al-manṣūr amīr al-djuyūsh* (for text, see al-Ḳalḳashandī, *Ṣubḥ al-a'shā*, x, 80-90). Shīrkūh possibly entrusted the management of affairs generally to Saladin (but for a decree dated Djumādā II 564/March 1169 said to be issued by Shīrkūh, see S.M. Stern, *Fatimid decrees*, London 1964, 80-4). However, he did not long enjoy this new responsibility. He died suddenly on Sunday 22 Djumādā II 564/23 March 1169. He was buried first in Cairo, but after several years his body was transferred to the *ribāṭ* in Medina, which according to a mutual pact he had built as a last resting-place for himself and his friend, already deceased, the Mawṣilī vizier al-Djawād al-Isfahānī [*q.v.*].

Shīrkūh's personal *mamlūks*, the Asadiyya, played a significant role in subsequent Ayyūbid history. His son Nāṣir al-Dīn Muḥammad established a princely line in Ḥimṣ. Foundations attributed to Shīrkūh include a *djāmi'* and a *madrasa* at Aleppo, a *madrasa* at Raḥba, a *madrasa* for the Shāfi'īs and Ḥanafīs outside Damascus and a *ribāṭ*, two *masdjids*, a Ṣūfī *khanḳāh* and possibly a *ḥammām* within the city.

SHĪRWĀN, Shirwān or Sharwān, a region of eastern Caucasia, known by this name in both mediaeval Islamic and modern times.

Shīrwān proper comprised the easternmost spurs of the Caucasus range and the lands which sloped down from these mountains to the banks of the Kur river [*q.v.*]. But its rulers strove continuously to control also the western shores of the Caspian Sea from Ḳuba (the modern town of Kuba) in the district of Maskat (< *Maskut, Mashkut, to be connected with the ancient Eurasian steppe people of the Massagetes) in the north, to Bākū [*q.v.*] (modern Baku) in the south. To the north of all these lands lay Bāb al-Abwāb or Derbend [*q.vv.*], and to the west, beyond the modern Gök Čay, the region of Shakkī [*q.v.*]. In mediaeval Islamic times, and apparently in pre-Islamic Sāsānid ones also, Shīrwān included the district of Layzān, which probably corresponds to modern Lāhīdj (the two names must be etymologically connected), often ruled as a separate fief by a collateral branch of the Yazīdī Shīrwān Shāhs [*q.v.*]. These boundaries of Shīrwān were substantially the same in Il Khānid times, according to Ḥamd Allāh Mustawfī, *Nuzha*, 92-3, tr. 93-4. The plains and lowlands of Shīrwān were exposed to attack, and the Shāhs had to face aggressive neighbours: the Alans and the Hāshimid rulers of Bāb al-Abwāb from the north, the Rūs [*q.v.*] from the Caspian Sea, and rival Muslim powers like the Daylamī Musāfirids and Kurdish Shaddādids [*q.vv.*] from the south.

Among the mediaeval towns of Shīrwān are mentioned Bākū; Shāwarān Shābarān, the ancient capital, in the southern part of the Ḳuba district; and Shammākhī or Shammākhiyya (modern Russian Shemakha), said to have been named after a ruler of Shīrwān, al-Shammākh b. Shudjāʿ, contemporary with Hārūn al-Rashīd's governor of Arrān, Armenia and Ādharbaydjān, Saʿīd b. Salm b. Ḳutayba (al-Balādhurī, *Futūḥ*, 210; cf. al-Yaʿḳūbī, *Ta'rīkh*, ii, 517 ff., and al-Ṭabarī, iii, 648). When Shammākhī became the capital of the Yazīdī Shāhs, it was probably this same town which was temporarily re-named Yazīdiyya (306/918), but it is the old name which has survived till today, with Shemakha an administrative and manufacturing centre of some importance (see below).

After the ending of the Shirwan Shāhs by the Ṣafawid Shāh Ṭahmāsp I [see shīrwān shāh], Shīrwān formed a province of Persia and was usually governed by a Khān, who is often called Beylerbey or Amīr al-Umarā'. The inhabitants several times rebelled against the Shīʿī dynasty, and as Sunnīs appealed for help to the Ottoman sultan of Turkey. With other Caucasian lands, Shīrwān was taken by the Turks in 1578, held after a series of battles with varying results, and finally ceded to the Ottoman sultan by the peace of 1590. Under rule, Shīrwān was divided into fourteen *sandjaks*; it included Shakkī in the north-west and Bākū in the south-east, i.e. practically the whole of mediaeval Shīrwān. Derbend, which had long been separated from Shīrwān, formed a separate governorship. Persian rule was not definitively restored till 1607. In the 17th century, Ḳuba and Sālyān were given as a separate principality to the Ḳaytaḳ, who had migrated southwards. In 1722 the Khān of Ḳuba, Ḥusayn ʿAlī, submitted to Peter the Great and was confirmed in his dignity. By the treaty between Russia and Turkey of the year 1724, the coast territory with Bākū, now occupied by the Russians, was for the first time politically separated from the rest of Shīrwān, which was left to the Turks with Shemākha as capital. This division was retained as regards administration even after both parts were reunited to Persia. By the treaties of 1732, the coast lands north of Kura still remained to the Russians and the other parts of Shīrwān and Dāghistān to the Turks; it was only after Nādir Shāh [*q.v.*] had taken their conquests from the Turks by force of arms (capture of Shemākha, 22 October 1734) that the coast lands were ceded to him voluntarily by the Russians (treaty of Gandja, 10/21 March 1735). After the death of Nādir Shāh, Persian rule could no longer be enforced in these regions; several independent principalities arose; the name Shīrwān was now limited to the territory of the Khān of Shemākha, which was later under Russian rule divided into three administrative districts (Shemākha, Gökčay and Djawād). Fatḥ ʿAlī Khān of Ḳuba (1758-89) succeeded in bringing Derbend as well as Shemākha under his sway, so that, as Dorn observed, "a true Shīrwān Shāh arose in him". During the last years of his reign, Fatḥ ʿAlī flattered himself with the idea of bringing Persia itself under his sway and ascending the throne of the rulers of Persia. When the Ḳādjārs had succeeded in restoring the unity of Persia, the sons of the Khān were no more able to maintain their independence than the other Caucasian chiefs and had to choose between Russia and Persia. General Zubov, who had been despatched by Catherine II, had already reached the Kura below Djawād (1796) when he and his army were recalled by the Emperor Paul. The Khān of Shīrwān (Shemākha), Muṣṭafā, who had already entered into negotiations with Zubov, submitted to the Russians in 1805, who occupied Derbend and Bākū next year (1806), but soon afterwards he made overtures to the Persians and sought help from them. By the peace of Gulistān (12/24 October 1813), Persia gave up all claim to Derbend, Ḳuba, Shīrwān and Bākū. Nevertheless, Muṣṭafā continued to have secret dealings with Persia. It was not till 1820 that his territory was occupied by Russian troops; the Khān fled to Persia and Shemākha was incorporated in Russian territory. The outbreak of hostilities again in 1826 was taken advantage of by Muṣṭafā and by an earlier Khān of Bākū, Ḥusayn, for an attempt to stir up their subjects against Russia, but without success. After 1840 the former territory of the Khān of Shīrwān was united with Ḳuba and Bākū to form one administrative area (at first the "Caspian territory"; from 1846 the "government of Shemākha"; from 1859, after the destruction of Shemākha by one of the earthquakes frequent there, the "government of Bākū"). The old capital of Shīrwān, as late as the middle of the 19th century, had a larger population than Bākū; according to Ritter's *Geografisch-*

statistisches Lexicon[5], 1864-5, Shemākha had 21,550 and Bākū 10,600 inhabitants. In the 1880s, the relationship was reversed (E. Weidenbaum, *Putevoditel' po Kavkazu*, Tiflis 1888, 342-396: Bākū 45,679, Shemākha 28,545).

After the Bolshevik Revolution of 1917 and the consequent upheavals in the Caucasus region, the old Shīrwān and Shemākha fell within the Azerbaijan S.S.R., and Shemakha (lat. 40° 38' N., long. 48° 37' E.) became the chef-lieu of a *rayon* or district. It is now (1994) within the independent Azerbaijan Republic. It is also a significant processing centre for local fruit and agricultural produce, including the making of wine. Numerous Islamic buildings, including mosques and mausolea, remain, though damaged by the earthquakes endemic to the region. In 1970 Shemakha had an estimated population of 17,900, still well below the 19th century level.

The older name of the district gives its name to the locally-woven Shīrwān woollen rugs, similar to the Dāghistān ones produced to the north of the Caucasus but slightly coarser in texture and with a longer pile.

Bāb al-Abwāb* preserved in the latter Ottoman historian Müneddjim Bashī), Cambridge 1958, esp. 75-85. (W. BARTHOLD-[C.E. BOSWORTH])

SHĪRWĀN SHĀH, SHARWĀN SHĀH, the title in mediaeval Islamic times of the rulers of Shīrwān [*q.v.*] in eastern Transcaucasia.

The title very probably dates back to pre-Islamic times. Ibn Khurradādhbih, 17-18, mentions the Shīrwān Shāh as one of the local rulers who received his title from the Sāsānid emperor Ardashīr. Al-Balādhurī mentions the Shīrwān Shāh, together with an adjacent potentate, the Layzān Shāh, as amongst those encountered by the first Arab raiders into the region; he further records that Shīrwān and other principalities of the eastern Caucasus submitted during ʿUthmān's caliphate to the commander Salmān b. Rabīʿa al-Bāhilī (*Futūḥ*, 196, 203-4).

Yazīd b. Usayd al-Sulamī, governor of the northwestern Persian lands of the caliphate for al-Manṣūr, took possession of the naphtha wells (*naffāṭa*) and salt workings (*mallāḥāt*) of Shīrwān; the eastern part of the land was therefore at that date of greater importance than the western part, as the situation of the ancient capital, Shābarān, in the eastern part and north of the southeastern-most spur of the Caucasus, implies (cf. what is said concerning this in SHĪRWĀN). From the end of the 2nd/8th century, Shīrwān was ruled by members of the Arab family of Yazīd b. Mazyad al-Shaybānī (d. 185/801) as part of his vast governorship of Ādharbaydjān, Arrān, Armenia and the eastern Caucasus region. His great-grandson Haytham b. Muḥammad is said to have assumed, during the troubled times in ʿIrāḳ consequent on the murder of al-Mutawakkil in 247/861, the ancient title of Shīrwān Shāh, beginning a line of Yazīdī or Mazyadī Shāhs which lasted up to Tīmūrid times.

For the earlier history of this dynasty, we have the anonymous *Taʾrīkh Bāb al-Abwāb*, preserved in the later Ottoman historian Müneddjim Bashī [*q.v.*], the last date of which concerning the Shāhs is 468/1075. We know from this that the history of the Shāhs was closely bound up with that of the Hāshimids in Bāb al-Abwāb or Derbend [*q.vv.*], with intermarriage between the two Arab families and with Yazīdīs often ruling for various periods in the latter town. By the time of the anonymous *Ḥudūd al-ʿālam* (372-982), the Shīrwān Shāhs, from their capital of Yazīdiyya (very probably the later Shamākha), had absorbed neighbouring petty principalities north of the Kur river and thus acquired the additional titles of Layzān Shāh and Khursān Shāh (tr. Minorsky, 144, comm. 403 ff.). We can also discern the progressive Persianisation of this originally Arab family (a process parallel to and contemporary with that of the Kurdicisation of the Rawwādids [*q.v.*] in Ādharbaydjān). After the Shāh Yazīd b. Aḥmad (381-418/991-1028), Arab names give way to Persian ones like Manūčihr, Ḳubādh, Farīdūn, etc., very likely as a reflection of marriage links with local families, and possibly with that of the ancient rulers in Shābarān, the former capital, and the Yazīdids now began to claim a *nasab* going back to Bahrām Gūr or to Khusraw Anūshirwān.

These Shāhs buttressed their power, like other Eastern Islamic dynasties of the time, with professional slave troops (*ghulāms* [*q.v.*]), for it was necessary for them, *inter alia*, to maintain an army to ward off incursions by non-Muslim peoples like the Alans and Georgians. Fear of the Oghuz [see GHUZZ] led the Shāh Ḳubādh b. Yazīd in 437/1045 to build a stone wall with iron gates round Yazīdiyya and to fortify other towns; by 458/1066, Farīburz b. Sallār (455-*ca.* 487/1063-*ca.* 1094) had to pay an indemnity to deter the Turkmens under Ḳaratigin, who devasted the regions of Masḳaṭ and Bākū. In 459/1067 Farīburz submitted to the Saldjūḳ sultan Alp Arslan, undertaking to pay an annual tribute of 70,000 dīnārs, eventually reduced to 40,000; coins later issued by Farīburz acknowledge Malik Shāh as well as the ʿAbbāsid caliph.

Farīburz's diplomatic and military abilities enabled the Yazīdīs to survive in Shīrwān. Under sultan Maḥmūd b. Muḥammad (511-25/1118-31 [*q.v.*]), Shīrwān was occupied by Saldjūḳ troops. The sultan was invited by local leaders to come there himself; after his arrival, the Shāh (probably Manūčihr III b. Farīdūn) went to him to obtain justice, but was imprisoned. The people of Shīrwān, with whom the prince was very popular, tried to procure his release, but without success. This state of affairs encouraged the Georgians to invade Shīrwān, but they were driven out by Maḥmūd. The population suffered very much from the occupation of their country and these events became known as the "devastation" (*takhrīb*) of Shīrwān. The campaign took place in the first and last years of office of the vizier Shams al-Mulk, who was put to death by the sultan's orders in Rabīʿ I 517/May 1123 in Baylaḳān (probably on the way back to Persia from Shīrwān).

The same campaign appears in quite another light in Ibn al-Athīr, x, 433-4. The campaign is said to have been caused by the invasions of the Georgians and the complaints of the people, especially of the town of Derbend. Soon after the arrival of the sultan in Shamākha, a large Georgian army appeared before the town, which terrified the sultan; soon afterwards, however, a quarrel broke out between the Georgians and their allies the Ḳipčaḳ Turks, as a result of which the enemy had to retire "as if defeated" (*shibh al-munhazimīn*; they had therefore not actually been defeated). The sultan remained for some time in Shīrwān and returned in Djumādā II 517/August 1123 to Hamadān.

The middle years of the 6th/12th century were flourishing ones for the Yazīdids, although the succession and genealogy of the Shāhs from this time onwards becomes somewhat confused and uncertain. Münedjdjim Bashî, for instance, gives only a skeletal list from Manūčihr III b. Farīdūn I (whom he calls Manūčihr b. Kasrān; the name of Kasrānids now appears in some sources for the subsequent Shāhs) onwards (translated by Minorsky, *A history of Sharvān and Darband,* 129-38, including a commentary which brings in the information from recent numismatic work). Manūčihr III not only used the title of Shīrwān Shāh but also assumed that of Khāḳān-i Kabīr ("Great Khāḳān"), from which was taken the *takhalluṣ* or pen-name of the Persian poet Khāḳānī [*q.v.*], a native of Shīrwān and the Shāh's eulogist in the earlier part of his life. During these decades, the Shāhs appear on their coins simply as vassals of the Great Saldjūḳs, and only after the death of the last of that dynasty, Ṭoghrïl III b. Arslan (590/1194) does the name of the ʿAbbāsid caliph as overlord re-appear on their coins.

Shīrwān at that time was actually completely dependent on the Georgian kings, who took the title Shīrwān Shāh themselves. Matrimonial alliances were several times concluded between the Kasrānids and the Georgian royal house. The son and successor of Manūčihr III, Akhsitān I (*ca.* 544-*ca.* 575/*ca.* 1149-*ca.* 1179), no doubt owed to his powerful relative, ally and suzerain, king George III, his victory over a Russian fleet at Bākū and the reconquest of Shīrwān and Derbend. On the other hand, the lands of Shakkī, Ḳabala and Mūḳān were later taken from the Shīrwān Shāh by the Georgians (al-Nasawī, *Sīrat Sulṭān Djalāl al-Dīn,* ed. Houdas, 146, 174). Political conditions in the first half of the 7th/13th century are not quite clear; neither the Shīrwān Shāh Rashīd mentioned by Ibn al-Athīr under the year 619 (xii, 264-5) nor the Shīrwān Shāh Farīdūn b. Farīburz mentioned by al-Nasawī (175) under 622 A.H. are known from coins; in place of these we find on coins as contemporary of the caliph al-Nāṣir (575-622/1180-1225) Farīburz II b. Farīdūn II b. Manūčihr, and following him under the same caliph, Farrukhzād b. Manūčihr II and Garshasp I b. Farrukhzād I. In contradiction to the above accounts, al-Nasawī says that the Shīrwān Shāh had paid sultan Malik Shāh a tribute of 100,000 dīnārs; the Khʷārazm Shāh Djalāl al-Dīn therefore demanded the same sum from the Shīrwān Shāh when he appeared in Ādharbaydjān. According to al-Nasawī, the reply given him was that conditions were no longer the same as before, as a large part of the country was now in the possession of the Georgians. It was agreed to pay 50,000 dīnārs, but even of this 20,000 were remitted. Shortly before this time, the Khʷārazm Shāh had driven the officers of the Shīrwān Shāh out of the land of Gushtāspī at the junction of the Kura and Aras and farmed out this territory for 200,000 dīnārs; on the other hand, he restored to prince Sulṭān Shāh, Mūḳān [*q.v.*], which had been ceded by his father to the Georgians (on the occasion of the marriage of the prince with a Georgian princess, daughter of Queen Rusudan, 1223-47). After the subjection of Shīrwān by the Mongols, coins were struck in the name of the Mongol Great Khān; the name of the Shīrwān Shāh also appears, but without a title. Under the rule of the Īlkhānids, no coins were struck in Shīrwān; the country belonged sometimes to their empire and sometimes to that of the Golden Horde. As a province in the empire of the Īlkhānids Shīrwān brought the state treasury 11 *tūmāns* (the *tūmān* was 10,000 dīnārs) and 3,000 dīnārs (the dīnār was not now a gold coin, but a silver coin of 3, later 2 *mithḳāls*; cf. W. Barthold, *Persidskaya nadpiś na styenye Aniyskoi mečeti Manuče,* St. Petersburg 1911, 18-19, repr. in *Sočinenya*, iv, Moscow 1966, 313-38). Gushtāspī had remained separate and paid 118,500 dīnārs. The Kasrānid dynasty remained in existence; under the successors of the Īlkhānids, the Shīrwān Shāh Kay Kubādh and his son Kāwūs were again able to play the part of independent rulers (their coins were anonymous, like the coins of several dynasties of this period); but soon afterwards, Kāwūs had to submit to the Djalāyrids [*q.v.*] and strike coins in their name. Kāwūs is said to have died, according to Faṣīḥ (in Dorn, 560) in 774/1372-3); his son Hūshang was murdered by his subjects after reigning ten years, and with his death the dynasty of the Yazīdids/Kasrānids came to its end.

Control of Shīrwān passed to a remote connection of the Yazīdids/Kasrānids, Shaykh Ibrāhīm of Derbend (784-820/1382-1417), at first ruling as a vassal of Tīmūr and then, after the latter's death in 807/1404, as an independent prince. The long reigns of his successors Khalīl Allāh I (820-66/1417-62) and Farrukh Yasār (866-900/1462-1501) were decades of peace and prosperity for Shīrwān, with many fine buildings erected in Shamākha and Bākū. The history of the last Shīrwān Shāhs now becomes entwined with that of the Shaykhs and then Shāhs of the Ṣafawid family. The head of the Ṣafawiyya order Djunayd b. Ibrāhīm [*q.v.*] was killed in 864/1460 during a raid on Shīrwān from Ādharbaydjān. His son Ḥaydar [*q.v.*] was likewise killed in 893/1488 at Ṭabarsān to the southwest of Derbend by a coalition of Farrukh Yasār and the Aḳ Ḳoyunlu sultan Yaʿḳūb b. Uzun Ḥasan, who was apprehensive at the growing power of the Ṣafawids. After his seizure of power over Persia, Shāh Ismāʿīl I Ṣafawī avenged these killings by an invasion of Shīrwān in 906/1500-1, when he killed Farrukh Yasār and made Shīrwān a Ṣafawid dependency (see *Camb. hist. of Iran*, vi, 209-9, 211-12). Further Shāhs, descendants of Farrukh Yasār, continued in Shīrwān for nearly 40 years until the Ṣafawid Shāh Ṭahmāsp I in 945/1538 incorporated Shīrwān fully into the Ṣafawid kingdom, reducing it to a governorship. A son of one of the last Shīrwān Shāhs, Burhān ʿAlī Sulṭān b. Khalīl Allāh II, and his son Abū Bakr attempted with Ottoman help to regain their former kingdom, but without lasting success.

(W. BARTHOLD-[C.E. BOSWORTH])

SHĪTH (Hebr. Shēth), Seth the third son of Adam and Eve (Gen. IV, 25-6, V, 3-8), regarded in Islamic lore as one of the first prophets and, like his father, the recipient of a revealed scripture. He is not mentioned in the Ḳurʾān, but plays a considerable role in the subsequent *Ḳiṣaṣ al-anbiyāʾ* [*q.v.*] literature (see below). He is said to have been born when his father was 130 years of age, five years after the murder

of Abel. When Adam died, he made him his heir and executor of his will. He taught him the hours of the day and of the night, told him of the Flood to come and taught him to worship the divinity in retirement at each hour of the day.

It is to him that we trace the genealogy of mankind, since Abel did not leave any heirs and Cain's heirs were lost in the Flood. It is said that he lived at Mecca, performing the rites of pilgrimage until his death; that he collected the leaves revealed to Adam and to himself (numbering fifty) and regulated his conduct by them; and that he built the Kaʿba of stone and clay. On his death, he left as his successor his son Anūsh (Enoch); he was buried beside his parents in the cavern of Mount Abū Ḳubays; he had attained the age of 912 years. According to Ibn Isḥāḳ, he married his sister Ḥazūra.

Later traditions. Adam having fallen ill, desired to have olives and oil from Paradise; he sent Shīth to Mount Sinai to ask God for them, and God told him to hold out his wooden bowl; it was filled in a moment, with what his father had asked for, and he rubbed his body with the oil, ate a few olives and was cured. Adam was beardless; Shīth was the first to have a beard. He is also called the first *ūriyā* (a Syriac word signifying "teacher", cf. Hebr. *ōr* "light, teaching"). He was exactly like his father physically as well as morally. He was the favourite child. He spent the greater part of his life in Syria, where one tradition says that he was born. From his time, man was divided into two categories; those who obeyed him and the others who followed the children of Cain. As a result of his counsels, a few of the latter entered into the right path, but the others persisted in their rebellion. Maxims said to have been left behind by him are quoted (Mīrkhʷānd, *Rawḍat al-ṣafāʾ*, lith. Bombay 1272, i, 12 ff.).

Above all, Shīth is described as the one who fought his brother Cain, as the murderer of Abel [see HĀBĪL WA-ḲĀBĪL]. He defeated Cain in battle, delivered him in fetters to the avenging angels and enslaved all his progeny. He then built over 1,000 cities and filled the earth with peace and justice.

Al-Ṭabarī, *Annales*, writes Shath and Shāth (i, 153), and says that Shīth is a Syriac form (*sūryānī*). The name signifies "in place of, gift (of God)" because he was given in place of Abel (Gen. IV. 26).

Al-Muḳannaʿ [*q.v.*] held that the spirit of God was transferred from Adam to Seth (Muṭahhar b. Ṭāhir al-Maḳdisī, *Livre de la Création*, vi, 96). This idea comes from a Gnostic sect, the Sethites, who were found in Egypt from the 4th century, and who possessed a *Paraphrase of Seth*, to be more precise, seven books by this patriarch and seven others by his children, whom they called the "Strangers" (Epiphanes, *Haer.*, xxxix, 5). The Gnostics possessed the books of Jaldabaoth, the Demiurge, attributed to Seth (Epiphanes, *op. cit.*, xxvi, 8). The Ṣābiʾūn of Ḥarrān [see ṢĀBIʾA] had several writings attributed to Seth, and the latter was associated with Adam by the Manichaeans (P. Alfaric, *Les Écritures manichéennes*, Paris 1918, 6, 9, 10). Seth is always associated with Adam by the Druzes (P. Wolff, *Die Drusen*, Leipzig 1845, 151, 193, 372).

(CL. HUART-[C.E. BOSWORTH])

SHIVĀDJĪ [see MARĀTHĀS].

SHĪZ, the name of a very old Persian fire-temple, a place or district to the south-east of Lake Urmiya in Ādharbāydjān, said to be the native place of Zoroaster. According to A.V.W. Jackson, the name is said to be derived from the Avestan name of Lake Urmiya, Čaēčasta; according to Yāḳūt, it is an Arabic corruption of *Djazn* or *Gazn*, i.e. *Kanzaka* or *Gazaca* of the classical writers or *Gandjak* of the Pahlavi texts.

The older geographers correctly consider the two places and names to be distinct. The Arab traveller Abū Dulaf [*q.v.*] visited Shīz en route for Daylam and then Ādharbāydjān and Arrān in the mid-4th/10th century. According to him, the town lay among hills in which gold, quick-silver, lead, silver, arsenic and amethyst were found. Within the walled town was a pond of unfathomable depth, the water of which turned everything to stone. There was also a large ancient fire-temple there, which was held in great honour and from which all the sacred fires in Persia were lit. The fire had already burned 700 years without leaving ashes. The Persian kings used to bestow gifts on the temple, so that it collected vast treasures. Abū Dulaf went there specially to find hidden treasure. Sir Henry Rawlinson's photographs of Takht-i Sulaymān show the pond in the centre of the walls and the ruins of the temple.

Takht-i Sulaymān lies some 140 km/80 miles from the southeastern corner of Lake Urmiya, whereas the great Greek city of Ganzaka, where the fire temple originally stood, is only about 14 km/8 miles from this corner of the lake. What seems to have occurred is that the Sāsānid emperor Khusraw Anūshirwān (531-79 [*q.v.*]) transferred the sacred fire and the temple treasures from Ganzaka near Lake Urmiya to a more inaccessible place in the mountains of southern Ādharbāydjān in order to protect it from Byzantine attack (Ganzaka was in fact twice occupied by Heraclius, on the second occasion in 628; see the detailed discussion in V. Minorsky, *Roman and Byzantine campaigns in Atropatene*, in *BSOAS*, xi [1944], 248-53, 256-60).

The fire temple at Shīz continued to be important for the local Zoroastrians during early Islamic times. According to al-Balādhurī, *Futūḥ*, 326, the caliph ʿUmar agreed with the *marzbān* of Ādharbāydjān to leave the fire temple undisturbed and to allow the people of Shīz to continue their dancing and other festivities. It seems doubtful, however, whether it was still functioning in Abū Dulaf's time, three centuries later, for his account did not convince his contemporaries.

(J. RUSKA-[C.E BOSWORTH])

SHKODRA [see ISHKODRA, in Suppl.].

SHLUḤ [see TASHELḤĪT].

SHOGHI EFFENDI [see SHAWḲĪ EFENDI RABBĀNĪ].

SHŌLĀPUR, the name of a District and of

its administrative centre, in the western Deccan of India. In British Indian times, these fell within the Bombay Presidency; within the Indian Union, they are now on the southeastern fringe of Mahārashtra State.

The town (lat. 17° 43', long. 75° 56' E.) was an early centre of the Marāthās [*q.v.*]. In 718/1318 it came finally under the control of the Dihlī Sultans, being governed from Deogīrī or Dawlatābād [*q.v.*], then under the Bahmanīs, then oscillating between the ʿĀdil Shāhīs of Bīdjāpur and the Niẓām Shāhīs of Ahmadnagar before being incorporated by Awrangzīb into the Mughal Empire in 1078/1668. After possession by the Niẓāms of Ḥaydarābād, it passed towards the end of the 18th century to the Marāthās, but was conquered from the Pēshwā [*q.v.*] by General Munro in May 1818. The town still has some of its walls, which had eight gates, and still has an impressive fortress within their perimeter, begun in the late 8th/14th century by the Bahmanīs, but now dilapidated. In the early 20th century, the population of Shōlāpur town was roughly one-third Muslim and two-thirds Hindu; according to the 1971 census, the total population of the town was 398,361, but it is unclear what proportion of these were Muslims.

SHUʿAYB, a prophet mentioned in the Ḳurʾān, who, on the basis of XI, 91, was understood to have come after Hūd, Ṣāliḥ and Lot (Lūṭ) [*q.vv.*]. According to XXVI, 176-91, Shuʿayb was sent to the "People of the Thicket", *aṣḥāb al-ayka*, a group which is also mentioned in XV, 78, XXXVIII, 13, and L, 14. Furthermore, Shuʿayb is spoken of as sent to Madyan in VII, 85, XI, 84, 94-5, and XXIX, 36. This location is also mentioned in IX, 70, XX, 40, XXII, 44, and XXVIII, 22-3, 45. On the historical and geographic identity of these people and places, see MADYAN SHUʿAYB. As a result of the mention of Madyan in the context of Moses in Ḳurʾān, XX, 40, and esp. XXVIII, 22-8, the explanation arose in Islamic narratives (see al-Ṭabarī, i, 365, and most later exegetes) that Shuʿayb should be identified with (or be seen as the uncle of) Jethro (Yithrūn, Yathrā), the father-in-law of Moses mentioned in the Bible (Exod. iii, 1, iv, 18, xviii, 1-12) and referred to, but unnamed, in the Ḳurʾān.

The story of Shuʿayb, especially as told in Ḳurʾān, VII, 85-93, XI, 84-95, and XXVI, 176-91, follows the standard Ḳurʾānic narrative outline of prophetic history (see the analysis of the three versions in J. Wansbrough, *Quranic studies: sources and methods of scriptural interpretation*, Oxford 1977, 21-5). After his call by God, Shuʿayb preached monotheism, honesty in commerce and the necessity for order in the world and not hindering those who believe in God. The leaders of the community rejected him and threatened to expel him and his followers; they also considered stoning him, restrained only because he was one of them. An earthquake (so *radjfa* is commonly glossed; *ṣayḥa*, "shout" and *ẓulla*, "overshadowing" are also mentioned) destroyed their homes and the community, but Shuʿayb and his followers survived.

SHUʿBA B. AL-ḤADJDJĀDJ b. al-Ward, Abū Bisṭām al-ʿAtakī, a *mawlā* from Baṣra with the honorific *shaykh al-islām*, was an eminent scholar and collector of *ḥadīth* [*q.v.*]. Born during the years 82-6/702-7, his death from the plague is generally taken to have occurred in 160/776. Originally from Wāsiṭ, he came to live in Baṣra, where he sought out al-Ḥasan al-Baṣrī [*q.v.*]. Shuʿba is recorded to have studied *masāʾil* (= juridical problems) with him, so if that is historical he may be assumed to have arrived there in or before 110/728, the year in which Ḥasan died. About Shuʿba's personal circumstances very little is recorded. He is said to have had a speech defect. He wore dirty, dust-covered clothes, and his ascetic lifestyle was highly praised; his generosity towards the poor is lauded in many reports.

Early in life Shuʿba was allegedly fond of poetry and he associated with the poet al-Ṭirimmāḥ (d. *ca.* 120/738 (?) [*q.v.*]), but the story goes that when he once heard the well-known *faḳīh* and *ḥadīth* collector al-Ḥakam b. ʿUtayba (d. 112-15/730-3) transmit traditions from various masters, he was supposedly so struck with this that he henceforth began to gather *ḥadīth* himself. In due course he developed into Baṣra's most outstanding *ḥadīth* collector, seen in the honorary title *amīr al-muʾminīn fī 'l-ḥadīth* awarded him by a colleague ten years his junior, Sufyān al-Thawrī [*q.v.*]. On the other hand, Abū Ḥanīfa [*q.v.*] is said to have referred to Shuʿba, probably pejoratively, as the *ḥashw al-miṣr* "the stuffing of the town".

Shuʿba is supposed to have heard traditions with large numbers of masters of whom al-Mizzī (*Tahdhīb*, xii, 480-6) records the names of more than 300, some 130 of whom are said to have hailed from Kūfa. The figure of 300 cannot be considered complete, for Aḥmad Ibn Ḥanbal (d. 241/856 [*q.v.*]), *K. al-ʿilal wa-maʿrifat al-ridjāl*, ed. Ankara 1963, i, 126, 128, 160-3) mentions many others who are not even included in al-Mizzī's list. Upon inspection, more than half of these 300 turn out to be mere names of otherwise totally nondescript people, in other words, they may be thought of as *madjhūlūn*.

Alongside his reputation as a great *ḥadīth* transmitter, Shuʿba's fame lies also in his expertise in *djarḥ wa-taʿdīl* [*q.v.*], the science of disparaging and declaring trustworthy *ḥadīth* transmitters, a science of which he is generally considered to have been the first exponent and which earned him the honorific *ḳabbān al-muḥaddithīn*, the steelyard of transmitters. There are numerous anecdotes in the sources describing him as particularly wary of *kadhib*, mendacity, sc. in *ḥadīth*. Thus he reproached the *ḳuṣṣāṣ*, the story-tellers [see ḲĀṢṢ], for having "added" to traditions. He is even recorded as having expressed the desire to drag a notorious *ḥadīth* forger, one Abān b. Abī ʿAyyāsh (d. 138/755), to the court of the local *ḳāḍī*.

It is a curious paradox that arguably the most famous tradition, which according to Muslim mediaeval scholarship deserves the qualification *mutawātir* [*q.v.*] (i.e. broadly authenticated), is in all likelihood due to Shuʿba: *man kadhaba ʿalayya mutaʿammidan fal-*

yatabawwaʾ makʿadahu min al-nār (i.e. "he who deliberately puts false statements into my mouth must occupy a place in Hell"). In the few *isnād* bundles which support (versions of) this allegedly prophetic saying (see *Bibl.*), it is Shuʿba who is the oldest and at the same time best-attested common link. He is in fact what *ḥadīth* scholars have come to define as a *ṣāliḥ* [*q.v.*] transmitter. His saying reflects eloquently a general perception among 2nd/8th-century traditionists, namely that proliferating traditions whose moral or legal contents and/or underlying messages gain acceptance or popularity as from the time they emerge, as was the case with the *man kadhaba* saying, is *not* to be seen as *kadhib*, but rather seen as a practice fully condoned by Islam to codify its indispensable, extra-Ḳurʾānic foundations. The list of traditions in whose *isnād* bundles he is the undeniable common link, and thus responsible for (part of) the (wording of the) texts, is huge; in many chapters of the Six Books there are sayings attributed to the Prophet that are definitely his. Among these there are several crucial ones such as the statement which may be considered as a cornerstone in the early theorising of the *ahl al-sunna*: *man sanna fī 'l-islām sunnatan ḥasanatan fa-lahu adjruhā wa-adjru man ʿamila bihā baʿdahu* (i.e. "he who introduces into Islam a good custom/norm will be given the ensuing merit and the merit accruing to all those who practice/adopt it after him").

Apart from all this, his fondness of poetry is alluded to on many occasions. As al-Aṣmaʿī (d. 213/828 [*q.v.*]) stated: "We have never seen anyone more expert in poetry than he". Also concerning poetry and its position in society, he brought traditions into circulation in which he is observed trying his hand himself at making verses, some of which he then ascribed to the Prophet, cf. G.H.A. Juynboll, *On the origins of the poetry in Muslim tradition literature*, in W. Heinrichs and G. Schoeler (eds.), *Festschrift Ewald Wagner zum 65. Geburtstag*, Beirut 1994, ii, 182-207.

Among his *ca.* 300 alleged *ḥadīth* masters there is one for whose traditions Shuʿba was generally criticised, sc. Djābir b. Yazīd al-Djuʿfī (d. 128-32/746-50 [*q.v.* in Suppl.], and J. van Ess, *Theologie und Gesellschaft*, i, 294-8), whose name is usually associated with extreme Shīʿī doctrines. Initially, Shuʿba was himself not free from Shīʿa-related allegations: one source (al-Khaṭīb, ix, 260, 10) identifies him with *taraffuḍ* (= harbouring moderate (?) Rāfiḍī ideas) which one of his pupils, Yazīd b. Zurayʿ (d. 182/798), imputed to him. Eventually Shuʿba seems to have abandoned these.

Among Shuʿba's many alleged students two stand out as particularly important in that their transmission from their master is directly available in printed collections: ʿAbd Allāh b. al-Mubārak (d. 181/797), *Kitāb al-Zuhd wa 'l-rakāʾik*, Malagaon 1966, and Abū Dāwūd al-Ṭayālisī (d. 204/819 [q.v.]), *Musnad*, Ḥaydarābād 1321. To these two may be added seven more pupils of Shuʿba, equally prolific, whose numerous traditions were allegedly personally recorded by Aḥmad Ibn Ḥanbal in his *Musnad*: Muḥammad b. Djaʿfar Ghundar (d. *ca.* 193/809), Yaḥyā b. Saʿīd al-Ḳaṭṭān (d. 198/814), ʿAbd al-Raḥmān b. Mahdī (d. 198/814), al-Naḍr b. Shumayl (d. 204/819), Yazīd b. Hārūn (d. 206/821), Muʿādh b. Muʿādh (d. 196/812) and Wakīʿ b. al-Djarrāḥ, while Bukhārī (d. 256/870 [*q.v.*]) has noted down in his *Ṣaḥīḥ* from his master Ādam b. Abī Iyās (d. 220/835) much material on the direct authority of Shuʿba.

Bibliography: Ibn Abī Ḥātim, *Taḳdimat al-maʿrifa li-kitāb al-djarḥ wa 'l-taʿdīl*, 132-57, contains a list of transmitters about whom Shuʿba is recorded to have uttered criticisms; for further information on Shuʿba, see Fasawī, *Kitāb al-maʿrifa wa 'l-taʾrīkh*, ed. A.Ḍ. al-ʿUmarī, ii, 283-5; Baḥshal, *Taʾrīkh Wāsiṭ*, ed. Kūrkīs ʿAwwād, 120-1; Dhahabī, *Tadhkirat al-ḥuffāẓ*³, i, 193-7; idem, *Siyar aʿlām al-nubalāʾ*², vii, 202-28; Ibn Khallikān, *Wafayāt*, ed. (G.H.A. Juynboll)

SHUBĀṬ [see TAʾRĪKH].

SHUBHA (A., pl. *shubah*, *shubuhāt*), literally, "resemblance", a term that developed two distinct technical meanings.

In theology and philosophy, a *shubha* is a false or specious argument which "resembles" a valid one. In later scholastic treatises, positive arguments for a given view are often followed by a series of *shubah*, counter-arguments by opponents, and their refutations (see e.g. al-Āmidī, *Ghāyat al-marām fī ʿilm al-kalām*, ed. Ḥ.M. ʿAbd al-Laṭīf, Cairo 1971, 265-74, and for a logical controversy over *shubah*, see J. van Ess, *Die Erkenntnislehre des ʿAḍudaddīn al-Icī*, Wiesbaden 1966, 353).

In law, a *shubha* is an illicit act which nevertheless "resembles" a licit one, and is relevant primarily to the *ḥadd* [*q.v.*] offences, those specifically forbidden in the Ḳurʾān and having fixed penalties, and especially to fornication (*zinā*). In attempting to avoid as much as possible imposition of the severe *ḥadd* penalties (stoning, amputation, and flogging), the jurists appealed to a prophetic *ḥadīth* instructing the believers to "avert the *ḥadd* penalties by means of ambiguous cases" (*idraʾū 'l-ḥudūd bi 'l-shubuhāt*). Thus, in contradistinction to other areas of the law, commission of a *ḥadd* offence through ignorance is considered grounds for suspension of the prescribed penalty.

This principle is recognised by all schools of law, both Sunnī and Shīʿī, although with varying terminology and scope. The most elaborate discussions are those of the Ḥanafīs, who recognise three categories: 1. *Shubha fī 'l-maḥall* (also known as *shubhat mulk* or *shubha ḥukmiyya*), in which the act's status as forbidden is contravened by some outside indicator; the standard example is that of sexual intercourse with one's son's slavegirl, the indicator being the *ḥadīth* which states that "You and your property belong to your father". In such cases, the penalty is suspended even if the offender is aware that the act is forbidden. 2. *Shubha fī 'l-fiʿl* (also known as *shubhat ishtibāh* or *shubhat mushābaha*), in which the offender claims to have believed, mistakenly but plausibly, that the act was licit; examples include sexual intercourse during her waiting period (*ʿidda*) with a wife thrice divorced. In these cases, the offender's explicit claim of igno-

rance of the law is essential for suspension of the penalty. 3. *Shubhat al-ʿakd*, resulting from an invalid marriage contract, such as one without witnesses, or an incestuous one. Abū Ḥanīfa claimed that such a *shubha* obtains even when the offender admits to awareness of the invalidity of the contract (thus he refused to apply the *ḥadd* penalty for prostitution), but was opposed on this point by his pupils al-Shaybānī and Abū Yūsuf.

The Shāfiʿīs also recognise three categories of *shubha*, but define them rather differently: 1. *Shubha fi 'l-maḥall*, such as intercourse with a foster relative. 2. *Shubhat al-fāʿil*, as when another woman is substituted for the bride on the wedding night. 3. *Shubhat al-ṭarīḳ* or *al-djiha*, in cases where the schools disagree, such as Shīʿī *mutʿa* [*q.v.*] marriage or Ḥanafī marriage by an adult woman without a guardian (*walī*). With less systemisation, Mālikīs and Ḥanbalīs, as well as Imāmī Shīʿīs, generally accord *shubha* status to the same situations as the Shāfiʿīs. Some other cases of illicit intercourse not subject to the *ḥadd* penalty, such as intercourse with one's wife during her menses and intercourse under coercion, are sometimes also labelled *shubha*.

SHUBRĀ [see DAMANHŪR].

SHUDJĀʿ AL-DAWLA, Mīrza Djalāl al-Dīn Ḥaydar b. Ṣafdār Djang (1732-75), was the third *Nawwāb*, or ruler, of the North Indian, post-Mughal successor state of Awadh [*q.v.*] (Oudh) from 1754 until his death. One of the most capable statesmen of 18th-century India, he made his realm into the major indigenous power in North India, fighting the British almost to a standstill at the Battle of Baksar in 1764. Realising his value as an ally, the East India Company reinstated him in 1765, and for the next decade a process of mutual testing and political experimentation occurred. Under the subsidiary alliance system, in which he paid for the internal use of British-officered Indian troops, the way was opened for increasing Company intervention during subsequent reigns. Shudjāʿ al-Dawla nonetheless modernised his army during this period, closed Awadh to the disruptive effects of European trade, secured the treasury in the custody of his main consort Bahū Begam, and made large annexations, including Itāwā and Rāmpūr [*q.vv.*]. The Governor-General, Warren Hastings, treated him formally as an equal, but after Shudjāʿ al-Dawla's death, the realm was further undermined by expansive British military, commercial, and diplomatic ambitions. See further AWADH.

AL-SHUDJĀʿĪ, Shams al-Dīn, Mamlūk historian and contemporary of the sultan al-Malik al-Nāṣir Muḥammad b. Ḳalāwūn [*q.v.*] and his successors.

In the only surviving fragment of his chronicle *Taʾrīkh al-Malik al-Nāṣir Muḥammad b. Ḳalāwūn al-Ṣāliḥī wa-awlādihi* (ed. and tr. Barbara Schäfer, *Die Chronik aš-Šuǧāʿīs*, Wiesbaden 1977; *Šams ad-Dīn aš-Šuǧāʿī, Tārīḫ al-Malik an-Nāṣir … wa-aulādihi*, Wiesbaden 1985), the author's name appears both in the text and on the title page as Shams b. al-Shudjāʿī; however, in *Kashf al-ẓunūn*, ed. Flügel, ii, 153, Ḥādjdjī Khalīfa refers to the author as Shams al-Dīn al-Shudjāʿī al-Miṣrī. Although the editor and translator of the text correctly points out that "Shams" would not have occurred independently as an *ism* at this time and that the rendering "Shams al-Dīn" must therefore be correct, there is no explanation for her decision to follow Ḥādjdjī Khalīfa in dropping the "ibn" but to ignore his "al-Miṣrī". The *nisba* is, of course, important in establishing the author's identity as is, moreover, the *nasab*, since P.M. Holt has recently tried to find a *mamlūk* in the biographical literature who would combine the *laḳab* "Shams al-Dīn" with the *nisba* "al-Shudjāʿī", derived from the uncommon Mamlūk *laḳab* of Shudjāʿ al-Dīn (see *Shams al-Shujāʿī: a chronicler identified?*, in *BSOAS*, forthcoming). On the basis of Mamlūk naming patterns, Holt assumes that the author was a *mamlūk* with the *ism* of Sunḳur or Aḳsunḳur in the service of an *amīr* Shudjāʿ al-Dīn known to have lived during the period 745-56/1345-56, dates for which there are personal references to the author in the text. The only suitable candidate is one Shams al-Dīn Aḳsunḳur, Amīr Djāndār, of the household of Shudjāʿ al-Dīn Ghurlū. Although the date of Aḳsunḳur's death is unknown, he is known to have been exiled to Tripoli in 748/1348 and thus could have been alive in 756/1356. But as ingenious as this identification may be, it loses some credibility by the suppression of "ibn", for if it is retained, there is the distinct possibility that Ibn al-Shudjāʿī was not a *mamlūk* at all but the son of one, and that his *ism* as a second-generation Muslim was probably Muḥammad, invariably associated with the *laḳab* Shams al-Dīn. Furthermore, since no references are to be found in any of the copious biographical dictionaries to a historian bearing any of these names, it is probably prudent to refer to him by the name cited in the text and on the title page of the manuscript, sc. Shams b. al-Shudjāʿī, or, following Ibn Ḳāḍī Shuhba's citations in his own history, simply al-Shudjāʿī (see Schäfer, 1985, 5). Besides the *terminus post quem* (756), we know only that the author made the Pilgrimage to Mecca in 745/1344-5 and that he was in the service of Shaʿbān, presumably the sultan al-Kāmil Shaʿbān (746-7/1345-6 [*q.v.*]). Furthermore, if Ḥādjdjī Khalīfa is correct, al-Shudjāʿī was associated in some way with Miṣr, either the town of that name or the country Egypt.

The question of the significance of al-Shudjāʿī's *Taʾrīkh* is also fraught with difficulties. Although only a fragment for 737-45/1337-45 exists, it has been proved to be heavily indebted to al-Yūsufī's *Nuzhat al-nāẓir fī taʾrīkh al-Malik al-Nāṣir*, for which there is only a fragment for mid-733 to mid-738 (ed. Aḥmad Ḥuṭayṭ, Beirut 1986). Comparison of the two texts for the one year, 737, which the two fragments have in common indicates that al-Shudjāʿī paraphrased al-Yūsufī's text with only a few additions, mainly precise dates (D.P. Little, *An analysis of the relationship between four Mamlūk Chronicles for 737-45*, in *JSS*, xix [1974], 252-68). Collation of al-Shudjāʿī's passages from other

years with those attributable to al-Yūsufī in al-Maḳrīzī's and al-ʿAynī's histories shows that the pattern of al-Shudjāʿī's indebtedness to al-Yūsufī (d. 759/1358) is compellingly consistent up to the annal for 741, when the evidence is not as forthcoming as for the previous years. However, even then and thereafter, the textual evidence suggests that al-Shudjāʿī was heavily indebted to another source, probably al-Yūsufī. Unfortunately, references in the *Taʾrīkh* of Ibn Ḳāḍī Shuhba, the only historian to cite al-Shudjāʿī by name, are not helpful in this regard. But whether or not al-Shudjāʿī continued to borrow from al-Yūsufī consistently is not so important as the undisputed fact that the *Taʾrīkh* contains many details, especially for the years 741-5, which cannot be found in other extant sources and is therefore of considerable importance for this period.

Bibliography: Given in the text.

(D.P. Little)

AL-**SHŪF**, a district of Mount Lebanon, generally denoting the current districts of it south of the Beirut-Damascus road. However, names of geographical areas often follow political, demographical or administrative changes. From the early Islamic period until the end of the Crusades, "Mount Lebanon" (*Djabal Lubnān*) was applied only to the northern districts of Djubbat Bsharrī, Batrūn and Djubayl, the original homeland of the Maronites, while the southern districts were known as Djabal al-Shūf, which at times also included Djabal Kisrawān. The Mamlūks [*q.v.*], who ruled Syria from 659/1261 till 921/1516, divided the entire region according to three administrative units: Tripoli—Djabal Lubnān; Damascus—Djabal Kisrawān, al-Matn, and al-Gharb; and Sidon—al-Shūf. However, in local usage, al-Shūf denoted, as it does today, al-Shūf proper, Iklīm al-Shūf (a restricted area around Dayr al-Ḳamar) and, surrounding it, the Greater Shūf, the homeland of the Druzes [see AL-DURŪZ] from at least the 7th/13th century.

During the latter part of the Mamlūk era and at the beginning of the Ottoman period, Iklīm al-Shūf was ruled by Druze *amīrs* of the Maʿn family—chroniclers of the 10th/16th century accordingly called it al-Shūf al-Maʿnī. The Druze chronicler Ḥamza b. Sibāṭ (d. 926/1520) speaks of al-Ashwāf (pl. of al-Shūf), referring probably to the internal subdivision of Iklīm al-Shūf as known to the locals: al-Shūf al-Suydjānī, al-Shūf al-Ḥaytī, and al-Shūf al-Bayāḍī.

In their efforts to bring the Druzes under their control the Ottomans launched a number of expeditions against al-Shūf al-Maʿnī, where Druze resistance was strongest. When these proved too expensive, they arrived in 1001/1593 at a compromise with the local chief, Fakhr al-Dīn al-Maʿnī [*q.v.*] II, whom they appointed *amīr al-liwāʾ* of the Ṣaydā [*q.v.*] *sandjak*. Soon Fakhr al-Dīn controlled not only the Greater Shūf, now often called Djabal al-Durūz, but also the Biḳāʿ valley, the coastal area between Sidon and Tripoli, northern Palestine and areas in Transjordan. When, inspired by Druze-Maronite unity and a period of economic prosperity, Fakhr al-Dīn tried to establish political autonomy, the Ottomans put an end to his rule in 1042/1633, and his successors controlled only a small part of al-Shūf.

In 1108/1697 the only candidate of the Maʿnī family for the *imāra* of al-Shūf preferred to serve in the Porte's bureaucracy, upon which, in order to maintain the political regime of the *imāra*, the Druze chiefs invited the Sunnī Shihāb family to rule as *amīrs*. Though the area continued to be called Djabal al-Durūz until the beginning of the 19th century, successive waves of immigrants from the north since the time of Fakhr al-Dīn II transformed the demography of al-Shūf, so that by 1800 Christians made up the majority of the population. The conversion in the 1750s to Christianity of part of the Shihābīs and the Abu 'l-Lamʿīs, the Druze rulers of al-Matn and al-Shūf al-Bayāḍī, meant the end of Druze supremacy and the rise of the star of the Maronites.

When, at the beginning of the 19th century *amīr* Bashīr Shihāb [*q.v.*] expanded his rule to Kisrawān, Djubayl, Batrūn and Djbbat Bsharrī, the *amīr* of al-Shūf came to be called *amīr Djabal Lubnān*, i.e. *amīr* of the whole of Mount Lebanon. No longer the *primus inter pares* of the *muḳāṭaʿdjīs* [see MUḲĀṬAʿA] of al-Shūf, Bashīr took advantage of their factionalism in order to consolidate his own power. Demographic changes, Druze factionalism, increasing European trade with Mount Lebanon, a strengthening of the political position of the Maronite Church, and Djazzār's and Ibrāhīm Pasha's [*q.vv.*] support for Bashīr are all factors which introduced a shift in al-Shūf's balance of power. In 1841, following the Egyptian withdrawal, sectarian strife broke out between the two communities—the Druze bent on regaining their former position of power, the Maronites seeking to maintain and even reinforce their new-found prosperity. In an effort to solve the conflict, the European Powers and the Ottomans imposed on Mount Lebanon a settlement based on the double *ḳāʾimmaḳāmiyya* [see ḲĀʾIM-MAḲĀM], whereby the districts north of the Beirut-Damascus road came under Christian, and those to the south, i.e. al-Shūf, under Druze administration. However, this settlement proved too fragile and recurring incidents set off a civil war in 1860. Though at first victorious, the Druzes were ultimately defeated because of French intervention—the Druzes left al-Shūf in large numbers to settle as immigrants in Djabal Ḥawrān, soon called Djabal al-Durūz. No longer a centre of political power, al-Shūf soon became integrated into the *mutaṣarrifiyya* [see MUTAṢARRIF] (1861-1918) and, subsequently, the state of Lebanon.

As a result of the civil war which broke out in 1975, by 1983 virtually the entire Christian population had fled from al-Shūf. Again a predominantly Druze area, al-Shūf has become a focal point in the efforts to resettle the refugees from the different regions and thus to find an overall solution for the Lebanese conflicts.

SHUFʿA (A.), lit. "pre-emption", the right of the co-owner to buy out his partner's share which is for sale. Should the property be sold without his approval to a third party, the partner has the privilege to purchase the property, even against the will of the new owner, who should be reimbursed with the price paid. Both Ḳurʾān and *Ḥadīth* are cited by books of *fiḳh* in support of the concept, though the former seems to provide only indirect reference. The Ḥanafīs grant this privilege to the owners of adjacent properties and make it valid not only to non-fungible properties but also to appendages of the property, such as access and water rights. The *Madjalla* definition (art. 950) gives the term the power of "pos-

session" (*tamalluk*). *Shufʿa*, according to the four schools, is restricted to non-fungible property. The Ẓāhirīs extend *shufʿa* to fungible property, including animals, on the basis of the prophetic tradition that *shufʿa* is in "everything". Ibn Ḳudāma interpreted "everything" to mean only what cannot be divided, and he deprived both the *dhimmīs* and the Rafiḍī Shīʿa from the right to *shufʿa*, unlike al-Shāfiʿī and some other scholars, who see the right as general and not affected by faith.

Muḥammad b. Yaʿḳūb al-Aṣamm (d. 957/347) completely rejected *shufʿa* on the grounds that it clashes with the individual's freedom to sell. This could result in the landowner's loss, since no-one would buy knowing that he might lose what he had purchased. Although al-Aṣamm's view is refuted in the *Mughnī*, his view would be better understood if the term were properly defined, for *shufʿa* is not a right but a reason that creates a right.

Shufʿa was retained in many secular laws introduced to Muslim countries, such as the Egyptian, French-based law of 1883. There has been a longstanding legal controversy over whether *shufʿa* is a personal (*ḥaḳḳ shakhṣī*) or real right (*ḥaḳḳ ʿaynī*). Al-Sanhūrī in seeking to resolve the controversy maintained that it is not a right at all, but a cause (*sabab*). He placed *shufʿa*, as a right-making "cause", on a parallel with other causes that create rights, like contracts and inheritance. Although al-Sanhūrī conveyed no opinion as to whether this cause creates a personal or real right, it is evident that Islamic law views *shufʿa* as both a personal and real right, if inheritance is used as a guide. Al-Zuḥaylī, referring to the Ḥanafī school, maintained that the cause (*sabab*) for *shufʿa* "right" is the "adjacency" of the two properties. This adjacency would appear to be only a cause leading to *shufʿa*, which is the actual legal designation (*sabab*) for the right of ownership.

(M.Y. Izzi Dien)

SHUFURWA or Shawarwa, Banū, conventional readings for the name of a family of Ḥanafī clerics and men of letters in Iṣfahān during the 6th/12th century. The name has not been explained and should perhaps be read rather as (Persian) Shaβ-rō "black-face". Although several members of the family are listed in biographical works, the only one about whom we have precise knowledge is Sharaf al-Dīn ʿAbd al-Muʾmin b. Hibat Allāh b. Muḥammad b. Hibat Allāh b. Ḥamza *al-maʿrūf bi-Shawarwa*, a religious scholar who spent time in Damascus and Cairo (where he met Ṣalāḥ al-Dīn) before returning, in 570/1175, to his native Iṣfahān. Al-Ṣafadī quotes a few of his Arabic verses. His name appears as that of the author in at least some of the manuscripts of *Aṭbāḳ al-dhahab*, a little moralising tract in Arabic, a poor imitation of al-Zamakhsharī's *Aṭwāḳ al-dhahab* (printed Būlāḳ 1864 and often; tr. O. Rescher, in his *Beiträge zur Maqâmen-Litteratur*, vii, 1914).

This Arabic writer is perhaps identical with Sharaf al-Dīn Shufurwa, the author of an extant, but unpublished, poetical *dīwān* in Persian, consisting largely of panegyrics to the *atabeg* Djahān-Pahlawān Muḥammad b. Eldügüz, the *de facto* ruler of the Saldjūḳ empire 571-82/1175-86 [see ildeñizids]; he also praises the Saldjūḳid Arslan b. Ṭoghrïl (556-71/1161-76). The Persian anthologists from the time of Djādjarmī onwards give his personal name as ʿAbd al-Muʾmin, evidently identifying him with the above-mentioned cleric, but our earliest authority, Muḥammad ʿAwfī, calls him Sharaf al-Dawla wa ʾl-Dīn Muḥammad Shufurwa, implying that he was in fact a different member of the same family. The same author quotes a few poems by his cousin Ẓahīr al-Dīn ʿAbd Allāh b. Shufurwa. The 7th/13th-century anthology compiled by Djamāl al-Dīn Sharwānī quotes a number of *rubāʿīs* by Sharaf al-Dīn, Ẓahīr al-Dīn and ʿIzz al-Dīn Shufurwa; the last is mentioned also by al-Ḳazwīnī.

Bibliography: ʿAwfī, *Lubāb*, i, 268-74 (with M. Ḳazwīnī's notes and those in S. Nafīsī's ed., 639-47); Djamāl al-Dīn Khalīl Sharwānī, *Nuzhat al-madjālis*, ed. Iḳbāl, *Khānadān-i Shufurwa*, in *Yādgār*, v/6-7 (1327 *Sh*./1949), 108-17; Storey-de Blois, v/2, 539-43, 561-2 (with further literature).

(F.C. de Blois)

SHUGHNĀN, Shighnān, a district on the upper Oxus, there known as the Pandj River, extending over both banks from where the river leaves the district of Wakhān [*q.v.*] and turns directly northwards before flowing westwards again. The left bank part of Shughnān now falls within the Afghān province of Badakhshān [*q.v.*] and the right bank one within the Pamir region of the former USSR, a division likewise reflected in the districts of Ghārān immediately to the north of Shughnān and Rawshān to its south. The whole district is extremely mountainous, with the lowest parts, the valley bottoms, at an altitude of 1,828 m/6,000 feet, and with the pass over the Shughnān range of mountains in the Pamir, which separates the Ghund (Russ. Gunt) valley on its northern edges from the Shakh-dara (Russ. Shakh-darinskiy) range (which rises to 6,726 m/22,060 feet) being at 4,267 m/14,000 feet. The Tādjīk population is very sparse and confined to the valley bottoms.

The name of the region has various spellings in the medieval Islamic geographers, including Shiḳ(i)nān, Shik(i)nān, Shiḳīna, Shikīna. The form شكينه "a large village" of the *Ḥudūd al-ʿālam*, tr. Minorsky, 112, perhaps points to Shaḳīna, which the translator thought was probably the later Ishkāshim (see below). In the travel account of the Buddhist monk Hiuen-tsang (early 7th century A.D.) and in the T'ang dynastic annals, Shughnān appears as Shi-k'i ni (E. Chavannes, *Documents sur les Tou-kioue occidentaux*, St. Petersburg 1903, 152); in 646, envoys from Shughnān visited the Imperial court. In the period shortly afterwards of the Arab conquest of Central Asia, its ruler was a vassal of the Yabghu who ruled the whole upper Oxus region. The Arab geographers attach it administratively to Badakhshān or Ṭukhāristān [*q.v.*], and al-Yaʿḳūbī, *Buldān*, 292, tr. Wiet, 109, speaks of the local ruler as (?) Kh.mār Beg (cf. Barthold, *Turkestan down to the Mongol invasion*³, 65; Marquart, *Ērānšahr*, 223,

225). In the late 13th century, Marco Polo mentions the mining of "Balas" rubies in the mountains of Syghinan, although it is actually in the adjacent district of Ghārān that the abandoned mines can be seen (Yule-Cordier, *The Book of Ser Marco Polo*³, London 1902, i, 157).

Al-Ya'kūbī also mentions, 304, tr. 133, that the Barmakī al-Faḍl b. Yaḥyā conquered Shughnān in the caliphate of Hārūn al-Rashīd, but it is dubious whether Islam was permanently introduced there at this time. This seems more likely to have been the work of Nizārī Ismā'īlī *dā'īs* or propagandists, sent to Badakhshān by the Grand Masters in Alamūt, amongst whom is mentioned a Sayyid Shāh Malang Khurāsānī and, in the 7th/13th century, the Ḥusaynid Sayyid Shāh Khāmūsh Shīrāzī. This brought about the permanent presence of Khōdja Ismā'īlism in the upper Oxus region, and in Shughnān, Ismā'īlī *pīrs* and *mīrs* ruled hereditarily till the 19th century (see Farhad Daftary, *The Ismā'īlīs: their history and doctrines*, Cambrige 1990, 27, 441, 486-7, noting also the preservation there of Ismā'īlī works in manuscript, some of them brought back to Dushanbe by the Soviet research expedition to the region in 1959-63). The Amīrs of Kābul Shīr 'Alī Khān and 'Abd al-Raḥmān Khān endeavoured to bring Shughnān under their sway, so that towards the end of the 19th century the local people appealed to the Amīr of Bukhārā and to the Russian Governor-General of Turkestan. In March 1895, after diplomatic negotiations in London involving Russia and Great Britain, the Afghāns agreed to evacuate the right bank of the Pandj river, whilst the Amīr of Bukhārā relinquished his possessions in Darwāz on the left bank to the north of Shughnān.

Russian authority in the district was exercised from 1895 onwards from Khārāgh (Russ. Khorog) where the Ghund and Shakh-dara rivers join the Pandj, but the shock waves of the Bolshevik Revolution were felt even in Shughnān, and Bolshevik forces took over the Pamir region in November 1920. Right-bank Shughnān eventually became part of the Gorno-Badakhshaya Autonomous Oblast in the eastern part of the Tadzhikistan SSR (now the Tadjikistan Republic), whilst left-bank Shughnān remained part of the Afghān *wilāyat* or province of Badakhshān. Afghān Shughnān contains the settlement of Ishkāshim, on the left bank of the Pandj and commanding the only winter route between Badakhshān and the trans-Oxus districts of Shughnān and Wakhān; it was here that the English traveller John Wood crossed the Oxus ice in 1837 (*A journey to the source of the River Oxus*², London 1872, 204-6; see also C.E. Bosworth, *EIr* art. *Eškāš(e)m*).

Finally, one should note the presence in Shughnān of speakers of the Modern East Iranian Pamir language, Shughni, with its component dialects of Shughni, Bajui, Khufi, Roshani, Bartangi, Oroshori and Sarikoli (see G. Morgenstierne, *Etymological vocabulary of the Shughni group*, Wiesbaden 1976; J.R. Payne, *Pamir languages*, in R. Schmitt (ed.), *Compendium linguarum iranicarum*, Wiesbaden 1989, 417-44; ĪRĀN. iii. Languages, in Suppl.).

SHUKĀ'Ā or SHUKĀ' (A.) is the thistle.

The word is a collective term used to indicate various more or less spiny plants, comprising mainly species and types of the *Compositae*, but also of other families. Mention should be made above all of *Carduus* and *Cirsium*, each with numerous types, further *Sonchus, Onopordon, Centaurea, Cnicus, Carthamus* and others. The whitethorn of Dioscurides (ἄκανθα λευκή, *al-shawka al-bayḍā'*) is defined by Ibn Djuldjul [*q.v.*] with *shukā'ā* (*Dioscurides triumphans*, iii, 13, see *Bibl.*), but this is hardly justifiable because the latter term simply indicates the thistle. The white acanthus therefore is mostly rendered with *bādhāward*, which in *Dioscurides triumphans*, iii, 14, should be the Arabic acanthus (ἄκανθα 'Αραβική, *al-shawka al-'arabiyya*), which in its turn appears just as often as *shukā'ā*. *Shukā'ā* and *bādhāward* are often "compared" with one another, not identified. Only tentatively may it be assumed that with the white acanthus *Onopordum acanthium L., Compositae*, is perhaps also meant *Cirsium ferox L.* and variants. This type spreads its leaves rosette-like, which fits the botanical description (*op. cit.*). As synonyms are also found Romance *ṭūb(a)* (from latin *tubus*), so-called because of its high stalk, with which fire is fanned (*op. cit.*, iii, 71), further *ibrat al-rā'ī* ("shepherd's needle") or *ibrat al-rāhib* ("monk's needle") because of the pointed thorns, and the Berber words *ayfd* and *tāfrūt*. It cannot be determined whether these and other words indicate synonyms or other types of the thistle; cf. Renaud's explanations on *Tuḥfat al-aḥbāb* no. 457, and those by Meyerhof on Maimonides' *Sharḥ asmā' al-'uḳḳār*, no. 362.

As for *shukā'ā* as a medicine, if put on children's pillows, the thistle stills the saliva which flows from their mouths. If applied as a compress, the thistle is good for hemiplegia (*fālidj*), and if pulverised, it helps against swellings which occur at the backside, and it cicatrises putrefying ulcers. Ashes of the thistle slow down chronic dyscratic moistures (*al-ruṭūbāt al-muzmina*), which flow from the womb.

SHUKR (A.), thankfulness, gratitude; acknowledgment (pl. *shukūr*); it also has the meaning of praise, which is gratefulness with the tongue.

1. As a religious and mystical concept.

As a Ṣūfī term for an internal state and its external expression, *shukr* is a station (*maḳām*) of the wayfarer (*sālik*) and has all the above meanings when referring to human beings.

However, *shukr* on the part of God signifies the "requiting and commending [a person]" or the "forgiving" a man: or the "regarding" him "with content, satisfaction, good will", or "favour": and hence, necessarily, the "recompensing", or "rewarding, him". The saying *shakara 'llāhu sa'yahu* signifies "May God recompense, or reward, his work or labour" (Lane).

In the Ḳur'ān, God is *al-Shākir* (II, 158; IV, 147) and *al-Shakūr* (XXXV, 29-30; XXXV, 34; XLII, 23; LXIV, 17) the latter also being one of His Most

Beautiful Names, meaning "He who approves, or rewards, or forgives, much, or largely; He who gives large reward for small, or few works; He in whose estimation small, or few, works performed by His servants increase, and who multiplies His rewards to them" (Lane). God is *al-Shakūr* "in the sense of widely extending His favours, not (thankful) in a literal sense", giving thankfulness for thankfulness, "just as He has stated, 'The recompense for an offense is one equal thereto' (XLII, 40)" (al-Ḳushayrī, 384, tr. Von Schlegell, 132). "Only God ... is absolutely grateful, because His multiplication of the reward is unrestricted and unlimited, for there is no end to the happiness of paradise" (see LXIX, 24) (al-Ghazālī, tr. of *al-Maḳṣad*, 101) "The one who rewards a good deed manifold is said to be grateful for that deed, while whoever commends the one who does a good deed is also said to be grateful" (*ibid.*). So God's reward, His praise for a good deed is praise for His own work, "for their works are His creation" (*ibid.*).

As for human beings, whose qualities are derived from the divine qualities "the thankful one (*al-shākir*) is he who is thankful for what is, and the very thankful one (*al-shakūr*) is he who is thankful for what is not" (al-Ḳushayrī, 385, tr. Von Schlegell, 134).

The importance of *shukr* is clearly expressed in XIV, 7: *And when your Lord proclaimed: "If you are thankful, surely I will increase you, but if you are thankless, my chastisement is surely terrible"*. It is called the key to Paradise on the basis of XXXIX, 74: *And they shall say: "Praise belongs to God, who has been true in His promise unto us, and has bequeathed upon us the earth, for us to make our dwelling wheresoever we will in Paradise! How excellent is the wage of those that labour!"*

Al-Ghazālī in his *Iḥyā'* has a comprehensive chapter on *ṣabr* [*q.v.*] and *shukr*, which are characterised as the two parts of *īmān* (which equals *yaḳīn*, see al-Makkī, 421) which support and complement each other, *ṣabr* being the precondition for *shukr*. Since these are divine qualities and yield two of God's Most Beautiful Names (*al-Ṣabūr, al-Shakūr*), ignoring them means ignoring not only *īmān* but also the qualities of God.

Since al-Ghazālī uses the material of the important Ṣūfī compendiums (mainly al-Ḳushayrī and al-Makkī; see Gramlich, *Stufen zur Gottesliebe*, 4 ff.), structuring it in a clear, logical order with many additions and clarifying similes of his own, this comprehensive chapter will be used here as a basis.

Although mentioned in different ways before, it was one of al-Ghazālī's most important original ideas to give a clear exposition of the three parts of *shukr*: (1) *ʿilm*, "knowledge", (2) *ḥāl*, "(the right) state" and (3) *ʿamal* "acting", and their interrelation with each other.

(1) Knowledge is the real understanding that nothing except God has existence in itself, that the whole universe exists through Him and that everything that happens to a person (including afflictions) is a benefaction from Him. This leads to knowledge of God and His acts, *tawḥīd* [*q.v.*], and the ability to thank Him which also is a divine benefaction requiring gratitude. Constant awareness of this connects the term with invocation (*dhikr*), and those who have gratitude in every situation are those who give praise (*ḥāmidūn*). *Shukr* as knowledge of the impossibility of really thanking God is expressed in the words of Moses: "O Lord, how can I thank you while being unable to thank you except with a second benefaction from you?" God's answer is: "If you know this, you have already thanked me" (*Iḥyā'*, iv, 83, l. 16) Whoever has this knowledge in its absoluteness is a pure *shākir*.

(2) Deriving from this knowledge is the second part of *shukr*, the state of joy in the benefactor (not in the benefaction or the act of grace), with the attitude of *khuḍūʿ* "humility" and *tawāḍuʿ* "modesty". Joy in the benefactor, not for Himself but for the caring that prompted Him to give is the state of the *ṣāliḥūn* [*q.v.*] who are grateful for fear of punishment and hope for reward. The highest degree of the state of joy lies in using the benefaction as a means to reach God's presence and gaze at His face eternally (al-Shiblī: "*Shukr* means vision (*ruʾya*) of the benefactor, not vision of the benefaction" [*Iḥyā'*, iv, 81, l. 23]). Thus *shukr* is connected to *dhikr*, the only healthy state of the heart (sūra II, 152: *Therefore remember Me, I will remember you, give thanks to Me and reject Me not*).

(3) The action in accordance with the state of joy deriving from complete knowledge of the benefactor has three aspects: the (hidden) action of the heart which is intending the good; the (manifest) action of the tongue which is praise of God; and the action of the members of the body, which is using them in obedience for Him and as a means against disobedience as expressed in *shakwā* "complaint", which is thereby diametrically opposed to *shukr*.

Ignorance of the real meaning of *shukr* as explained above, and thus neglect and misuse of God's benefactions, is *kufr*. The increasing proximity to God through *shukr* and the increasing distance from God through *kufr* is expressed in sūra XCV, 4-6: *We indeed created man of the fairest stature. Then We restored him to the lowest of the low—save those who believe, and do righteous deeds; they shall have a wage unfailing.*

Understanding of the difference between *shukr* and *kufr*, which, ultimately, has to be an understanding with the heart, is based on knowledge of all the principles of the religious law brought about by hearing the verses/signs of God and relying on them, which cannot be done without the prophets sent by God. Through this, God's wisdom in all existing things and the true meaning of His benefaction and its different kinds can be understood, which leads to seeing with the eye of certainty.

(Alma Giese)

2. As a factor in public life and in the principles of law.

In earliest Arabic the term seems to refer to a public proclamation of gratitude or debt. In later Arabic, the term refers also to the affective state of feeling grateful, and is usually tied to the concepts of *niʿma* (benefaction) and *riḍā'* (contentment/satisfaction).

In the *Kitāb al-Aghānī*, the poet Ḥuṭay'a [*q.v.*] is spared by Zayd al-Khayl and "when al-Ḥuṭay'a returned to his people he began praising Zayd,

proclaiming (*shākir*[an]) his benefaction (*li-niʿmatihi* ...) (Cairo 1389/1970, xvii, 266 ll. 4 ff.)". Here and elsewhere (e.g. *Naḳāʾiḍ Djarīr wa ʾl-Farazdaḳ*, ed. Bevan, 671-2, 740, 1063) this complex of ideas suggests that sparing life, particularly, evoked a public declaration of gratitude to the benefactor; the relationship thus acquired required some sort of acknowledgment or repayment so that the benefactor was contented. Refusing to acknowledge this benefaction, ingratitude, in this context, was called *kufr*.

In the principles of jurisprudence (*uṣūl al-fiḳh*), the concept of thanking the benefactor (*shukr al-munʿim*) was an occasion for controversy: those who believed that the intellect (*ʿaḳl*) contains certain sorts of natural moral knowledge considered "thanking the benefactor" one of the indubitable items of *ʿaḳlī* knowledge—like the value of equity (*al-inṣāf*) or the reprehensibility of falsehood. Thanking is thus one of the items of moral knowledge known "before the arrival of the *sharʿ*" in the view of the Muʿtazila, some early Shāfiʿīs, Ḥanbalīs, and, even, later Ḥanafīs. Ashʿarīs and later Shāfiʿīs and Ḥanbalīs denied that such natural knowledge was possible, and al-Ghazālī, in his *Mustasfā* argues that God might have ordained indifference to benefactions, or might have seen feeble efforts to thank Him as impertinent (i, 61). Despite the disparagement of *shukr* as a piece of natural knowledge, all conceded that it was, after the arrival of the *sharʿ* or revelation, an important element of piety (see al-Kharāʾiṭī, *Kitāb Faḍīlat al-shukr, passim*). It was also an important concept in the construction of artificial social relations, particularly of commander and soldiery (see Mottahedeh, *Loyalty and leadership*, index, s.v. "thanking the benefactor").

SHUKRĪ, ʿAbd al-Raḥmān (1886-1958), Egyptian poet, writer, educator and critic of North African origin whose grandfather settled in Egypt. Shukrī was born in Port Said and graduated from secondary school in Alexandria in 1904. His grandfather as well as his father were nationalists active in Egyptian political life. Shukrī befriended his father's friend ʿAbd Allāh al-Nadīm [*q.v.*] and backed Saʿd Zaghlūl [*q.v.*]. He defended the Egyptian revolution with an anti-British poem which caused his expulsion from the Law College (1906). On the advice of Muṣṭafā Kāmil [*q.v.*], he joined the High School for Teachers, where he studied Arabic and English literatures. There he met the poet Ibrāhīm ʿAbd al-Ḳādir al-Māzinī [*q.v.*], who reviewed in *al-Dustūr* Shukrī's first romantic *dīwān*, *Ḍawʾ al-fadjr* ("The light of dawn") (1909). This *Dīwān* contained narrative, romantic and meditative poems dealing with life, love and soul; one of its poems was written in blank verse (*shiʿr mursal*).

As a successful student, Shukrī was sent to study English Literature at Sheffield University, where he got his B.A. degree in literature and history, a period (1909-12) which left a great impression upon his personality and poetry. There he learnt to admire the English Romantics, whose influence upon Shukrī equalled that of the great poets of the ʿAbbāsid period. After his return from England he published his second *dīwān*, *Laʾāliʾ al-afkār* (1912), which reflected the same tendencies as his first one. In the introduction to his third *dīwān*, *al-Khaṭarāt* ("Notions") (1916), he expressed his new understanding of poetry as a humanistic, spiritual and intellectual experience, and criticised the conventional judgement of poetry that it should resort to falsehood and fancy (*tawahhum*) as opposed to imagination (*takhayyul*).

Shukrī now worked as a teacher of English and Arabic literature. It was during that period that he, together with his friends al-ʿAḳḳād [*q.v.* in Suppl.] and al-Māzinī, formed a group of poets and critics who defended the English Romantic trend of poetry and its critical views and was known as *Madrasat al-Dīwān*. This group opposed what they considered as the bad influence of French literature because of its sentimentality, rhetorical tendencies and lack of organic unity. The group denounced composing poetry in conventional genres such as elegy, eulogy, panegyric and defamation, and strove against the *ḳaṣīda*'s embellished style and stereotyped themes as revived by the neo-classical poets such as Aḥmad Shawḳī and Ḥāfiẓ Ibrāhīm [*q.vv.*].

In 1916 the solidarity of this school was shaken when Shukrī accused al-Māzinī of plagiarism from English Romantic poetry in the introduction to *al-Khaṭarāt*. In 1921 al-Māzinī retaliated by charging Shukrī with plagiarism of ideas and metaphors from English poetry and by accusing him of tendencies to madness, as reflected in his *al-Iʿtirāfāt* ("Confessions") (1916).

Between 1909-19 Shukrī published seven *dīwān*s and five books, but after 1919 there was a long interval of silence. It was only in 1936 that he started writing some articles on education, psychology and literature in periodicals such as *al-Risāla*, *al-Thaḳāfa*, *al-Hilāl* and *al-Muḳtaṭaf*. During 1934-8 Shukrī worked as a principal in a secondary school and an Inspector at the Ministry of Education, retiring in 1938 to Port Said and dying in 1958.

Shukrī experimented widely with the new forms of poetry, and composed unrhymed verses, using monometre and monorhyme, but did not notice the importance of using enjambement. The deviation of Shukrī's poetry from the neo-classical trend was in his narrative, romantic and meditative poems, in which he avoided using conventional images of classical Arabic poetry. His approach can be seen in his collected eight volumes of poetry published posthumously in Alexandria in 1960 in 666 pages.

(S. Moreh)

SHÜKRÜ (i.e. **SHÜKRĪ**) **BEY**, Aḥmed (1875-1926), son of Ibrāhīm, Young Turk politician, was born in Kastamonu, near the Black Sea, into a poor family.

Shükrü graduated from the teachers' training college in Istanbul and started out on a career in education, serving both as a teacher himself and as director of education. He joined the underground opposition movement of the Committee of Union and Progress (*Ittiḥād we Teraḳḳī Djemʿiyyeti* [*q.v.*]) before the constitutional revolution of July 1908. After the revolution, he served as the district governor of Siroz [*q.v.*] and spent some time at the home office, but he came to the fore as Minister of Education from 1913 to 1918. During this time he was very successful in raising the number of schools (including those for girls) and enlarging and improving the University and the teachers' training establishments (from 1915 onwards, with the help of German specialists). He also devoted much attention to the publishing of teaching materials. He came into conflict with the Sheykh al-Islām Khayrī Efendi when he tried to unify all education under the jurisdiction of his ministry and put an end to the independent status of the *Awḳāf* schools, but gradually got his way. Some enlightened Ottoman educators such as Khālide Edīb (Adıvar) accused him of being interested in quantity, i.e. in raising the number of pupils, rather than in quality.

After the First World War, he was among the first prominent Young Turks to be deported by the British, first to Lemnos (May-September 1919) and thence to Malta, for internment there. Together with fifteen others, he escaped in September 1921 and made his way back to Turkey. After his return, he first served on the provincial council in Izmit and was then appointed governor of Trabzon province by the nationalist leadership in Ankara. In April 1923 he played a prominent role in the attempts of a group of former Unionists led by Ḳara Kemāl, the former party boss in Istanbul, to revive the C.U.P., which had been disbanded in 1918. Nevertheless, in August 1923 he was elected to the second Grand National Assembly as representative of Izmit in the interest of Muṣṭafā Kemāl Pasha's People's Party (*Ḥalḳ Fïrḳasï*).

In November 1924 he resigned from this party to be among the founders of the opposition Progressive Republican Party (*Teraḳḳīperwer Djumhuriyyet Fïrḳasï*), which was closed down by the Kemālist government in June 1925. In 1926 he was among those accused of planning to assassinate the President of the republic. He was tried and convicted by the Independence Tribunal and hanged in Izmir on 13 July 1926.

SHŪL. 1. The name of a land and a city in China mentioned in the mediaeval Arabic geographer Ḳudāma b. Djaʿfar [*q.v.*], 264, here borrowing material from the lost part of his predecessor Ibn Khurradādhbih [*q.v.*]. According to Ḳudāma, Alexander the Great, in company with the Emperor of China, went northwards from China and conquered the land of Shūl, founding there two cities, Kh.mdān and Shūl, and ordering the Chinese ruler to place a garrison (*rābiṭa*) of his troops in the latter place.

Khumdān is well-attested in other Islamic sources (e.g. Gardīzī; Marwazī, tr. Minorsky, 25-6, comm. 71, 84), and usually identified with the capital of the T'ang dynasty, Č'ang-an-fu, later Hsi-an-fu, lying on the Weiho, a right-bank affluent of the Huang-ho and already mentioned in a 6th century Byzantine source as Χουμαδάν or Χουβδάν, cf. *Ḥudūd al-ʿālam*, tr. Minorsky, 84, comm. 229, 231. Shūl, however, has not been satisfactorily identified. Marquart, *Streifzüge*, 90, and *Ērānšahr*, 316, saw in it Turkish *čöl* "steppe, plain, desert", a translation of Chinese *sa-ču* "sandy settlement", the Sachiu in Tangut of Marco Polo (Yule-Cordier, *The Book of Ser Marco Polo*[3], i, 203, 206). But according to Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 420, *čöl* is a loanword from Mongolian not traceable in Turkish before the Čaghatay period. One might conceivably identify Shūl with the Čülig of the Orkhon [*q.v.*] inscriptions, a country listed as one which sent representatives to the Kaghan Ishtemi's funeral, and, if the list is in geographical order, Čülig lay between Korea and China (Clauson, *loc. cit.*). Finally, one may remark that the suggestion at the end of the *EI*[1] art. shūl that the Shūl of the Arab geographers may refer to a colony of Soghdians is dubious; one might more pertinently mention that the town of Kāshghar [*q.v.*] in eastern Turkestan appears as Shu-lê in Chinese and Shulig in Tibetan (cf. Minorsky, *op. cit.*, comm. 280, who also notes at 225 various emendations that have been made of the reading *sh.w.l*). It seems impossible to reach any certainty regarding the whole question.

Bibliography: Given in the article. (C.E. Bosworth)

2. A Lur tribe of southern Persia [see shūlistān].

SHŪLISTĀN, literally, "land of the Shūl" [see shūl. 1. above], a district, formerly a *bulūk*, in the southern Persian province of Fārs.

Three epochs must be distinguished in the history of the district: one before the arrival of the Shūl, the period of their rule (from the 7th/13th centuries), and the period of its occupation by the Mamassanī Lurs about the beginning of the 12th/18th century.

During the Sāsānid period, the district was included in the *kūra* of Shāpūr-khūra. The founding of its capital Nawbandagan (Nawbandjān) is attributed to Shāpūr I. This important town situated on the road from Fārs to Khūzistān was taken by ʿUthmān b. Abi 'l-ʿĀṣ in 23/643 (Ibn al-Athīr, iii, 31); it is often mentioned by Arabic historians and geographers [see further, nawbandadjān]. The district is watered by the river system which finally forms the river Zohra, which flows through Zaydūn and Hindiyān. In the old *Fārs-nāma* (151) the river of Nawbandjān bears the name Khʷābdān. The river system is described in detail in *Fārs-nāma-yi Nāṣirī*, ii, 326; the principal water-course comes from the direction of Ardakān and is now called Āb-i Fahliyān or Āb-i shūr.

The description of Fārs (*Fārs-nāma*) composed in the life-time of the Atabeg Čawulī (early 6th/12th century) does not yet know the expression *Shūlistān*, that is to say, "the country of the Shūl". This last tribe at first inhabited Luristān [*q.v.*], of which the half was under its rule about 300/912. The great chief (*pīshwā*) of the Shūl was Sayf al-Dīn Mākān Rūzbihānī, whose ancestors had governed the district from the time of the Sāsānids. We may here mention that the Rūzbihānī figure among the Lur tribes. At the same time as this *pīshwā*, Ḥamd Allāh Mustawfī mentions a governor (*ḥākim*) of the *wilāyat* of the Shūl, who was called Nadjm al-Dīn. From the year 500/1106, the Kurd tribes and others from Djabal

al-Summāḳ (in Syria) began to move into Luristān. From these Kurds the dynasty of the Atābegs of the Great Lur [see LUR-I BUZURG] is sprung. Under the Atābeg Hazārasp (600-50/1203-52) the newcomers drove the S͟hūl back into Fārs.

Towards the end of the 13th century, Marco Polo (Yule-Cordier, i, 83-5) mentions amongst the eight "kingdoms" of Persia, *Suolestan*, which may refer to the new territory around Nawband͟jān occupied by the S͟hūl. The old Chinese map studied by Bretschneider (*Mediaeval researches*, ii, 127) marks a *S͟he-la-tsz'* between S͟hīrāz and Kāzarūn, which must correspond to S͟hūlistān. Although the Muslim historians were ignorant of the S͟hūl dynasty, the tribe in the time of Mustawfī had hereditary governors, the descendants (*nawādakān*) of Nad͟jm al-Dīn Akbar. A new administrative centre replaced Nawband͟jān: during the campaign of 795/1393 Tīmūr halted at Mālāmīr-i S͟hūl ("the estates" of the Amīr of the S͟hūl being thus distinguished from Mālāmīr = Īd͟had͟j [*q.v.*]); the position of this place between two water-courses, corresponds to Fahliyān which is now the capital of the district.

The S͟hūl must form an ethnically distinct unit. The history of the Kurds by S͟haraf al-Dīn only mentions them incidentally perhaps because the author excluded them from his category of "Kurds". Ibn Baṭṭūṭa (ii, 88), who in 748/1347 met S͟hūl at S͟hīrāz and on his first stage on the road from S͟hīrāz to Kāzrūn (Das͟ht-i Ard͟jan?), calls them "a Persian tribe (*min al-aʿād͟jim*) inhabiting the desert and including devout people". The Persian dictionaries mention a peculiar dialect *S͟hūlī* (Vullers, ii, 481: "a kind of *Rāmandī* and *S͟hahrī* which is spoken in Fārs"). S͟hihāb al-Dīn Ibn Faḍl Allāh al-ʿUmarī (who died in 749/1348) states that the S͟hūl have very considerable affinities with the S͟habānkāra [*q.v.*] and asserts their generosity and hospitality. Their warlike character is evident from the remark of Ras͟hīd al-Dīn, who in speaking of the Tātārs, capable of killing one another "for a few words", compares them to the Kurds, the S͟hūl, and the Franks (ed. Bérézine, vii, 62). In 617/1220 the Atābeg of Luristān Hazārasp advised Muḥammad K͟hʷārazms͟hāh to entrench himself behind the chain of Tang-i Talū (Balū? "oak") and to mobilise there against the Mongols, 100,000 Lurs, S͟hūl, the people of Fārs and S͟habānkāra" (D͟juwaynī, 114, tr. Boyle, ii, 383). Ras͟hīd al-Dīn (ed. Quatremère, 380) mentions amongst the valiant defenders of Mawṣil in 659/1260 "the Kurds, the Turkomans and the S͟hūl".

Established on the great road, the S͟hūl nomads were themselves exposed to invasions; the Atābeg of Luristān Yūsuf S͟hāh (673-87/1274-88) attacked them and killed the brother of their chief Nad͟jm al-Dīn (*Taʾrīk͟h-i Guzīda*, 343); in 755/1354 the Muẓaffarid S͟hāh S͟hud͟jāʿ chastised them severely when they attacked S͟hīrāz (*ibid.*, 660); in 796/1394 ʿUmar S͟hayk͟h marching in the rear-guard of his father Tīmūr pillaged on his way all the unsubdued "Lurs, Kurds and S͟hūl" (*Ẓafar-nāma*, 615).

The nomad (or semi-nomad) state and the warlike character of the S͟hūl, the similarity of their speech to Persian, the inroads of their neighbours, all these factors must have contributed on the one hand to the dispersion of the S͟hūl and on the other to their assimilation and final absorption.

In modern Persia, the only traces of the S͟hūl are to be found in the toponomy of Fārs, where there exist in the *s͟hahrāstāns* of S͟hīrāz and Būs͟hahr several villages with S͟hūl as an element of their names (see Razmārā (ed.), *Farhang-i d͟jug͟hrāfiyā-yi Īrān-zamīn*, vii, 142-3).

At the time of the last Ṣafawids (*Fārs-nāma-yi Nāṣirī*, ii, 302) or after the rise of Nādir (Bode, i, 266) S͟hūlistān was occupied by new invaders, the Mamassanī Lurs, after whom the district became called *bulūk-i Mamassanī*. Its extent was then about 100 by 60 miles, between the following boundaries: to the east Kāmfīrūz and Ardakān; to the north and to the west Razgird and the country of the Kūh-Gālūʾī (Kūh-Gīlūya) Lurs; to the south Kāzrūn and the mountain of Marra-S͟higift (the northern slopes of the Marwak in Das͟ht-i Ard͟jan). Of the six cantons of the district four (*čar-bunīča*) bore the names of Mamassanī clans: Bakes͟h, D͟jāwīdī, Dus͟hmanziniyārī and Rustam. In these cantons there were 58 villages and 5,000 families. The clans were governed by their hereditary *kalāntars*. The Mamassanī claimed to possess the annals of their tribe and said that they came from Sīstān (J. Morier, in *JRGS* [1837], 232-42); this legend must have attached itself to the name of Rustam, the name of one of the four clans. The language of the Mamassanī is a Lurī dialect.

S͟HŪMĀN, a district of the upper Oxus region mentioned at the time of the Arab invasions. It lay near the head waters of the Kāfirnihān and Surkhān rivers, hence in the upper mountainous parts of Čag͟hāniyān and K͟huttalān [*q.vv.*]. In Chinese sources such as Hiuen-Tsang, it appears as Su-man. In al-Tabarī, ii, 1179, 1181, where the conquests of the governor Kutayba b. Muslim [*q.v.*] in upper K͟hurāsān during 86/705 are being described, S͟hūmān is linked with Ak͟harūn or K͟harūn as being under a local prince, whose name seems to be the Iranian one *Gus͟htāspān. By 91/710, however, he was in revolt against Kutayba (*ibid.*, ii, 1227-8, 1230), necessitating a punitive expedition by the Arabs.

It appears in the 4th/10th century geographers as

a town with a strong citadel and as supplied with well-endowed *ribāṭs* (presumably against the pagan Turks to the north and east) (see e.g. Ibn Ḥawḳal, ed. Kramers, 455, 477, tr. 439, 459; *Ḥudūd al-ʿālam*, tr. 115, 120). It seems to be Shūmān which is mentioned in Tīmūrid sources, e.g. Sharaf al-Dīn ʿAlī Yazdī, as Ḥiṣār Shādmān, which Le Strange, *Lands of the Eastern Caliphate*, 439-40, took to be the later town Ḥiṣār.

(C.E. Bosworth)

SHUMAYM, Abu 'l-Ḥasan ʿAlī b. al-Ḥasan b. ʿAntar al-Ḥillī, best known under his Sibylline surname of Shumaym, usually without the definite article, littérateur of mediaeval ʿIrāḳ (511-601/1117-1204).

Originally from the Mazyadid centre of al-Ḥilla [*q.vv.*], he later moved to Baghdād where he studied and tried to earn his living, but we know very little of this period of his life. In any case, he did not stay there long but preferred to move to Syria and Diyār Bakr, where he found generous patrons whom he eulogised in return for substantial presents; finally, he settled at Mawṣil, where he died.

He had a certain talent, seen in both poetry and artistic prose, leaving behind an abundant and rather interesting œuvre. On the pattern of Abū Tammām, he composed a *Ḥamāsa* or poetical anthology, but this was largely made up of his own verses, with little regard for the great mass of poets and prose writers, including the best of these, apart from a few exceptions. He tried to rival Abū Nuwās, whose highly-appreciated wine poetry could not, he affirmed, stand comparison with his own; and Abu 'l-ʿAlāʾ al-Maʿarrī, for example, was nothing but a "blind dog" (see *Shadharāt*, v, 5). The only authors to find grace in his eyes were al-Mutanabbī, above all in regard to his eulogies, Ibn Nubāta for his sermons (*khuṭab*) and al-Ḥarīrī for his *Maḳāmāt*. Moreover, Shumaym al-Ḥillī, "who made out that he had surpassed all other literary works, conceded that, despite various attempts, he could not compose *maḳāmāt* better than those of al-Ḥarīrī, which stimulated him to write a commentary on them" called *K. al-Nukat al-muʿdjamāt fī sharḥ al-maḳāmāt*. Amongst numerous works attributed to him may be mentioned an *Anīs al-djalīs fi 'l-tadjnīs*, *Manāḳib al-ḥikam wa-mathālib al-umam*, *al-Mukhtāra fī sharḥ al-Lumaʿ* (of Ibn Djinnī), *al-Amānī wa 'l-tahānī*, *al-Taʿāzī wa 'l-marāzī* and *al-Manāʾiḥ wa 'l-madāʾiḥ*.

Apart from his boastful self-satisfaction, most of the biographers agree upon stressing his extravagant character. Yāḳūt went to see him in 594/1198 at Āmid [*q.v.*], the main city of Diyār Bakr; in the course of this meeting, he asked him to recite some of his own verses, which triggered off great praise on the part of Yāḳūt. But the latter was then scolded by Shumaym, who said to him, "Shame on you! Do you not know anything better than praise?". "What more then should I do?", replied Yāḳūt, which brought forth the reply, "Well, you should do this" (and he began to dance and clap his hands until he was exhausted).

Yāḳūt (*Irshād*, ed. Margoliouth, v, 129-39, ed. Cairo 1928, xiii, 50-72) gives in his section on the poet a somewhat unsavoury explanation of the poet's *laḳab* or nickname deriving it from *shamma* "to smell [something]".

(A. Ben Abdesselem)

SHUMAYṬIYYA or Sumayṭiyya (also Shumaṭiyya or Sumaṭiyya), a Shīʿī sect whose name is derived from that of one of its heads, a certain Yaḥyā b. Abi 'l-Shumayṭ. The sect recognised as *imām* and successor of Djaʿfar al-Ṣādiḳ [*q.v.*] his youngest son Muḥammad, who not only bore the name of the Prophet but also is said to have resembled him physically. After the failure in 200/815 of the Shīʿī rebellion of Abu 'l-Sarāyā [*q.v.*] in Kūfa against the caliph al-Maʾmūn (al-Ṭabarī, iii, 976 ff.), Muḥammad b. Djaʿfar, who then lived in Mecca as an old man, was urged by his followers to proclaim himself imām and caliph and was rendered homage in front of the Kaʿba on 6 Rabīʿ I 201/2 October 816. But when he was defeated by ʿAbbāsid troops near Mecca and again near Medina, he surrendered and ceremonially abdicated in Mecca, in Dhu 'l-Ḥidjdja 201/July 817; he was then deported to al-Maʾmūn's court at Marw (al-Ṭabarī, iii, 989-95). The Shumayṭiyya sect seems to have owed its existence to these events; it recognised the descendants of Muḥammad b. Djaʿfar as imāms. The sect soon disappeared, however, according to the Shaykh al-Mufīd (d. 413/1022 [*q.v.*]), who confirms that in his time it had ceased to exist.

SHUMAYYIL, SHIBLĪ b. Ibrāhīm (1850-1917), controversial Lebanese physician and social reformer. He began his studies of medicine in the Syrian Protestant College, completing them in Paris and Istanbul; he was to practise in Ṭanṭā and Cairo. He published *al-Shifāʾ* magazine (1886-91) to spread the new medical ideas, and, with Salāma Mūsā [*q.v.*], *al-Mustaḳbal* (1914), in order to build a society based upon modern scientific reasoning. His articles in the Arab press were published in *Madjmūʿat Maḳālāt al-Duktūr Shiblī Shumayyil* (Cairo 1910). The foremost populariser of Darwin's theory of evolution in the Arab world, his commentary and translation of the German Ludwig Büchner's lectures on Darwin, *Taʿrīb li-sharḥ Bukhnir ʿalā madhhab Dārawīn* (Alexandria 1884), caused an uproar. He published *al-Ḥaḳīḳa* (Cairo 1885), refuting Ibrāhīm al-Ḥawrānī's criticisms of Darwin's theory, and further set forth Darwin's ideas in the second edition of his two books, *Falsafat al-nushūʾ wa 'l-irtiḳāʾ* (Cairo 1910). He was also one of the first proponents of socialist and secularist thought in Arabic.

Amongst his other works, he translated Hippocrates, wrote a commentary on Ibn Sīnā and published several medical works. His *Shakwā wa-āmāl marfūʿa ilā Djalālat al-Sulṭān al-Muʿaẓẓam ʿAbd al-Ḥamīd Khān* (Cairo 1895) and his *Les Méfaits de la domination turque et la responsabilité de l'Europe* (Cairo 1913) reveal what he felt was wrong with the Ottoman Empire, whilst his *Sūriyā wa-mustaḳbaluhā* (Cairo 1915) suggests how Syria should

respond to Ottoman tyranny. His literary works include a novel *al-Ḥubb ʿalā ʾl-fatra, aw ḳiṣṣat Wanīs wa-Ḥalwā* (Cairo 1914), a play on the First World War *al-Maʾsāt al-kubrā* (Cairo 1915), a translation of Racine's *Iphigénie* and a philosophical poem, *al-Ruḏjhān* (Cairo n.d.).

Bosworth *et al.*, Princeton 1989, 637-50; J. Lecerf, *Shibli Shumayyil, metaphysicien et moraliste contemporain*, in *BEO*, i (1931), 153-86. (P.C. Sadgrove)

SHUMEN [see shumnu].

SHUMNU, the most frequently-found Ottoman form (see below), Bulgarian Shumen, a town in northeastern Bulgaria, at the foot of the steep slopes of the Shumen plateau, a situation which makes Shumen as beautiful from an artistic point of view as it is from a military one (Moltke). It is a crossroads for ways towards the Stara Planina passes, the Danube and the Black Sea. The small but turbulent river of Bokludža (Porojna), a major factor in the shaping of the town, originates from the karst springs. In the past, the spring water was conducted by pipes to mosques and by *waḳf* and *maḥalle* pipes to the numerous fountains and baths in the city. The climate is moderate, even mild.

The classical name was Myssionys, Myssiunus. The first occurence of the name of Shumen is in the so-called Šišman inscription of the 14th century, written in Bulgarian. In the Ottoman period we find Shumî, Shumnu, Shumna, Shumena, Shumlar, Shumla and Shumni; after 1878, Shumen; and 1950-65, Kolarovgrad.

There have been settlements on the site for five thousand years, since Thracian times; there are numerous and considerable remnants of fortresses, settlements, churches, and monasteries in the region. Shumen came into being up on the plateau (today Hisarlăka), where five fortresses have existed successively: a Roman one (4th century A.D.), a Byzantine (5th-6th centuries), two Bulgarian (9th-10th and 12th-14th centuries) and an Ottoman (15th century). During the Second Bulgarian Kingdom, a town outside the fortress walls emerged.

The fortress was conquered by the Ottomans in 1388, during the campaigns of Čandarlî ʿAlī Pasha, Sultan Murād I's Grand Vizier, against Tsar Ivan Šišman. The fortified mediaeval town of Shumen was destroyed by the Crusaders during the Varna campaign of 1444 and was later abandoned. It was probably in the 15th-16th centuries that part of the population first settled down below the plateau, in the plain, founding a new settlement. This settlement (*ḳaṣaba*), with a predominantly Turkish Muslim population, became Shumen in the second half of the 15th century.

The town acquired strategic importance during the Russian Turkish wars of 1768-74, 1806-12, 1828-9 and 1877-8, when it was part of the fortified quadrangle of Ruse-Varna-Silistra-Shumen. The Russians never succeeded in seizing it, while the Turks considered it impregnable. After the Congress of Berlin (1878), Shumen became part of the Bulgarian Principality.

Beginning from the 9th/15th century, Shumen was administratively dependent, as a *nāḥiye* and a *ḳaḍāʾ*, on the Nikopolis (sometimes the Silistra) *sanḏjaḳ*, and from the 11th/17th century—on the *eyālet* of Özi; it was a *khāṣṣ* of the Sultan, part of the *waḳf* of Yîldîrîm Bāyezīd I (791-805/1389-1403). According to Ewliyāʾ Čelebi and Ottoman records from the 11th/17th century, there resided in the *ḳaḍāʾ* of Shumen two *ḳāḍīs* (with daily salaries of 300 *akčes*) a *nāʾib*, a *naḳīb ül-eshrāf*, a *subashî*, a *ketkhüdā*, a *sipāhī ketkhüdāsî*, a *serdār* of the Janissaries, a *muḥtesib*, and a *bāḏjdār*.

According to the Ottoman chronicler Wāṣîl Efendi, at the time of the Ottoman conquest the population of Shumen amounted to 700-800 houses. Colonisation from Asia Minor and the Islamisation of the local population turned northeastern Bulgaria into a region with numerous Turkish population. The first Turkish colonisation comprised soldiers, Islamic religious functionaries and dervishes from Anatolia. *Yürüks* from the Tañrîda (Karagöz), Naldöken, and Ḳodjadjîḳ groups were settled in the *nāḥiye* of Shumen. In 1483-5 *Yürüks* were registered in Shumen proper; there are also data related to colonisation from the Arab territories of the Empire. In 1856 and 1864 Tatar colonists were settled in the town; by 1878 they numbered up to 150-200 houses, and had their own mosque with a religious school attached to it, a donation by Rifʿat Pasha. There were also Gypsies in the town.

The Orthodox Christian Bulgarians lived in the eastern part of Shumen, in the *maḥalle* of Kilise, and beginning in the 17th century, in the *warosh* around the small church of the Holy Ascension (in the mid-17th century, Petăr Bogdan spoke of a wooden church) and the large church of St. Elias built in the 19th century. During the Russo-Turkish wars of 1768-74 and 1806-12, and the Kărdžali conflict at the end of the 18th century, many villages around Shumen were ruined and new Bulgarian *maḥalles* emerged. Shumen has been from the 19th century till now an important cultural and educational centre. After the liberation of Bulgaria, its Orthodox Christian population increased, while the Turkish one stagnated or declined through emigration (see below). One of the important Armenian colonies in Bulgaria, with its own church, was established in the town in the 17th century. The Armenian community in the town expanded following the settlement of immigrants from Turkey in 1896 and after World War I. In the 16th-17th centuries there were permanently living in the town Ragusans (according to Petăr Bogdan, 20 people). In the 19th century, a Jewish community and a synagogue were established. In 1849, for a short while, there settled in Shumen a group of Hungarian ex-revolutionaries led by L. Kossuth. Many Turks left Shumen immediately after the liberation of Bulgaria and the period up to the Balkan War in 1912, in 1928-9; in 1949-51 and in 1989. After World War II, the majority of the local Jews moved to Israel, and some Armenians to the Soviet Union.

The population registrations and censuses from 888-90/1483-5 onwards show an increase, fairly regular, in all the communities. In 1963, the town had 60,758 inhabitants (50,616 Bulgars, 4,545 Turks, 648 Armenians, 277 Gypsies). By 1972 the population had reached 79,134.

The centre of the town evolved around the religious complex of the Eski Djāmiʿ (constructed in 1480-90 by the *ḳāḍī* Sinān Čelebi and incorporated by Yaḥyā Pasha in his foundation in Skopje of 1506; at the same time, a *medrese* was attached to it and repaired on the orders of Maḥmūd II in 1837-8, according to an inscription written by the court poet Seyyid Muṣṭafā Ṭālib Efendi) and the Eski Ḥammām in the Eski

Maḥalle. Gradually, the town evolved as a trading centre towards the east. Its shopping centre consisted of a Bitpazārî situated around the Čarshî Djāmiʿ and Sāḥat Djāmiʿ (built 1580) and the Eski Čarshî, Sheyṭān Čarshî and Yuḳarî Pazār, around the mosque preceding the Tombul Djāmiʿ, where the two main lines of communication in the town crossed. Nearby is the *bezistān*, dating from the 16th century, which changed its functions many times and has been preserved until today. Shumen's importance as an urban centre increased, especially in the 18th century, when it grew north- and eastwards.

The growth of a large number of non-producing Muslims considerably contributed to the economic prosperity of the town. The *waḳîfs*, some 50 to 60 of them, owning not only agricultural estates but shops and workshops as well, also had a clear rôle here. The *waḳîf* of Ḥādjdjī Redjeb founded in 1671 to support the Ṣolaḳ Djāmiʿ, drew its income from 41 shops. In the 18th century the town turned into a "distribution centre", supplying the whole region with goods; leather production was widely spread there; the town was famous for its coppersmiths, too. During the Crimean War, the main Turkish forces and a large English and French contingent resided in the fortress of Shumen. This fact, together with the growth of the town population, brought about the development of the network of markets. Shumen has preserved its position as an industrial, trading and railway centre until today.

The town had been systematically fortified in the 18th century by the Grand Viziers Muḥsin-zāde Pasha and Djezāʾirli Ḥasan Pasha. During the Crimean War (1854-6) and the War of 1877-8, Shumen evolved into an Ottoman fortress of the first rank, with a large garrison, well-kept fortifications, barracks, military depots, sanitary premises, etc.

Shumen was recognised as a leading Islamic city in the European provinces of the Ottoman Empire, with significant monuments religious and military construction. The former are enumerated in detail by Ewliyāʾ Čelebi and in the registers of various periods. With a peak of 63 up to 1872, there were in 1884, 47 Muslim religious centres (Jireček) and in 1965, some fifteen.

The most significant monument of Ottoman architecture in Shumen is the Yeñi Djāmiʿ or Tombul Djāmiʿ, the largest Ottoman religious building in Bulgaria and a unique example of a well-preserved Ottoman *külliyye* (a *medrese*, a library, a *mekteb*, a *sebīl*, and a fountain) dating from 1744-5 and belonging to Sherīf Khalīl Pasha's foundation. It was built by an unknown architect of limestone and marble, and was inspired by the art of the Tulip Period [see LĀLE DEWRI] in the capital, notwithstanding the fact that it was built a decade after the period. The exterior is still very Ottoman-looking, but on the interior, the decoration shows Baroque influence. It is included in a complex with a rectangular court on the west and a two-storeyed building on the north serving as a library. The minaret is 40 m/130 feet high. The inscription was composed by the poet Niʿmet, himself born at Shumen in 1186/1772. During the campaign of destruction of Turkish buildings 1984-5, this complex was the sole one to be spared, and it still functions as a mosque.

Sherīf Khalīl Pasha (d. 1752) was born either in the village of Madara or in Shumen proper. He had a brilliant career as a statesman: a *ketkhüdā* of the Grand Vizier Dāmād Ibrāhīm Pasha [see DĀMĀD], to whom he dedicated several *ḳaṣīdes*; *wālī* in Aydîn, Trebizond, Inebakhtî, Belgrade, Ağriboz, and Bosnia; and an educated person who wrote poetry and translated from Arabic and Persian. One of the outstanding representatives of the Ottoman ruling élite during the *Lāle Dewri*, he was also a member of the so-called learned society organised around Sultan Aḥmed III's (1703-30) court, which translated and compiled commentaries on Arabic, Persian, Latin, ancient Greek, and other works.

Khalīl Pasha's *waḳîf-nāme* (preserved in Shumen) deals *inter alia* with the library at the *medrese*. Part of this book collection, together with other books from the town and the surroundings, and from other places in Bulgaria, has been preserved and is in the History Museum at Shumen; it contains 650 manuscripts and 1,400 old printed books.

The desire to modernise Shumen has led to the destruction of the architecture from the pre-industrial period, both Islamic and non-Islamic. Not a single place in the old town of Shumen was spared, apart from a few examples of Ottoman culture. The town Museum houses a collection of monumental and funerary inscriptions.

The Khalwetī Seyyid ʿOthmān Atpazārî, author of works on religion and dogmatics (second half of the 11th/17th century; Fenalî Muṣṭafā, a Bektāshī and a poet (end of 17th-early 18th century); Meḥmed b. ʿOthmān, author of a mathematics treatise (second half of the 12th/18th century); Yūsuf Naḳshibendī (19th century); the calligraphers Ḥāfiẓ Ibrāhīm, Hüseyn Waṣṣāf, Seyyid Aḥmed Nāzifī, and the calligraphers of the Izārī family (18th-19th centuries) were all born in Shumen.

Towards the end of the 19th and in the 20th century, Shumen became one of the centres of Turkish education and of the Turkish intelligentsia in Bulgaria. K. Jireček noted in his *Pătuvanija po Bălgarija* that "one is impressed by the vitality of the Turkish population, a rare phenomenon in Bulgaria; the Turks in this town have built a new school and private houses". The famous *Nüwwāb* (under its statute of 1922, within the jurisdiction of the Grand *Müftülük* and of the Bulgarian Ministry of Foreign Affairs) began to function as a private school, where teachers for the primary Turkish schools were trained; a higher department was attached to it, where a three-year course for religious functionaries and teachers for Turkish junior secondary schools was taught; in 1948 it was transformed into a Turkish comprehensive school. Both before and after the World War II, a considerable part of the Turkish teachers were its graduates. It was closed down in mid-1950s. Today it is a secondary Islamic religious school, again called *Nuvvab*. After World War I and until the late 1950s, the specialised educational institutions in Shumen trained teachers for Turkish language education. After World War II, a Turkish National Theatre and a Turkish public library called after the Turkish Communist poet Nazım Hikmet [*q.v.*] functioned in the town. There were twelve Turkish newspapers, three with an Islamic trend, published there before the end of World War II, and four afterwards. Before World War II, the Turkish Publishing House *Teraki* had its seat in Shumen. At present, there are three mosques functioning in the town, and the regional *Müftülük* is also there.

SHUNGWAYA, the name of a harbour up a creek, Mcho [Mto] wa Hori, in Somalia, in 1° 15' S. and 41° 50' E., 260 miles north of Mombasa. The anonymous *Kitāb al-Zunūdj*, a 19th-century compilation from other local works, claims it as the epicentre for the dispersal of ten Bantu tribes in Kenya and Tanzania. Whereas a tradition of kingship and of Islam is alleged for Shungwaya, one would expect these to be reflected among those tribes. Only the Shambaa among them formed a kingdom 200 years after the alleged 16th-century dispersal and adopted Islam under Zanzibari influence in the 19th century.

Apart from the modern village known as Bur Gao, there are three ancient settlements. The central site is surrounded by a masonry wall, enclosing about seven ha. It contains a pillar tomb [see manāra] and a rectangular building with no *miḥrāb*. The local people allege that it is where a Shaykh Muḥyī al-Dīn used to pray. It is domed, the northern wall being on the side of Mecca, which suggests an Ibāḍī origin. The northern site has a number of tombs, and a large building, so encumbered with overgrowth that H.N. Chittick was unable to determine whether it was a mosque or a house. The third site, down the creek, is on a hill (Somali *bur*) with a defensive wall round the summit; presumably it is this to which the modern name refers.

In 1912 Captain C.W. Hayward "caused his native servants to dig over the topsoil in places". In 1931 only he reported his finds to H. Mattingly as comprising coins of the Ptolemies: 1; Rome 1st to 2nd century: 5; uncertain: 1; Byzantium, 4th century: 79; Mamlūks of Egypt: 6; Egypt under the Turks: 7. The ensemble has been regarded with some scepticism, but, as Sir Mortimer Wheeler remarked, there is no reason why there should not have been a series of deposits over so long a period. Nevertheless, others, including Wheeler and Gervase Mathew (1955), Grotanelli (1955), and Chittick (1969), have reported no further coins. If genuine, the finds of so haphazard a nature can hardly be regarded as a hoard, but possibly as evidence of trade connections at different times. Hayward did not specify the find sites, nor has there been any excavation.

SHUNKUB (a.) (and variants *shukkub, shinkāb*) pl. *shanākib*, masc. substantive denoting the common snipe (*Capella gallinago gallinago*). In the Maghrib and Egypt, it is known as *kannis, dadjādjat al-mā'* and *bikāsīn* (< Fr. *bécassine*), while in 'Irāḳ it is called *djuhlūl*, the same term as for the sandpiper (*Tringa*). In addition to the common snipe, the great or solitary snipe, *shunkub kabīr* (*Capella major* or *media*), the Jack snipe, *shunkub ṣaghīr* (*Limnocryptes minimus*) and the painted snipe, *shunkub muzawwak* (*khawlī* in Egypt) (*Rostratula benghalensis*) are also found. Arabic naturalists do not make any mention of this bird and only al-Damīrī mentions it in passing.

Along with this very aloof, nocturnal marsh wader, *shunkub* is, with *shunkub al-baḥr*, also used for the trumpet fish (*Centriscus*).

SHŪRĀ (a.), together with *mashwara, mashūra*, a nominal form connected with the form IV verb *ashāra* "to point out, indicate; advise, counsel" (see Lane, *s.v.*), with the meaning "consultation".

1. In early Islamic history.

Here, *shūrā* is especially used of the small consultative and advisory body of prominent Ḳurashīs which eventually chose 'Uthmān b. 'Affān as the third caliph over the Muslim community after the assassination of 'Umar b. al-Khaṭṭāb [*q.v.*] in Dhu 'l-Ḥidjdja 23/November 644. The practice of consultation by the *sayyid* or *shaykh* of a tribe with his leading men was known in pre-Islamic Arabia, as is set forth in mashwara; the *shūrā* on 'Umar's death was thus no innovation but in many ways a continuation of tribal practice.

The main accounts of the *shūrā* are in such sources as Ibn Sa'd, *Ṭabaḳāt*, iii/1, 245, 247-50, etc., al-Balādhurī, *Ansāb al-ashrāf*, v, 15-25, and al-Ṭabarī, i, 2722-6, 2776-88; cf. Caetani, *Annali*, v, 79-110. Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-balāgha*, preserves excerpts from a *Kitāb al-Shūrā wa-maktal Ḥusayn* by al-Sha'bī [*q.v.*] and from a *K. al-Shūrā* by al-Wāḳidī [*q.v.*], see Sezgin, *GAS*, i, 277, 297. The traditional account of the sources is that 'Umar on his death-bed wished in the first place to designate as his successor 'Abd al-Raḥmān b 'Awf (the original intended successor, Abū 'Ubayda b. al-Djarrāḥ [*q.v.*], having died in 18/639), but 'Abd al-Raḥmān refused the burden of office, as did 'Abd Allāh b. 'Umar, so that 'Umar then nominated a *shūrā* of 'Abd al-Raḥmān b. 'Awf, 'Alī b. Abī Ṭālib, 'Uthmān b. 'Affān, al-Zubayr b. al-'Awāmm, Sa'd b. Abī Waḳḳāṣ [*q.vv.*], and the absent Ṭalḥa b. 'Ubayd Allāh [*q.v.*] if he returned to Medina within three days. All these were of course Meccans, and no Anṣār were included. They were, moreover, all prominent persons

Tombul Djāmiʿ, built by Sherīf Khalīl Pasha in 1157/1744, the largest Ottoman religious building in modern Bulgaria and a unique example of a well-preserved Ottoman *külliye*, still functioning as a place of worship. Photograph taken in 1934.

in their respective clans; all were early converts to Islam, hence could claim *sābiḳa*, with all except ʿUt̲h̲mān having fought at Badr; all were either connected by kinship (*ḳarāba*) and/or marriage (*ṣihr*) with the Prophet and/or each other; and, together with the first caliph Abū Bakr and ʿUmar's brother-in-law Saʿīd b. Zayd [*q.v.*], were counted amongst the ten to whom Paradise was assured (*al-ʿas̲h̲ara al-mubas̲h̲s̲h̲ara* [*q.v.*]).

G. Rotter has discussed at length the difficulties and inconsistencies of the traditional accounts, noting at the outset the anti-Umayyad prejudice and pro-ʿAlid tendentiousness put into the mouth of ʿUmar in the accounts of the nomination of the *aṣḥāb al-s̲h̲ūrā* (very clearly seen in the papyrus fragment of Ibn Isḥāḳ published by Nabia Abbott, as pointed out by M.J. Kister, *Notes on an account of the Shura appointed by ʿUmar b. al-Khattab*, in *JSS*, ix [1964], 320-6). The number of *Muhād̲j̲irūn* who had the requisite *sābiḳa* as participants at Badr and who were of potential caliphal status was by the year 23/644 quite restricted. Exactly when ʿUmar nominated the members of the *s̲h̲ūrā*, before or after receiving his death-blow, is uncertain. It is also unclear who precisely were the *aṣḥāb al-s̲h̲ūrā*; Muḥammad b. Ḥabīb, *Muḥabbar*, 75-6, includes Saʿīd b. Zayd amongst them, whilst al-Wāḳidī and al-Zuhrī (in *Ansab al-as̲h̲rāf*, v, 21) state that Saʿd b. Abī Waḳḳāṣ did not take part in the *s̲h̲ūrā*. Rotter therefore surmised that the story of ʿUmar's setting-up of the *s̲h̲ūrā* could be a fabrication and could in fact have been shaped by partisans of various interest groups in later struggles over the caliphate; the *s̲h̲ūrā* seems to him more like a continuation of the pre-Islamic *malaʾ* [*q.v.* in Suppl.] of the Meccan clan chiefs (*Die Umayyaden und der zweite Bürgerkrieg (680-692)*, Wiesbaden 1982, 7-16).

The final choice seems to have fallen on ʿUt̲h̲mān because of his status of being twice the son-in-law of the Prophet, his age and experience, and his *s̲h̲araf* or nobility of lineage from ʿAbd S̲h̲ams b. ʿAbd Manāf. ʿAlī shared this *s̲h̲araf* as a Manāfī also, and had both *ṣihr* as Fāṭima's husband and *ḳarāba* as Muḥammad's paternal cousin, but was (with the exception of Saʿd, whose membership of the *s̲h̲ūrā* is not altogether certain, see above) the youngest of the potential candidates amongst the *aṣḥāb al-s̲h̲ūrā*, being in his mid-forties. It seems to have been ʿUt̲h̲mān's superiority on the grounds of his early closeness to the Prophet, his *sinn* and his *s̲h̲araf*, rather than any choice of him as a safe, conservative, compromise candidate who would continue the heritage of Abū Bakr and ʿUmar, that led to his being offered the caliphate (*pace* the view of e.g. M.A. Shaban in his *Islamic history A.D. 600-750 (A.H. 132), a new interpretation*, Cambridge 1971, 61-3).

The idea of *s̲h̲ūrā* as a means of selecting caliphs and other great men in the state, i.e. the principle of election, seems to have been especially attractive during the Umayyad period for zealots, rebels and dissidents. Hence ʿUmar II b. ʿAbd al-ʿAzīz may have contemplated its use for his own successor; the rebel in the East al-Ḥārit̲h̲ b. Surayd̲j̲ [*q.v.*] issued a manifesto urging that the governor of K̲h̲urāsān should be chosen by a *s̲h̲ūrā*; and the ephemeral Umayyad caliph Yazīd III b. al-Walīd in 126/744 endeavoured to rally support for his claim to the throne by appealing to the Book of God, the *sunna* of the Prophet and succession to rule by a *s̲h̲ūrā* (see P. Crone and M. Hinds, *God's caliph, religious authority in the first centuries of Islam*, Cambridge 1986, 63, 65, 68, 76, 127-8). Also, the concept must obviously have appealed to a sectarian group with egalitarian ideas such as the K̲h̲ārid̲j̲ites (see E.A. Salem, *Political theory and institutions of the K̲h̲awārij*, Johns Hopkins Studies on History and Political Science, Ser. LXXIV, no. 2, Baltimore 1956, 58-9).

2. In al-Andalus.

Practised in other Islamic lands, the *s̲h̲ūrā* of the *ḳāḍī* especially flourished in al-Andalus, where it was exercised by *mus̲h̲āwarūn* from the first half of the 3rd/9th century. The first "advisers" of judges were celebrated *fuḳahāʾ*, like Yaḥyā b. Yaḥyā (d. 234/848), Saʿīd b. Ḥassān (d. 235/849) or ʿAbd al-Malik b. Ḥabīb (d. 238/852), who had travelled to the East and studied with the great jurists of the age. At first the number of these *mus̲h̲āwarūn* was very limited, but from the first half of the 4th/10th century they grew considerably and it became one of the career stages for *ʿulamāʾ*, who exercised this function before becoming judges. This reflects the change within the *s̲h̲ūrā*, which was not considered, at the outset, as a *k̲h̲uṭṭa*, as the terminology for designating the first *mus̲h̲āwarūn* shows: biographical sources uses such expressions as *kāna mus̲h̲āwar^an^*, *s̲h̲ūwira fi ʾl-aḥkām*, etc., or more rarely, *wulliya ʾl-s̲h̲ūrā*, *taḳallada ʾl-s̲h̲ūrā*. Only in the Almoravid period does one find the phrase *k̲h̲uṭṭat al-s̲h̲ūrā*.

In the first stage of the *s̲h̲ūrā*'s evolution, the *ḳāḍī* consulted the *mus̲h̲āwarūn* in his own *mad̲j̲lis*, which often provoked lively discussions when opinions differed amongst the counsellors. But it seems that, in the course of time, the *mus̲h̲āwarūn* assumed the habit of giving their responses to judges from their own homes, which Ibn ʿAbdūn, in his *ḥisba* treatise written at the end of the 5th/11th century or the opening of the next one, considered as an abuse which ought to be suppressed. The opinions of the *mus̲h̲āwarūn* could be given in writing; Ibn Sahl's (d. 486/1093) *Aḥkām* give numerous examples. The topics about which they were consulted covered all the possibilities of the law and dogma of Islam, from questions of legal procedure to accusations of heresy. Regarding this last point, there is a good example in the legal proceedings against Abū ʿUmar al-Ṭalamankī (d. 428 or 429/1036-7) in Saragossa. The town's *ḳāḍī* asked for an opinion on the case from six *mus̲h̲āwarūn*, who rejected the accusation against Abū ʿUmar. The functions of the *mus̲h̲āwar* clearly approximated closely to those of the *muftī*, but were exercised exclusively for the *ḳāḍī*, who had to follow the opinions of his advisers. In this wise, one can say that the *ḳāḍī*'s sphere of responsibility was diminished by the existence of these counsellors, especially as it was the *amīr* (later, the caliph) who nominated the *mus̲h̲āwarūn*. But the judge also had the possibility of dismissing certain of his counsellors if he found himself strongly at variance with them (thus the caliph al-Nāṣir dismissed from office Muḥammad b. Yaḥyā b. ʿUmar b. Lubāba (d. 330/941) at the request of the *ḳāḍī* Aḥmad b. Muḥammad al-Ḥabīb, forbidding him moreover to give out *fatwās*) or of seeking the inclusion in the *s̲h̲ūrā* of a celebrated *faḳīh* whom he wanted. After the end of the Umayyad caliphate, the nomination of *mus̲h̲āwarūn* remained a prerogative of the holder of political power, but in periods when this was enfeebled, judges appointed their own counsellors. At Labla

(Niebla) the people nominated Muḥammad b. ʿAbd Allāh Ibn al-Djadd (d. 515/1121) for the town's *khuṭṭat al-shūrā*, whilst at Murcia, the *ḳāḍī* Muḥammad b. ʿAbd Allāh al-Khushanī Ibn Abī Djaʿfar, who assumed power in 539/1145, nominated the very young Muḥammad b. Aḥmad Ibn Abī Djamra (d. 599/1202); Ibn al-Abbār has preserved, in his *Takmila*, the nomination decree of Ibn Abī Djamra, who belonged to one of the leading families of Murcia and who went on to become, a year later, *ḳāḍī* of Valencia.

3. In the modern Arab world.

The idea and practice of consultation in government had an intermittent history in Islam prior to the 19th century [see above, 1 and 2, and mashwara]. In that century, as the Ottoman empire's encounter with Europe accelerated, the old principle was revived in a series of institutions established in the empire's centre and its Arab provinces, as part of the effort to modernise the political order (for the Ottoman practice of consultation prior to and during the *Tanẓīmāt*, see madjlis al-shūrā). Bodies with deliberative and advisory authority bearing the name *shūrā* (or *mashwara*, its interchangeable derivative) were set up by Muḥammad ʿAlī in Egypt, in the 1820s; by his son Ibrāhīm in Egyptian-occupied Syria and Palestine, in the 1830s; and by his grandson, the Khedive Ismāʿīl, in Egypt again. The latter assembled a "Consultative Council of Delegates" (*Madjlis shūrā al-nuwwāb*) in 1866, featuring the novel quality of being elective, though indirectly, which operated until the 1882 British occupation. These councils represented a dual phenomenon: an embodiment of the Islamic ideal of consultation in government, and an attempted emulation of European-type parliaments.

The use of the term *shūrā* reflected this dual import. From the early 19th century, the word was applied to every type of Western governmental body, including elective and representative parliaments. Thus Muḥammad ʿAlī's official bulletin, *al-Waḳāʾi al-Miṣriyya*, applied the name in the 1830s to the British Parliament and the French *Chambre des députés*. The Egyptian *shaykh* Rifāʿa Rāfiʿ al-Ṭahṭāwī [*q.v.*], well acquainted with European politics, likewise used it for institutions such as the Swiss Federal Assembly and the United States Congress, as did other Arabic-speaking observers of Western politics throughout the century. At the same time, applied in a local context, *shūrā* connoted the newly-revived traditional idea of a ruler consulting with his chosen group of advisers. Such a twofold application of the word was a source of ambiguity, typical of the rapidly changing political concepts at the time. It made it possible, and convenient, for thinkers such as Muḥammad ʿAbduh and Rashīd Riḍā [*q.vv.*] to justify the borrowing of parliaments—an alien idea—by associating them with the Islamic notion of consultation. This and similar attempts, during the formative phase of political modernisation, to equate modern and traditional ideas facilitated the introduction of new concepts into the region but undoubtedly also contributed to their modification.

In the 20th century, parliamentary institutions were formed in the Arabic-speaking lands under different titles, often in response to public demand inspired by foreign example [see madjlis. 4. A.]. The political roles which they played differed with time and place, but on the whole they were more limited than those of their Western counterparts. Among these, bodies entitled *madjlis shūrā* (or *madjlis istishārī*) were particularly traditional in nature and had a markedly limited say in decision making. Such bodies appeared mostly in the Arabian Peninsula, where European influence was small and the tribal custom of consultation remained a vivid attribute of local government. In the Saudi state, an Organic Law establishing a *Madjlis shūrā* was announced in 1926, but the institution remained on paper for many decades despite repeated royal pledges to set it up. A Consultative Council Statute was promulgated by Saudi Arabia's King Fahd in 1992, again providing for establishment of an appointed *Madjlis shūrā* with advisory authority. In Ḳaṭar, the Amīr Aḥmad b. ʿAlī Āl Thānī in 1970 enacted a constitution under whose provisions a *Madjlis shūrā* was established two years later, partly elected and partly nominated by him (but in practice consisting of the Amīr's disciples). In Yemen, a *Madjlis shūrā* was founded in 1971, as prescribed by the constitution of the previous year. Unlike other peninsular states, Yemen was at that point not a monarchy but a republic, and the *shūrā* was to offer advice to a three-man Presidential Council which actually ruled the country; both bodies were abolished following the 1974 coup. In ʿUmān, a State Consultative Council (*al-Madjlis al-istishārī li ʾl-dawla*) was established in 1981 by Sultan Ḳābūs as a first experiment in limited public participation. It was replaced in 1991 by a *Madjlis al-shūrā*, whose formation and political prerogatives were similarly limited.

Elsewhere, the term *shūrā* and its derivatives appeared occasionally in titles of governmental institutions, reflecting the essentially restricted role prescribed for them. Such, e.g., was Morocco's Consultative National Assembly (*al-Madjlis al-waṭanī al-istishārī*), appointed by King Muḥammad V in 1956 as an advisory forum to the monarch. A somewhat different role was assigned to the Consultative Council which President Anwar al-Sādāt set up in 1980 in republican Egypt to supplement the People's Assembly (*Madjlis al-shaʿb*), the popularly-elected legislature. The Council, partly elected and partly nominated by the president, was to debate and express views on public matters as part of the country's pluralistic political order. Its definition as a *shūrā*, then, properly mirrored its merely deliberative and advisory power.

(A. Ayalon)

SHURAFĀʾ (A.), in Moroccan dialect, SHORFĀ, pl. of *sharīf* [*q.v.*] "noble".

This term denoted the persons belonging to the "house of the Prophet", *Ahl al-Bayt* [*q.v.*] and then became essentially reserved for the descendants of the Prophet Muḥammad by his daughter Fāṭima [*q.v.*], the wife of his cousin ʿAlī b. Abī Ṭālib [*q.v.*]. Several children were born of the couple, of whom al-Ḥasan and al-Ḥusayn were the ancestors of all the so-called Ḥasanid and Ḥusaynid *shurafāʾ*, both in the Middle East and in the Maghrib. These persons have always enjoyed great consideration as well as certain privileges granted by the rulers and the peoples of the lands where they lived. But one should note that, at the side of the authentic line of the Prophet, certain descendants of famous *murābiṭūn* have, improperly, claimed the title of *sharīf*.

1. History.

ʿAlī had numerous sons by other wives than Fāṭima, forming an important line of descendants, these being the ʿAlids [*q.v.*] in general, of whom the Ḥasanids and Ḥusaynids are part, but only these last can claim Sharīfian descent. Whether from one or other of the two branches, they exist in several of the Islamic lands.

I. All the Ḥasanid *shurafāʾ* of the Middle East stem from the second son of al-Ḥasan, Ḥasan II: (a) From the latter's son ʿAbd Allāh al-Kāmil there descend through Mūsā al-Djawn the Banū ʾl-Ukhayḍir of Mecca and Yemen (251-350/865-961), the Mūsawīs and the Hawāshim, then the Banū Ḳatāda, *amīrs* of Mecca (these last from 598/1201-2 onwards), the Banū Fulayta, and finally the Banū Ṣāliḥ of Ghāna, as well as the so-called Sulaymānid *shurafāʾ*. (b) From Dāwūd, another son of Ḥasan II's, stem the Sulaymānids of Yemen and Mecca. (c) From Ibrāhīm, another of Ḥasan II's sons, stem the Rassid Imāms [*q.v.*] of Yemen, through al-Ḳāsim al-Rassī.

II. The Ḥusaynid *shurafāʾ* of the Middle East have as their ancestor Djaʿfar al-Ṣādiḳ [*q.v.*] b. Muḥammad al-Bāḳir, al-Ḥusayn's grandson by ʿAlī Zayn al-ʿĀbidīn. From these, the Fāṭimids [*q.v.*] or ʿUbaydids of Ifrīḳiya and Egypt claimed descent, as also the Banū Muhannā [*q.v.*], *amīrs* of Medina before 601/1204, and above all, the series of the Twelver Shīʿī Imāms which stops with the twelfth, Muḥammad al-Mahdī, son of Ḥasan al-ʿAskarī (d. 260/874).

The descendants of a brother of Ḥasan II, Zayd, from whom stemmed the Zaydids of Ṭabaristān (247-87/861-900), may be considered as *shurafāʾ*.

III. The Shurafāʾ (Shorfā) of the Maghrib. It is in the farthest extremity of North Africa, the Maghrib al-Aḳṣā, that the Shurafāʾ are most numerous. A century or so after the appearance of Islam in Morocco, this group had an extremely important political and religious role, since it was an ʿAlid, the great-grandson of al-Ḥasan b. ʿAlī, hence a *sharīf*, sc. Idrīs I [*q.v.*], son of ʿAbd Allāh al-Kāmil and brother of the Mūsā al-Djawn mentioned above, who founded the first Sharīfian dynasty in Morocco.

The vast majority of the Shurafāʾ of the Maghrib are of Ḥasanid descent, since they descend from the above-mentioned Idrīs I and his son Idrīs II. This last had seven sons, five of whom had issue: (a) ʿUmar, whose descendants reigned in the Djabal al-ʿAlam and then in the region of Tlemcen; these are the Ḥammūdid [*q.v.*] Shurafāʾ, whom one finds again in Spain, where for a few years (407-14/1016-23) they occupied the caliphate in Cordova, and were subsequently rulers in Malaga. (b) al-Ḳāsim, whose son Yaḥyā installed himself at Djūṭa, in the Gharb of Morocco, on the Wādī Sabū (Sebou) and was the progenitor of all the Djūṭid Shurafāʾ (the Djūṭiyyūn) at Fās (see genealogical table). One should especially mention the ʿImrānids (ʿImrāniyyūn) who functioned as *naḳībs* and were the opponents of the Marīnids (second half of the 9th/15th century). (c) ʿĪsā, founder of the Dabbāghiyyūn Shurafāʾ who emigrated in the 4th/10th century near to Cordova with Ḥasan b. Gannūn, and then returned to Salé and Fās after the Christian reconquest. (d) ʿAbd Allāh, from whom stemmed the Amghāriyyūn established in the north of Morocco, then to the south of Azemmour. (e) Muḥammad, who had two sons, Yaḥyā, ancestor of the Kattāniyyūn Shurafāʾ in Meknès and then in Fās (second half of the 10th/16th century) and ʿAlī, from whom several Sharīfian branches descend (see WAZZĀN and the genealogical table).

ʿAbd Allāh al-Kāmil, Idrīs I's father, had had two other sons whose progeny came to Morocco later: (a) Djaʿfar, ancestor of the Shurafāʾ of Sūs. (b) Mūsā al-Djawn, from whom stem the Ḳādirid Shurafāʾ (Ḳādiriyyūn) through ʿAbd al-Ḳādir al-Djīlānī [*q.v.*], founder of the Ḳādirī Ṣūfī order; these Shurafāʾ settled at Fās at the end of the 9th/15th century. Finally, Muḥammad al-Nafs al-Zakiyya [*q.v.*], ancestor of the two Sharīfian dynasties which took power in Morocco after the fall of the last Berber dynasty, the Banū Waṭṭās [*q.v.*] (10th/16th century), sc. the Saʿdid Shurafāʾ [*q.v.*]—whose Sharīfian descent was controversial—and their replacements in the following century, the ʿAlawī Shurafāʾ from Sidjilmāsa in the Tafilalt [see ʿALAWĪS].

Certain members of the mystical *silsila* of the Shādhiliyya mystical order [*q.v.*] are Shurafāʾ: ʿAbd al-Salām b. Mashīsh al-Ḥasanī (d. 625/1228), an Idrīsid *sharīf* of the Banū Muḥammad b. Idrīs, was their head towards the end of the Almohad dynasty. His successor, who gave his name to the order, Abu ʾl-Ḥasan ʿAlī b. ʿAbd Allāh al-Shādhilī [*q.v.*], was likewise said to be an Idrīsī *sharīf*, like the majority of the Shurafāʾ of the Djabal ʿAlam.

IV. At the side of all these Ḥasanid Shurafāʾ, there existed equally in Morocco, especially at Fās, two groups of Ḥusaynid Shurafāʾ, through Mūsā al-Kāẓim [*q.v.*] b. Djaʿfar al-Ṣādiḳ, son of Muḥammad al-Bāḳir, grandson of al-Ḥusayn. These are the Ṣiḳilliyyūn Shurafāʾ, the offspring of ʿAlī al-Riḍā b. Mūsā, and the ʿIrāḳiyyūn Shurafāʾ, descendants of a brother of ʿAlī al-Riḍā, Ibrāhīm al-Murtaḍā.

2. Literature of the Shurafāʾ.

Given the special importance of the Shurafāʾ in the Maghrib, it is not surprising that this has resulted in the florescence of a special literature dealing with genealogy and biography. The first notable works on these subjects were undertaken by a Ḳādirid Sharīf of Fās, Abū Muḥammad ʿAbd al-Salām b. al-Ṭayyib al-Ḳādirī, born in 1058/1648 and died in 1110/1698 (see E. Lévi-Provençal, *Historiens des Chorfa*, 276-399). In addition to three monographs on hagiology, he wrote several works dealing with the Sharīfī groups of Morocco: first a general study of Sharīfism in the Moroccan capital, *al-Durr al-sanī fī baʿḍ man bi-Fās min ahl al-nasab al-ḥasanī*, which, in spite of its title, also includes the Ḥusaynid branches; on account of the period in which he was writing, he deliberately left out the Saʿdians, who in any case were to disappear very quickly for lack of descendants. This work was lithographed at Fās in 1303 and 1308 A.H. Al-Ḳādirī's other treatises deal with (a) the Ḳādirī Shurafāʾ (*al-ʿUrf al-ʿāṭir fī man bi-Fās min abnāʾ al-shaykh ʿAbd al-Ḳādir*), and (b) the Shurafāʾ ʿIrāḳiyyūn (*Maṭlaʿ al-ishrāḳ fī ʾl-ashrāf al-wāridīn min al-ʿIrāḳ*).

At the end of the 11th/17th century and beginning of the 12th/18th century, two other treatises on Sharīfī genealogy were compiled in Morocco; one devoted to the 'Alawid Shurafā' of Sidjilmāsa was written by Abu 'l-'Abbās Aḥmad b. 'Abd al-Malik al-Sharīf al-Sidjilmāsī, and entitled *al-Anwār al-saniyya fī nisbat man bi-Sidjilmāsa min al-sharāf al-muḥammadiyya*; the other, entitled *Shudhūr al-dhahab fī khayr nasab*, was the work of a *sharīf* of the Djabal al-'Alam, al-Tihāmī b. Muḥammad b. Aḥmad Ibn Raḥmūn, who composed it in 1105/1603-4.

In 1127/1715 a descendant of the marabout family of the *zāwiya* of Dilā' [see AL-DILĀ' in Suppl.], Abū 'Abd Allāh Muḥammad al-Masnāwī b. Aḥmad al-Dilā'ī (d. 1136/1721), composed a new treatise on the Sharīfism of the Ḳādirids, *Natīdjat al-taḥḳīḳ fī ba'ḍ ahl al-sharaf al-wathīḳ* (publ. Tunis 1296 and Fās 1309, partially tr. T.H. Weir, *The first part of the Natījatu 'l-Taḥqiq*, Edinburgh 1903).

A monograph was a little later devoted to the Shurafā' Ṣiḳilliyyūn of Fās by a Ḳādirid, grandson of the author of *al-Durr al-sanī*, Muḥammad b. al-Ṭayyib al-Ḳādirī, d. 1187/1773: this is the *Lamḥat al-bahdjat al-'āliya fī ba'ḍ furū' al-sha'ba al-ḥusayniyya al-ṣiḳilliyya*. The Shurafā' of Wāzzān had also several historians in the 12th/18th century; we may mention the *Tuḥfat al-ikhwān bi-ba'ḍ manāḳib shurafā' Wāzzān*, by Ḥamdūn al-Ṭāhirī al-Djūṭī (d. 1191/1777), lithographed at Fās in 1324 A.H.

The composition of the *Kitāb al-Taḥḳīḳ fī 'l-nasab al-wathīḳ*, which the genealogists of Fās consider apocryphal and attribute to Aḥmad b. Muḥammad al-'Ashmāwī al-Makkī, also dates from the end of the 12th/18th century: this work, which deals only with the Sharīfī branches that settled in Algeria, was translated in 1906 by Père Giacobetti.

A specialist in Sharīfī genealogy was Abu 'l-Rabī' Sulaymān b. Muḥammad al-Shafshāwanī al-Ḥawwāt, born 1160/1747, d. at Fās 1231/1816. He left among other works a monograph on the Shurafā' Dabbāghiyyūn, called also from their quarter in Fās Shurafā' al-'Uyūn: *Ḳurrat al-'uyūn fī 'l-shurafā' al-ḳāṭinīn bi 'l-'Uyūn*, and a monograph on the Ḳādirid Shurafā', *al-Sirr al-ẓāhir*.

The Shurafā' 'Irāḳiyyūn had their historiographer, 'Abd Allāh al-Walīd b. al-'Arabī al-'Irāḳī, d. 1263/1849; this work, published in Fās, is called *al-Durr al-nafīs fī man bi-Fās min banī Muḥammad b. Nafīs*.

Finally, one may mention amongst more recent works, in addition to the information collected in the valuable *Salwat al-anfās* of Muḥammad b. Dja'far al-Kattānī [see AL-KATTĀNĪ], two works relating to the Sharīfī branches of Morocco. The first is the work of Muḥammad b. al-Ḥādjdj al-Madanī Gannūn, d. 1302/1885, *al-Durar al-maknūna fī 'l-nisba al-sharīfa al-maṣūna*; the other, more important, is entitled *al-Durar al-bahiyya wa 'l-djawāhir al-nabawiyya fī 'l-furū' al-ḥasaniyya wa 'l-ḥusayniyya*, lithographed at Fās in 1314. This book, by Abu 'l-'Alā' Idrīs b. Aḥmad al-Fuḍaylī, d. 1316/1898-9, is an excellent repertory with much unpublished information, clearly presented.

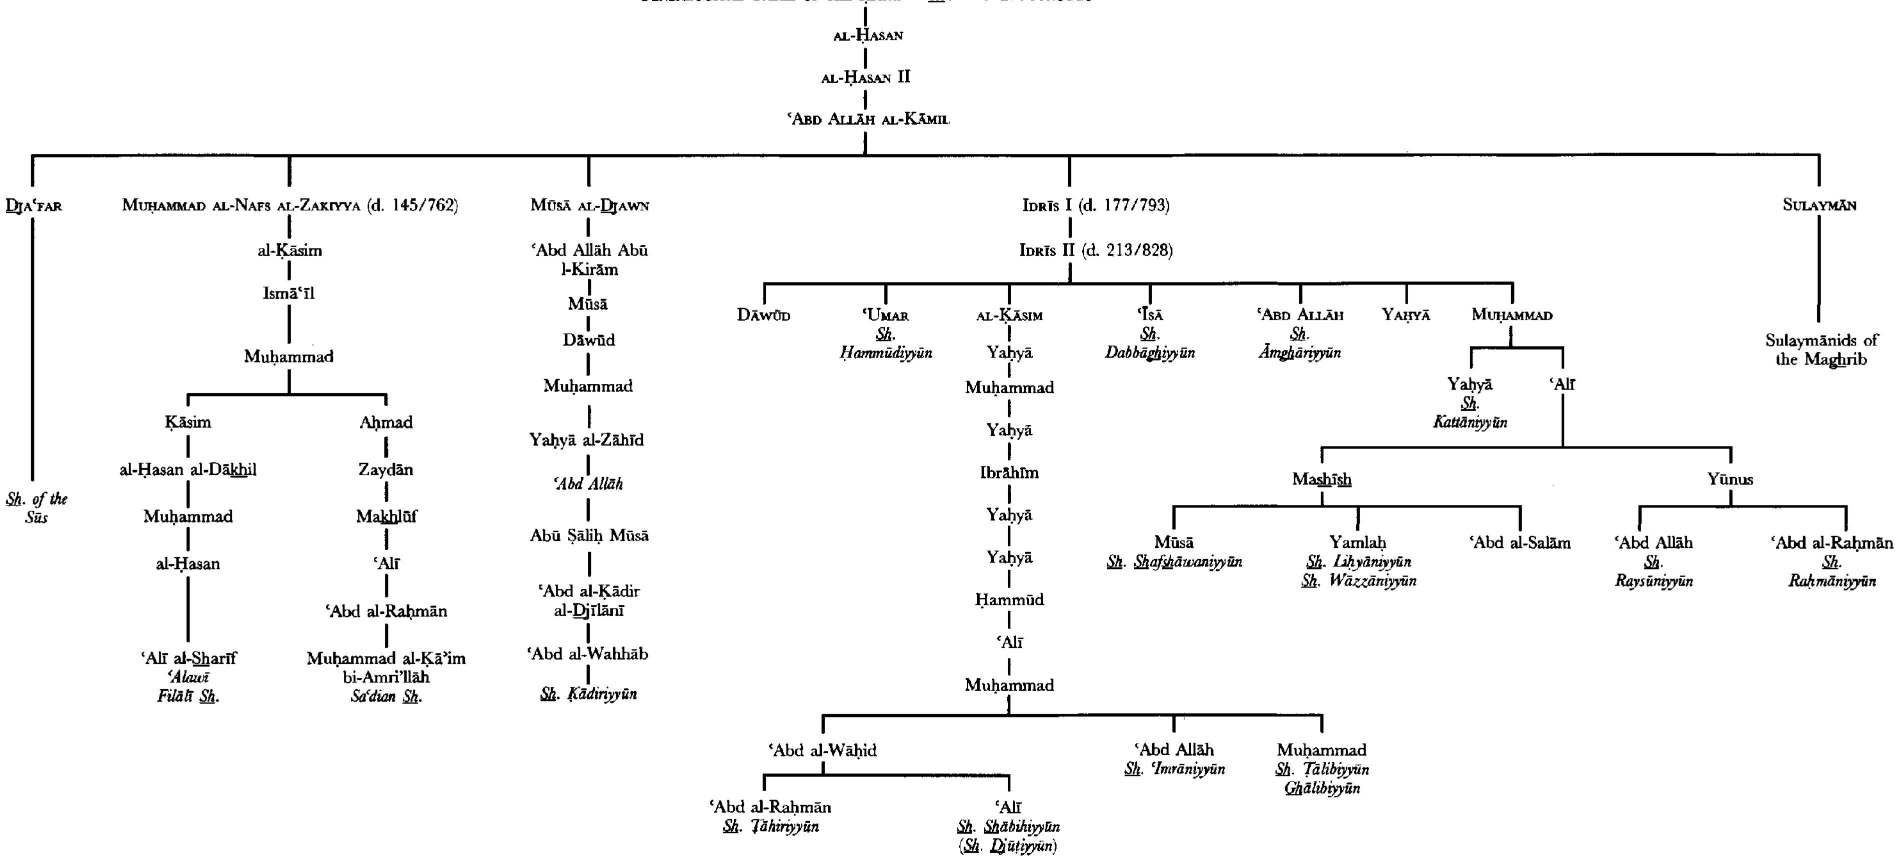
(E. LÉVI-PROVENÇAL-[CH. DE LA VÉRONNE])

SHURAḤBĪL B. **ḤASANA**, Abū 'Abd Allāh, early Meccan convert to Islam, prominent Companion of the Prophet and leading commander in the Arab invasions of Syria, d. 18/639.

Apparently of Kindī origin, he was known by his mother's name Ḥasana, but his patrilineal *nasab* was ... b. 'Abd Allāh b. al-Muṭāḥ b. 'Amr. He is described as a *ḥalīf* or confederate [see ḤILF] of the Meccan clan of Zuhra but as also being connected, through another marriage of his mother, with Djumaḥ. As an early convert, he took part in the second *hidjra* or migration to Ethiopia (see Ibn Sa'd, iv/1, 94, vii, 118; Ibn al-Athīr, *Usd al-ghāba*, ii, 390-1). He became prominent in the Prophet's *ghazawāt* or raids, and in Abū Bakr's caliphate fought in the Ridda Wars under Khālid b. al-Walīd. After the Muslim victory at 'Aḳrabā' or Yamāma, he was sent as one of the four commanders heading armies into Syria, in his case, into Jordan or Palestinia Secunda, according to al-Madā'inī in al-Ṭabarī, i, 2107-8, with 7,000 warriors. He was probably at such places as Djarash, al-Faḥl, Ḳadar, the Golan region, etc. (late 12-early 13/late 634-early 635), and also in northern Palestine, although firm information is lacking for most of these campaigns. He died, as did his fellow-commander Yazīd b. Abī Sufyān, in the Plague of 'Amwās (Emmaus) in 18/639, aged 67 (Ibn al-Athīr) or 69 (al-Balādhurī).



Bibliography: The primary sources for Shuraḥbīl's military career (Ibn A'tham, Balādhurī, Ṭabarī, etc.) are well exploited in F.McG. Donner, *The early Islamic conquests*, Princeton 1981, 114-16, 118-19, 129 ff., 152-3, 359, 361-2. See also M.J. de Goeje, *Mémoire sur la conquête de la Syrie*, Leiden 1900, 70 ff.; M. Gil, *A history of Palestine 634-1099*, Cambridge 1992, 33-4, 41, 44, 74. (C.E. BOSWORTH)

SHURĀT [see KHĀRIDJITES].

SHURAYḤ B. AL-ḤĀRITH (or B. SHURAḤBĪL) B. ḲAYS, Abū Umayya al-Kindī, an early *ḳāḍī* of Kūfa. He was reportedly born in the Yemen to a family belonging to the Persian *abnā'* [*q.v.*]; his *nisba* is said to refer to his status as a *mawlā* of Kinda. There is disagreement as to whether he met the Prophet. According to a number of accounts (rejected by al-Shāfi'ī and others), he was first appointed judge of Kūfa by 'Umar (in 18/639 or 22/643); his appointment was allegedly confirmed by 'Uthmān, 'Alī and Mu'āwiya. 'Alī called him "the best judge among the Arabs" (*aḳḍā 'l-'arab*) and provided him with a monthly stipend of 100 (or 500) dirhams. Their relationship appears, however, to have been uneasy: 'Alī upbraided him for handing down a wrong decision and even dismissed him, though he reinstated him a few months later.

Shurayḥ is said to have served as *ḳāḍī* of Kūfa for between 53 and 75 years, with two significant interruptions. The first occurred during the governorship of Ziyād b. Abīhi, who sent him as a judge to Baṣra, where he spent one year (or seven years); during that time Masrūḳ b. al-Adjda' (d. 63/682-3) replaced him in Kūfa (or acted as his deputy there). The other largely coincided with the period during which Kūfa

Genealogical Table of the Ḥasanid Shurafāʾ in Morocco

was successively in the hands of al-Mukhtār and Muṣʿab b. al-Zubayr (66-72/685-91) [*q.vv.*], when Shurayḥ reportedly withdrew in order to avoid involvement in the *fitna*; others have it that he was forced to resign. He was reinstated by ʿAbd al-Malik, who gave him 10,000 dirhams and some property in al-Fallūdja [*q.v.*]. According to a report in al-Ṭabarī, al-Ḥadjdjādj [*q.v.*] in 79/698-9 acceded to the *ḳāḍī*'s request to be relieved of his duties and accepted his recommendation that Abū Burda b. Abī Mūsā al-Ashʿarī [*q.v.*] be appointed as his successor. The most usual dates given for Shurayḥ's death are between 76/695-6 (a date which does not tally with al-Ṭabarī's report) and 80/699-700, though dates as early as 72/691-2 and as late as 99/717-8 are also recorded. Reports of his age at death range between 100 and 127 years; the statement that he was 180 years old is probably the result of a corruption of the number 108. These reports may reflect a wish to show that Shurayḥ was born sufficiently early to have met the Prophet (cf. Lammens, 79).

There are conflicting accounts of Shurayḥ's relations with the Umayyads. On the one hand he is portrayed as doing their bidding, as in the case of Hāniʾ b. ʿUrwa [*q.v.*], when he obeyed ʿUbayd Allāh b. Ziyād by telling Hāniʾ's supporters that their leader was still alive; and he was an adviser and confidant of Ziyād b. Abīhi. Yet he is also alleged to have privately made extremely unflattering remarks about some of his Umayyad superiors, and to have only followed their orders for fear of his own safety. The Kūfan Shīʿīs accused him of having been among the signatories of a document charging Ḥudjr b. ʿAdī [*q.v.*] with agitation against the authorities; yet Shurayḥ denied this, claiming that he had in fact testified to Ḥudjr's piety.

Shurayḥ is often described as the ideal judge. He held court in the mosque beside the *minbar*; on rainy days he would sit in judgment at home. His probity was such that he even found against his own son (or brother), who was then imprisoned. He is said to have followed earlier authorities in his legal pronouncements and to have refrained from issuing independent legal opinions (*fatwās*); others, however, claim that he applied *idjtihād* when no answers to a particular problem were available. The pronouncements ascribed to him generally conform to the position of the old schools. They were transmitted mostly by Kūfan scholars, including al-Shaʿbī, al-Ḥakam b. ʿUyayna and Abū Isḥāḳ al-Sabīʿī, and some are cited by the Ḥanafīs as precedents. Shurayḥ is also remembered as a traditionist and a poet.

The inconsistencies and implausible details in Shurayḥ's biography and the contradictory pronouncements attributed to him (e.g. on the exercise of pre-emption by non-Muslims; see Ibn Māza, 467) have led some scholars (notably Lammens, Tyan, Schacht and Pellat) to regard elements of his biography as legendary. Schacht in particular maintained that Shurayḥ was "merely a *ḥakam* of the old style" and that opinions and traditions ascribed to him were "spurious throughout" and "the outcome of the general tendency to project the opinions current in the schools of law back to early authorities". This view has since been challenged (see Sezgin, i, 402, Motzki, 152-3).

SHŪRĪDA, MUḤAMMAD TAḲĪ, Persian poet, b. Shīrāz, according to most accounts, in 1274/1858, d. 6 Rabīʿ II 1345/14 October 1926.

His father ʿAbbās was an artisan by trade. Shūrīda's ancestry, from what is known, reached back to the poet Ahlī Shīrāzī (d. 942/1535-6), author of the *mathnawī Siḥr-i ḥalāl* "Legal magic". When he was seven years old he was struck blind by small-pox. Some two years later his father died, after which he came under the care of his maternal uncle. In 1288/1871-2 he accompanied his uncle in the pilgrimage to Mecca. On returning, he resumed his earlier studies, achieving a high standard in literary studies and Arabic. In 1311/1893-4 he travelled to Tehran, where he came into contact with Mīrzā ʿAlī Aṣghar Khān Amīn al-Sulṭān (d. 1907), prime minister of Nāṣir al-Dīn Shāh. He was introduced to the monarch, who was impressed by his poetry, gave him his favour and eventually bestowed upon him the title of Faṣīḥ al-Mulk. He stayed in the capital till the accession of Muẓaffar al-Dīn Shāh (1313/1896) after which he moved to Shīrāz permanently. He was treated as an important figure in official circles, and granted the revenues of a village. Towards the later part of his life, he held the custodianship of Saʿdī's resting place

in S̲h̲īrāz. He died at the age of sixty-eight, and was buried by the side of Saʿdī's tomb.

S̲h̲ūrīda is credited with an astonishing memory which enabled him to know by heart many lengthy *ḳaṣīdas* of the old masters. He has left a number of works, most of them unfinished. His *dīwān*, which comprises an estimated total of some 15,000 couplets, was published at Tehran in 1325/1946 by his son, Ḥasan Iḥsān Faṣīḥī. It contains poems in conventional verse forms such as *ḳaṣīda, ghazal, musammaṭ* and *ḳiṭʿa*. In his style of writing, S̲h̲ūrīda was essentially a poet in the classical mould following the trends initiated by early masters from K̲h̲urāsān and Fārs. He wrote many panegyrics, the most notable being those in praise of the Ḳād̲j̲ār rulers. His themes, taken as a whole, are largely traditional.

(Munibur Rahman)

S̲H̲URṬA (a.), a military-administrative term most conveniently translated as police. The basic meaning of the root *s̲h̲-r-ṭ* is "to separate or to distinguish something out of a larger entity", thus an élite force within an army or, according to some sources, criminals who separate themselves from the social order, and thence those whose function it is to bring them to book. An individual in such a unit is a *s̲h̲urṭī*, plural *s̲h̲uraṭ* or more popularly *s̲h̲urṭiyya*.

1. In the central lands of the caliphate.

The term *s̲h̲urṭa* is among the earliest of the Arabic sources of the Muslim state applied to the élite units of the armed forces whose function was to impose law and order and to uphold the authority of the newly-established state. Its establishment is variously attributed to the caliphs ʿUmar, ʿUt̲h̲mān and Muʿāwiya, and there are several reports of units being involved in putting down revolts in the early Umayyad period. Into the early ʿAbbāsid period, the *s̲h̲urṭa* and its commander, *ṣāḥib al-s̲h̲urṭa*, are reported as having played a significant role, firstly in enforcing the authority of the caliphs, and later in the course of the series of armed palace revolts which took advantage of a weakened caliphate.

The *s̲h̲urṭa* remained primarily a pragmatic institution with no authority in the developing theoretical systems of the *S̲h̲arīʿa*, and with only a limited foundation in documents of appointment, such as those recorded by al-Ḳalḳas̲h̲andī, and in the writings of al-Māwardī and Ibn K̲h̲aldūn. The institution combined the preventive and repressive functions of a police and security force with the judicial functions of a magistracy and summary court. In accounts of government processes, it is often associated with the implementation of *siyāsa* [*q.v.*]. The historical records show that the *s̲h̲urṭa* was in fact empowered with a wide and varying jurisdiction in different times and places. In Spain and during the later ʿAbbāsid period, its powers in the cities were not only territorially defined but also often specific to different classes of society. When the *ṣāḥib al-s̲h̲urṭa* was powerful he could trespass extensively on to the jurisdiction of both *ḥisba* and that of the *ḳāḍī*, taking charge of enforcing proper conduct in public places, dispensing criminal justice and supervising the implementation of retaliation or *ḳiṣāṣ* [*q.v.*]. Among the duties often attributed to the *s̲h̲urṭa* were riot control in the cities, protection of villages against brigandage, checking the quality of the work of artisans and support for tax enforcement. The *ṣāḥib al-s̲h̲urṭa* appears often in the early centuries as the head of the ruler's personal bodyguard, a function whose title and role is confused with that of the *ḥaras*. Among the earliest functions of the institution was also that of night watch (*al-ṭawāf bi 'l-layl*, and this was the one which it retained most consistently and for the longest time; in the Muslim West, its commander was often entitled *ṣāḥib al-layl* in later centuries.

In the early centuries, the *ṣāḥib al-s̲h̲urṭa* was among the highest officials in both central and provincial government, but an indication of his gradually sinking rank is the change from his fourth placing under the ʿAbbāsids to the twenty-fifth one under the Mamlūks (according to al-Ḳalḳas̲h̲andī, *Ṣubḥ al-aʿs̲h̲ā*, Cairo 1913-19, iv, 23, v, 450. This decline in rank is associated with the decline of the authority of central governments and the gradual redistribution of power between, on the one hand, foreign military castes (Mamlūks) which had control of repressive powers, and, on the other, with local urban quarters developing their local forms of collective defence and social discipline. By the late Mamlūk period, the term *s̲h̲urṭa* is increasingly rare in the sources, as the *mamlūk* military units took over the functions of repression and imposition of public order. Many of the more local functions became vested in the local quarters, and the officials sank in status to become among the lowest in the community. The roles of night watch and rubbish collection tended to overlap, while officials responsible for crime prevention developed an ambiguous relationship with the petty criminal element.

2. In Muslim Spain.

The *s̲h̲urṭa* in al-Andalus has always posed the problem of identification of its three categories: *ʿulyā, wusṭā* and *ṣug̲h̲rā*. In his history of Muslim Spain, E. Lévi-Provençal followed the interpretation of E. Tyan, who relied for his part on a text of Ibn K̲h̲aldūn. The *s̲h̲urṭa ʿulyā* would be, according to the great North African historian, that concerned with misdemeanours committed by people belonging to the *k̲h̲āṣṣa*, while the jurisdiction of the *s̲h̲urṭa ṣug̲h̲rā* was applied to the *ʿāmma* (*Muḳaddima*, Beirut 1981, 312). However, Ibn K̲h̲aldūn does not mention the *s̲h̲urṭa wusṭā*, established by ʿAbd al-Raḥmān III al-Nāṣir in 317/929-30. For their part, the historical sources are not clear regarding the competence of this "medium" *s̲h̲urṭa*, just as they are not entirely clear about the two others,

and the subject remains shrouded in a degree of obscurity.

The earliest information regarding the *shurṭa* in al-Andalus dates from the reign of ʿAbd al-Raḥmān I (d. 172/788), who awarded this responsibility to al-Ḥusayn b. al-Dadjn al-ʿUkaylī, commander of his cavalry at the battle of Muṣāra (this connection between the *shurṭa* and military activity is not always evident, but it becomes a stronger element under the Umayyad caliphate). During this early period, the function of the *shurṭa* could be exercised simultaneously with the *wilāyat al-sūḳ*, the *ḳaḍāʾ* or the prayer. It was al-Ḥakam I (180-206/796-827) who inaugurated the *shurṭa ṣughrā*, also ordering the construction of an enclosure in the gallery of the Great Mosque of Cordova, beside the position occupied by the *ḳāḍī*, for the submission of affairs subject to the jurisdiction of the *shurṭa*. Al-Ḥārith b. Abī Saʿd, son of a slave affranchised by ʿAbd al-Raḥmān I, was the first to perform this function, initially under al-Ḥakam and then during the reign of his successor ʿAbd al-Raḥmān II (206-38/822-52) who, after the death of al-Ḥārith, appointed his son Muḥammad b. al-Ḥārith to take his place. It is interesting to note that under this last-named *amīr*, another descendent of slaves affranchised by the founder of the Umayyad dynasty, Muḥammad b. Khālid Ibn Martanīl, was also appointed to the *shurṭa* (and to the inspection of markets). It could be said that, while retaining functionaries of Arab origin for this post, the *amīrs* were at pains to consolidate links of personal dependence (a cousin of Ibn Martanīl was responsible for the *shurṭa* under the *amīr* Muḥammad (238-73/852-86). As for the competence of the *shurṭa*, the intervention of al-Ḥakam I could be considered a deliberate effort to mark the existence of a jurisdiction separate from that of the judges, an effort which should perhaps be seen in the context of the *amīr*'s troubled relationship with the *ʿulamāʾ* of Cordova, which was to lead ultimately to the revolt of the *Rabaḍ*. A new development in this evolution came about under ʿAbd al-Raḥmān II, who decreed the separation of the *wilāyat al-sūḳ* from the *aḥkām al-shurṭa*, known as *wilāyat al-madīna*. The text of Ibn Ḥazm (quoted by Ibn Saʿīd in *Mughrib*, i, 46) on this question seems to associate the jurisdiction of the *shurṭa* with the *wilāyat al-madīna*. In his description of administrative systems in al-Andalus, Ibn Khaldūn (and Ibn Saʿīd quoted by al-Makkarī) confirms this possibility and, in fact, during the Umayyad caliphate references are found to the *shurṭat al-madīna*. But in other instances, it is clear that it was a case of two different functions, responsibility for which was incumbent on separate functionaries. The separation between *shurṭa* and *aḥkām al-sūḳ*, introduced by ʿAbd al-Raḥmān II, poses similar problems, since it was not always respected, and under the *amīr* Muḥammad, successor to ʿAbd al-Raḥmān II, examples are already found of combination of the two functions, examples which are repeated throughout the Umayyad caliphate and the period of the Taifas. Cases are also known where appointment to the *shurṭa* was combined with that to the judgment of appeals (*radd*), this beginning under the reign of the *amīr* ʿAbd Allāh (275-300/888-912). The *aṣḥāb al-shurṭa wa ʾl-radd* are classed, in the ceremonial of the Umayyad caliphate, with the senior judge of Cordova, judges of provinces and families of noble origin. They are considered equivalent to the *ḥukkām*, and they do not belong to the world of high-ranking officials (*ahl al-khidma*).

The first *aṣḥāb al-shurṭa al-ʿulyā* are recorded under the reign of the *amīr* ʿAbd Allāh. One of them, Ḳāsim b. Walīd al-Kalbī, was confirmed in his function by al-Nāṣir, and played an important military role in the pacification of the rebellions of Seville and of Carmona. In the early years of his reign (well documented in vol. v of Ibn Ḥayyān's *Muḳtabis*), al-Nāṣir appointed to this post members of families such as the Banū Abī ʿAbda, the Banū Ḥudayr (who also fulfilled the role of the *shurṭa wusṭā*) and the Banū Shuhayd, as well as one of his maternal uncles and his *mawālī*, including Durrī. At the same time, the caliph entrusted to him the command of numerous military expeditions. This link between the *shurṭa ʿulyā* and military responsibilities was maintained in the case of ʿUbayd b. Aḥmad b. Yaʿlā (appointed *ḳāʾid al-aʿinna* in 343/954) and later, the admiral of the fleet ʿAbd al-Raḥmān b. Rumāḥis. Descriptions of Umayyad ceremonial under al-Ḥakam II contained in vol. vii of the *Muḳtabis* show the privileged status of the *aṣḥāb al-shurṭa al-ʿulyā wa ʾl-wusṭā*, among the highest-ranking functionaries. This is not a question of a responsibility entrusted to a single person, and it is offered to people in conjunction with their appointment to the command of an army unit or the governance of a province. This evolution seems to indicate that the *shurṭa ʿulyā* (and the other categories) has become a kind of official rank or grade in the hierarchy of the caliphal administration, in close association with the army. Special missions are entrusted to holders of this title, such as the preparation of expeditions against Christian kingdoms and the reception of North African princes who are vassals of the caliph of Cordova. For their part, the biographical sources show us the continuity of the *ḥukkām* entrusted with the *shurṭa* (and frequently also with the *sūḳ*). Among these, the activity of Aḥmad b. Naṣr under al-Ḥakam II is well described by the historical sources: he was concerned with the market as well as with the public distribution of the caliph's alms and with complaints against the governors (*ʿummāl*) of provinces, Aḥmad b. Naṣr is ranked, in palace ceremonies, among the *aʿyān al-khāṣṣa*, not among the senior functionaries.

With al-Manṣūr b. Abī ʿAmr (who had himself been *ṣāḥib al-shurṭa al-wusṭā* before exerting total control of caliphal power) references to the *aṣḥāb al-shurṭa al-ʿulyā wa ʾl-wusṭā* disappear from the sources (mention of the role of the *shurṭa ʿulyā* is not found until later, under the Zīrids of Granada, and then only once), while the *ḥukkām* continue to fulfil their functions, in this period as after the fall of the caliphate and in Cordova as in other cities. Al-Manṣūr had in addition a personal *shurṭa*, under the supervision of a *wālī*, and established in the palatine city which he had founded, al-Madīna al-Zāhira [*q.v.*]. In the period of disorder which saw the disappearance of the Umayyad caliphate, Ibn Wadaʿa, who was responsible for the *shurṭat al-madīna*, played an important political role, addressing the power vacuum which came into being. If Ibn Ḥayyān (quoted by Ibn al-Khaṭīb in *Aʿmāl al-aʿlām*) is to be believed, the *aṣḥāb al-shurṭa* exercised despotic power during these years, and it was not until the seizure of power by the Banū Djahwar that justice and order were to be established once more in Cordova.

(Manuela Marín)

SHUSHTAR, Shūshtar, Arabic form Tustar, a town of southwestern Persia in the mediaeval Islamic province of Ahwāz [*q.v.*] and the modern one (*ustān*) of Khūzistān (lat. 32° 03' N., long. 48° 51' E.). It stands on a cliff to the west of which runs the river Kārūn [*q.v.*], the middle course of which begins a few miles north of the town. This position gives the town considerable commercial and strategic importance and has made possible the construction of various waterworks for which the town has long been famous. The main features of these constructions are: (1) the canal called Āb-i Gargar (in the Middle Ages, Masrūḳān) which is led from the left bank of the river about 600 yards north of the town; it runs southwards along the east side of the cliffs of Shushtar and rejoins the Kārūn at Band-i Ḳīr, the site of the ancient ʿAskar Mukram; (2) the great barrage called Band-i Ḳayṣar, which is thrown across the principal arm of the river (here called Shuṭayṭ or Nahr-i Shushtar) east of the town and is about 440 yards long; this barrage supports a bridge intended to connect the town with the west bank, but now a considerable gap is broken in it; (3) the canal called Mīnāw (from Miyānāb) which begins above the barrage in the form of a tunnel cut out of the rock on the western side of the town; the citadel is above this part; the Mīnāw turns southwards and is intended to irrigate the land south of the town.

Shushtar, along with these canals, was already in existence in pre-Islamic times. Pliny knows a town called Sostra (xii, 78) and it appears as Shōshtar in the *Liste géographique des villes d'Iran*, publ. by Blochet (*Recueil de travaux relatifs à la philologie et l'archéologie égyptienne et assyriennes*, xvii [1895], no. 46); it is found in Syriac literature as a Nestorian bishopric (cf. Marquart, *Ērānšahr*, 27). Persian tradition also regards Shushtar as a very old town (e.g. Abu 'l-Fidā', ed. Reinaud, 315). This tradition is found in the Arab historians and geographers and most fully in the *Ta'rīkh-i Shūshtar* of ʿAbd Allāh Shūshtarī (see *Bibl.*). The story goes that the town was founded by the mythical king Hūshang after the foundation of Shūsh (Susa). Shushtar is said to be a comparative from Shūsh meaning "more beautiful", in reference to the site of the town (Marquart, *loc. cit.* also regards it as a derivative from Shūsh with the suffix-*tar* indicating direction). The Arabic form Tustar is generally explained as an Arabicisation of Shūshtar (e.g. by Ḥamza al-Iṣfahānī and Yāḳūt, i, 848). Several sources record that the town was built in the form of a horse. Tradition also says that the Mīnāw canal, formerly called Nahr-i Dāriyān, was built by Darius the Great and that it was the Sāsānid Ardashīr I who began to construct the barrage in the river below the mouth of the canal, after the latter had dried up because the bed of the river had sunk through erosion by the force of the current. The work was only completed, however, under Shāpūr II by his Roman prisoners under Valerian II (cf. also Ṭabarī, i, 827 and al-Masʿūdī, *Murūdj*, ii, 184 = § 606). The Āb-i Gargar was first dug simply to divert the volume of water. The Band-i Ḳayṣar was next constructed and called after the emperor, and the bed of the river above the barrage was paved with huge slabs of stone bound with iron so as to prevent any further erosion. This paving was called Shādirwān, a term which was also applied to the barrage itself. Ultimately, a new barrage is said to have been built across the Gargar. From the 8th/14th century, the Āb-i Gargar was called Dū-Dānig and the Nahr-i Shushtar Čahār-Dānig, because they contained respectively two- and four-sixths of the quantity of water in the Kārūn. Muslim authors number these great hydraulic constructions among the wonders of the world (e.g. Ḥamza al-Iṣfahānī and Ibn Baṭṭūṭa). Although the authenticity of the tradition quoted could be for the most part disputed, it is not improbable that Roman prisoners of war took part in the construction of the barrage (cf. Nöldeke, *Geschichte der Perser und Araber*, 37); local tradition further attributes to Roman colonists thc introduction of a number of industries, e.g. the manufacture of brocade (*dībādj*) and certain popular customs.

In the caliphate of ʿUmar, the town was conquered by al-Barā' b. Mālik, whose tomb used to be pointed out in the centuries following. Tradition also says that the coffin of the prophet Dāniyāl was found there, which later on was brought to Shūsh. In the Umayyad period, the town became one of the strongholds of the Khāridjīs; the Khāridjī Shabīb made it his capital, but after his death al-Ḥadjdjādj seized it; it was then that the great bridge over the barrage was destroyed. Under the caliphs, Shushtar was the capital of one of the seven provinces (sometimes a larger number is given, see al-Muḳaddasī, 404), into which Khūzistān was divided. When Baghdād became the centre of the empire, Shushtar gradually became influenced by its proximity to the capital. One quarter of Baghdād, for example, in the 4th/10th century was called Maḥallat al-Tustariyyīn; it was the residence of the merchants and notables from Khūzistān. The oldest mosque was built under the ʿAbbāsids; begun in the reign of al-Muʿtazz (252-5/866-9), it was only finished under the caliph al-Mustarshid (512-29/1118-35). There was, however, a fire-altar at Shushtar in the time of al-Ḥallādj (Massignon, *La passion d'al-Hallāj*, i, 92).

Shushtar, along with Ahwāz, has always been the chief town in Khūzistān; Ḥamd Allāh Mustawfī calls it the capital of this province. It was conquered by Tīmūr, and remained in the hands of the Tīmūrids till the year 820/1514, when it fell to a Shīʿī dynasty of Sayyids under the suzerainty of the Ṣafawids and became a centre of Shīʿa propaganda. Several governors have founded little dynasties there. The town enjoyed most prosperity in the reign of Wākhishtū Khān (1041-78/1632-67), whose descendants kept the governorship till the end of the Ṣafawids. At the beginning of the 19th century it was among the provinces governed by Muḥammad ʿAlī Mīrzā, son of Fatḥ ʿAlī Shāh, who restored, for example, the barrage and the bridge. At this period, it is said to have had a population of 45,000, but the number has certainly diminished a great deal since, for Rawlinson in 1836 puts it at 15,000 and Curzon in 1890 at 8,000. The area covered by the town is out of all proportion to the population. Sykes also calls Shushtar the most ruined town in Persia; this description applies also to the irrigation works. The houses are built of stone and brick; they contain cellars [see sardāb], here called *shewādān*, in which the inhabitants shelter in the excessive heat of summer (Shushtar has the dubious distinction of having the highest mean maximum temperature for July in the whole country, 47.3° C.).

As to the inhabitants themselves, they are a mixture of Arab and Iranian or proto-Iranian elements. In the middle of the 19th century there were still a considerable number of Mandaeans here; Layard counted 300-400 families of them in 1840 (cf. also the description of them given by ʿAbd Allāh al-

Shushtarī, 24). They have probably now disappeared. Travellers at the end of the 19th century (Curzon and Sykes) described the character of the present inhabitants as disagreeable and fanatical. Among the Persians, the devoutness of the inhabitants has earned the town the honorific title of *Dār al-Muʾminīn*. On the other hand, we find Shushtar included among the Persian towns celebrated for the stupidity of its inhabitants (Christensen, in *AO*, iii, 31).

In the early 20th century, the town was rent by feuding between the two factions of the Niʿmatīs, supporters of the Bakhtiyārīs and Constitutionalists, and the Ḥaydarīs, pro-Arab and pro-monarchy. From the later 19th century, Shushtar had benefited commercially from being the farthest point on the Kārūn reached by the steamship service inaugurated in 1887 by Messrs Lynch [see KĀRŪN], for goods had to be landed there and sent forward by caravan. It grew to be the major retail centre of southwestern Persia, with a population reaching 28,000 in 1938 before the completion of the Trans-Persian Railway then. But since that line crossed the Kārūn at Ahwāz, on its way from Bandar Shāpūr on the Gulf to the interior plateau, Shushtar was bypassed; Ahwāz [*q.v.*] became a major city, eclipsing Shushtar, so that the latter's population began to decline. In 1971 it was still only 27,532, but has recently increased to 70,294 (1991 census figure).

(J.H. KRAMERS-[C.E. BOSWORTH])

AL-SHUSHTARĪ, ABU 'L-ḤASAN ʿALĪ b. ʿAbd Allāh al-Numayrī, Ṣūfī of Muslim Spain and resident of Malaga and Grenada (b. *ca.* 610/1212, d. at Ṭīna 668/1269 and buried at Damietta; his *nisba* derives from Shushtar, here a *ḳarya* or village of the Guadix district).

His masters included Ibn Surāḳa al-Shāṭibī and other disciples of Abū Ḥafṣ ʿUmar al-Suhrawardī (d. 632/1234 [*q.v.*]), and he was in contact with the Ṣūfī poet al-Nadjm b. Isrāʾīl al-Dimashḳī, whom he met in 650/1252. But most influential for al-Shushtarī was the philosopher and mystic Ibn Sabʿīn [*q.v.*], whom he met at Bidjāya in 646/1248 and five years later in Egypt and at Mecca.

His prose works include *al-Maḳālīd al-wudjūdiyya fī asrār al-ṣūfiyya* (ms. Cairo, Taymūr, *taṣawwuf*, 149, fols. 413-43); *al-Marātib al-īmāniyya wa 'l-islāmiyya wa 'l-iḥsāniyya; al-Risāla al-ʿalamiyya* (résumé by Ibn Luyūn); *al-Risāla al-baghdādiyya* (ea. M.-Th. Urvoy, in *BEtOr*, xxviii [1975], 259-61); *al-Risāla al-ḳudsiyya fī tawḥīd al-ʿāmma wa 'l-khāṣṣa* (mss. Taymūr, *taṣawwuf* 149, see Urvoy, 259 n. 3, and Istanbul, Şehit Ali 1389/6); and *al-ʿUrwa al-wuthḳā fī bayān al-sunan wa-iḥṣāʾ al-ʿulūm*.... But al-Shushtarī was best known for his poetry, with a *dīwān* of odes, *muwashshaḥāt*, etc., commented on by ʿAbd al-Ghanī al-Nābulusī (author of a *Radd al-muftarī fi 'l-ṭaʿān ʿalā 'l-Shushtarī*), Aḥmad b. Muḥammad al-ʿAdjība al-Ḥasanī and Zarrūḳ (mss. of the *dīwān* listed in Massignon, *Investigaciones sobre Šuštarī*, 54). It has been edited by ʿA.S. al-Nashshār, Alexandria 1960, and by F. Corriente, *Poesía estrófica (cejeles y/o muwaššaḥāt) atribuida al místico granadino Aš-Šuštarī (s. XIII d.c.)*, Madrid 1988. In his *muwashshaḥāt* and *azdjāl* in dialectical Arabic, set to melodies, he followed the way traced by Muḥyī 'l-Dīn Ibn al-ʿArabī, who had made the *zadjal* a vehicle for mysticism (see Corriente, *La poesía estrófica de Ibn ʿArabī de Murcia*, in *Sharq al-Andalus*, iii [1986], 19-24).

Certain charismatic acts were attributed to him, and were gathered together by al-Ghubrīnī and reproduced by later biographers. As a disciple of Ibn Sabʿīn, al-Shushtarī was considered to be of suspect orthodoxy and was allegedly an exponent of the doctrine of *ḥulūl*, although the reserves concerning him are less than those for his master.

(MARIBEL FIERRO)

AL-SHUSHTARĪ, SAYYID NŪR ALLĀH [see NŪR ALLĀH].

AL-SHUʿŪBIYYA (A.), a movement within the early Muslim society which denied any privileged position of the Arabs. The term Shuʿūbiyya goes back to Ḳurʾān, XLIX, 13, where it is stated: "O Men, We have created you of a male and a female and have made you into peoples (*shuʿūb*) and tribes (*ḳabāʾil*), that ye might know one another. Verily the noblest of you in the sight of God are they that do most fear Him."

The derivation of the term Shuʿūbiyya from the word *shuʿūb* occured before the movement of the same name appeared (Gibb, 66-7). The original Shuʿūbiyya was the concept of extending the equality between the *shuʿūb* and the *ḳabāʾil* to include equality among all Muslims, and was adhered to by the Khāridjites [*q.v.*] in the early period of Islam. This idea countered the Ḳuraysh's [*q.v.*] claim to leadership. The Shuʿūbiyya movement, which appeared in the 2nd/8th century and reached its peak in the 3rd/9th century,

had other, more diverse goals. These ranged from a call for equality between non-Arabs (ʿADJAM [*q.v.*]) and Arabs (ʿARAB [*q.v.*]), whose advocates were also known as *Ahl al-taswiya* (al-Djāḥiẓ, *Bayān*, iii, 5), to the claim of non-Arab supremacy which denied any significance, past or present, of the Arabs.

Most of the Shuʿūbīs were Persians, although references to Aramaeans, Copts and Berbers, among others, are also found in the literature. (A unique example of non-Persian Shuʿūbiyya is Ibn Waḥshiyya's [*q.v.*] *Nabataean agriculture*.) It seems that the term Shuʿūbiyya was used by the Shuʿūbīs themselves, and was not a discriminatory term used by their opponents. In contrast to the classical Arabian interpretation of the Ḳurʾān, where *shuʿūb* and *ḳabāʾil* were both based on the principle of genealogy, several Persian interpreters assigned different meanings to *shuʿūb* and *ḳabāʾil*, whereby *shuʿūb* stood for a people whose identity was determined by territory, and *ḳabāʾil* stood for a people whose identity was determined by genealogy (Mottahedeh, 167-70).

I. Goldziher was the first to study the Shuʿūbiyya in depth; he identified two main forces behind the anti-Arab movement. First, he stated that the ʿAbbāsids had been exercising strong discrimination against the Arabs. Second, the Persians, only superficially Islamicised to begin with, re-discovered a national consciousness. This nationalism was further spurred on by autonomy movements taking place in the eastern part of the empire at the time (Goldziher, *Muhammedanische Studien*, i, 147-55). But Goldziher's supposition that the Shuʿūbiyya was in contact with nationalistic separatist movements was contested by H.A.R. Gibb. He came to the conclusion that the Shuʿūbiyya had not been a threat to the continued existence of the empire but rather to its future direction. "Their aim was not to destroy the Islamic empire, but to remold its political and social institutions and values, which represented in their eyes the highest political wisdom." (Gibb, 66.) In fact, it is difficult to find evidence of any sympathy on the part of the Shuʿūbīs for revolts that took place against the central power. Furthermore, the Shuʿūbīs primarily consisted of the educated, poets, and, above all, secretaries, who could only benefit from a strong and centralised state.

Over the course of their conquests, the Arabs adopted both the Sāsānid administration in place as well as its personnel, a group of highly professional civil servants with a strong sense of their status in society. Although the patron-client-relationship (*walāʾ* [*q.v.*]) bound the secretaries to their Arab conquerors, it also served their unique privileges. The secretaries remained faithful to the Sāsānid tradition; they translated literature such as the biographies of the kings of Persia, wrote epistles in the Sāsānid official style and produced works on practical knowledge about government. There is no evidence of any conflict between the civil servants and the Arabs well into the early ʿAbbāsid era. Even in the writings of a high secretary as Ibn al-Muḳaffaʿ [*q.v.*], expressing his disgust for people of lower origins at the caliph's court, one detects no anti-Arab resentment between the lines (Goitein, 236).

The clash came after the former garrisons of Kūfa and Baṣra developed into urban and prosperous societies made up of Arabs and non-Arabs, merchants and artisans, scholars and educated. The foundations of Arab-Islamic scholarship were laid, and a new Arab style of poetry and prose began to circulate. As the literary production of the secretaries came under serious competitive pressure towards the end of the 2nd/8th century, the initial indifference of the secretaries towards their Arab conquerers changed to hate, and the Shuʿūbiyya movement came about (Gibb, 62-6).

Gibb's description of events is convincing, but it is also incomplete. It was not simply a question of the triumph of one cultural tradition over another; rather, it was a matter of status. At risk was not just the reputation of the Persian court literature but the social privileges of the secretaries who followed its tradition. Meanwhile, the Arab and Islamic literature was not simply a product of isolated philologists and jurists but reflected the world-view of the new citizens.

This development took place in an era of demilitarisation, expansion of trade relations and a general flourishing of the cities, whereby social status differences between Arabs, as well as between Arabs and non-Arabs, began to lose importance. These things added together made up the foundation of a society that offered its members an opportunity to raise their social position above the level assigned at birth.

At the beginning of the ʿAbbāsid era, the position of the secretaries in the state administration remained largely unchallenged, but soon thereafter members of the urban middle class began to appear in the highest positions of government. Two epistles by al-Djāḥiẓ [*q.v.*], namely "Reproach of the character of the state secretaries" (*Dhamm akhlāḳ al-kuttāb*) and "Praise of the merchants and reproach of the public offices" (*Fī madḥ al-tudjdjār wa-dhamm ʿamal al-sulṭān*) are perhaps a good illustration of relations at the time, even though they may include anti-Shuʿūbī exaggerations. According to these epistles, the secretary distributed pompous Persian maxims and criticised the Arab-Islamic tradition, while in truth he was completely dependent upon his masters and under an obligation to show utmost loyalty to them. The merchant, on the other hand, shared his knowledge of the Djāhiliyya and of Islam with others willingly and with composure, because his living was not dependent upon his erudition (*Dhamm*, 42-3; *Madḥ*, 157-8).

Some authors interpret the Shuʿūbiyya less under its specific conditions but rather compare it with other movements of the same sort within the larger framework of Muslim history and society. The most recent publication on the topic, for instance, has largely removed the social and ideological context from the study of this movement and has instead portrayed it as a form of regional and ethnic antagonism. There it is seen in a line with its antecedents, the conflict of the Northern and Southern Arabs (Norris, 32).

Not only the meaning but also the importance of the Shuʿūbiyya is open to various interpretations. On the one hand, there are preserved in mediaeval Arabic anthologies, literary works and historiographies a number of remarks by poets such as Bashshār b. Burd [*q.v.*] which seem to demonstrate that the making of pro-Persian or anti-Arab comments was a harmless literary fashion (Norris, 35). On the other hand, a passage by al-Djāḥiẓ reveals deep concern that the Shuʿūbiyya could grow to become a real threat to Islam. Hate breeds hate, according to his line of thinking, and it is only a short step from hating the Arabs to hating Islam. "The bulk of those who are sceptics in regard to Islam, at the outset, were inspired by the ideas of the Shuʿūbiyya. Protracted argument leads to fighting. If a man hates a thing, then he hates him who possesses it, or is associated with it. If he hates [the Arabic] language then he hates the [Arabian] peninsula, and if he hates that peninsula then he loves those who hate it. Thus matters go from bad to worse with him until he forsakes Islam itself, because it is

the Arabs who brought it; it is they who provided the venerable forebears and the example worthy of imitation" (*Ḥayawān*, vii, 220).

The study of the Shu'ūbiyya is made even more difficult by the fact that not one original tract has survived. One is forced to use the accounts of anti-Shu'ūbī polemics in order to reconstruct the movement's arguments. The most complete examples of such a polemic are found in al-Djāḥiẓ, *Bayān*, iii, and Ibn Ḳutayba's [*q.v.*] *K. al-'Arab* and a passage in Ibn 'Abd Rabbih. They are built upon the pattern of "virtues and vices" (*manāḳib, mathālib* [*q.vv.*] of the respective nations and recount the attacks of the Shu'ūbiyya against the Arabs as well as their refutation. Arab warfare, described by the Shu'ūbīs in detail, was a technical, tactical and strategic disgrace in comparison to the warfare skills of the Sāsānids and Byzantines. The Arabian habit of gesticulating with a stick in hand while speaking, and other linguistic and non-linguistic habits of speech, served only to expose the emptiness of the Arabian claim to eloquence. Their rough language revealed the Arabs for what they really were, a people of camel-drivers. The Persians alone were capable of eloquence, delicacy and good conduct, and the arts and sciences were products of the Greek and Indian cultures, not the Arabian. Furthermore, the Arabs could rightfully claim just four prophets as their own, namely Hūd, Ṣāliḥ, Ismā'īl and Muḥammad [*q.vv.*], and were said to be descendants of Ismā'īl, the son of Ibrāhīm [*q.v.*] by his slave Hagar, and not of Isḥāḳ, the son of Ibrāhīm by his legal wife Sarah.

But this crude form of anti-Arabism was not what made the Shu'ūbiyya dangerous. The danger of the Shu'ūbiyya lay in the scepticism it provoked among the educated. The seeds of the concept of free-thinking (*zandaḳa* [*q.v.*]), sown in the pre-Islamic culture in 'Irāḳ, showed not only Manichaean tendencies but began to manifest itself as an anti-moral, frivolous and cynical attitude (*mudjūn* [*q.v.*]).

The reaction was both Arabian and Islamic. Three developments laid the foundation for a final victory of the Arabian humanities in the period following al-Djāḥiẓ. These developments were the concept of *adab* [*q.v.*], which joined pre-Islamic and Arabian traditions with religious tradition, the rise of the Mu'tazila [*q.v.*] with its strict monotheistic outlook, and the founding of the *Bayt al-ḥikma* [*q.v.*] which produced translations of Greek logic and philosophy that were effective instruments in the fight against dualistic heresies. In this context, Ibn Ḳutayba was able to compose a binding compendium that recognised Sāsānid tradition while at the same time reconciled it with the Arabian and Islamic scholarship (Gibb, 69-72).

About two hundred years after the Shu'ūbiyya died out in the East, a new Shu'ūbiyya appeared in the 5th/11th century in al-Andalus. This time it was not the Persians but the Berbers and the "Slavs" [see AL-ṢAḲĀLIBA. 3], understood to mean Galicians, Franks, Germans, Langobards and Calabrians, who made use of anti-Arab polemic. The epistle by Abū 'Āmir Ibn Gharsiya [*q.v.*], which earned no less than five rebuttals in the century following its writing, is considered to be the masterpiece of the Andalusian Shu'ūbiyya. Ibn Gharsiya was a renowned poet and secretary with Christian and Basque origins, but his epistle does not differ substantially from those of his eastern predecessors. As with the earlier works, the epistle makes references to the pre-Islamic Arabs' low degree of civilisation and praises the Persian and Byzantines, without losing a word over the non-Arabs of al-Andalus. Furthermore, as with the earlier writings of the Shu'ūbiyya, the descent of the Arabs from Ismā'īl is held up as a blemish upon the people. The epistle demonstrates Ibn Gharsiya's excellent command of the Arabic language and his familiarity with Eastern culture, two things that were also characteristic of his predecessors. In contrast to them, however, Ibn Gharsiya was not rooted in an old-established tradition whose preservation was his main task. "He was not a Christian Spaniard attacking the conquerors of his homeland but rather a neo-Muslim attempting to extend the benefits of Islamic civilization to those non-Arab peoples who formed a large segment of the Andalusian community" (Monroe, 12-13).

In the light of the resurgence of a new kind of Shu'ūbiyya in al-Andalus, the question arises whether it should be viewed not only in its specific historical situation but also as a general phenomenon in Arab-Islamic history. Hanna-Gardner pursued this question; and they discovered not two or three, but many Shu'ūbiyyas, beginning with the Shu'ūbiyya of the Middle Ages, through Ottomanism and Westernisation in the 19th century to Internationalism, Regionalism and Socialism in the 20th century. According to the authors, these movements have one thing in common that permits grouping them together under the same heading. They appeared in the name of universalism in order to undermine Arab communal consciousness, and thereby automatically called forth an Arab particularism. In this sense, all of them were true to the original meaning of the term Shu'ūbiyya "belonging to the people", while the Arabs continued to identify themselves with *ḳawmiyya* [*q.v.*] "belonging to a particular people", i.e. the Arabs (337).

The temptation is great to view the regular ebb and flow of Shu'ūbiyya and Arabism in terms of century-to-century swings between universalism and particularism. Yet such a view would overlook two important facts. First, the term Shu'ūbiyya fell out of use in the Middle Ages and did not become popular again until the time of Arab nationalism, where its use became inflated. The term then became a common denunciation of one's political opponents and was even projected back into history. Second, while the universalism-particularism-scheme may be true for the 20th century, it does not fit the Shu'ūbiyya of the Middle Ages. For it was in the name of an Islamic universalism, and not of an Arab particularism, that writers like al-Djāḥiẓ attacked the movement at that time.

(S. Enderwitz)

SHUWA (etymology of this name obscure), a group of Arabs, of nomadic origin, found by early modern times (the 19th century) in the central Sudan belt of Africa, now coming within the countries bordering on Lake Chad, sc. western Chad, northeastern Nigeria, northern Cameroons and the southeastern tip of Niger.

1. History.

Their origin was in Dārfūr and Wādāy [*q.vv.*], and they migrated westwards at an unknown date, perhaps as early as the 14th century; in the 17th century they were present in Bagirmi [*q.v.*] to the southeast of Lake Chad as that nation took shape. The earliest arrivals adopted the Kanuri language, but in the main they preserved their Arabic dialect, distinct from the Arabic of North Africa and the Western Sudan [see below, 2.]. A further impetus to their westwards migration was when, in the early 19th century, Shaykh Muḥammad al-Kānemī [*q.v.*] used them as aides against the eastwards advance of the Fulani. The Shuwa do not seem to have passed beyond Borno or Bornu [*q.v.*] in northeastern Nigeria, and only small numbers went southwards to the Mardawa and Adamawa regions. Some of the Shuwa remained pure camel nomads (the *abbāla*), but others converted to cattle nomadism (the *baḳḳāra*) and some became agriculturists around the southern shores of Lake Chad, where there arose Shuwa villages, cultivation being done by Negro serfs or clients. They do not, however, seem ever to have formed towns or to have had a permanent home centre. Hence they were often in a dependent relationship with local potentates, such as the Kanembu *Mais* of Kanem. In 19th century Borno, many Shuwa held high court and administrative posts and the Shehu rulers took their womenfolk as wives.

The Shuwa were a significant factor in the Islamisation of the region. Two of the most important and influential nomad groups in Bornu, the Awlād Sāra and the Awlād Muḥārib, claimed Sharīf [*q.v.*] status, and traditions of eastern Hausaland include the chiefs of the Shuwa amongst those allegedly receiving copies of the Ḳurʾān from the Prophet Muḥammad's own hands. According to Trimingham, the Shuwa, unusually for the Muslims in this region, are Ḥanafī in *madhhab*.

2. Dialect.

The term Shuwa (شوى) refers to the spoken Arabic dialect and its approximately 2 million speakers who currently inhabit the former territories of Bagirmi [*q.v.*] and Kanem [*q.v.*]-Borno, today's Borno State [see BORNŪ], Northeast Nigeria, and parts of Cameroon and Chad. The largest concentration of Shuwa Arabs presently lives in and around Maiduguri. There is no consensus on the etymology of thc word *Shuwa*. The people themselves favour a Kanuri [*q.v.*] (Nilo-Saharan) etymon *šəwa* "beautiful"; however, much more probable is an Arabic source *šiwāh* "sheep" (sing. *šāh*), demonstrating that the Shuwas are part of Baggāra Arab culture.

Shuwa Arabic is but one micro-dialect of a distinct Sudanic macro-dialect spoken between Lake Chad and the Red Sea. A major characteristic of Shuwa Arabic is the preservation of Old Arabic (OA) short vowels, especially *a*, in unaccented open syllables (*kabīr* "big"), which have elided in the Maghrib and the Levant. Another is that it has no diglossia with Modern Standard Arabic.

Some principal features of the Shuwa dialect are:

(1) the OA pharyngeals have become laryngeals or zero (OA *qaʿad* > *gaat* "he stayed"; OA *ʾaḥmar* > *áhamar* "red")

(2) OA *ġ* > *q* (*qanam* "sheep")

(3) OA *m* > *b* in a few lexemes containing nasals (*bakān* "place")

(4) OA *dj* > *d* in a few lexemes containing sibilants (*šadar* "trees")

(5) the development of an inchoative-intransitivising prefix *al-* (*fákkar* "remind", *alfákkar* "remember")

(6) verbal reduplication (*lámma* "gather", *lámlam* "gather a lot")

(7) final stress in *-í* "my", *afʿál* elatives, and singulative *-á* (*bētí* "my house", *akbár* "bigger", *qanamá* "1 sheep")

(8) front and back vowel harmony (*bišīl* "he takes", *bugūl* "he says")

(9) syllable and word-final position devoicing (*tač* "you m.s. come", *makʾat* "place where one stays")

(10) many loanwords (including idioms) from non-Semitic African languages, such as Kanuri, Hausa (*rās alkalām* "topic", lit. "head of the talk", *dugó* "then, afterwards" < Kanuri *dugó* "first, before")

Two major groups of Shuwa dialects can be distinguished, Eastern (E) and Western (W). The major E isoglosses are:

(1) OA *θ* > *s* (E *sōr* "bull", W *tōr*)

(2) 1. plural imperfect subject suffix is *-u* (E *nimšu* "we go", W *nimši*)

(3) active participle with object suffix *-in* (E *kātbínha* "has written it, f.", W *kātíbha*)

(4) imperfect preformative vowel is *i* (E *tiji* "she comes", W *tiji* ~ *tāji*)
(5) Some lexical items (E with *h*, W with *x*; e.g., *hadda* "he put")

SHUYŪʿIYYA (a.), Communism.

1. In the Arab world.

1. *Terminology*

This substantive and the noun-adjective *Shuyūʿī* were established after the First World War to denote the ideological positions and political organisations associated with the Third International, described as "communist", as distinct from the "socialist" Second International and the positions and organisations associated with it. References to socialism (*Ishtirākiyya*), as a theoretical basis, remain in current usage, although it tends to be qualified by "scientific".

While *Ishtirākiyya* has prevailed over the borrowed form *Sūsyālism* to denote socialism since the 1870s, terminology relating to "communist" tendencies of thought and action was fluctuating until the beginning of the 1920s. Derivations from the borrowed form *Kumūn/Kūmūn* came into existence after the Paris Commune, but in 1883 Muḥammad ʿAbduh [*q.v.*] opted for the following definition of "naturalist" materialist trends in his Arabic translation of the *Risāla* of Djamal al-Dīn al-Afghānī, entitled *al-Radd ʿalā al-dahriyyīn: al-Sūsyālist "al-Idjtimāʿiyyūn" wa ʾl-Nihīlist "al-ʿAdamiyyūn" wa ʾl-Kumūnist "al-Ishtirākiyyūn"*. In 1908, Djirdjī Zaydān [*q.v.*] repeated this distinction, but in the same year Shiblī Shumayyil [*q.v.*] preferred, while noting the equivalence with *Idjtimāʿiyya*, the global term *Ishtirākiyya* to denote European socialism in all its diverse forms; and it is this term which predominates in the more authoritative works of Salāma Mūsā (1913) [*q.v.*] and Muṣṭafā al-Manṣūrī (1915). After the adoption in 1918-19 of the distinctive qualificative "communist" (change in the name of the Bolshevik party, then foundation of the Third International), two pairs of terms are in competition: *Ibāḥiyya/Ibāḥī*, used especially, on account of its multiplicity of senses, by polemicists, although not exclusively so, since it denotes the common, collective appropriation of property, and in Palestine an early Arabic tract on the eve of 1 May 1921 is signed *al-Ḥizb al-Ibāḥī fī Filasṭīn*; the pairing *Shuyūʿiyya/Shuyūʿī*, derived from a root which expresses the same idea, and all the more so in that the Mushāʿ [*q.v.*] pattern is applied to a still-practised form of indivision, was to gain ascendancy. Since 1921, Tunisian communists have used these terms to describe themselves.

2. *The inter-war period: foundation of the first communist parties*

In the immediate post-war period, the Russian Revolution was viewed with particular interest in the Arab Orient, since it appeared to accord with the nationalist aspirations which motivated the revolutions of 1919 in Egypt, of 1920 in ʿIrāḳ, with movements of opposition to mandatory division in the Levant and in Palestine, and with the still embryonic, proto-nationalist, constitutional reformist movements of Tunisia and Algeria. The denunciation, after November 1917, of secret agreements for the sharing of the Arab provinces of the Ottoman Empire (Sykes-Picot-Sazonov), entailing renunciation of the Russian claim, the echo of the Congress of Baku (September 1920), calling the Muslim peoples to *djihād* and, for the Pan-Islamists at least, support for Kemalist Turkey—all these contributed to this "anti-imperialist" alliance. The link with social aspirations was not absent, but it was interpreted according to different scales of priorities. The objective of the Bolsheviks was to establish a society based on the collective appropriation of social goods. A *fatwā* of the *muftī* of Egypt, in response to a question in *The Times*, having declared this contrary to religion, *al-Manār*, the periodical of Muḥammad Rashīd Riḍā [*q.v.*] (August 1919), taking up an idea of ʿAbd al-Raḥmān al-Kawākibī (*Ṭabāʾiʿ al-istibdād, 1902* [*q.v.*]) asserted that there was, neither in the ideas nor in the actions of Bolshevism, any contradiction with the principles of Islam. But this was a marginal opinion. Nationalist leaders were more aware of the dialectics of power; the weight of popular demonstrations and strikes consolidated the national cause, but needed to be kept under control. On the other hand, intellectuals, versed in socialism and its various forms, as well as trade unionist or pre-trade unionist workers, were more aware of the dialectics of society; to give an anti-capitalist class content to anti-imperialist national conflicts, thus paving the way for the acquisition of power by the workers, on the model of the Soviet "dictatorship of the proletariat".

Between 1920 and 1925, the first parties inspired by the Communist International made their appearance, although the modes of formation were diverse. In two cases, it was a matter of the evolution of European socialist formations which attracted few if any adherents in the countries concerned. In North Africa, under French domination, the decision was the result of the majority decision of the Congress of Tours (December 1920) of the Socialist Party (S.F.I.O., *Section Française de l'Internationale Ouvrière*) to accept the conditions of membership of the Communist International, and thereby to become the Communist Party (S.F.I.C., *Section Française de l'Internationale Communiste*). The federation of Tunisia and those of Algeria belonged to this majority. In Palestine, now under British mandate, the socialist movement in the pre-war period was concerned only with Zionist immigration: a slow crystallisation of the extreme left of the Palestinian branch of *Poʿalei Tsion* led to the formation of the *Mifleget Poʿalim Sotsialistim* (October 1919) which in April 1921 declared itself a communist party (P.C.P.). Its membership of the International, conditional upon the abandonment of any reference to proletarian Zionism and the obligation to become a party of the Arab masses, was finalised in March 1924. In two other cases, emergence was more complex. In Egypt, Coptic and Sunnī intellectuals, followers of Salāma Mūsā in Cairo, small socialist groups of foreign or Ottoman origin based in Alexandria under the leadership of a naturalised Egyptian, Joseph Rosenthal, and in particular, a syndicalist revolutionary component constituting a Confédération Générale du Travail (C.G.T., February 1921), founded *al-Ḥizb al-Ishtirākī al-Miṣrī* in August 1921. The majority decision to join the International was taken in July 1922, this leading to the secession of the Salāma Mūsā group. The party was admitted to membership in January 1923, having undertaken an obligation to convoke a congress which formalised the acceptance of the 21 conditions, purged the party and changed its name. In Lebanon, under French mandate, the process was

more gradual: Fuʾād Shimālī, a communist trade unionist expelled from Egypt in August 1923 for disseminating Bolshevik propaganda, made contact with Yūsuf Ibrāhīm Yazbek and the populist intellectuals who, since the end of 1922, had, in writing, romantically claimed association with the Communist International; priority was given to the creation of a trade union base. The visit of an envoy from the Communist Party of Palestine in October 1924 accelerated the formation of a party, known as the Lebanese People's Party (P.P.L.), the legal frame for a communist cell in liaison with the International. The celebrations of May Day 1925 revealed the existence of an Armenian group (Spartakus) which was rapidly absorbed into the L.P.P., henceforward organised in accordance with communist structures. It was independent of the French Communist Party.

The minimal base of consensus with the conditions of membership of the International was a matter of the link between class struggle and national struggle, the common denominator being opposition to capitalism in its imperialist phase, experienced in the form of colonialism. But this was part of the conception of a worldwide proletarian revolution, of which the International, dominated by the Party State of the Soviet mother country of the worldwide proletariat, determined the strategy and the tactics, these decisions being obligatory for affiliated parties. Leading members were trained at the University of Toilers of the East in the "Marxist-Leninist", in fact "Stalinist", ideological activism [see MĀRK(I)SIYYA]. For the next ten years, it was not so much the requirement for an organic link between Party and trade union which caused problems but rather it was the attitude towards the national bourgeoisie. The contribution of local communist parties to the dynamism of the trade union movement can be traced from this period [see NIḲĀBA]. However, after Egypt's accession to formal independence, the Wafd, given power by the electorate in 1924, suppressed strikes by the workers and dissolved the Communist Party and the C.G.T. which was associated with it. Arrests and a succession of trials forced the surviving militants into hiding, in a process of dispersion tantamount to the annihilation of the party.

In Algeria, the obligation imposed by the eighth condition of membership, requiring support for the actions of every movement of colonial emancipation, was regarded with reservations by communist federations affiliated to the French Communist Party, at least until their combination in a single "region" in 1925. Calls from the Communist International demanding the independence of Algeria (and of Tunisia) met no response in a movement which was still proto-nationalist, other than acquiescence in communal actions aimed at reform. Activity (1924-6) against the war of the Rīf [*q.v.*] was to illustrate the difficulty of generalising the revolution in the Maghribī environment. The constitution of the North African Star (Paris, 1926) was supposed to fill this gap: the independence of the three countries of the Maghrib featured in its programme. But, until its proscription in 1929, it was active only in immigrant circles in France.

In the Near East, the national movement was a reality, although in the Levant it was Syrian rather than Lebanese, excluding the Jewish national nucleus in Palestine. The Syrian revolution (1925-7), beginning in the Djabal al-Durūz, while supported by the P.P.L./P.C.L. and the P.C.P., was relatively widespread only within the confines of Lebanon. From December 1925 onward, the P.P.L. was disbanded, and its leaders interned until 1928. Extended to cover the whole of the Levant, it henceforward dubbed itself the Syrian Communist Party, under the leadership (1933) of Khālid Bakdāsh. But its programme, bearing the imprint of the "class vs. class" policy adopted in 1928 by the sixth Congress of the International, contributed, here as elsewhere, to its isolation from the national movement.

Directives on "arabisation" [see TAʿRĪB] chiefly concerned Palestine, Algeria and Tunisia, being confined to the objective of a gradual homogenisation, to be maintained at the level of leadership when the two federations should accede, in 1936, to the status of autonomous communist parties independent of the P.C.F. Realisation of this requirement was rendered more problematical by the irresolution which characterised the interpretation of the events of August 1929 in Jerusalem: revolutionary movement or pogrom? A central committee with an Arab majority was constituted on the instructions of the International at the end of 1930. The detention of these leaders in 1931 contributed to changing the image of the P.C.P. in Arab circles, but Jewish militants, while supporting the claims of the Palestinian national movement, remained unconvinced in regard to the forms taken by the latter.

The return to a frontist line of action, undertaken at the seventh Congress of the Communist International (July-August 1935), took better account of the diversity of local conditions: to the European anti-fascist front corresponded an anti-colonialist front, the colonised territories of the Maghrib participating in both. In Syria, this approach had already been inaugurated in the form of periodicals aimed at revolutionary intellectuals (*al-Duhūr*, 1934, then *al-Ṭalīʿa*, 1935-9). The coincidence of the national struggles with the accession to power in France of the Popular Front, which in 1936 favoured the conclusion of agreements envisaging, after a period of transition, a form of independence for Syria and Lebanon, contributed to the success of the Communist Party, now divided (theoretically) into two national branches. The same applied in the Maghrib, despite the ambiguity of the co-existence of the two types of front. The demands of the Muslim Congress of Algeria (June 1936), co-signed by the communists, were of democratic and assimilationist direction. The North African Star, reconstituted in 1933 on a nationalist base, renamed the Algerian People's Party after its dissolution (1937), soon dissociated itself from this compromise. The divergence with the P.C.A. was not so much over the objective of independence as over questions of timing and priorities. In Palestine, the great strike of 1936 and the Arab nationalist movement of the ensuing years, led to secession on the part of the "Jewish section". Here too, the P.C.P. participated locally in guerrilla actions, and gained influence in intellectual circles.

A new Communist Party appeared in ʿIrāḳ. It crystallised around groups and circles, in contact but without organic links (1929-34), active in a frontist cadre, within the Waṭanī Party, then the al-Ahālī movement, as well as in the syndicates. It supported the *coup d'état* of Bakr Ṣidḳī (October 1936), which pushed ʿIrāḳ into the fore of popular anti-colonialism. Two ministers belonged to the frontist organisation of the Left which was created at his instigation. But long before the counter-coup of August 1937, the political and trade union dynamism of this left-wing "front" had subjected its members to stern repression.

But these were also the years of the Spanish Civil War, launched from Spanish Morocco (July 1936),

with the active support of the "Fascist" powers (Germany, Italy, Portugal). The Communist International encouraged the formation of the International Brigades, in support of the Republic of the popular front. Some volunteers drawn from Arab communist parties participated. But for the first time, there was the prospect of inciting an insurrectional movement in the Franco-ist rearguard sector, in Morocco. K͟hālid Bakdās͟h, on a mission for this purpose, taking advantage of the Moroccan contacts of a communist Jewish merchant of Oran, was obliged to familiarise himself with Mag͟hribī "specifications".

On the eve of the Second World War, repression by the colonial authorities, direct or indirect, was applied both to radical nationalists and communists, the latter suffering to an even greater extent following the signing of the German-Soviet non-aggression pact (August 1939).

3. *From the expansion of the 1940s to the "Cold War" period*

Besides criticising the hopes reposed in the victory of the Axis Powers by the majority of the nationalist leaders, the Arab communist parties, until the German attack on the Soviet Union (June 1941), declared themselves neutral in a war hitherto defined as inter-imperialist. Being pro-independence, the ʿIrāḳī coup instigated by Ras͟hīd ʿAlī al-Kaylānī (April-May 1941) [*q.v.*], recognised by the U.S.S.R., was supported. From the summer of 1941 (Near East) and the autumn of 1942 (Mag͟hrib), the region passed under Allied control. Communist parties now declared in favour of participation in the war effort, victory of the democratic camp being presented as the guarantee of a concerted emancipation of the Arab peoples; this expectation was corroborated by the war aims announced at this time by the Allies, and by the relative freedom of action already conceded to the labour and trade union movement, as to the national movement. The limitations were illustrated by the Franco-Levantine crisis of November-December 1943, when the newly-elected parliaments in Lebanon and Syria decided to suppress all references to the French mandate, with the unanimous agreement of the political constituents. However, under pressure from the Allies, a compromise favourable to the national movement was implemented. The credibility of the Communist Parties "of Syria and of Lebanon" (separated into two national parties in January 1944) was thereby enhanced. Elsewhere, manifestos or programmes revealed the claims that were supposed to be satisfied in the aftermath of the war. A new Communist Party was constituted in Morocco (1943), composed of pre-war study groups and trade unionists. The question of membership of the International, dissolved the same year, did not arise. A heterogeneous party, it co-ordinated its action, in the same manner as that followed by the Parties of Algeria and Tunisia, with the P.C.F., which participated in General de Gaulle's provisional government in Algiers, seeing liberation of the French mainland as the overriding priority.

But with the end of the war, determination to maintain imperial control, even with the concession of certain reforms, dashed these hopes. In the case of France, this was shown, in May-June 1945, by the suppression of the insurrection in the Algerian region of Constantine, the significance of which escaped the P.C.A., and then the bombardment of Damascus [see AL-S͟HĀM. 2 (b)], the paradoxical effect of which was to be international recognition of the independence of Syria and of Lebanon. In the case of Britain, this was shown by pressure for the re-negotiation of treaties limiting the sovereignty of Egypt and ʿIrāḳ, and by the delays applied to the emancipation of her other possessions in the Near East. To this may be added the conditions in which the question of Palestine was to be resolved.

In Palestine, the Arab communists, bolstered by the recruitment of intellectuals and of workers, had in 1943 constituted their own organisation influential amongst trade unionists (*ʿUṣbat al-Taḥarrur al-Waṭanī*). In common with the Jewish-dominated P.C.P., and not without debate, they accepted, in opposition to other elements of the Palestinian national movement and to the Arab League, the principle of the solution of Partition, agreed by the United Nations in November 1947. But what remained of the territory devolved to Arab Palestine was annexed by Jordan and by Egypt in the aftermath of the disastrous war launched by the Arab League in 1948. The majority of communists henceforward belonged to the Communist Party of Israel, while the minority who remained in Cis-Jordan contributed to the creation (1951) of the Jordanian Communist Party.

In ʿIrāḳ, the Communist Party consolidated its organisation and its links with the national movement. The strikes and nationalist demonstrations of May 1946, then of 1948, directed against the British military presence and the conclusion of a new treaty, provoked a campaign of repression in the course of which the militants were treated with particular severity: three leading figures, including the secretary-general, were hanged in 1949. But martial law, in force until 1954, could not prevent the periodic recurrence of demonstrations and strikes.

In Egypt, Marxist groups professing communism were re-established from 1942 onwards. But this was a result of the dispersion, the rivalry, most of all for the initiative and the control of the trade union movement. The principal poles were the HAMETHO (*al-Ḥaraka al-Miṣriyya li 'l-Taḥarrur al-Waṭanī*) of Henri Curiel and the group called *al-Fad͟jr al-D͟jadīd*. Their unanimity of action, together with the Left of the Wafd, in the context of the National and Student Committee (February 1946) involved opposition to the re-negotiation of treaties with Britain. From the summer of 1946, repression was renewed. The state of emergency imposed by the Palestine war (1948-9) shackled a movement which, though still in existence, showed few signs of united purpose, with the single exception of projects concerning the trade unions. But the Free Officers, in power since July 1952, prohibited the holding of a congress which was supposed to address this issue.

Principally through the influence of students educated in Cairo and in Beirut, new workers' groups or parties appeared in the Near East. Setting aside the case of Saudi Arabia (National Reform Front, 1953, becoming the National Liberation Front in 1958, then the Communist Party in 1975), this involved the British colonial region: Baḥrayn (*D͟jabhat al-Taḥrīr al-Waṭanī*, 1955), Aden (*al-Ittiḥād al-S͟haʿbī al-Dīmuḳrāṭī*, 1961), as well as Anglo-Egyptian Sudan. Here there was a direct filiation with the Egyptian HAMETHO, the title of which was borrowed at first (1946), with the qualification of "Sudanese"; it was from the outset in liaison with the nascent trade union movement, and was later to find support among the cotton farmers of the D͟jazīra; soon dubbed the Communist Party, its frontist orientations favoured effective independence (achieved in 1956) over the union of Sudan and Egypt which had once been envisaged. At a later stage, simultaneously with the reconstitution of the

Egyptian Communist Party (1975), an *Ittiḥād al-Shaʿb* appeared in Kuwait.

4. *The test of practical application*

The trajectory of these parties since the 1950s was influenced as much by common traits as by differences caused by the variability of national conditions, themselves related to the variability of regional and international contexts.

Following the dissolution of the Communist International, there was no longer a centre for international co-ordination. The Information Bureau (*Kominform*), created in 1947 in response to the Truman Doctrine, was concerned, until its abolition in 1956, with the European communist parties. In the context of the Cold War, it nevertheless had an indirect influence outside Europe, in that it substituted for the theory of world revolution that of the campaign for peace, inseparable from the right of peoples to claim self-determination, to demand the removal of military bases installed in their territory and to denounce the military pacts binding their governments. While the extension of the "socialist system" in the world enlarged the field of reference, the Soviet Communist Party remained for Arab "communist and labour parties" the arbiter of "orthodoxies", to the point where the Stalinist "deviations", where they were acknowledged, were most often explained by the need to guard against the "intrigues" of the "imperialist camp". It was by this logic that in the "post-Stalinist" period the interventions in Hungary (1956), then in Czechoslovakia (1968) and in Afghānistān (1979) were to be supported and presented as a counter-balance to the interventions, rife at that time, of the other "camp" in the three "developing" continents. Finally, according to a tradition established from 1921 onwards, it was established that the diplomatic relations of the Soviet State, even when maintained with repressive Arab states, did not compromise the "proletarian internationalism" of the Soviet Communist Party, though it was a "Party-State". Among the conferences uniting elements of the "international labour movement" from 1957 onwards, that of 1960 had some significance for the region: it defined the "State of national democracy" as a form of progress towards socialism applicable to some of those countries which professed non-alignment and opted for a programme of economic and social development controlled by the public sector.

Arab communist parties definitely participated in national struggles for liberation, sometimes armed (Algeria, South Arabian Federation), in movements of democratic opposition, sometimes in the form of civil war (Lebanon), paved the way for coups d'état on the part of Free Officers claiming to represent national populism, while appealing to the ideology of Arab unity, or supported them once established. But, with the exception of ʿIrāḳ (1958) and Sudan (1969), the alliance fronts were *de facto*. Trade union affiliations to the C.I.S.L. permitted pro-western régimes of the Near East, as well as nationalist movements and régimes, to control the type of organisation of the masses which, being pluralist, constituted the principal power-base of communist parties. In certain cases of frontist experience (Sudan, 1969-71; ʿIrāḳ, 1958-63 and 1968-78), initial rivalry in the context of various forms of mass-organisation was followed by a seizure of political control by the dominant national party, corresponding to a renewal of repression, latent or violent, of the communist partners. In fact, phases of legality or semi-legality were to be brief. Only the experience of South Yemen (1967-90) avoided this pattern: after a period of co-operation (1970 onwards), Arab nationalists in power, communists and Baʿthists, constituted a unified organisation (1975), preparatory to the creation of an "avant-garde" party (Yemeni Socialist Party, 1978), defined as an instrument of "national democracy with a socialist perspective".

Internal debates mainly concerned questions of the definition of the nature of régimes and the characterisation of the strata of the bourgeoisie which controlled the dominant parties, and thus addressed the tactics of alliance, in partnership or opposition. Disagreements sometimes led to schisms and/or exclusions, according to a conception of "democratic centralism" asserted by old and new communist parties and justified by the imperatives of self-preservation during phases of repression and secrecy. These schisms were of only limited significance, except in Syria. Under the leadership of Kh. Bakdāsh, an Arab prototype of the Stalinist ruler in his methods and his personal cult, the P.C.S., declaring the primacy of Syrian over Lebanese land, considered the P.C.L. a subsidiary force, with the result that the latter decided in 1968 unilaterally to assert its independence. The following year, in the context of the Israeli-Arab conflict, disagreements over tactics and the role of the party emerged within the P.C.S. itself. Despite phases of compromise, the result of this was the existence at the start of the 1980s of five competing organisations, if one includes the faction of Riyāḍ al-Turk, the leaders of which were imprisoned by the Baʿth. Agreement on a programme of reunification, initiated in 1986, between the four other elements, was put into effect the following year by only three of them; the supporters of Bakdāsh dissociated themselves.

Responses to the problem of relations with nationalist parties in power were different. Integration was sometimes envisaged, as a means of contributing towards the formulation and application of national charters. The Algerian Communist Party merged with the F.L.N. in 1964 and was subjected, with the Left of this party, to repression after the *coup d'état* of Hawwārī Būmadyan (1965); it was relaunched in 1966 under the title of P.A.G.S. (*Ḥizb al-Ṭalīʿa al -Ishtirākī*) and in the 1970s its militants were once more associated with the dynamisation of the mass movement, resulting from the more radical evolutions of the F.L.N. The same development took place in Egypt, in 1965; freed from detention camps, the militants of the Communist Party (unified in 1957) merged with the Arab Socialist Union. But in Sudan, the attempt to impose this model on the Communist Party, and its counter-proposal of a democratic front based on parity, led from 1970 onward to a split which was further aggravated when the C.P. supported the coup by Free Officers of July 1971, more sympathetic to its views, but crushed within a few days; the execution of its secretary-general and other leaders forced it to go underground. In Syria, then in ʿIrāḳ, it was the form of a progressive nationalist front under the hegemony of the dominant Baʿth parties which was adopted. While it persisted in Syria, it remained a formal framework, whereas in ʿIrāḳ it was shattered when Baʿthist control of the country was established; the repression which ensued, remarkable for its duration as well as the brutality of its measures, proved effective. Other types of front involved countries classed as pro-Western. In Morocco, the Communist Party, dissolved by judicial decree in 1960, twice changed its title (Party of Progress and Socialism since 1974); it shared, after 1975, in the consensus over the annexation of the formerly Spanish Sahara, opposed, pend-

ing public consultations, by the United Nations; it was included among the frontist structures of the legal democratic opposition. Other forms related to the continuation of the Israeli-Arab conflict of 1967. In Lebanon, a national and progressive front, inspired by the Progressive Socialist Party (P.S.P.) and the P.C.L., constituted as the central Political Council of the National Movement at the height of the civil war, united all parties and organisations opposed to the Christian Phalangists and favouring alliance with the P.L.O. In the Palestinian territories occupied by Israel since 1967, the communists of the West Bank, independent of the Jordanian C.P. from 1970 onward, then united with those of Gaza to form the P.C.P. (February 1982) and contributed, in partnership with the P.L.O., to the organisation of the internal political resistance which produced the *Intifāḍa*, fighting to promote the preferred solution, that of a Palestinian state alongside that of Israel. But in both cases, this failed to be translated into concrete representation when legislative elections became possible.

Arab unitary ideology has caused fewer problems, other than to prefer, rather than the organic form typified by the Syro-Egyptian union (1958-61), federal models which would preserve the democratic achievements of each participant. Since 1967, inter-Arab fronts, of varying durability, or conferences, have rallied parties and organisations, in power or not, around common Arab causes. Nasserite, Baʿthist, and "Arab nationalist" tendencies have competed all the more with the communists, whether during phases of opposition or of alliance, in that their structures, pyramidal and centralised, and their networks of mass-organisation are modelled on those of the Communist Party, with the difference that the first two of the above-mentioned tendencies constitute most often the party in power. The same applies to debate, populist in tone but borrowing from Marxist dialectic, in varying proportions, much of its vocabulary. Trotskyite elements are marginal, the Maoists ephemeral. "New left" tendencies are represented rather by "Arab nationalist" organisations, open to united action on specific objectives with the communist parties.

Compared with the pre-war period, when membership of Arab communist parties varied between a few hundred and a few thousand, recruitment over the last few decades has changed the position radically. Although figures for the Gulf Emirates are hard to acquire, elsewhere the total ranges from several thousand to several tens of thousands. In pre-war conditions, with the exception of brief texts, such as the *Communist manifesto* of Marx and Engels, translated in 1933 by Kh. Bakdāsh, few "classical" texts of Marxism were available in Arabic. From the 1940s onward, a sustained effort was begun in Egypt, giving precedence to the works of Stalin; this was later transferred to Lebanon and pursued in parallel with translations carried out in Moscow. The press was more regular, in its various forms of periodicity; in phases of illegality, cultural publications or the exploitation of more favourable conditions in neighbouring countries permitted the dissemination of journals, bulletins or reviews. Publishing houses, whether dependent on the communist parties or not, produced a growing number of works composed by Arab Marxists: memoirs of political or trade union leaders, but also works of economy, philosophy, history. It was around the theme of "patrimony" (*turāth*) that questions relating to religion were addressed. While the Muslim Brotherhood [see AL-IKHWĀN AL-MUSLIMŪN] was the object of polemic, the Sudanese Communist Party used references to the values of the past to encourage, against conservative prejudices, a militant and progressive Islam. In the same perspective, and especially after the Iranian Islamic revolution, forms of dialogue have been explored by the communist parties of the Near East with the object of establishing eventual convergences. These efforts have born little fruit. Political Islam, constituted on the basis of humanitarian associationism, encouraged in the 1980s by states as diverse as Egypt, Sudan, Algeria, Yemen and even Israel (in the case of Gaza) to compensate for suppressed democratic expectations, has become an implacable foe, not only of the communists, ostensibly those most affected, but of states themselves.

5. *The implosion of the socialist system and since: revisions and redeployments*

During the second half of the 1980s, the evolutions of the socialist system, in particular of its Soviet "centre", were to demand reassessments of former theoretical and practical frameworks. In all parties the debate was vigorous, all the more so in that after a period of relative prosperity, the Arab world was experiencing an accumulation of crises: Egypt had abandoned the cause of confrontation with Israel; a new conflict had erupted between ʿIrāḳ and Iran; the abrupt decline in the price of oil neutralised to some extent the developmental benefits which nationalisations of this asset had been supposed to provide, initiating or exacerbating cycles of debt; and the crisis of democracy made itself felt in all states professing "national democracy" as an ideal or pragmatic solution. The Yemeni Socialist Party was itself torn by fratricidal struggles (January 1986). Soviet *perestroika* and "new political thought" were approached primarily in terms of their consequences for the Arab world. The equation between socialism and humanism was interesting, but disturbing in the extent to which the connection with the "class" perspective seemed to be abandoned, more particularly in terms of international relations. The end of the Cold War, for some, presented the possibility of a resolution of the Israeli-Arab conflict. Others were especially attentive to the setbacks of "real socialism" in central Europe, to the internal problems of the Soviet Union. The inability of the latter to establish a diplomatic solution of the ʿIrāḳ-Kuwait conflict and the scale of the resources mobilised by the military coalition in 1991, prefigured its implosion the same year. The new context, that of a new world order, unipolar and liberal, demanded that consideration of these issues, already embarked upon, should be made more systematical. The responses which emerged from the congresses held at this time, the products of open and contradictory debates, were to be diverse.

In South Yemen, the ruling P.S.Y. had begun its own *perestroika* in 1988. Unification with North Yemen (1990) was thereby facilitated, in the context of progress towards a market economy and a multi-party system, agreed upon by the two single parties. The second political force in the country following the elections of 1993, the P.S.P., in partnership with minor parties, succeeded in enforcing a democratic and decentralised conception of constitutional reform (February 1994). But conflict over the application of these measures, the postponement of the merging of the armies of the two former states, led to confrontations which ultimately resulted in civil war. In this context, even recourse to a secession by the South could not save the P.S.Y. from destruction.

In the majority of cases the "communist" label has been retained, the aspiration towards a society freed

from the exploitation of man by man maintaining, for these parties, the motivating force of a "realist" utopia. The long experience of "real socialism" and its downfall is a laboratory for the consideration of questions of strategy and tactics. These parties have, to varying degrees, democratised their structures and introduced new programmes more consistent with national, regional and international conditions. The principal objective is democracy, the target is "uninhibited liberalism", the instrument is frontist alliance. In the more repressive countries, alliances constituted in former times have been enlarged: within ʿIrāḳ and in conjunction with ʿIrāḳī Kurdistān as regards the P.C.I. and the P.C.K.I. which has derived from it (1993); and in the Sudan, in the context of a national democratic alliance which embraces the southern resistance, as regards the P.C.S.

Others have changed their titles and orientations. The decision of the Palestinian Communist Party to tranform itself into a People's Party (P.P.P.) was rather premature (October 1991); it defined the realisation of a Palestinian state, the objective of an entire people and not of a class, as the central task. In Algeria, the P.A.G.S. became in January 1993 the *al-Taḥaddī* Party (of "challenge": an acronym of *Taḳaddum, Taḥdīth and Dīmuḳrāṭiyya*). In Tunisia, a party "of the Left", *al-Tadjdīd*, replaced the P.C.T. in April 1993. In these two countries, minorities dissociated themselves from these options, described by them as "social democratic".

A further indication of these redeployments and revisions, the significance of which (in 1996) remains to be determined: the *al-Nahdj*, a periodical for the exchange of views among Arab communist parties (1983-91), then sub-titled *Review of Marxism-Leninism in the Arab world*, has appeared since 1994 under the subtitle *Contribution to the clarification and implantation of rationalism*. It is currently activated by an autonomous team of Near Eastern Marxists, some of them members of communist parties, others not.

2. Persia.

The introduction of communist ideas in Persia was influenced by two events: the Constitutional Revolution of 1906-11 in Persia and the October 1917 Revolution in Russia. The first political party based on communist ideas was the Justice Party (*Firḳa-yi ʿAdālat*), created in 1917 in Baku by a group of Persian workers. The Justice Party changed to the Communist Party of Iran (*Firḳa-yi Komunist-i Īrān*) in its first Congress in 1920.

Communist activities were subdued during Riḍā Shāh's consolidation of power in the 1920s. The Party held its Second Congress only in 1927. Having moved closer to Moscow, the Congress described the 1921 coup as a British plot, denouncing Riḍā Shāh [*q.v.*] as their appointee. In confronting the communists, however, Riḍā Shāh passed a law in June 1931 banning all political organisations threatening the constitutional monarchy or advocating collectivist ideas using the Arabic term *ishtirākiyya* "socialism".

The next communist phase was in the 1930s-1940s. Dr. Taḳī Arānī's Marxist group and the Tudeh (Tūda) Party were its most prominent features. The strategies of the first and second communist phases indicated some differences. The latter put greater emphasis on the spread of Marxist and communist ideology among the intellectuals, while the former focused on workers. Similarly, party activists of the second phase were predominantly Persian-speaking intelligentsia of Tehran in contrast to the first phase dominated by Persian immigrants in the Soviet Union. Open political activity came to a halt once again in 1937 with the arrest of the "fifty-three", including Arānī. They were found guilty of forming a clandestine *ishtirākī* organisation outlawed by the 1931 law.

World War II and Riḍā Shāh's abdication in 1941 helped create a more open political atmosphere. On their release in September 1941, a group of younger members of the "fifty-three" launched the *Ḥizb-i Tūda-yi Īrān* ("Party of the Iranian Masses"), which became one of the most significant political forces in Iran after its inception. The Party refrained from using "communist" in its title for several reasons, one of which was the 1931 law. Another reason was Soviet war-time interests, which discouraged the Party's open identification with communism. Furthermore, communism as an ideology was unknown to the masses whose support the party aimed for. In its manifesto, the Tudeh accordingly stood for democracy, independence from foreign imperialism and loyalty to the Constitution.

The Party produced its first provisional programme in February 1942. Unlike other secular movements, the Tudeh adopted a broad programme to attract a wider spectrum of supporters and avoid antagonising the clergy (*ʿulamāʾ*). It rapidly established itself as the largest political party, with a structure, policy, and countrywide organisation. In 1943 it succeeded in having nine of its fifteen candidates elected to the fourteenth *Madjlis*. Another Tudeh achievement was organising labour groups in industrial cities, including Ābādān, especially among its oil workers, Iṣfahān, Ahwāz and Rasht. In 1944-5, the party continued to grow, enabling it to gather crowds estimated as large as those of pro-constitution rallies in 1906. With these successes, the Tudeh held its First Party Congress in August 1944 to approve the party programme. The growth of the Party continued, reaching its peak in August 1946 when three of its members were given ministerial posts in the Prime Minister Ḳawām al-Salṭana's cabinet. The Party's successes, at least in the northern regions, was at least in part due to the support of the occupying Red Army.

The Tudeh's fortunes began to change from the autumn of 1946 onwards, when Ḳawām al-Salṭana's government limited party activities. This helped party dissidents to force changes, including a debate on the sensitive issue of relations with the Soviet Union. One of their criticisms was over the party's pro-Moscow policy (the Tudeh had organised a mass meeting in October 1944 against the government's refusal to grant an oil agreement to Moscow). Internal divisions, however, led to the moderate faction, including Khalīl ʿAlikī and other intellectuals, to leave the party in 1947. Although free from dissidents, the Tudeh was soon banned under the 1931 law after the declaration of martial law in 1948. This forced the party underground, only to re-emerge in 1951 at the height of the Prime Minister Mossadeq's campaign for oil nationalisation [see MUṢADDIḲ]. This phase also came to an end with the August 1953 coup against Mossadeq's government (the Tudeh's refusal to intervene has since been blamed as a factor helping the success of the coup).

Between 1953 to 1958, the re-installed Muḥammad Riḍā Shāh [*q.v.*] began dismantling the Tudeh by arresting and executing party members. By the mid-1960s, the Shāh completed the process of controlling the political arena to such an extent that no independent organisation survived. This, along with the experiences of China, Vietnam, Cuba and Algeria, encouraged the emergence of underground socialist and revolutionary movements. A distinct feature of these movements was their general support for armed struggle. Most prominent among these groups were the Marxist Fidāʾiyyīn, the Islamic Mudjāhidīn, the Kurdish Democratic Party Paykar (separated from Mudjāhidīn and adopting Maoist views), The Workers' Road, and the Kurdish Komoleh guerrillas. These organisations, rather than the traditional leftist or centrist opposition, represented the anti-régime opposition in the 1960s and 1970s.

The most effective organisations in influencing youth in the 1970s and in breaking the back of the state during the 1977-8 revolutionary process were the Marxist Fidāʾiyyīn or the Iranian Peoples' Guerrilla Freedom Fighters, and the Islamic Mudjāhidīn or the Organisation of the Iranian Peoples' Freedom Fighters. The latter presented a revolutionary interpretation of Islam sometimes inaccurately referred to as "Islamic Marxism". The year 1978-9 was a watershed, since for the first time after the 1950s the left, including the Tudeh party, could organise and act openly.

Nonetheless, the era of revolutionary solidarity and political openness, or perhaps anarchy, was short lived. The first test came in March 1979 when the provisional government called a referendum on future political systems, limiting the choice between the monarchy and the "Islamic Republic". Having declared support for the clergy's leadership, the Tudeh participated in the referendum in favour of the Islamic Republic. The Mudjāhidīn also supported the referendum, but the Fidāʾiyyīn boycotted it.

Despite the support from it, the régime targeted Tudeh activists in 1983, putting its leaders on public trial, where they confessed to the party's "betrayal" of the "Iranian masses". The other major revolutionary force, the Mudjāhidīn, went into open confrontation with the Islamic Republic from 1981 onwards, in collusion with the then president Banī Ṣadr. The régime succeeded in overcoming this threat, driving the organisation into exile in Paris. The régime's brutal confrontation and the Mudjāhidīn's decision to move its headquarters to ʿIrāḳ in the midst of the Iran-ʿIrāḳ war in the 1980s have helped discredit the organisation.

The Marxist Fidāʾiyyīn went through a serious internal crisis after the revolution, leading to a split in 1981. One section, known as the Majority, adopted similar policies to the Tudeh and joined it. The other, known as the Minority, rejected dictatorship of the proletariat, insisting on nationalism and supporting coalitions within the framework of bourgeois pluralism.

The last prominent organisation to note is the Kurdish Democratic Party led by Dr. ʿAbd al-Raḥmān Ḳāsimlū. With its socialist orientation and support for Kurdish nationalist rights, the Party remains the most important political organisation among Iranian Kurds. From the late 1980s, the government began discussions with Ḳāsimlū. They were halted in 1989 with Ḳāsimlū's assassination in Geneva during their last round of negotiations.

The 1990s thus witnessed a general decline in the activities of the communist, socialist or Marxist groups. The absence of an open political arena and the diminished contemporary state of international socialism, have both contributed to this decline.

3. In Turkey.

Communism has been a far weaker force in Turkey than in several other Muslim countries. This may partly be explained by the Turks' attachment to Islam, but more particularly by their hostility to Russia (especially during the Cold War) and the constant infighting between rival leftist groups. Between 1918 and 1920 no less than three parties of Marxist orientation were set up in the nascent Turkish state. These were linked to an underground Communist Party, allied to Moscow, and led by Dr. Şefik Hüsnü [Değmer]. To add to the confusion, an official Communist Party was set up on the initiative of Mustafa Kemal [Atatürk] in October 1920, in which several of the leading members of his government were enrolled. However, all these groups were closed down in 1925, following the suppression of the Kurdish rebellion led by Şeyh Sait. The Communist Party continued an underground existence, mainly abroad, under Değmer's leadership, until 1946, when two legal socialist parties were established, only to be officially dissolved at the end of the year. Leadership of the Turkish Communist Party was then taken over by Zeki Baştimar, who was succeeded by İsmail Bilen. During the Cold War, the party served as the orthodox voice of Soviet communism: it was based in eastern Europe and had virtually no support base in Turkey itself.

Within Turkey, leftist groups came out into the open again after the coup of 27 May 1960. Several more or less Marxist parties were established during the 1960s, of which the most successful was the Turkish Workers' Party (*Türkiye İşçi Partisi*), led by Mehmet Ali Aybar. However, this split apart in 1968, and was suppressed by the military-dominated régime of 1971-3. During the 1970s a plethora of revolutionary Marxist parties and terrorist organisations emerged, but these were all suppressed by the military government of 1980-3. Since then, Turkish communism has effectively withered away, except for sporadic terrorist attacks by small ultra-leftist organisations. With the collapse of the communist régimes of eastern Europe, the Turkish Communist Party has also ceased to exist.

SIAK SRI INDRAPURA [see sumatra].

SIALKOT [see siyālkūt].

SIBĀḲ [see faras].

SĪBAWAYHI, pioneer Arabic grammarian, the author of a single, untitled work, known only as *Kitāb Sībawayhi* and acknowledged as the founding text of Arabic grammatical science. All else, his name, origins, dates and originality, is uncertain, Sībawayhi having died too young and too far away from the cultural centres of ʿIrāḳ to establish himself in the scholarly biographical tradition.

1. Life and teachers.

(a) *Life*. Sībawayhi's name is usually given as Abū Bishr ʿAmr b. ʿUthmān b. Ḳanbar, *mawlā* of Banū Ḥārith b. Kaʿb Sībawayhi. Humbert (1995, 3-8) discusses the many variants and argues persuasively that the full name arose from the need to fill the vacuum in the "onomastic chain". In practice, he is never called anything but Sībawayhi, explained by folk etymology as Persian for "Apple fragrance" or even "30 scents", though actually a nickname, Sēbōe "Little Apple" (Nöldeke, *apud* Brockelmann, I, 100). He is said to have been born in al-Bayḍā', Shīrāz, of Persian parents, and to have died aged between 32 and "40-odd" years old, probably in Fārs. An approximate death date of 180/796 can be inferred: Sībawayhi died before Yūnus (182/798), and al-Khalīl died between 160/776-7 and 175/791, before the *Kitāb* was written down.

At some time, he came to Baṣra to study *āthār*, i.e. the *Ḥadīth*, or more explicitly jurisprudence (*fiḳh*). This is important for the early history of grammar, and supplies the topos in which Sībawayhi is humiliated into studying grammar by his linguistic ineptitude in the presence of Ḥammād b. Salama [*q.v.*]. The other notorious incident in Sībawayhi's career also involves his humiliation, this time by al-Kisā'ī [*q.v.*], in a debate called *al-Mas'alat al-zunbūriyya* after its theme, the syntax of *kuntu aẓunnu anna 'l-ʿaḳraba ashaddu lasʿat^an min al-zunbūri fa-idhā huwa hiya* or *idhā huwa iyyāhā*. Al-Kisā'ī wins by bribing some Bedouin to support his position, and Sībawayhi goes off and dies of grief, consoled, some say, by a payment of 10,000 dirhams solicited for him by al-Kisā'ī.

(b) *Teachers*. Nineteen names are mentioned: (i) seven traditionally identified by the biographers as teachers of Sībawayhi, and (ii) twelve connected with him in other ways. (i) (1) ʿAbd Allāh b. Abī Isḥāḳ [*q.v.*, also Sezgin, *GAS*, ix, 36-7], d. 117/735 or 127/745, cited 7 times (see Troupeau, *Lex.-index*). (2) ʿĪsā b. ʿUmar [*q.v.*, also *GAS*, ix, 37-9], d. 149/766, 20 times. (3) Abū ʿAmr b. al-ʿAlā', d. 154/771 (*GAS*, ix, 40-2), 57 times. (4) Hārūn al-Ḳāri' (*GAS*, ix, 43-4), d. 170/786, 5 times. (5) Abu 'l-Khaṭṭāb al-Akhfash [*q.v.*, also *GAS*, ix, 48-9], d. 157/773-4, 58 times. (6) Yūnus b. Ḥabīb (*GAS*, viii, 57-8; ix, 49-50) d. 183/799-800, 217 times. (7) al-Khalīl b. Aḥmad [*q.v.*, also *GAS*, viii, 51-6, ix, 44-8], d. at the latest 175/791-2, cited by name 608 times.

(ii) Other names appearing in the *Kitāb* but not considered as teachers in the biographies (cf. Humbert, 1995, 9-14): (8) Abū Murhib, untraced, cited once. (9) Ibn Masʿūd, the Companion [*q.v.*], d. 32/652-3, 3 times. (10) Mudjāhid [*q.v.*, also *GAS*, viii, 22], d. 104/722, once. (11) al-Aʿradj (*GAS*, ix, 34-5), d. 117/735, 3 times. (12) al-Ḥasan [al-Baṣrī] [*q.v.*, also *GAS*, ix, 44], d. 110/728, twice. (13) Abū Rabīʿa (*GAS*, viii, 29), d. *ca.* 170/786, once. (14) Ibn Marwān, cf. Carter, in *REI*, xliv, 75, n. 2 (Troupeau has Ibn Marwān once as a grammarian and a Marwān al-Naḥwī separately as a poet). (15) al-Aṣmaʿī [*q.v.*, also *GAS*, viii, 71-6, ix, 66-7], d. 213/828, twice. (16) al-Akhfash [al-Awsaṭ] [*q.v.* and see below], once. The preface of a *Kitāb* manuscript recopied by Ibn Kharūf (d. 605-10/1206-13) lists twelve masters, the seven traditional names and five more, two already known, Ibn Marwān and al-Aṣmaʿī, and three new names. (17) Abū Zayd al-Anṣārī [*q.v.*, also *GAS*, viii, 76-80, ix, 67-8], d. 215/830. (18) Abū ʿUbayda [*q.v.*, also *GAS*, viii, 67-71, ix, 65-6], d. 207/822 or 213/828. (19) al-Liḥyānī, who may be the one mentioned by Abu 'l-Ṭayyib, *Marātib*, 89-90 (Humbert, 12).

All but three can be eliminated on technical or historical grounds as possible influences on Sībawayhi (cf. Humbert, 10-12, Versteegh, 1993, 161-3). Only ʿĪsā b. ʿUmar, Yūnus and al-Khalīl were close enough chronologically and intellectually to play a role in the creation of Sībawayhi's grammatical system. Of two works credited to ʿĪsā, nothing survives but a flat-

tering reference by al-Mubarrad (Abu 'l-Ṭayyib, *Marātib*[2], 46; Ibn al-Anbārī, *Nuzha*, ed. Amer, 15, says he has never seen a copy nor heard of anyone who has). ʿĪsā died well before Sībawayhi and is only a shadowy presence in the *Kitāb*, usually quoted indirectly; he may have furnished information in a similar way to Yūnus and al-Khalīl but on a much smaller scale. We return to Yūnus and al-Khalīl below.

2. Grammatical background and origins. The only reliable source of information about primitive grammar or what we might call "proto-grammarians" is the *Kitāb* itself. Versteegh's invaluable survey of early *Tafsīr* (1993) demonstrates that no matter what was said about language in this period (and the subject could hardly fail to arise!), it did not reach the level of a mature theory of language with an appropriate scientific vocabulary and methodology.

(a) *Foreign origins*. There have been attempts to trace the origins of Arabic grammar to external influences, principally Greek, via Syriac [see NAḤW]. The Greek hypothesis achieves a major restatement about every hundred years, beginning with the not very-widely consulted Hasse (1788), after which the baton passes to Merx (1889), then Rundgren (1976) and Versteegh (1977). All these assume that Arabic grammar could not have evolved out of the resources of Arab-Islamic culture and that various systematic and terminological features of Arabic grammar point to Greek models. There are no texts or circumstantial evidence for exchanges between Syriac scholars and early Arab grammarians, and the Greek case is essentially *post hoc ergo propter hoc*. The most important testimony, a logical work attributed to Ibn al-Muḳaffaʿ [*q.v.*], bears the taint of inauthenticity (it might be by his son), and contains almost nothing of relevance. The main weakness of the Greek hypothesis, however, is that it explains so little of the grammar in the *Kitāb*. An Indian origin has been proposed for phonological theory, argued confidently by Danecki and equally firmly refuted by Law. Lack of documents and circumstantial evidence again undermine the case, coupled with insufficient symmetry between the systems.

(b) *Indigenous origins*. The traditional narrative ascribing the invention of grammar to Abu 'l-Aswad al-Du'alī [*q.v.*], thence through generations of scholars up to and beyond Sībawayhi, has an inner coherence which corresponds well to the likely stages in the growth of linguistic consciousness, responding to the increasing volatility of Arabic and the need for a definitive form of the text upon which the new Islamic civilisation now depended. But this neither caused, nor can it explain, Sībawayhi's grammatical system. Extensive similarities between legal reasoning and the grammar of the *Kitāb* (cf. Carter, in *REI*, xliv, 86-91) encourage the hypothesis that Sībawayhi found his inspiration in law. We are not told how he got his legal training, but after the incident with Ḥammād b. Salama he "went off and attached himself to the *madjlis* of al-Akhfash with Yaʿḳūb al-Ḥaḍramī and al-Khalīl and the rest of the *naḥwiyyūn*" (al-Zadjdjādjī, *Madjālis*, 155): in other words, of the leading authority on Arabic, a major Reader, sundry "grammarians" (if such they were, see below), and the older man who would later preserve his work. He thus remained within the philological tradition implied by the conventional histories: Ḳur'ān, secular language and early systematisation, with the future disciple al-Akhfash having the seniority to act as host for this astonishingly fertile gathering of minds.

(c) *Grammar before Sībawayhi*. The *Kitāb* reflects contemporary grammatical thinking very clearly though not always precisely. Three themes are important here: (i) the *Kitāb* as evidence for early "Schools" of grammar, (ii) the "*naḥwiyyūn*" and (iii) the debt to specific masters named in the *Kitāb*.

(i) Schools. If you believe that grammar only reached its scientific perfection through Sībawayhi, then the existence of "Schools" before him is inconceivable. Darwinism is not found before Darwin. Baalbaki (*Stud. Ar. et Isl.*, 24) detects the roots of the famous "Baṣran" and "Kūfan" dichotomy already in the *Kitāb*, and Talmon (in *BSOAS*, xlviii) identifies a "Medīnan School" on the basis of three references in the *Kitāb* and other later evidence, adding for good measure the names of two Meccan "grammarians" prior to Sībawayhi. Nothing is known about their grammatical opinions, however, except for Ibn Marwān, whose dispute with Abū ʿAmr is reported in the *Kitāb* (Talmon, in *JAOS*, civ), and no significant interpretative benefits arise from reducing the inevitable conflicts of opinion among these early figures to a system of "Schools".

(ii) The *naḥwiyyūn*. This word (always plural) occurs 20 times in the *Kitāb* referring to an anonymous group of participants in the grammatical debate. Their anonymity is disputed by Talmon (in *ZAL*, viii), who also argues that the *naḥwiyyūn* were highly sophisticated thinkers. From the way Sībawayhi cites them, however, one must conclude that he regarded their grammatical reasoning as inferior; in most of the exchanges he either rejects or severely criticises them, e.g. [**aʿṭāhūnī*] is incorrect, not said by the Arabs, but the *naḥwiyyūn* have created it "by analogy (*ḳāsūhu*)" (i, 383/i, 335). It seems unlikely that Sībawayhi saw himself as one of the *naḥwiyyūn*, which raises a delicate question: who, then, were the real "grammarians"? Sībawayhi had no name for "grammar" as such, which was eventually called *naḥw* on the assumption that this was what the *naḥwiyyūn* were doing in the *Kitāb*.

(iii) Specific masters. Sībawayhi drew directly and indirectly upon the knowledge of several informants and scholars, but only Yūnus and al-Khalīl were intimately involved with the creation of the *Kitāb* (see below on al-Akhfash).

Yūnus is mentioned 217 times, and although his exact role is difficult to pin down, Sībawayhi disagrees with him more often and more conspicuously than with al-Khalīl. For example, he is particularly severe on Yūnus's claim that *min ḳuddām*[in] should be vocalised *min ḳuddām*[a]: "that is one way of speaking, although no Arab actually ever says it" *hādhā madhhab*[un] *illā annahu laysa yaḳūluhu aḥad*[un] *min al-ʿArab* (ii, 47/ii, 43). Even though Sībawayhi occasionally sides with Yūnus against al-Khalīl (e.g. on the truncated vocative *yā ḳāḍi* against al-Khalīl's *yā ḳāḍī*, ii, 289/ii, 315), Yūnus tends to hold views which do not fit into Sībawayhi's scheme.

Al-Khalīl is quoted by name or by implication (*sa'altuhu*, etc.) on almost every page of the *Kitāb* and was clearly an inexhaustible source of data and theoretical inspiration for Sībawayhi. Reuschel confines Sībawayhi's role to merely organising what al-Khalīl taught him, a position which it is as difficult to refute as to accept. Fischer is at the other pole; having examined the discarded phonological terminology of al-Khalīl preserved by al-Khwārazmī, he concludes that al-Khalīl was mainly a "morphophonologist" and may well have been unaware of the basic principles of Sībawayhi's grammar. Danecki even argues that al-Khalīl's phonological ideas were primitive in comparison with those of Sībawayhi. All this accords with

the biographical constant that al-Khalīl is usually titled "the Prosodist" (*Ṣāḥib al-ʿarūḍ*) and also recognised as the founder of lexicography, while Sībawayhi's association with the creation of grammar is not seriously challenged. What stands out is al-Khalīl's interest in the following: (i) compound syntactic units functioning as single words (the terms *muntahā 'l-ism* and *tamām al-ism* are associated with al-Khalīl, e.g. i, 350/i, 306), (ii) the principle that a speaker who begins an equational sentence is obliged to finish it with a predicate (e.g. i, 394/i, 346), (iii) the role of the listener's knowledge (i, 453/i, 403), (iv) the relationship between frequency and elision (e.g. i, 143/i, 120). But Sībawayhi does not always agree with al-Khalīl, e.g. i, 181/i, 151, where *hādhā radjul^{un} akhū zayd^{in}* intended to mean "this is a man [like] Zayd's brother" is labelled "incorrect and weak" (*ḳabīḥ wa ḍaʿīf*). A genius is known by the questions he asks, as has been said already of al-Khalīl (Bräunlich, in *Islamica*, ii, 61), and Sībawayhi's questions, no matter how much he depended on his teachers for the answers, were inspired by a concept of language that was at best only latent in al-Khalīl's intuitive and unsystematic perception.

3. The contents of the *Kitāb*.

The following is a summary of the repertoire of ideas which all subsequent grammar exploited and still exploits.

(a) *Arrangement.* Although a large work (printed editions are more than 900 pages), the order of the material and the internal cross-references reveal an unmistakable plan. The *Kitāb* begins with seven introductory chapters (probably the same as a *Risāla* attributed to Sībawayhi which forms the core of al-Zadjdjādjī's *al-Īḍāḥ*), after which Sībawayhi deals with Arabic grammar in the order syntax, morphology, and phonology.

The "*Risāla*" is as close as we come to an orderly statement of Sībawayhi's linguistic presuppositions (or postulates, as Suleiman, in *JSS*, xxxv, 258 would have it). It is perhaps an exaggeration to say that "Sībawayhi never explicitly states the basic theoretical principles on which he works" (Bohas/Guill./Koul., 33), but he is certainly casual about it. Nevertheless it is from these introductory sections that we learn there are three parts of speech, two discrete sets of vowels and inflections, a number of internal hierarchies (see below), a fundamental subject-predicate structure, an assortment of lexical, semantic and phonological accidents such as synonymy, polysemy, elision and substitution, a group of formal and semantic criteria and a range of non-standard phenomena permitted only in poetry.

(b) *Data.* The object of study is *kalām* "speech", i.e. every speech act (including Ḳur'ān and poetry) which fulfils the criteria of structural and semantic adequacy. *Kalām* does not imply any particular length or number of constituents (cf. Talmon, in *ZDMG*, cxxxviii, 80-8), still less anything as specific as "sentence" (only later termed *djumla*), and may also denote "prose" in contrast with "poetry" but not exclusively (Iványi, *Proceedings*, 210-12). Data are of three kinds, the Ḳur'ān, poetry and the usage of the "Arabs", i.e. the Bedouin, and are adduced in one of these three forms or in the familiar symbolic representations of the type *zayd^{un} ḍarabtuhu*. Iványi has tabulated the introductory formulae indicating Sībawayhi's estimate of the data's authenticity. Although the Ḳur'ān is stated to have been sent down "in the speech of the faithful" (*ʿalā kalām al-ʿibād*, i, 167/i, 139) Sībawayhi did not give linguistic priority to Ḳur'ānic usage, nor is there any hint of a doctrine of *iʿdjaz* [*q.v.*] at this stage. He is aware of the various *ḳirā'āt* and not always in favour of certain Readings (Baalbaki, in *ZAL*, xv; Brockett), but avoids embroiling himself in doctrinal implications.

Poetry (1,056 lines, Djumʿa, 116, from 231 poets in 26 tribes, *ibid.*, 14) was originally quoted without attribution. Traditionally, it was al-Djarmī who counted 1,050 verses and added the names except for 50 he could not identify (but see Djumʿa, 214). Only three contemporary poets, Abān al-Lāḥiḳī, Bashshār b. Burd and Khalaf al-Aḥmar are quoted, and all three citations are suspect. As with the Ḳur'ān, poetic data have no priority over the Bedouin Arabic, but Sībawayhi acknowledges that poetic usage may differ from prose, usually dialect features which were not adopted into standard Arabic.

Proverbial expressions (*mathal*) are recognised as non-productive (e.g. i, 24/i, 18). Surprisingly little *Ḥadīth* material is quoted in the *Kitāb*: there are a few fragments identifiable as *Ḥadīths*, and the famous *kullu mawlūd^{in} yūladu ʿalā 'l-fiṭri*, etc. is found in i, 396/i, 348. But the Prophet Muḥammad is nowhere mentioned in the *Kitāb*, and even *Ḥadīths* are introduced as if they were part of ordinary speech, e.g. by *ḳawluhum* (cf. ʿUḍayma, 762; Ḥadīthī 1980, 59).

The ideal language is what Sībawayhi calls "good old Arabic" *al-lugha 'l-ʿarabiyya 'l-ḳadīma 'l-djayyida* (ii, 424/ii, 474), i.e. Ḥidjāzī (*al-ḥidjāziyya hiya 'l-lugha 'l-ūlā 'l-ḳudmā* (ii, 41/ii, 37). Levin (in *JSAI*, xvii) shows that Sībawayhi made his own enquiries of the Bedouin as well as relying on second-hand evidence. It is also significant (*ibid.*, 235) that Sībawayhi contrasts the artificial constructs of the *naḥwiyyūn* with the natural usage of Bedouin informants and urges speakers to follow only the "Arab" way. His dismissal of some Bedouin usages as "incorrect" (*ibid.*, 236) has important theoretical implications, likewise the idea that the reasons for a usage can be lost, e.g. why some proper names have *alif-lām* (i, 268/i, 228, perhaps from al-Khalīl).

These three kinds of data and their representations in model utterances are the evidence for the "way" correct Arabic is spoken (writing is marginal, though the *Kitāb* does mention the formula for beginning letters, *ammā baʿdu*, i, 470/i, 418). Sībawayhi's word for "way" is usually *naḥw*, e.g. *sa-tarā hādhā 'l-naḥwa fī kalāmihim* "you will see this way [of speaking] in their speech" (i, 243/i, 207), but he also uses the synonyms *sabīl, ṭarīḳa, madhhab, wadjh, madjrā*, occasionally even *sunna* and *sharʿ*. He therefore treats *kalām* as a set of acts judged pragmatically by motive, structure and communicative effectiveness, not as a set of logical propositions judged by semantic content and falsifiability. Truth and falsehood are irrelevant: *kalām* is evaluated (i, 7/i, 7) in terms of its structural correctness, as (ethically) "good" *ḥasan* or "bad" *ḳabīḥ*, i.e. well-formed or ill-formed (with synonyms *djamīl, radī'*, etc.), and by its communicative effectiveness, as (ethically) "right" *mustaḳīm* (compare *naḥw* with *ṣirāṭ, sunna*). Incomprehensible speech is "wrong" *muḥāl*, i.e. perverted. Communicative success or failure are absolute, but structural correctness may be graded, *aḥsan, adjwad* etc. Speech may even be *mustaḳīm ḳabīḥ*, i.e. making sense though structurally incorrect (especially in poetry), but is normally only "permissible", *djā'iz*, if it is structurally complete, *yaḥsun al-sukūt ʿalayhi*, and semantically self-sufficient, *mustaghnī*.

(c) *General principles. Kalām* itself is segmented in two ways, into word classes and word positions. There are only three formal categories, *ism, fiʿl* and *ḥarf djā'a li-maʿnā* [*q.vv.*]. Not too much distortion results from equating *ism* with "noun" and *fiʿl* with "verb", although "verb" is far closer to the Greek *rhema* with its implications of "predicate" than the Arabic *fiʿl*, which

means simply "[word denoting] an act". But the definition of *ḥarf djāʾa li-maʿnā* assumes a knowledge of Sībawayhi's concept of word position or *mawḍiʿ*.

Mawḍiʿ "place", more fully *mawḍiʿ fi ʾl-kalām* "place in speech" is Sībawayhi's term for the position in which a speech element is used (cf. the notion of "function" in Western linguistics). In this sense, *mawḍiʿ* is simply taken over from ethical terminology, where it commonly denotes the "place" of an act as determining its goodness or badness (cf. Ibn al-Muḳaffaʿ and the early jurists). Each *mawḍiʿ* represents a specific linguistic act, thus *mawḍiʿ al-nidāʾ* is "the place for calling", realised by the word *yā* expressing the meaning *maʿnā* [*q.v.*] of that act, viz. *maʿnā ʾl-nidāʾ* "the meaning of calling". This brings us back to *ḥarf*, which, unlike the noun or verb, is formally and semantically unclassifiable and can only be defined by what the speaker does with it, hence *yā* is *ḥarf nidāʾ* "a particle of calling", i.e. used to perform an act whose meaning is "calling". The general definition of *ḥarf* is implicitly *ḥarf djāʾa li-maʿnā* "x", where "x" is one of the seventy or so linguistic acts identified by Sībawayhi as a *mawḍiʿ/maʿnā*, all denoted by verbal nouns exactly as in *fiḳh*. Every particle is defined in this way: *lā* = *ḥarf [djāʾa li-maʿnā] ʾl-nafy*, *in* = *ḥarf [djāʾa li-maʿnā] ʾl-sharṭ* and so on. It follows that Sībawayhi has little time for lexical meaning, since merely explaining one word by another leads to infinite regression (ii, 312/ii, 339).

The correlative of *mawḍiʿ* is *manzila*, and just as *mawḍiʿ* connotes function and syntagmatic features, so *manzila* represents status on the paradigmatic axis. Thus two elements from different form classes, if they have the same status, *manzila*, may occur in the same function, *mawḍiʿ*, e.g. the particle *mā* in Ḥidjāzī usage has the status of the verb *laysa* (i, 27/i, 22). A third term in this set, *mawḳiʿ*, denotes simply the occurrence of an element in the string without regard to its function: compare *li-kāna mawḍiʿ ākhar* "*kāna* has another place" (i, 21/i, 16), i.e. "there is another way to use *kāna*", with *lam lā yakaʿu baʿdahā faʿala* "*faʿala* never occurs after *lam*" (i, 457/i, 407, and cf. Versteegh, in *Arabica*, xxv).

Consequent on all this is the principle, often raised by al-Khalīl and fully exploited by Sībawayhi, that compound units may have the status of a simple element and so be substitutable for it. The *Kitāb* identifies a number of units with the *manzila* of a "single noun" (*ism wāḥid*), such as noun + adjective, annexed nouns, demonstrative + noun, categorical *lā* + noun, *anna* + noun, relative clause and antecedent, *ayy* + relative clause, *an* + subordinate verb, *idhan* + verb, verb + agent pronoun suffix, and verb + preposition. Levin's suggestion (*Studies in Isl. hist.*) that *kalima* in the *Kitāb* is (with Levin's own reservations) partially equivalent to "morpheme" is illuminating, but the relationship between *kalima* and *ism wāḥid* needs further exploration.

Manzila also implies a hierarchy, since the range of an element's forms and functions depends on its status. For instance, the verbal status of the "five particles" *inna, anna* etc., allows them to operate on nouns and give them dependent (*naṣb*) form in the same way as *ʿishrūna* has verbal status and effect, but none of them have the paradigmatic freedom (*taṣarruf*) of verbs (i, 279/i, 241). The system accommodates several hierarchies, most of which are set out in the introductory paragraphs of the *Kitāb* and have been collected by Baalbaki (in *ZAL*, ii). They include the priority of nouns over verbs, singular over dual and plural, masculine over feminine, indefinite over definite, simpler word patterns over more complex, "lighter" vowels over "heavier", *mahmūsa* consonants over *madjhūra*. Sībawayhi also regards time as closer to verbs and place to nouns (i, 16/i, 12). None of this violates the linearity of *naḥw*: a speech element can only occur in the "chaîne parlée" (Martinet), and its status determines its place(s) in the chain just as civil rank determines the place(s) of an individual in society.

The symmetry and coherence of Sībawayhi's grammar are assured by *ḳiyās* "analogy" [*q.v.*], which unifies linguistic practice through structural similarities and enables the generation of new utterances. Sībawayhi's use of *ḳiyās* has been compared with early juridical arguments and Baalbaki (*Misc.*) shows how the mechanisms of analogical reasoning are all there, even if the formal terminology is lacking. Gwynne has examined *a fortiori* arguments in the *Kitāb* and concluded that this kind of reasoning passed from law to grammar, then directly to theology. For Sībawayhi, it was the speakers who made analogies: "they sometimes liken one thing to another, even if they are not alike in all respects" (i, 93/i, 77, using *shabbaha*). His readers are told to do the same: *fa-ʿalā hādhā fa-ḳis hādhā ʾl-naḥwa* "so make analogies on this for this way [of speaking]" (ii, 163/ii, 167, note *ḳāsa* in the context of *naḥw*), but he also warns against analogical extension of non-standard forms: *lā yanbaghī laka an taḳīsa ʿalā al-shādhdh* "you should not base analogies on anomalies", i, 398/i, 351.

There is a conspicuous pragmatism in Sībawayhi, no doubt inspired by al-Khalīl. As well as a speaker, *mutakallim*, there is always a listener, *mukhāṭab*, who determines whether an utterance is "right", *mustaḳīm*, or "wrong", *muḥāl*, though not its structural correctness. The listener's knowledge is a decisive factor in elision, and can also affect other choices of the speaker: as well as *marartu bi-rajulayni muslim*^{in} *wa-kāfir*^{in} a speaker may say *muslim*^{un} *wa-kāfir*^{un} "as if answering the question 'who were they?' ... even if the listener does not say anything, for the speaker's words will go according to what you might have asked him" (i, 214/i, 182). Psychological and contextual explanations are frequently offered (cf. Buburuzan) and there is even a hint at the concept of body-language (i, 279/i, 240).

(d) *Syntax*. The primary purpose of speech is the making of statements, and the grammarian's task is to account for "the actions performed by the speaker in order to construct a linguistic sequence appropriate to his specific intended meaning" (Guillaume, in *Hist. Ep. Lang.*, viii, 53). For Sībawayhi, each act is normally realised as a binary unit, with one active element, the *ʿāmil* [*q.v.*] "operator" and one passive, the *maʿmūl fīhi* "operated on", and the effects of that *ʿamal* "operation" appear as an explicit or implicit variation in the word-ending *iʿrāb* [*q.v.*]. Thus the act of *nidāʾ* is realised through an active operator, the *ḥarf nidāʾ* and a passive *munādā*. Ultimately, the speaker is the operator (i, 166/i, 139), which is why in some units, e.g. *iḍāfa, badal* and *ibtidāʾ*), both parts are passive (*muḍāf/muḍāf ilayhi, mubdal/mubdal minhu, mubtadaʾ [bihi]/mabnī ʿalayhi*). *Ibtidāʾ* is a special case, as the speaker's act of predicating has no morphological consequences (subject and predicate remain independent, *marfūʿ*) unless the statement is modalised by verbs such as *kāna, ẓanna* etc. (Guillaume, 60-1).

The division into only three word classes, nouns, verbs and particles, is not the whole story. Several subclasses of nouns and verbs are distinguished (like the *ḥurūf*) by their function, e.g. adjectival qualifier, *ṣifa* or *naʿt*, space/time qualifier, *ẓarf*, circumstantial qualifier, *ḥāl*, personal pronoun, *ḍamīr* or *muḍmar*, demonstrative noun, *ism al-ishāra* or *al-ism al-mubham*,

relative noun, *ism mawṣūl*, verbal noun, *maṣdar*, various verbal complements, *maf'ūl*, nominal verb, *ism al-fi'l* (including interjections), dependent phrase *ṣila* and verb of surprise, *fi'l al-ta'adjdjub*. Transitivity is described in detail, confirming that any similarity between the Arabic *muta'addī* and the Graeco-Latin *transitivus* is coincidence, the nearest term in Sībawayhi to our sense of "transitive" being *waḳa'a/awḳa'a* (Levin, *Stud. or.*). A corollary of the substitution principle mentioned above is the separation principle embodied in the expression *'ishrūna dirhamᵃⁿ*, which stands for all those units whose first element has obligatory *tanwīn* or the equivalent and whose second element is structurally and semantically detachable (Carter, in *BSOAS*, xxxv). Finally, Sībawayhi's treatment of *ḳāla*, *ẓanna*, etc., and their effect on predicative utterances, displays a degree of refinement we are only just beginning to appreciate.

(e) *Morphology*. The morphological section of the *Kitāb* occupies about half the work in sheer bulk. As well as enumerating all the known patterns for nouns, verbs and particles, Sībawayhi categorises them by number of radicals (minimum two, maximum five), carefully distinguishing these from augments. The relation between declinability, gender and word-pattern, and the connection between pattern and function, are investigated, including the unusual behaviour of proper nouns and foreign names. Derivation, *ishtiḳāḳ* [*q.v.*], is discussed in detail (Leemhuis shows that Sībawayhi analyses Stems II and IV much more delicately than later grammarians). Varieties of *tanwīn* are treated, and long chapters are devoted to the diminutive, the dual and sound and broken plurals. Pause, rhyme, exclamation and phonetic reduction (*tarkhīm*) are described, the last two in the syntax section, where they rightly belong as a feature of the vocative. In short, very little is left out, though al-Zubaydī proudly published a list of more than eighty forms Sībawayhi missed (*Kitāb al-Istidrāk*, see below).

(f) *Phonology*. This occupies the seven dense and laconic final chapters of the *Kitāb*. Although Sībawayhi refers to sounds by their graphic form, it is clear that (following al-Khalīl) he knew the difference between the name of a letter, the grapheme and the phoneme. He also knew that the set of Arabic sounds (our "phoneme inventory") was limited and distinctive, and he gives precise descriptions of their place and manner of articulation [see ḤURŪF AL-HIDJĀ']. Dialectal and conditioned variants (allophones) are reviewed, also the Arabisation of foreign sounds, and the role of ease of articulation, proximity and frequency fully acknowledged; this includes vocalic allophones arising from *imāla*, *rawm* and *ishmām*, processes not unlike umlaut. Assimilation is recognised as occurring not only within but between words. Phonological constraints on syllabic structure and the morphological results are treated, as are sound changes arising from metathesis, elision, substitution and conversion. Totally lacking is any mention of *tadjwīd*, though there are frequent references to the way individual Ḳur'ānic sounds or words are "read", i.e. textually rather than liturgically.

Sībawayhi's terminology applies uniformly at all levels; every syntactic, morphological and phonological unit has a *naḥw* or way of use according to its status *manzila* and function *mawḍi'*, by which it is judged to be structurally correct, *ḥasan*, or incorrect, *ḳabīḥ*, with analogy, *ḳiyās*, as the controlling principle. For obvious reasons, there is no call for *muḥāl*, "incomprehensible", outside syntax, but we sometimes find "right", *mustaḳīm*, in a morphological context where the choice of a certain form affects communication (ii, 60/ii, 55). Sībawayhi also understood the nature of metalanguage; with al-Khalīl he often tests the linguistic status of elements by artificially converting them into proper names, and he is alert to the problems of purely theoretical examples (Ayoub).

4. The text and editions of the *Kitāb*.

(a) *Composition*. The *Kitāb* survives because of al-Akhfash, a service for which he has not been given due credit. Sībawayhi died before he could bring his work into publishable form, and it was al-Akhfash who helped him write the first draft, so to speak, and he alone who gathered it up and later used it for his own teaching. Through this epistemological bottleneck passed a work of transcendent genius. After Sībawayhi's death, Yūnus was shown a book of some thousand pages which had emerged from this collaboration, and he certified it as an authentic digest of al-Khalīl's and Sībawayhi's knowledge, thus retrospectively defining the academic pedigree of the *Kitāb* and confirming its large size *ab initio*. There is something rather convincing about a story which so innocently avoids the pitfall of fabricating an *idjāza* when such mechanisms patently did not exist. The lack of precedent accounts better than Sībawayhi's premature death for the *Kitāb*'s unusual form (no title, no preface, no conclusion); if he had time for a thousand pages, the absence of literary formalities can only have been because there were no models. The *Kitāb* shows no trace of the well-established epistolary manner (still less of any dipping into translations from Greek or Syriac), and the originality of the work lies as much in its style as its content; it is one of the earliest "books" in Arabic at all, hence its default title *Kitāb Sībawayhi*.

(b) *Manuscripts*. Humbert 1995 lists 77 extant manuscripts, and a 78th has recently been found (Humbert, *Dévelop.*, 133). The oldest is a fragment from 351/962 (chs. 184-277, 288-312), and the earliest complete copy is dated 588/1192-3. Al-Mubarrad, who studied the *Kitāb* with al-Djarmī and al-Māzinī, two pupils of al-Akhfash, is responsible for the creation of a "vulgate", which included his own glosses, but there were alternative transmissions, notably of Abū 'Alī al-Fārisī (d. 377/987), who showed an outstanding interest in collecting *Kitāb* manuscripts. He represents a stage in the history of the *Kitāb* when scholars eagerly sought and collated manuscripts, culminating in the emergence of two "standard editions", an Eastern version associated with al-Zamakhsharī and an Andalusian version associated with al-Rabāḥī. The Zamakhsharī recension is easily recognised by the addition of *al-ḥā'iṭ* in the very first line and a haplology in the last folio.

Completely outside these two dominant traditions is the Milan fragment, containing chs. 327 to 435, i.e. about one-sixth of the *Kitāb*. This manuscript, tentatively dated by Humbert to the 5th/11th century, exhibits enough textual and marginal divergences from the mainstream versions to point to a totally independent line of transmission. There is evidence, slight and tantalising, to connect this version directly with Tha'lab, the chief "Kūfan" grammarian and bitter rival of al-Mubarrad, and its forthcoming publication will greatly improve our knowledge of the *Kitāb*.

(c) *Editions*. (1) *Le livre de Sibawaihi*, ed. Hartwig Derenbourg, Paris 1881-9, repr. Hildesheim 1970. (2) *Kitāb Sībawayhi*, ed. Kabir-Uddin Ahmed Khan Bahadur, Calcutta 1887. (3) *Kitāb Sībawayhi*, Būlāḳ 1898-1900, repr. Baghdād [1965]. (4) *Kitāb Sībawayhi*, ed. 'Abd al-Salām Muḥammad Hārūn, 5 vols., Cairo 1968-77, 2nd ed. 1977. (5) Beirut, 1967. German

translation, Gustav Jahn, *Sîbawaihi's Buch über die Grammatik, übersetzt und erklärt*, Berlin 1895-1900, repr. Hildesheim 1969. See further Humbert, *Studies*, 179-82, 1995, 27-40.

(d) *Commentaries*. Of more than 80 ancillary titles listed in Sezgin, *GAS*, ix, 58-63, 242, only 21 are extant. Five have been published, viz no. 20, Ibn al-Naḥḥās, *Sharḥ abyāt Sībawayhi*, ed. Z.Gh. Zahīd, Beirut 1986; no. 29, al-Zubaydī (*GAS*, ix, 222), no. 37, Ibn al-Sīrāfī, *Sharḥ abyāt Sībawayhi*, ed. M.ʿA. Sulṭan, n.p. 1979, no. 39, Hārūn b. Mūsā, *Sharḥ ʿuyūn Kitāb Sībawayhi*, ʿA.R.ʿA.L. ʿAbd Rabbih, Cairo 1984; no. 48, al-Djawālīkī (*GAS*, ix, 242). Add al-Zadjdjādjī, *Īḍāḥ* (*GAS*, ix, 94), translated by C.H.M. [Kees] Versteegh, *The explanation of linguistic causes. Az-Zaǧǧāǧī's theory of grammar. Introduction, translation, commentary*, Amsterdam 1995. Partial editions: no. 25, al-Sīrāfī, *Sharḥ Kitāb Sībawayhi*, ed. R. ʿAbd al-Tawwāb, Cairo 1986 (2 vols.), no. 28, Abū ʿAlī al-Fārisī, *al-Taʿlīḳa*, ed. ʿA. b. Ḥ. al-Ḳūzī, Cairo 1990 (1 vol.), no. 31, al-Rummānī (*GAS*, ix, 112). Extracts from al-Sīrāfī in Jahn and Būlāḳ, where also extracts from no. 43, al-Aʿlam al-Shantamarī's *Taḥṣīl ʿayn al-dhahab*.

(e) *Reference works*. Sezgin, *GAS*, ix, 51-63, 241-2, incorporating W. Diem, *Bibliographie/Bibliography, Sekundärliteratur zur einheimischen arabischen Grammatikschreibung*, in C.H.M. Versteegh, K. Koerner, H.-J. Niederehe (eds.), *The history of linguistics in the Middle East*, Amsterdam 1983, 195-250 (= *Historiographia linguistica*, viii (1981), 431-86), with supplements in *ZAL*, x, xi, xii, xiv. Indispensable resources are: G. Troupeau, *Lexique-index du Kitab de Sibawayhi*, Paris 1976; ʿA.Kh. ʿUḍayma, *Fahāris Kitāb Sībawayhi wa-dirāsa lahu*, Cairo 1975; A.R. Naffākh, *Fihris shawāhid Sībawayhi*, Beirut 1970; G. ʿAwwād, *Sībawayhi imām al-nuḥāt fī āthār al-dārisīn khilāl ithnay ʿashar ḳarn*[an], Baghdād 1978; Kh. ʿA.R. al-Ḥadīthī, *Abniyat al-ṣarf fī Kitāb Sībawayhi*, Baghdād 1965; the index of Hārūn's *Kitāb* edition, also Schaade and Mosel.

5. Sībawayhi's pupils and the legacy of the *Kitāb*.

(a) *Pupils*. Sībawayhi only had two pupils that we know anything about, al-Akhfash and Ḳuṭrub [*q.vv.*]. Three others are merely names: al-Nāshī, much admired by al-Mubarrad, al-Ziyādī, who apparently read the *Kitāb* with Sībawayhi and al-Māzinī (see Humbert 1995, 15, n. 35 on both) and one ʿUtba al-Naḥwī, described as *min aṣḥāb Sībawayhi*, *Aghānī*[1], xvii, 16, perhaps the same as al-ʿUtbī in al-Zubaydī, *Ṭabaḳāt*, 44.

Of the two recognised pupils, al-Akhfash is remarkable for his role in the composition and transmission of the *Kitāb*, and Ḳuṭrub is perhaps more remarkable for having had nothing to do with either, as he simply "studied the *Kitāb* with Sībawayhi". This is a problem, of course, since there was strictly speaking no *Kitāb* for him to study. He was about the same age as Sībawayhi and thus more of a fellow-student than a pupil; his reputation as a "dissenting grammarian", in Versteegh's phrase, makes it difficult to imagine him as a student of Sībawayhi and impossible to consider him a disciple. Since none of his works survive (nor any of al-Akhfash) there is no way to know the full technical basis for his unique grammatical position. For al-Akhfaṣ, at least, we can hope to reconstruct his views from his numerous glosses on the *Kitāb*.

(b) *Grammar after Sībawayhi*. In the years after Sībawayhi's death, the *Kitāb* went into occultation. Bernards has explored this phase and shown how the *Kitāb* began to acquire prestige only with al-Mubarrad (d. 285/898 [*q.v.*]), which fits nicely with Humbert's independent conclusion that it was al-Mubarrad who laid the foundations for a standard *Kitāb* text. Thus al-Yazīdī (d. 202/818, studied with al-Khalīl but not with Sībawayhi) can praise the "Baṣran" grammarians without even mentioning Sībawayhi. Al-Akhfash taught the *Kitāb* to only three disciples, al-Djarmī, al-Māzinī and ʿAbd Allāh b. Hānī, though it was also known to al-Kisāʾī and al-Farrāʾ who play, however, no part in its transmission. Al-Djarmī and al-Māzinī both energetically promoted the *Kitāb*, and the latter admonished: "anyone who thinks they can do better than the *Kitāb* should show some humility!". When al-Djāḥiẓ presented a copy as a gift to a *wazīr*, the work's fame was assured; by al-Mubarrad's time, the difficulty of the *Kitāb* was compared with riding on water and eventually it was crowned with the title "the Ḳurʾān of grammar". The growing prominence of the *Kitāb* is linked also with the emergent "Baṣran" and "Kūfan" schools, with Thaʿlab declaring that the *Kitāb* was the work of 42 scholars and he could very well do without it! But the *Kitāb* itself (*pace* Baalbaki, *Stud. ar. et isl.*) gives little support to the polemicists; Sībawayhi is so careful to balance systematic regularity *ḳiyās* against observed data, *samāʿ*, that he can hardly be claimed as a representative of either school.

Arabic grammar is not static, and although the *Kitāb* remained the reference point for all subsequent developments, the science itself moved on. Prescriptive needs were fulfilled, methodological theory elaborated, curricular requirements accomodated, and the relatively junior science of rhetoric was established.

Comparison of Sībawayhi's vocabulary with later grammar (Troupeau, *Lex.-index*, 18-25) makes the qualitative and quantitative changes plain. Absent from the *Kitāb* are, amongst others, *madjāz/ḥaḳīḳa, nathr/naẓm, fāʾida/ifāda, djumla, madjhūl, ḥukm, ḍābiṭa, iḳtaḍā, maḥall, rābiṭ, salb, nāsikh, basīṭ/murakkab, shamsī/ḳamarī* and all abstract nouns of the type *ismiyya, fiʿliyya*. Terms were created for many items Sībawayhi left unnamed, e.g. *tamyīz, kāna ʾl-nāḳiṣa/ʾl-tāmma, lā li-nafy al-djins, mā al-nāsikha, mā al-daymūma, afʿāl al-ḳulūb, alfʿāl al-muḳāraba*, etc.

Troupeau's index also exposes the extreme rarity of many terms in the *Kitāb*. Abstractions such as *ʿaraḍ, djawhar, ḥudjdja, ṣūra, djins, ṣinf*, occur in single figures, *nawʿ* only 11 times, with *mādda* and *hayūlā* completely absent, suggesting that Sībawayhi was not greatly interested in categories, or rather that the expression of class membership was already catered for by the indigenous metaphor of *umma* (23 times) and its cognate notions "tribe", *ḳabīl*, "mother", "sister" and "daughter". Two rare terms, *ʿilla* and *taḳdīr*, have been over-interpreted. Sībawayhi associated *ʿilla* principally with phonological "weakness", and on the few occasions when it seems to mean "cause" it also involves weak radicals or similar morphophonological factors; in short, there is not much evidence that Sībawayhi subscribed to any explicit theory of grammatical causality other than *ʿamal*. With *taḳdīr* the position is equally inconclusive; again, the term has primarily morphophonological import and occurs only once in a purely syntactic context. In i, 287/i, 247, *a-laysa hādhā zayd*[un] *munṭaliḳ*[an] is said to be "like *ḍaraba ʿabd Allāhi zayd*[an] *ḳāʾim*[an] in *taḳdīr* but not in meaning", and the suspicion that this may be an interpolation is irresistible. The original sense of *taḳdīr* is seen in an incident where Sībawayhi is challenged to make up words with certain patterns and radicals (al-Zubaydī, *Ṭabaḳāt*, 72). Sībawayhi *ḳaddara wa-akhṭaʾa* "tried to fit the radicals into the patterns and got it wrong", where *ḳaddara*

still has the same morphological connotation as in the *Kitāb*.

As grammatical science evolved, elements of Sībawayhi's system were dropped or marginalised. Prescriptive grammar was not so concerned with the moral aspect of communication implied by *istaḳāma*, which became less common as the normative verb *dj̲āza/yadj̲ūzu* increased in frequency. The concept of *sabab* [*q.v.*], which accounted for a wide range of syntactic phenomena, was restricted to the *naʿt sababī* construction, e.g. *marartu bi-radj̲ulin ḥasanin abūhu*. The scope of *muḍāraʿa* was drastically reduced. For Sībawayhi, it was part of a general theory of analogical pressure inseparable from *ḳiyās* and related (in ways not yet examined) to the analogies performed by speakers, but all that survives now is the name of the imperfect verb, still called *muḍāriʿ* to this day. Sībawayhi's analysis of appositional and coordinated qualifiers was tidied up; on structural grounds he called them both simply *ʿaṭf*, but his successors in their formalistic way subdivided them into *ʿaṭf bayān* and *ʿaṭf nasaḳ* respectively. Sībawayhi's terms for predication, where *musnad* = first part, *musnad ilayhi* = second part of any predicative structure whether nominal or verbal, were inverted by the 4th/10th century (Levin, in *JAOS*, ci) to *musnad* = predicate, *musnad ilayhi* = subject irrespective of word order.

(c) *The Kitāb in the West*. The interpretation of Sībawayhi's grammar in the West has always been implicitly or explicitly a comparative exercise, and has never resolved the dilemma that literal translations of the *Kitāb* are technically unconvincing and technical translations are historically misleading. Jahn opened up the work to a wider audience (de Saussure *could* have read it, though we will never know), but his vital warning that the German version is only for those who can compare it with the Arabic is mostly ignored. All too often the secondary literature fails to find a compromise between the type of translation represented by Jahn's "Über die Verben, von deren 1. Form das Passivum vorkommt, ohne daß das Aktivum gebraüchlich ist" and what Sībawayhi actually said, *bāb mā dj̲āʾa fuʿila minhu ʿalā g̲h̲ayri faʿaltuhu* (ch. 447). It is only useful to recast Sībawayhi's thought in some modern theoretical framework if the undertaking has real explanatory value. One may regret, now, the speculation that Sībawayhi belonged "somewhere between de Saussure and Bloomfield" (Carter, in *JAOS*, xciii, 157), lending new irony to the word Procrustean which has been applied to Arab linguistics.

Sībawayhi's vocabulary lacks many terms, among them "number", "gender", "tense", "person", "case", "mood", "syllable", "accent", "diphthong", but to focus on these perceived shortcomings diverts attention from the realities of the *Kitāb*. Even more damaging is the inaccurate rendering of the terms that Sībawayhi does use. No-one would be impressed by a writer on *fiḳh* who consistently translated *fatwā* as "death sentence", yet similar distortions are common in works on Arabic grammar. The most unfortunate is the equation of *ʿamal* with "governing", but the imposition of Latin case and mood names runs a close second. We also find "copula" for *ḍamīr al-faṣl*, turning that which keeps apart into that which joins together, *fāʿil* becomes "subject" despite the Arabs' careful terminological distinction between *fāʿil* and *mubtadaʾ*, *mabnī li ʾl-mafʿūl* (in later grammar *madj̲hūl*) are reproduced by "passive", obliterating the Arab theory of this form of verb, phonetic terms are squeezed into Western categories, and so on.

Yet Sībawayhi continues to inspire. Like all works of genius, the *Kitāb* bears infinite re-reading, and all research into Arabic grammar must still begin with Sībawayhi, even if the science which he founded outgrew him and evolved into the scholastic grammar of the *madrasa*. The high intellectual calibre of the late grammarians is undeniable, but it seems less than perfect justice that as grammar sublimated itself into a dialogue with the Ḳurʾān, Ibn K̲h̲aldūn could say without incongruity that Ibn His̲h̲ām (d. 761/1360 [*q.v.*]) was "more of a grammarian than Sībawayhi" *anḥā min Sībawayhi*.

(M.G. Carter)

SĪBĪ (also spelt Sīwī in mediaeval Islamic sources, e.g. the *Ḥudūd al-'ālam*) a town and district of northeastern Balūčistān, lying on the plain below the entrance to the Bolān Pass and the route to Quetta [see KWAṬṬA], which is some 140 km/88 miles beyond Sībī town. The town is situated in lat. 29° 31' N. and long. 67° 54' E. Because of its strategic position between the mouths of the Bolān and Harnaī Passes, and on the way down to the Indus valley, it has always played a part in history.

In early Islamic times, Sībī was one of the towns of the district of Bālis(h) or Wālishān, although the residence of the *amīr* was at al-Ḳaṣr/Kūshk near another of the district's towns, Ispindjāy (see *Ḥudūd al-'ālam*, tr. Minorsky, 111, comm. 346). The district is mentioned in the *Bundahishn* as Bālist, presumably meaning in Persian "highland". The Ṣaffārid Ya'ḳūb b. al-Layth [*q.v.*] brought Bālis(h) under his control in 253/867 (C.E. Bosworth, *The history of the Saffarids of Sistan and the Maliks of Nimruz*, Costa Mesa and New York 1994, 99). In Ghaznawid times, it formed part of the sultans' empire, and on their expeditions to India, they frequently marched from Bust and al-Rukhkhadj [*q.vv.*] via Sībī to Multān and the Indus valley (see M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 199; Bosworth, *The later Ghaznavids*, Edinburgh 1977, 7-8). The district of Sībī was held *ca.* A.D. 1500 by Arghun from Ḳandahār; then by the Mughals (in Akbar's time, it was a *maḥall* of the Bhakkar *sarkār* in the Multān *sūba*); in 1714 by the Kalhōras of Sind; and later in that century, by the Durrānī Afghāns. In the 19th century, Sībī and Pishīn formed the so-called "assigned districts" (any surplus revenue from which was to be refunded to the *amīrs* of Afghānistān) handed over to Britain by Ya'ḳūb Khān b. Shīr 'Alī under the Treaty of Gandamak in 1879.

In British India, only some two-fifths of Sībī District were directly administered, the rest being the Marī and Bugtī tribal areas and a part of Kalāt state [*q.v.*]. The strategic value of Sībī town was increased when the standard-gauge railway to Pishīn was constructed through it, with its also becoming subsequently the junction for the Quetta line. The ethnic composition of the District included 43% Balūč and 20% Pathāns. Sībī is now in the Balūčistān Province of Pākistān.

SIBĪR, the designation of Western Siberia first used in sources for the Čingizid era of the 13th and 14th centuries. From this the modern Russ. Сибирь (and thence "Siberia" in European and other languages) derives. The origins of this toponym are unclear. A connection with the Sabirs, a Turkic nomadic grouping which formed part of the Khazar state (cf. the Suwār in Volga Bulgharia) and who may have occupied some parts of this region before moving to the Volga zone in the early 6th century A.D., has been suggested (Patkanov, *Über das Volk der Sabiren*, 258-77). *Sabir* (*Säbir*), in turn, has been derived from the name Hsien-pi (**siem-bi*), a Proto-Mongolian tribal confederation of Inner Asia which overcame the Hsiung-nu for control of Mongolia in the 2nd century A.D. and from which the Jou-jan/Avars, among others, appear to have originated. The later toponym *Ibir-Sibīr* (see below) has been conjectured as stemming from **Abar-Säbir* (Quatremère, *Histoire*, 413 ff., Pritsak, *The origin*, 278-80). The evidence is conjectural at best. The Kimek Ḳaghanate, known to the mediaeval Islamic geographers (cf. *Ḥudūd al-'ālam*, ed. Sotoodeh, 85-6, tr. Minorsky, 99-100, and KIMÄK), from which the Ḳipčaḳ confederation developed, was located in much the same territory.

The earliest reference to this name is found in the (*ca.* 1240) *Yüan-chao-pi-shih* (*Secret History of the Mongols*, tr. Cleaves, 173), in the form *Shibir*, where it is listed in a group of peoples extending from Central Siberia to the Urals. A Franciscan letter of 1320 records the form *Sibur* (Pelliot, *Notes sur le 'Turkestan'*, 51-2). This is similar to the forms noted in the Pizzigani brothers' map of 1367 and a Catalan map of 1375: *Sebur*, located to the north of the *Pascherti* (Bashkurts, see

Egorov, *Ist. geograf.*, 130-1; Yule, *Cathay*, i, 307). A number of authors, beginning with Rashīd al-Dīn in the early 8th/14th century (*Djāmi*ʿ, ed. Alizade *et al.*, i/1, 72-3, and ed. Karīmī, i, 513), note a region termed "Ibīr Sibīr". Al-ʿUmarī (ed. Lech, 77), writing *ca.* 741-9/1341-9, in his section on Khʷārazm and Ḳībčaḳ, makes reference to the *bilād Sibir wa-Ibir* which is adjacent to "Bāshḳird" and is a region in which "the ice does not depart from them for a period of six months". A contemporary of his, the anonymous Spanish Franciscan author of the *Libro del conosçimiento* (van den Wyngaert, *Sinica Franciscana*, i, 572), mentions the largely uninhabited "lands of Albizibi" which encompass "Tartaria" from the north. The form "Ibir-Sibir" may also be seen in I-pi-rh Shi-pi-rh of the *Yüan-shih* (and a somewhat later Chinese map, see Bretschneider, *Med. researches*, i, 37; Pelliot, *Notes critiques*, 59). In the early 15th century, Johannes Schiltberger (*Bondage and travels*, ed. Telfer, 34-6, 49) took part in a campaign against *Ibissibur* while the region was still largely under Ostyak control. By that time, the "land of Sibir" appears in Russian sources (cf. *PSRL*, xi, 198; *Ustiužskiy*, 70, recording the death *ca.* 1406 or 1407 of Toḳtamïsh there). Later Islamic sources (e.g. the 10th/16th century *Taʾrīkh-i Rashīdī*, tr. Ross, 282) continued to call the region "Ibīr-Sibīr". As the name appears to be known only from the Čingizid era, it may derive from Mong. *siber/sibir* "dense forest, thicket" (Lessing, 695), but since the Mongols tended to use the existing ethnonyms and toponyms of the regions they conquered, this seems unlikely.

Sibir, never clearly defined in the sources, formed the north-eastern border zone of the Djočid *ulus*, extending, probably, to the Ïrtïsh and Čulïman rivers, the Baraba and Kulunda steppes and southward toward the Altay and Lake Balkhash (Egorov, *Ist. geograf.*, 45, 54-5). The earliest Čingizid-era polity to emerge in this region (last half of the 8th/14th century?) was that of the Tümen khānate on the middle Tobol and Tura-Tavda mesopotamia with its centre at Čimgi-Tura. It comprised a number of Ḳïpčaḳ-Turkic-speaking Turko-Mongolian tribal groupings, stemming from the same milieu as the Noghay Horde, and was frequently fought over by opposing Djočid factions. It was to here that Toḳtamïsh fled following his defeat by Tīmūr in the late 8th/14th century, after which it was controlled by the Noghay *amīr* Edigü through Čingizid underlings. Although local Tatar traditions (preserved in oral form and in the Russian chronicles) present a welter of confusing accounts, the ruling house appears to have derived from (a probably Noghay chieftain) Taybugha (Miller, i, 189-3; Frank, *Siberian chronicles*, 8-10). Sometime before 1481, the Shībānid Ibaḳ Khān, who together with the Noghays inflicted fatal blows on the "Great Horde", took control of the region from the Taybughids. Mamat (Muḥammad), a Taybughid, killed Ibaḳ in 1493 or 1495, regained control of the khānate and moved its capital to Sibir/Isker/Ḳashlïḳ (*PSRL*, xxxvi, 47; Armstrong, 66-7 [Yesipov chronicle]). This now became the Khānate of Sibir, which soon subsumed the remaining Shībānid holdings in Tümen and expanded into Bashkir and Ob Ugrian (Ostyak) lands. The Taybughid princes Yediger and Bekbulat, troubled by internal problems (their father, Kasïy/Kāẓïm, had been assassinated by members of his own entourage) and Moscow's conquest of Kazan [see ḲAZĀN] (1552), submitted to Ivan IV in 1555. This did not prevent their defeat and death at the hands of Küčüm [*q.v.*], a descendant of Ibaḳ (1563). Seydäk (Сеидякъ < Arab. *sayyid*), Bekbulat's son, fled to Bukhārā and from there continued periodic resistance. Although Islam was clearly the religion of the Taybughids (who, in the absence of Čingizid credentials, stressed their Islamic legitimacy, Frank, *Siberian chronicles*, 23) and of the ruling strata of the khānate of Sibir, local tradition credits Küčüm with a concerted effort (occasionally forcible) to proselytise the local population. Naḳshbandī *shaykhs* also appear to have played some role in the propagation of Islam on this northern frontier. Küčüm's successes were short-lived. In 1581, the Russians, under the Cossack Ermak Timofeev, began the conquest of Siberia, taking the city of Sibir in October 1582. Ermak perished in a Tatar ambush in 1585 and Küčüm continued to struggle against the Russians, their Tatar allies and Seydäk (who in 1587 was made prisoner by the Russians and taken off to Moscow, *Ist. Sibiri*, ii, 32; Armstrong, *Yermak*, 81-2), but without success. Following a defeat at Russian hands in 1598 (*Ist. Sibiri*, ii, 30-6), old and now blind, Küčüm fled to the Noghay Horde, where he died: *Manghït khalkïnïng ičige bardï. Ḥaḳḳ-ï raḥmanatige kitdi* (according to Abu 'l-Ghāzī, ed. Desmaisons, 177, this occurred in 1003/1594-5; the Yesipov and Remezov Chronicles, Armstrong, *Yermak*, 82, 237-43, report that the Noghays killed him). The Russians established their forts and urban settlements on or near the khānate's earlier towns. Tobol'sk (1587) was built near Tatar Sibir.

Sibir was an important link in trans-Siberian commerce, connecting the Volga-Ural region and Central Asia with the forests of the north so important to the fur trade. Little is known about the internal structure of the khānate. As non-Čingizids, the Taybughids appear, like the Noghays, to have used the titles *biy* (bey, beg) and *sulṭān*. The Tatar tribes were organised into *uluses*, headed by *mīrzās*, as were the subject peoples, often incorporated into one or another *ulus*, who paid the *yasaḳ* (tribute collected in furs).

SIBṬ [see ibn al-djawzī, ibn al-taʿāwīdhī, al-mārdīnī. 3.].

al-SĪD, Spanish el-Cid, the Cid, the name by which the most celebrated and the most popular of the heroes of Castilian chivalry is known; he played a preponderating political part in Muslim Spain of the second half of the 11th century, and we can now gain an idea of his real personality by removing all the legendary matter that has grown up around his life and his exploits. It was to the Dutch scholar R. Dozy that the honour was due of having established, as a result of his examination in 1844 of the manuscript of the *Dhakhīra* of Ibn Bassām preserved in Gotha, that the story of the *Crónica General* of Alfonso the Wise relating to the Cid, which up till then had been considered a pure invention, was really translated from the Arabic, and probably from a work of the Valencian Muḥammad b. Khalaf Ibn ʿAlḳama (428-509/1037-1116 [*q.v.*]) called *al-Bayān al-wāḍiḥ fi 'l-milamm al-fāḍiḥ* (cf. also F. Pons Boigues, *Ensayo bio-bibliográfico*, 176-7, no. 140) and that it is contemporary with the Cid.

This knight, who was called Rodrigo Díaz de Vivar, was descended from a noble Castilian family and was born at Burgos during the first half of the 11th century. It is known that in 1064 he distinguished himself, on the side of Sancho II of Castile in a war which this sovereign waged against Sancho of Navarre. He defeated at this time a knight of Navarre in single combat, and the success stood him in good stead in the Castilian army, whose commander-in-chief he became (or the "Standard-bearer of the King") with the title of Campeador (Latin *campeator*, written by the Arabs الكنبيطور *al-kanbiyaṭūr*, the equivalent of the Spanish Arabic *mubāriz* or *barrāz*, "the champion who comes out of the ranks, when two armies are ranged against one another, to challenge an enemy to single combat"). A short time afterwards thanks to the counsels of Rodrigo Díaz, Sancho II made himself master of the Kingdom of León by taking his own brother Alfonso prisoner at Burgos. The latter was able to flee to the Muslim king of Toledo al-Ma'mūn, of the dynasty of the Banū Dhu 'l-Nūn. In Muḥarram 465/7 October 1072, Sancho of Castile was killed before Zamora which he was besieging. The new king of Castile always secretly felt a grudge against Rodrigo Díaz for the humiliation of this oath, but in order to conciliate the knight, then very influential, and to attach him to him, he gave him his cousin Jimena (Chimène) Díaz, the daughter of the Count of Oviedo, in marriage (1074). Some years later, Alfonso VI sent him to the ʿAbbāsid dynast of Seville, al-Muʿtamid [*q.v.*], in order to collect the tribute, which this Muslim prince paid in return for a nominal alliance with Castile. The Cid himself returned to Castile after successfully attaining the real aim of his mission. Alfonso VI, probably at the instigation of García Ordóñez, then accused the Cid of having appropriated a part of the presents which had been given to him at Seville to bring to the king, and he took advantage of the first opportunity—the expedition against the Muslims of Toledo undertaken without his consent—to disgrace him and to banish him from his dominions (1081).

It is from this time that the life of a "condottiere" led by the Castilian knight dates, and that he began to fight, as occasion arose, the Muslims or his own co-religionists, on behalf of a third person or on his own behalf.

After an unsuccessful attempt to enter the service of the Count of Barcelona, Rodrigo Díaz offered his services to the Hūdid ruler of Saragossa [see saraḳusṭa], Aḥmad b. Sulaymān al-Muḳtadir. The latter agreed to take him into his army with his mercenaries. He died in the same year and his son Yūsuf al-Mu'tamin succeeded him at Saragossa, while his other son al-Mundhir received Denia, Tortosa and Lérida. The two brothers lost no time in going to war with one another. Rodrigo Díaz continued in the service of al-Mu'tamin, while al-Mundhir made an alliance with the King of Aragon, Sancho Ramírez, and with the Count of Barcelona, Ramón Berenguer II. The Cid soon won a great victory over the enemies of his master, took rich plunder and made prisoner the Count of Barcelona, whose liberty he restored soon after. He made a triumphal entry into Saragossa, where the Hūdid ruler overwhelmed him with presents and with honours. He had acquired at one stroke prestige and an ascendancy without parallel among his Muslim soldiers who from this time began to call him "my master", *sayyidī*, vulg. Sp. Ar. *sīdī*, which was translated into Spanish in the form of "*mio Cid*" (the famous *Poem of the Cid* was originally called "*El Cantar de mio Cid*"); and soon this name prevailed (with or without the employment of the possessive). Rodrigo Díaz, thanks to his military talents, had become in the eyes of the Muslims of Spain a champion and an irresistible leader in war, el-Cid Campeador.

In 1084, after an ephemeral reconciliation with Alfonso VI, the Cid covered himself with glory once more in Aragon in the service of al-Mu'tamin. When this prince died in the following year, he passed into the services of his son and successor Aḥmad al-Mustaʿīn II.

When the Almoravid Sulṭān Yūsuf b. Tāshfīn landed in Spain to fight against the Christians and put them to rout at Zallāḳa (12 Radjab 479/23 October 1086), the Dhu 'l-Nūnid Yaḥyā b. Ismāʿīl al-Ḳādir had to appeal for help to the King of Castile and to al-Mustaʿīn of Saragossa. The latter saw in this a good opportunity to deprive al-Ḳādir of his kingdom, and secretly entered into an agreement with the Cid to seize the town, all the booty to go to the condottiere. But the latter, mindful of the gifts which al-Ḳādir had bestowed upon him, refused to touch the town and sent a new token of his vassalage to Alfonso. Thereafter, with his army he made incursions into the whole district of Valencia, and in the year 1089, returned to Castile, where he was received with honour by his sovereign. Then he regained the Sharḳ al-Andalus [*q.v.*] with his army numbering 7,000 men.

Profiting by the absence of the Cid, al-Mustaʿīn of Saragossa had made an alliance with Berenguer of Barcelona, who was besieging Valencia. The Count of Barcelona retreated before the Cid, who promised

al-Ḳādir, in return for a payment of 10,000 dīnārs a month, to defend his capital against all enemy attempts. A short time afterwards, Alfonso quarrelled with him once more. Then the Cid, like a regular independent bandit chief, ravaged with fire and sword the whole eastern country from Orihuela to Játiva, marched against Tortosa, defeated the Count of Barcelona, and concluded a treaty with him. At this time, besides the sums which he received from the Count of Barcelona and the Muslim princes of Tortosa and Valencia, the Cid had also amongst his tributaries the Arab lords of Albarracín (al-Sahla), of Alpuente (al-Būnt), of Murviedro (Murbayṭar, today called Sagunto), of Segorba (S̲h̲ubrub), of Jérica (S̲h̲āriḳa) and of Almenara.

The King of Castile, in order to put an end to the growing influence of his too powerful vassal, decided to deprive him of Valencia. Strong in his alliance with the Pisans and the Genoese, he came to besiege the town by land and by sea, while the Cid was engaged in helping the Muslim king of Saragossa against the Christian King of Aragon. Informed of what was taking place, the Cid left Saragossa with his army and laid waste the county of Nájera and of Calahorra, the particular fief of his sworn enemy García Ordóñez. The town of Logroño in the Rioja was completely destroyed by him, and Alfonso VI had to raise the siege of Valencia without attaining any success.

During his absence, the Cid left at Valencia a Muslim lieutenant, Ibn al-Farad̲j̲, at the court of al-Ḳādir. The latter, in S̲h̲awwāl 485/November 1092, was killed after a rising of the population incited by the *ḳāḍī* Ibn D̲j̲aḥḥāf, who placed himself at the head of the city as president of the Valencian republic (*d̲j̲amāʿa*), with a purely nominal representative of the Almoravid government at his side. Some months later, in D̲j̲umādā II 486/July 1093, the Cid marched on the capital with the whole of his army, seized without difficulty the suburbs of Villanueva and of al-Kudya and agreed to make terms with Ibn D̲j̲aḥḥāf, while maintaining a strict blockade of the town. The chief of the Valencian republic was forced to surrender the town to the Cid on 28 D̲j̲umādā I 487/15 June 1094. The Campeador did no harm to the population, but did not hesitate to burn alive a short time afterwards the former president, Ibn D̲j̲aḥḥāt, as a punishment.

From this time the Cid was absolute master of Valencia. He had turned into a church the great mosque of Valencia and restored the bishopric of the town, which he gave to Jerome of Perigord. In the end, he was quite reconciled to his suzerain Alfonso of Castile, and he was allied to two royal houses of the Peninsula through the marriages of his daughters, María with Ramón Berenguer III, and Christina with the Infante of Navarre Ramiro. He then tried to take Játiva (S̲h̲āṭiba [*q.v.*]) from the Almoravids but his army was routed. The Cid, full of wrath and broken-hearted by this disaster, succumbed not long after in the middle of 1099.

After the death of the Cid, his widow Jimena resisted, for about two years, the incessant attacks of the Almoravids. Valencia was besieged at the beginning of 495/1101 by the Lamtūnī general al-Mazdalī. It sustained the siege for seven months but on the advice of Alfonso VI, who had come to relieve it, Jimena decided to evacuate Valencia, which she ordered to be burned on her departure. When the Almoravid troops entered it, on 15 Rad̲j̲ab 495/5 May 1102, they found nothing but ruins. Jimena transported the body of the Cid to Castile; it was buried near Burgos, in the convent of San Pedro of Cardeña. Jimena was herself buried there when she died five years later in the year 1104.

Bibliography: As noted above, a still valuable work on the life and historical career of the Cid is R. Dozy, *Le Cid d'après de nouveaux documents*, Leiden 1860, repr. in his *Recherches sur l'histoire et la littérature de l'Espagne pendant le Moyen-Âge*, [3]Paris-Leiden 1881, ii, 1-233. (R. HITCHCOCK)

AL-ṢIDDĪḲ (A.), a name applied to the first caliph Abū Bakr meaning "the eminently veracious" and "he who always confirms the truth". The lexicographical tradition understands the form of the word to be an intensive adjective (W. Wright, *Grammar*, i, 137-8) indicating the extremes of *ṣidḳ* [*q.v.*], truth.

The word appears in the Ḳur'ān six times and has

a technical sense suggesting an etymology derived from the Aramaic-Hebrew *ṣaddīḳ*, which has the meaning "pious" in Rabbinic literature. Those who believe are *ṣiddīḳūn* in Ḳurʾān IV, 69 and LVII, 19 (both times in conjunction with being *shuhadāʾ*, "witnesses" or "martyrs"), Abraham and Idrīs are called prophets as well as *ṣiddīḳ* in XIX, 41 and 56 respectively, while Mary is called *ṣiddīḳa* in V, 75, and Joseph's prison guard addresses him *ayyuhā 'l-ṣiddīḳu* in XII, 46.

The association of the word with Abū Bakr is explained in a number of anecdotes in classical sources. Abū Bakr, when faced with the sceptics of his community, said of Muḥammad and his night journey, "If he says it is so, then it is true (*ṣadaḳa*)". Abū Bakr then requested that Muḥammad describe Jerusalem to prove the veracity of his account. In order that he could see the city, Abū Bakr was lifted up and he was then able to confirm for everyone the truth of Muḥammad's description. Each time an element was described, he said, "You are telling the truth (*ṣadaḳta*). I testify that you are the messenger of God" and at the conclusion the Prophet said to him "And you, Abū Bakr, are *al-ṣiddīḳ*", and from that time on he was called by this name (Ibn Hishām, 265).

Al-Ṭabarī does not provide the same post-*miʿrādj* narrative, but does follow up on his ascension story with an account of the first male to accept Islam, which according to some reports (al-Ṭabarī, i, 1165-7) was Abū Bakr who, according to the poem of Ḥassān b. Thābit (*Dīwān*, ed. Arafat, London 1971, i, 125) quoted by al-Ṭabarī, was the first to "declare the truth" (*ṣaddaḳa*) of the prophet. Once again, the attempt is made to explain Abū Bakr's name in terms of his devotion to Muḥammad.

The naming of Abū Bakr is also associated with Ḳurʾān, XXXIX, 33, *alladhi djāʾa bi 'l-ṣidḳ wa-ṣaddaḳa bihi, ūlāʾika hum al-muttaḳūna*, "he who comes with the truth and he who confirms it; they are the God-fearing", which is sometimes understood to refer to Muḥammad and Abū Bakr respectively (see e.g. Abū 'l-Layth al-Samarḳandī (d. 375/985), *Baḥr al-ʿulūm*, Beirut 1993, iii, 151 and n. 1 for further references). Those claiming descent from Abū Bakr are frequently called al-Bakrī al-Ṣiddīḳī or al-Ṣiddīḳī for short.

The Ṣūfī ideal of sincerity (*ṣidḳ*) which can raise individuals to the level of the Prophet is demonstrated most fully by Abū Bakr, about whom Muḥammad is reported to have said: "Abū Bakr and I are like two race horses; if he had run faster than me, I would have believed in him; but I was the faster, so he believed in me." (al-Ḳāshānī, *Iṣṭilāḥāt al-ṣūfiyya*, Cairo 1981, 139).

ṢIDDĪḲ ḤASAN KHĀN AL-ḲANNAWDJĪ [see NAWWĀB SAYYID ṢIDDĪḲ ḤASAN KHĀN].

AL-ṢIDDĪḲĪ, a *nisba* borne by members of the famed Egyptian family of *shaykh*s of the Bakriyya Ṣūfī order [see AL-BAKRĪ B. ABI 'L-SURŪR and BAKRIYYA]; it related to their claimed descent from the first caliph Abū Bakr al-Ṣiddīḳ [*q.v.*].

(Ed.)

SIDHPŪR, a place in the northeastern part of the mediaeval Indian province of Gudjarāt [*q.v.*], lying to the east of modern Paṭan. It is mentioned in the history of the Muslim sultans of Gudjarāt as a pilgrimage centre much revered by the local Hindus but sacked in *ca.* 816/1414 by Sultan Aḥmad I b. Tātār Khān, who destroyed the temples there and imposed the *djizya* or poll-tax on the inhabitants.

(Ed.)

SIDI, the name of a servile African group in India, first reported by Sir Richard Burton. The term is used also for their language, which is related to Swahili. Burton locates them in Sindh, but reports small numbers in all parts of Gudjarāt. Their women are called *sidiyani*. They were originally slaves imported into India "from Muscat and other harbours on the eastern coast of Arabia", where pockets of Swahili speakers still exist. Burton says that their importation "originated under the Ameers" of Sindh: the first such was recognised by the Mughal Emperor in 1738. Whitely found them distributed throughout Kathiawar State.

Burton distinguishes them from Habashī [see HABASH, ḤABASHĪ], slaves imported from Ethiopia, a commerce that certainly existed in the 13th century. For their ethnic origin he lists twenty-two African tribes. Nineteen of these can be identified with tribes in the present Tanzania. The remaining three have not been identified, but have Bantu names which cannot be connected with Ethiopia. He also mentions Lamu [*q.v.*] as a port of origin.

While he says that the Sidi used Sindhi words when they fail to recall words in their own tongue, his word-list of some 200 words, in an orthography that he admits to be faulty, corresponds sufficiently well as to be recognisable in terms of the dialects described by Sacleux in 1909.

(G.S.P. Freeman-Grenville)

SĪDĪ ʿALĪ REʾĪS (Seydi Ali Reis) (b. Istanbul, beg. 16th century, d. there Djumādā I 970/December-January 1562-3), Ottoman mariner, administrator, author and poet, also known by his *takhalluṣ* Kātibī or Kātib-i Rūm. He participated in Ottoman naval operations that included the conquest of Rhodes (1522), the battle of Preveza (1538), the sailings of Khayr al-Dīn Pasha Barbarossa [*q.v.*], and the conquest of Libyan Tripoli (1551); he also rose to the rank of *ketkhudā* [*q.v.*] of the imperial arsenal (*tersāne-yi ʿāmire*) in Istanbul, following the careers of his father and grandfather.

Sīdī ʿAlī's historical importance, however, rests on his activities and events to the east of Suez. In 1553, while he was in Aleppo with the imperial army during Süleymān II's [*q.v.*] campaign against the Ṣafawids, he received an order to bring the Ottoman ships which Pīrī Reʾīs [*q.v.*], the ill-starred commander of the Ottoman "Suez fleet", had left in Baṣra, to Suez. Sailing out on 1 Shaʿbān 961/2 July 1554, he failed to reach the Red Sea because of both Portuguese attacks and also storms; the latter deflected the course of the Turkish ships toward India. Fearing Portuguese warships patrolling the coast, and giving up hope of returning by sea, Sīdī ʿAlī disembarked at the port of Surat on 1 Dhu 'l-Ḳaʿda 961/28 September 1554. He was welcomed by its Muslim governor, and was asked by Aḥmad III, the Sultan of Gudjarāt, to assist him in the siege of Broach [see GUDJARĀT; BHAROČ]. Some 200 men from what had remained of the

Ottoman fleet joined Aḥmad, but Sīdī ʿAlī, with 53 companions, set out on an overland trip to Turkey (beg. Muḥarram 962/end November 1554). They passed through Aḥmadabad, Dihlī, Lahore, Kābul, Samarḳand, Bukhārā, Mashhad, Rayy and Ḳazwīn, before reaching Ottoman-held Baghdād at the end of February 1557. Sīdī ʿAlī then set out for Istanbul, and learning that Süleymān was at Edirne, he hurried there, arriving in May. His possible worries that a fate similar to that of Pīrī Reʾīs was awaiting him proved unfounded, for the sultan received him kindly, and was the first to appreciate the seaman's story; moreover, Sīdī ʿAlī's journey had also been a diplomatic feat, for he brought back 18 letters from various sovereigns addressed to the Ottoman sultan, including messages from the newly-enthroned Mughal Akbar I and from Shāh Ṭahmāsp I.

Sīdī ʿAlī narrated his epic anabasis in an account known as *Mirʾāt al-mamālik*. His other works, also in Turkish, are chiefly translations from Persian or Arabic and deal with mathematics, astronomy and navigation in the Indian Ocean: (1) *Mirʾāt-i kāʾināt* (Istanbul University library, T. 1824), a treatise on astronomical measurements and instruments chiefly applicable to the art of celestial navigation; (2) *Khulāṣat al-hayʾa* (mss. Ayasofya 2951 and Nuruosmaniye 2911), a treatise on geometry and mathematics containing a translation of ʿAlī Ḳushdjī's [*q.v.*] *Fatḥiyya*, enriched with excerpts from Čaghmīnī and Ḳāḍī-zāde-i Rūmī; and (3) *Kitāb ül-muḥīṭ fī ʿilm il-eflāk we-abḥur*, better known as *Muḥīṭ*, still unpublished in its entirety; two mss. exist in Istanbul (Topkapı Sarayı, Revan 1643—possibly the autograph—and Nuruosmaniye 2948), one in Vienna (Flügel 1277), and one in Naples (Museo Borbonico). It is, after his travelogue, Sīdī ʿAlī's most famous work, and is based on Arabic works dealing with navigation in the Indian Ocean, chiefly those by Ibn Mādjid and Sulaymān al-Mahrī [*q.vv.*]. The *Muḥīṭ* consists of 10 sections; the fourth includes an account of "Yeñi Dunyā", the New World, and of Portuguese voyages of discovery, including Magellan's circumnavigation of the globe.

Sīdī ʿAlī's account reveals the prestige of the Ottoman sultan among his coreligionists in India and Central Asia, the universality of the Turkic element there (in India, for example, he learned enough Čaghatay to write poetry also in that language), and the effectiveness of Ottoman Turkish soldiers who were in demand at every court. His scientific and navigational works, however, failed to stimulate the Turks toward a more aggressive policy in the Indian Ocean; the sailing of the fleet under his command was the last major Ottoman undertaking east of the Red Sea.

Sīdī ʿAlī Reʾīs spent his final years mostly in Istanbul (his appointment as *defterdār* of *tīmārs* of Diyārbakir at 80 *aḳčes* per day may have been chiefly a financial arrangement), where his house became a centre of gathering for the intellectual élite. He became a minor legend among his compatriots, and the story of his adventures gave rise to a new Turkish proverb, *bashına Seydī ʿAlī ḥālleri geldi* "You [or "He"] have been beset by adversities like those of Seydī ʿAlī". His poetical talent, recorded only through examples found in the *Mirʾāt al-mamālik*, stood him in good stead on at least two occasions, when he was arrested on suspicion of spying but was released after having sent poems to the local governor at Mashhad and to Shāh Ṭahmāsp at Ḳazwīn.

Bibliography: Ş. Turan, *İA* art. *Seydi Ali Reis*; G. Ferrand, *Instructions nautiques et routiers arabes et portugais des XV^e et XVI^e siècles*, i, Paris 1928, 12-18, 196-8, 248-55; A. Adnan Adıvar, *Osmanlı Türklerinde ilim*, Ankara 1982, 85-9 (and its French version, *La science chez les Turcs Ottomans*, Paris 1938); W.C. Brice, C. Imber and R. Lorch, *The Daʾire-yi Muʿaddal of Seydi ʿAli Reʾis*, Manchester 1976.

The *Mirʾāt al-mamālik* was published in Ottoman Turkish (1313/1895-6) and in a recent modernised version in *yeni yazi* (*Mirʾat ül-memalik*, n.d.), as well as in several trs.: German (H.F. von Diez, *Denkwürdigkeiten von Asien*, Berlin 1815, ii, 133-267), English (A. Vambery, *The travels and adventures of the Turkish Admiral Sidi Ali Reis*, London 1899), Uzbek (Sh. Zumnunab, *Memleketler küzgüsi*, Tashkent 1963), and Persian. None of his other works has been published, but sections from the *Muḥīṭ* have appeared in English, Italian and German trs. (see Turan's and Adıvar's works). (S. Soucek)

SIDI BEL-ABBÈS [see sīdī bu ʾl-ʿabbās].

SĪDĪ BU ʾL-ʿABBĀS, conventional form Sidi Bel-Abbès, a town of Algeria created in 1849 and deriving its name from the tomb of the saint Sīdī Abu ʾl-ʿAbbās, whose *ḳubba* is on the left bank of the Mekerra river, the town itself being on its right bank (lat. 35° 15' N., long. 0° 39' W.). It lies in the centre of the Tell of Oran equidistant from Mascar and Tlemcen. The plain of the Mekerra (altitude 470 m/1,540 feet) is separated from maritime climatic influence by the Tessala mountain chain, giving Sidi Bel-Abbès a continental climate parallel to that of the High central plateau, semi-arid, sudden rains often causing floods, and with frequently harsh winters. But the climate is healthy and water is available everywhere for irrigation by norias at only 3 or 4 m depth.

Antiquity. The Romans noted the fertility of the Tessala region, from which they dominated the course of the Mekerra (apparently from a Berber root *m-k-r* "great", according to A. Pellegrini), called by them Tasaccura (apparently "river of the partridge", Berber *tasekkurt*, because this bird favoured cereal fields), and the plain of Sīdī Bu ʾl-ʿAbbās.

The Islamic period. The great Ṣufrī Khāridjite Berber revolt of 122-4/740-2 [see ṣufriyya. 2.] freed the region from Arab domination through the battles of the *Ghazwat al-Ashrāf* (122/740) and that of the Wadi Sebu (123/741). At the end of the 4th/10th century, it was dominated by the Berber Azdādja tribe, who exported foodstuffs, especially corn, via Oran (Wahrān, founded in 290/903 by the Andalusians and the Banū Mesgen, a branch of the Azdādja) to Murcia and Granada, according to Ibn Ḥawḳal, and then in the next century by the Banū Rāshid, Zanāta Berber nomads of the Maghrāwa confederation. In Almohad times, the ruler of Tlemcen Yaghmurāsan b. Zayyān, founder of the ʿAbd al-Wādids (*r.* 633-81/1236-83), developed irrigation and agriculture in the valley of the Mekerra, the Sīg (this name, < Berber *sik* with the idea of a group of primitive dwellings, having replaced the classical one of Tasaccura). He is also said to have brought in nomadic Arabs of the Banū ʿĀmir, especially those of the Maʿḳil [*q.v.*], to the southern frontier of his realm in order to close access to the Tell. The whole region played a notable role in the struggles between the ʿAbd al-Wādids and the Marīnids; according to Marmol, the Marīnid sultan Abu ʾl-Ḥasan in 732/1331-2 ravaged Tessala.

The Mekerra plain continued to supply grain to Tlemcen and elsewhere *ca.* 1500, and cattle- and camel-raising were also practised there, with the products exported from Oran (cereals, including to Italy; textiles, including the coverings called by the Por-

tuguese "hambels" (< *ḥanbal*). The Crusade which led to the occupation of Oran in 915/1509 neutralised a port useful for aiding the persecuted Muslims of al-Andalus and was also impelled by a desire to gain control of the riches of the region. It was the Banū ʿĀmir who furnished most of the cavalry defending Tlemcen against Spanish attacks, though some groups of them were in a treaty relationship with the Spanish, *Moroz de la Paz*, paying a tribute called *rūmiyya* and furnishing noble hostages. Over the next three centuries, there was an equilibrium of tribes in the region, of whom the more exposed ones to Spanish attacks negotiated at times with the bey of Mascara, at others with the chief of the garrison in Oran.

Economic development in the plain of Sīdī Bu 'l-ʿAbbās at this period continued to be an extensive agricultural-pastoral one practised by a largely nomadic population living in tents and dominated by the Maghrāwa. It was connected with towns such as Mustaghānim to the north-east (quarter called al-Maṭmar, "of the grain silos") and Tlemcen to the south-west (also a quarter al-Maṭmar, traversed by a "way of silos", *Ṭrīg al-Maṭmar*).

According to the local legend concerning Sīdī Bu 'l-ʿAbbās, he was the grandson of Sīdī Bū Zīdī, who had come from Mecca to Aflu in southern Algeria, probably in the 17th century, and the latter's *ḳubba* is extant in the village of Ḳṣar Sīdī Bū Zīd to the north-east of Aflu. His grandson died *ca.* 1780 and is buried on the hill of Sīdī ʿAmmār, which dominates Sīdī Bu 'l-ʿAbbās, in a rectangular *ḳubba* with a cupola of glazed tiles. However, the hypothesis of a saint of Moroccan origin is possible through the spread in the central Maghrib of Abu 'l-ʿAbbās al-Sabtī [*q.v.*] and Almohad moves towards unity of the Maghrib, and this may have been favoured in the 17th century by anti-Spanish resistance and the economic and political leadership of the Banū ʿĀmir favouring the substitution of a Moroccan for a local saint.

After the abandonment of Oran by the Spanish in 1206/1792, the port developed its exports of grain, meat and beasts to the British Mediterranean garrisons (Mahon, the Balearics, Gibraltar) and to Spain, and Arzew (al-Marsā) became one of the main markets for supplying British troops in the Peninsular War 1808-14. The Banū ʿĀmir continued to be dominant, and joined ʿAbd al-Ḳādir b. al-Sharīf in his revolt of 1220/1805 or 1221/1806 against the Bey of Oran, and after its suppression, the plain of Sīdī Bu 'l-ʿAbbās suffered devastating reprisals; although balanced between the Turkish Regency and the Spanish, the population there managed to preserve its independence.

The colonial period. On the French occupation of Oran on 4 January 1831, the Banū ʿĀmir joined other local tribes in recognising as sultan ʿAbd al-Ḳādir b. Muḥyī 'l-Dīn al-Ḥasanī (1808-83 [*q.v.*]). The plain was strenuously attacked and occupied by French forces and reduced to submission, with the sweeping-away of traditional chiefs and considerable depopulation. The encampment of Sidi Bel-Abbès was founded in 1841, with a redoubt on the right bank of the Mekerra facing the *ḳubba* of the saint on the opposite bank. The town was created by decree on 5 January 1849 as centre of the future *arrondissement* of Sidi Bel-Abbès. The cereal and livestock resources of the region were soon exploited, with an all-season carriage road built to Oran for exporting to France and flour mills established along the Mekerra. Orania, less populous than the other two provinces of the north of the Regency, lent itself to colonisation and exploitation at modest expense, and the military occupation forces in Orania rose from 10,000 men in 1840 to 35,000 in 1845. The Muslim population tended to be forced up to the hill slopes, with the farms of colonists in the plain. After the revolt in Orania of 1864-6 by the Ulād Sīdī Shaykh and the Flīta, this process accelerated. Cereals, especially of the soft variety of wheat (*fārīna*), as opposed to the indigenous hard variety (*gemḥ*, triticum durum), and tobacco culture grew. By 1900, the Spanish colonists from Andalusia brought in from 1845 as workmen had become two-thirds of the colonist population of the *arrondissement.* After 1920, viticulture increased, as cereal production dropped owing to soil exhaustion. In 1939, Sidi Bel-Abbès exported 15,000 sheep annually to France plus a tenth of the cereal production of Algeria. This period of agricultural expansion was accompanied by, until *ca.* 1940, sedentarisation of the remaining nomads, with the abandonment of tents for fixed dwellings (often the *gourbi* or shack); pushed into the mountain zones, they exploited the forests for charcoal production, and a rural as well as an urban proletariat grew up. Outside the town of Sidi Bel-Abbès, a week-long regional festival took place annually in honour of the saint, on an area called "the Plateau" (*el-Blāto*), with tents erected there.

During the war of independence in the 1950s, the problems of employment and rural exodus were accentuated by bombardments and the depopulation of rural zones through the policy of regroupment of populations aimed at depriving the nationalist forces of material and moral support from the indigenous population (on the lines of the "cantonment" policy of the 19th century). The problems persisted after 1962, with economic regression of the plain of Sidi Bel-Abbès due above all to the unequal distribution of resources in the colonial period, sc. by a minority of the European population.

(H. BENCHENEB, shortened by the Editors)

SIDJDJĪL (A.), one of the mysterious words of the Ḳurʾān, appearing in XI, 84/82; XV, 74; and CV, 4. The derivation in the Arabic sources from Persian *sang* "stone" and *gil* "mud" did not satisfy Horovitz. It seems to designate stones resembling lumps of clay, fired or sun-dried, since this is corroborated by LI, 33-4, "... That we may loose on them stones of clay, marked by your Lord for the prodigal". Some commentators add that these stones had been baked in the fire of Hell, and the expression "marked by your Lord" (XI, 84/82; LI, 34) would mean, so they assert, that the stones were marked with the names of those at whom they were destined.

There exist other interpretations, not unanimously admitted: what has been written or decreed (clearly derived from the term's likeness to *sidjill* [*q.v.*]; Hell or the lowest Heaven (the word being considered in this case as another form of *sidjdjīn* [*q.v.*]). It has also been associated with adjectives derived from the root *s-dj-l.* But a convincing account of the term and its background has now been given by F. Leemhuis in his *Qur'anic* siǧǧīl *and Aramaic* sgyl, in *JSS*, xxvii (1982), 47-56: that it is in origin a non-Semitic, apparently Sumerian word, appearing in Akkadian as *sikillu* or *shigillu*, denoting a smooth kind of stone, now attested in the Aramaic of Hatra [see AL-ḤAḌR] as *sgyl* or *sgl* (probably for **sigil*) with a specialised meaning of "altar stone" > "altar, sacrarium". From Mesopotamia, it must early have entered the Arabic dialects of adjacent parts of the Syrian Desert, becoming known in Central Arabia by the time of the Prophet with the meaning of "hard, flint-like stone".

Bibliography: See also Lane, *Lexicon*, s.v.; Ṭabarī, *Tafsīr*, Cairo 1328, xii, 57; Suyūṭī, *Itḳān*, Cairo 1318, i, 139; A. Siddiqi, *Studien über die persischen Fremdwörter im klassischen Arabisch*, Göttingen 1919, 73; J. Horovitz, *Koranische Untersuchungen*, Berlin-Leipzig 1926, 11. For the hypothesis according to which the stones mentioned in sūra CV, 4, refer to a smallpox epidemic, see Caetani, *Annali*, i, introd., 147, and Fernandez y Gonzalez, *La aparición de la viruela en Arabia*, in *Revista de ciencias históricas*, v (1887), 201-16. See also A. Jeffery, *The foreign vocabulary of the Qur'ān*, Baroda 1938, 164-5; R. Blachère (tr.), *Le Coran*, Paris 1956, 254; R. Paret, *Der Koran. Kommentar und Konkordanz*, Stuttgart, etc. 1971, 240. (V. VACCA-[ED.])

SIDJDJĪN (A.), one of the mysterious words of the Ḳurʾān, appearing in LXXXIII, 7-9: "Nay, but the book of the libertines is in *sidjdjīn*! And what shall teach you what is *sidjdjīn*? [It is] a book inscribed." The majority of commentators take this as a proper name. The word has attracted a dozen interpretations, which are grouped around two central concepts: (1) *Sidjdjīn* is the seventh and lowest earth, or a rock or well in Hell, or even the home of Iblīs; (2) It is the name of the record in which all human acts are set down. Without the definite article, *sidjdjīn* designates Hell Fire, or again, something painful, violent, hard, durable or eternal. These interpretations are influenced by the term's resemblance to *sidjdjīl* [*q.v.*], associated erroneously with the root *s-dj-l.*

Although al-Suyūṭī's *Itḳān* classes it amongst the non-Arabic words, no generally-accepted etymology has been put forward. R. Dvořák, *contra* Jeffery, did not consider it as one of the *Fremdwörter.* The lexicographers, on the other hand, make it a synonym of *sidjn* "prison", which has influenced the most widespread interpretation of the commentators, who see it as the place where the record of the evildoers is kept rather than the record itself. The Ḳurʾān's text admits of both interpretations.

SIDJILL (A.).

1. Ḳurʾānic and early Arabic usage.

Sidjill is an Arabic word for various types of documents, especially of an official or juridical nature. It has long been recognised (first, it seems, by Fraenkel) that it goes back ultimately to Latin *sigillum*, which in the classical language means "seal" (i.e. both "seal-matrix" and "seal-impression"), but which in Mediaeval Latin is used also for the document to which a seal has been affixed; it was borrowed into Byzantine Greek as σιγίλλ(ι)ον, "seal, treaty, imperial edict", and then, via Aramaic (e.g. Syriac *sygylywn*) into Arabic. It should, however, be noted that in Arabic *sidjill* never means "seal" (*khātam*), but always refers either to a document (*kitāb*) or to a scroll (*ṭūmār*, also a loanword from Greek) on which documents are written. The latter provides the most plausible explanation for the much-debated Ḳurʾānic verse XXI, 104, where God is represented as saying "We shall roll up the sky like the rolling-up of the scroll for the documents" (*ka-ṭayyi 'l-sidjilli li 'l-kutub*); the other explanations offered by the commentators (*sidjill* means "man" in Ethiopian, or it is the name of the Prophet's scribe, etc.) have nothing to recommend themselves. There is also a *ḥadīth* according to which, on the Day of Judgement, God will show the Muslim 99 scrolls (*sidjill*), each one extending as far as the eye can see, on which his sins are registered (see Wensinck's *Concordance*, ii, 431, where *al-ṣabr* is a misprint for *al-baṣar*).

In classical Arabic, *sidjill* is frequently used for a document containing the judgments of a *ḳāḍī*, and in various other technical senses. Al-Khʷārazmī (*Mafātīḥ al-ʿulūm*, 57) says that it designates a credit-note given to official messengers exempting them from the costs of their journey. From the Fāṭimid empire we have the *sidjillāt Mustanṣiriyya*, the official correspondence of the court of the caliph al-Mustanṣir with the Ṣulayḥids [*q.v.*], vassal rulers of the Yemen.

2. In Mamlūk usage.

It is evident from Ibn Khaldūn's *Muḳaddima* that during the Mamlūk period the term *sidjill* (pl. *sidjillāt*) must have been used for the judicial court registers kept by official witnesses (*ʿadala*) "which record the rights, possessions, and debts of people and other (legal) transactions." But the term is infrequently encountered with this general meaning in Mamlūk chancery (*inshāʾ*) and notarial (*shurūṭ*) manuals, which, after all, were designed for the use of professionals.

In his *Ṣubḥ al-aʿshā*, for example, al-Ḳalaḳashandī used the term in reference to documents issued by Fāṭimid caliphs, either conferring *iḳṭāʿāt* on their subjects or appointing them to public office (*wilāyāt*). Otherwise, he used *sidjill* once to designate a document issued by a judge to certify (*isdjāl*) the legal integrity (*ʿadāla*) of his son. In *shurūṭ* works, designed to provide models to notaries for drafting legal documents, *sidjill* was also used with technical denotations and was defined in contrast to two other types of documents or records: *nuskha* (pl. *nusakh*) and *maḥḍar* (pl. *maḥāḍir*). According to two authors of Mamlūk notarial manuals—the Syrian Ḥanafī Nadjm al-Dīn al-Ṭarsūsī (d. 748/1348) and the Egyptian Shāfiʿī Shams al-Dīn al-Asyūṭī (b. 813/1410-11)—a *maḥḍar* was simply an official record of the minutes of a case or transaction conducted before a *ḳāḍī*; a *sidjill* was an official record of the case, based on and including the *maḥḍar*, plus the judge's decision or verdict. This notarial distinction did not originate with the Mamlūks, as J. Wakin's research demonstrates. Presumably, individual *sidjills* were compiled and kept in a *kitāb al-sidjillāt* or *dīwān al-ḥukm* and constituted the offical record of a *ḳāḍī*'s judgements, but no such compilation has been found earlier than the *sidjillāt* of al-Maḥkama al-Ṣāliḥiyya, which date to the second decade after the Ottoman conquest of Egypt. The closest approximation to a Mamlūk judicial archive is the Ḥaram collection, which consists of copies of documents associated with the court of a late 8th/14th-century Shāfiʿī judge in Jerusalem. But these documents contain no references to *sidjillāt*. Both al-Ṭarsūsī and al-Suyūṭī also distinguish between a *sidjill* and a *nuskha*. The latter is simply a certified verbatim copy of an original document, while the former contains an enumeration of attestations (*isdjālāt*) to the validity of the document and its contents, along with a copy of the document itself. It should be noted that the term *sidjillāt* was used in perhaps still another sense in the Mamlūk decrees issued to the monks of St. Catherine's Monastery at Mt. Sinai, namely as documents which, along with *marāsīm*, *tawāḳīʿ*, *murabbaʿāt*, *ʿuhdāt*, and *mustanadāt*, attested to the Mamlūks' recognition of the legal status of the monks and their monastery. In two instances, *sidjillāt* is modified by the word *khalīfatiyya*, which indicates that these may have been caliphal edicts. But the precise denotation of *sidjillāt* in this context of various kinds of decrees, contracts, and records is not yet clear; moreover, it should be recalled that *sidjill* was also a general term for "document" [see DIPLOMATIC], especially during the Fāṭimid period.

3. In Ottoman administrative usage.

The Ottomans used this general term for "register" in a variety of contexts; thus Meḥmed Thüreyyā's biographical encyclopaedia is known as the *Sidjill-i ʿothmānī* (Istanbul 1308-11/1890-4). In the late Ottoman Empire, the personnel files of civil servants were known as the *sidjill-i aḥwāl*. By the term *ḳāḍī sidjilleri* or *sherʿiyye sidjilleri* are meant the registers kept in the courts of Ottoman *ḳāḍīs*. Documents were often, but not always, entered in chronological order, and every register normally covered one or two years. The oldest extant records date from the late 9th/15th century. We do not know when the practice of keeping these registers was first instituted, and can only speculate from which Muslim state the practice was copied. For while inheritance inventories have survived for Mamlūk Jerusalem, the bulk of Ottoman registers was not made up of such inventories, even though these latter items are found frequently enough. Pre-Ottoman *ḳāḍī* registers are extremely rare; but cf. R.S. Humphreys, *Islamic history, a framework for inquiry*, London and New York 1995, 219.

While registers dating from the 9th/15th century seem to have only been preserved for Bursa and Kayseri, *ḳāḍī sidjilleri* were instituted in the Arab provinces shortly after the Ottoman conquest. This indicates that at the beginning of the 10th/16th century, the compilation of such registers already formed part of established routine at least in the larger cities. From the second half of this century onwards, more and more towns and cities preserve at least minor collections of *sidjills*. While older registers are more likely to have been lost than more recent ones, the general lack of *sidjills* for rural settlements which we know to have possessed a *ḳāḍī* before the middle of the 13th/19th century, may indicate that in such places, the compilation and preservation of *ḳāḍī* registers was not the rule in older periods.

The organisation of registers

Ḳāḍī registers of the larger cities consist of two parts; one section begins where books written in the Arabic script normally begin. Here we find records of transactions in the local court, such as sales, loans, agreements concerning divorces or manumissions of slaves. These transactions were not contentious, and the parties in question had them recorded so that proof of the sale, divorce or manumission would be easily available; this aim explains why we normally find the names of three, four or five people under the relevant text (*shhūd ül-ḥāl*). Proof provided by entry into the register was especially important to non-Muslims, who could not legally testify against Muslims; this fact may explain why non-Muslims frequently turned to the court. Some capitulations [see IMTIYĀZĀT] even contained the clause that all contracts involving merchants of the relevant nation had to be registered by the *ḳāḍī*, or else later complaints against the foreign trader would be regarded as irreceivable (Suraiya Faroqhi, *The Venetian presence in the Ottoman Empire*, in Huri İslamoğlu-İnan (ed.), *The Ottoman Empire and the world economy*, Cambridge and Paris 1987, 340). Thus while in ordinary transactions recourse to the court was not obligatory, the sultan might legislate such an obligation in specific instances. The *ḳāḍī* registers also document cases of litigation, which might concern the division of an inheritance, but equally a complaint against a neighbour who had added a room to his house overlooking the plaintiff's court, thereby invading the privacy of the latter's family.

More serious matters such as rape, robbery and murder also occur in the *sidjill*, but not very frequently. Since the *sherīʿat* regarded murder without robbery as something which mainly concerned the

family of the victim, while on the other hand, the state demanded a share of the blood money (*ʿö̲s̲h̲r-i diyet*), there was some incentive to settle out of court. Many documents concerning cases which by present-day categories would be regarded as penal simply contain the "facts of the case" as established by the plaintiff's, defendant's and witnesses' depositions. Presumably the matter was then referred to the sultan's Council in Istanbul. But the Council, after having been apprised of such an affair, according to the evidence of the Registers of Important Affairs (*Mühimme Defterleri*) and the Complaint Registers (*S̲h̲ikāyet defterleri*) often merely issued an order to the relevant *ḳāḍī* to judge the matter according to the *s̲h̲erīʿat*. Thus in most cases, neither one nor the other type of register informs us of the judgements issued and the manner of their execution.

A second section of the register begins at what the scribes regarded as the last page of the volume in question. This second half is taken up with orders issued by the sultan's Council; some of these, similar to modern circulars, were issued to all governors and *ḳāḍīs* of a given region. Others are concerned with matters specifically assigned to the particular *ḳāḍī* and/or governor. These may include responses to complaints by local inhabitants, such as creditors unable to recover loans. Occasionally a rescript may occur both in the Registers of Important Affairs and in the local *ḳāḍī* registers. But that is fairly rare, as neither the registers of the *ḳāḍīs* nor those prepared in Istanbul have survived in their totality. In addition, we cannot be sure how great was the percentage of documents which, for one reason or another, escaped registration at either the central or the local end. In large cities such as Aleppo, there were separate registers for the orders emanating from the central administration (*awāmir sulṭāniyya*).

In the largest cities, such as Bursa or Cairo, separate registers for inheritance inventories were instituted. By this term we mean a list of the goods left by the deceased, including both movable property and real estate, but not state-owned agricultural land (*mīrī*). Debts and money owed to the deceased were also included, as well as clauses constituting the testament of the deceased, especially if there were slaves to be liberated. In Edirne and Istanbul, special inheritance registers existed covering the *ʿaskerīs*, that is the servitors of the sultans (and sometimes their spouses) whose inheritances were liable to confiscation. However these registers were not the responsibility of the *ḳāḍī*, but were kept by a special official known as the *ʿaskerī ḳassām* [see ḲASSĀM].

In cases where no children or absent people were involved, the heirs could divide up the inheritance without recourse to the *ḳāḍī* and, consequently, without the compilation of an inheritance inventory. Thus only a relatively small share of all inheritance cases was recorded. Merchants are probably over-represented in the *sid̲j̲ill*, as they often died while away from home, or, if older and sedentary, had sons who were away when their fathers died. Moreover, their goods and chattels were important enough to be worth recording, and given the existence of both creditors and debtors of the deceased, it was often imperative to make an official record of the manner in which the inheritance had been divided. By the same token, the inheritances of women and the poor are under-represented; when the inheritance was small, it was to the advantage of all heirs to avoid reducing it further through the fees charged by the court. The frequency of inheritance disputes shows that manipulations to disinherit minors and women were common. It therefore makes sense to assume that some inheritances were not documented in order to deprive an heir of his/her fair share. Inheritances were also recorded when the temporary absence or non-existence of heirs resulted in the *beyt ül-māl emīni*'s taking possession, temporarily or permanently, of the estate in question. Cases where only a few heirs were involved also were more likely to be included than others, for it was then necessary to demonstrate that the *beyt ül-māl emīni* was not entitled to confiscate. When the inventory does not explicitly state that the inheritance was sold by public auction, the prices assigned to the individual goods in the register should be regarded with a degree of caution.

The *ḳāḍī*'s registers must have been kept in the court building of the district centre; there is no evidence that copies were ever sent to Istanbul. In the Aegean region, however, it is probable that the *ḳāḍī* registers were collected in one of the major towns already in the 13th/19th century, and then were lost when this provincial archive was destroyed, in all likelihood before the 1260s-70s/1850s. For, otherwise, it is hard to explain why to the south of Balıkesir and Edremit and to the north of Antalya, no *ḳāḍī* registers survive except for Manisa, apart from a number of Izmir volumes from the second half of the 13th/19th century.

It was the responsibility of the outgoing *ḳāḍī* to hand these registers over to his successor. Occasionally, we hear of *ḳāḍīs* who did not do this, presumably because of accidents or because they had something to hide. No Ottoman court buildings from before the mid-13th/19th century have survived, but casual references in the documents, as well as the traveller Ewliyā Čelebi's descriptions of 11th/16th century Ottoman towns, prove that they existed at least in the larger cities. Without such a building, it is difficult to imagine how the often substantial series could have survived frequent changes of officiating *ḳāḍīs*. On the other hand, the all but complete absence of *ḳāḍī* registers relevant to the numerous small *ḳāḍī*'s seats of the 10th/16th century can probably be explained by the lack of a building to house these institutions. Presumably the court building resembled the residence of a well-to-do family, with structures surrounding two courtyards. In the first, corresponding to the men's part of a house (*selāmlïk* [*q.v.*]), the business of the court must have been transacted, while the family dwelt in the second courtyard, the *ḥarem* section. Outgoing *ḳāḍīs* must have moved out to make room for their successors.

Not all the cases recorded in the *sid̲j̲ill* were dealt with by the *ḳāḍī* in person. Disputes concerning landholding were often resolved by delegating a (presumably junior) member of the legal establishment to the site in question; where houses needed to be divided up among several heirs, in the 11th/17th century the *ḳāḍīs* of larger towns could rely on the advice of the *mimʿār-bas̲h̲ï*, a local master builder (not to be confused with the sultan's Chief Architect officiating in Istanbul). By contrast, the decisions of the *nāʾibs*, adjunct *ḳāḍīs* who officiated in rural districts, have very rarely found their way into the *sid̲j̲ills*. In the late 12th/18th century, at least in the Bursa area, there also existed *sid̲j̲ills* which were not compiled for the local *ḳāḍī* but for an official in charge of sultanic *waḳfs* answerable to the *dār al-seʿādet ag̲h̲asï*. In terms of content, these *sid̲j̲ills* resemble those compiled for *ḳāḍīs*.

In the more important courts, the *ḳāḍīs* had a num-

ber of scribes at their disposal. Recruitment and training in the 9th/15th and 10th/16th centuries appear to have been less systematic than in later periods, for where these earlier centuries are concerned, we find evidence of scribes who evidently had difficulty handling the mechanics of registration. Thus in late 9th/15th century Bursa, a scribe who had produced a particularly garbled account of a succession explained the reason for the confusion in the margin, asking his readers to pardon him. Spelling errors and clumsy handwriting also are not rare in early registers. By contrast, from the 11th/17th century onward, scribes in the larger courts wrote in a relatively uniform hand. Presumably the senior scribes also put the claims of plaintiff, defendant and witnesses into the appropriate legal formulas. It is tempting to assume that the fragments of everyday speech which are often found among the formulaic language of the documents constitute residual traces of what the participants in the case actually said; but whether this is really true is not at all certain.

Archives containing si<u>dj</u>ills

Registers kept by Ottoman *ḳāḍī*s and preserved in Turkey are now located in the National Library (Milli Kütüphane) in Ankara, having been transferred to this place from the provincial museums in which they were previously housed. Registers prepared by the various courts of the city of Istanbul can be consulted in the office of the Chief Islamic Jurisconsult (Müftülük) in the Süleymaniye quarter of that city. A published guide is available, the newest version of which allows the prospective user to determine the years covered by each register in addition to the call number (Akgündüz *et alii*, 1988). Moreover, this guide contains a broad selection of reproduced documents. *Ḳāḍī* registers in the Ankara National Library deal with localities inside the borders of present-day Turkey. A few extant registers are, however, not covered by this catalogue: thus some museums failed to inform the catalogue compilers of their holdings, and a Çorum register (1004-5/1595-7), located in the Çorum Library, should be added as well.

Outside of modern Turkey, *ḳāḍī* registers, in larger or smaller numbers, are to be found in numerous successor states of the Ottoman Empire. Hungary has only a single *si<u>dj</u>ill*, concerning the district of Karánsebes-Lugos, dating from the late 11th/17th century (Magyar Tudományos Akadémia Könivtára, Keleti Osztály, Török Kéziratok, Qu. 62). In Bosnia, the Oriental Institute, the <u>Gh</u>āzī <u>Kh</u>osrew Beg Library and the Historical Archive, all located in Sarajevo, have separate collections of registers: in the Historical Archive we find six volumes concerning Livno, Visoko and Teme<u>sh</u>war, while the <u>Gh</u>azī <u>Kh</u>usrew Library holds 68 *si<u>dj</u>ills* of Sarajevo itself, spanning the period from the 10th/16th to the 13th/19th century. In the Oriental Institute, 66 registers existed at least until recently, concerning the region surrounding the city and covering the 11th/16th century. At present, we do not know for certain which of these registers have perished in the war accompanying the dissolution of Yugoslavia.

In Macedonia, the state archive in Skopje houses the *ḳāḍī* registers of Bitola (Monastir); the series consists of 185 volumes, beginning in 1015-16/1607 and ending in 1912. Certain volumes have been made available in print. As to present-day Albania, the oldest surviving *si<u>dj</u>ill* known to date is found in the Vatican Library: it covers Avlonya (974-6/1567-8). No other registers concerning this port seem to exist anywhere else. In Albania, there survive series of registers covering Berat (beginning in 1010-11/1602) and Elbasan (beginning in 988/1580, in copy only). All other Albanian towns, including Tirana, have at most a few *si<u>dj</u>ills* going back to the 13th/19th century.

Ḳāḍī registers located in present-day Bulgaria concern Sofia, Rusčuḳ (Ruse) and Vidin; the oldest known register (Sofia, 949/1542 to 957/1550) was lost during World War II. However, an edition containing the summaries of every individual document had been prepared just before the disappearance of the original, and was published in 1960. The extant *si<u>dj</u>ills* have been deposited in the National Library in Sofia. There is some coverage of the 11th/17th century, but the registers become much fuller and more informative for the 12th/18th one, when expanding commercial opportunities allowed an increasing number of townsmen to prosper. On Greek territory, a similar situation prevails, as the oldest known register in the Macedonian State Archive (Salonica) dates from 1107-8/1696. This institution contains the largest number of *si<u>dj</u>ills* in all of Greece: over 300 volumes covering the city of Salonica and the surrounding countryside, including the judicial districts of ʿAwret-ḥiṣār, Pazārgāh, Volos and Ḳaterin. From the 1240s and 1250s/1830s there survive a number of inheritance inventories covering the Muslim population of Salonica itself. *Ḳāḍī* registers preserved in Veroia begin in 1011/1602; they number about 130, while two volumes consisting of different fragments of Veroia *si<u>dj</u>ills* are owned by the Nahost Institute of the Ludwig-Maximilians-Universität, Munich. In the Municipal Library of Heraclion, Crete, there is a collection of 166 *si<u>dj</u>ills* beginning in the 1070s/1660s; the Ottoman history of this town is documented right from the time of its conquest.

In the Turkish part of Cyprus, the *ḳāḍī* registers of Lefkoşe go back to the late 10th/16th century, they are mostly located in the Evkaf Dairesi in Lefkoşe. Those *ḳāḍī* registers extant in Syria are for the most part concentrated in Damascus, where they can be consulted in the General Directorate of Historical Documents. Registers relating to the Arab provinces are for the most part in Arabic, although documents in Ottoman Turkish are not unknown. Damascus is covered for the period from 991/1583 to 1920 (1,658 volumes), while the extant documents for Aleppo (731 volumes) reach from 962-3/1555 to 1925. This archive also contains about thirty registers of sultans' commands directed at the authorities in Aleppo, in addition to some registers consisting exclusively of inheritance inventories. From the court of Ḥamā, 64 registers have been preserved, which begin in 942-3/1536 and reach to the year 1296-7/1879; some *ḳāḍī* registers also cover Ḥimṣ. In the Sunnī *<u>sh</u>erīʿat* court of Ṣaydā, the existence of eighteen registers, dating from the 13th/19th century, was noted in 1975 by Antoine Abdel Nour; these have probably been destroyed by fire in 1975-6. In the Old City of Jerusalem, the *maḥkama <u>sh</u>arʿiyya* contains the *ḳāḍī* records of both Nablus and Jerusalem; while the former only cover the 12th/18th and 13th/19th centuries, the Jerusalem *si<u>dj</u>ill* go back to 937/1530-1, and thereby constitute one of the oldest series known. By contrast, the Haifa registers begin in 1286-7/1870 reflecting the relatively short history of this town. Some registers from the mid-13th/19th century are also available for Gaza.

A collection of 1851 *maḥkama <u>sh</u>arʿiyya* registers has been preserved in Cairo; these volumes have been for the most part compiled in the numerous courts which existed in the second-largest city of the Ottoman

Empire. Registers are extant from the 11th/17th century onwards. The largest section (559 volumes) concerns the court known as the Bāb al-ʿĀlī, while the sections al-Ḳisma al-ʿarabiyya and al-Ḳisma al-ʿaskariyya encompass probate inventories concerning the property of Ottoman subjects and members of the ruling élite respectively. However, from the later 11th/18th century onwards, Muslim merchants and artisans increasingly joined the military corps, which thus took on the composition of militias. As a result, the al-Ḳisma al-ʿaskariyya section is relatively large (418 al-Ḳisma al-ʿarabiyya registers, versus 157 volumes belonging to al-Ḳisma al-ʿaskariyya).

Waḳf *in the* ḳāḍī sidjilleri

As *waḳf* administrators were subject to supervision by the *ḳāḍī*, the *sidjills* also contain many documents concerning repairs to existing *waḳf* buildings. The rental of *khāns* and shops, and in the case of *waḳfs* lending money at interest, the settling of accounts, are also covered in some detail. Many *waḳfs* turned over major pieces of real estate to a tenant-in-chief, who was in turn responsible for finding occupants for individual shops or workshops; the relevant contracts were at times entered into the *sidjill.* Other records document "double rent" (*idjāreteyn*) agreements; here, a relatively high entry fine was paid, in exchange for which the tenant was allowed a lease which his heirs might inherit. Other documents record the special type of lease by which 12th/18th and 13th/19th century artisans often held their shops (*gedik*); *gediks* could only be passed on to other members of the same craft guild. Foundations without the resources to rebuild after fires or earthquakes received the *ḳāḍī*'s authorisation to turn over the land at a low rent to whoever would build on it. A *waḳf* in need of capital might contract a loan, and then permit the lender long-term occupation of a piece of profitable real estate at low rent until the loan was repaid. There are also cases of *istibdāl* on record, in which the *waḳf* administrator was authorised to divest the foundation of properties which were no longer useful and to acquire others in their stead.

In 12th/18th century Bursa, lists of all foundations lending out money at interest were regularly compiled in separate registers classed among the *sidjill.* These registers also contained the names of the debtors and responsible *waḳf* administrators. Since the amount of the debts and the sum of money remaining in the *waḳf* chest were equally recorded, the financial status of each *waḳf* could be read off at a glance. While this information was not collected as systematically in other cities, money *waḳfs* are still quite frequently documented throughout the Turkish-speaking parts of the Ottoman Empire.

Workshops belonging to *waḳfs* were also in evidence in the *sidjills*. This information is particularly valuable, since we know very little about the functioning of non-*waḳf* shops. Most frequent is information on dye houses, workshops where a large number of individual masters exercised their trade. Particularly well documented, in the *sidjills* of both Istanbul and Bursa, is the dye house associated with the library of Sultan Aḥmed III in Istanbul; numerous disputes which occurred throughout the 12th/18th century provide information on the relationship between masters and administrators, and on intra-guild competition as well. As the *bedestāns* of many towns and cities also produced revenue for major *waḳfs*, the *sidjills* record information on their operation as well; after damages due to fire, detailed protocols were compiled, determining the expenses involved in repairing the *bedestān* in question. Such documents, known as *keshif* (which exist for other *waḳf*-owned buildings as well) are of special value to historians of architecture.

The ḳāḍī *registers as an historical source*

During the last twenty-five years, social and economic historians of the Ottoman lands have examined the *sidjills* with particular attention. Scholars have come to appreciate the capacity of this source to provide a record of historical change, and have therefore tended to prefer the *sidjills* to the tax registers (*ṭāpū taḥrīr*) which in earlier decades had provided the backbone of most socio-economic analyses. Moreover, given the scarcity of private archives in many provinces of the Ottoman Empire, the *sidjills* often constitute the main (or even the only) source which relates to local as opposed to central government concerns.

As a first step, the functioning of the courts and the *ḳāḍīs*' correspondence with the authorities in the capital have been studied, as well as the complex interplay between *sherīʿat* and *ḳānūn* as applied by the *ḳāḍīs*. Here the source criticism long practiced by historians has been joined to the discourse analysis initiated by students of literature. But principally, the standardised character of many documents contained in the *sidjills* permits statistical analysis, which has been undertaken with respect to probate inventories as well as to sales documents.

When houses were sold in larger Ottoman cities, such as Istanbul, Bursa and Aleppo, but even in Ankara or Kayseri, the record of the relevant agreement included not only the price, but also an enumeration of the neighbouring property-holders and the rooms contained in the dwelling in question. Administratively determined prices (*narkh* [*q.v.*]) are also found frequently enough in the registers of some localities to permit the construction of series. Conversion rates concerning the different coins which circulated in different parts of the empire can be derived from sales records and inheritance inventories. These series show up the degree to which a given town was economically integrated into a larger entity. Given the linkage between monetary inflation and social unrest, accurate indices of currency devaluation are of great importance to the social historian as well.

Qualitative information in the *sidjills* has equally come to interest researchers. With respect to women not part of the Ottoman élite, the *ḳāḍī sidjilleri* constitute almost the only source of information; as women often turned to the courts in order to defend their property rights, historical research has focussed on the relationship of women to property. Ample information is also available on divorce, and occasionally we find texts which show how marriage negotiations were begun or broken off. The probate inventories contained in the *sidjills* also provide some evidence on polygyny and family structure. These data are, however, less usable than one might wish for, as children who predeceased their parents are not recorded, and moreover, the sample of probate inventories included represents only a very specific sector of the urban population. The *sidjills* also contain a fair amount of information on women who founded and administered *waḳf.*

Slaves belonging to private persons also have left few traces anywhere but in the *sidjills*. Records of sales and manumissions can be supplemented by promises of future manumission in exchange for specific services; documents allowing a slave to use capital belonging to a master have also been found, as well as records of the personal and household goods which female owners sometimes gave their slave women when

the latter were manumitted and married off. Since the *sidjills* often mention the slave's place of origin, it has been possible to relate major campaigns to the affluence of slaves from a given region at a large slave market such as Bursa.

Relationships between inhabitants of town quarters are reflected in complaints concerning wilful damage to buildings, nuisances in and around shops, or accusations of drunkenness and loose living. There is some documentation on the life of the poorest townsmen, often immigrants without families, as they died in a *khān* or on the street. Attempts to limit immigration into the towns are also on record, namely when *tīmār*-holders or administrators of crown lands demanded the return of peasants who had migrated to town without the consent of the proper authorities. But the same records document the interest of the townsmen in retaining their solvent neighbours, whether former villagers or not, by appropriate testimony to the court. Reactions on the part of artisans to the special demands made upon them in wartime are documented in the disputes among craftsmen as to which guild was the adjunct (*yamaḳ*) of which other, as *yamaḳs* were obliged to contribute to the taxes demanded from the "superior" guild. No systematic evaluation has as yet been attempted for the numerous protocols concerning accidents and sudden deaths, which were included in the registers in order to safeguard the neighbours against later claims. These protocols provide a vivid reflection of the risks inherent in living in an urban community.
